(A) There would be an improvement in service to the public. The improved service would be an advancement over that presently in effect, would be especially beneficial to all independent areas served by this railroad, and would create a greater utilization of freight car equipment.

(B) New service routes would be established for passing traffic between the East and the West and the North and the South, and there would be continued the routes presently existing.

(C) There would be substantial economies in the operating expense of each and both carriers.

(D) On account of the present scant car supply owned by the TP&W, there would be greater protection afforded it

by reason of the fact the M&StL owns and operates equipment sufficient to protect its needs and still make available a supply for the TP&W.

[fol. 1161] (E) The M&StL is closely tied in with agriculture and its products and is therefore largely dependent upon crop conditions. With improved service, particularly as to the time factor, there would be an attraction sufficient to result in handling tonnages other than those above mentioned. In other words, it is certain the railroad's commodity base would be diversified to a much greater extent than now existing.

(F) If unification is permitted, each and both carriers would have funds available, without borrowing, to adequately improve the physical property of both roads.

(G) At a point approximately 25 to 30 miles west of Peoria there are located on the M&StL two coal mining operations which produced for the period 1951 to 1955, both inclusive, an average annual aggregate of 27,585 loaded cars of coal for line haul movement. The production at these mines has gradually receded as compared with the former years when the coal market was less competitive. At the present time there is a considerable movement of coal by barge via the Illinois River into the Chicago area, and these mines find themselves at a disadvantage in respect of being on equal footing with their coal producing competitors in this area, in that they do not have direct access to the Illinois River. Some of their production now moves by barge via the Illinois River at a docksite cost to them higher than their neighbors'. The M&StL rate for [fol. 1162] handling this coal locally to Peoria is on a competitive basis with other railroads, but because the M&StL does not have direct access to the Illinois River there is an added charge which falls on the mines in order to complete the haul to docksite. This latter charge is assessed by the P&PU as a switching charge.

If the TP&W is acquired by the M&StL there will be an opportunity thereby furnished to provide direct contact with the Illinois River at a place not far from Hollis, which is located on the TP&W and near Peoria. If the

TP&W is acquired by the Pennsylvania-Santa Fe, this unfavorable situation will still prevail.

(H) I have been with this railroad for 41 years. I know the importance of the Peoria Gateway to our continued solvency. In my opinion, the M&StL could very easily find itself in straitened circumstances in the future if it were to lose—and I think we would lose it if the Pennsylvania-Santa Fe were here successful—a considerable volume of our traffic now flowing through the Peoria Gateway, particularly that moving through our western connections via the Kansas City and Omaha gateways.

(I) And finally: Here is a railroad that is on the block for sale. The present owners desire to get out of the railroad business. Some railroad is likely to purchase it. From my experience, not only with the railroad of which I am now President, but with other railroads, particularly in the middle west, I fervently believe it would more re- [fol. 1163] dound to the public's benefit, interest and service if the TP&W were acquired by the M&StL instead of the combined ownership of the Pennsylvania and Santa Fe. This 239-mile railroad would become an important and major portion of the M&StL which itself is small as many railroads go in this country. The M&StL would at all times be concerned that this 239-mile railroad be utilized to its full capacity, in a service to the public and in revenue returns to it and to the M&StL. The utility of the TP&W would be vital to the economy of both companies.

On the other hand, this 239-mile railroad would likely be lost in the huge combination of the Pennsylvania-Santa Fe Railroads, which together aggregate more than 20,000 miles. As to those railroads, this small 239-mile railroad would probably be no more than a secondary line and the revenues accruing from its operations would have no substantial effect one way or the other upon the gross revenues or net income of the Pennsylvania-Santa Fe. Because the TP&W is going to be purchased by someone, I think, and it is my deep conviction, that the only logical railroad to take it over is the M&StL.

Mr. Wheeler: Does that complete your direct testimony, Mr. Devins?

The Witness: Yes, sir.
Mr. Wheeler: That is all.
Exam. Albus: We will recess until 4:30.

(Short recess.)

[fol. 1164] Exam. Albus: The hearing will please come to order, gentlemen.

We will continue with the cross-examination.

Mr. Thomas.

Mr. Thomas: Mr. Examiner, I want to make a suggestion that we defer the cross examination of this witness until we have heard the witnesses who are going to present the studies which he has apparently reached conclusions from. We have here a series of conclusions with no supporting facts, and he tells us that those facts are to come or the studies are to come from other witnesses. I think we will save a lot of time. We may not have to cross-examine this witness at all, if we can hear the details that are supposed to support these conclusions, then we will know whether we should waste any time examining regarding these conclusions.

Exam. Albus: Mr. Wheeler, do you have anything to say as to that?

Mr. Wheeler: May I consult with my witnesses?

Exam. Albus: Personally, I think it is a good suggestion in view of the fact that we only have 30 minutes or so left, to defer the cross-examination until tomorrow morning when the opposition has an opportunity to look over this stuff.

Mr. Thomas: I might say, Mr. Examiner, looking over this material here won't give us the basis for cross.

Exam. Albus: I realize your situation, Mr. Thomas.

[fol. 1165] Mr. Wheeler: Do I understand that not only Mr. Thomas but other counsel wish to have him—

Mr. Lucas: I join very heartily in that suggestion, Mr. Examiner.

Exam. Albus: I think it would be a good idea.

Mr. Wheeler: We have no objection.

Exam. Albus: Thank you very much.

May we have the next witness for direct, then.

With the understanding that Mr. Devins is the first witness for cross-examination tomorrow morning.

Mr. Wheeler: May I at this time offer in evidence these two exhibits.

Exam. Albus: Yes, exhibits marked for identification H-26 and H-27 are received at this time.

(Applicant's Exhibits Nos. H-26 and H-27, Witness Devins, were received in evidence.)

Mr. Thomas: Mr. Examiner, I am still not quite clear on this cross-examining. My suggestion was that we should hear the detailed testimony of these witnesses from whose studies Mr. Devins has drawn conclusions before we start to cross-examine those conclusions. We can't do it without the facts.

Exam. Albus: Off the record, please.

(Discussion off the record.)

Exam. Albus: On the record.

Mr. Wheeler: Mr. Examiner, at this time and very [fol. 1166] briefly, I'd like to recall Mr. Heineman to the stand to cover one phase of his testimony that I have neglected to cover.

Exam. Albus: All right.

Ben W. Heineman was sworn and testified as follows:

Redirect examination.

By Mr. Wheeler:

Q. Mr. Heineman.

A. Yes, sir.

Q. In your previous testimony you referred to a luncheon conference with Mr. Gurley, president of the Santa Fe, regarding acquisition by the Santa Fe and the Pennsylvania of the TP&W stock. Was there any further aspect of that acquisition that you discussed with Mr. Gurley at that conference?

A. Yes, as a matter of fact, unintentionally I omitted what was really the major purpose of the conference.

Q. Will you please state that purpose?

A. This conference was immediately following May 26—by immediately I mean a few days, I don't know exactly when, but quite shortly after the May 26 meeting. I have also forgotten whether Mr. Gurley called me or I called him. But, in any event, we met and the purpose of the meeting was to discuss what M&StL's views were with reference to joint ownership of the TP&W. Mr. Gurley said that he understood that the M&StL's views were and always had been that we were interested in sole ownership but that he wished to give me the opportunity to state to [fol. 1167] him whatever my views were. At that time I was distressed by what had happened. I was trying to find some solution that would perhaps salvage something to the M&StL, and I asked Mr. Gurley if he would be interested in a two-way partnership with the M&StL. Mr. Gurley asked me whether the M&StL would have any interest in a, I believe he said five-way partnership, because at that time we knew, as a matter of fact, he told me that the Nickel Plate and the Rock Island both made inquiry as to whether they could participate. I said that we would not have any interest—well—that is not accurate. I said that so far as I was concerned, I did not believe the M&StL would have any interest in a five-way partnership, that I would recommend against it to our board of directors if the opportunity were provided, that I thought the price was too high, without the benefits of unification, but I said it was a final matter for our board of directors to decide, not for me to decide, but that I would strongly recommend against it. I don't believe there was much further discussed about two-way ownership with the Santa Fe. Mr. Gurley was very pleasant and said that he would let me know—I have forgotten whether he said then or later, after he had given the matter full consideration. Now, that was, to the best of my recollection that was the extent of that conversation.

I would like to say, however, on the record that I think that what I had in mind, and I did not communicate this [fol. 1168] to Mr. Gurley, was some arrangement whereby if he told me at that luncheon and I had been otherwise informed, they were concerned about the Lomax gateway by their partnership with us, I thought that we could pro-

tect, that that would give them assurances of our protection of the Lomax gateway, and that by working out some kind of a management arrangement we could get the benefits or at least the partial benefits of unification. Now, in any event, as I say, or I guess I haven't said, sometime later, I believe in July, Mr. Gurley wrote a letter to us, and I believe to all the other interested carriers saying that they were going to go it with the Pennsylvania.

Now, I am sorry, Mr. Examiner, I didn't cover that. It was really the most important part of the conversation.

Q. Just one further question, Mr. Heineman. You have here testified that the board of directors of the M&StL are now in favor only of sole ownership of the TP&W by the M&StL.

A. Yes, sir. That is also the uniform policies of all operating personnel.

Mr. Wheeler: No further questions.

Exam. Albus: Is there any cross-examination?

Mr. Thomas: No, sir.

Mr. Lucas: No, sir.

Exam. Albus: You are excused, Mr. Heineman. Thank you very much.

(Witness excused.)

[fol. 1169] Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

[fol. 1170] Mr. Wheeler: I would like to call Mr. Swanson.

JAMES A. SWANSON was sworn and testified as follows:

Direct examination.

By Mr. Wheeler;

Q. Will you state your name and address, Mr. Swanson?

A. My name is James A. Swanson. I have offices at 111 East Franklin Avenue, Minneapolis 4, Minnesota.

Mr. Wheeler: Mr. Examiner, I would like at this time

to have marked for identification the exhibits that will be offered through Mr. Swanson.

Exam. Albus: Very well.

Mr. Wheeler: Mr. Examiner, I regret to say they are not here, they are on their way down but they haven't arrived yet.

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: The hearing will please come to order. We will mark the exhibits to be introduced through Mr. Swanson at this time.

Mr. Wheeler: Mr. Examiner, at this time I should like to have marked for identification the exhibits which will be offered through Mr. Swanson.

Exam. Albus: Very well.

Mr. Wheeler: Will H-28 be the next?

Exam. Albus: Yes.

[fol. 1171] Mr. Wheeler: I would like to have marked first H-28, combined statements of revenue tons by product classification;

H-29 statement showing loaded cars.

Exam. Albus: Consisting of how many sheets?

Mr. Wheeler: Five sheets, actually six sheets, five numbered pages.

As H-30, one sheet, gross freight revenues.

H-31, one sheet, summary of gross freight revenue and revenue cars.

As H-32, summary of traffic moving between Nemo, Illinois, and Peoria, Illinois, a booklet.

As H-33, revenue freight traffic statistics, one sheet.

H-34, the dark blue covered pamphlet headed "Percentage Divisions".

H-35, a map of railroad freight classification territories.

As H-36 an analysis of typical carload movements eastbound and westbound, a booklet.

(Applicant M&StL Exhibits Nos. H-28, H-29, H-30, H-31, H-32, H-33, H-34, H-35, and H-36, Witness Swanson, were marked for identification.)

By Mr. Wheeler:

Q. Mr. Swanson, have you prepared a statement for presentation to the Commission in these proceedings?

A. I have.

Q. Will you please give that statement.

A. I am employed by The Minneapolis & St. Louis Rail- [fol. 1172] way Company as its freight traffic manager. I am now specifically charged with supervision over the matter of freight rates, routing, and division of revenues as they involve shippers and movements on our railroad. I have been employed by the M&StL Railway since June 16, 1932. I came to the road as a clerk; I was appointed Chief of Tariff Bureau in March 1939, Assistant General Freight Agent in October 1941, General Freight Agent in December 1950, and to my present position on October 15, 1955. Prior to my service with the M&StL Railway, I had 10 years of service in the Tariff Department of the Soo Line Railroad. My overall railroad experience embraces some 33 years.

Now, I will skip to the top of page 3 of my prepared statement, the exhibits having been offered.

Upon reference to Exhibit H-28, it will be noted that the five-year average for the M&StL shows manufactures and miscellaneous, 33.1 per cent of total. The same group on the TP&W for the five-year period was 52.9 per cent of total. The combined properties over the five-year period handled revenue tons in manufactures and miscellaneous group representing 38.9 per cent of total traffic. Similar percentages were: for PRR, 32.6 per cent; for Santa Fe, 42.1 per cent.

In the group embracing products of mines, the M&StL movement over the five-year period represents 29.4 per cent of total traffic. The TP&W tonnage in the same group [fol. 1173] for the same period was 16.7 per cent of total tonnage. This made the percentage for the combined properties in the same group for the same period, 25.7 per cent. Similar percentages were: for PRR, 57.3 per cent; for Santa Fe, 27.1 per cent.

Products of agriculture produced 25.7 per cent for the total tonnage handled by the M&StL for the five-year

period. The same group produced 20.2 per cent of the total tonnage handled by the TP&W for the same period. The same group produced 24.0 per cent of total tonnage handled by the combined properties in the same period. Similar percentages were: for PRR, 5.8 per cent; for Santa Fe, 20.6 per cent.

Similar percentages in the group embracing products of forest were: M&StL, 8.9 per cent; TP&W, 5.0 per cent; combined properties, 7.8 per cent; PRR, 2.3 per cent; Santa Fe, 5.9 per cent.

Similar percentages in the group embracing animals and products, were: M&StL, 2.2 per cent; TP&W, 4.6 per cent; combined properties, 2.9 per cent; PRR, 0.8 per cent; Santa Fe, 2.2 per cent.

Insignificant percentages were contributed by less than carload traffic and forwarder traffic. Particular attention is drawn to the fact that the combined figures would serve to reduce the M&StL's reliance on products of agriculture and would serve to increase its percentage on manufactures and miscellaneous. This would have a stabilizing [fol. 1174] influence on the traffic flow over the combined properties in the event our application to acquire control of the TP&W were approved.

Referring to Exhibit H-29, it will be found that the number of cars interchanged with the TP&W by the M&StL, Pennsylvania, Santa Fe, Rock Island and Nickel Plate Railroads has been compared with the total number of cars handled by each line for each of the years shown. I might elaborate on that and say these are loaded cars, and the percentage these interchange cars bears to the total business handled by each line has also been computed. It will be noted that the M&StL's interchange with the TP&W at Peoria represents a far greater percentage of its total revenue cars handled than is shown for any other applicant carrier. This shows that relatively, traffic interchanged with the TP&W is more valuable to the M&StL than to any of the other carriers listed in this exhibit.

I have also approached this theme from another angle. I have taken the gross freight revenues of the TP&W and each of the aspirants for control of that property, for the seven-year period, 1948 through 1954, and have set

them out in a single page exhibit which has been marked Exhibit H-30.

This exhibit also portrays the relative importance of the TP&W to the M&StL as contrasted with the other applicants and interveners. It will be noted that the average gross freight revenues of the TP&W for the seven [fol. 1175] year period were 30.4 per cent of the similar figure for the M&StL, while they amounted to only 0.9 per cent of the Pennsylvania, 1.4 of the Santa Fe, 3.9 per cent of the Rock Island, and 4.5 per cent of the Nickel Plate average gross freight revenues for the same period.

In line 9 of this exhibit I have also made a comparison of the total mileage operated by the TP&W with the total mileage operated by each of the other lines shown, which presents much the same picture.

I also invite attention to Exhibit H-31. This exhibit gives the gross freight revenue and revenue cars handled between the M&StL and the TP&W at Peoria for the four years ending December 31, 1955. It also shows the percentage of such revenue and revenue cars to the total freight revenue and total revenue cars of the M&StL for the same years.

From an examination of the last three exhibits, Nos. H-29, H-30 and H-31, it is at once seen that no other carrier interested in the acquisition of all or a portion of the control of the TP&W interchanges anything like such a percentage proportion of total revenue cars with the TP&W, or receives anything like such a percentage proportion of its total revenues from its interchange with the TP&W, as does the M&StL.

In analyzing the proposals here under consideration, I have undertaken to develop what it will mean to the revenues of the M&StL if the application of the Santa Fe and [fol. 1176] the Pennsylvania railroad in Finance Docket 18991 to acquire the control of the TP&W, be approved.

Particularly vulnerable to loss to our railroad in that event is traffic moving over our line channeled through the Peoria Gateway. This traffic may be subdivided into several categories. First and foremost is traffic which is now moving in connection with the Santa Fe system via

Nemo, Illinois. In the second category I would place that traffic which is bridged over our line via Peoria and junction points other than Nemo but which moves through the Kansas City or Omaha gateways to that area in the West and Southwest, which could be handled over the Pennsylvania, TP&W, Santa Fe route.

In the next category I would place our interline received traffic moving to Peoria as a destination and our interline forwarded traffic moving from Peoria as an origin. In the next category I would place our other westbound bridge traffic moving via Peoria destined to that broad territory in the northwest. In the next category I would place our other eastbound bridge traffic moving via Peoria which has its origin in the northwest, together with our westbound terminations at competitive stations and our eastbound competitive originations channeled through the Peoria gateway.

In connection with the traffic which we interchange with the Santa Fe at Nemo and handle over our rails to or from Peoria, Illinois, I have had prepared Exhibit H-32, which [fol. 1177] is an analysis of our accounts of this traffic for the years 1952, 1953 and 1954, as well as the first seven months of 1955.

The first page of this exhibit, which has been marked Schedule 1, is a synopsis of the material contained in the remainder of the exhibit. Upon reference to Schedule 1, it will be found under caption "Revenue Cars Handled" that 117 cars were listed in 1954 under the column "Interline Received". Note 1 shows that this is traffic terminating at Peoria, Illinois. 92 of these 117 cars originated on the Santa Fe System. Of the 242 cars listed under the caption "Interline Forwarded" for the same year, which includes the cars originating at Peoria, Illinois, 179 terminated on the Santa Fe System. Of the 3,311 eastbound bridge cars in 1954, 2,630 originated on the Santa Fe and 481 terminated on the Pennsylvania Railroad. Of the 6,580 westbound bridge cars, 1,665 originated on the Pennsylvania, and 5,668 terminated on the Santa Fe system.

Without a doubt, the originating carrier on whose line the shipping industry is located, has the greatest influence

upon routing that shipper's traffic. Normally the industry feels a definite obligation to that carrier. He seeks rate and [fol. 1178] routing information from that line, places his rate problems before it, looks first to it for car supply, relies upon it for tracings and diversions. Frequently traffic comes to the originating carrier unrouted or, in some instances, showing only the delivering line. As a matter of fact, the Freight Traffic Redbook, which is a recognized shipper's manual, exhorts shippers unfamiliar with the complexities of tariffs to leave routing open on bills of lading to assure themselves of obtaining the lowest rate. When a carrier accepts a bill of lading that shows neither rate nor route, it becomes its duty to transport the shipment to destination over a route which will produce the lowest charge affording it a line haul. In these cases the originating carrier naturally has the opportunity to insert its own preferred routes on its own way bills. The terminating line which serves the consignee also has a dominant influence upon movement of traffic. That line becomes aware of the traffic movements and seeks to secure routing orders from that consignee directing the shipper to favor it with routing on his bills of lading. Now with these heavy originations and terminations on the lines of the Santa Fe and Pennsylvania railroads on this traffic which has been moving over our line, we are fearful that ownership by these two large railroads of the TP&W will result in a substantial drying up of this desirable flow of traffic over our line.

In addition to the traffic covered by Exhibit H-32 I [fol. 1179] have examined our accounts for the year 1954 and find that we received 11,724 cars at Peoria, Illinois, which we handled as a bridge carrier and delivered to connecting lines at junction points in Illinois (other than Nemo)—I might qualify and say that these are loaded cars—Iowa and Minnesota during that year. Furthermore, we received at Peoria 12,439 cars which terminated on our railroad. 10,425 cars of this latter total were destined to competitive points, that is, points reached by other lines connecting or connected with the TP&W. Likewise, we delivered 15,290 cars of eastbound bridge traffic received from connecting carriers at junction points in Minnesota,

Iowa and Illinois (other than Nemo) to connecting carriers at Peoria, Illinois. We originated on our railroad 14,365 cars which we delivered to connecting carriers at Peoria for movement beyond that point. Of this latter number, 9,060 cars were competitive traffic which originated at stations on our line also served by other carriers connecting or connected with the TP&W. The amount of revenue which our railroad received from this traffic which was received from or delivered to connecting carriers at Peoria (apart from the bridge traffic carried via the Nemo interchange) during the year 1954, was $7,167,072. Only $929,993 of this was derived from traffic originating or terminating at points on our railroads which are not served by other carriers. The remainder, or $6,237,079, is strictly competitive traffic. We also forwarded from Peoria to [fol. 1180] destinations on connecting lines a total of, and I will have to supply that figure tomorrow, carloads producing revenue of $86,741, and we received from connecting carriers destined to Peoria, Illinois, 495 cars producing aggregate revenues of $67,707.

In connection with this particular traffic moving from, to, or via Peoria over our line through junction points with connecting carriers other than Nemo, Illinois, I have a detailed study of waybill abstracts for four months of the year 1954, namely, January, April, July and October, to develop the extent of the traffic moving over our line with which the Pennsylvania-TP&W-Santa Fe route would be directly competitive. And by that I mean the route in the reverse direction, Santa Fe-TP&W-Pennsylvania as well. I picked the four months named to minimize the work of gathering the material over that which would be entailed on a full annual basis. The months shown are so spaced as to include all seasonal trends. I projected the results of my study to an annual basis by the simple expedient of multiplying the figures obtained by three.

In my opinion, the result so obtained fully and truly portrays the picture on an annual basis.

The detailed study of our accounts for the four months named in 1954 showed that during those four months our eastbound business on this type of traffic produced reve-

nues to the M&StL in the amount of $72,864, and west [fol. 1181] bound business in the same category produced revenues to the M&StL of $70,600, the combined total being $143,464. Projecting this revenue on an annual basis by multiplying the foregoing figure by three, we arrive at an eastbound figure of $218,592. On westbound traffic the projected figure is $211,800. The combined figure is $430,392 of revenue to the M&StL. This total figure represents 2.2 per cent of our gross freight revenues for the year 1954.

Examples of the movements included in this study follow:

Wrought pipe from origins in Pennsylvania to Kansas destinations which we received from connections at Peoria and delivered to the Rock Island Railroad at Brighton, Iowa, for movement through the Missouri River gateways. We handled a movement of tractors from Detroit, Michigan, consigned to Lubbock, Texas, routed beyond Peoria via M&StL-Marshalltown, Iowa, in connection with the Chicago Great Western Railroad through the Kansas City gateway. A car of bicycles moved from Cleveland, Ohio, destined Kansas City via Peoria-M&StL-Monmouth-CB&Q. We received a car of peanuts originating in Virginia at Peoria, which we delivered to the CMStP&P railroad at Hedrick, Iowa, for movement to Los Angeles, California, via Kansas City in connection with the Santa Fe railway. A car of pulpboard originating at Fulton, New York, moved to Kansas City, Missouri, via Peoria-M&StL-Ackley, Iowa-IC railroad through the Omaha gateway in connection with the Union Pacific.

[fol. 1182] Likewise, we handle a goodly amount of eastbound traffic from western territory to points east of Peoria which is delivered to us by lines other than the Santa Fe. Examples of this type of traffic are as follows: A movement of wheat from Kansas City, Missouri to Buffalo, New York, routed via CB&Q-Monmouth, Illinois-M&StL to Peoria, Illinois, thence NYCStL. A movement of flour from St. Joseph, Missouri, to Boston, Massachusetts, received from the Chicago Great Western Railroad at Des Moines, Iowa, and delivered to eastern connections at

Peoria, Illinois. A movement of lettuce from El Centro, California, to North Hawthorne, New Jersey, received from the CRI&P Railroad at Brighton, Iowa, delivered to eastern connections at Peoria, Illinois. A movement of propane gas from Hocker, Oklahoma, to Marion, Indiana, received by our line from the Milwaukee Road at Hedrick, Iowa, delivered to eastern connections at Peoria, Illinois.

This traffic, the traffic interchanged with the Santa Fe at Nemo, and the other traffic channeled through the Peoria Gateway and that moving to and from Peoria which moves from or to connecting lines or from or to competitive stations—100 per cent of it—is competitive. By that I mean it is traffic which does not necessarily have to move over the rails of the M&StL to obtain the benefit of the lowest rate. It could be diverted away from our line to the lines of the applicants and their controlled subsidiary, the TP&W. [fol. 1183] In the year 1954 this traffic produced in excess of $7,000,000 in gross revenues to the M&StL.

We have analyzed this traffic and have come to the conclusion that based upon 1954 figures we would suffer an annual loss of approximately $1,110,000 in the event the application of the Pennsylvania and Santa Fe were granted.

All of this business I have described as being vulnerable to loss to the M&StL, is very desirable traffic. It not only pays its way but lends substantial support to our entire system. Without it our low density lines in South Dakota, Western Minnesota, and Western Iowa could not survive. In support of this statement I have made some computations from Exhibit H-32, taking the year 1954 as representative, which are designed to show that our ton mile earnings on the Peoria-Nemo bridge traffic greatly exceed our system average ton mile earnings and that the revenue per mile of road derived from the Peoria-Nemo bridge [fol. 1184] traffic contributes greatly to the system average. The distance over our railroad from Peoria to Nemo, Illinois, is 58.5 miles. Our average haul on revenue freight during the year 1954 was 198 miles. The revenue per ton mile from business covered by Exhibit H-32 was 4.2 cents as contrasted with the system average of 1.4 cents (see Exhibit H-33). The traffic covered by Exhibit H-32 produced in 1954 revenue per mile of road of $11,821 as con-

trasted with a system average revenue per mile of road of $14,088 (see Exhibit H-33). This in spite of the fact that the business covered by Exhibit H-32 contributes only 9 per cent of the revenue derived from all traffic handled over the segment between Nemo and Peoria. So it may be seen that this business makes a very important contribution toward bringing up the system average.

With reference to Exhibit H-35, which is the map, all of the representative points on the Pennsylvania Railroad used in Exhibit H-34 are located in that territory colored in yellow on the map designated as Official Classification Territory. All of the representative points on the Santa Fe System used in Exhibit H-34 are located in that territory colored blue on the map, which is Western Classification Territory. Some of them are in the subdivision of that section designated as Western Trunk Line Territory. Some of them are in that section designated Southwestern Freight Bureau Territory and some of them in that section designated as Mountain Pacific Territory. Traffic between Moun- [fol. 1185] tain Pacific Territory and the east is generally referred to as "Trans-Continental Traffic".

In connection with general percentages between Western Trunk Line Territory and Official Classification Territory, the primary division break is made over such gateways between Western Classification Territory and Official Classification Territory as Chicago, Peoria, St. Louis-East St. Louis. A secondary break in the proportion accruing west of these gateways is made on the Missouri River—in this case, Kansas City, Missouri. Via the routes of the Santa Fe-M&StL, or Santa Fe-TP&W through Kansas City and Peoria, the revenue accruing between those points is then subdivided on established percentages. This same general basis also prevails on transcontinental traffic—that is, traffic to and from Mountain Pacific Territory.

On traffic to and from Southwestern Freight Bureau Territory, the primary division break is made on Mississippi River crossings. Where the Santa Fe hauls traffic to or from its junction points with the M&StL at Nemo, Illinois, or the TP&W at Lomax, Illinois, the primary division break is made over East Fort Madison, Illinois. A secondary break of the eastern factor is then made over the

Peoria gateway. A secondary break of the western factor is made over the Kansas City gateway. Then the proportion accruing between Kansas City and Peoria is lumped together and the established divisions in effect between Kansas City and Peoria are applied to that lumped factor [fol. 1186] to ascertain the divisions of the Santa Fe for its haul between Kansas City and Nemo or Lomax, and the proportions of the M&StL or TP&W between those junction points and Peoria.

Where the Wabash Railroad hauls the traffic east of the Kansas City gateway and crosses the Mississippi River at East Hannibal, Illinois, the primary division break is made on that Mississippi River Crossing. Where traffic is handled east of Kansas City gateway by the Wabash Railroad through St. Louis-East St. Louis in connection with the Pennsylvania Railroad, the division break is made on East St. Louis on eastbound traffic and on St. Louis on westbound traffic.

Exhibit H-34 sets out percentage divisions supplied to us by the Santa Fe, applicable between the following representative points on the Pennsylvania, namely: Grand Rapids, Michigan; Detroit, Michigan; Cleveland, Ohio; Pittsburgh, Pensylvania; Philadelphia, Pennsylvania; New York, New York; Fort Wayne, Indiana; Logansport, Indiana; Columbus, Ohio, and Cincinnati, Ohio, on the one hand; and the following representative points on the Santa Fe System on the other, namely: Kansas City, Missouri; Dodge City, Kansas; Denver, Colorado; Oklahoma City, Oklahoma; Tulsa, Oklahoma; Fort Worth, Texas; Galveston, Texas; Amarillo, Texas; El Paso, Texas; and San Francisco, California.

[fol. 1187] The information is shown where applicable via the following routes:

1. PRR—Chicago—Santa Fe.
2. PRR—Effner—TP&W—Lomax—S.Fe.
3. PRR—Peoria—TP&W—Lomax—S.Fe.
4. PRR—Peoria—M&StL—Nemo—S.Fe.
5. PRR—Effner—TP&W—Peoria—M&StL-Nemo-S.Fe.

6. PRR—Decatur—Wabash—Kansas City—S.Fe.

7. PRR—St. Louis—Wabash—Kansas City—S.Fe.

8. PRR—Logansport—Wabash—Kansas City—S.Fe.

8A. PRR—Fort Wayne—Wabash—Kansas City—S.Fe.

Apart from divisions on eastbound Lumber from Mountain Pacific Territory and eastbound Grain and Grain Products from Western Territory, there is a general percentage basis of divisions applicable to practically all other traffic which is currently moving. These percentages are shown on pages 1 through 32. Specific commodity divisions in effect on eastbound Lumber from Mountain Pacific Territory have been taken care of by a showing of the eastbound Lumber divisions from San Francisco, California, on pages 33, 34, and 35. Rates on Grain and Grain products eastbound make on the basis of combination rates over the gateways through which such traffic ... ves and a picture of this is shown by the representative percents each line receives of the total revenue accruing from representative points of Dodge City, Kansas, and Kansas City, Missouri, to the [tol. 1188] eastern points selected as shown on pages 36 to 41. I might interpolate that the Kansas City per cents have been based on the proportional rates east of Kansas City.

On pages 48 to 60 of this exhibit, I have prepared line graphs setting out the percentages each line involved in the specified routes receives on eastbound and westbound business between the eastern points and western points employed in that exhibit. An examination will disclose that the Santa Fe System lines in almost every instance receive their maximum proportions on traffic routed via the Chicago Gateway. It also shows that the Pennsylvania Railroad, considered apart from the Wabash Railroad, generally receives its maximum proportion on traffic routed via the St. Louis-East St. Louis Gateway. Furthermore, it shows that the lumped proportion of the Pennsylvania Railroad and the Wabash Railroad is always greatest when the Wabash Railroad receives the haul to or from Kansas City, Missouri. This lumped proportion is shown because

the Pennsylvania Railroad owns 99 plus per cent of the common stock of the Wabash Railroad and, accordingly, has a definite interest in traffic routed over that line.

Exhibit H-36 is an analysis via the same routes to the extent they have application, as were used in Exhibit H-34, of revenues which accrued on several actual representative shipments which moved during 1954—both eastbound and westbound. These happen to be shipments which were [fol. 1189] channeled through Nemo and Peoria, Illinois, but rates have been checked and have been found to be equal via all routes for which the analysis has been made.

A study of this exhibit serves to bear out the facts developed by the previous exhibit, No. H-34, to the effect that Santa Fe maximum earnings generally accrue when they haul traffic to or from Chicago, and that Pennsylvania System earnings are found to be greatest over its routes with the Wabash Railroad through the Kansas City gateway. The revenues of the Pennsylvania Railroad, considered apart from the Wabash, will be found to be generally greatest via its St. Louis-East St. Louis interchange.

Q. Does that conclude your direct testimony, Mr. Swanson?

A. Well, I have a few remarks that I should like to make off the cuff on these line graphs.

Exam. Albus: I think they can wait until tomorrow.

How long will it take you?

The Witness: It might take as long as a half an hour, Mr. Albus.

Exam. Albus: This case is adjourned until tomorrow morning at 9 o'clock.

(Whereupon, at 5:40 p.m., an adjournment was taken until 9:00 a.m., Thursday, February 9, 1956.)

[fol. 1190]

BEFORE THE INTERSTATE COMMERCE COMMISSION

Finance Docket No. 18991

Finance Docket No. 19086

[Title omitted]

The Carrousel Room,
Pere Marquette Hotel,
Peoria, Illinois.

TRANSCRIPT OF HEARING—February 9, 1956

Met, pursuant to notice, at 9:00 a.m.

Before: Paul C. Albus, Examiner.

APPEARANCES:

(As heretofore noted.)

[fol. 1192] PROCEEDINGS

Exam. Albus: The hearing will please come to order, gentlemen.

We will start out this morning with cross-examination of Mr. Devins. Mr. Thomas, please.

JOHN W. DEVINS resumed his testimony as follows:

Cross examination.

By Mr. Thomas:

Q. Mr. Devins, has the Association of American Railroads made recommendations to you about your car supply --car ownership, I mean?

A. Yes, sir.

Q. Have you complied with those recommendations?

A. No, sir.

Mr. Thomas: That is all I have.

Exam. Albus: Mr. Lucas, please cross-examine.

Cross examination.

By Mr. Lucas:

Q. Mr. Devins, will you turn to page 18 of your prepared text, please.

A. Yes, sir.

Q. The opening part of the full paragraph more than halfway down says: "As will be later demonstrated, to curtail such volume would most certainly adversely affect M&StL revenues", and the balance of the quotation. Are you referring to the later demonstration on the part of Mr. Swanson?

A. Yes. It will be gone into in detail by traffic representa- [fol. 1193] tives. There will be others than Mr. Swanson.

Q. Are you assuming that if the applicants obtained control that the M&StL will suffer materially in respect to its revenues in conjunction with the TP&W?

A. Yes.

Q. If you had a participation in an aggregate revenue of two and a half million dollars, would you undertake to foster and protect it?

A. Will you read that question, please.

(The last question was read.)

A. That is a hypothetical question. I'd have to have all of the details.

By Mr. Lucas:

Q. If I confine it to participation in the flow of traffic that represents annually two and a half million dollars to the M&StL, what would be your position with respect to fostering it and protecting it, if you could?

Mr. Wheeler: Mr. Examiner, I don't understand the question.

Exam. Albus: Do you understand the question, Mr. Devins?

The Witness: No, I do not. I wouldn't understand it unless I had complete details.

By Mr. Lucas:

Q. All right. I wonder if your counsel would furnish you with a copy of Exhibit H-5.

Mr. Wheeler: I don't have it to furnish him.

Mr. Lucas: I hope that doesn't reflect your attitude toward it.

By Mr. Lucas:

Q. Mr. Devins, you have a copy of Exhibit H-5 before [fols. 1194-1195] you, do you?

A. Yes, I do.

Q. Will you turn, please, to page 5.

A. Yes.

Q. Will you look on the left to item 3.

A. Yes.

Q. And then will you carry your eye across, please, to the figures under column 5. Do you follow me?

A. Yes, I do.

Q. Do you notice that that column is one of three that is headed "Revenue Accruing to the TP&W" in connection with various forms of traffic in which they participate?

A. Yes.

Q. Going down to item 3, do you see my figure of 2,574,853?

A. Yes.

Q. If the Minneapolis & St. Louis had that participation in that amount of money derived from traffic interchanged with a connecting road, would they be interested in fostering and protecting it?

A. We'd be interested in fostering and protecting any kind of traffic, in any volume.

Q. And you would certainly be interested in protecting that amount, would you not?

A. We'd be interested in protecting two and a half million dollars any time.

[fol. 1196] Q. All right. Now may I direct your attention to the same column, item 1-E, an additional amount of 3,171,600; if that were added to the two million and a half, you would be even all the more interested, would you not, in protecting it and fostering it?

A. I don't understand your expression "protecting it." We don't have it now.

Q. Just what did you mean by the fact that you might consider if the applicants obtained control that you would lose some revenue?

A. I think we would lose because of the kind, of three railroads.

Q. What are the three roads, if you please?

A. The Santa Fe, Pennsylvania and the TP&W, if you acquired it.

Q. Going back to the 3,171,000, if that were added to the 2,574,000 would you not be just as interested, even more, in seeing to it that nothing happened to that aggregate of $4,800,000?

A. But, in my opinion, it would not be added, it wouldn't be added under my circumstances.

Q. If you will take my assumption that the two might well be put together, would you consider a traffic stake of 3,800,000, nearly four—

A. I don't like to take an assumption, if you will pardon me.

Q. You don't like to answer the question the way I put it?

A. No.

Mr. Lucas: That is all, Mr. Examiner.

[fol. 1197] Exam. Albus: Mr. Cassell?

Mr. Cassell: No.

Exam. Albus: Mr. Broker?

Mr. Broker: No cross examination.

I want to ask Mr. Lucas—were you assuming that the revenue accrued to the M&StL in that situation? I didn't understand your question.

Mr. Wheeler: I didn't, either, Mr. Examiner, and I don't think the witness did.

Mr. Lucas: Mr. Broker, do you want me—

Mr. Broker: I would like to hear the question clarified. This says "Revenue Accruing to the TP&W." Are you trying to say would he be interested in protecting revenue accruing to the M&StL in that amount?

Mr. Lucas: In the same amount, certainly.

Exam. Albus: Mr. Davis?

Mr. Davis: No, sir.

Exam. Albus: Is there any further cross examination?

(No response.)

Exam. Albus: Redirect?

Mr. Wheeler: Yes, Mr. Examiner.

Redirect examination.

By Mr. Wheeler:

Q. Mr. Devins, did you understand that the revenue about which Mr. Lucas testified now accrues to the TP&W and not to the M&StL?

[fol. 1198] A. I did. I understood in both instances it accrued to someone else or some other railroad and not to us.

Q. And therefore it was traffic that the M&StL could not protect at the present time?

A. Right.

Mr. Wheeler: I have no further questions.

Exam. Albus: Is there any recross?

(No response.)

Exam. Albus: You are excused, Mr. Devins.

[fol. 1199] Exam. Albus: Mr. Swanson for cross examination, please.

James A. Swanson resumed the stand and testified further as follows:

Direct examination (continuing).

Mr. Wheeler: Mr. Examiner, I believe that Mr. Swanson had not quite finished his direct last night.

Exam. Albus: I am sorry. All right, you may continue, then, with your direct.

The Witness: In the first place I should like to supply the figure that was left blank on page 10 of my prepared statement where we also forwarded from Peoria to destinations on connecting lines a total of 432 carloads. This should be understood to be via routes other than Nemo, Illinois.

I indicated at adjournment yesterday that I should like to make some remarks about the line graphs shown on pages 48 through 60 of Exhibit H-34. To begin with I should like to invite attention to figures in Exhibit H-36, particularly on each page, line 9, or rather line 11, which shows the total freight revenues accruing on a number of typical shipments. You will find that the range is from $400 per car on page 27 up to $1,645 per car on page 8. Now having that range in mind I think that it is reasonable to use a hypothetical figure of $1,000 for simplicity purposes in connection with some remarks I would like to make on these line graphs.

If you will turn to page 49, for example, of Exhibit H-34, [fol. 1200] it can be readily seen that with a hypothetical figure on per car earnings of $1,000 you may simply move the decimal point in the percentages one digit to the right to obtain the earnings of the involved carriers via the routes shown, in other words, in this particular instance the Pennsylvania combined with the Wabash would earn through the Kansas City gateway via its route through East Hannibal, $690; via the St. Louis gateway $678. The Pennsylvania alone without the Wabash would earn $480 via St. Louis or East St. Louis. The Pennsylvania through its Peoria branch thence through Lomax, including half of the revenues that would accrue to the TP&W, would earn $435, and so on down the page.

Now, you will note that the revenues to the Pennsylvania via St. Louis or East St. Louis, giving the traffic to a carrier other than the Wabash the combined system revenues considering the Wabash part of the system would be reduced by $210, via Peoria branch Lomax, including one-half of the TP&W revenues, the earnings would be reduced by $255.

By Mr. Wheeler:

Q. Mr. Swanson, why do you include one-half of the TP&W?

A. I am assuming now if the Santa Fe and Pennsylvania were to acquire ownership each of them would obtain half of the benefits that accrue to the TP&W. Via their route through Effner and Lomax the revenues of the Pennsylvania would be $303 less than maximum earnings through Kansas City. Via Effner and Peoria, which would contem-

[fol. 1201] plate handling the traffic west of Peoria via a carrier other than the TP&W, still including one-half of the earnings that would accrue to the TP&W between Effner and Peoria, the revenues would be $353 less than maximum earnings via Kansas City.

Now taking the Pennsylvania Railroad alone their maximum earnings are via St. Louis or East St. Louis where they would obtain $480 out of this hypothetical shipment. Their next best route from the standpoint of earnings in this case would be via their Peoria branch through Lomax, including one-half of the TP&W, which would be $45 less than their maximum earnings.

If the shipment were handled via Effner and Lomax the revenues to the Pennsylvania would be $93 less than their maximum earnings. If it were handled via Effner and Peoria, using a line other than the TP&W west, their revenues would be $143 less than their maximum earnings.

Now turning to the Santa Fe, it will be noted that their maximum earnings on this hypothetical shipment would be $695. That would accrue to them via their route through Chicago. Their next best route would be Effner-Lomax westward or Effner-Lomax eastward where their earnings would be $82 less than their maximum earnings. That includes one-half of the TP&W. Then if they were to handle that shipment eastward via Lomax and Peoria, delivering [fol. 1202] the traffic to a carrier other than the TP&W there, their earnings together with one-half of the TP&W earnings would be $130 less than their maximum earnings via Chicago.

I have made similar computations on all of these sheets, but I think that portrays the general picture. It generally follows that pattern.

Q. Mr. Swanson, could you discuss the next item under Santa Fe per cent?

A. The next item under Santa Fe percents that reads Effner-Peoria-Nemo would contemplate movement via the M&StL west of Peoria, and in that event the Santa Fe's earnings would be $146 less than their maximum earnings. These routes were all included to give a complete picture of all of the routes used on pages 1 through 41 of the exhibit.

Q. Now, the last item that you discussed, that is, Effner-Peoria-Nemo, would yield less revenue to the Santa Fe than via Effner-Lomax or Peoria-Lomax, would it not?

A. That is right Effner-Lomax would yield $613, Peoria-Lomax $565, Effner-Peoria-Nemo $449.

Q. Does that conclude your statement?

A. Yes, it does, Mr. Wheeler.

[fol. 1203] Exam. Albus: Cross examination, please.

Mr. Wheeler: Mr. Examiner, I did omit one item here.

Exam. Albus: You may ask it now.

By Mr. Wheeler:

Q. Mr. Swanson, under the part of this exhibit labeled "PRR Per Cents," what item would cover a shipment going from Peoria to Nemo?

A. Are you referring now to the line graph that we—

Q. Yes, sir. I am speaking now of a shipment that would travel over that route, not that it would just begin at Peoria and end at Nemo.

A. Would you read that question, please, I don't quite follow it.

(The question preceding the last question was read.)

A. That would be the item labeled Effner-Peoria. That item contemplates the Pennsylvania's delivery of westward traffic at Effner to the TP&W and the TP&W's delivery of that traffic to a connecting line at Peoria, which in the instance of your question would be the M&StL via Nemo.

Mr. Wheeler: Thank you.

Exam. Albus: Now cross examination, please.

Cross examination.

By Mr. Thomas:

Q. Will you look at your Exhibit H-29, Mr. Swanson.

A. Yes, sir.

Q. Do the cars shown in column B, on page 1, include cars [fol. 1204] as to which the TP&W had only a switch movement?

A. My understanding is that they do not.

Q. Would you give me the figures which include the cars having a switch move?

A. I can't supply them at this time.

Q. Are you positive that there are no cars in there which are given only a switch move by the TP&W?

A. I might say that the information under column B of this exhibit was borrowed from Exhibit H-51 that was submitted by the TP&W in the Illinois Terminal case, and that I verified the figures for 1954 with our car service department. Those cars did not include a switch move. Our figures were two cars off of the figures that were in the TP&W Exhibit H-51 in the Illinois Terminal case.

Q. Does the record in the Illinois Terminal case show whether or not those 1954 figures include cars having only a switch move on the TP&W?

A. I don't know.

Q. From what reports did you check these figures?

A. I had the head of our car service department verify the figures for 1954.

Q. What sources did he use for that verification?

A. Our interchange with connecting carriers.

Q. You mean--

A. (Interrupting) Our interchange with the TP&W.

[fol. 1205] Q. Are those from the station records?

A. I might say, Mr. Thomas that Exhibit H-31 shows the same, 11,999 cars, under the column headed 1954, and that is divided as to interline received, interline forwarded, and intermediate cars. The interline received cars are those cars received at Peoria from the TP&W moving to a destination on our line. The interline forwarded cars are those cars which move from a station on our line via Peoria to the TP&W. If there were any switch cars included, that would not be under either of those categories. It would be under local traffic.

Mr. Thomas: May I go off the record for a minute?

Exam. Albus: Yes.

Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

By Mr. Thomas:

Q. Mr. Swanson, did you request the TP&W to provide you with interchange information about the M&StL-TP&W interchange?

A. I made no such request.

Q. You just used this data from the Illinois Terminal case?

A. That is correct.

Mr. Wheeler: I believe you also said you checked it against your own information.

The Witness: Yes, for the year 1954, we checked it against our own information.

[fol. 1206] By Mr. Thomas:

Q. Could you supply your total interchange at Peoria with the TP&W, including cars switched by the TP&W shown separately?

Perhaps I have asked for that information.

Mr. Heineman: You asked me for it and it is being prepared.

Exam. Albus: What was the answer?

Mr. Wheeler: It has already been requested and we have agreed to supply it.

Exam. Albus: Thank you.

By Mr. Thomas:

Q. Your Exhibit H-30 shows the gross freight revenues of the M&StL. for the years 1948 through 1954. Do you have the figure for the year 1955 available?

A. Our 1955 gross freight revenues were $20,091,364.

[fol. 1207] By Mr. Thomas:

Q. Mr. Swanson, will you tell me how the M&StL solicits the traffic that it obtains for its line.

Mr. Wheeler: Mr. Examiner, Mr. Swanson—or Mr. Nelson, the head of the traffic department of the M&StL, will follow Mr. Swanson on the witness stand, and I think that question should better be directed to him.

Exam. Albus: Will you reserve it for Mr. Nelson.

Mr. Thomas: The problem is this witness telling about competitive traffic and the dangers of losing it and how traffic is routed and the influences of various roads in obtaining traffic.

Mr. Wheeler: If he wants to proceed after my statement, let him go ahead.

Exam. Albus: You may answer, Mr. Swanson.

A. Well, I was going to tell Mr. Thomas that that is out of my bailiwick and that we will have a witness who will follow me, Mr. Nelson, our vice-president, who has charge of solicitation on our railroad, and I agree with Mr. Wheeler that the question might properly be directed to him.

By Mr. Thomas:

Q. Then, you don't know the influences of solicitation of the traffic moving over your line?

A. Oh, I have some familiarity with that influence, why, certainly.

Q. I find it a little difficult to determine whether I should go on with this or not. You say you are not the witness who [fol. 1208] is to testify about your solicitation policy, but have you had solicitation experience?

Mr. Wheeler: Mr. Examiner, I merely want to make this clear. Mr. Swanson is subordinate in the traffic office to Mr. Nelson. Mr. Nelson has jurisdiction over Mr. Swanson's department and many others. But we do tender Mr. Swanson as qualified to answer any and all questions with respect to these exhibits and as to the basis of the exhibits that he introduced. If it is a question as to his qualifications to prepare and testify with respect to these exhibits, then, I think Mr. Thomas should proceed. If, on the other hand, he wants information with respect to traffic solicitation policy, et cetera, I think he should better wait for Mr. Nelson.

Exam. Albus: All right, let's proceed.

Mr. Thomas: I might say that what I am interested in might not be described as policies, but practices.

By Mr. Thomas:

Q. Does the M&StL maintain a number of off-line offices?
A. Yes, sir.
Q. How many?
A. Well –
Q. Are you planning to put those in the record by another witness?
A. Yes, Mr. Nelson will put those in the record.
Q. You have a number, in various cities?
A. That is correct.
[fol. 1209] Q. Throughout the United States?
A. Throughout the United States.
Q. Take the traffic that you have shown in your Exhibit H-32, is that bridge traffic moving between Nemo and Peoria?
A. Yes, sir.
Q. That traffic, as I understand it, is from or to the Santa Fe, the bridge traffic moving–
A. That is interchanged with the Santa Fe at Nemo, Illinois.
Q. What arguments do your solicitors use in order to get that traffic to the M&StL when they are talking to the shippers?
A. I have had no practical solicitation experience. I know what arguments I would use if I were in the solicitation field, but I don't know what arguments they use in that connection.

Mr. Wheeler: Mr. Examiner, I think this is really within the scope of Mr. Nelson's testimony.
Exam. Albus: I think he answered the question, he doesn't know what arguments are used.

By Mr. Thomas:

Q. Let me ask you about the first schedule of Exhibit H-32. I want to refer to the material indicated as revenue carloads handled—
A. Yes, sir.
Q. (Continuing) About halfway down the page.
A. Yes, sir.

Q. And over on the right-hand side, the third column from the right, you have a heading "Total under bridge."

A. Yes, sir.

[fol. 1210] Q. As I understand, that's the total of eastbound and westbound bridge traffic—

A. That is correct.

Q. (Continuing) —moving between Nemo and Peoria.

A. And Peoria, yes, sir.

Q. Now, for the year 1954, in that third column from the right, under the heading "Revenue Carloads Handled" you show 9,891 cars.

A. That is correct.

Q. Do you know how many of those are interchanged with the TP&W?

A. No, I didn't make that check.

Q. Could you supply that information?

A. Yes.

Q. Now, to obtain that traffic to which I just referred, you have to solicit, or your people, your traffic solicitors, have to solicit against the Santa Fe, which is making efforts to obtain its long haul to Chicago, is that correct?

A. There is no question about that.

Q. And you have to solicit against the TP&W which is attempting to obtain that traffic at Lomax?

A. Surely.

Q. And you have to solicit for it against other connections of the Santa Fe west of Chicago?

A. All of the competitive routes.

Q. That would include routes in which the Santa Fe [fol. 1211] wasn't involved, wouldn't it?

A. Yes, it would.

Q. And you obtain that traffic in spite of all that competition?

A. We have thus far been successful in that effort.

Q. But you do not know the arguments that your solicitors use to obtain that traffic, and I think you so stated?

A. Well, that's correct.

[fol. 1212] Q. Now, if the Santa Fe and Pennsylvania were to acquire the TP&W, what change would there be in the situation from the standpoint of solicitation, if you know?

A. Well, I understand that the Santa Fe will put Lomax on a parity with their Chicago solicitation, and that we will then be soliciting against a new combination. In other words, today we are on a parity with Lomax. We would no longer be on such a parity.

Q. You understand that the Santa Fe is going to solicit for a haul via the TP&W through Lomax?

A. I understand that they will advise their shipping public that they will be just as happy to take traffic via Lomax as via Chicago.

Q. How will that take any additional traffic away from you when they are soliciting for the haul all the way to Chicago now?

A. As I see it, those shippers who prefer the Peoria gateway would be influenced by this additional solicitation on the part of both the Santa Fe and the TP&W.

Q. But today you have both the Santa Fe soliciting for Chicago and the TP&W soliciting for the Peoria gateway?

A. Yes, but tomorrow we would have the Santa Fe also soliciting for the Peoria gateway in connection with the TP&W only.

Q. Is it your understanding that the Santa Fe's proposition here was that the Santa Fe would solicit for the Peoria [fol. 1213] gateway?

A. It is my understanding that they would put Lomax and Chicago on a parity, thereby soliciting alternatively via either route.

Q. Don't you think your solicitors can take some advantage of the fact that it is understood that Lomax is on a parity with Chicago?

Mr. Wheeler: Mr. Examiner, I think this is argumentative and that he is going over the same ground over and over again. I suggest if the Santa Fe is changing their parity policy as between Lomax and Chicago as a predicate for these questions Mr. Duffy should resume the stand and state the present Santa Fe—

Exam. Albus: Do you know the answer to that question, Mr. Witness?

The Witness: Will you read the question again, I didn't understand it at all.

Exam. Albus: Well, then, there is no use reading it. Let's have the next question, or reframe the question, please.

By Mr. Thomas:

Q. Aren't your solicitors pretty vigorous salesmen?

A. I think they are.

Q. Don't you think a good salesman could make a pretty good argument with a shipper that if the Santa Fe isn't complaining against traffic being routed via Lomax that they shouldn't complain about traffic being routed via Nemo?

[fol. 1214] Mr. Wheeler: Mr. Examiner, I don't think there is any such predicate in the record. My understanding of the testimony of Mr. Duffy, who is sitting right here, is that they are placing Lomax and Chicago on a parity.

Mr. Thomas: This question assumes that.

Mr. Wheeler: It does not. It assumes a policy of neutrality as between Lomax, Nemo, and Chicago.

Mr. Thomas: It does not.

Exam. Albus: All right, let's not argue about it. The record will show what Mr. Duffy said on the stand.

Mr. Wheeler: I object to the question as not being consistent with the testimony of record.

Exam. Albus: The objection is overruled.

You may argue that in your brief. That is the proper place for it.

A. Will you read the last question?

(Question read.)

A. Well, he could certainly make that argument, but I am not convinced that it would be successful.

By Mr. Thomas:

Q. Do you think the Santa Fe could afford to tell the shippers how the traffic should be routed beyond the lines of the Santa Fe?

Mr. Wheeler: Mr. Examiner, this man is an employee of the M&StL not the Santa Fe.

Mr. Thomas: I am speaking to a man who has offered [fol. 1215] estimates about the possible diversion of traffic, and I am trying to find out what he knows about the factors that affect the routing of traffic.

Exam. Albus: He may answer.

The Witness: Will you read that, please.

(Question read.)

A. My understanding is that they intend to tell the shippers that with respect to the Lomax route.

By Mr. Thomas:

Q. Would you answer the question on the assumption that the Santa Fe would not want to tell the shipper to use the TP&W route beyond the Santa Fe and thereby offend the Erie, for example?

Mr. Wheeler: Pardon me, may I interrupt.

Is this assuming control of the TP&W by the Santa Fe-Pennsylvania?

Mr. Thomas: Yes, it is.

Mr. Wheeler: Thank you.

A. Well, certainly there are some solicitation policies that the Santa Fe must pursue with its connections, and I certainly am not in a position to be entirely familiar with them.

By Mr. Thomas:

Q. And don't railroads generally make it a point not to interfere with their eastern connections, western railroads?

A. I think that is true.

Q. They need them all, don't they?

[fol. 1216] A. Yes.

Mr. Thomas: We wouldn't want to offend the Nickel Plate either, Mr. Broker. Someone called that to my attention.

By Mr. Thomas:

Q. Now, Mr. Swanson, on page 8 of your prepared statement you discussed the question of traffic which is either unrouted or specifies only the delivering line?

A. Yes, sir.

Q. You say that frequently traffic of this sort comes to the originating carrier?

A. Yes, sir.

Q. Have you made a study to determine how frequently such traffic comes to the originating carrier?

A. It comes to us in such—

Q. (Interrupting) Will you answer my question first and then explain it?

A. I have made no detailed study of that, no.

Q. If the Santa Fe is the originating carrier and the traffic is unrouted and it is traffic going from the Santa Fe territory to the east, doesn't the Santa Fe or wouldn't the Santa Fe, under your theory as expressed here, route that traffic via Chicago to get its long haul?

A. I presume they would.

Q. Now, what would be the change if the Santa Fe placed Lomax and Chicago on a parity?

A. On this particular unrouted traffic I see no change. [fol. 1217] Q. Now take the Santa Fe as the terminating line, where it can influence or control the traffic to the extent you suggest, assuming your theory is correct—

Mr. Wheeler: Just a moment. Again, so that the record will be clear, are you assuming for these questions that you are asking that you have acquired control of the TP&W?

Mr. Thomas: Yes, that is correct.

Mr. Wheeler: Did you so understand, Mr. Swanson?

The Witness: That is my understanding, yes.

Mr. Broker: On a 50-50 basis, is that right?

Mr. Thomas: Yes, let that be understood to all those questions.

Exam. Albus: Very well, that will be understood.

Mr. Thomas: Shall I reframe that question or can you find it and read it?

Exam. Albus: Do you have the question, Mr. Swanson?

The Witness: All I have heard is on westbound traffic.
Exam. Albus: Read the question, please.
(Question read.)

By Mr. Thomas:

Q. (Continuing) —would the Santa Fe not try for its haul today on such traffic?
A. Are we talking about unrouted traffic?
Q. Yes.
A. Then the originating carrier will have control.
Q. Let's not talk about unrouted traffic, let's talk about [fol. 1218] terminating, traffic terminating on the Santa Fe, which under your theory as expressed here would be under the—I think you used the expression dominant influence of the Santa Fe.
A. I used that term?
Q. Yes. Well, assuming that your theory is correct would the Santa Fe use that dominant influence today to get that traffic at Chicago?
A. Today they would, yes.
Q. You would not get it at Nemo if that dominant influence was successful?
A. Not if it prevailed, no.
[fol. 1219] Q. Now will you turn to page 9 of your prepared statement? You refer to 11,724 loaded cars received by the M&StL at Peoria in the year 1954 which were handled by the M&StL as a bridge carrier and delivered to connecting lines at junctions in Illinois other than Nemo and in Iowa and in Minnesota.
A. Yes, sir.
Q. That is westbound traffic, isn't it?
A. That is westbound bridge traffic, yes, sir.
Q. Now, in order to get that traffic, to get the bridge haul between Peoria and Nemo, you have to solicit against the Santa Fe, don't you?
A. This is not Peoria-Nemo and it might well be traffic that wouldn't ordinarily move to points on the Santa Fe. This is our entire westbound bridge traffic.
Q. I understand. I withdraw that question.
But as I understood your implication here was that this traffic is competitive with the Santa Fe.

A. No, Mr. Thomas. My implication was that the latter traffic that I discussed in some detail later, that discussion began with the first full paragraph on page 10 of my prepared statement.

Q. Isn't that what you called your second category on page 6?

A. No, this embraces the traffic in that category, but the broad description on page 9 also includes traffic bridge into the Northwest.

[fol. 1220] Q. Well, let's first discuss traffic moving—let's first discuss traffic included in your second category.

A. That is the traffic I began to describe in the first full paragraph on page 10 of my prepared statement.

Q. You mean your reference there to the waybill abstract?

A. That's correct.

Q. In other words, you have examples there of that traffic?

A. I have some examples of that on pages 11 and 12, I believe.

Q. Let's take the first one there, wrought pipe from origins in Pennsylvania to destinations which you received from connections at Peoria and delivered to the Rock Island at Brighton, Iowa, for movement through the Missouri River gateways?

A. Yes, sir.

Q. Could that have moved via the Santa Fe at Nemo?

A. Yes, sir.

Q. Then you solicited that traffic for a longer haul against the Santa Fe's taking it at Nemo, did you not?

A. No, I don't know that to be a fact. I don't know what solicitation practices resulted in that movement. It may have been the result of some Rock Island solicitation.

Q. Wasn't that Rock Island solicitation solicitation against the Santa Fe?

A. I presume that when the Santa Fe is excluded from a haul that it could obtain that the lack of movement over that line is the result of some adverse solicitation.

[fol. 1221] Q. Isn't that true with respect to the Santa Fe in all these examples?

A. Apparently. There is some cause for the movement via the other routes.

Q. Isn't the Santa Fe in a position in all of those examples both westbound and eastbound, in a position to solicit for a haul via Chicago, and at least a haul by Nemo?

A. They are in such a position.

Q. And all the other routes between the east and the west serving the origin and destination of that traffic are soliciting for that traffic, are they not?

A. Surely.

Q. And yet you obtained it, the M&StL obtained the traffic?

A. I don't know whether we obtained it. We got a haul on it.

Q. Do people just give you traffic without solicitation?

A. Oh, we get an occasional car without asking for it.

Q. Generally speaking, wouldn't you say that you would expect that to be the result of your solicitation efforts?

A. Solicitation by and large is very influential on the movement of traffic.

Q. Now I covered both the examples of westbound traffic and eastbound traffic of the type you called your second category, did I not?

A. I understand that to be a fact.

Q. Now turning to page 9 here, the next type of traffic [fol. 1222] mentioned is 12,439 loaded cars received by the M&StL at Peoria and terminated on the M&StL?

A. That is correct.

Q. You say 10,425 of these were destined to competitive points?

A. That is right.

Q. That is, points reached by other lines connecting or connected with the TP&W?

A. Yes, sir.

Q. What does connecting or connected with mean, is that some destination?

A. I included in this group all cars that terminated at competitive points on our railroad, including such points as might be competitive with such line as the Chicago Great Western. That I indicate as connected with the

TP&W but the other lines are connecting lines of the TP&W, such as the Rock Island and the Burlington.

Q. The Northwestern?

A. The Northwestern would be a connecting line of the TP&W.

Q. The Milwaukee?

A. So would the Milwaukee be a connecting line with the TP&W.

Q. Let's take a place like St. Paul, what are the connecting lines there or lines connected with the TP&W that you refer to as competitive.

A. Well, the principal competitors there would be the Burlington and the Rock Island who connect with the TP&W at Keokuk.

[fol. 1223] Q. How about Minneapolis?

A. The same thing.

Q. Wouldn't that also include the Northwestern and the Milwaukee?

A. To a far lesser extent.

Q. You are getting this traffic in competition with those lines, as I understand it today.

A. Yes, we are getting it in competition with any and all competitors.

Q. And those lines are not involved as applicants in the application of the Santa Fe and the Pennsylvania, are they?

A. Only the Rock Island is an intervenor.

Q. Is an intervenor, but assuming that the Santa Fe and the Pennsylvania acquired the TP&W do you think that traffic moving via the Burlington from the Twin Cities over the TP&W route would be diverted from you?

A. I think there is a greater chance of that westward where the Pennsylvania originates the traffic.

Q. And how would the Pennsylvania come into the picture?

A. In putting the traffic over the TP&W all the way to Keokuk.

Q. You understand that they are going to solicit for the TP&W?

A. I understand they are going to put Effner on a parity with Chicago.

Mr. Cassell: Mr. Swanson, didn't you mean to say Lomax [fol. 1224] instead of Keokuk?

The Witness: No, I am talking about the northwest traffic via the Rock Island or the Burlington through the Keokuk—

By Mr. Thomas:

Q. Isn't the Pennsylvania trying to get that traffic via Chicago today?

A. I rather suppose they are.

Q. Or via St. Louis?

A. It wouldn't move via St. Louis. But you are getting it.

Q. But you are getting it?

A. Yes, we are getting it. These are cars that we had last year.

Q. On page 13 of your study you made an estimate which you said was your conclusion based on 1954 figures as to the approximate annual loss which would be suffered by the M&StL if the application of the Pennsylvania and Santa Fe were granted.

A. Yes, sir.

Q. Did you make a study as a basis for that estimate?

A. Yes, we did.

Q. Is that available for examination by us?

A. I can read it into the record.

Q. We'd like a copy. Could you furnish us with a copy of it?

A. I can furnish a copy of that study.

Q. Thank you.

Mr. Thomas: That is all I have, Mr. Swanson.

Exam. Albus: Mr. Lucas.

[fol. 1225] Cross examination.

By Mr. Lucas:

Q. Mr. Swanson, would be willing to let me have for a reasonable period of time this Exhibit H-51 that was filed in the Illinois Terminal case on behalf of the TP&W?

A. I don't have the exhibit with me at the moment.

Mr. Broker: Mr. Lucas, may I answer that, one of our exhibits will be H-51 in the I.T. case, and I will get it for you this noon.

Mr. Lucas: That is fine. I just want to see what it is.

Exam. Albus: Very well.

By Mr. Lucas:

Q. But that is, Mr. Swanson, I think you said is the exhibit from which you took certain of the statistics that appear in your testimony?

A. That is correct.

Q. Will you turn, please, to the same page that Mr. Thomas was just asking you, page 13.

A. Yes, sir.

Q. You base your estimate there on 1954 figures. What about, let's say, a reasonable period prior to 1954, along in the 1950's, would your alleged loss be equally accurate for the period '50, '51, '53, and '52, and '53.

A. It would be substantially the same estimate.

Q. Are you anticipating that there will be a change in the TP&W's solicitation policy?

A. I would rather expect that there would be some change.

[fol. 1226] Q. You do not believe that the independent management will be free to solicit traffic for the benefit of the TP&W?

A. Well, it certainly will solicit traffic for the benefit of the TP&W.

[fol. 1227] Q. At page 15 of your prepared text, Mr. Swanson, do you have that, sir?

A. Yes, I do.

Q. The bottom paragraph sets out percentage division supplied us by the Santa Fe. I just want to clear up. I think you probably don't mean to exclude the participation in that information being supplied the Pennsylvania Railroad, do you?

A. I didn't mean to exclude it, I just mean to indicate we had received it from the Santa Fe.

Q. And the applicants joined in supplying you the information that was requested in advance of the hearing?

A. That is my understanding, Mr. Lucas.

Q. Will you turn now, please, to page 18.

A. Yes, sir.

Q. And in the full paragraph on that page toward the bottom you used the term "lumped proportion of the Pennsylvania Railroad and the Wabash Railroad".

A. Yes, sir.

Q. The words "lumped proportion" are the ones that underlie certain of your exhibits in which you show the Pennsylvania Railroad and the Wabash in combination?

A. Yes, sir, including the Wabash proportion.

Q. Will you take up, please, Exhibit H-28.

Let me take the years 1954 and 1953 for the basis of my next questions. Will you note the middle column relating [fol. 1228] to the TP&W, please.

A. Yes, sir.

Q. And opposite the "Products of mines", "Bituminous coal", do you note the increase for 1953 from 212,000 revenue tons to 324,000 revenue tons in 1954?

A. I do.

Q. If you will accept my mathematics, that is an increase of 133,000 tons. Does that seem to be correct?

A. That is correct.

Q. Do you know whether there was a mine or certain mines opened on the TP&W for the strip mining of bituminous coal in 1953 and '54?

A. I know that they have some substantial strip mines on the TP&W. I am not familiar with the time when they were opened.

Q. That increase there with respect to products of mines has some effect, does it not, on your percentage figures that you show otherwise on this page?

A. It would have some effect. It would increase, of course, the average percentage for the five years on products of mines over and above that which obtained in 1953.

Q. On that same commodity classification, products of mines, the percent of total of the TP&W changed from 14.7 to 19.8 from '53 to '54, did it not?

A. That is correct, in the average of 16.7.

Q. And that increase in the movement of bituminous [fol. 1229] coal would also affect the figures down at the bottom, the percentage of total, or let me ask it this way: Do you think that increase in coal movement had some

effect on the TP&W change in respect to manufacturers and miscellaneous—

Mr. Wheeler (interrupting): Just a moment, please. I think the witness is entitled to know what the questioner means by "some".

Mr. Lucas: All right, Mr. Wheeler. Let me start over again.

By Mr. Lucas:

Q. I direct your attention to the percent of total, about 6 lines from the bottom, under the TP&W 1953. Do you follow me on that, Mr. Swanson?

A. The percent of total under "Manufacturers and miscellaneous"?

Q. That is right. 54.1 per cent for the year '53, is that right?

A. That is correct.

Q. And the percent of manufacturers and miscellaneous dropped in the year '54 to 49.4?

A. That is correct.

Q. Do you think the increase of 130,000 tons between those two years in bituminous coal had something to do with that reduced percentage on manufacturers and miscellaneous?

A. Oh, surely, when you increase the tonnage under one commodity classification, it is bound to lower the percentage on the other.

Q. On this same exhibit, H-28, do you understand whether [fol. 1230] there is or is not any duplication in revenue tons figures there shown for the M&StL and the TP&W combined?

A. The combined figures are the combined tonnages of the two lines.

Q. I assume that is correct. Now, however, let me give you an example. If a car of wheat moves over both the M&StL and the TP&W, is it not shown as revenue tons for both railroads?

A. It would be duplicated, yes, sir.

Q. You do not know how much duplication might be involved in the figures, the figures in the six columns which show the combined—

A. No, I don't.

Q. On page 4 of your prepared statement, Mr. Swanson, I direct your attention to the second sentence at the top of the page reading "Particular attention is drawn to the fact that the combined figures would serve to reduce the M&StL's reliance on products of agriculture and would serve to increase its percentage on manufactures and miscellaneous", and you say this, which I assume means the predicate of that is the part I just read, is that correct?

Mr. Wheeler: Mr. Examiner, could I have that question read. I don't follow it.

Exam. Albus: Do you understand it, Mr. Swanson?

The Witness: No, I am not quite clear.

Exam. Albus: Read the question.

[fol. 1231] A. Well, the following statement is predicated upon that statement that was read.

By Mr. Lucas:

Q. My question was probably not very clear, but that is what I meant to develop, for sure.

Then you say this, which you have now cleared up, and I quote, "This would have a stabilizing influence on the traffic flow over the combined properties in the event our application to acquire control of the TP&W were approved." Just what do you mean would have a stabilizing influence on the traffic flow over the combined properties?

A. Well, we find that manufacturers and miscellaneous contributes more steady flow over the year than does agriculture which follows a seasonal pattern, and what I meant to point up by this statement was the fact that there would be some stabilization in the direction of humps and valleys in seasonal trends.

Q. Do you mean or assume that the manufacturers of miscellaneous traffic on the TP&W would then all automatically flow over the M&StL?

A. Oh, no.

Q. Do you mean that some of it would, in your opinion?

A. Not necessarily, no. We'd anticipate pretty much the same flow of traffic over the M&StL as at present and the same flow of traffic over the TP&W as at present.

Q. Your answer would be the same, that you wouldn't [fol. 1232] assume that the agricultural traffic of the M&StL. would automatically flow over the TP&W?

A. Oh, that's obvious.

Q. What is the source of the figures shown in Exhibit H-29?

A. I responded to that on a question by Mr. Thomas.

Q. In other words, Exhibit H-51?

A. That is correct, except that I had the year 1954 verified by our carrier service department as to the TP&W and M&StL interchange?

Q. And in my question I meant, Mr. Swanson, to identify that as H-51, in the exhibit filed by the TP&W in the Illinois Terminal case.

A. I understand.

Q. Your effort to verify the figures taken from Exhibit H-51 in the Illinois Terminal case, did it make any check against the freight commodity statistics for the year 1954?

A. I don't know to what statistics you have reference.

Q. Are you familiar with the statement fifty-five one hundred, number five five one hundred?

A. No, sir.

Q. So you don't know whether the verification included a check of these figures against statement no. 55-100?

A. I don't know what the verification includes.

Q. If there is a discrepancy there of 13,000 cars, you can't clear that up for us today without any further information, can you?

[fol. 1233] Mr. Wheeler: Mr. Examiner, I don't think that question is at all fair. I don't think he should be asking this witness about a document that he doesn't have before him or have some opportunity to examine.

Exam. Albus: I will sustain that objection.

By Mr. Lucas:

Q. Well, do the total revenue cars in column C on page 1 of your Exhibit H-29 include cars switched?

A. No; they are all line haul cars.

Q. Well, then, I come back to the question how do you account for a difference of thirteen thousand cars, if my figures are correct, in connection with statement no. 55-100?

Mr. Wheeler: What is statement 55-100? I think that is what the witness is entitled to see.

Mr. Lucas: ICC freight commodity statistics for the year 1954.

A. I don't know where the differences occur.

By Mr. Lucas:

Q. Do you have any information as to the volume of cars switched at Peoria, total cars switched at Peoria?

Mr. Wheeler: By whom?

Mr. Lucas: Total cars switched at Peoria.

By Mr. Lucas:

Q. By all railroads.

A. No.

Q. Do you have the information as to how many cars as between the M&StL and the TP&W are switched at Peoria?

A. Yes.

Q. Does that appear in your—

[fol. 1234] A. (Interrupting) I don't have it here. No, it doesn't appear here.

Q. Is that something you are going to supply in response to—

A. (Interrupting) As I understood it, Mr. Heineman agreed to supply that information.

Q. That is all right, then.

Have you ever been to Effner, Mr. Swanson?

A. No, I haven't.

Q. You have no basis, then, personal knowledge, for comparison of switching at Effner and switching at Peoria?

A. No personal knowledge of it, no.

Q. Have you gained any knowledge through your activities in the industry, so to speak?

A. Oh, I have gained a lot of knowledge of it right here.

Q. Would you say that there is a very close comparison between switching of cars at Peoria and switching of cars at Effner?

Mr. Wheeler: Mr. Examiner, if this is from an operating standpoint, we will have an operating witness later.

Mr. Broker: I object to that, too, because this man isn't qualified, for instance, to describe a switching service between the TP&W and the Nickel Plate at Farmdale.

Exam. Albus: If he has never been to Effner, he doesn't know what the situation is.

Mr. Lucas: Well, he said he had some knowledge gained [fol. 1235] in the trade.

Exam. Albus: He knows what a switched car is, but how they switched it is something else again.

By Mr. Lucas:

Q. Have you any information as to the number of cars switched at Effner compared with Peoria?

A. I think the only switching you have at Effner is the interchange switching. I don't know, there would be far less at Effner than Peoria, I rather imagine.

Q. Now, on Exhibit H-30, I direct your attention to percentages shown in columns 4, 6, 8, 10 and 12.

A. Yes, sir.

Q. I guess you readily agree with that because they would vary with the total volume of traffic handled by each line, would you not?

A. That is the reason, of course, the percentages vary. The smaller line has the larger percent.

Q. On that basis, the Chicago-Illinois Midland would have a greater interest than the M&StL to get the TP&W, would it not?

A. I don't know what their interest would be. I know ours is great.

Q. In connection with your testimony, also the last pages of Schedules 4 and 5 of Exhibit H-32—

A. Yes, sir—

Q. (Continuing) —there you give the total traffic interchanged at Peoria, do you not?

[fol. 1236] A. Are we referring to Exhibit H-32?

Q. That is right.

A. Only that traffic interchanged that we receive from the Santa Fe at Nemo, Illinois, or delivered to the Santa Fe at Nemo, Illinois.

Q. Will you turn, please, to page 9 of your prepared text, Mr. Swanson.

A. Yes, sir.

Q. I think you have already indicated to Mr. Thomas that the figure you have given there towards the beginning of the first full paragraph, the westbound bridge traffic, 17,724 cars at Peoria—

A. Yes, sir.

Q. That is what you received, is that right?

A. That plus the Nemo interchange shown on page H-32, the westbound bridge traffic.

Q. And on that same page you say: "Likewise, we delivered 15,290 cars of eastbound bridge traffic received from connecting carriers" and so forth.

A. Yes, sir.

Q. Can you give us the number of cars interchanged with the Nickel Plate?

A. I don't have that available.

Q. Would it be much trouble to develop that and supply it to us?

Mr. Lucas: Mr. Wheeler, do you have any objection? I [fol. 1237] should address it to you.

Mr. Wheeler: Off the record.

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

Mr. Wheeler: We will be glad to furnish it.

Mr. Lucas: Just to clear up what we are asking for, it is the year 1954, all cars that went through Peoria for receipt from or delivery to the Nickel Plate in conjunction with the M&StL.

Mr. Wheeler: Mr. Lucas, on these requests, so that we can have them straight in the record, would you mind giving me a letter on them?

Mr. Lucas: I will be glad to.

By Mr. Lucas:

Q. I think you have already agreed to supply, in response to question of Mr. Thomas, the traffic analysis that appears on page 11. When that is produced, will it show the complete routing?

A. No.

Q. Do you have available here the complete routing for the nine examples that you site?

A. Yes, I can give you that.

Q. Would it save time to get it in a tabulation or can you give it quickly in the record?

A. Well, I have it in a maze of figures in my room. I [fol. 1238] would have to ferret it out.

Q. Suppose we get that later.

Exam. Albus: Include that in your request.

By Mr. Lucas:

Q. Mr. Swanson, I understand that I am in error in indicating that that analysis is the one to which I now should be directing my attention and your attention, too. On page 10 of your prepared text, the second paragraph, or the first full paragraph, you say: "I have made a detailed study of waybill abstracts for four months of the year 1954" and so forth. That is the study to which I should be referring and would like to have produced.

Mr. Lucas: Can I also include that in the letter, Mr. Wheeler?

Mr. Wheeler: Yes, sir.

By Mr. Lucas:

Q. And will that study show the complete routing, the analysis of the waybills?

A. Yes, it does.

Q. Now, Mr. Swanson, when you were furnished the information to which I directed your attention earlier, by both the Pennsylvania and the Santa Fe, were there not some footnotes and notations on that information?

A. May I have that question, please.

Mr. Lucas: Will you read the question.

(The last question was read.)

A. You refer now, I presume, to the information with [fol. 1239] respect to divisions prepared jointly by the Pennsylvania-Santa Fe?

By Mr. Lucas:

Q. Maybe I can clear it up this way, was there any supplemental information to the effect that the percentages shown would be reduced by changes accruing to intermediate carriers in the Chicago and St. Louis areas, wherever those two gateways were applicable?

A. There was no such information in the memorandum that I have, although I understand that where an intermediate carrier is used at Chicago or the terminal railroad at St. Louis there are deductions for that intermediate service.

Exam. Albus: Let the record show a ten-minute recess.

(Short recess.)

Exam. Albus: The hearing will please come to order.

If there is no chance of finishing this case by Saturday evening we are going to adjourn early tomorrow, around 4:30, the same as we did last week, to afford the people from Chicago a chance to return home for the weekend. We may be in a little better position to tell tomorrow whether or not there is a chance of winding it up on Saturday; if there is, we will probably work Saturday. Otherwise we will adjourn from tomorrow afternoon until Monday.

Mr. Broker: Mr. Examiner, Mr. Wichman called for examination in Ex Parte 196 and we would like very much to have him go on tomorrow. I don't think any of the railroads will object to that, but I'd like to point out this matter.

[fol. 1240] Exam. Albus: Is he your only witness, Mr. Broker?

Mr. Broker: No, sir. I have one other witness who will not take very long.

Exam. Albus: Very well, we will take care of Mr. Wichman tomorrow.

Mr. Davidson: In that connection, I have consulted with counsel and it will be agreeable for Mr. Atkinson, President of the Wabash, to be accommodated this morning.

Exam. Albus: Very well. If it is agreeable to counsel, it is certainly agreeable with the Examiner.

Mr. Cassell: I think Mr. Adams has spoken to a number of counsel, considering a similar problem of ours, that Mr. Gainnie will not be available next Monday, depending on whether or not, on how the case is going to go, on the time. We may ask the courtesy of putting him on tomorrow.

Exam. Albus: Very well. Anything you counsel agree to or any procedure you want to follow is certainly all right with me.

Now we will continue with the cross-examination of Mr. Swanson. Mr. Lucas, please.

By Mr. Lucas:

Q. Mr. Swanson, perhaps I can shorten the particular point that I was discussing with you just before the adjournment. If I read into the record from the bottom of the information, information sheet, relative to divisions, percentages that were supplied to you by the Santa Fe and the [fol. 1241] Pennsylvania, this note appearing at the bottom and I now quote: "Note—percentages shown above would be reduced by changes accruing to intermediate carriers in the Chicago and St. Louis areas to the extent applicable", I mean, the information you received had that qualification and your use of the material was subject to that qualification, was it not?

A. I didn't understand that that qualification was shown on any of the information that I had, Mr. Lucas.

Q. Perhaps you didn't see it, but that is a copy of what was supplied by the Pennsylvania and the Santa Fe.

A. Oh, that is with respect to the eastbound lumber.

Q. Is that lumber?

A. Yes, that is lumber.

Q. Again trying to shorten it, Mr. Swanson; also, Mr. Examiner—

Exam. Albus: That is all right.

By Mr. Lucas:

Q. (Continuing) —exactly the same note appears at the top of all of the additional sheets pertaining to other commodities. Can you verify on the record that that is so?

A. I find that notation on the eastbound lumber, the eastbound grain and grain products, from both Kansas City and Dodge City—yes, the notation is there. I understood that that would be a fact. I see it on the top of the general percentage sheet that note is shown.

Q. It is opposite all of the commodities, is it not?

[fol. 1242] A. Yes.

Q. On all the sheets?

A. Yes.

Q. Mr. Swanson, some of the revenues received by the M&StL are a result, are they not, in part, of the solicitation policy of the TP&W?

A. I presume that there would be some measure of traffic that would move over our line that would be the responsibility of the TP&W solicitation.

Q. Now, I qualify that by saying if, if their solicitation policy is unchanged, presumably you would still have the benefit of whatever that proportion of revenues would be?

A. We would have that proportion if their policy were unchanged, yes.

Mr. Lucas: That completes it, Mr. Examiner.

Exam. Albus: Mr. Cassell?

Cross examination.

By Mr. Cassell:

Q. Mr. Swanson, in your testimony and in your exhibits you have shown an amount of revenue that you feel is vulnerable to loss?

A. Yes, sir.

Q. If the Santa Fe and Pennsylvania application is approved, isn't that right?

A. Yes, sir.

Q. Isn't the premise for that the fact that it is going to [fol. 1243] be acquired and owned by competing carriers?

A. That is the premise upon which that statement was made.

Mr. Cassell: That is all.

Exam. Albus: Mr. Broker.

Mr. Broker: No questions. I should like to point out for the record, though, that I have furnished to Mr. Lucas a copy of the exhibit in the Illinois Terminal case, and I believe the proper number of that is H-52, in that case.

Exam Albus: Very well.

The Witness: Thank you.

Mr. Lucas: I apologize, Mr. Broker, in not having said something about that.

I think that clears up the H-52. In fact, Mr. Examiner, he said we may retain that.

Exam. Albus: Very well.

Mr. Davis, please, for cross-examination.

Cross examination.

By Mr. Davis:

Q. Mr. Swanson, do I understand from your testimony, particularly as concerns the St. Louis gateway and divisions thereover, that the Wabash and the Pennsylvania are direct connections at St. Louis or East St. Louis?

A. I understand that the connection at East St. Louis is through the Terminal Railroad Association.

Q. And how about at St. Louis?

A. I am not wholly familiar with that St. Louis-East [fol. 1244] St. Louis situation.

Q. Then, you don't know that the Wabash and the Pennsylvania have no direct connection except through the Terminal Railroad at St. Louis and East St. Louis?

A. I understand that the Terminal Railroad's charges are absorbed in that interchange traffic. That's my understanding.

Q. Now, as far as the paying of those charges is concerned on traffic, for example, moving to and from the Southwest via that gateway, the delivering line would pay those charges out of their divisions, is that correct?

A. That is my understanding.

Q. Now, on page 16 of your prepared statement, the last sentence in the first full paragraph states that where traffic is handled east of Kansas City gateway by the Wabash Railroad, St. Louis-East St. Louis, in connection with the

Pennsylvania Railroad, the division break is made on East St. Louis on eastbound traffic and on St. Louis on westbound traffic. Now, would that not depend, the accuracy of your statement depend, upon the origin and destination of the traffic involved?

A. The information—yes, there is some dependence upon that, that is true.

Q. In other words, upon transcontinental traffic the break might be at East St. Louis in all situations, might it not?

A. The break there is at East St. Louis.

Q. Now, from that same sentence that you have just [fol. 1245] read, do you mean to indicate that the divisional break is any different between the Wabash and the Pennsylvania than it is between the Wabash and any other connection at that gateway?

A. No, they are the same.

Q. Now, I direct your attention to the statement on page 18 of your prepared statement wherein you refer to the lumped proportion—

A. Yes, sir.

Q. (Continuing) —of the Pennsylvania Railroad and the Wabash Railroad, and I believe that you also make a similar reference in your Exhibit H-34, where you show Pa. percentages, including Wabash, is that not correct?

A. Yes, sir, it is.

Q. Now, Mr. Swanson, do you know of any instance in which, in the making of divisions, Wabash is lumped with PRR in making those divisions?

A. That isn't part of the divisional arrangement. That is merely a lumping together of the two proportions that accrue to each line.

Q. Then, your answer is that in making divisions those two lines are separated and treated wholly apart from one another?

A. That is my understanding.

Q. It further is not your understanding, is it, that the Wabash proportion would accrue directly to the Pennsylvania Railroad?

A. No, it accrues directly to the Wabash, and it is only through the Pennsylvania's ownership of the Wabash that [fol. 1246] they have an interest.

Q. And that those revenues that the Wabash receives from its proportion would only directly benefit the Pennsylvania insofar as the sum that trickles down through the form of dividends accrues to the benefit of the Pennsylvania, is that not correct?

A. That is correct, they have that ownership interest.

Q. As a matter of fact, the actual stock control is in the Pennsylvania Company, is it not, rather than in the Pennsylvania Railroad Company?

A. Well, I am not familiar with the whole relationship, but I think they are synonomous.

Mr. Davis: That is all I have.

Exam. Albus: Is there any further cross-examination? Mr. Broker.

Mr. Broker: Earlier in the hearing I raised the question as to what is a gateway, if you will recall.

Exam. Albus: Yes.

Mr. Broker: This witness has some testimony on that.

Cross examination.

By Mr. Broker:

Q. A "gateway", as more properly used in this case, is a point with a primary division break, isn't it, such as Peoria, St. Louis, or Chicago, isn't that right?

A. That would be my definition of a gateway. I presume that there are both major and minor gateways for the move-
[fol. 1247] ment of traffic and that such a point as Lomax or Effner might be considered a minor gateway and Peoria the major gateway.

Mr. Broker: I have nothing further.

Exam. Albus: Is there any further cross-examination?

Cross examination.

By Mr. Davidson:

Q. Mr. Swanson, you have studied the traffic on the TP&W and its movements, have you not?

A. No, I have made no detailed study of the TP&W traffic.

Q. You don't know where its traffic originates or anything, is that it?

A. Oh, I have some definite ideas. We have testimony here that shows a large movement of traffic over the TP&W between the Pennsylvania and the Santa Fe.

Q. Now, do you have any opinion, as an expert on traffic movements, do you have any opinion on the movements west of Peoria on the TP&W, whether the movements, whether the interchange traffic is more than, equal to or less than traffic originating on the TP&W between Peoria and its western termini?

A. Will you read that question, please.

(The last question was read.)

Mr. Wheeler: Mr. Examiner, I submit, there are a multitude of questions there. I don't understand the question. I don't know whether to object to it or not.

Exam. Albus: Does the witness understand the question?

The Witness: I am not sure that I do.

Mr. Davidson: I will break it down.

[fol. 1248] By Mr. Davidson:

Q. Do you have any idea whether there is more interchange traffic than traffic originating between Peoria and the western termini?

Exam. Albus: On the TP&W.

A. What do you mean by "the western termini"? Online traffic?

By Mr. Davidson:

Q. Keokuk and Lomax.

Exam. Albus: This is on the TP&W, Mr. Swanson.

A. That is what I want to develop. I understand that the interchange traffic is far greater than the originating and terminating traffic.

By Mr. Davidson:

Q. Do you have any knowledge based on your study how much of that traffic, that interchange traffic, comes from lines that do not connect with the M&StL at Peoria or west of Peoria?

A. I repeat, I have made no study, so I have no knowledge of that.

Q. Do you have any opinion on it?

A. Oh, I have my opinion, my own opinion, yes.

Q. What is that?

A. My opinion would be that the greater part of the traffic would or could be channeled through the Peoria gateway. It certainly can be channeled through the Peoria gateway because it is today.

Mr. Davidson: All right.

Exam. Albus: Are there any further questions on cross?

[fol. 1249] (No response.)

Redirect examination.

By Mr. Wheeler:

Q. Mr. Swanson, were all of the exhibits which you have presented discussed with Mr. Nelson and the traffic department of the M&StL prior to their final preparation?

A. Yes, they were.

Q. And did they receive the approval of Mr. Nelson and other members of the traffic department?

A. They did.

[fol. 1250] Q. You were asked a question with respect to unrouted traffic originating on the Santa Fe. Would not the differential between Chicago—

Mr. Thomas: May I object. I see we can get into leading questions on redirect by the form of that question.

Wasn't that starting out to be a leading question, Mr. Wheeler?

Mr. Wheeler: I don't think so.

Exam. Albus: Let's proceed and we will find out what it is.

By Mr. Wheeler:

Q. Do you have an opinion, Mr. Swanson, with respect to whether the Santa Fe would receive, not more revenue on traffic originating on its lines and traversing the TP&W before or after acquisition of the latter property?

Mr. Thomas: Let me get that question clearly, Mr. Wheeler. Was your reference to what, gross revenue or net?

Mr. Wheeler: Gross.

Exam. Albus: Let's have the answer, if you have one.

A. Yes, it is obvious that the Santa Fe through its ownership interest in the TP&W would receive a larger proportion after acquisition than at present.

By Mr. Wheeler:

Q. Now refer to the notes on the divisional information sheets furnished you by the Santa Fe-Pennsylvania.

A. Yes, sir.

Q. To which reference was made by Mr. Lucas.

A. That's right.

[fol. 1251] Q. In what instances would that note apply?

A. Well, I can give you an example on westbound traffic, if you will refer to sheet—

Q. (Interrupting) Mr. Swanson, let me change the question in order to simplify this.

In what instances would the note not apply?

A. The note would not apply, as I understand it, where direct interchange is made between the carriers.

Q. Now, when the note did apply, would it significantly affect the information with respect to which you have heretofore testified?

A. Not significantly, no.

Mr. Wheeler: I have no further questions.

Exam. Albus: Is there any recross-examination?

Recross examination.

By Mr. Lucas:

Q. Mr. Swanson, do you have any familiarity with the movement over the EJ&E through Chicago, through the Chicago area?

A. I know they have a substantial interchange movement.

Q. And how about the Indiana Harbor Belt?

A. They have also a substantial interchange movement. I developed the charges on that and can read them into the record, if you would like.

Q. The EJ&E develops a substantial amount of traffic incident to switching to and from local industries in the [fol. 1252] Chicago district, does it not?

A. Without a doubt.

Q. And so that is equally true of the Indiana Harbor Belt?

A. Yes, it would be true of them without a doubt.

Q. Does the Pennsylvania railroad have a direct interchange with western lines at St. Louis?

A. Not to my knowledge.

Q. They do have to proceed through intermediate switching carrier, do they not?

A. I understand the Terminal Railroad Association interchanges that traffic.

Mr. Lucas: That is all.

Exam. Albus: Mr. Davis.

Recross examination.

By Mr. Davis:

Q. What is the transfer charge assessed by the Terminal Railroad Association at St. Louis, Missouri, for the river crossing between east and west lines at that point?

A. It varies according to the commodity.

Q. What is the top figure?

A. I believe the top figure to be $25.81 a car.

Q. Do you consider that to be insignificant?

A. When it is translated into percentages it is not particularly great.

Mr. Davis: That is all I have.

Exam. Albus: Are there any further questions of Mr. Swanson?

[fol. 1253] Further redirect examination.

By Mr. Wheeler:

Q. Mr. Swanson, are you familiar with the ownership of the Terminal Association of St Louis?

A. I understand that it is owned by all of the St. Louis lines, that there are 15 owners with the Missouri Pacific having two ownerships or 16 shares in it.

Mr. Wheeler: I have no further questions.

Mr. Broker: For the record the Nickel Plate is not a part owner of the Railroad Terminal Association, although uses its facilities.

Exam. Albus: Mr. Swanson is excused.

The Witness: Thank you.

(Witness excused.)

Exam. Albus: And the record will show that the exhibits marked for identification H-28 to and including H-36 are received at this time.

Mr. Lucas: May I make an objection to so much of the exhibits as purport to show the Pennsylvania and the Wabash on a lumped proportion basis?

Exam. Albus: Yes, sir, you may make that objection.

It is overruled.

Mr. Thomas: Mr. Examiner, I just wanted to state, as I did earlier, that there is some question about certain interchange figures in Exhibits H-29 and H-30. We are going to try to clear them up off the record.

[fol. 1254] Mr. Davidson: Due to circumstances under which I have no control, to wit, the weather, made me arrive late. I wonder if I can impose on counsel and the Examiner that Mr. Devins may be placed again on the stand so I may ask him a few questions.

Exam. Albus: On cross-examination?

Mr. Davidson: Yes.

JOHN W. DEVINS was sworn and testified as follows:

Cross examination

By Mr. Davidson:

Q. Mr. Devins, on page 16 of your direct testimony, I believe you testified that the railroad now has, one of the problems which faces the M&StL, are branch lines and feeders that are not justified from a economic point of view, is that correct?

A. That is correct.

Q. Now, Mr. Devins, you heard the testimony of your traffic man in which he testified that the bulk of the traffic on the western half of the TP&W, that is, that portion west of Peoria was interchange traffic?

A. Yes.

Q. And you further heard, you further heard him testify that practically all that interchange traffic could be handled on the M&StL's line west of Peoria?

A. Yes.

[fol. 1255] Q. Now, may I ask you this, did you at any time discuss with Mr. Heineman the possibility of savings that could be effected by abandoning the western half of the TP&W?

A. I think I ought to explain this—

Q. (Interrupting) Did you or did you not?

A. I discussed with Mr. Heineman—

Q. (Interrupting) When and where?

A. I think in Chicago at one time.

Q. Who was present?

A. He and I.

Q. What did you say and what did he say?

A. I think I told him about the conversation that we had previously had between myself and Mr. Sprague some 16 or 18 years ago when this subject first came up as to the desirability of the M&StL acquiring the TP&W railroad, that in scanning maps and looking over the situation from them, and that only, that we had thought that there might be a possibility of abandoning the west end of the TP&W railroad and thus avoiding a need for two routes, but that subsequently when we came to find out

all of the facts and details about the operation on that end of the line we dropped the subject entirely because obviously it could not be done and shouldn't be done.

Q. Have you made any study of the direct savings that could be effected by abandonment of that line, assuming the M&StL handles that traffic?

[fol. 1256] A. No, sir.

Q. So you don't know whether you can save any money or not?

A. No, I don't. We never even considered it.

Mr. Wheeler: May the witness finish his answer.

A. Never even considered it. We were not thinking in those terms whatever.

By Mr. Davidson:

Q: Do you know what the maintenance cost on the west end of the TP&W is?

A. No, I do not, and I think it is immaterial. It is a good railroad, and I think it is immaterial.

Mr. Davidson: I ask that the last part be stricken.

Exam. Albus: It may be stricken.

By Mr. Davidson:

Q. So you don't know what it costs?

Exam. Albus: That is what he said.

By Mr. Davidson:

Q. What is the dollar value of traffic originating west of Peoria on the TP&W?

A. If you refer to traffic, intermediate traffic, between the west end of the line and Peoria I do not.

Q. Has the board of directors ever discussed the cost of maintaining the TP&W west—the board of directors of the M&StL, you are on that, are you not?

A. Yes, sir.

Q. Have you ever considered the cost of maintaining the TP&W west of Peoria?

A. No, sir.

[fol. 1257] Q. Has it ever been discussed with the board?

A. No, sir.

Q. The west end of the TP&W has never been discussed by anyone in the M&StL, in your presence, except the conversation you had in Chicago with Mr. Heineman?

A. None whatever.

Mr. Davidson: Thank you.

Exam. Albus: Are there any further questions?

(No response.)

Exam. Albus: You are excused, Mr. Devins. Thank you.

Mr. Davidson: Thank you.

(Witness excused.)

Mr. Wheeler: Mr. Examiner, Mr. Carr has asked to be heard at this time, and we are yielding to him.

Exam. Albus: Thank you very much, Mr. Wheeler. Mr. Carr, please.

(Applicant's Exhibits Nos. H-28 through H-36, inclusive, Witness Swanson, were received in evidence.)

[fol. 1258] C. A. Carr was sworn and testified as follows:

Direct examination.

The Witness: My name is C. A. Carr. I am a rate expert in charge of the traffic department of the South Dakota Public Utilities Commission in the State House at Pierre, South Dakota.

For the past 20 years I have been engaged in various phases of transportation, including appearances in finance dockets before the Interstate Commerce Commission and numerous rate proceedings and so forth.

In this case I am appearing for the State of South Dakota and for the South Dakota Public Utilities Commission who have intervened in this case in support of the Minneapolis & St. Louis Railway.

The M&StL operates a segment of rail line entering the State of South Dakota east of Watertown and extending west and northwest a distance of approximately 154 miles.

It is an important agency and link of rail transportation in the state, serving 17 cities and towns and the trade area adjacent thereto.

In my testimony in this proceeding I wish to show that the acquisition by the M&StL of the TP&W is in the public interest, that the acquisition of the TP&W by the Pennsylvania Railroad and the Atchison, Topeka and Santa Fe Railway Company by reason of competitive relations be- [fol. 1259] tween said carriers and the M&StL will produce adverse financial results to it by loss of traffic and will tend to reduce its capacity to render adequate service over its system, including particularly that segment thereof located in the State of South Dakota, and hence would not be in the public interest.

I submit the following facts are common knowledge of persons in transportation circles:

That there are certain rail traffic gateways through which the predominant volume of freight traffic passes handled by railroads;

That most of the large railway systems of the United States, which includes the Pennsylvania and the Santa Fe, converge at the Chicago gateway;

That the second important gateway involved in this proceeding is the Peoria gateway;

That the M&StL, unlike its competitive rail lines, does not enter the predominant gateway or interchange freight traffic at Chicago;

That no railway system can operate for any length of time without handling interline or overhead traffic with other carriers;

That such interline traffic is transferred from one rail line to the other at the gateways;

That the M&StL is dependent on the TP&W for a large [fol. 1260] volume of interchange of freight traffic delivered to it or delivered by it through connections with the TP&W. Reference is made to the decision of the Commission in Finance Docket No. 10947, 228-ICC-277, in 1935, where its operations in connection with the interchange of traffic at Peoria, Illinois, is referred to in the following language:

"The most important of these through routes are maintained in connection with the Peoria line, which is an im-

portant carrier of east and west traffic, and one of the most effective routes between the Northwest and the East and South. The Minneapolis & St. Louis has joint rates with many carriers on business passing through Peoria, to and from any points east of Peoria. West of Peoria the Burlington through Monmouth, the Milwaukee through Hedrick, the Milwaukee through Marshalltown, and the Rock Island through Brighton. In 1935 east side lines delivered to west side lines through the Peoria & Pekin Union Railway at Peoria 66,478 carloads, of which 22 per cent went to the Minneapolis & St. Louis."

I am reading from the decision.

Exam. Albus: That isn't necessary, Mr. Carr, if you can just make a reference to it.

The Witness: All right, I will do that.

That is found on page 317 of that decision.

In commenting upon the present and probable condition of the M&StL in the above-quoted decision, the Commission [fol. 1261] again refers to the overhead traffic and the future of the M&StL. And then I wish to call attention to page 363 of that decision, Mr. Examiner.

Exam. Albus: Thank you very much.

The Witness: I have distributed an exhibit which I would like to have identified at this time.

Exam. Albus: The Exhibit referred to by Mr. Carr may be marked for identification H-37.

(Intervenor's Exhibit No. 37, Witness Carr, was marked for identification.)

The Witness: This exhibit consists of 10 pages and a cover page. Page 1 is a sketch of the M&StL in South Dakota. It covers a distance of 153.97 miles. This line runs through a very fine agricultural territory. It produces a surplus of grain, livestock and potatoes, which has to find its way to the markets. You will note there are 15 towns shown in South Dakota along the line of the M&StL, which goes through six counties. The largest town in South Dakota which the M&StL serves is Aberdeen. Aberdeen is the third largest town in South Dakota, with a population of 21,051 people. It has 23 industries located on the M&StL Railway. The second largest town is Watertown, which is

the fifth, in terms of population, in South Dakota. Its population is 12,699. It has 18 industries located on the M&StL Railway. The other towns are smaller but in an agricultural territory such as this the population of the [fol. 1262] town isn't so important as the production in that territory. I know of one town in this area with a population of 25 people that has shipped as much as one trainload of potatoes in one day.

Page 2 shows the production in farm value of agricultural commodities produced in the counties tranversed by the M&StL in South Dakota. The names of the counties are shown over the different columns. These six counties have a total land area of 6,685 square miles. There has been noted under each county the production and farm value of the various different commodities that are produced in those counties in 1954. The total value, as shown on the extreme lower right, is $92,081,400.

I do not wish to infer that all this production moves out by rail or by the M&StL Railway, but we have to ship a great deal of it out and we need a good sound railroad to market our produce.

Pages 3 and 4 show the number of cars in tons of freight originating and terminating in South Dakota on the M&StL since 1928. I have shown it, you will note, by different groups.

During this 27-year period, you will note at the bottom of page 4, there was an average of 3,478 cars originating and 3,029 cars terminating each year.

Pages 5 to 10 show actual shipments made by the Minneapolis & St. Louis Railway, both originating and terminat- [fol. 1263] ing, both local and interline. The figures speak for themselves and are put into the record, Mr. Examiner, to show the importance of the M&StL in South Dakota.

Exam. Albus: Thank you very much. Does that conclude your testimony?

The Witness: No. I have some more.

Exam. Albus: Very well.

The Witness: The Examiner of the Commission, by reason of the several cases before the Commission relating to the M&StL, including the abandonment of certain of its

branch lines in Finance Docket No. 12436, 240 ICC 329, and Finance Docket No. 10907, 224 ICC 523, is familiar with the fact that the M&StL Railway for many years in financial difficulties, has improved and strengthened its financial status, it has set its house in order and has become a reasonably prosperous railroad when contrasted with railroads generally. That the portion of the M&StL Railway located in South Dakota is one of its less remunerative branch lines and one upon which the impact of detrimental competition and diminution of earnings will first be reflected in inadequate common carrier rail service. I am of the opinion and it is also the opinion of the interests I represent that the acquisition of the link of rail transportation over which the M&StL here seeks to obtain control, is essential and necessary to enable it to successfully compete with two transcontinental and powerful railroads seeking the same [fol. 1264] authority.

We had a meeting of the Governor of the State of South Dakota and the Attorney General, Mr. Examiner, and our Commission, and they were unanimous in taking the position that we are taking here at this time.

That is all I have.

Exam. Albus: Thank you very much.

Is there any cross-examination of Mr. Carr?

Mr. Thomas: No, sir.

Exam. Albus: Mr. Lucas.

Cross examination.

By Mr. Lucas:

Q. Mr. Carr, do you know whether there has been any solicitation in South Dakota of traffic by representatives of the TP&W?

A. Not that I know of.

Q. If some of this tonnage is the result of such solicitation, it either originated or terminated, some of it at least on the M&StL?

A. That is right.

Q. And if their solicitation policy should continue, would you assume that probably the tonnage would continue to move as reflected in your exhibit?

A. Yes, the tonnage would move if we had a good railroad there to move it.

Q. And if the TP&W solicits the traffic in conjunction [fol. 1265] with the M&StL to and from South Dakota, presumably the statistics would probably continue as shown in your Exhibit H-37?

A. Yes, we hope so. Our position, of course, is that we want to keep a strong railroad up there. If the tonnage would keep on the way it is now, it would be perfectly satisfactory. We would like to improve the railroads that are in there or keep them as strong as they are now.

Mr. Lucas: That is all I have.

Exam. Albus: Mr. Cassell, please.

Cross examination.

By Mr. Cassell:

Q. Mr. Carr, I take it, the affairs of your state are based on the fact that the TP&W is going to be bought by a competitor of the M&StL?

A. Yes, sir.

Q. It is the fact that the new owners may be a competitor of the line in which you are interested that causes you that worry, is that right?

A. It is a competitor of the M&StL that we are worrying about. We would like the M&StL to acquire that property.

Mr. Cassell: That is all.

Exam. Albus: Mr. Broker?

Mr. Broker: No questions.

Exam. Albus: Mr. Davis.

Mr. Davis: No questions.

Cross examination.

fol. 1266] By Mr. Davidson:

Q. Mr. Carr, by getting its house in order, I assume you mean the M&StL got rid of a funded debt?

A. Well, I don't know whether you are familiar with the M&StL or not. The history is in the record. It has been in receivership.

Q. I am asking what you meant when you said it got its house in order.

A. I am trying to tell you, in the record, that the M&StL. has been in receivership, and they have gotten out of that, they have been rather prosperous, fairly prosperous, in recent years and that is what I mean by getting their house in order.

Q. The receivership was the result of a funded debt, was it not?

A. If you say so.

Q. Then, you don't know whether it was or not, what caused the receivership?

A. I don't know what causes a receivership.

Q. What caused the receivership of the M&StL.? You said they had gotten their house in order. I am trying to find out what you meant by your answer or your statement.

A. It could be if you say it was funded debt, I don't know. I know they were in receivership. I don't know why.

Q. Did you also mean by that that they got rid of unprofitable branches?

[fol. 1267] A. Some of their lines they abandoned.

Q. And if they should take over the TP&W they should adopt a policy of stripping branches that don't contribute revenue, shouldn't they?

Mr. Wheeler: Mr. Examiner, I object to that question on the grounds that this man is not going to formulate the policies of the M&StL.

Exam. Albus: I will sustain the objection.

Mr. Davidson: May I address myself to the Examiner. This man is an expert on traffic and on railroad management and he sets up what is good policy and what builds a strong railroad. He says they got their house in order and I am trying to find out what he means by that.

Exam. Albus: I think he has already told you.

By Mr. Davidson:

Q. Now, you are an expert in railroading, are you not?

A. I hope so.

Q. And one of the things that contribute to railroad management problems is unprofitable branches, is it not?

A. Yes, sir.

Mr. Davidson: No further questions.

Exam. Albus: Are there any further questions of Mr. Carr?

(No response.)

Exam. Albus: Let the record show at this time the exhibit identified as H-37 is received.

[fol. 1268] (Intervenor State of South Dakota's Exhibit No. H-37, Witness Carr, was received in evidence.)

Exam. Albus: You are excused, Mr. Carr. Thank you very much.

(Witness excused.)

[fol. 1268a] Mr. Wheeler: I would now like to call Mr. Nelson.

Roy W. Nelson was sworn and testified as follows:

Direct examination.

By Mr. Wheeler:

Q. Mr. Nelson, will you state your name and address for the record?

A. My name is Roy W. Nelson, 111 East Franklin Avenue, Minneapolis, Minnesota.

Mr. Wheeler: Mr. Examiner, at this time I should like to have marked for identification the exhibits which have already been distributed.

The first is a pamphlet entitled "Maps Showing Route of the Toledo, Peoria, and Western Railroad and Connecting Carriers".

Exam. Albus: Those maps may be marked for identification Exhibit H-38.

(Applicant M&StL's Exhibit No. H-38, Witness Nelson, was marked for identification.)

Mr. Wheeler: The second is entitled "Description of the Territory Served by the Minneapolis, St. Louis Railway, Toledo, Peoria, and Western Railway".

Exam. Albus: The exhibit referred to may be marked for identification as Exhibit H-39.

(Applicant M&StL's Exhibit No. H-39, Witness Nelson, was marked for identification.)

Mr. Wheeler: The third is entitled "Trends of Popula-
[fol. 1269] tion, Manufacture and Agriculture of the States Served by the M&StL, TP&W, Santa Fe and Pennsylvania.

Exam. Albus: That will be marked for identification H-40.

(Applicant M&StL's Exhibit No. H-40, Witness Nelson, was marked for identification.)

Mr. Wheeler: Thank you.

By Mr. Wheeler:

Q. Mr. Nelson, have you prepared a statement for presentation to the Commission in this proceeding?

A. I have.

Q. Will you please give that statement?

A. I am Vice-President—Traffic of The Minneapolis & St. Louis Railway Company. I have charge of Traffic, Sales, Rates and Divisions, Industrial Development, and Advertising.

I entered railroad service in the Freight Claim Department of the Minneapolis & St. Louis on July 24, 1914, and advanced through various positions in that department until January 18, 1926. At that time I was promoted to the position of Chief Clerk to the Chief Traffic Officer, which position I held until July 15, 1935. I was then promoted to the position of General Agent, St. Paul, which position I held until May 1, 1937, when I was promoted to General Agent, New York. I was subsequently appointed to the positions of Assistant Traffic Manager, Eastern Traffic Manager, Assistant Vice President-Traffic, and Resident Vice President, New York, which latter position I held until April 1, 1954, at which time I was elected to the position
[fol. 1270] of Vice President-Traffic, which I now hold.

During my tenure of office in New York, I was quite active in the affairs of the Traffic Club of New York; and in the year 1947 was elected Chairman of the Board of

Directors of that club, and in 1949 was elected President of the same organization.

The M&St.L operates in the States of Illinois, Iowa, Minnesota and South Dakota. It currently operates a total of 1,397 miles of trackage.

The TP&W extends from the Illinois-Indiana state line at Effner, Indiana to Keokuk, Iowa, where it connects with the Chicago, Burlington & Quincy and the Chicago, Rock Island and Pacific Railroads, and to Lomax, Illinois, where it connect. ith the Santa Fe System. It also has a branch line from Hamilton to Warsaw, Illinois. Its total mileage is 239.4 miles.

I have had an exhibit prepared designated as Exhibit No. H-39 which sets out the population of each county served by both lines divided as to urban and rural population. Page 1 of this exhibit is a country map of the area served by the M&St.L and TP&W in which the lines of these carriers have been traced to indicate the counties of the states through which those lines operate.

Pages 2 to 5, inclusive, of the exhibit also show the latest available information with respect to the value of agricultural products in each of the counties served, also the [fol. 1271] number of manufacturing establishments with average number of employees for each of the counties designated.

From this exhibit it will be noted that the M&StL serves substantially rural counties in the four-state area in which it operates. In South Dakota, 58.8 per cent of the population served by the M&StL is rural. In Minnesota the area served is comprised of 22.1 per cent rural population. This percentage figure is low solely because the area includes the densely populated cities of Minneapolis and St. Paul in Hennepin and Ramsey Counties. In Iowa, the area served is comprised of 46.7 per cent rural population, and in Illinois, 36.6 per cent.

The number of manufacturing establishments and average number of employees engaged in such establishments comprise a comparatively small portion of the population in the counties served by the M&StL, as is shown in those exhibits. Of the population in the counties served by the M&StL in the four-state area, the percentage of those em-

ployed in manufacture in the State of South Dakota is 1.7 per cent; in Minnesota, 9.8 per cent; in Iowa, 5.5 per cent; and in Illinois, 7.9 per cent. In the counties in Illinois and Iowa served by the TP&W, 11.1 per cent of the population is employed in manufacturing establishments.

I have also made a study of the population, manufacturing and agricultural trends in each of the four states served by the M&StL and the TP&W, as well as the states served by the Santa Fe System and the states served by the Penn- [fol. 1272] sylvania Railroad, and have prepared an exhibit which has been designated as Exhibit No. H-40 depicting that trend. Pages 2 and 3 of the exhibit show the population trend in the decade 1940 to 1950. It will be noted that there was a percentage increase in population of only 7.9 per cent in the four-state area served by the M&StL and TP&W, while the increase was 12 per cent in the states served by the PRR, and 18.6 per cent in the states served by the Santa Fe System.

Pages 4 to 9, inclusive, of that exhibit show the manufacturing trend for the year 1947 as compared with 1953. With respect to the manufacturing trend as shown on Pages 4 through 9 of Exhibit No. H-40, it will be noted that in the four-state area served by the M&StL-TP&W the largest gain by far with respect to value added by manufacturing and gain in the number of employees engaged in manufacturing was in the State of Illinois.

This gain took place largely in the Chicago land area, which is not served by the M&StL or the TP&W, and to support this, we have secured from the Chicago Association of Commerce and Industry, information that the total industrial production in this area in 1947 was $11,640,000,000, and for the same year, the value added by manufacture was $5,529,000,000.

This latter figure is 47½ per cent of the total industrial production.

The 1953 total industrial production was $18,300,000,000, and, in the absence of a 1953 figure representing value [fol. 1273] added by manufacture, we have applied the 47½ per cent figure, obtained from the 1947 figures, to arrive at $8,692,500,000 as the value added by manufacture in 1953.

This would indicate an increase in the Chicagoland area of $3,163,500,000 as value added by manufacture, whereas the increase in value for the entire state of Illinois was $3,431,487,000.

Pages 4, 5, and 6 of the exhibit show the manufacturing trend in the area served by the M&StL, Pennsylvania, and Santa Fe Systems.

It will be noted that the percentage of gain in the four-state area served by the M&StL is 53.4. This percentage presents an inflated picture because it includes a gain of $3,431,487,000. in the State of Illinois, much of which was added by industry in the Chicagoland area, which is not served by the M&StL. Even so, the percentage gain in the area served by the Pennsylvania Railroad was higher than the M&StL area, being 62.2 per cent on page 5; and the percentage gain in the area served by the Santa Fe was also higher, being 75.5 per cent, as shown on page 6.

Similarly, pages 7, 8 and 9, showing the number of employees engaged in manufacturing in the same areas show a percentage gain of 12.6 for the M&StL four-state area, which also includes the sizeable gain in Illinois, much of which may be attributed to the gain in the Chicagoland area. However, the percentages of both the area served [fol. 1274] by the Pennsylvania and the area served by the Santa Fe are higher, being 16.8 per cent and 30.0 per cent, respectively.

This shows that the M&StL territory is not developing as fast as the territory served by the Santa Fe and the PRR and accordingly that the M&StL does not have a territory of growth and development such as the East, Southwest and West to fall back on in the event it loses traffic.

Pages 10 to 19, inclusive, of that exhibit show the value of agricultural products in each of these states for a five-year period 1950 through 1954.

The unification of the M&StL and the TP&W would provide additional interchange points on the TP&W between Peoria and Effner, wherein we would be in position to interchange traffic through direct deliveries to the following railroads:

Pennsylvania at Effner, Indiana
G.M.&O. at Chenoa, Illinois
Illinois Central at Gilman and El Paso, Illinois
C.&E.I. at Watseka, Illinois
New York Central at Sheldon, Illinois
Wabash at Forrest, Illinois
Nickel Plate at Farmdale, Illinois
C.M.St.P.&P. at Webster, Illinois

I have prepared an exhibit consisting of 16 pages, which has been identified as Exhibit No. H-38. This exhibit con- [fol. 1275] sists of a large scale tracing of the lines of the M&StL and the TP&W in Illinois, and on each set of maps is traced the route of the connecting carrier of the TP&W. Each large scale tracing is accompanied by a system map of such connecting line.

These interchange points will provide additional traffic to the unified lines of the M&StL and TP&W. This would create new traffic via these lines, which currently moves principally through the Chicago Gateway and which, to a large extent, moves via the direct Chicago-Twin Cities lines.

The M&StL now operates trains with the Illinois Central via our Albert Lea interchange carrying considerable traffic through Chicago moving interterritorially between the South, Southeast and Northwest sections of the country, out of which our earnings are considerably lower than would accrue to the M&StL if that same traffic was handled in connection with the M&StL-TP&W.

There is considerable traffic originating at the destined to points on the M&StL and throughout the Northwest that moves via Albert Lea or other junctions short of our maximum haul for service reasons. A considerable portion of this traffic could be kept on the M&StL-TP&W long haul routes due to the faster freight service that this combination would establish. This would provide longer haul revenue for the M&StL and new business for the TP&W.

Referring now to Exhibit H-38.

Pages 1 and 2 show the lines of the Illinois Central Rail- [fol. 1276] road. It will be noted that interchange points

exist between the Illinois Central and the TP&W at Gilman and El Paso, Illinois.

Gilman is located on the Chicago-St. Louis and the Chicago-New Orleans main lines and also on the line going to Birmingham with southern connections beyond.

El Paso is located on the Centralia, Illinois-Madison, Wisconsin, line, and which line connects with the main line to and from New Orleans and Birmingham at Centralia, Illinois. This line serves such principal industrial cities as Bloomington, Clinton, Decatur and Centralia, Illinois.

While the M&StL presently connects with the Illinois Central Railroad at Peoria, Illinois, interchange at that point must be made through an intermediate carrier. Furthermore, Peoria, Illinois is located on a branch line of the Illinois Central Railroad and traffic, presently routed via M&StL-Peoria-I.C. from and to the South and Southeast, takes some 24 to 48 hours longer than would prevail through direct interchange at main line junctions of Gilman or El Paso on traffic moving via a unified M&StL-TP&W route.

The present short-line mileage, used in connection with the I.C.C. Docket 28300 Class Rates, between Minneapolis and New Orleans is 1210 miles. Via the following routes, the distance between these points is as follows:

M&StL-Albert Lea-Illinois Central through Chicago, 1409 miles.

[fol. 1277] M&StL-Peoria-Illinois Central, 1313 miles.

M&StL-Peoria-TP&W-El Paso-Illinois Central, 1228 miles.

M&StL-Peoria-TP&W-Gilman-Illinois Central, 1400 miles.

The same relative difference in distance will prevail from and to points on, or via, the Illinois Central, south of Cairo, Illinois.

Turning now to pages 3 and 4 which show the Gulf, Mobile & Ohio Railroad:

It will be noted that interchange exists between the GM&O and the TP&W at Chenoa, Illinois.

Chenoa is located on the main line of the GM&O between Chicago and New Orleans, Mobile, St. Louis, also Montgomery, Alabama, for southern connections beyond.

While the M&StL presently connects with the GM&O at Peoria, interchange at that point must be made through an intermediate switching carrier. Furthermore, Peoria is located on a branch line of the GM&O, and traffic, presently routed M&StL-Peoria-GM&O, to and from the South and Southeast, requires a longer time in transit than would prevail through direct interchange at the main line junction at Chenoa, moving via the unified M&StL-TP&W route.

The direct interchange at Chenoa will accomplish faster freight service for traffic originating at or destined to M&StL stations and the Northwest on traffic originating at or destined to M&StL stations and the Northwest on traffic [fol. 1278] to or from the Chicago area, than can be presently accomplished via M&StL-Peoria-GM&O.

The present short-line mileage, used in connection with the I.C.C. Docket 28300 Class Rates, between Minneapolis and Mobile is 1163. Via the following routes, the distance between these points is as follows:

M&StL-Peoria-GM&O, 1278 miles.

M&StL-Peoria-TP&W-Chenoa-GM&O, 1345 miles.

The same relative difference in distances will prevail from and to points on or via the GM&O south of Cairo, Illinois.

The present short-line mileage, used in connection with the ICC Docket 28300 Class Rates, between Des Moines and Chicago is 337. Via the following routes, the distance between these points is as follows:

M&StL-Peoria-GM&O, 470 miles.

M&StL-Peoria-TP&W-Chenoa-GM&O, 429 miles.

Turning now to pages 5 and 6 which show the Chicago and Eastern Illinois Railroad:

It will be noted that interchange exists between the C&EI and TP&W at Watseka, Illinois.

The interchange at Watseka should open new avenues of traffic between M&StL stations and the Northwest territory, on the one hand, and the South and Southeast territory on the other.

Watseka is on the main line of the C&EI, Chicago to St. Louis and Chicago to Evansville.

[fol. 1279] The C&EI has a large interchange at Evans-

ville with the Louisville & Nashville to and from Nashville, New Orleans and Florida.

The service via Watseka would by-pass the Chicago Gateway, and attract business now moving via railroads other than M&StL-TP&W for service reasons. Traffic moving between the Northwest territory and stations on, or via the C&EI, is now funneled through the Chicago Gateway. Direct main line interchange at Watseka, Illinois, with the unified lines of the TP&W and M&StL would provide a faster freight service route on this traffic, and would produce additional business for both the M&StL and the TP&W.

The present short-line mileage, used in connection with the I.C.C. Docket 28300 Class Rates, between Minneapolis and Evansville, Indiana, is 650. Via the following route, the distance between these points is as follows:

M&StL-Peoria-TP&W-Watseka-C&EI, 786 miles.

The present short-line mileage, used in connection with the I.C.C. Docket 28300 Class Rates, between Des Moines and Evansville, is 471. Via the following route, the distance between these points is as follows:

M&StL-Peoria-TP&W-Watseka-C&EI, 588 miles.

Turning now to pages 7 and 8 which show the Nickel Plate Railroad:

It will be noted that interchange exists between the Nickel [fol. 1280] Plate and the TP&W at Farmdale, Illinois.

Presently the interchange between the Nickel Plate and the M&StL is accomplished through an intermediate switching carrier at Peoria, and this service could be improved with direct interchange being made at Farmdale.

Turning now to pages 9 and 10 which show the New York Central System:

It will be noted that interchange exists between the New York Central and the TP&W at Sheldon, Illinois.

Peoria, Illinois is located on the Peoria & Eastern Railway, a subsidiary of the New York Central. Via this line, the New York Central serves Danville, Indianapolis and Cincinnati. While the Peoria interchange would continue to be used on traffic moving over that line, the direct interchange between the TP&W and the New York Central at Sheldon would provide a source of new business for the

unified route of the M&StL-TP&W on traffic to and from the New York Central points in Northern Indiana, Michigan, Northern Ohio and New York.

The present short-line mileage, used in connection with the I.C.C. Docket 28300 Class Rates, between Minneapolis and Detroit, Michigan is 595, computed across Lake Michigan. Via the following routes, the distance between these points is as follows:

M&StL-Peoria-New York Central, 991 miles.

M&StL-Peoria-TP&W-Sheldon-New York Central, 806 [fol. 1281] miles.

The present short-line mileage, used in connection with the I.C.C. Docket 28300 Class Rates, between Des Moines and Detroit Michigan is 598. Via the following routes, the distance between these points is as follows:

M&StL-Peoria-New York Central, 794 miles.

M&StL-Peoria-TP&W Sheldon-New York Central, 710 miles.

Turning now to pages 11 and 12 which show the Wabash Railroad:

It will be noted that interchange exists between the Wabash and the TP&W at Forrest, Illinois.

Forrest, Illinois, is located on the main line of the Wabash from Chicago to Decatur, connecting at Bement, Illinois, with the line of the Wabash from Buffalo and Detroit to St. Louis and Kansas City.

While we presently interchange traffic with the Wabash at Albia and Des Moines, Iowa, we have no present interchange east of the Mississippi River, and the Albia and Des Moines routes provide, at best, circuitous service to the East, on the Wabash. The Forrest route would provide a service route between stations on the M&StL and the Northwest territory, on the one hand, and eastern stations served by, or via the Wabash, on the other hand. The Forrest route would help us to secure business originating at or destined to points on the Wabash in Michigan, and also on business [fol. 1282] to and from Canada, through the Detroit Gateway, and business to and from the East that moves through Buffalo or the Niagara Frontier.

The present short-line mileage, used in connection with the I.C.C. Docket 28300 Class Rates, between Minneapolis

and Buffalo is 788, computed across Lake Michigan. Via the following routes, the distance between these points is as follows:

M&StL-Albia-Wabash, 1254 miles.

M&StL-Peoria-TP&W-Forrest-Wabash, 1121 miles.

The present short-line mileage, used in connection with the I.C.C. Docket 28300 Class Rates, between Mason City and Detroit, Michigan is 564. Via the following routes, the distance between these points is as follows:

M&StL-Albia-Wabash, 878 miles.

M&StL-Peoria-TP&W-Forrest-Wabash, 746 miles.

Turning now to pages 13 and 14 which show the Pennsylvania Railroad:

It will be noted that interchange exists between the Pennsylvania and the TP&W at Effner, Indiana.

While the M&StL presently connects with the Pennsylvania at Peoria, Illinois, interchange at that point must be made through an intermediate switching carrier. Furthermore, Peoria is located on the Peoria-Terre Haute branch of the Pennsylvania, which line operates through Indianapolis, Columbus and Pittsburgh to the East, and provides, at best, a circuitous movement of traffic between [fol. 1283] Peoria and eastern terminals of the Pennsylvania. The Effner Gateway will eliminate both the intermediate switching and the circuitous routing.

The unified M&StL-TP&W route, through the Effner Gateway would provide improved service to and from points on the M&StL and its connections in the Northwest, West, or Southwest.

The present short-line mileage, used in connection with the I.C.C. Docket 28300 Class Rates, between Minneapolis and Pittsburgh is 843. Via the following routes, the distance between these points is as follows:

M&StL-Peoria-Pennsylvania, 1101 miles.

M&StL-Peoria-TP&W-Effner-Pennsylvania, 1037 miles.

Turning now to pages 15 and 16 which show the Chicago, Milwaukee, St. Paul & Pacific Railroad:

Webster, Illinois is located on the Terre Haute line of the CMStP&P. There is a sizeable movement of coal that originates on the Terre Haute line of the CMStP&P to destinations on the M&StL and the Northwest that could move

through the Webster interchange and thereby provide additional traffic to both the M&StL and TP&W with the establishment of the unified service.

There is also a large volume of traffic that originates from or is destined to points in eastern Wisconsin, such as Milwaukee, Racine, Green Bay, Beloit, to and from Southwest territory that could move through the Webster interchange.

While many of the routes with the TP&W via its junction [fol. 1284] points with connecting carriers east of Peoria are open under the tariffs today, they are not being used—first, because we have no integrated freight schedules in connection with the TP&W via most of these junction points; Second, the time required in switching at Peoria; Third, because we have no incentive at the present time to solicit traffic via the TP&W since we obtain our maximum haul and revenue on any traffic that we receive from or deliver to connections at Peoria; and Fourth, shippers' resistance to inclusion of a non-affiliated carrier in the route.

If we were to acquire control of the TP&W we could establish an integrated service in which no switching time would be required and that would otherwise facilitate the movement of the traffic via the TP&W through its junction points with other carriers east of Peoria, Illinois. Furthermore, we would actively solicit traffic for movement over the TP&W lines via those junction points, since it would enhance our revenues on all business handled in that way by the amount of the earnings on the TP&W lines.

With the expanded use of the various junctions resulting from the unified service of the M&StL-TP&W we would be in position, competitively, to meet the freight service of our competition, now generally channeled through the Chicago Gateway.

The acquisition of the TP&W by the M&StL would estab- [fol. 1285] lish faster freight service routes beneficial to the shipping public, via junction points on the TP&W with connecting carriers located east of Peoria, Illinois.

The use of these routes by the shipping public would provide new revenue for both the M&StL and TP&W; and strengthen the financial position of both and enable them to better meet our competition.

For a period of years the Pennsylvania has maintained a neutral attitude with respect to the flow of traffic moving through the Peoria Gateway, and likewise, the Santa Fe on traffic moving via its Illinois junctions thru the Peoria Gateway,—in other words, where we have prevailed upon shippers to use our route through Peoria, these lines have not opposed it.

Reference is made to the large map of the United States on which the lines of the Pennsylvania and the Santa Fe have been traced, which has been introduced as Exhibit No. H-19. It will be noted that the lines of the Pennsylvania blanket the eastern portion of the United States and that the lines of the Santa Fe, similarly, blanket that territory in the Southwest and the South Pacific Coast Territory. As a result, there are, naturally, many heavy shipping industries located directly on the lines of those two carriers.

It is common railroad experience that concerns located on-line will, to the greatest practicable extent, use the lines [fol. 1286] by which they are directly served, because of freight service requirements, equipment supply, rate quotations, rate assistance, car tracings and diversion, industry locations, and many other special services in kindred categories.

If the Santa Fe and Pennsylvania acquire control of the TP&W, their individual traffic solicitation forces will continue to seek to influence the movement of the traffic flow between the East and the West over their long-haul routes; but if the shippers, for any reason, desire the use of the Peoria Gateway, that solicitation influence of the combined Pennsylvania-Santa Fe System would be brought to bear in the direction of movement of traffic between Effner and Lomax for TP&W long haul, to the detriment and disadvantage of the M&StL.

The M&StL and the TP&W currently maintain traffic agencies at the following points:

Chicago, Illinois	Minneapolis, Minnesota
Cincinnati, Ohio	New York, New York
Cleveland, Ohio	Omaha, Nebraska
Dallas, Texas	Peoria, Illinois
Detroit, Michigan	Philadelphia, Pennsylvania

Indianapolis, Indiana	Pittsburgh, Pennsylvania
Kansas City, Missouri	St. Louis, Missouri
Los Angeles, California	San Francisco, California
	Seattle, Washington

The M&StL has traffic agencies at the following points [fol. 1287] where the TP&W does not:

Albert Lea, Minnesota	Fort Dodge, Iowa
Birmingham, Alabama	Houston, Texas
Boston, Massachusetts	New Orleans, Louisiana
Buffalo, New York	Portland, Oregon
Denver, Colorado	St. Paul, Minnesota
Des Moines, Iowa	Spokane, Washington
Duluth, Minnesota	Washington, D. C.
Fargo, North Dakota	Winston-Salem, North Carolina

The TP&W has traffic agencies at the following points where the M&StL does not:

Keokuk, Iowa
Tulsa, Oklahoma

It will be noted that the M&StL has agencies at all points in which the TP&W has agencies, except at Tulsa, Oklahoma and Keokuk, Iowa. With the unification of the M&StL and TP&W, economies in traffic expense could be realized to the extent of approximately $454,471.

In estimating this saving, we currently anticipate that it could be accomplished through elimination of duplications in traffic agencies, supervisory and general office expenditures, including advertising, stationery and printing. The present traffic personnel of the TP&W is comprised of 57 persons. It is our opinion that a number of these people could be readily absorbed into a unified traffic force, at the [fol. 1288] same time showing a saving through elimination of duplicate facilities. The assimilation of certain of the TP&W personnel would serve to provide more extensive and intensive use of our present facilities. Thus we would not only realize immediate savings but we would plow back part of them by increasing the number of our solicitation offices and increasing the present personnel of others. This beyond question will increase the traffic over the combined M&StL-TP&W properties.

If the M&StL were to acquire control of the TP&W the services of each line would be complementary to the other, and this acquisition would serve to produce new business for each line. On the other hand, if the Santa Fe and the Pennsylvania were to acquire control of the TP&W, a large part of the business that they could add to the TP&W would be that now enjoyed by the M&StL. The Pennsylvania and Santa Fe lines presently have a direct connection between their systems in Chicago, Illinois, which is used extensively. The Pennsylvania, through its 99 per cent owned subsidiary, the Wabash, also has direct connection with the Santa Fe in Kansas City via alternate routes through Hannibal and St. Louis.

The long haul route of the Santa Fe, on both east and westbound traffic, on which it receives its maximum earnings, is via Chicago. The long haul route of the Pennsylvania, considered apart from the Wabash, on which it receives its maximum earnings, is via the St. Louis-East [fol. 1289] St. Louis Gateway. The long haul route of the Pennsylvania-Wabash combined, on which that combination of lines receives maximum revenues, is via the Kansas City Gateway. Accordingly, we can see no incentive for either line to actively solicit business via an intermediate route of the TP&W.

If the Pennsylvania and Santa Fe lines were to acquire control of the TP&W, this acquisition would result in a substantial financial loss to the M&StL and would threaten its present financial and competitive position in the industry. On the other hand, if the M&StL were to acquire control of the TP&W, it would strengthen the position of both carriers as a result of increased revenues derived from additional traffic becoming available through improved service.

The addition of the routes which would be made available by the joinder of the M&StL and the TP&W would enhance revenues of both by attracting additional traffic, as previously mentioned. The result would be a stronger financial position, with the ability to perform greater service to the shipping public.

With regard to our solicitation policy, it is our intention to place the Nemo, Lomax and Keokuk Gateways on a

parity. With respect to the Nickel Plate, I wish to say that we have absolutely no intention of disturbing the present flow of tonnage now moving in connection with that line. We would not disturb our present profitable interchange with the NKP. We would not be pennywise and pound foolish, and I repeat that we would not be pennywise and [fol. 1290] pound foolish. Furthermore, it is our intent to preserve the solicitation policy with these roads now maintained by the TP&W.

In recent years we have expanded the activities of our Industrial Development Department. The M&StL, like other railroads, has observed the trend in the location of industries outside the congested business areas and appreciates the necessity of securing industrial property in suburban areas adjacent to the larger cities.

On March 1, 1955, we employed the services of Mr. Frank E. Clawson as Director of Industrial Development. Mr. Clawson was previously engaged in a similar capacity for the Minneapolis Chamber of Commerce. At the time we undertook to engage him, we found that the State of Minnesota was also seeking his services as head of its department for the development of industrial growth in that state, which indicates that he is a man of outstanding ability in that field.

Since coming with our company, Mr. Clawson has made a complete industrial survey in Minneapolis, Peoria, and other communities served by our railroad. In the metropolitan area of Minneapolis served by the M&StL, we found there is very little industrial property available for our use. Accordingly, on January 31, 1956, the Board of Directors of our company authorized the purchase of the Minnesota Western Railroad, subject to approval of the Interstate Commerce Commission, with the purpose in mind [fol. 1291] of acquiring additional properties adjacent to that line for industrial growth.

At the present time, in the City of Peoria the M&StL finds itself in a strait jacket because we have no industrial property adjacent to our line suitable for industrial expansion. I have had Mr. Clawson make a survey of the properties of the TP&W suitable for industrial growth and have a favorable report from him indicating that there is

land suitable for this purpose adjacent to the rails of the TP&W.

When we acquire the TP&W you may be sure we will carry on an aggressive program to bring new industries to Peoria and promote the expansion of existing plants. We would then have property of our own to promote as well as participating in the over-all industrial development of Peoria in cooperation with the Association of Commerce.

Q. Does that conclude your direct testimony, Mr. Nelson?
A. It does.

Mr. Wheeler: That is all.
Exam. Albus: We will take a recess until 2 o'clock.

(Whereupon, at 12:40 p.m., a recess was taken until 2:00 p.m. of the same day.)

[fol. 1292] AFTERNOON SESSION 2:00 p.m.

Exam. Albus: The hearing will please come to order.
We will continue with the cross-examination of Mr. Nelson.
Mr. Thomas, please.

Cross examination.

By Mr. Thomas:

Q. Mr. Nelson, are you familiar with the schedules of the Illinois Central on its line from Chicago through Filman to the south?
A. No, I am not.

Mr. Thomas: Mr. Examiner, it seems to me that if we put a rate and division man to talk about schedules on the railroads, and we put a solicitation man on to talk about service, I find it very difficult to cross-examine.
Will there be some witness provided later for that sort of thing?
Mr. Wheeler: Yes, sir, Mr. Schroder.

Mr. Thomas: It seems to me he should have been put on first so we'd have something to go on.

By Mr. Thomas:

Q. I would be taking up your time if I examined you about service and schedules, is that right?

A. I will try to answer it to the best of my ability.

Q. If you don't know the schedules, it isn't much help.

You have shown a lot of junctions on page 5 of your statement.

A. Yes, sir.

[fol. 1293] Q. Those are the junctions through which you hope to develop additional traffic—

A. That is correct.

Q. (Continuing) —for the combined railroads—

A. Yes.

Q. (Continuing) —if your application is approved. They are all east of Peoria?

A. That is correct.

Mr. Thomas: Pardon me for taking a little time. It is going to be pretty short, Mr. Examiner.

Exam. Albus: Thank you very much.

By Mr. Thomas:

Q. You state on page 14 that many of the routes which you have discussed earlier in your testimony via the TP&W and its junctions with other connecting carriers east of Peoria are open under the tariffs today, they are not being used, and you give certain reasons. You say you have no integrated freight schedules with the TP&W?

A. That is correct.

Q. Have you ever approached the TP&W and asked them to work out integrated freight schedules with you?

A. Yes, we have. That's under negotiation at the present time.

We are endeavoring to work an eastbound schedule in connection with the TP&W at the present time.

Q. Is that the one via the Nickel Plate?

A. It would be comparable to the Nickel Plate, sir.

[fol. 1294] Q. Did you say you approached the TP&W to work that out?

A. Let me explain it in my own language. At the present time our cutoff time with the Nickel Plate is 12:30 and we have been negotiating with the TP&W to agree to a similar cutoff time but up to the present time the TP&W said they have some problems, they have too many trains at one time, and they haven't given me an answer, although Mr. Coulter indicated to me in Chicago that he thought he'd have something for me very shortly.

Exam. Albus: Is that cutoff time a.m. or p.m.?

The Witness: It is a.m.

By Mr. Thomas:

Q. When was this question first discussed?

A. That's been under discussion for some time. In fact, for a period of time, well, we have been getting in Peoria too late to make the Nickel Plate eastbound trains and the same way with the TP&W, and effective December 22 we issued a circular with the approval of the Nickel Plate that the schedule was all tied up and in effect.

Q. Did you tell Mr. Coulter you were going to do that?

A. Yes, I did.

Q. He wasn't surprised?

A. Oh, no. They want our service.

Q. Well, I am speaking of the Nickel Plate, did you tell him you were going to put that in with the Nickel Plate?

A. I don't recall whether I did or not, but I wouldn't [fol. 1295] hesitate in telling them.

Q. Well, it is already in now, isn't it?

A. The TP&W?

Q. No, the Nickel Plate.

A. Oh, yes.

Q. You didn't tell him before you put it in, did you?

A. I don't recall whether I told him or not but this has been a subject of negotiation for several months. I have told the TP&W what we were trying to do with the Nickel Plate.

Q. You give us one of your reasons for not working out integrated schedules with the TP&W the fact that you

have no incentive to solicit traffic via the TP&W since you maintained your maximum haul and revenue on any traffic that you received from and delivered to your connections at Peoria?

A. That is correct.

Q. You think there is a great deal of traffic potentiality over these connecting junctions according to your testimony, is that correct?

A. I do.

Q. Well, if you could work out integrated schedules with the TP&W to develop that traffic potential, why haven't you done so? It seems to me that—strike that question and I will rephrase it.

It seems to me that you would have had an incentive other than the fact—strike that, I will rephrase it.

[fol. 1296] You said you had no incentive—

A. That's right.

Q. (Continuing) —because your long haul is at Peoria?

A. That's right.

Q. But you would get more revenue, wouldn't you, if you had an increased volume of traffic for that long haul to Peoria, wouldn't that be an incentive?

A. Well, it would be an incentive if we had the integrated service and the cooperation of the TP&W.

Q. Do I understand that you haven't received the cooperation of the TP&W?

A. We have never approached them on it, on these routes, with the exception of Effner.

Q. You state another reason for your failure to work out any such integrated service with the TP&W that there is shippers resistance to the inclusion of non affiliated carriers, a non affiliated carrier in a route, is that correct?

A. Yes, we run under that all the time and so does everybody else.

Q. Have you ever heard of the Alphabet Route?

A. Very much so.

Q. Doesn't that involve the Nickel Plate, Wheeling and Lakin, Pittsburgh and West Virginia, Western Maryland and Reading?

A. You can add the CNJ to it, if you want to.

Q. Does that route compete with the direct route of the

[fol. 1297] Pennsylvania from the western territory served by the Nickel Plate to the eastern territory served by the Reading and Western Maryland?

A. It does, and we use it.

Q. Does it handle a large volume of traffic?

A. Well, I wouldn't compare the volume with the major lines but they do very well.

Q. Does it provide a competitive service with the Pennsylvania?

A. I think they do into Chicago. I am not positive. That is only hearsay.

Q. Haven't you successfully worked out a competitive service between Chicago and the territory served by your railroad via the Santa Fe with interchange at Nemo?

A. That service has worked out very satisfactorily, we are proud of it.

Q. Isn't that service in competition with the direct lines from Chicago?

A. Well, I will put it this way, on the northbound traffic it is not exactly competitive. I would say the service would be about 24 hours from Chicago to Minneapolis in connection with the Santa Fe, Nemo route, but eastbound it is not competitive and we are trying to make it competitive.

Q. Has the Santa Fe cooperated with you in providing that service?

A. Yes, they have.

[fol. 1298] Q. Does it handle freight forwarder traffic from Chicago to the Twin Cities?

A. Yes, sir, which I was responsible for.

Q. Do you interchange a large volume of traffic at Peoria with the Nickel Plate through the P&PU?

A. Yes, sir.

Q. Is the P&PU a switch line, a terminal line?

A. It is considered that.

Q. What is the volume of that interchange?

A. I don't have it here.

Q. Is it large?

A. Yes, it is substantially large.

Q. Isn't your largest interchange at Peoria?

A. I would say offhand it is.

Q. Is it substantially larger than the interchange of the TP&W?

A. Yes.

Q. Twice as much?

A. Well, it is hard to say unless I have the figures in front of me but I would say substantially larger than the TP&W, yes.

Mr. Thomas: I have asked for some figures but I am not sure my request was phrased properly. I asked for a break-down of the interchange at Peoria but I didn't make it clear that the figures I want dealt with interchange between line haul railroads even though they may be ac- [fol. 1299] tually effected by an intermediate switch haul of the P&PU. I will take that up with Mr. Wheeler.

Exam. Albus: Very well.

Mr. Thomas: That is all I have. Mr. Examiner.

Exam. Albus: Mr. Lucas, please.

Cross examination.

By Mr. Lucas:

Q. Mr. Nelson, Mr. Devins' Exhibit H-27 is a reproduction of the Peoria gateway, and you are familiar with it?

A. I would like to tell you that this is my baby and I worked months preparing it in New York and spent many of a weekend making it up.

Q. Here is one time, then, we have the witness who really can answer the questions on it. I am only going to ask you—

Mr. Wheeler: Mr. Examiner, I think we can do without these insinuations on the record by counsel.

By Mr. Lucas:

Q. Isn't it a fact that the M&StL holds itself out to reach all the railroads and destination territories through these gateways that are listed on page 5 of your testimony and from there on?

A. I will tell you this, that if the shipper asked for it, we endeavor to reach them through these gateways.

Q. You refer to the Albert Lea interchange with the Illinois Central.

A. Yes, sir.

[fol. 1300] Q. Under your plan of operation and solicitation would not the Illinois Central be short haul if traffic were interchanged with it at Gilman and El Paso instead of Albert Lea and Peoria?

A. It is possible.

Q. Wouldn't the situation be more than possible, wouldn't it be actual?

A. Very probable.

Q. You will go part way with me, will you, but you won't accept the word actual?

A. Let me put it this way, I don't think we would disturb the solicitation that has been conducted by the Illinois Central. We have a standing agreement that we will fight each other on business, but there is a lot of business that we originate and solicit ourselves that we will try to influence for our long haul via Gilman and El Paso.

Q. That route at the present time in conjunction with the M&StL and the Illinois Central is an active one, is it not?

A. Yes, and we have a train a day each one.

Q. By the way, when you speak of unified throughout your testimony, as you do, are you accepting what has been stated, I believe, by Mr. Devins, that there is to be a consolidation, or if not a consolidation, a unification of the Toledo, Peoria and Western and the M&StL under your proposal?

A. Will you explain the difference between consolidation and unification? I mean is there any difference between them?

[fol. 1301] Q. You don't believe you know the distinction between acquisition of control and, say, consolidation, first, of two companies?

A. Oh, I understand the word consolidation but I didn't know what you were driving at.

Q. Well, now, don't you assume—are you familiar with the proposal of your company which appears to call for a consolidation or unifications?

Mr. Wheeler: Mr. Examiner, I object to that as a misleading and inaccurate characterization of the request in this proceedings by the Minneapolis and St. Louis Railway.

Exam. Albus: I think everyone understands that this application is to acquire control of the TP&W. There is no question of consolidation or merger involved here.

By Mr. Lucas:

Q. Then, Mr. Nelson, may I direct your attention to page 18 of your prepared text, at the top of the page, I read you the second sentence and I quote "With the unification of the M&StL and the TP&W economies and traffic expense could be realized to the extent of $254,471", and throughout your testimony you speak of possibility of establishing better gateways, less circuitous gateways, if there is a unification between the TP&W and the M&StL, am I mistaken in the implications of that setup?

Mr. Wheeler: Mr. Examiner, I object to this question. The witness speaks throughout his testimony of unification. [fol. 1302] I believe that is inaccurate. I think the witness did use in his testimony the word unified operation, but I do not believe that except in this instance did he use unification.

Exam. Albus: The record will show what the witness said, there is no question about that.

If you have a question to ask the witness about what he means by unification in that quotation you read him you may do so.

Mr. Lucas: I certainly can't understand Mr. Wheeler's objection because throughout here he speaks of unification.

By Mr. Lucas:

Q. Mr. Nelson, what do you mean when you have used throughout your testimony the unification of the M&StL and the TP&W?

A. Well, my answer to that on unification is that we intend to operate the properties of the TP&W.

Q. And on page 18, in the middle of the second paragraph, and I quote, "assimilation of certain of the TP&W personnel would serve to provide more extensive and intensive use of our present facilities." What do you mean by

the word "assimilation", the words "Assimilation of certain of the TP&W personnel"?

A. Well, we intend to absorb some of the TP&W traffic personnel. They have a very good personnel and we intend to absorb them into our organization.

Mr. Wheeler: Mr. Lucas, you understand that we do not, that the M&StL does not propose a separate independent [fol. 1303] operation such as the Pennsylvania and the Santa Fe, as set forth in their application, do you not?

Mr. Lucas: That is what I interpret your position to be, yes.

By Mr. Lucas:

Q. Mr. Nelson, page 8, you refer to the Peoria interchange with the Gulf, Mobile and Ohio. Under your proposal and your plan of operation and solicitation would not the Gulf, Mobile and Ohio be short changed if its traffic were interchanged with the TP&W traffic at Chenoa instead of Peoria?

A. That would be a divisional arrangement that would have to be worked out. At the present time there is probably no division via that route and that is a matter that will have to be worked out.

Q. If present divisions were not unchanged would not the Gulf, Mobile and Ohio be shorthauled in that situation?

A. Well, in the absence of any agreed divisions they would be.

Q. Now, pages 9 and 10, would not the answer likewise be the same on the Chicago, Eastern Illinois with respect to its traffic through Chicago and your proposal to have it move through Watseka instead of Chicago?

A. I understand there is agreed divisions now between the C&EI and the TP&W.

Q. But they would be shorthauled, the divisions might be another matter, isn't that right?

A. Oh, yes, that is right. That is right.

[fol. 1304] Q. On page 11 isn't the same situation true of the New York Central, Peoria versus Shelton, if you were to establish a new proposed service interchange point at the latter place?

A. That is right.

Q. And would not the Wabash be shorthauled on eastern traffic if the interchange point was moved from Albion-Des Moines, Iowa, to Forest, Illinois?

A. Let me answer you this way, we use the Wabash gateway east of Peoria now but we insert the Chicago, Illinois and Midland. When you compare the C&IM and the TP&W divisions, why, they are, as I understand, approximately the same and I don't think they are going to be hurt.

Q. Would the Milwaukee be shorthauled on coal originating on its line in Indiana if it turned this coal over to the unified TP&W rather than delivery in the Northwest?

A. Yes, but can I clarify that?

Exam. Albus: Yes, sir.

A. This coal originates in the Terre Haute district going to industries on our line, particularly at Mason City and Chaska, and I think we have the right to secure a long haul, if we can get it.

Q. What would be the effect of the establishment of these routes that you indicate Twin Cities via Peoria in respect to Chicago North Western on traffic in that area from the Northwest to the East and Southeast?

[fol. 1305] A. What effect would it have on the North Western?

Q. That is right.

A. I am not in position to speak for the Chicago North Western.

Q. Do you think it might have some effect on the Chicago North Western traffic if you were to accomplish your unification and your proposed gateways in this proceeding?

A. There are possibilities.

Q. Don't you think there would be more than just possibilities, Mr. Nelson?

A. I don't know how good the North Western's solicitation is. I am not in position to know.

Q. You are competitive in the Twin Cities with the Chicago, North Western at the present time, are you not?

A. Yes, sir.

Q. If the present situation remained unchanged you could

work out these junctions and routes east of Peoria, could you not, with the present management of the TP&W?

A. It probably could be done but I don't think the TP&W would be interested.

Mr. Lucas: That is all, Mr. Examiner.

Exam. Albus: Mr. Cassell, please.

Cross examination.

By Mr. Cassell:

Q. Mr. Nelson, will you turn to page 6 of your prepared testimony.

A. Yes.

[fol. 1306] Q. There you are speaking of traffic that you hope to have that is now moving through the Chicago gateways and other gateways, isn't that right.

A. That is right.

Q. That is traffic that is now moving by other carriers, then, isn't it?

A. Which paragraph are you referring to, Mr. Cassell?

Q. The traffic that you are talking about that you expect to get that is now moving via the Chicago gateway and other gateways, that is now moving by other carriers, isn't it?

A. Not all together, we get some.

Q. The traffic you expect to get?

A. Would be new traffic.

Q. New traffic to you?

A. Yes.

Q. But it is not new traffic to railroads, is it?

A. That is correct.

Q. It is traffic presently moving by other railroads, isn't that true?

A. Yes.

Q. So that you expect to divert traffic from other railroads to yourself?

A. Yes.

Q. And then it is not new traffic but diverted traffic?

A. That is correct.

[fol. 1307] Q. And you expect to get that from the roads with whom you now compete?

A. Yes.

Q. The Rock Island is one of those roads, isn't it?

A. Yes, we compete, and we also have connections with you.

Q. That's right. And the Rock Island serves the Twin Cities, doesn't it?

A. It does.

Q. And Chicago?

A. That is right.

Q. And Peoria?

A. That is right.

Q. So that you would expect to get traffic from them as a result of this plan you have?

A. Well, I am talking about the traffic from, say, the Twin Cities to south and southeast.

Q. The Rock Island moves that traffic today, doesn't it, some of it?

A. It certainly does.

Q. And you expect to get some of that?

A. Yes, sir.

Q. On page 19 and successive pages you are talking about, and on the previous pages you speak about these routes which will be created with the use of the M&StL and the TP&W, you gave the mileages and junctions. So far as [fol. 1308] the shipper is concerned there are routes today that can move traffic that would otherwise, which you expect to move over these new routes, aren't there?

A. Yes, sir.

Q. So so far as the shipper is concerned this acquisition isn't essential to them to move their traffic, is it?

A. Well, I am not qualified to answer. As a matter of service, and if you've got the service, why—

Q. Do you know, do you know whether there is any advantage to the shipper or not in having these new routes that you speak of?

A. There is advantage to the shippers on our railroad particularly and to the Northwest.

Q. Don't those shippers in the Northwest have routes today in which they can move their shipments?

A. They have routes but they may not use them.

Q. Do you know?

A. I don't know.

Q. Well, you don't know whether this is any advantage or not, do you?

A. No.

Mr. Cassell: That is all.

Exam. Albus: Mr. Broker.

Cross examination.

By Mr. Broker:

Q. Does the Nickel Plate give you good service?

[fol. 1309] A. Very, very much so.

Mr. Broker: Thank you, that is all.

Exam. Albus: Mr. Davis.

Cross examination.

By Mr. Davis:

Q. On page 19 of your prepared statement, Mr. Nelson, you make certain references to maximum earnings of the Pennsylvania in conjunction with the Wabash through Kansas City, for example. Did you hear the testimony of Mr. Swanson in response to questions which I asked him this morning concerning divisions?

A. Yes, sir.

Q. Do you agree with the answers which he gave to those questions as being correct?

A. I agree.

Q. Mr. Nelson, is mileage the only determining factor in the development of the junctions which you have shown as interchange points, increased volume, if your application here is approved?

A. Well, it is a combination of mileage and service. Sometimes the mileage may be longer via a certain route but the service is comparable, probably a more direct route. I put those mileages in there for the reason that I thought I'd treat everybody fairly, and I put it in each instance.

Q. Are you aware of the volume of interchange between [fol. 1310] the Wabash and your line via Albia and Des Moines, Iowa?

A. Yes, it is quite extensive.

Q. Would you say that that is larger than your total interchange with the TP&W at Peoria on an annual basis?

A. I would say that Albia and Des Moines would be larger.

Q. And are you aware that a substantial part of that traffic moves to points east of the Illinois-Indiana state line that comes to the Wabash from you at Albia and Des Moines?

A. Well, there is some business that we get from the Wabash that we would call the eastern business, but predominantly it is what we call a north and south route. I mean most of the traffic flow between our line and the Wabash is stuff that moves through the St. Louis gateway and south thereof.

Q. The traffic that does move to the east, which we interchange with you at Albia and Des Moines, would not go through the St. Louis gateway, would it, it would be taken on the Wabash line Moberly through Hannibal and thence eastward, would it not?

A. Yes.

Q. Your answer was yes, wasn't it?

A. Yes.

Q. Your service route, one of your best service routes, between the Twin Cities and St. Louis is in conjunction with the Wabash by Albia and Des Moines, is it not?

A. Yes, sir.

Mr. Davidson: That is all I have.

[fol. 1311] Exam. Albus: Are there any further questions on cross-examination.

Mr. Hoag.

Cross examination.

By Mr. Hoag:

Q. Mr. Nelson, at page 15 of your prepared statement, at the top of the page, you refer to, I believe you are re-

ferring to the Peoria area, you make the statement that should TP&W be acquired by the M&StL that an integrated service could be instituted that there would be no switching time involved. Would you please enlarge upon that statement.

A. I'd rather have Mr. Schroeder answer that but if you ask for my opinion I will give it to you.

Q. It is your statement, I would like to have your background on that.

A. All right. This is what we intend to do in case this happens, our time freight that leaves Minneapolis will go all the way through to Effner. Does that answer it?

Q. What do you propose to do with the yards?

A. Well, I think it was covered in Mr. Devins' testimony, as I recall, that we would probably abandon the present yard we now have inside the city limits of Peoria, which we call the Barlett yard.

Q. You would abandon the present M&StL yard?

A. Yes.

Q. Would you still retain the TP&W yard?

[fol. 1312] A. Yes, sir.

Q. Mr. Nelson, at page 18, I think you make some reference to traffic personnel. On the M&StL what constitutes their total number of traffic personnel?

A. You mean solicitors, solicitors and commercial—

Q. (Interrupting) I am referring to it in the same way as you refer to it as far as the TP&W?

A. Well, in a comparable way I would say about 126 or possibly 127.

Q. That is calculated on the same basis on which you arrived at traffic personnel for 126 to 130?

A. 127, something like that. Maybe somebody resigned yesterday.

Q. Should your present application be approved, what would be the total traffic personnel for the TP&W, M&StL?

A. You mean the combined?

Q. Yes.

A. Well, that is going to be covered in an exhibit, but I will explain it to you briefly. We will retain certain positions in Peoria and we will probably make some additions at Los Angeles, may make some additions at Detroit, and

so forth and so on, and it is difficult to give you an exact figure but I think it is somewhere in the neighborhood—I think we will only acquire about eight or nine, I don't know—can I look at this exhibit a minute?

Q. Go right ahead.

[fol. 1313] A. It is 12.

Q. 12 what, sir?

A. We will retain 12 of the present organization based on this economy figure, but that economy figure is subject to revision and study after we have a chance to study it we intend to take some of these savings and increase our personnel at various offices and utilize the TP&W employees. This is the maximum economy, you understand.

Q. If I am correct in my mathematics, then, on total traffic personnel should your application be granted you would have somewhere in the neighborhood of 138 rather than a combined total presently of 183?

A. That would be an approximate figure providing that we achieve these maximum economies that we have set here.

Q. I believe you quoted a figure of $454,000 as the economies to be realized?

A. Yes.

Q. Could you break that figure down? How much of that constitutes a labor figure?

Mr. Wheeler: May interpose an objection here. I think the word the "could" rather than "would" on the top of page 18 of his statement.

Mr. Hoag: Excuse me, it is could.

Exam. Albus: The record will so show.

Mr. Wheeler: Do you have the question, Mr. Nelson?

[fol. 1314] The Witness: Yes.

A. Do you mean the total economies from the positions that would be abolished, is that what you mean?

By Mr. Hoag:

Q. At the top of page 18 of your prepared statement?

A. You asked me about compensation.

Q. Yes, I said of the figure of $454,000 how much of that constitutes money for labor?

A. $258,863. That is Peoria only. Now, do you want the off-line?

Q. Yes.

A. $158,169.

Q. Or a combined total of what, sir?

A. I will have to figure it out here. I've got about four hundred forty-four thousand.

Q. Would you please explain what that figure is to represent, the four hundred forty-one thousand?

A. The four hundred forty-four thousand.

Q. You just gave me a combined total of four forty-one.

A. Four hundred forty-four thousand.

Q. Four hundred forty-four thousand, pardon me.

A. That is the economies and compensation.

Q. Direct labor savings?

A. That is the way I understand it.

Q. Would you please explain to me--I believe you heard [fol. 1315] Mr. Heineman's testimony the other day on this assimilation program for employees, how that would work as far as traffic personnel are concerned on these--

A. Did you finish the question?

Q. Yes, I am just doing some figuring here. I will be right with you. According to my calculation, sir, it would be some 45 positions that would be lost.

A. That is right.

Q. Mr. Heineman the other day explain an assimilation program of the M&StL--

Mr. Wheeler: Mr. Examiner, I again just don't want the record confused. Mr. Hoag uses the word would be lost and the testimony of the witness is could, and he goes on to explain that the maximum savings are one thing and the actual program is something else. I just don't think the record ought to be confused on the basis of those two terms.

Exam. Albus: Well, it is straightened out now to that extent.

You may answer, Mr. Nelson.

A. Will you repeat the question, please.

(Thereupon questions and answers were read beginning with the last question on page 1314 and ending with the question which begins on line 9 of page 1315.)

Mr. Hoag: If the question is not clear, I can restate it.

By Mr. Hoag:

Q. To go along with Mr. Wheeler, it appears that that the [fol. 1316] 45 positions could possibly be lost, would you please explain how that might work on Mr. Heineman's assimilation program.

Exam. Albus: So far as the traffic department is concerned?

Mr. Hoag: Yes, I am talking specifically about the traffic department.

Exam. Albus: All right.

A. Well, we can speak about the attrition, resignations and things of that nature. We have approximately 25 employees over 55, and the TP&W probably have proportionately some, and we think that, and with the expansion of new offices or increasing the personnel in some of the offices we will be able to assimilate a substantial number of those employees.

By Mr. Hoag:

Q. The traffic personnel is fairly well spread around the country, are they not?

A. Yes, sir.

Q. Wouldn't it rather ingenious for your assimilation program for you to move them around the country on that basis.

A. Oh, I don't see anything objectionable about that, as long as they are taken care of.

Mr. Hoag: That is all I have.

Exam. Albus: Mr. Davidson.

Mr. Davidson: Just a few questions.

Cross examination.

By Mr. Davidson:

Q. I understand that the proposed schedule of economies [fol. 1317] that could be effected in the traffic department

alone contemplates a maximum of $258,000 in the Peoria area.

A. I'd like to review it again. I am sure that is correct. Yes.

Q. And how much at Chicago?

A. We have it here $29,254.

Q. How many positions would be, could be lost at Chicago?

A. There could be four solicitors and one clerk, could be.

Q. Of course on the other hand if these economies are not made then those figures aren't applicable, is that correct?

A. These are subject to study.

Q. You spoke on page 15 of your testimony of the facilitation of traffic via the TP&W through its junction points with other carriers east of Peoria.

A. That is right.

Q. Now, this testimony, as I understand it, covers the traffic advantage as you see them, is that correct?

A. That's correct.

Q. Now, from the point of view of the M&StL, on the basis of your testimony, there is no advantage in having the western half of the TP&W?

A. I mentioned in my testimony here that we were going to put Nemo, Keokuk and Lomax on a parity.

Q. Where is the advantage to the M&StL of those?

Mr. Wheeler: Of those, you mean what?

[fol. 1318] By Mr. Davidson:

Q. Those three points.

A. Well, there is a tremendous amount of perishable business that moves at the present time through the Lomax gateway and we intend to keep it rolling through the Lomax gateway.

Q. Could that be handled on the M&StL?

A. It could.

Q. It could be handled today on the M&StL, could it not?

A. It could.

Q. So that in effect that branch of the TP&W west of Peoria is a competitor of the M&StL?

A. It is a competitor now with us.

Q. And will cease to be a competitor if you can acquire it?

A. No. We intend to keep the Lomax gateway open.

Q. Well, will it be a competitor of the M&StL if you acquire it?

A. You say it will be a competitor if we acquire it?

Q. I say will it be?

A. No, it would be one of own.

Mr. Davidson: No further questions.

Exam. Albus: Is there any further cross-examination?

Mr. Lucas: Mr. Examiner, would you indulge me on what I hope won't be over two questions.

Cross examination.

By Mr. Lucas:

Q. Under the unification of the traffic agencies would the combined force thereafter on a unified basis solicit for the unified system?

[fol. 1319] A. Yes, sir.

Mr. Wheeler: Mr. Examiner, I just want the record to show that I object to the use of the word "unification" if Mr. Lucas intends by that to use it as having a legal connotation other than the difference that was employed by Mr. Nelson in his direct statement.

By Mr. Lucas:

Q. Would there be separate solicitation for the TP&W—by the TP&W for traffic under your proposal.

A. No, sir.

Mr. Lucas: That is all.

Mr. Broker: I didn't hear the answer.

Exam. Albus: No, sir.

Are there any further questions of Mr. Nelson.

Redirect examination.

By Mr. Wheeler:

Q. Has the TP&W shown any interest in working out the integrated services via the interchange that you testified to in your direct testimony, page 5, Mr. Nelson?

Mr. Thomas: I object. It is a leading question.

Exam. Albus: The objection is overruled. I don't think that is leading.

What is the answer?

A. The answer is this, with the exception of the Effner route, which we have been negotiating, we haven't been approached by the TP&W in connection with this matter, with the other junctions.

[fol. 1320] By Mr. Wheeler:

Q. What advantages would the integrated service via those junctions afford to shippers?

Mr. Thomas: Mr. Examiner, that is certainly a leading question.

Mr. Wheeler: A leading question. I asked him what advantage. If that is leading I will put in with you.

Mr. Thomas: You are telling him the answer.

[fol. 1321] Mr. Cassell: I will object. It has already been answered.

Exam. Albus: I am not so much concerned about it being a leading question as I am proper redirect. On that basis, I will sustain the objection.

Mr. Wheeler: Mr. Examiner, I believe, I think it was either Mr. Lucas asked the witness some questions regarding service shippers received via these routes. If I am incorrect in that, then I withdraw the question, but I believe the record will show and it was for that reason I asked this question of Mr. Nelson.

Exam. Albus: Well, in case the record does so show, you may answer, Mr. Nelson.

The objection is overruled.

Mr. Cassell: Mr. Examiner, previously he said he didn't know what the service was by some roads—

Exam. Albus: Maybe he will say that again. I don't know.

Do you have an answer to the question pending, Mr. Nelson?

A. Well, I was going to say it would be a service advantage to us, but whether that service is better than that offered by our competition it is hard for me to say.

Mr. Cassell: What was the end of that?
Exam. Albus: He can't say.
Is everybody content?

By Mr. Wheeler:

Q. Would these routes afford shippers a faster route in which the M&StL would participate, Mr. Nelson?
[fol. 1322] A. Yes, sir.
Q. Mr. Nelson, do you traffic solicitors move about from time to time?
A. Yes.
Q. That is, from one city to another?
A. Yes, I am making four or five of them right now. Three of them have been completed and two of them are in the process, and I expect to have some more.
Q. Mr. Nelson, when you used the word "unified" in connection with your testimony did you mean to indicate in any way that the corporate status of the TP&W would be changed if the M&StL acquired control of it?
A. I didn't want to indicate that at all.

Mr. Wheeler: I have no further questions.
Exam. Albus: Recross-examination, please.
Mr. Thomas: Nothing.
Mr. Lucas: No, sir.
Exam. Albus: Anyone?
Mr. Cassell: None.
Exam. Albus: You are excused, Mr. Nelson. Thank you, sir.

(Witness excused.)

Exam. Albus: Let the record show that exhibits marked for identification H-38, H-39 and H-40 are received in evidence.

(Applicant M&StL's Exhibits H-38, H-39 and H-40, Witness Nelson, were received in evidence.)

[fol. 1323] Mr. Wheeler: I would like to call Mr. Ernest Peterson.

E. L. Peterson was sworn and testified as follows:

Direct examination.

By Mr. Wheeler:

Q. Mr. Peterson, will you please state your name and address.

A. E. L. Peterson, 164 Grain Exchange Building, Minneapolis, Minnesota.

Q. What is your occupation, Mr. Peterson?

A. I am Director of Traffic and Manager of the Minneapolis Traffic Association.

Q. How long have you held that position?

A. For the past six years.

Q. What positions in the transportation field did you hold prior to that time?

A. Oh, for eight years prior to that time I was assistant traffic manager of the Kansas City Board of Trade, for about ten years prior to that I occupied a similar position in the Sioux City, Iowa, market. Prior to that I was employed by several railroads. So my experience dates back to about 1920 in transportation matters.

Q. Have you occupied any positions on any advisory committees or anything of the kind in connection with transportation?

A. Governmental advisory committees?

Q. Yes, sir.

[fol. 1324] A. No, sir, I have not.

Q. Industry advisory committees?

A. I don't quite understand your question.

Q. Have you served on any industry advisory committees in connection with transportation matters?

A. Well, I am on the Executive Committee of the National Industrial Traffic League, if that is in the nature of what your question led to.

Q. Yes, sir.

What are your duties as director of traffic of the Minneapolis Traffic Association?

A. The Minneapolis Traffic Association, if you may allow me to elaborate a little there—

Q. If you will.

A. (Continuing) —is maintained by the Minneapolis Grain Exchange and the Minneapolis Chamber of Commerce. It was organized in 1906 for the purpose of furthering the transportation position of the Minneapolis market, and it is my duty to as much as possible carry out that policy.

Q. Who make up or what companies make up or are members of the Minneapolis Traffic Association?

A. They are made up of the members of the Minneapolis Grain Exchange and the Minneapolis Chamber of Commerce.

Q. And what is the general nature of the business of the member companies?

[fol. 1325] A. Those engaged in the grain business, those engaged in the grain business, those engaged in the mercantile and manufacturing business, business in general in the Twin Cities.

Q. Is your membership concerned with car supply conditions on the railroads serving the Northwest?

A. Very much so, especially the members of the Minneapolis Grain Exchange.

Q. Would you explain that and describe their interest in further detail?

A. The general trade territory of the Minneapolis Grain Exchange and the membership of that exchange lies in the States of Minnesota, North Dakota, South Dakota, and Montana. We also draw some grain from northern Wyoming, from the States of Oregon and Washington, a little from northern Iowa. The ability to draw that grain, of course, is contingent upon our getting the transportation equipment that will allow it to come into the Minneapolis market. During the harvest period we quite often run into car shortage periods, so it is important to our people to be able to get the boxcars when they need them.

Q. Do your member companies, the companies that you service, own elevators on the lines and railroads in the Northwest?

A. Many of them do, yes.

Q. What service does your association render to the member companies in connection with car supply?

A. In connection with car supply, it is our endeavor to [fol. 1326] try and get an adequate supply of boxcars up into the upper midwestern territory when we need them.

Q. Do your member companies advise you as to their car supply needs?

A. They do not call us as to their day-by-day needs. When we hear from our member companies is when we run into shortage, shortages in different sections of the country, and then we seem to be the first one they contact.

Q. What are the railroads, in general, in the Northwest that serve your member companies?

A. The Milwaukee Railroad, the Northwestern Railroad, the Great Northern, the M&StL, the Northern Pacific, the Soo Line, the Rock Island, the Chicago Great Western and a couple of smaller ones.

Q. On the basis of your experience, do you have an opinion with respect to the car shortage or supply so far as movement of grain was concerned during the 1955 season on those railroads?

A. Yes. Some of those railroads were in very bad shape, in that we were not able to get enough cars on those lines to take care of the grain that wanted to move from stations on those lines. There were one or two lines who did what we consider a very good job in handling the grain. Quite a few of the lines, though, did not do the kind of a job we would like to have had.

Q. Can you give me the experience, your experience, [fol. 1327] with respect to the M&StL during the 1955 grain season?

A. The 1953 movement of the M&StL was one of our bright spots.

Q. By that, you mean what, sir?

A. I mean that we had probably the least trouble and I had the least complaint coming from people who wanted to move grain by the M&StL than I did for any other line.

Q. If there had been complaints and car shortages on the M&StL do you believe they would have come to your attention?

A. I certainly do.

Mr. Wheeler: I have no further questions.

Exam. Albus: Cross-examine, please, Mr. Thomas.

Cross examination.

By Mr. Thomas:

Q. Mr. Peterson, don't you know that there were only six weeks in 1955 when there weren't car shortages on the M&StL?

A. I don't think that's peculiar to the M&StL. That was also true of all of our lines out in there. I don't believe there was a time during 1955 when the M&StL had greater than the average daily shortage of 85 cars.

Q. You didn't answer my question directly. Do you know or don't you know that there were only six weeks when there weren't shortages?

Exam. Albus: Are you talking about grain cars, Mr. Thomas?

Mr. Thomas: I am just talking about cars.

Exam. Albus: About shortages generally?

[fol. 1328] Mr. Thomas: Yes.

Exam. Albus: All right.

A. You say in 1955, Mr. Thomas?

By Mr. Thomas:

Q. Yes.

A. Well, I can't answer your question for this reason, Mr. Thomas, at one time I received from the car service division of the Association of American Railroads various statistical reports, such as CS No. 44-A. However, for some reason I was taken off of the mailing list on that particular report, so I have nothing beyond September 10, 1955. Prior to that time my own figures show there was about 8 weeks, 7 or 8 weeks, when the M&StL did not report shortages.

Q. Would your answer be the same, Mr. Peterson, if I told you I was referring to boxcars when I used the expression "car shortages"?

A. That is what I am talking about here, is boxcars.

Q. Your answer would be understood as applying to that question, boxcar shortages?

A. That is right.

Mr. Thomas: That is all.

Exam. Albus: Mr. Lucas.

Cross examination.

By Mr. Lucas:

Q. Mr. Peterson, you enumerated some six or seven roads competitive with the M&StL in connection with the transportation needs of your membership?

A. No, I didn't.

[fol. 1329] Q. Sir?

A. I did not.

Q. What was your enumeration of the roads—

A. (Interrupting) The various roads bringing grain into Minneapolis was numerous.

Q. In and out of the Twin Cities, are those roads competitive with the M&StL?

A. Not in all cases. The Great Northern and Northern Pacific, for example, do not go east of the Twin Cities, whereas the Burlington, which I did not enumerate, Mr. Lucas, should be included in that category.

Q. What about the Burlington—particularly, you mentioned that, that's all right—the Milwaukee and the Northern Pacific and the Rock Island?

A. I would say to common destinations they are competitive.

Mr. Lucas: That is all.

Exam. Albus: Mr. Cassell.

Mr. Cassell: No cross.

Exam. Albus: Mr. Broker?

Mr. Broker: No questions.

Exam. Albus: Mr. Davis?

Mr. Davis: No questions.

Exam. Albus: Mr. Davidson?

Mr. Davidson: None, Mr. Examiner.

Exam. Albus: Is there any further cross-examination?

[fol. 1330] (No response.)

Exam. Albus: Is there any redirect?

Mr. Wheeler: No, sir.

Exam. Albus: You are excused, Mr. Peterson.

(Witness excused.)

[fol. 1331] Mr. Wheeler: Mr. Schroeder.

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

I believe Mr. Lucas has a question concerning the last bit of testimony taken in the case.

Mr. Lucas: Thank you, Mr. Examiner.

May I ask if the reporter would read my last question addressed to Mr. Peterson.

Exam. Albus: Read the question, please.

(Question read.)

Mr. Lucas: I meant in place of the Northern Pacific to say the Chicago and Northwestern.

Exam. Albus: Is there any objection to that correct?

Mr. Wheeler: I can't agree to it because I don't know whether Mr. Peterson would say yes or not if the question were modified.

Exam. Albus: I am awfully sorry, I don't know what to do about it.

Is there any possible way to get Mr. Peterson back here?

Mr. Wheeler: Mr. Examiner, we had a very difficult time of getting Mr. Peterson down here. He was a very difficult man to catch and bring down. He told me that he had to get right back to Chicago, that he had an engagement there, and it was for that reason we really put him on out of order in our case.

[fol. 1331a] Exam. Albus: Do you know whether or not he is driving?

Mr. Lucas: Mr. Examiner, that is all right. I will waive it.

[fol. 1332] ALBERT W. SCHROEDER was sworn and testified as follows:

Direct examination.

By Mr. Wheeler:

Q. Will you please state your name and address?

A. My name is Albert W. Schroeder. My address is 111 Franklin Avenue, Minneapolis, Minnesota.

Mr. Wheeler: Mr. Examiner, at this time I would like to have marked for identification the three exhibits that will be put in through Mr. Schroeder.

The first is a map showing the lines of the Minneapolis and St. Louis Railway in black with the various stations shown along the line.

Exam. Albus: That map may be marked for identification Exhibit H-41.

(Applicant M&StL's Exhibit No. H-41, Witness Schroeder, was marked for identification.)

Mr. Wheeler: The second is another map showing rail and ballasts, having colored lines.

Exam. Albus: H-42 for identification.

(Applicant M&StL's Exhibit No. H-42, Witness Schroeder, was marked for identification.)

Mr. Wheeler: And the third and last is one marked Peoria-East Peoria.

Exam. Albus: H-43 for identification.

[fol. 1333] (Applicant M&StL's Exhibit No. H-43, Witness Schroeder, was marked for identification.)

OFFERS IN EVIDENCE

Mr. Wheeler: Mr. Examiner, I am not sure that I offered in evidence the exhibits put in by and prepared by Mr. Nelson. If I failed to do so, I would now like to offer them.

Exam. Albus: My records indicate they have been received, but if they haven't been, they are received at this time.

By Mr. Wheeler:

Q. Mr. Schroeder, what is your present position with the M&StL?

A. I am Vice-President of Operations of The Minneapolis & St. Louis Railway Company.

Q. Are you also President-Elect of that company?

A. That is correct.

Q. Mr. Schroeder, did you hear the testimony of Mr. Heineman regarding the policy and practices that will be followed by the M&StL in connection with the acquisition of the TP&W?

A. I did.

Q. Did you participate in those decisions?

A. I did.

Q. Do you approve them?

A. Without qualification.

Q. As President of the TP&W will it be your purpose to carry them into effect?

A. That is correct.

Mr. Broker: Excuse me, as President of the—

[fol. 1334] Mr. Wheeler: I beg your pardon. I should have said M&StL.

Exam. Albus: President-Elect.

By Mr. Wheeler:

Q. Have you any comment to make with respect to the proposed price to be paid, that is, of $12,150,000, for the stock of the TP&W?

A. Well, yes, I do have, to this extent, that I was not associated with the M&StL Railroad in any way when the negotiations for the purchase of the TP&W was started or consummated, therefore I will be in a little better position to give an answer after studying what we are proposing in unification. I would say that price would be very satisfactory to the M&StL.

Q. Now, Mr. Schroeder, you used the word unification, and in the light of previous discussion I want to clarify that for the record. Is there any intent, so far as you know, on the part of the M&StL if it is given authority to acquire control of that property to eliminate the corporate entity of the TP&W?

A. No, sir.

Q. So that when you used that word you were using it in its colloquial sense?

A. That is right. I might say this, while it is synonymous with consolidation, we thought it was a better word to illustrate exactly what we were proposing. In fact, it was a word we borrowed from the Kansas City Southern when they did something very similar in this way to what we are proposing with the Louisiana and Arkansas. We [fol. 1335] thought it was a little more expressive and a little more descriptive.

Q. Mr. Schroeder, will you please tell us when you took over your present position with the M&StL and give us a summary of your experience prior to that date?

A. I have held the position of Vice-President of Operations of The Minneapolis & St. Louis Railway Company since November 1, 1955. Prior to that date, I graduated from the University of Nebraska in 1938 with a Bachelor of Science Degree in Civil Engineering. My first railroad employment was with the Burlington Railroad in 1939, where I held various engineering and maintenance positions until 1949 when I resigned as Assistant to Engineer of the Track for the system to accept the position of Chief Engineer with the Chicago & Eastern Illinois Railroad. I also held the positions of Division Superintendent, General Manager, and Vice-President and General Manager on that road before coming to The Minneapolis & St. Louis Railroad.

Q. Before continuing with your prepared statement, Mr. Schroeder, I wonder if you could briefly describe the top personnel and officers who are associated with you in the management of the M&StL.

A. At the present time?

Q. At the present time.

A. The M&StL Railroad, as a good many people know, has had a management as far as the department heads are

concerned, especially in the operating department, that [fol. 1336] hasn't changed too much in a number of years. At the present time our principal problem in management positions appears to be the very fact that the average age of every one except the executive officers, if I recall correctly, runs about 64 years of age. For instance, we have in 1956 nineteen people who will reach that age of retirement or will have already reached it, are now 65, and that continues at quite a rapid rate as far as our railroad is concerned in the number of officers there are on the railroad for the next five or six years.

We have, for instance, a situation where one of our officers happens to be the second oldest employee on the railroad is wanting to retire and we are in the process of setting up a regular retirement program which the railroad has not had in the past. It is similar, I think, to a good many railroads that you are all familiar with, as far as pattern of the retirement program is concerned.

Q. Does that situation on the M&StL personnel situation, have any relation to your desire to acquire the TP&W?

A. The management of the TP&W is a very fine, aggressive, young management, and I believe, as has already been mentioned, the management pool between the needs of the M&StL and the TP&W would very nicely complement one with the other, while I can't think of any right offhand. I think we are all aware of the fact that some companies have actually been purchased for their personnel.

[fol. 1337] Q. Mr. Schroeder, returning to your prepared statement, have you gone over the properties of the TP&W and examined their operation?

A. Yes. I made one trip to study the unification of the property upon acquisition of the TP&W by the M&StL.

Q. On the basis of your inspection and study of the properties and their operations, do you believe that operating economies and improvements will result from the acquisition of the TP&W Railroad by the M&StL?

A. Yes. The present operated mileage of the M&StL is 1,397 miles. The operated mileage of the TP&W is 239.43 miles. The M&StL joins the TP&W with a direct connection at Peoria, Illinois, which is located approximately at the

geographical center of the TP&W. Interchange between the two roads is effected by transfers between the M&StL-Peoria Yard and the TP&W-Peoria Yard, a distance of 5.4 miles. The actual transfer is done at the "PT" tracks at the east end of the M&StL Yard.

The total operated mileage of the two roads combined would be 1636.43 miles, which is comparable to the mileage of operating divisions on larger railroads. It seems to me it is obvious from the mileage and physical connections of the two roads, as shown on the map, Exhibit H-41, that the unification of the two properties will result in economies and efficiency in operation.

The duties of the executive and staff officers of the M&StL [fol. 1338] in the administration, planning and direct supervision of all phases of operation of the road could easily be extended without undue burden to cover the additional same duties in the operation of the TP&W. In my study, the exact duties for various sub-departments, such as maintenance of way, maintenance of equipment, train operation, car service, purchasing, and so forth, were considered as to just how we plan to unify our operation with the TP&W's, and the last part of my study contains a summary in dollars as to the savings to be realized. However, I have not attempted to set up a time table as to when any or all the economies will be effected. I realize that it will take some time to accomplish the over-all program. During this period, a part of the program will be realized through normal attrition on the two roads and as such will have little effect on existing personnel. Furthermore, I want to stress at the outset that in considering savings to be realized through reduction of personnel, I have looked at positions and not at individuals. In other words, certain officers or employees of the TP&W may be retained in lieu of officers and employees of the M&StL holding corresponding positions. Accordingly, all reference in my testimony to positions on the TP&W relates solely to those positions and not to the individuals holding those positions."

[fol. 1339] As an example, there would be required only one Operating Vice President, one General Superintendent, one Chief Engineer, one Mechanical Superintendent, one

Superintendent of Car Service, one Chief of Police, and one Purchasing Agent, together with their present staffs, to adequately cover the additional needs of only 239 operated miles. Of the 24 executive positions listed by the TP&W, a trainmaster and a roadmaster would be retained to continue direct supervision of train operation and track maintenance over what is now the TP&W trackage.

I want to mention right there that that does not mean that there would be 22 executive positions left nor does it mean that there would be none left. When I am speaking of the trainmaster and the roadmaster, I am referring to two that will be retained as far as operations are concerned, and this will be further explained by a following witness who will have the details on not only this, but other personnel, as to cost and how they feather in, not only salarywise, but as accounts are concerned under the ICC basis and how certain savings are applied to certain departments.

Exam. Albus: Next question, please.
Mr. Wheeler: Off the record, Mr. Examiner.
Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

[fol. 1340] By Mr. Wheeler:

Q. Will the acquisition of the TP&W by the M&StL result in economies of maintenance of way?

A Yes. The line of the M&StL railroad between Minneapolis and Peoria is laid with 115 or 100-pound rail, except for 10.25 miles of less than 100-pound rail, and is ballasted with either crushed stone or washed gravel ballast. The TP&W railroad between Effner and Lomax and Keokuk has the same type of track construction, including weights of rail ranging from 70-pound to 115-pound, and is ballasted with crushed stone and or slag, gravel and some cinders. It is my opinion that these two lines are of approximately the same quality, both in construction and maintenance. The ruling grade on the M&StL railroad in both directions is 1.45 per cent between Minneapolis and Peoria, except for Maxwell Hill, and the ruling grade on the TP&W is 1.2 per

cent. Exhibit H-45 is a map showing by color the similarity of rail and ballast sections and ruling grades.

Between Minneapolis and Peoria on the M&StL there are 46 section gangs. On the TP&W there are 11. If the two railroads were to be unified, one Extra Gang would be sufficient. General supervision of the work by one Chief Engineer and one General Roadmaster would be adequate to plan and oversee the maintenance programs to assure the continued level and class of maintenance.

The same is true as far as the condition of buildings and bridges of the two roads. At the present time there are two [fol. 1341] bridge and building gangs on the TP&W and eight on the M&StL. By integrating the work nine gangs could take care of the two roads nicely.

As to signal and communications, it is proposed to retain the present signalmen and maintainers, of which there are seven, on the TP&W, to continue maintenance of interlocking plants, crossing protections and signals on that portion of the unified road. The nine maintainers presently employed by the M&StL could continue to take care of their territories as now assigned. By combining the line gang of the M&StL with that of the TP&W, it is estimated three positions could be saved. General supervision of the work, the planning of the maintenance and material, etc., could be handled by the S&C staff under the Chief Engineer.

I might add there that the extra gang we are speaking of are seasonal laborers and the number of people in the line gang I am talking of are seasonal laborers on the M&StL.

It would be our plan, then, from the track, structures, signals and communications standpoint, to save 35 positions now carried under the present maintenance forces of the two roads. The positions of General Roadmaster; Bridge Engineer and Assistant Chief Engineer in charge of signal and communications, would have direct supervision over the maintenance work of the unified road. They would, in addition to programming the work, arrange for ordering mate- [fol. 1342] rial and supervise progress of work according to standards.

Q. Will additional economies be realized in the consolidation of work equipment?

A. Yes. The use of work equipment presently owned by the two railroads would be built into a program for work equipment so as to get the greatest usage and to operate the equipment seasonally and in such a way as to coincide with delivery of materials and work force over the unified railroad. For example, the TP&W is mofe southerly than any point on the M&StL and ballasting units could be started on the TP&W early in the season and be moved over lines of the M&StL as the summer progresses, being used to Watertown, South Dakota, Fort Dodge, Iowa, or any of the other lines on the latter railroad, and then floated back onto the TP&W. This will result in a longer season of maintenance than can be utilized on the M&StL or can be justified on the short mileage of the TP&W. The same thing would be true in more efficient laying of rail, where individually the two roads, even though mechanized in this operation, do not lay enough rail per year to achieve a high degree of efficiency. By adding the approximately 15 mil of new rail laid on the M&StL to the 10 miles annually laid on the TP&W, to make a 25-mile total, a greater degree of efficiency and supervision could be achieved. The proper organization of such a gang is the most important factor toward their efficiency. The longer they work together, the [fol. 1343] better the "teamwork" smooths out and the more efficient they become. Obviously the same is true in other maintenance of way operations, such as ballasting, tieing, bridge work, et cetera, where great deal of moneys are spent by both roads to maintain proper level of maintenance. By unification, the physical procedures could be greatly improved and higher efficiency attained.

Q. Will the union of these roads result in more efficient utilization of motive power and economies in maintenance of equipment?

A. Yes. The M&StL and the TP&W are fully dieselized with respect to motive power. At the present time on the M&StL we own 73 units, of which 25 were built by Electro-Motive Division of General Motors, 38 were built by American Locomotive Company, and the balance, or 10, are various sizes and types of small switchers manufactured by Electro-Motive Division, General Motors Corporation, Baldwin Locomotive Works, and Caterpillar Company.

The TP&W owns a total of 15 units of motive power, of which three were manufactured by Lima Locomotive, five by Electro-Motive Division of General Motors, and seven by the American Locomotive Company. All of the power of both roads are of approximately the same age.

On the M&StL, of the 73 units, eight are standby units that are not immediately assigned, and, in addition, five of the 73 units are assigned to shop providing for the con- [fol. 1344] tinuance of regular maintenance. Of the 15 units operated by the TP&W, two are standby units to be used as additional units in multiple or power for extra service. It can be seen there are 10 units owned by the two railroads that are unassigned units, and five are assigned for shopping purposes, out of the total of 88 units. With unification, it would be possible to take care of all of the business if four of the unassigned units were disposed of. This would still leave a surplus of six units for extra service and five units for shop assignment. In this way the Lima's of the TP&W and one B.L.W. of the M&StL could be disposed of. This would also reduce parts inventory from seven types of locomotives to five.

I might add here that when I am talking about "units" I am talking generally of any of the types, and it is quite obvious why I state here that the Limas and the one B.L.W. would be the three to be sold probably from strictly an inventory standpoint, but upon investigation we might find there are other units which because of their size or age might fall into that category.

With the further integration of freight service, which will be discussed under transportation, it will be shown that actually, instead of only six units for standby service, there will be generated 10 units of surplus power, which would take care of seasonal increases, extra trains, etc. The effects of the reduction in total number of units of motive power [fol. 1345] can be seen.

The maintenance and heavy repair shop of the M&StL is located at Minneapolis, with a small amount of it also done at Marshalltown. The maintenance and heavy repair point of the TP&W is located at Peoria Yard. By running M&StL freight trains into the TP&W yard, on thru-freight train schedules from Minneapolis to Effner and/or from

Minneapolis to Lomax and Keokuk, and multiplying the units owned by both railroads, it is our intention to discontinue locomotive repair of maintenance, other than servicing the engines, at Peoria. The present force employed in maintenance and heavy locomotive repair work at Cedar Lake at the present time numbers 171 people. At Peoria, presently, the M&StL employs four for the servicing of all locomotives going through Peoria, and the equivalent locomotive force equal to that now employed by the TP&W would be discontinued.

Heavy car repair on the M&StL is now done at Marshalltown Shop. The capacity of this shop is not fully utilized, and all of the heavy car repair work for both railroads would be done at Marshalltown with the present force of 71 employees.

And that, again, is positions I am talking about.

There will be shown, under the car service division of this testimony, the percent bad order situation on the M&StL for the years 1954 and 1955. This railroad has been one of the best in the nation, with respect to a very low bad order [fol. 1346] percentage for a number of years, and I think this points out the fact that with unification the rolling stock on the TP&W would be given the same treatment, in this category, as has been demonstrated with respect to M&StL bad order cars in the past.

On the repair track for light and running repairs at Peoria the M&StL employs 13 people, and the TP&W duplicates this work on their light repair track. It is our intention that the Peoria light repair work, as far as cars are concerned, would be handled by a total of 17 employees. This, in effect, means that the present two mechanical departments, as far as heavy and light locomotive repair, heavy car repair and part of the light car repair forces are concerned, would be reduced by 70 employees.

And I might add here, and I will discuss it a little more in detail a little later, that on the M&StL, the corresponding employees, we have more than 37 who have already reached their sixty-fifth birthday, so you can see how attrition is going to dovetail into our plan.

Exam. Albus: That is a good spot for a 10-minute recess.

(Short recess.)

Exam. Albus: The hearing will be in order.
We will continue with the direct of Mr. Schroeder.

By Mr. Wheeler:

Q. Mr. Schroeder, in your testimony you refer to certain shops, buildings and, I believe, also the yards of the M&StL in Peoria which, on integration of the operation of the [fol. 1347] M&StL and the TP&W might be unnecessary in connection with those operations. Do you have any comment as to the use to which those will be put?

A. Well, our plans are, on the basis of shop buildings and facilities of that kind, that they would be retained. For instance, to try to convert into warehouse use, possibly foundries, that I know, roundhouse and heavy repair facilities have been used in the past for some fertilizer developments and things of that kind, where it would generate not only carload business but development also for fuel and water facilities, of course, and some enginehouse shelter more than anything else would be retained, too. I am thinking mainly in terms of the heavy repair facility, the building itself and the store department facility. In other words, they have been converted on other roads, and we think we could put them to good use here.

Q. What about land that is now occupied by your Peoria yard, have you any plans with respect to that?

A. Well, that land, as I presume a lot of you here know, is subject to flooding and the engineering department the M&StL in years past has studied the proposal for diking to protect the yards from actual flooding and so forth and we think it could be successful. We already have tracks there to some degree. We have a large building there that we would do the same thing with, that we would try to [fol. 1348] convert, perhaps with some expense to ourselves, to keep that as industrial property in Peoria.

Q. Now, Mr. Schroeder, returning to this subject of unification, would the word "integration" be as a synonymous term the way you have used that term throughout your testimony?

A. Yes, it would.

Q. One thing further, you list a number of positions, the duties of which on an integrated basis of operation would

require only one man. Would the man who held that position hold the position for the TP&W as well as the M&StL in the event you acquire control of the M&StL?

A. Right.

Q. Returning to your direct statement, can through freight schedules be integrated and yard time and expense be reduced?

A. Yes. Servicewise, the M&StL and TP&W are very much alike in that they are predominantly freight carriers.

Under present operations, the M&StL operates two eastbound freight trains between Minneapolis and Peoria; they being No. 20, which is operated as a first-class train on a 17 hour schedule, and No. 96, a thru-freight train with pickup and set-out at important points. The TP&W now operates two freight trains between Peoria and Effner, Nos. 20 and 22, having elapsed time of 4 hours and 30 minutes, and 4 hours, respectively. These schedules are based on cutoff times for making connection with Pennsylvania trains at [fol. 1349] the latter station, I have been told. They also operate a local, No. 24, that carries a time freight schedule for use when needed.

Westbound from Effner, the TP&W operates two trains connecting with the Pennsylvania, they being Trains 21 and 23 on a 2-hour 33-minute schedule Effner to Peoria. Westbound from Peoria, the M&StL operates two freight trains: No. 19, a first-class train on a 17-hour schedule to Minneapolis; and No. 95, a pickup and set-out train at important points Peoria to Minneapolis.

West of Peoria the TP&W operates Train No. 121 to Lomax on a 2 hour and 44-minute schedule. This train doubles back to LaHarpe as Third Subdivision No. 120 and lays up at LaHarpe. TP&W Train No. 123 goes to Keokuk but sets out Santa Fe-Lomax cars at LaHarpe, goes to Keokuk and lays up, coming out of there as Second Subdivision No. 120. This train goes to Peoria, picking up Third Subdivision No. 120's cars at LaHarpe enroute.

Third Subdivision No. 120's crew, upon their rest at LaHarpe, runs as No. 123's connection on the Third Subdivision and goes to Lomax. It departs Lomax as No. 122 and goes to Peoria.

We have now covered the existing schedules on the TP&W between Effner and Lomax and Keokuk, and the M&StL from Minneapolis to Peoria. And I might add that these schedules are per time table no. 18 now in effect on the TP&W, and there are no changes in those schedules.
[fol. 1350] At the present time the TP&W has a full set of dispatchers around the clock at Peoria Yard. The M&StL has a similar set of dispatchers at Oskaloosa. By connecting our circuits at the M&StL Peoria Yard to the TP&W Peoria Yard, one set of dispatchers could use either Morse or telephone, with telephone being used as a carrier on our wires between Oskaloosa and Peoria, to dispatch the entire 239 miles of road operated on the TP&W, together with the territory now dispatched from Oskaloosa. If only Morse is used, there would be no cost except the immediate physical hookup, which could be done over leased wire of either Western Union or Bell Telephone at a very minor operating charge. In this way the unification of dispatching would also lend something to handling of business and maintaining service as outlined above on both railroads. The dispatching could be done equally well from either Oskaloosa or Peoria.

I might add in that connection that we have on the M&StL now two chief dispatchers that are—well, one chief dispatcher that is in excess of 65; we have two trick dispatchers that are 65 or older; we have another one that is becoming 65 this year and wants to retire and therefore I think this is a perfect illustration of unification where one road gains to the advantage of the other.

The M&StL enjoys a direct interchange with the TP&W where crews of the respective railroads deliver in two transfer tracks at foot of M&StL Yard. The P&PU, CRI&P [fols. 1351, 1352] and PT—I believe that should be PRT—deliver in our yard. On the other hand, the TP&W enjoys direct interchange with the P&PU, CRI&P, and PT, which we do, and in addition, has direct interchange with the Nickel Plate, Illinois Terminal, and the CB&Q. This is better illustrated on the map, Exhibit H-43. Business moving from M&StL thru-freight trains to all of the lines in Peoria is necessarily somewhat delayed because most of the connections have to be made by the use of the

P&PU Railroad. If unification were to be realized by the two roads, considerable time would be saved by the P&PU, CRI&P and PT, making interchange to only one yard instead of two in Peoria, and two independent switching operations would be reduced to one, thus speeding up business going to both the TP&W and the M&StL.

Necessarily, our freight trains Nos. 19 and 95, westbound, have a departure time set to assure receiving all connections before leaving. By using the TP&W yard, connections with three additional railroads would be direct, and again, the saving in time by the P&PU, CRI&P and PT would be of tremendous value in speeding up M&StL Trains Nos. 19 and 95. The same is true of eastbound M&StL Trains Nos. 20 and 96. It is our intention to integrate the thru service westbound between Effner and Minneapolis by consolidating TP&W Train No. 23 and M&StL No. 19, making direct connection with Pennsylvania Train LD-19 on its present schedule out of Effner at 4:15 P.M., arriving at Peoria at 6:48 P.M. Business from that train going to Lomax would be handled in TP&W [fol. 1353] Train No. 123 on its present schedule, but at the same time departure time of M&StL Train No. 19 would be set up from its present 1:15 A.M. Peoria, to 11:30 P.M., thus allowing, in effect, thru operation of business Effner to Minneapolis, and stepping up the movement of cars received in the present TP&W yard, so that No. 19 would arrive Minneapolis 1 hour 45 minutes in advance of its present schedule. The advantage to shippers for cars moving to the northwest would be greatly enhanced by this saving in terminal time.

This saving would be realized by reduction of a present TP&W transfer, one complete switching operation, and a saving to the P&PU, CRI&P and PT by delivery to one yard instead of two, and would assure the continuance of the handling of the business to Lomax and Keokuk in the same manner as it is now.

Train No. 95 presently departing Peoria at 3:00 A.M. would be changed to coincide with TP&W Train No. 21 out of Effner at 8:15 A.M., PRR LD-11 connection, arriving Peoria 10:40 A.M., and our present No. 95 would be set back from 3:00 A.M. to departure 12:01 P.M., thus again

allowing business moving direct to the northwest to move continuously in our Train No. 95, and also handle business off TP&W No. 122. This would let No. 95 clean out tonnage from all connections at Peoria.

Eastbound M&StL operates No. 20, a thru-freight train as a first-class train with scheduled arrival at Peoria of 9:15 P.M. This train would be projected in conjunction [fol. 1354] with the TP&W's present No. 20, and receiving business from the west off TP&W No. 120 from Lomax and Keokuk, would arrive Effner 6:30 A.M. as at present.

The annual transportation saving by the use of one yard, exclusive of any savings of time in the movement of cars would amount to approximately the cost of present M&StL yard operation, except for retaining three yard clerks. As an example, M&StL has two trick yardmasters at Peoria daily, and the TP&W, three tricks. Obviously only three tricks—one around the clock—would be required. The TP&W works five engines in its yard and the M&StL works three yard assignments. By eliminating yard work with more direct connections into the present TP&W yard and the elimination of transfers by both railroads between their respective yards, it is thought that not only can the five present yard assignments of the TP&W easily take care of the handling of trains as outlined above for both roads, but that there would be an opportunity for the consideration of some yard power reductions by the unified yard.

As to power assignments, by running M&StL power thru as outlined above, power from M&StL-TP&W No. 20 could be turned back on Train No. 21-95, and power from TP&W Train No. 22 could be turned back on Train No. 23-19 at Effner. This would release all of the power now used by the TP&W for its two thru trains, or by M&StL No. 96's power equivalent between Peoria and Effner, with the end [fol. 1355] result being four units surplus. You will recall that disposition of additional power as well as assignments for extra service was discussed in some detail under the mechanical section. It would be expected that local trains Nos. 24 and 25 operated by the TP&W would continue to operate as they are, and as pointed out previously, service now offered by the TP&W between Peoria, Lomax and Keokuk would continue, that is, service, in the same way

as is now being performed, but with the understanding that cars coming from the Minneapolis or northwest area, or any stations on the M&StL or its connections, would be greatly expedited to stations on the TP&W, or for the Lomax or Keokuk gateway.

Following is a proposed schedule showing integration of service as outlined above:

PROPOSED CONSOLIDATED SCHEDULE

Westbound

T #21-M #95	T #121		T #23-M #19	T #123
8:15 A.M.		Lv. Effner	4:15 P.M.	
10:48 A.M.		Ar. Peoria	6:48 P.M.	
12:01 P.M.	1:00 P.M.	Lv. Peoria	11:30 P.M.	9:30 P.M.
6:01 A.M.		Ar. Minneapolis	4:30 P.M.	
	3:44 P.M.	Ar. Lomax— (Keokuk)		4:48 A.M.— (12:44 A.M.)

Eastbound

M #20-T #20	T #120		M #96	T #122-T #22
4:30 A.M.		Lv. Minneapolis	4:00 P.M.	
[fol. 1356]				
	5:15 P.M.	Lv. Lomax		5:45 A.M.
9:15 P.M.	9:57 P.M.	Ar. Peoria	11:00 P.M.	8:40 A.M.
2:00 A.M.		Lv. Peoria		12:01 P.M.
6:30 A.M.		Ar. Effner		4:00 P.M.

Q. Will acquisition of the TP&W by the M&StL permit economies and improvement in car service?

A. Yes. The M&StL Car Service Department is headed by an Assistant to Vice President-Operations, and he has under him a staff of six people, including specialists in routing, tracing and car distribution. A shippers' service is furnished on tracing of cars by this department, which has for its use a teletype system, a mechanized car accounting system handled by the Comptroller's office, and the usual telephone and telegraph facilities. The TP&W has a similar service without the teletype installations.

The M&StL, with its present staff, could easily absorb the duties performed by two people on the TP&W, and we believe, with our extensive mechanization and facilities we

would be able to do a better job in this respect than is being done by the two roads individually. This will be further pointed out in comparing the relative ownership of cars between the two roads, general bad order situations, and periodic shortage in freight car equipment.

In the 1955 Equipment Register is shown the total number of freight cars owned by the M&StL, to be 3907, and by [fol. 1357] the TP&W, 253. Following is a list of the cars, by type, as owned by the two railroads:

M & St L	Type	T P & W
No. Cars		*No. Cars*
2615	Box	49
249	Gondolas	
327	Hopper—Coal	147
100	Hopper—Covered	
329	Flat	37
* 20	Stock	20
* 17	Airslide	
* 250	Refrigerators	
3907		253

* Leased

The M&StL has been a credit per diem road. On the other hand, the TP&W has been a debit per diem road because most of its traffic is bridge. Ownership of equipment on the M&StL not only has proven adequate from the per diem standpoint, but the number of cars substantially complies with the theoretical ownership as set up by the A.A.R. formula for this purpose. Following is shown the per diem payments for the M&StL and the TP&W in the year 1954, as taken from Form A reports:

Q. Mr. Schroeder, let me ask you, in what category are any deviations in the theoretical ownership set up by the A.A.R. formula in so far as M&StL car ownership is concerned?

[fol. 1358] A. Only in coal cars.

Q. Coal cars?

A. Right.

PER DIEM 1954

	M&StL	TP&W
Per Diem Paid	$2,341,326	$ 659,838
Per Diem Received	2,502,348	135,000
Net	$ 161,022	$ 524,838 (minus)

It can be seen from these costs that had the TP&W and M&StL been unified in 1954, the credit per diem of the M&StL would have offset some of the TP&W debit and reduced that debit to $363,816.

Following is a table showing car surplus by types and months for 1954 and 1955 on the M&StL:

DAILY AVERAGE SURPLUS—FREIGHT CARS

1954	Box	Gondola	Coal Hopper	Flat	Stock	Refgr	Total
Jan	13	16	20	52	8	10	119

Dec	15	11	33	8	8	22	97

It can be seen from the table that certain months of the year the M&StL enjoys a surplus of all types of cars. While it is not known exactly what the car orders are on the TP&W during these M&StL surplus months, it must be assumed that if car distribution were unified for both railroads, that car surplus would be available in filling orders on the TP&W. This shows how the two roads would strengthen one another by the use of combined car ownership and distribution.

[fol. 1360] With respect to car requirements on the TP&W and the ability of the M&StL to fill car orders as compared to the possibility of either the Santa Fe or the Pennsylvania being more capable of doing the job, following is a table showing the average daily freight car shortage for the years 1953 through 1955 on the M&StL as compared to shortages on the Pennsylvania and Santa Fe.

AVERAGE DAILY FREIGHT CAR SHORTAGE—

52									20

It will be noted from the table that during 1953; shortages, by the number of weeks, were greater on the M&StL than on the Pennsylvania and Santa Fe, but the actual number was far smaller than the number of cars shown on the other two roads. During 1954 the same trend was true, but during 1955 shortage of cars on the M&StL existed in approximately the same number of weeks, but the shortage in number was far less than on either of the other two roads. I think the table makes it obvious that with the M&StL having integrated car distribution with the TP&W they would at least be equal, and in my opinion superior, in ability to furnish cars efficiently and well on the TP&W. Certainly, the weeks of acute car shortage on [fol. 1363] the Pennsylvania and Santa Fe, as shown above, would yield no cars as compared to what a combined service could give.

Following the same line of thought on ability to furnish cars on order to TP&W, there is entered a table showing per cent of bad order freight cars during the years 1954 and 1955 on the M&StL as compared to similar periods on the Pennsylvania, Santa Fe and TP&W.

First Each Month	AT&SF Ry.		Penn. RR.		TP&W RR.		M&StL Ry.	
	1954	1955	1954	1955	1954	1955	1954	1955
January	3.3	3.8	8.2	16.2	4.5	2.8	2.7	1.6
February	2.8	3.9	8.7	16.3	4.4	3.6	3.2	2.3
March	3.0	4.1	9.5	16.3	1.8	5.6	3.2	2.1
April	3.2	4.1	10.2	16.4	2.6	4.4	3.4	1.6
May	3.2	4.7	10.9	16.1	2.2	3.6	2.2	1.4
June	3.6	4.4	12.0	15.4	1.3	4.0	2.7	2.1
July	3.5	4.0	12.7	15.1	3.1	3.6	2.7	1.1
August	3.9	3.7	11.7	12.6	1.3	4.0	2.7	1.1
September	4.0	3.7	12.6	11.5	3.2	4.3	2.5	1.2
October	4.2	3.5	13.4	10.7	2.8	4.0	2.1	1.1
November	3.8	3.3	14.4	10.0	3.2	3.1	1.2	1.2
December	4.2	3.3	15.7	9.4	4.0	2.8	1.6	2.0

In every case percentage of bad orders have been lower on the M&StL railroad which illustrates utilization of cars is much more efficiently handled on the M&StL as compared to the Santa Fe and Pennsylvania.

[fol. 1364] From this same information it will be noted that the per cent of bad orders on the TP&W is consistently higher than on the M&StL, and it is only logical that with unification, the bad order situation would be as improved on the TP&W as is shown on the M&StL. It might be added that the latter railroad consistently has one of the best performances with respect to low bad order percentage as compared to other railroads in the United States.

There would be some savings in the requirement of work equipment cars. This was pointed out by discontinuance of one bridge gang, as explained under the maintenance of way portion of this testimony. Also, an extra gang would not be required. In this way all of the work equipment cars on the TP&W, or their equivalent on M&StL, of which there are 33, could be scrapped or sold.

Under the transportation section of this testimony was shown the integration of freight service where trains would be run from Minneapolis to Effner, and in that same part was shown the saving in power. There would likewise be a saving in cabooses, and it is estimated that under the

thru-freight service plan, two cabooses out of a total of twenty could be scrapped or sold.

[fol. 1365] Q. Will you explain any economies that would be realized in purchasing?

A. The purchasing and stores department of such railroad is made up of the usual supervisory staff of purchasing agent, chief clerk, buyers, and so forth, and without overburdening the purchases for both roads could easily be handled by one of these staffs.

From the unification of this function, there would be a considerable saving by greater volume buying. As an example: The M&StL purchases approximately 200,000 ties per year; the TP&W 95,000 ties per year. By purchasing the total of these two items, both railroads would enjoy a considerable saving due to additional volume buying. Other examples along this same line are treated bridge material, lubricating oil, et cetera.

I believe you will recall the other day Mr. Gurley expressed similar opinions along these lines.

Similarly, in 1954 the M&StL purchased 6,084,665 gallons of fuel oil for diesel operation at 10.68 cents per gallons, while the TP&W purchased 1,805,842 gallons for 11.08 cents. The difference of 4 mills on 1,805,842 gallons would have saved the TP&W $723.36 and while this is not a big item, it still illustrates that many small economies can be realized along these lines. Further, had the unified railroad purchased the sum total of their individual purchases of [fol. 1366] 7,890,507 gallons, it is probable that the purchase price per gallon, due to the greater volume, would have been considerably lower. The saving by joint purchases of the two roads can conservatively be estimated by using a figure of 2 per cent of the total purchases of both properties, and we have not attempted to fix a dollar value to that.

Q. Would you summarize savings outlined in your testimony?

A. Yes. I might say another witness will follow me, as I described a little earlier, where he takes these positions as I described them and ties them in and describes the po-

sition and the cost and then again feathers them to the various counts. So what I am summarizing here are just the gross figures of which the detail will be packed up entirely.

Previous I have outlined the manner in which department functions would be integrated between the two roads. I have also mentioned number of employees in the various departments as I have gone along. Again, it should be realized that no time table has been set up as to when such positions would be discontinued, and I believe it is obvious and understandable that it might take some time to accomplish the overall program. Also, I would like to again stress the fact that certain officers and employees of the TP&W would be retained in lieu of officers and employees of the M&StL holding corresponding positions. In other words, attempt has not been made to designate by individuals, but rather it has been shown what our ultimate [fol. 1367] unified operation would be as far as savings are concerned.

Taking first, maintenance of way and structures. Reduction of certain supervisory positions, namely, the chief engineer, engineer of maintenance, valuation engineer, superintendent of signals, draftsmen, surveyors, and land agent, will result in savings of $48,381.

I might say along those same lines that we have three officers in our engineering department on the M&StL that have either exceeded, I would say in every case has exceeded, the average of 65.

Savings in track labor and bridge and building force would amount to $125,425, and in the maintenance of way proportion of the purchasing and stores personnel, $23,000. These savings total $196,806. Adding to that other economies such as estimated expense incident to these supervisory positions, would save $8,068 and the decrease in depreciation attributable to sale or other disposition of the TP&W general office building would amount to $6,625.

We think that office building is a very attractive piece of real estate and probably the rental on it would be a very important factor to us. All of these items resulting from unification of maintenance of way, total $211,499.

Savings in certain supervisory positions in maintenance of equipment, as testified to earlier, would include superin- [fol. 1368] tendent of motive power and mechanical department clerks in the amount of $27,378. And I might say again there in the openings of equal jobs, not necessarily superintendent of motive power, but in supervisory jobs in our mechanical department at Cedar Lake we have about eight positions that are at the age of 64 or higher and two clerical positions, as I recall, at the same age or higher.

Labor savings in maintenance of equipment and stores, as testified to earlier, would be $343,118. The maintenance of equipment proportion of purchasing and stores at $33,981, less purchasing department personnel at $34,210, would show a wage and salary economy of a total of $370,267.

Other economies to be added to this would be reduction of expenses of $10,522 incident to savings in supervisory positions. The shop machinery expense reduction is estimated at $1,849; power plant machinery, $1,711; and depreciation on shop and power plant machinery, $1,761. These last three items are related principally to repair operations. Through the unification, it has been testified that 4 locomotives could be sold or otherwise disposed of, and using the basis of $3,000 material per unit, per year, for maintenance would result in a net saving of $12,000. The estimated material used for work equipment repairs would be saved, in the amount of $7,299. Equipment depreciation would be reduced by the locomotives and work equipment to be sold in the amount of $25,631. Stationery [fol. 1369] and printing economies totaling $775 could be effected. The total of all these items is $451,815.

In transportation, $18,939 would be saved by the reduction of certain supervisory positions, namely, the superintendent, special agent, and the superintendent's clerk. It so happens that we have a superintendent at Oskaloosa and you recall I mentioned dispatching could be done equally well at Peoria or Oskaloosa, and I would guess at the latter. The remuneration of the superintendent here and ours at Oskaloosa is about equal.

Avoiding duplicate employees at Peoria Station would amount to $25,708 classified as "Personnel and Clerical", and $25,378 for "Agents, Telegraphers, et cetera." And this

is all Peoria station where we could integrate our freight stations and not out on any other point on the line. Reduction of Peoria yard forces on the basis of M&StL cost would save $146,988; duplicate dispatching forces, which I have already mentioned, would save $27,648, and duplicate services in the way of train attendants; station supervisor, station foreman, et cetera, would save $22,738. The transportation expense proportion of reduction in purchasing and store personnel, is $22,208. Other estimated economies in transportation incident to force reduction, such as superintendence, would amount of $40,000; dispatching $5,404; fuel consumption, $6,360; and 50 per cent in stationery and printing cost, or $5,138—the total being [fol. 1370] $316,749. The total savings from unification in maintenance of way, maintenance of equipment, and transportation is $960,063.

I would like to pause there just for a minute and say that in the transportation saving in personnel it is proposed that there would be 36 jobs saved on unification and on the M&StL at the present time that there are 44 employees in similar or equal or in some way related jobs in excess of the age limit. I bring that out again to point up the importance we have given to this matter of consolidating, not only management people but employees also, contract employees also.

Using the combined 1954 operating revenues of the M&StL and the TP&W and using the combined operating costs of the two roads for that year, the maintenance of way ratio after unification is figured to be 16.0 per cent; the maintenance of equipment, 12.6 per cent; and transportation, 30.6 per cent, and these ratios will be set out for you in detail by the following witnesses. These resulting ratios reflect directly the efficiency with which the two roads could be operated.

Adding in the other items not coming under direct operation would give us an operating ratio at 69.4 per cent, which would compare favorably with those ratios of the most efficiently operated railroads in the United States.

Q. Does that complete your direct testimony at this time?

A. It does.

[fol. 1371] Mr. Wheeler: The witness is available for cross-examination.

Mr. Thomas: Mr. Wheeler, as I understand, you will have an exhibit that will have the supporting detail to which Mr. Schroeder referred.

Mr. Wheeler: That is correct.

Mr. Thomas: May I pass the first round. I may not have any questions.

Exam. Albus: Very well.

Mr. Lucas.

Mr. Lucas: May I join in passing the first round?

Exam. Albus: Mr. Cassell, do you want to pass?

Mr. Cassell: I will get all my questions in right now.

Exam. Albus: Fine.

Cross examination.

By Mr. Cassell:

Q. Are your mileage payments included in the per diem?

A. No, sir, they are not. They are separate.

Q. So that figure doesn't include those?

A. You mean the private car miles?

Q. Yes.

A. That is right, in neither of the railroads did I state the private car mileage rate.

Mr. Cassell: That concludes my cross-examination.

Exam. Albus: Thank you.

[fol. 1372] Mr. Broker.

Mr. Broker: I think I will pass the same as the Santa Fe and Pennsylvania.

Exam. Albus: Very well.

Mr. Davis: No questions.

Exam. Albus: Mr. Hoag.

Mr. Hoag: I am vitally interested in the testimony of Mr. Schroeder but because he has indicated that there is another supporting witness who likewise has supporting exhibits, I would prefer at the present time to defer cross-examination of Mr. Schroeder until I hear the second witness.

Exam. Albus: Is there any objection to that?

Mr. Wheeler: No, sir.

Exam. Albus: Off the record a minute.

(Discussion off the record.)

Exam. Albus: On the record.

You are temporarily excused, Mr. Schroeder, and we will put on Mr. Provo.

(Witness temporarily excused.)

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

The hearing will please come to order.

Mr. Wheeler: Mr. Provo.

[fol. 1373] OFFERS IN EVIDENCE

Mr. Examiner, I should like at this time to offer exhibits marked for identification H-41, 42, and 43.

Exam. Albus: They are received.

(Applicant's Exhibits Nos. H-41, H-42 and H-43, Witness Schroeder, was received in evidence.)

LARRY S. PROVO was sworn and testified as follows:

Direct examination.

By Mr. Wheeler:

Q. Will you state your name and address.

A. My name is Larry S. Provo, my address is 111 East Franklin Avenue, Minneapolis 4, Minnesota.

Q. What is your present occupation?

A. I am vice president and comptroller of the Minneapolis & St. Louis Railway Company.

Q. Will you please state your experience prior to the taking of that job.

A. I graduated from the University of Minnesota with a degree in business administration. Accounting was my major subject. I am a certified public accountant in the

State of Minnesota. I am also a member of the American Institute of Accountants.

Upon graduation from the University of Minnesota I was employed by Arthur Andersen & Co., a nationally known public accounting firm. I remained with that firm in various positions until December 1954, when I was appointed to my present position with the M&StL.

[fol. 1374] Q. While you were employed with Arthur Andersen was that company engaged to make a survey of the accounting functions of the M&StL?

A. In June 1954, Arthur Andersen & Co., was engaged to make a survey of the accounting and reporting system of the M&StL. The purpose of this survey was to develop the accounting requirements of the railroad and the economies to be realized by installing a new system, and I was the manager from Arthur Andersen on the engagement.

Q. Will you continue with your statement.

A. During the time that I have been with the M&StL, we, together with Arthur Andersen & Co., have been engaged in installing the accounting and reporting system recommended by the account-firm. The primary objective of this system is to provide useful and timely information for management at a minimum cost.

The new system eliminates almost all duplication of effort by the use of I.B.M. tabulating cards which are key-punched from source documents (time rolls, inventory usage reports, wheel reports, et cetera) prepared in the field. The punch cards are used to summarize all of the various accounting data required for particular types of transactions. After the data is key-punched into cards, the accounting functions are done mechanically. We have new high speed I.B.M. accounting machines and electronic calculators to make this possible.

[fol. 1375] We have a complete system of responsibility accounting and budgeting on the railroad. Under the responsibility accounting system we will prepare more than 430 financial statements each month. These statements are for the supervisory personnel of the M&StL and cover up to six levels of supervision. The statements are summarized at each level so that all any supervisor has to look at is one statement to determine who is responsible for expense vari-

ations from the budget in his area of supervision. Only those expenses for which he is responsible are reported on his statement. The statements do not include bookkeeping allocations or depreciation or such other cost that he has no responsibility or control over.

A complete budgeting system is a part of our responsibility account system. This method of reporting cannot be adopted without complete and integrated mechanization. Basically complete and integrated mechanization means that the following records are prepared mechanically.

General ledgers, and that comprises all the records of the M&StL. There is no extra set in pen and pencil or a different set for the NICC.

(2) Accounts payable.

(3) Pay rolls.

(4) Property and equipment.

(5) Perpetual inventories.

(6) Car accounting.

[fol. 1376] (7) Revenue divisions.

Our accounting system provides management with a complete perpetual inventory record which enables it to exercise effective control over inventories in all departments. This not only releases cash to be used for other corporate purposes which otherwise would be tied up in inventories, but also reduces the possibility of inventory losses due to obsolescence and overstock.

We are also using the statistical technique of random sampling to obtain an estimate of revenues on a current basis so that management has timely information available.

When this system is completely installed, we feel we will have the most useful and modern railroad accounting system in the country. We provided complete flexibility in modernizing accounting functions, and the system we have designed can accommodate the accounting requirements for a railroad of almost any size.

With this general background in mind, I would like to discuss the effect on the M&StL Accounting Department if we were successful in acquiring the TP&W.

Q. Mr. Provo, before you turn to that did the mechanization of the accounting system for the M&StL which you have described result in a large non-recurring expense during the year 1955?

A. Yes, in the year 1955, which is really our conversion [fol. 1377] year and our programing year, we estimate that out-of-pocket non-recurring costs in connection with the modernization program were a little over $300,000, between three hundred and three hundred twenty-five thousand. I would like to say along that line that the matter was presented to the board of directors of the M&StL to decide whether or not those costs should be amortized over a five-year period or a three-year period. The Board decided in my opinion a very sound business judgment to take all of the expenses in the year 1955 rather than attempt to make a showing by deferring part of the costs into the subsequent years.

Q. Mr. Provo, does Arthur Andersen & Co. conduct a complete audit of the accounts of the M&StL yearly?

A. They do. The first audit was made for the year ended December 31, 1954, and they are about at the end of the audit for the year ended December 31, 1955.

Q. Are such complete audits usual or unusual in the railroad industry?

A. I would say that they are unusual. Some of the railroads have examinations. I am not sure of the scope of those examinations, but as a rule I would say most roads do not have audits.

Q. Have you any comment with respect to such audits?

A. Well, I came from a public accounting firm and I think that audits are required by the S.E.C. and by banks [fol. 1378] for small companies. I think there is a great value to an audit and that an audit, of course, insures that your accounts are properly stated, and in Arthur Andersen's audits if your accounts are not properly stated their certificate is qualified. I mean in many instances they may disagree with the Interstate Commerce Commission, which they do in our case.

(Answer read.)

A. I should state that more properly, that Arthur Andersen will, if they disagree, qualify their certificate. Now,

they have a petition pending before the Interstate Commerce Commission in connection with the matter of accelerated amortization.

Over and above the question of properly stating accounts the auditors will make suggestions for improvements in the system and procedure of the company they are working under.

Q. Have the audits of Arthur Andersen of the M&StL been in any regard qualified, and, if so, would you state in what regard?

A. The only qualification that we receive in our certificate is that Arthur Andersen believes in our income, our net income, is overstated to the extent of the reduction in the provision for federal income taxes by reason of obtaining deductions for tax purposes on equipment that is certified under necessity certificates.

Q. Is that qualification consistent with the I.C.C. provi- [fol. 1379] sions with respect to accounting?

A. The qualification is not consistent with the I.C.C.'s qualifications in that our records are kept in accordance with the requirements of the Interstate Commerce Commission.

Q. I believe you were at the bottom paragraph on page 3 of your prepared statement, Mr. Provo. Could you continue?

A. With the background in mind, I would like to discuss the effect on the M&StL accounting department if we were successful in acquiring the TP&W. To facilitate the determination of what would be necessary to unify the accounting of the TP&W with that of the M&StL, I visited the offices of the TP&W in December 1955, and determined generally their accounting activities and accounting organization. We appraised the accounting requirements by analyzing what the increase in the cost of the M&StL accounting department would be if the revenues of the M&StL were $28,000,000 dollars, which is approximately the combined revenues of the M&StL and the TP&W.

I would like to explain that a little further and say to determine the requirements of a unified operation we looked at it on the one hand as to what our increase in costs would be, if our revenues were to increase by $7,000,000, as a

check on that we visited the offices of the TP&W to find out generally the activities of the TP&W accounting department.

We also reviewed the executive and legal department requirements of the unified operation.

[fol. 1380] As a result of our survey, we estimate that the general expenses of the unified railroads could be reduced by approximately $341,102. These economies would be realized by saving 34 positions at an annual cost of $211,519. In addition, legal expenses would be reduced by $45,176, I.B.M. rentals, stationery and printing, and other expenses would be reduced, with a resulting savings of $45,422. The total of these items is $341,102, which is the amount of general expense economies referred to previously.

Now throughout the M&StL presentation there has been discussion of the effect of a unified operation. Mr. Heineman has testified as to the financing contemplated if our proposed acquisition is approved. Mr. Nelson has testified on the economies to be realized in a unified traffic operation, and Mr. Schroeder has testified on the economies that can be accomplished by unifying the operating departments.

My testimony has indicated the economies that can be made by unifying the executive, legal and accounting departments of the M&StL and the TP&W.

I would now like to have marked for identification an exhibit which summarizes the estimated effect of the acquisition on the net income of the M&StL and the TP&W. This exhibit is entitled "The Minneapolis & St. Louis Railway Company--Combined and Pro Forma Schedules to Reflect Economies from Unified Operations for the year ended December 31, 1954."

[fol. 1381] Mr. Wheeler: Mr. Examiner, I would like to have marked for identification the brown-covered pamphlet entitled "Combined and Pro Forma Schedules to Reflect Economies from Unified Operation for the Year ended December 31, 1954."

Exam. Albus: The exhibit referred to may be marked for identification II-44.

(Applicant's Exhibit No. II-44, Witness Provo, was marked for identification.)

By Mr. Wheeler:

Q. Mr. Provo, just to keep the record straight again on this question of unification, when you use the term unified, you do not mean to indicate that the corporate setup of the TP&W would be changed in any way under the plans that you have indicated in your testimony and in this exhibit, do you?

A. No, sir. When we started working on this I believe we talked about integration at many points and I think to us integration and unification are synonymous. We chose the term unification because I visited the offices of the Kansas City Southern, and they have over the years unified their operations with those of Louisiana and Arkansas, and they refer to their integration as the unification of the two railroads.

I would like to explain Exhibit H-44 as follows. It has three sections and these sections are indicated by a yellow tab on the left, the first is summary, the second is oper- [fol. 1382] ating revenues and expenses, and the third is employees and compensation.

The Employees and Compensation schedules start with Schedule 19. The first three numerical columns of this schedule show the number of employees of the M&StL., the TP&W, and the combined total.

I will explain this schedule, and most of them you will see follow in pretty much the same fashions, but I think if I explain this one schedule the rest will then become self-explanatory.

The first three columns of this schedule show the number of employees on the M&StL. and on the TP&W for the year ended December 31, 1954, and then it shows the combined total.

The next two columns are the compensation plans to the M&StL. employees, the TP&W employees, as reported in the 1954 formula reports to the Interstate Commerce Commission and the combined total.

The next two columns reflect the number of employees and the compensation that we estimate would be required in a unified M&StL.-TP&W operation.

The last two columns show the economies from unification.

Schedule 19 is a summary of this information, and Schedules 20 through 25, inclusive, are the detail schedules in support of Schedule 19.

Schedule 20 shows the detailed data for the executives, [fol. 1383] officials and staff assistants and the professional, clerical and general employees.

Schedule 21 is a departmental classification of the economies from unification shown on Schedule 20.

Schedule 22 reflects the economies from unification of the maintenance of way forces.

Schedule 23 shows the economies from unified maintenance of equipment and stores forces.

Schedules 24 and 25 show economies in forces in a unified transportation operation.

The schedules I have just reviewed summarize our best estimate and appraisal of the personnel requirements of the unified operations, they were based on inspection trips, on my trip to the general office of the TP&W, the estimates were raised on our knowledge of our own operation and the capacity that we have to absorb additional functions.

To determine the total economies from unification, it was necessary to translate from the personnel schedules shown in the section I have just reviewed to the detailed income accounts of the two companies which start on Schedule 4, which is right after the second yellow tab "Operating Revenues and Expenses."

[fol. 1384] Schedule 4 shows the combined operating revenues of the two roads and shows a reduction in the revenue attributable to unification of $11,470. This reduction results from the elimination of the TP&W general office in Peoria. The $11,470 represents 1954 revenue from a cafeteria operation.

In combining the revenues of the two roads in this exhibit, we have not provided for any change in revenues due to the improved service and longer hauls described by Mr. Nelson. We have not anticipated any revenue variation in this exhibit because of the difficult problem of measuring the effect of unified solicitation forces and so forth on the revenue picture.

Schedule 5 is a summary of the operating expenses of the two roads for the year ended December 31, 1954, and also shows the economies from unification and the resulting variations in expense ratios.

By unification, the combined operating expenses could be reduced $1,770,945. This would represent an 8.5 per cent overall expense reduction. The operation ratio is shown as 69.4 per cent as compared to the M&StL operating ratio of 79.2 per cent. The decrease in expenses by primary accounts is as follows:

[fol. 1385]

	Decreases in Expenses	Ratio to Combined Total of M&StL and erating Expenses TP&W Op
Maintenance of Way and Structures	$ 211,499	4.6
Maintenance of Equipment	431,815	11.1
Transportation	316,749	3.7
Traffic	454,471	25.0
General	341,102	19.8
Miscellaneous	15,309	37.8
Total	$1,770,945	8.5

Schedules 6 and 7 show the maintenance of way economies.

Schedules 8 and 9 reflect the economies resulting from unifying equipment maintenance.

Schedules 10 and 11 show economies resulting from the unified transportation departments.

Schedule 12 shows traffic, general expense, and miscellaneous operations economies from unification.

Schedules 13, 14 and 15 show in detail the traffic economies.

And I would like to explain something that was referred to in Mr. Nelson's testimony. I am afraid I did not get a chance to sit down with Mr. Nelson and discuss just exactly how this was summarized, although he was completely aware of the economies as anticipated.

[fol. 1386] Schedule 15 is a detailed schedule of the off-line agencies of the TP&W, and the last column, you will see, represents the compensation economies and totals $185,169. The total compensation economies in the traffic department are shown on Schedule 14 as $258,836, which includes the $185,169 on Schedule 14.

Schedules 16 and 17—

Q. Shouldn't that be "Schedule 15"?

A. Oh, excuse me.

Schedules 16 and 17 show the economies from unification of the executive, legal and accounting departments.

Schedule 18 shows the computation of the adjustment in railway tax accruals resulting from economies from unification, bond interest, et cetera.

At that point I would like to mention that all through the summary this book reflects the interest applicable to the proposed bond issue.

Q. Mr. Provo, when you say "proposed bond issue," you are speaking of the bond issue about which Mr. Heineman testified to finance the purchase of the stock of the TP&W?

A. Yes, sir, the $12,000,000 bond issue that is detailed, the details of which are shown in his testimony.

Q. Will you proceed, please.

A. Railroad retirement and unemployment taxes are reduced by $79,624 because of the reduction in total com-[fol. 1387] pensation paid. The federal income tax provision is adjusted to reflect the net variation in income before Federal income taxes attributable to the operating expense reduction, the interest on the proposed bond issue, the revenue decrease, and the decrease in railroad retirement and unemployment taxes.

The purposes of Schedules 4 through 25 is to show the detail underlying our calculation of the estimated annual value of the TP&W to the M&StL if the TP&W were to be acquired by the M&StL.

Schedule 1 shows the estimated annual value of the TP&W to the M&StL.

In 1954 the M&StL earned $1,647,000. We estimate that the 1954 net income of the M&StL would have been increased if we had owned the TP&W, and the operations had been unified, and the 12 million dollar bond issue

were outstanding, by $1,279,000. The total income under these assumptions would have been $2,926,000.

To us, this is a realistic and fair appraisal of the tremendous importance of the TP&W to the M&StL.

However, even this does not reflect the full picture. The M&StL would be adversely affected if the TP&W were acquired by the Santa Fe and Pennsylvania.

Mr. Swanson has testified to traffic vulnerability. He has indicated that a very significant part of our revenue would be vulnerable if the TP&W were owned by roads other than

[fol. 1388] Mr. Swanson testified that the estimated loss of revenue to the M&StL if the TP&W were owned by the Santa Fe and the Pennsylvania, would be $1,110,000, which represents 5.4 per cent of 1954 M&StL revenues. The revenue lost would represent incremental revenue so that the effect on net income would be very harmful to the M&StL. If we lose $1,110,000 of revenue we estimate that our net income would be decreased $453,000. This amount represents 27 per cent of 1954 net income.

The difference between our estimated net income, assuming M&StL ownership, and our estimated net income, assuming Santa Fe-Pennsylvania ownership, is $1,732,000, or $2.17 per share.

To us this is a fair appraisal of the annual value of the TP&W to the M&StL based on 1954 data of the M&StL and TP&W. The $1,732,000 is 105.2 per cent of our 1954 net income. The annual value to the M&StL would be higher if 1955 data had been used because the TP&W net income increased from $641,000 in 1954 to $790,000 in 1955.

On Schedule 2 we have compared this with the value of the TP&W to the Santa Fe-Pennsylvania. As we mentioned, the estimated annual value to the M&StL is equivalent to 105.2 per cent of its 1954 net income. If the Santa Fe had a 50 per cent ownership in 1954 its net income would have been increased by a half of one per cent. The net income of the Pennsylvania, if it had a 50 per cent ownership of the TP&W in 1954, would have

[fol. 1389] Mr. Wheeler: That concludes the direct testimony of Mr. Provo at this time, Mr. Examiner.

Exam. Albus: At this time we will adjourn until tomorrow morning at 9 o'clock in this room.

(At 5:10 p.m., Thursday, February 9, 1956, the hearing in the above-entitled matter was adjourned till tomorrow, Friday, February 10, 1956, at 9 a.m.)

[fol. 1389A] Clerk's Certificate to foregoing transcript (omitted in printing).

BEFORE THE INTERSTATE COMMERCE COMMISSION

Finance Docket No. 18891

Finance Docket No. 19086

[Title omitted]

The Carrousel Room,
Pere Marquette Hotel,
Peoria, Illinois.

TRANSCRIPT OF HEARING: February 10, 1956

Met, pursuant to adjournment, at 9:00 a.m.

Before: Paul C. Albus, Examiner.

APPEARANCES:

(As heretofore noted.)

[fol. 1392] PROCEEDINGS

Exam. Albus: The hearing will please come to order.

According to the agreed schedule for today Mr. Atkinson of the Wabash is the first witness.

Mr. Atkinson, please.

Mr. Davis: Mr. Examiner, may we mark the exhibits for identification?

Exam. Albus: Yes, sir. In what order do you want them marked.

Mr. Davis: Attached to Mr. Atkinson's testimony are letters with suffixes to identify them.

The map, No. A, is the first exhibit.

Exam. Albus: It may be so marked as H-45 for identification.

(Intervenor's Exhibit No. H-45, Witness Atkinson, marked for identification.)

Mr. Davis: The map letter B is the next exhibit.

Exam. Albus: It is marked for identification Exhibit H-46.

(Intervenor's Exhibit No. H-46, Witness Atkinson, marked for identification.)

Mr. Davis: The one page exhibit with the letter C, "Carload Traffic Forwarded or Delivered" is the next exhibit.

Exam. Albus: It is H-47 for identification.

(Intervenor's Exhibit No. H-47, Witness Atkinson, marked for identification.)

Mr. Davis: The next one is the letter E.

[fol. 1393] Exam. Albus: H-48.

(Intervenor's Exhibit No. H-48, Witness Atkinson, marked for identification.)

Mr. Davis: E follows C in that case.

Exam. Albus: Right.

Mr. Davis: D is the next exhibit.

Exam. Albus: H-49.

(Intervenor's Exhibit No. H-49, Witness Atkinson, marked for identification.)

Mr. Davis: "F".

Exam. Albus: H-50 for identification.

(Intervenor's Exhibit No. H-50, Witness Atkinson, marked for identification.)

Mr. Davis: "G".

Exam. Albus: "G" may be marked for identification H-51.

(Intervenor's Exhibit No. H-51, Witness Atkinson, marked for identification.)

Mr. Davis: And "H".

Exam. Albus: That will be H-52.

(Intervenor's Exhibit No. H-52, Witness Atkinson, marked for identification.)

Mr. Wheeler: Mr. Examiner, I believe when I made my previous comments we were off the record. I was not aware of that fact. I would like to note for the record that we have received for the first time just now the testi-

[fol. 1394] mony and the exhibits to be presented by Mr. Atkinson, whereas heretofore we have been following the practice of exchanging the exhibits the night before.

Exam. Albus: Yes, sir.

Mr. Wheeler: I would also like to have marked for identification an exhibit which I have just distributed to counsel which consists of excerpts from the testimony of officials of the Pennsylvania and the Wabash in the Wabash Company Control case.

Exam. Albus: The excerpts may be marked for identification Exhibit H-53.

(Applicant's Exhibit No. H-53, Mr. Wheeler, marked for identification.)

Mr. Wheeler: I should like to state for the record that these were taken from the transcript of the stenographer's notes of the hearing held June 12th and 13th, 1941, at Washington, D. C.

Mr. Lucas: Thank you.

Mr. Wheeler: If anyone cares to examine it I have with me a certified copy certified by the secretary of the Commission.

Mr. Lucas: Mr. Examiner, I think the record ought to show that we have not been following the practice of exchanging exhibits the night before. The Santa Fe and Pennsylvania furnished their first two exhibits, H-4 and H-5, to parties that they could get in touch with, including [fol. 1395] Mr. Wheeler, a couple of days before the hearing commenced. Mr. Wheeler furnished us with Mr. Nelson's and Mr. Schroeder's exhibits, but not with their prepared statements upon our request the night before they appeared, and Mr. Broker has furnished us with the Nickel Plate exhibits and prepared testimony the night before he is to call his witnesses. I think the record ought to show the facts.

Exam. Albus: Very well. That is perfectly all right.

Mr. Broker: We just distributed the prepared testimony of Mr. Phipps, though, not Mr. Witt.

Exam. Albus: Are there any further preliminaries?

(No response.)

Exam. Albus: Let's proceed with the testimony.

ARTHUR K. ATKINSON was sworn and testified as follows:

Direct examination.

By Mr. Davis:

Q. Will you please state your name and address.

A. I am president of the Wabash Railroad Company, and my office and residence are located in the City of St. Louis, Missouri.

Q. Will you please describe your experience in the railroad field.

A. My railroad experience began when I started to work for the Denver and Rio Grande Railroad Company in the office of the general auditor in 1909. From 1909 to 1919 I held various positions in the accounting department. [fol. 1396] From 1920 to 1922 I was field accountant, supervising accountant and assistant comptroller for the United States Railroad Administration. From 1922 to 1929 I was assistant auditor, Assistant Comptroller for the United States Railroad Administration. From 1922 to 1929 I was Assistant Auditor, Assistant Comptroller and Assistant to vice president in charge of Finance and Accounting for Wabash Railway Company and all of its affiliated companies. From 1930 to 1942 I was vice president, secretary and treasurer of Wabash Railway Company, and from 1931 to 1940 I was treasurer for the Receivers of Wabash Railway. In 1941 and 1942 I was Chief Accounting and Financial Officer of that company. During the receivership of Wabash Railway Company I also served as Secretary of the Stockholders Protective Committee and Secretary of the Reorganization Managers.

[fol. 1397] I have been a Director of Wabash Railroad Company since September 2, 1937; a member of the Finance Committee of Wabash Railroad Company since formation of that committee on June 17, 1943; and a member of the Executive Committee since April 17, 1947. I was Vice President-Finance and Accounting of Wabash Railroad Company from May 15, 1942, until I was elected President of the company on April 17, 1947. I am also President, a Director and a member of the Executive Committee of

various subsidiaries and affiliated companies of Wabash Railroad Company.

I have had extensive experience in connection with reorganization and refinancing of railroad companies. As Treasurer for the Receivers of Wabash Railway Company, I worked actively in bringing about the reorganization of Wabash Railway Company. I have been active in the financial readjustment of the Kansas City Terminal Railway Company and the Terminal Railroad Association of St. Louis. In 1951 and 1952, as Chairman of the Finance Committee of the Chicago and Western Indiana Railroad Company, I supervised the refinancing of that company under its new First Collateral Trust Mortgage.

I am familiar with the applications filed in these proceedings by the Santa Fe, the Pennsylvania Railroad Company and Pennsylvania Company and by the M&StL.

The Wabash and its predecessors have worked very closely with the TP&W and its predecessors for almost one [fol. 1398] hundred years in contractual and operating arrangements which I will describe later in more detail.

Perhaps I should mention here that from May 1880 to 1884 the predecessors of the Wabash leased and operated the entire line of the TP&W, extending from the Indiana-Illinois state line on the east and to Hamilton and Warsaw, Illinois, on the west.

The Wabash has also been keenly interested through the years in the TP&W property and has followed closely the press and public reports that have appeared from time to time concerning any merger or sale of that property with or to other carriers.

The Wabash management has on a number of occasions made studies as to the possible usefulness of the TP&W in extending the Wabash System. It may be of interest to note that the Commission in one of its consolidation plans allocated the TP&W property to the Wabash-Seaboard System. Consolidation of Railroads (1929) 159 I.C.C. 522,532.

Q. Mr. Atkinson, have you prepared certain exhibits for this case which you wish to present at this time?

A. I have.

Q. Will you proceed with that, if you please.

A. My Exhibit A, which has been identified as Exhibit H-45, is a map which I have caused to be prepared, which shows the line of the TP&W, Santa Fe, Pennsylvania, Rock Island, M&StL, Nickel Plate, Illinois Central and Wabash [fol. 1399] in the respective colors shown on the legend. Also shown are the junction points of Wabash with those other lines named. The points at which Wabash interchanges traffic with the TP&W and with the applicant railroads are set out in the box on this map in the upper right-hand corner.

It will be noted from this map that the western termini of the Wabash are at Kansas City and Omaha. At Kansas City, Wabash interchanges a heavy volume of traffic with the Santa Fe and the Rock Island. From Kansas City the Wabash main line runs to Chicago via Hannibal, Missouri, Decatur and Forrest, Illinois; it also runs from Kansas City to St. Louis and from St. Louis to Chicago. From Moberly, Missouri, the Wabash line extends in a northerly direction to Des Moines, Iowa, passing through Albia, Iowa. Wabash interchanges traffic in volume with the M&StL at Albia and at Des Moines. From Bement, Illinois, a main line extends to Detroit, Michigan, serving Fort Wayne and Toledo. At Logansport and Fort Wayne, Indiana, and Toledo, Ohio, on this line, we interchange a heavy volume of traffic with the Pennsylvania. At Toledo, Ohio, Wabash also interchanges a significant volume of traffic with the Nickel Plate. Another segment of our main line connects Chicago and Detroit. From Detroit, Wabash runs eastward through Canada to the Niagara Frontier. At Buffalo we have a heavy interchange with carriers serving the east and New England, it will be noted.

[fol. 1400] Q. Will you proceed.

A. My Exhibit B, which has been identified as H-46, is a railroad map of the portion of the State of Illinois directly involved in this case. There is shown in heavy broken lines the railroad of the Wabash in this area and in dotted lines the TP&W railroad extending from Keokuk, Iowa, on the west, to Effner, Illinois-Indiana, on the east. At Forrest, Illinois, on the Wabash main line from Decatur to Chicago, there is indicated on this map the portion of the TP&W main line between Forrest and Fairbury over which

Wabash has contractual and operating rights to reach its Streator Branch. The line used by the Wabash is 6.22 miles in length. Without this operating arrangement Wabash could not operate its Streator Branch which extends in a northwestwardly direction from Fairbury to Streator, Illinois, a distance of approximately 30 miles, and serves the principal points of Honegger, Fairbury, Pontiac, Cornell and Streator, Illinois.

The original line of railroad that now constitutes the Streator Branch extended from Streator to Effingham, Illinois, via Strawn and Bement. The line between Strawn and Bement is now a part of our main line. That part of the line between Strawn and Fairbury was taken up in 1883, and traffic to or from points between Forrest and Streator was moved in Wabash trains over the main line portion of the TP&W between Forrest and Fairbury. Wabash records show contracts dating back to December [fol. 1401] 18, 1885, between the predecessors of Wabash and TP&W, granting to Wabash the right to use the main line of the TP&W between Forrest and Fairbury for the movement of its trains with its own power. In all of these intervening years this contractual relationship has benefitted both Wabash and TP&W, and operating arrangements necessary to its development have been effected.

Wabash has a substantial investment in the Streator Branch and realizes significant revenues therefrom.

Q Mr. Atkinson, could I interject here just for a moment and ask you whether or not you know what that investment amounts to.

A. The investment on the Streator Branch, according to the valuation section under the inventory of the Interstate Commerce Commission, including land, was $687,031.

Q. Would you proceed with your statement, please.

A. Several communities located on that line are wholly dependent upon Wabash rail service. The Illinois communities of Champlin, Lodemia, McDowell, Rowe and Cornell are served by Wabash exclusively.

I have shown on my Exhibit C, which has been marked as Exhibit No. 47, the volume of busines moving to and from Wabash stations on the Streator Branch. The great preponderance of this traffic moves over the line of the

TP&W between Fairbury and Forrest. It will be noted that the total number of revenue cars handled by Wabash to and from these stations during the 12-month period [fol. 1402] from November 1, 1954, to October 31, 1955, inclusive, was 8,064. Based upon the average revenue per car of the Wabash System for 1954 and taking into consideration the actual movement of traffic, it is estimated the revenue earned by the Wabash was approximately $803,000.

There are 25 industries at stations on the Streator Branch which Wabash serves with its own rails.

At Streator, Illinois—9 industries
At Pontiac, Illinois—5 industries
At McDowell, Illinois—4 industries
At Cornell, Illinois—3 industries
At Champlin, Illinois—1 industry
At Forrest, Illinois—1 industry
At Honegger, Illinois—1 industry
At Lodemia, Illinois—1 industry.

Of course, there are other patrons who use the Wabash team track facilities for the loading or unloading of carload freight at these stations. Through switching arrangements Wabash also serves industries located on the lines of other railroads with whom we connect at Pontiac and Streator, Illinois.

[fol. 1403] Pontiac has an approximate population of 8,200. Wabash, through switching arrangements, serves 17 industries located on the rails of the Illinois Central and the GM&O.

Streator has a population of approximately 17,000. At that point, through switching arrangements, Wabash serves 40 industries that are located on the rails of the Burlington, Santa Fe, GM&O and New York Central.

Wabash interchanges traffic with the Burlington, Santa Fe and New York Central at Streator, Illinois. On such traffic those lines perform roadhaul servic to or from Streator and Wabash performs roadhaul service to or from Streator. During the year 1955 we received 483 carloads of this interchange traffic from the lines mentioned

and delivered to those lines 645 carloads during the same period, making a total of 1,128 carloads interchanged at Streator.

In like manner, at Pontiac during the year 1955 we interchanged with the GM&O and IC 143 cars and delivered to those lines 80 cars, making a total of 223 cars interchanged at Pontiac.

Thus, the interchange traffic on the Streator Branch during 1955 totalled 1,351 cars.

For the purpose of determining the nature of the traffic moving to and from points on the Streator Branch, a study was made of that traffic moving to and from Streator, Illinois, which was considered a representative. My ex-
[fol. 1404] hibit identified as H-48, consisting of four sheets, shows the movement to and from Streator, Illinois, for the months of January, April, July and October, 1955. The first two sheets reflect carload shipments from Streator. Of the 744 carloads shown, 260 were destined to points on the Wabash in the states indicated and 484 carloads to points beyond the Wabash in the states shown. Sheets 3 and 4 show that a total of 660 carloads were delivered at Streator during these months or a total forwarded and delivered of 1,404 carloads.

This exhibit shows clearly that shipments to and from Streator, Illinois, originate in or are delivered to practically every state in the United States. It further shows the importance of this Branch of the Wabash to shippers and consignees at Streator, Illinois, in reaching their markets throughout the country. It also shows the importance of this Branch to the Wabash.

The contract currently in effect between the Wabash and the TP&W for the use of the latter's track between Forrest and Fairbury is dated February 27, 1950, and contains a one-year cancellation provision. At present two trains in each direction are operated daily except Sunday on this Branch. It is quite obvious that the continuance of our contractual right to use this trackage upon reasonable terms is of vital importance not only to Wabash but to the shipping public served by the Streator Branch.

[fol. 1405] I next call your attention again to my map, Exhibit H-46, on which is shown in heavy broken lines that

part of the Wabash known as the Keokuk Branch extending in a northwestwardly direction from Bluffs, Illinois, to Keokuk, Iowa. There is indicated on this map the main line trackage of the TP&W between Elvaston, Illinois, and Hamilton, Illinois, over which Wabash operates its trains under contract for a distance of 6.53 miles. At Hamilton the TP&W main line connects with a track 0.58 miles in length owned jointly by the TP&W and Wabash. This jointly owned trackage connects with the bridge used by the TP&W and Wabash to cross the Mississippi River to Keokuk, Iowa. If it were not for the contractual arrangement with the TP&W for the use of its main line between Elvaston and Hamilton, the Wabash branch line would terminate some seven miles short of Keokuk.

In addition to using the TP&W line at this point, the stations at Elvaston and at Hamilton are operated by the TP&W with Wabash paying half of the maintenance and operation costs and taxes.

The Wabash records show that agreements have been in effect between the predecessors of Wabash and TP&W and that the Wabash has used the TP&W Elvaston-to-Hamilton line since 1859 or nearly 100 years.

I might state here that the Wabash has the right in perpetuity to use the Keokuk-Hamilton Bridge for the pay- [fol. 1406] ment of certain charges based on cars and type of traffic. This bridge property is now owned by the City of Keokuk and is under the supervision of a bridge commission. In the City of Keokuk, Wabash is the owner jointly with the Rock Island, Burlington and TP&W of the Keokuk Union Depot Company whose facilities are used by Wabash. The making up of trains, the switching of freight to industries and other services at Keokuk are provided by the Rock Island under contractual arrangement between Wabash and Rock Island dated July 1, 1904.

The Keokuk Branch of the Wabash is 75.8 miles in length and represents a substantial investment by Wabash to serve the area it traverses.

Q. Could I interject there again to ask you if you have the total investment of the Wabash in the Keokuk branch?

A. Again on the basis of the valuation section our investment in the Keokuk branch is one million eight hundred thirty thousand five hundred thirty-eight.

Q. Thank you.

A. My exhibit H-49 shows the volume of Wabash business to and from points on the Keokuk Branch for the period November 1, 1954 to October 31, 1955, inclusive, including the stations of Hamilton, Illinois, and Keokuk, Iowa. The total number of revenue cars originating or terminating on that branch in Wabash service is 11,051.

Of this 11,051 cars, it will be noted that 1,110 cars orig- [fol. 1407] inated at Keokuk and 12 cars at Hamilton for a total of 1,122 cars. In addition, 1,364 cars were delivered at Keokuk and 73 cars at Hamilton for a total of 1,437 cars. Therefore, of the total of 11,051 cars handled by Wabash on the Keokuk Branch, 2,559 cars or 23 per cent moved to or from Hamilton and Keokuk and would be directly affected by discontinuance of the trackage arrangement with the TP&W that I have described. These figures further demonstrate that in the event the traffic to and from Keokuk and Hamilton were lost from the total business on the Keokuk Branch, there would not be sufficient volume left to and from the stations on that branch north of Meredosia, Illinois, to warrant continued operation of the Keokuk Branch north of that point. It follows that loss of the trackage rights over the TP&W line would definitely require consideration of abandonment of the Keokuk Branch and its consequent adverse effect on the municipalities served by the branch. The Illinois communities of Meredosia, Varsailles, Hersman, Mount Sterling, Timeweli, Clayton, Chatton, Bowen, Denver and Bentley depend upon the Wabash exclusively for rail service.

Wabash also interchanges traffic at Keokuk with the Rock Island, Burlington and TP&W, on which traffic the Wabash and the connecting line have each performed line-haul service to or from Keokuk. For the year 1955 the cars interchanged totalled 63, of which 20 were received [fol. 1408] from connections and 43 were delivered to connections at Keokuk.

The population of Keokuk is approximately 17,000. Through the operating arrangements with the Rock Island which I have mentioned, Wabash serves four industries. Through switching arrangements we also serve 31 industries that are located on the Burlington. There are 55

industries in addition to the four at Keokuk which are served directly by Wabash:

At Mount Sterling, Illinois—15 industries.
At Meredosia, Illinois—six industries.
At Carthage, Illinois—six industries.
At Hamilton, Illinois—five industries.
At Bowen, Illinois—four industries.
At Timewell, Illinois—four industries.
At Clayton, Illinois—four industries.
At Versailles, Illinois—three industries.
At Bentley, Illinois—two industries.
At Denver, Illinois—two industries.
At Golden, Illinois—two industries.
At Chatton, Illinois—one industry.
At Hersman, Illinois—one industry.

[fol. 1409] As in the case of shipments moving to and from Streator, Illinois, an analysis has been made of the shipments handled by Wabash to and from Keokuk, Iowa, for the months of January, April, July and October 1955. This analysis is shown in my exhibit identified as H-50. The first sheet shows that during the period mentioned 110 cars were shipped from Keokuk to destinations beyond the Wabash in the states shown. 244 cars were shipped to destinations beyond the Wabash in the states shown in the first column on sheet 2. Sheets 3 and 4 show that 203 cars originated on the Wabash and 297 cars originated beyond the Wabash and were delivered at Keokuk. It will be noted that the shipments involved moved from or to origins or destinations in every part of the nation.

My Exhibit 51, that is, identified as H-51, shows the carload traffic interchanged between the TP&W and the Wabash for the period January 1, 1951, to December 31, 1955, inclusive. This is traffic on which both the TP&W and Wabash perform linehaul service.

I would like to say now at this point that the decline in the carloads interchanged with the TP&W at Forrest, Illinois, in the last five years has been due to various conditions, such as the unusual influx of traffic in 1951 occasioned by the Korean conflict, an unusual movement of wheat, corn and oats in 1951, changes in the operation

of several industries served thru that junction, formerly served jointly and which are now served exclusively by [fol. 1410] either the TP&W or the Wabash, and the improvement of Wabash service from Kansas City and Chicago to Wabash eastern connections. Adding together the total carloads of traffic that were handled by Wabash and the Streator Branch and on the Keokuk Branch north of Meredosia, together with the carloads interchanged with the TP&W at Elvaston, Forrest and Fairbury, it will be seen that a total of 17,469 cars, revenue cars, per year, would be involved in any disturbance of the Wabash operating and interchange arrangement with the TP&W.

Mr. Wheeler: Mr. Examiner, may I interrupt here just a moment. He made a reference to, as I believe, in his line haul between Kansas City and eastern points. I wonder if I may have that read back.

(The last paragraph in the statement of the witness above was read by the reporter.)

Mr. Davis: He hasn't made that, Mr. Wheeler, any reference to Kansas City.

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.
Continue.

A. (Continuing) My Exhibit H-52, consisting of 10 sheets, is compiled to show in some detail the extent to which the route of the TP&W and Wabash is used by shippers as an important channel of trade in moving car- [fol. 1411] load freight to and from all parts of the country. Sheet 1 is a recapitulation of the detailed information contained on the remaining sheets. The exhibit is compiled from records of the Wabash for the months of January, April, July and October 1955, with the exceptions noted. I have shown the origin and destination states, the junction at which the traffic was interchanged between TP&W and Wabash and the haul received by TP&W and Wabash on the traffic shown. It will be noted that carload traffic moves freely via the through routes utilizing the lines of

the TP&W and Wabash from and to practically every state in the Union. It also indicates clearly the availability of joint rates on such traffic as well as the divisional arrangements and working arrangements existing between the TP&W and Wabash and their connections.

It is important to Wabash that the through routes via existing gateways at which traffic is interchanged between Wabash and TP&W be kept open and undisturbed and the channels of trade which have developed through the use of such through routes remain available to the shipping public as in the past. Furthermore, it is important to Wabash that the through routes via the points of interchange between Wabash and the applicants Santa Fe and Pennsylvania be preserved so that Wabash may continue to interchange traffic with applicants at those points and have the opportunity to compete with routes comprised of the lines of the applicants and the TP&W through the [fol. 1412] area involved. For these reasons, Wabash requests that the Commission, in the event it grants the authority sought in the application in Finance Docket No. 18991, require the TP&W and the parties acquiring control thereof, and each of them, to maintain and keep open and in effect as between themselves and Wabash all existing routes and channels of trade via existing junctions and gateways.

It is also vital to Wabash and the continued operation of its Streator Branch and Keokuk Branch that the existing traffic and operation relationships and arrangements in effect between Wabash and TP&W, which involve Wabash use of trackage over the TP&W between Forrest and Fairbury, Illinois, and between Hamilton and Elvaston, Illinois, remain in force without interruption upon fair and reasonable terms. Wabash requests, therefore, that in the event the authority sought in the application in Finance Docket No. 18991 is granted, the TP&W and the parties acquiring control thereof, and each of them, should be required to maintain and keep in effect all existing traffic routes and operating relationships and arrangements now existing between Wabash and TP&W.

Wabash in its petition for leave to intervene in Docket No. 18991 has made a request upon the Commission, in

accordance with Section 5(2)(d) of the Act, to be included in the transaction proposed therein upon equal terms with other parties thereto in the event carriers other than ap- [fol. 1413] plicants are to be authorized to participate therein. At a meeting of the Board of Directors of the Wabash held on January 19, 1956, the Wabash was authorized to intervene in this case, and I was authorized to make such request for inclusion in the transaction and to take such further action in behalf of the Wabash as will permit it to participate equally with other parties in the transaction, including the purchase of shares of the capital stock of TP&W, in the event that carriers other than applicants in Docket 18991 be included. In the eventuality mentioned, I now state that Wabash agrees to purchase for cash to be paid to the applicants, or either of them, or such other appropriate party, the necessary number of shares of the TP&W stock and execute such documents as may be required to effect such purchase so as to make Wabash an equal participant in that transaction with such other carriers other than the applicants as may be included therein.

As will be seen reference to a railroad map, Wabash competes with the Santa Fe from Kansas City to Chicago; with the route of the Santa Fe to Lomax, Illinois, TP&W to Effner, Illinois-Indiana, thence Pennsylvania to the east; and with the route of the Pennsylvania from St. Louis, Missouri, and Decatur, Illinois, Chicago, Illinois, and Detroit, Michigan, to the east. Wabash also competes with the Rock Island from Kansas City to Chicago and elsewhere. Reference to my map Exhibit H-45 shows that Wabash and Nickel Plate compete with each other for [fol. 1414] substantially the entire length of their lines from Buffalo, New York, on the east, to St. Louis, Missouri, on the west.

The Nickel Plate and the Rock Island have made requests under Section 5 (2)(d) of the Act to become equal parties with the applicants in Docket 18991 in acquiring control of the TP&W.

It is my considered judgment that, with conditions imposed that I have requested, the control of TP&W through stock ownership by Santa Fe and the Pennsylvania will

not impair the traffic and operating relationships between the TP&W and Wabash or the opportunity of Wabash to compete with those applicants for traffic, and with the through routes made up of their lines and the TP&W. My judgment is based upon the independence of management exercised by Wabash during the years of its control through stock ownership directly by Pennsylvania Company and indirectly by The Pennsylvania Railroad Company. It is my belief that if the application in Docket 18991 is approved the TP&W will likewise be free to exercise independent judgment in matters which here concern the Wabash.

On the other hand, if the Rock Island, the Nickel Plate and perhaps other carriers are to be authorized by the Commission to become part owners of the TP&W, then the Wabash should be permitted also to become an equal participant in such control, not only in the interest of preserving its opportunity to compete with the contractual, [fol. 1415] traffic and operating arrangements described, but also in the interests of the public which uses its Streator and Keokuk Branches and which has established trade channels in Wabash-TP&W routing.

Wabash has intervened in Finance Docket No. 19086 in opposition to the control by the M&StL of the TP&W through stock ownership.

Through the years the Wabash and the M&StL have had a substantial interchange of through business at Albia, Iowa, and Des Moines, Iowa. In the year 1955 this amounted to 21,041 revenue cars. A substantial part of this business is either destined to or originates in Illinois or the states east thereof.

Q. Mr. Atkinson, could I interject at this point and ask you if you know the approximate percentage of the interchange with the M&StL at Albia and Des Moines which moves through Illinois or points east of the State of Illinois.

A. We will, on investigation of that traffic, say that about 35 per cent originated at or was destined to points in Illinois and the East.

Q. Thank you. Proceed.

A. It is my view that in the event the TP&W is controlled by the M&StL, a large part of this business would be influenced over the M&StL through the Peoria Gateway to our Illinois junctions with the TP&W at Forrest and Elvaston, Illinois. Because the total volume of business [fol. 1416] moving over the Des Moines line of Wabash is not great without the traffic interchanged at Albia and Des Moines with the M&StL, the loss of this traffic is of great concern to the Wabash.

I have previously described the great importance to Wabash of the trackage arrangements of long standing with the TP&W both in reaching its Streator Branch and in reaching Hamilton, Illinois, and Keokuk, Iowa, on its Keokuk Branch and the continuance of such arrangements upon fair and equitable terms. The future of our Keokuk Branch, which is dependent upon continued maintenance of the TP&W trackage between Elvaston and Hamilton, Illinois, and the joint trackage of the TP&W between Hamilton and the Keokuk Bridge, is of concern to the Wabash in this case. The importance of the TP&W line between Keokuk and Peoria to the M&StL is questioned, in view of the obvious fact that the M&StL will be interested primarily in the movement of traffic for the long haul on its own rails to or from Peoria that now moves on the TP&W line to or from Keokuk or to or from Lomax.

At such time as the M&StL has a contract for the purchase of the controlling stock of the TP&W, which is before the Interstate Commerce Commission for approval, then Wabash desires to become an equal participant with the M&StL, and such other carriers as may be parties thereto, in such transaction, and upon approval by the Commission will pay to the appropriate person or party such sum in cash as will make Wabash an equal partici- [fol. 1417] pant in such transaction.

In the event such transaction becomes a reality, it is my opinion that it will be consistent with and serve the public interest for Wabash to be included as a party to the transaction in order to preserve its opportunity to compete for the traffic which it now interchanges with the M&StL and the TP&W and to maintain its operating agreements and

arrangements with the TP&W upon fair and equitable terms.

As some measure of protection of the interests of Wabash which I have described, in the event of the M&StL. is authorized to acquire control of the TP&W and Wabash is not included as an equal participant in the transaction, then the Commission should require as a condition that the TP&W, the M&StL. and any other parties to the transaction, and each of them, maintain and keep open or in effect as between themselves and Wabash all existing routes and channels of trade via existing junctions and gateways and all existing traffic and operating relationships and arrangements.

[fol. 1418] Q. Does that conclude your statement on direct, Mr. Atkinson?

A. It does.

Mr. Davis: That is all.

Exam. Albus: Cross-examination, please.

Mr. Olson: I would like to reserve our right to cross examine until Mr. Wheeler returns.

Exam. Albus: Mr. Thomas.

Mr. Thomas: I have none.

Exam. Albus: Mr. Lucas.

Mr. Lucas: I think I have just a couple of questions.

Cross examination.

By Mr. Lucas:

Q. Mr. Atkinson, the document that Mr. Wheeler has distributed and which has been marked for identification as H-53, he has supplied the information that your testimony there was given at Washington hearing on June 12th and 13th, 1941.

I want to ask you if prior to that date the interchange between the Pennsylvania Railroad and the Wabash at Logansport was in effect.

A. Yes, it was.

Q. That goes back a considerable period of time prior to the acquisition of control of the Wabash by the Pennsylvania?

A. Yes. I think it goes back to at least 1900, beginning of the year 1900.

Q. In the same proceeding, namely, the acquisition of [fol. 1419] control of the Wabash by the Pennsylvania Railroad Company and Pennsylvania Company I quote from the Commission's approval of that acquisition of control with the following condition attached thereto, I now quote, in Item Sub-C in the Commission's report "that the Pennsylvania Railroad Company shall maintain joint rates, joint routes, interchange points and channels of trade through gateways of the Wabash Railroad Company now existing under the present operation of those properties," and then some more and I close the quote. Has that been complied with to your personal knowledge?

Mr. Wheeler: Mr. Examiner, I object to this as a leading question on redirect examination.

Mr. Davis: What do you mean redirect examination?

Exam. Albus: Objection is overruled. Let the witness answer.

Mr. Lucas: I agree with Mr. Davis.

Mr. Davis: I object to the word "redirect" in this case.

Exam. Albus: That was just a statement.

By Mr. Lucas:

Q. I don't know how I could ask you the question without directing your attention to the text. Has that condition been complied with to your personal knowledge?

A. Why, I am sure it was.

Mr. Lucas: That is all.

Exam. Albus: Mr. Cassell.

Mr. Cassell: May Mr. Broker and I reverse our normal [fol. 1420] order?

Exam. Albus: Yes, indeed.

Cross examination.

By Mr. Broker:

Q. If the Wabash is included in this transaction it is quite obvious, isn't it, that there will be multiple ownership?

A. Yes.

Q. Are you familiar with the proposal to acquire the control, stock control, of the Illinois Terminal Railway Company in Finance Docket No. 18572?

A. Yes.

Exam. Albus: I remember a little about that too; it is still very pertinent to me right now.

By Mr. Broker:

Q. Could you describe that railroad generally as a linehaul railroad?

A. The Illinois Terminal?

Q. Please.

Mr. Davis: I will interject an objection to the relevancy and materiality of this questioning in this proceeding.

Exam. Albus: I will permit the witness to answer whether or not in his opinion it is a linehaul carrier.

The Witness? The Illinois Terminal?

Exam. Albus: The Illinois carrier is a carrier upon which we are inquiring.

A. I think the record speaks for itself. The Illinois [fol. 1421] Terminal is an 80 per cent terminal carrier, only 20 per cent of its business roadhaul. 80 per cent of its business is the industrial area in East Alton and Federal, Illinois, across the river from St. Louis.

By Mr. Broker:

Q. Nevertheless it has linehaul revenues?

A. It does.

Q. How many railroads propose to purchase control of that property?

A. Eleven.

Q. And would you say there are any conflicting interests among those owners in respect to that property and the traffic which originates and terminates on it?

A. Is there any conflicting interest?

Q. Yes, among those prospective owners.

A. After they acquire the joint control or do you mean there is a conflicting interest now?

Q. Are there conflicting interest now?

A. Yes.

Q. Will there not be conflicting interests insofar as each desires to obtain traffic from that railroad?

A. Yes.

Q. Now, if the Commission approves that transaction do you think that property will be operated efficiently?

Mr. Davis: I will renew my objection before the answer is given.

[fol. 1422] Exam. Albus: I don't want to get into the trial of that case or the decision of it but I will permit the witness to answer.

Mr. Broker: I am asking his opinion solely.

Exam. Albus: Very well.

A. I do, indeed, I think it can be operated efficiently. It is a matter of ownership rather than management.

Mr. Broker: No other questions.

Exam. Albus: Has that case been determined yet by the Commission?

The Witness: There is a proposed report of the Examiner's but the Commission has not yet issued its final order.

Exam. Albus: Mr. Cassell, please.

Mr. Broker: May I just make it clear, Mr. Examiner, I am simply asking this witness's opinion as to the future.

Exam. Albus: That is the only reason it went into the record.

Proceed, Mr. Cassell.

Mr. Cassell: I think perhaps if Mr. Wheeler examined it might eliminate a number of my questions that will be duplicated.

Exam. Albus: Are you ready, Mr. Wheeler?

Mr. Wheeler: I am not quite ready.

Mr. Cassell: I will proceed.

Exam. Albus: All right.

[fol. 1423] Cross examination.

By Mr. Cassell:

Q. Mr. Atkinson, you have asked to participate in the TP&W if the M&StL is allowed to purchase the property, isn't that right?

A. Yes, sir.

Q. That is because the M&StL is a competitor of yours?

A. In part.

Q. And you want to protect the Wabash Railroad in that case?

A. Yes.

Q. Now, in the Santa Fe-Pennsylvania purchase you haven't asked to participate if the Pennsylvania and Santa Fe are the only purchasers, isn't that right?

A. That's right.

Q. And if any other carriers get in you have asked to get in?

A. That's right.

Q. Is that because you compete with some of those additional carriers that might have asked to come into the case?

A. Yes, I think that they might have an undue advantage if they were in the ownership of that property and we were not.

Mr. Wheeler: May I have the question and answer read.

(Question and answer read.)

By Mr. Cassell:

Q. Mr. Atkinson, on your Exhibit 50 you have shown traffic that originates and is destined to Keokuk and moves over the Wabash, as to all of the cars which move to or from points east of Illinois, and those could have been [fol. 1424] carried by the TP&W as the first carrier, could they not rather than the Wabash?

A. That is possible.

Q. So to that extent you are in competition on those cars with the TP&W, isn't that right?

A. That's right.

Q. The same would be true of cars that moved from or to points south, east and south of Illinois, isn't that right?

A. I don't know about south exactly.

Q. Well, let's say southeast.

A. Southeast and east, yes.

Mr. Cassell: That's all.

Exam. Albus: Mr. Wheeler, please.

Cross examination.

By Mr. Wheeler:

Q. Don't the figures you cited with respect to the size of the interchange between the M&StL and the Wabash at Albia and Des Moines indicate that those two roads are substantially complementary, that is, the M&StL and the Wabash?

A. Do you mean complementary as a lineal extension or complementary as parallel and competing? I don't understand your point.

Q. You don't understand the word complementary to be different from competitive?

A. Whether it is competitive, it may be complementary to natural lineal extension as against parallel line and com- [fol. 1425] petitive. I think it is a natural lineal extension more than a parallel competing line.

Exam. Albus: All right, gentlemen, let's proceed.

Mr. Wheeler: Mr. Examiner, we did not have the benefit of these exhibits.

Exam. Albus: I am very sorry about that.

Mr. Hoag: I have one question I would like to ask. May I interpose now.

Exam. Albus: Yes, go ahead.

Cross examination.

By Mr. Hoag:

Q. Mr. Atkinson, all the applicants in the present two proceedings have heretofore stated on the record that they have no objection to the Commission imposing the Washington job protection agreement for the benefit of employees who may be adversely affected in the event that their respective applications are granted, should this matter be ultimately resolved that the Wabash would become a purchaser or participant of does the Wabash object to the imposing of light conditions for the protection of employees.

A. Not at all.

Mr. Hoag: Thank you, Mr. Atkinson.

Exam. Albus: Are there any further questions before Mr. Wheeler resumes?

(No response.)

Cross examination (continuing).

[fol. 1426] By Mr. Wheeler:

Q. Mr. Atkinson, what are the traffic advantages to the Wabash if the Santa Fe and the Pennsylvania were in control?

A. Why, we compete with them and I don't know that there is any great advantage that they always were governed more or less by the routing of the traffic of which they have nothing to say and the Wabash solicitation is strong enough to participate in the movement with the Pennsylvania, why, we would participate I don't know whether it is a question of the Pennsylvania helping us in getting that business or whether it is our own efforts.

Q. Do you know of any advantages that are derived by the Wabash from control by the Pennsylvania?

A. No, I don't. We compete with them the same as anybody else. We get just as long hauls as we can just the same as they do against us.

Mr. Davis: May I interject here, Mr. Wheeler?

Was your last answer, Mr. Atkinson directed particularly—

Mr. Wheeler (interrupting): I object to any interruptions. I think he is going to have his chance on redirect.

Exam. Albus: All right, proceed.

By Mr. Wheeler:

Q. As I understand it, Mr. Atkinson, you want to participate in the ownership of the TP&W in the event the M&StL application to acquire control is granted but you do not want that right in the event the Pennsylvania-Santa [fol. 1427] Fe application is granted, is that correct?

A. That is correct.

[fol. 1428] Q. And what particular reasons cause you to make that destination?

A. Well, it is a matter that the Santa Fe and the Pennsylvania through this bridge route of the TP&W are already in the business and we are competing against that business now, but if the M&StL comes in we get a new person and that changes the whole status of the thing, and my whole position is that if anybody else comes into this picture that wants to have some voice in the ownership and the management of the TP&W other than those who are now probably working out that we should be a part to it and have equal voice in it.

Q. Don't you think the Pennsylvania will have a greater desire to route traffic via the TP&W as against the Wabash in the event that it obtains control of the TP&W?

A. Well, again I say I don't know; there is very little of that traffic that the Pennsylvania are routing. My experience is that the shipper or the consignee does the routing. Wherever his service is, if he wants the service, he will specify the routing.

Q. Mr. Atkinson, there is a good deal of testimony in this record to the effect that the originating carriers have substantial influence on the routing of traffic. Now, assume with me for the moment that that is the case. First of all, do you agree with that?

A. Why, I think they exercise their influence with the originating shipper in order to get the longest haul possible [fol. 1429] out of the movement, but that has to be predicated on good service.

Q. Now, Mr. Atkinson, there has been a lot of testimony here, too, that there is good service from the Pennsylvania via Effner, and I want you to keep that in mind in answering this question. Don't you believe that the Pennsylvania will have a greater incentive to route traffic via the TP&W through Effner if it acquires control of the TP&W than it has at the present time?

Mr. Thomas: Mr. Examiner, I object to this type of question. The witness says the shipper routes most all the traffic and he keeps coming back, he has all through this hearing, with the assumption in the question that the carrier routes the traffic.

Mr. Wheeler: I will change it to "influence of routing."
Mr. Thomas: Thank you.
Exam. Albus: The witness may answer.

A. Well, I don't know that I can speak for what the Pennsylvania would do, but I still say that we have that situation now and we have been competing with that situation, and I think successfully, and I don't know that this change or this acquisition of control by these two applicants will change the situation any.

By Mr. Wheeler:

Q. You don't think they will have any greater interest, the Pennsylvania will have any greater interest, in the TP&W and the traffic that moves over its lines after [fol. 1430] acquisition than it does now, is that correct?

A. Well, I think they will first consider whether they want to handle this business—I assume you are talking business from the east to the west?

Q. Yes, sir.

A. I would think if I was running the Pennsylvania that I'd want to try to get the longest haul on it, and that means St. Louis or Chicago over their own railroad first, and then second, when they would favor the Effner interchange as against the Wabash-Logansport interchange would be a matter of determining the best service and from where the traffic originated. I don't think they would have any influence on traffic that originates from Detroit or that area up there because it wouldn't be possible for the Pennsylvania to work through Effner on that traffic which the Wabash predominates in now.

Mr. Wheeler: Now, will you read him my question.

(Mr. Wheeler's last question on page 1429, starting with line 23, was read.)

A. If you want a yes or no to it, I can't answer it.

By Mr. Wheeler:

Q. You cannot answer it?

A. I would have to qualify it as to my judgment and my thinking.

Q. Did you have any discussions with officers or directors of the Pennsylvania regarding their proposed acquisition of the TP&W, Mr. Atkinson?

A. With an officer or a director of the Pennsylvania?

[fol. 1431] Q. Yes, sir.

A. Well, it so happens that I have Mr. Symes and two others formerly Pennsylvania officers and directors and, as I say, Mr. Symes, who is now President and Director of the Pennsylvania, is the Wabash Board. I talked to Mr. Symes about the Wabash intervening in this case, or in these cases, as a Director of the Wabash, not as a Pennsylvania officer or a director, because I had been advised that he was not going to be present at the board meeting on January 20, at which time I proposed to present to my board the position of the Wabash in these cases and to secure their judgment and their approval if they agreed with me intervening, and for the benefit and to protect the interests of the Wabash, and I therefor did talk to Mr. Symes, and told him what I was going to do, and that it would come up before the board. I think it was the day before the board meeting.

Q. My question related to the acquisition of control. You did have a discussion with respect to that, is that correct, with respect to the Pennsylvania's acquisition of control of the TP&W. Do I understand your answer to be that you did have such discussion?

A. I had a discussion with him as a director of the Wabash, with respect to the Wabash taking a position and intervening in this case.

Q. What I want to know, though, apart from the inter-

[fol. 1432] vention, did you have any discussion with Mr. Symes with respect to the Pennsylvania's acquistion of the TP&W?

A. No.

Q. Did you have any such discussion with any other director or officer or employee of the Pennsylvania?

A. I want to get exactly clear your question.

The Witness: Could you read the question again.

(The last question was read.)

A. No, sir.

By Mr. Wheeler:

Q. On the basis of your experience as President of the Wabash, do you think that ownership of the Wabash by the Pennsylvania causes them to seek to influence the movement of traffic over the Wabash because of that control, because of their stock control of that company?

A. No, I don't.

Q. You do not?

A. No.

Q. Now, Mr. Atkinson, did you discuss with any officer or employee or director of the Pennsylvania—and by mentioning "Pennsylvania" I include the Pennsylvania Company—your petition to intervene in this proceeding?

Mr. Davis: That question has been asked and answered once.

Exam. Albus: No, it hasn't.

Mr. Davis: I object to it.

Exam. Albus: The objection is overruled.

[fol. 1433] A. Could I have the question, please.

Exam. Albus: Read the question.

(The last question was read.)

Exam. Albus: Now, it will be understood that it will be any conversation or any discussion other than with Mr. Symes, as a director of the Wabash?

Mr. Wheeler: No, sir, I didn't want it so excluded. This is the first time I have asked this question, Mr. Examiner.

Exam. Albus: All right, do you have the question, Mr. Witness?

The Witness: I thought that he had asked a similar question before, but I will try to answer the question.

Exam. Albus: Very well.

A. I had no discussion with any officer or director of the Pennsylvania Company or Pennsylvania Railroad, as such, with respect to the Wabash intervening. I did have a discussion with Mr. Symes to inform him that at the board meeting of the Wabash, of which he is a director, that I proposed to discuss the matter of intervention by

the Wabash in these cases, and that at that time I knew he was not going to be present at the board meeting and I felt it was the courteous thing to do to acquaint him with this important matter that was going to be before the board.

By Mr. Wheeler:

Q. Did you have a draft of the petition at that time?

[fol. 1434] A. No, sir.

Q. I believe you indicated previously that Mr. Symes was the only officer or director of the Pennsylvania that is an officer or director of the Wabash.

A. At the present time.

Q. Are you correct, sir? Who are the former—

A. (Interrupting) Probably I should clarify that. Mr. Clement, former President of the Pennsylvania, and I believe he still is a director of the Pennsylvania Railroad, he is on my board.

Q. Yes, sir.

A. Mr. Walter S. Franklin, who was formerly a President, and I still understand he is a director of the Pennsylvania, is on my board, and Mr. Symes, the President presently of the Pennsylvania, and a director, is on my board. My answer is that I did so with the idea that we currently had the President of the Pennsylvania on the board, and when Mr. Clement and Mr. Franklin went off, I assumed that they had severed connections, but I now recall that they are directors of the Pennsylvania Railroad, but I had no discussion with them whatsoever.

Q. In that connection, Mr. Atkinson, do you recall when their applications to serve as directors of the Wabash while at the same time serving as directors of the Pennsylvania were approved by the Commission?

A. Well, as they were elected President—well, originally [fol. 1435] there were two directors in the Pennsylvania, in the reorganization plan, that sought authority from the Commission to serve as directors in the Wabash, so that would probably be around 1942.

Q. Do you know whether or not or does counsel know whether those decisions are reported?

Mr. Davis: I do not know whether they are.

A. Yes—do you mean is there an order issued to them?

By Mr. Wheeler:

Q. No, sir, I mean whether they are reported.

Mr. Davis: I do not know whether they are reported in the official reports.

Mr. Broker: I do not think they are.

The Witness: I don't think they are, either.

Mr. Wheeler: I would like to request that counsel furnish me copies of those, if he will.

Mr. Davis: I don't know that I have them available. Of course, they are public records which you could obtain as easily as I from the Commission. If I have them in our files, I would be most happy to reproduce them and send them to you, Mr. Wheeler.

Mr. Wheeler: I would appreciate it, if you would. As I recall, they are not readily available at the Commission. The files have been taken out of the Commission office and sent to a storage place and they are a little difficult to obtain.

Mr. Davis: Those are the finance dockets in which Mr. [fol. 1436] Clement and Mr. Franklin were—

Mr. Wheeler: And Mr. Symes.

Mr. Davis (continuing): —were authorized to serve on the Wabash board?

Mr. Wheeler: There were no other interlocking directors, I take it?

The Witness: No.

By Mr. Wheeler:

Q. Did you discuss with Mr. Symes the question of your being a joint purchaser with the Santa Fe and the Pennsylvania of the TP&W?

A. Yes.

Q. What was that discussion?

A. Well, the discussion was simply, this discussion I had with him was as a director, as I say, because he wasn't going to be at the Board meeting, and this was

a matter that was going to come up before the board, that I felt the Wabash position was just as we have stated it in our petition, namely, that we should see that the usual conditions are imposed, and furthermore that the trackage arrangements, contracts covering the use of these tracks, jointly or exclusively, or by right of use, that they should be preserved, that they were long-standing, and it was something that the interests of the Wabash required.

And, then, furthermore, I touched on the fact that the Nickel Plate and the Rock Island had already indicated [fol. 1437] that they wanted to participate in the ownership: therefore, if the Wabash position should be that if they did intervene, if the Commission held that these roads were entitled to participation, that we should seek a similar participation.

By Mr. Wheeler:

Q. Did you discuss with him participating, though, sir, participation by the Wabash independent of the participation of the Nickel Plate and the Rock Island, that is to say, did you discuss with him the question of whether or not you should be a one-third owner with the Santa Fe and the Pennsylvania?

A. No, I did not.

Q. Why not?

A. Simply because, as I stated earlier, that as far as the applicants acquiring this control, I think that we have been confronted with that situation now. And my whole concern was that in the event somebody else came in and got in the picture that we wanted to be sure that we weren't crowded out of that picture.

Q. The only thing I don't understand, Mr. Atkinson, is why there should be a difference in your estimate of the situation as between ownership by the Santa Fe and Pennsylvania and yourself and ownership by the Santa Fe, Pennsylvania, Rock Island and yourself, why does the introduction of the Rock Island or the Wabash change your position in this case?

A. Well, I am trying to make it clear that the present [fol. 1438] situation, our competition and so on, that this

matter of the Santa Fe, on the one hand, of that railroad and the Pennsylvania, on the other, acquiring control of it and having a voice in the management, it wouldn't have any different effect than what we are already dealing with or we are under competition with now, but if somebody else that doesn't have that relationship comes in, such as these other roads that we compete with on a different type of traffic and different movements, that if they come in, then, I felt, that the Wabash could best preserve their rights and have their interests protected by an equal participation.

Q. Mr. Atkinson, I would like to pursue that just a little farther. As I understand your testimony, you do compete with the Santa Fe, is that correct?

A. Yes.

Q. And you do compete with the Pennsylvania?

A. Right.

Q. And you compete with the Rock Island?

A. Yes.

Q. Which would you say of those three would you say was your greatest competitor?

A. I don't think they are the greatest competitor. If you bring the Nickel Plate in, then I can talk about—

Q. (Interrupting) I would rather not bring the Nickel Plate in yet.

Exam. Albus: Just those three.

[fol. 1439] A. Well, I think the competition with the Pennsylvania is greater than either of the other two.

By Mr. Wheeler:

Q. Is your competition with the Santa Fe your second of the three from the standpoint of competition and the Rock Island third?

A. Yes, I would say that.

Q. Mr. Atkinson, you understand, do you not, that the Rock Island proposes as part of its intervention to maintain the TP&W as a so-called independent operation, do you not?

A. Yes.

Q. Now, having that in mind and having in mind the fact that the Rock Island is the third competitor as against the Pennsylvania and the Santa Fe, why would you need protection, the protection of ownership in the TP&W, if the Rock Island is introduced into the ownership to a greater degree, than you would—and not need protection when the Santa Fe and the Pennsylvania are the acquiring parties?

A. Simply because the Santa Fe and the Pennsylvania have established this route and are using it and I am in competition with it now. But if the Rock Island and some Nickel Plate—or you mention only the Rock Island, I will stick with the Rock Island—if they came into the thing to the extent that we are competitive, whether it is greater competition with the Santa Fe or lesser competition, it is going to be new competition, they are going to have a new field to work on, and that's why I say that. [fols. 1440, 1441] Q. Mr. Atkinson, don't you know that the Rock Island now interchanges with the TP&W?

A. Yes.

Q. And has a substantial interchange with it?

A. Yes.

Q. Do you expect that its interchange with the TP&W is going to change in the event it acquires a third ownership with the Santa Fe and the Pennsylvania in the TP&W?

A. I don't know. It might.

Q. Well, do you think that the Pennsylvania interchange with the TP&W will change if it acquires control?

A. I don't think they can do any more than what they have been doing.

Q. And you think the same thing is true with respect to the Santa Fe, is that correct?

A. That's right.

Q. But that doesn't apply to the Rock Island, is that correct?

A. No, sir.

Q. Now, will you tell me why.

A. Simply because to the extent that we do have competition with the Rock Island, if they have some other arrangement and have some interest in the TP&W, they

might be able to divert traffic or to influence traffic for movement over the TP&W or they might be able to some of the traffic that I get from the TP&W that goes [fol. 1442] to common points are in areas where we both serve, they might be able to work that, although I again go back to say that the routing is a lot in the hands of the shipper, but it is the influence that might be brought to bear.

Q. And you think that influence is important?

A. I think it is, yes, to this extent, when somebody new comes into the picture.

Q. And you think this diversion would take place that the Rock Island would engage in diversion of traffic from its lines to the TP&W or from—but the Pennsylvania would not, is that correct?

A. Well, I say to the extent the Pennsylvania is now operating and have been for years that their position or their field is more or less established. What would happen with a new party coming into the picture is something that you just can't foresee.

Q. And you regard the Rock Island, then, as a new party here, insofar as the TP&W is concerned, but not the Pennsylvania or the Santa Fe?

A. That's right, on business that I would compete for.

Q. Do you have a substantial interchange with the Pennsylvania at St. Louis?

Q. Yes, we have an interchange there.

Q. And I believe you previously stated you had a substantial interchange with the Pennsylvania at Logansport? [fol. 1443] A. That's right.

Q. Is your line running west of Logansport directly or substantially parallel to the line of the TP&W, and I make reference now to your Exhibit H-45?

A. Well, there is a segment of the TP&W that might be construed as parallel to our line from Logansport through Springfield and the Hannibal gateway to Kansas City.

Q. Aren't the lines, your lines and those of the TP&W, in Illinois about as parallel as railroad lines can be running in an east-and-westerly direction?

A. I have seen a lot of them run side by side.

Q. Even if they ran side by side, they couldn't be much more parallel than these, could they?

A. Well, a small segment in there.

Q. I am talking solely about Illinois now, sir. You would agree as to that segment, would you not?

A. Yes, plus the fact, of course, we have a north and south line that bisects it.

Q. It bisects both your line and the TP&W line?

A. That is right.

Q. With respect to Streator, you said the Wabash serves 40 industries located on the Burlington, GM&O, and the New York Central, page 6 of your statement. Are those industries on the lines of these other carriers mentioned rather than on your line or are they jointly served by [fol. 1444] you and those other lines?

A. They are located on the rails of the other lines.

Q. Could those industries ship or receive shipments from all over the United States via these other lines without the Wabash?

A. Oh, they could by circuitous routes for an indirect rail move.

Q. Do you regard the New York Central east as being a circuitous route?

A. New York Central?

Q. Yes, sir.

A. The New York Central is not shown on this map.

Q. You are not familiar with their lines east of Streator?

A. Yes, I am more or less familiar with it. I think that at certain points in the east they are circuitous as against the Wabash route.

Q. Certain points?

A. Yes.

Q. But as to most points, would you not agree that they are not circuitous as compared with the Wabash?

Q. I think there are a number of points where they wouldn't be circuitous.

Q. Where they would not be?

A. Would not be.

Q. Wouldn't they be a majority of points?

A. They might be a majority of points, but not with [fol. 1445] respect to where the traffic is moving in that

particular area. I have in mind, for instance, Detroit. I don't think they would be as direct as the Wabash serves.

Q. Do they have a competitive service with you into Detroit and the New York Central out of Streator?

A. Yes, by getting into the Chicago congested area.

Q. By getting into the Chicago congested area—and that is your testimony with respect to them. Do you believe that is the only way they can get to Detroit, the New York Central?

A. They can get there other ways, but I think it would be circuitous.

Q. You do?

A. Yes, sir.

Q. Are the arrangements which you have with the TP&W, these trackage arrangements that you have testified to, beneficial to the TP&W?

A. Well, I would say so, yes, as long as the capacity is not consumed, a little help and maintenance and expenses for the use of their tracks is always helpful.

Q. So that they benefit the TP&W economically?

A. To some extent.

Q. And that would be true regardless of who owned the property, would it not?

A. That is true.

Q. What makes you think that you would lose those [fol. 1446] trackage and other arrangements you now have in the event that somebody else acquired the property?

A. Well, there might be abandonment proceedings for part of the line—of course, those abandonment proceedings have to go before the Commission and we would probably have the protection or the right before the Commission to reserve these rights.

Q. You don't regard this as an abandonment proceeding, do you?

A. No, except—while I wasn't at the hearings, I heard there was some discussion about abandoning the west end of the TP&W in connection with the M&StL.

Q. Was that one of the things you had in mind in intervening in this proceeding, Mr. Atkinson?

A. Why, yes, for protection of the west end there where

we have this trackage and the right to enter into Keokuk, but not solely because of that.

Q. What was the other?

A. The other is that the M&StL is a new factor coming into the picture and we are working all right through Albia and I don't know to what extent we would suffer from that new arrangement.

Q. I am speaking for the moment of these trackage arrangements now, Mr. Atkinson.

A. Well, trackage arrangements are always—these contracts, like others, all come up for renewal or for renegotiation, and we did have a case in the TP&W where certain [fol. 1447] trackage rights in jeopardy when the former management was there and we were given five days' notice to get off.

Q. Why do you think you would be in better shape with respect to those trackage arrangements if the Santa Fe-Pennsylvania acquired the property than if someone else did?

A. I didn't say that we would. I apply that with equal force to both cases.

Q. So that was not a factor in determining your position with respect to wanting to buy in with any other carriers other than the Pennsylvania-Santa Fe, is that correct?

A. No, I think regardless, if anybody else bought in other than the applicants, your men in the M&StL, as an applicant in your case or the others, that the trackage rights might be in jeopardy, if there are some of my competitors in there. They might squeeze me a little bit and want to get a better deal out of it or get me off and they might say, "I am the landlord and you are the tenant and it is time you pay some more rent or you get off."

Exam. Albus: We will take a short recess.

(Short recess.)

[fol. 1448] Exam. Albus: The hearing will please come to order.

We will continue with the cross-examination of Mr. Atkinson.

By Mr. Wheeler:

Q. Mr. Atkinson, you referred on page 14 of your direct testimony to the movement via Albia and Des Moines in conjunction with the M&StL, amounting to 21,041 revenue cars in 1955. Are you familiar with the fact that that includes a large non-recurring movement from Detroit?

A. For that particular year, you mean?

Q. For that particular year.

A. I am not familiar with it. I know there was a movement. Was this in the war year you refer to?

Q. 1955.

A. In that year?

Q. Yes, sir.

A. Well, there may have been some in there because the interchange from '54, the previous year, was 18,477, as compared with 4,021, an increase of some 2,500-odd cars.

Q. Mr. Atkinson, what per cent of the part that you referred to as originating in Illinois or states east thereof originated west of Decatur, Illinois?

A. I think I referred to the fact that from a study we made on the interchange of the Wabash and M&StL that 35 per cent of the cars originated at or were destined to points in Illinois or east, so I don't have a figure as to west of Decatur.

Q. You don't know what percentage originated west of Decatur, Illinois?

[fol. 1449] A. No, I do not.

Q. Do you have the figure for west of Bement?

A. No, I don't know that we'd have a breakdown at that point.

Q. Would it not be at Bement that this diversion that you talk about that might possibly come about in the event the M&StL acquired the TP&W would take place from your lines?

A. You mean on traffic originating or destined to the M&StL?

Q. Yes, sir.

A. It would have to be Forrest, wouldn't it?

Q. It would be Bement up to Forrest, would it not?

A. Yes, that is right.

Q. Do you receive substantial interchange at Decatur from the southeast, Mr. Atkinson?

A. Oh, some, but not a great deal there. That would be with the Illinois Central.

Q. And that is not a big interchange point with you with the I.C.?

A. Is a big interchange point, but it is largely for the soy beans and grains which originate in Illinois on points not from the southeast.

Q. What about lay traffic?

A. There may be some of it, but that's not the big interchange.

Q. With the Wabash?

A. Between the Illinois Central and Wabash.

[fol. 1450] Q. Where else would you interchange on traffic coming from the south and southeast with the I.C., the Illinois Central?

A. Well, I think that might—the real interchange point is at Talona, I think, where the main line crosses the Illinois Central.

Q. Talona?

A. Yes, that is the real interchange.

Q. I see. And that traffic going to the Northwest might well move over your lines to Albia and there be picked up by the M&StL?

A. Coming from the Illinois Central to the Wabash?

Q. Yes.

A. Yes, it could move out.

Q. That would be the normal movement, would it not be, of those three roads?

A. I would think so.

Q. In connection with Exhibit H-51, you made an explanation of the decline in traffic interchanged at Forrest, Illinois, with the TP&W and made reference therein to an improvement of service on your lines. Would please explain that?

A. Well, the one I wanted to illustrate was that in this Exhibit H-51 it shows the total carloads delivered to and received from the TP&W or the Wabash for the first year was '51, and it showed a total of 5,128 cars and then the next year, '52, it went to forty-five twelve, the year '53 was

[fol. 1451] thirty-eight sixty-eight, and finally when you get down to '55 it was thirty-four thirty-eight. I generally explained that that was due to a number of causes, and one of the causes I said was the fact that we had improved our service from Kansas City to Chicago and to Wabash eastern connections. That came about by the dieselization and the use of diesel power and the modernization of yards and everything that merited us to handle business out of Kansas City via the Hannibal gateway through Decatur to Chicago and against probably the movement of it from Santa Fe to TP&W thence or from Santa Fe direct to Chicago.

Q. In other words—

A. (Interrupting) In other words, the traffic went, to some extent went that way instead of coming off the TP&W.

Q. Due to the improved service on the Wabash?

A. That is right.

Q. In comparison with the alternative service offered in connection with the TP&W?

A. That is right.

Q. Do you have a copy of Exhibit H-53?

A. Yes, sir.

Q. Refer to page 2 of that exhibit, Mr. Atkinson. Do you see the second paragraph there?

A. Yes.

Q. You stated at that time that the Pennsylvania will be [fol. 1452] in a position to lend a guiding and helping hand. Has it lent you such a guiding and helping hand?

Mr. Davis: I will put an objection on the record as to the line of questioning in connection with this case.

Exam. Albus: The objection is overruled.

A. Yes, they have, and I probably in order to clarify my position I think you asked me before whether there have been any traffic benefits derived from this, and my answer was that I didn't know of any traffic benefits, but to the extent that there are directors on my board that have had the experience and the training on the Pennsylvania they have helped as counsel in our policy matters and in our deliberations before the Board. That is to the extent of the helping hand.

By Mr. Wheeler:

Q. In that same hearing Mr. Wilkinson for the Pennsylvania—what office did Mr. Wilkinson hold, Mr. Atkinson, if you remember?

A. I think he was a superintendent.

Mr. Lucas: That is correct. It is stated at the bottom of page 2.

A. Yes, it is stated their superintendent, special duty, chief engineer's office.

Mr. Davis: I will renew my objection as to questions dealing with the testimony of Mr. Wilkinson in that proceeding for the same reasons stated before.

[fol. 1453] Exam. Albus: I will sustain the objection with respect to Mr. Wilkinson's testimony in that case.

By Mr. Wheeler:

Q. Does the Pennsylvania control of the Wabash result in a favoring of the Wabash by the Pennsylvania on the establishment of routes?

A. Favor us by establishing routes?

Q. Yes.

A. Why, if we had a route that we wanted to work out with them I think they would be at least amenable to working it out with us. I don't know that they have ever proposed, and I don't know of any new routes that have been issued, well, there was one change in the routes after the control, but that was at our insistence or on our basis because of the better service through Detroit running through Toledo that was the only change in routes that I know of and there has never been anything else come up.

Q. Does the Pennsylvania's control of the Wabash influence the establishment of that route in your opinion?

A. No, we established it because we could do better through Detroit than we could through Toledo.

Q. Is that a route established in connection with the Pennsylvania?

A. Yes.

Q. Well, I don't think we are clear, then. Do you think the establishment of that route with the Pennsylvania would

[fol. 1454] have been established in the absence of control of the Wabash by the Pennsylvania?

A. Yes, I think we could have done it without somebody else but I think it might have helped if the Pennsylvania had the controlling position in the Wabash, that we were able to talk to them.

Q. Why do you think that?

A. Well, simply that there is some relationship as against —even though you are competing in policy matters, as I said they are directors on the board, when we seek their counsel and advice in order to develop something for the benefit of the Wabash, why, I think they are susceptible to that matter rather more pertinently than they would be if they were not in that position. This route that I refer to, well, which might be construed as opening a new route with the Pennsylvania was in lieu of another route that we had at Toledo and Toledo is sort of an off-the-main-line operation for us and we could better go into Detroit and do the job than we could through Toledo.

Q. What about train schedules? Does the Pennsylvania's control influence those arrangements insofar as the Wabash?

A. I don't say they control them, but I say so far as working out connecting schedules that will permit of the business making of their trains or their trains making our business, why, we have always done that the same as we do [fol. 1455] with any other railroad that we have connections with.

Q. You don't think their control has affected that in one way or another?

A. I do not.

Q. And I believe you stated that—well, let me ask you this question: Mr. Atkinson, in soliciting traffic for the Wabash, do your people have in mind the fact that the Wabash is controlled by the Pennsylvania?

A. Why, I assume they have knowledge of it but it is not a factor in their solicitation. They are out to solicit for the Wabash.

Q. All things being equal would the Wabash seek to influence a movement over the Pennsylvania as against another carrier?

A. Well, I think they'd first make sure that the Wabash was entitled to it and would get it and then after that if it was up in the air they might say the Pennsylvania is a good route or they might say somebody else had a good route. It would be largely dependent on giving advice to the shipper as to the best service in what they felt was the best way for him to get his rail transportation.

Q. Assume that the services were equivalent services.

A. Well, there might be a tendency. I would say there would be a tendency to think about the Pennsylvania.

Q. Do you have a joint rate and a joint route with the Pennsylvania between Logansport and Kansas City?

[fol. 1456] A. Yes.

Q. And that's one of the services to which you previously referred that has been improved in recent years? You remember we were discussing a moment ago in connection with H-51—

A. (Interrupting) So far as the Wabash service is concerned?

Q. Yes.

A. Yes. Of course I think it is appropriate to say that we have similar through routes with the Erie at Huntington which is just on the other side.

Q. Does that route that I have referred to with the Pennsylvania at Logansport, Kansas City, Logansport, was that in existence at the time of the control application?

A. Yes, sir.

[fol. 1457] Q. In connection with your discussions with Mr. Symes, did he indicate to you why the Pennsylvania was seeking control through stock ownership of the TP&W?

A. Why he was?

Q. Yes.

A. No, he never said.

Q. Did any other officer or employee officer, director or employee of the Pennsylvania indicate to you?

A. No, sir.

Q. On traffic originating on the Wabash, do you seek to have it routed so as to give the Wabash the longest haul?

A. Yes, sir.

Q. Mr. Atkinson, we earlier discussed the relationship of Mr. Symes as president of the Pennsylvania and in his

capacity as a director of the Wabash. Now, in his capacity as a director of the Wabash, didn't he ask your opinion as to whether he should join, whether the Wabash should join, the Santa Fe-Pennsylvania application, ask for a third interest?

A. Ask me if we should join?

Q. Yes, sir.

A. No.

Q. He did not?

A. No.

Q. He was not present at the board meeting when that came up?

A. No.

[fol. 1458] Q. Was any officer or director of the Pennsylvania at the Board meeting when that came up?

A. No, all three were absent.

Q. The only one you discussed this matter with was Mr. Symes?

A. That is right.

Mr. Wheeler: Mr. Examiner, it would shorten my examination of this witness and also of witnesses who are to follow if it could be agreed that the annual reports for the last five years, that is, form A reports to the Commission for 55 and the five preceding years would be considered as a part of the record and could be referred to by counsel on brief.

Exam. Albus: What part of the annual report?

Mr. Wheeler: I had just general reference to the annual report, and I had in mind those for the M&StL, Santa Fe, Pennsylvania, Rock Island, Nickel Plate, Wabash, Burlington.

Exam. Albus: And any other road—

Mr. Wheeler: TP&W.

Exam. Albus: And any other road. Is that agreeable to everyone?

Mr. Thomas: Yes, sir.

Mr. Broker: Yes, sir.

Exam. Albus: Absolutely.

Mr. Wheeler: Mr. Examiner, subject to checking to see if I can find one last paper in my briefcase that completes my examination.

[fol. 1459] Mr. Cassell: Mr. Examiner, may we go off the record, please?

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.
Proceed, Mr. Wheeler.
Mr. Wheeler: I have no further questions.
Exam. Albus: Thank you very much.
Is there any further cross-examination?

(No response.)

Exam. Albus: Is there any redirect?
Mr. Davis: I have no redirect.
Exam. Albus: Thank you very much.
Mr. Atkinson is excused.

(Witness excused.)

Mr. Broker: Mr. Witt, please.
Exam. Albus: The exhibits marked for identification H-45 including H-52 are received at this time.

(Intervenor's Exhibits Nos. H-45 to H-52, inclusive, Witness Atkinson, were received in evidence.)

S. J. Witt was sworn and testified as follows:

Exam. Albus: Mr. Davis has a statement.
Mr. Davis: First of all, may Exhibits H-45 through H-52 be received in evidence?
Exam. Albus: They are in the record.
[fol. 1460] Mr. Davis: I have to file with the Commission the information required by the Commission's Order for 5 (2) matters in both dockets, and in No. 19086 I asked leave of 45 days to supply the certified copies of the solutions of the Board.
Exam. Albus: When is the meeting?
Mr. Davis: It will be next month, the third Thursday.
Exam. Albus: Very well, you may have that leave.
Mr. Davis: How many copies, do you desire of these?

(The documents described to be furnished by intervenor.)

Exam. Albus: Let the record show that the supporting supplemental application supporting the Wabash participation in 18991 is marked for identification H-54 and for Finance Docket 19086 will be H-55. Both of those exhibits are received in evidence at this time.

(Intervenor's Exhibits Nos. H-54 and H-55, Mr. Davis, were marked for identification and received in evidence.)

Mr. Broker: Shall we mark these exhibits for identification, Mr. Examiner?

Mr. Wheeler: Mr. Examiner, before we proceed with this I would like to ask Mr. Davis a question.

I wasn't clear from your statement, Mr. Davis, whether or not the board of directors of the Wabash had acted on the intervention of the Wabash in either of these proceedings.

[fol. 1461] Mr. Davis: The board of directors has acted in the intervention of Wabash in 18991 specifically, and it is my view that they have also in the same action, at least indirectly, acted on our participation in the other case, too. However, I expect, in order to be doubly sure of that fact, to furnish specific action with respect to 19086, Mr. Wheeler, and I would ask leave for that purpose for 45 days to furnish you with that supplemental resolutions.

Exam. Albus: Mr. Broker, please.

Mr. Broker: Mr. Examiner, I request that the map marked "W-1" in the upper right-hand corner be marked for identification.

Exam. Albus: That will be marked for identification H-56.

(Intervenor's Exhibit No. H-56, Witness Witt, was marked for identification.)

Mr. Broker: And the one-page statement bearing the designation "W-2", would that be H-57?

Exam. Albus: Correct.

(Intervenor's Exhibit No. H-57, Witness Witt, was marked for identification.)

Mr. Broker: The eight-page statement bearing the designation "W-3", would that be H-58?

Exam. Albus: That is correct.

(Intervenor's Exhibit No. H-58, Witness Witt, was marked for identification.)

[fol. 1462] Mr. Broker: The two-page statement—

Exam. Albus: It is a single page, isn't it?

Mr. Broker: The next statement, one page, marked "W-4", would that be H-59?

Exam. Albus: That is correct.

(Intervenor's Exhibit No. H-59, Witness Witt, was marked for identification.)

Mr. Broker: The one-page statement, "W-5", would that be 60?

Exam. Albus: It may be so marked.

(Intervenor's Exhibit No. H-60, Witness Witt, was marked for identification.)

Mr. Broker: The one-page statement marked "W-6", would that be H-61?

Exam. Albus: That is correct.

(Intervenor's Exhibit No. H-61, Witness Witt, was marked for identification.)

Mr. Broker: The map bearing the designation "W-7", would that be H-62?

Exam. Aibus: Correct.

(Intervenor's Exhibit No. H-62, Witness Witt, was marked for identification.)

Mr. Broker: The one-page statement marked "W-8", would that be H-63?

Exam. Albus: Correct.

[fol. 1463] (Intervenor's Exhibit No. H-63, Witness Witt, was marked for identification.)

Mr. Broker: The one-page statement bearing the designation "W-9", would that be H-64?

Exam. Albus: That is right.

(Intervenor's Exhibit No. H-64, Witness Witt, was marked for identification.)

Mr. Broker: The two-page statement marked "Toledo, Peoria and Western Railroad Company Summary of Income and Financial Position"—

Exam. Albus: What about this map, W-10?

Mr. Broker: I am sorry, that would be the next one. Would that be H-65?

Exam. Albus: That is correct.

(Intervenor's Exhibit No. H-65, Witness Witt, was marked for identification.)

Exam. Albus: The two-page statement marked "Toledo, Peoria and Western Railroad Company Summary of Income and Financial Position", would that be 66?

Mr. Wheeler: What about W-11?

Mr. Broker: This one precedes W-11.

Exam. Albus: Summary of Income and Financial Position, T?

Mr. [illegible]ker: It may not be the next one in your group but it is in there.

Mr. Bagge: What number is that?

[fol. 1464] Mr. Broker: It would be H-66.

(Intervenor's Exhibit No. H-66, Witness Witt, was marked for identification.)

Mr. Broker: I request this W-11 be marked H-67 for identification.

Exam. Albus: It may be so marked.

(Intervenor's Exhibit No. H-67, Witness Witt, was marked for identification.)

Mr. Broker: The one-page statement "Summary of Income and Financial Position, Richmond, Fredericksburg and Potomac Railroad Company", I request that that be marked H-68.

Exam. Albus: It may be so marked.

(Intervenor's Exhibit No. H-68, Witness Witt, was marked for identification.)

Mr. Broker: We are ready to proceed, Mr. Examiner.

Exam. Albus: Very well, you may do so.

Mr. Broker: Has Mr. Witt been sworn?

Exam. Albus: Yes.

Direct examination.

By Mr. Broker:

Q. Please state your name and qualifications.

A. My name is S. J. Witt. I am vice-president-traffic of the New York, Chicago and St. Louis Railroad Company, with headquarters at 800 Terminal Tower, Cleveland, Ohio.

My railroad service began in September 1906 with the Baltimore and Ohio on Southwestern Railway in Cincinnati, [fol. 1465] Ohio. I went to the Akron, Canton and Youngstown Railroad in December 1911 and served with that company in the position of chief clerk in that traffic department ranging up to traffic manager until November 1955. At that time I accepted the position of freight traffic manager in charge of rates with the New York, Chicago and St. Louis Railroad Company. On June 1, 1947, I was appointed assistant vice-president traffic in charge of rates, and on January 1, 1954, to my present position. The New York, Chicago and St. Louis Railroad will be referred to hereafter as the "Nickel Plate".

Q. Please describe your present duties.

A. I have jurisdiction over all traffic matters such as rates, routes, service and relations with the public and other railroads.

Q. What is Nickel Plate's position in Finance Docket No. 18991?

A. It is Nickel Plate's position in Finance Docket No. 18991 that the Commission should impose a condition requiring the allotment to Nickel Plate of a share of ownership of the stock of the Toledo, Peoria and Western Railroad Company equal to that of the Santa Fe and Pennsylvania Railroads. The Toledo, Peoria and Western Railroad Company will be referred to hereafter as the TP&W. Stated concisely, the Nickel Plate seeks a one-third interest in the TP&W if only the Santa Fe, Pennsylvania, and Nickel Plate are permitted to acquire control, or a one-fourth [fol. 1466] interest if the Rock Island is also permitted to participate. If Nickel Plate is not admitted to a share of ownership, either voluntary by the applicants or by condition imposed by the Commission, then the application should be denied.

Q. Mr. Witt, if additional railroads are authorized to intervene there would be change in your share, would there not?

A. Yes, sir.

Q. Please describe the Nickel Plate road, referring to the exhibit marked for identification as H-56.

A. Nickel Plate operates approximately 2,179 miles of railroad, including 464 miles under lease from the Wheeling and Lake Erie Railway Company. Nickel Plate is divided into four districts as shown in my Exhibit H-56. Each of the districts is shown in a different color as follows: Nickel Plate district blue; Lake Erie and Western District red; Clover Leaf District green; and Wheeling District yellow. The district which connects with the TP&W is the Lake Erie and Western District.

Q. Have you prepared an exhibit marked for identification as H-57 which shows the number of loaded cars interchanged with the TP&W for the years 1945 to 1954, inclusive?

A. Yes. My Exhibit H-57 shows loaded cars received from and delivered to the TP&W by the Nickel Plate from the years 1945 to 1954, inclusive.

[fol. 1467] The exhibit shows that prior to 1949 the Nickel Plate delivered all of the cars it interchanged with the TP&W at Peoria Illinois. In this interchange service the Peoria & Pekin Union Railway (hereinafter called the P&PU) was used as the intermediate carrier between the two railroads. In respect of cars received from the TP&W, perishable traffic consisting of fresh fruit, fresh vegetables, fresh meats and packing house products, was delivered direct to the Nickel Plate through the Farmdale interchange. Other traffic was delivered through the P&PU at Peoria. The reason for this situation was that there was only one interchange track at Farmdale which was capable of handling only eastbound perishable traffic. This situation existed until July 1, 1949, when new interchange tracks with adequate capacity for handling eastbound and westbound traffic were put into operation at Farmdale.

The exhibit shows that beginning with 1950 substantially all of the traffic interchanged between the Nickel Plate and the TP&W was interchanged at Farmdale, Illinois. Atten-

tion is also directed to the continued year-by-year increase in the number of loaded cars interchanged. This increase in traffic interchanged was accomplished as the result of cooperation between the two railroads and of Nickel Plate solicitation efforts to have traffic move via the Peoria gateway.

Q. Do you have the number of cars interchanged during 1955?

A. Yes, in 1955 the Nickel Plate—yes, we delivered to [fol. 1468] the TP&W in 1955 at Farmdale and Peoria 4,901 cars and received 10,634 cars or a total of 14,535 cars.

Mr. Broker: I request that that figure of 4,901 be changed to 3,901.

The Witness: I am sorry.

By Mr. Broker:

Q. Have you prepared an exhibit marked for identification as No. H-58 analyzing the traffic interchanged between the TP&W and Nickel Plate? If so, please explain the exhibit.

A. I had a complete study made of such traffic for the months of March through September 1955, which is presented as Exhibit H-58. This Exhibit consists of 8 pages, one for each month indicated and a summary sheet. Dealing with the month of March (page 1), the exhibit shows the total cars received from the TP&W at Farmdale and Peoria (Line 1) and the total cars delivered to the TP&W (Line 9). Line 4 shows the number of cars received from the TP&W which were delivered to that line by the Santa Fe Railway at Lomax, Illinois. These cars amounted to 70.8 per cent of the total cars received by Nickel Plate from the TP&W. Line 12 shows the number of cars delivered by Nickel Plate to the TP&W, which that line in turn delivered to the Santa Fe at Lomax. The percentage of cars so delivered to the Santa Fe was 82.2 per cent. The total number of cars which the Nickel Plate received from or delivered to the TP&W and which had a prior or subsequent move- [fol. 1469] ment via the Santa Fe is shown in Line 18. The number of cars in March was 794 cars or 73.9 per cent of the total cars interchanged.

Pages 2 through 7 show similar information for the later months of the study.

Page 8 is a composite of the first seven pages. The seven months' study shows that of the cars interchanged with the TP&W, 77.4 per cent had a prior or subsequent movement via the Santa Fe. Based on my experience and knowledge of the traffic handled through the Peoria gateway, these exhibits are representative of our traffic interchanged with the TP&W.

Q. Does the Santa Fe interchange traffic with Nickel Plate at any place other than through the TP&W at Farmdale and Peoria?

A. In addition to Crandall, Illinois, which I shall discuss later, the Nickel Plate interchanges traffic with the Santa Fe at Chicago. At Chicago all perishable traffic is interchanged thru the Indiana Harbor Belt Railway. Other traffic is interchanged through the Illinois Northern Railway, the Belt Railway of Chicago, the Elgin, Joliet and Eastern, the Indiana Harbor Belt Railroad, and other switching lines in the Chicago District. In this connection, the Pennsylvania also connects and interchanges traffic with the Santa Fe at Chicago.

Q. How does the volume of Nickel Plate interchange with the Santa Fe at Chicago compare with the volume of Santa Fe traffic handled via the TP&W through Farmdale?

A. The interchange of traffic at Chicago is somewhat [fol. 1470] greater both eastbound and westbound than through Farmdale.

Q. Has the Nickel Plate any other connection with the Santa Fe?

A. The Nickel Plate has a connection and interchanges traffic with the Santa Fe at Crandall, Illinois, which is located on the branch line of the Santa Fe extending from Streator Junction, Illinois, to Pekin, Illinois. My Exhibit H-59 shows the number of cars interchanged at this point. Because there are no competitive through schedules maintained via Crandall, no perishable traffic is interchanged at this point and traffic is limited. Traffic interchanged at Crandall is principally freight originating at or destined to stations on the Lake Erie and Western District of the Nickel Plate in Illinois and Western Indiana, and Santa

Fe stations in Illinois. The schedules via Crandall are not now and never have been competitive with the service via Farmdale or Peoria, and interchange at Crandall could not be substituted for Farmdale and Peoria on traffic between the west and the east.

Q. Do you have the volume of interchange at Crandall between Nickel Plate and Santa Fe for 1955?

A. I don't think I have that. Wait a minute. What is that exhibit?

Mr. Broker: May I furnish it for the record?

Exam. Albus: Yes.

Mr. Broker: That was 229 cars received, 610 cars delivered, a total of 839.

[fol. 1471] Exam. Albus: Very well.

By Mr. Broker:

Q. Have you any information as to the volume of traffic interchanged by the Santa Fe and the TP&W at Lomax?

A. In Finance Docket No. 18752, Illinois-Missouri Terminal Railway Company Control, the TP&W presented in evidence a statement (marked as Exhibit H-52) showing its interchange of loaded cars with more important connections. This exhibit is here offered as Exhibit H-60. This exhibit shows that the interchange with the Santa Fe at Lomax was 32,323 cars for the year 1954, consisting of 20,650 cars received by the TP&W for eastbound movement and 11,673 cars delivered by the TP&W for westbound movement. The 32,323 cars interchanged by the Santa Fe and the TP&W include Peoria District originated and terminated traffic, as well as for all connections of the TP&W, including Nickel Plate and the Pennsylvania Railroad.

Q. Have you made a study to show what proportion of the Santa Fe-TP&W interchange moves in connection with Nickel Plate?

A. My Exhibit H-57 shows that the Nickel Plate interchanged 14,497 cars with the TP&W in 1954. Page 8 of my Exhibit H-58 shows that the Santa Fe participated in the haul on 77.4 per cent of the traffic interchanged by the

Nickel Plate and TP&W. On the basis of this percentage Nickel Plate-Santa Fe traffic during 1954 moving via TP&W amounted to 11,221 cars or 34.7 per cent of the traffic interchanged by the Santa Fe and TP&W.

[fol. 1472] Since the foregoing compilation was made, I have been given the volume of carload traffic interchanged between the TP&W and Nickel Plate at Farmdale for the entire year of 1955. These figures show that 3,861 cars were delivered to the TP&W and 10,618 cars were received from the TP&W, for a total of 14,479 cars. Applying the percentage of 77.4 per cent as developed from the information contained in my Exhibit H-58 would indicate that 11,206 cars were interchanged between the Santa Fe and the TP&W at Lomax. Stated otherwise, the TP&W served as a bridge or intermediate carrier between the Nickel Plate and Santa Fe on 11,206 cars.

Q. Have you made a further breakdown of Exhibit H-60 between eastbound and westbound traffic?

A. Exhibit H-60 shows that the Santa Fe interchanged 20,650 cars east bound to the TP&W and the TP&W delivered 10,387 cars eastbound to the Nickel Plate in 1954. Unfortunately, I do not have the number of cars interchanged between the Santa Fe and TP&W for the calendar year 1955, consequently I could only apply the percentage against the 1954 figures. Exhibit H-58, page 8, line 4, shows that of the eastbound cars delivered to the Nickel Plate by TP&W, 77.3 per cent were received from the Santa Fe. Applying this percentage against the 10,387 cars delivered to Nickel Plate by TP&W produces 8,029 cars as having had a previous movement on the Santa Fe, or 38.9 per cent of the total eastbound loaded cars delivered by the Santa [fol. 1473] Fe to the TP&W at Lomax. This leaves a total of 12,621 cars delivered by the Santa Fe to the TP&W for termination on the TP&W and for delivery to all connections of the TP&W other than the Nickel Plate.

Exhibit H-60 also shows that the TP&W delivered 11,673 cars to the Santa Fe at Lomax for westbound movement and that the Nickel Plate delivered 4,019 cars to the TP&W at Farmdale. My Exhibit H-58, page 8, line 12, shows that for the seven months of 1955, 77.7 per cent of the westbound cars delivered to the TP&W by Nickel Plate were

delivered to the Santa Fe at Lomax. Applying this percentage to the total of 4,019 cars delivered by Nickel Plate to TP&W produces 3,123 cars which subsequently moved via Santa Fe beyond the TP&W or 26.8 per cent of the total westbound interchanged from the TP&W to the Santa Fe. Thus, of the cars delivered by TP&W to the Santa Fe at Lomax, 8,550 were originated by the TP&W or were received from all connections of the TP&W other than the Nickel Plate.

It is evident from this exhibit that Nickel Plate's traffic forms a substantial portion of the overhead traffic of the TP&W interchanged with the Santa Fe at Lomax.

Q. Will you please state the percentage of cars handled jointly by the TP&W and Nickel Plate which originated or terminated on the TP&W and also the percentage of loaded cars that moved via connections of the TP&W other than the Santa Fe.

A. Page 8 of Exhibit H-58 shows this information. For [fol. 1474] the seven months of 1955 shown, it was 6.3 per cent. The exhibit also shows the percentage of cars that moved beyond the TP&W via connections other than the Santa Fe is 16.3 per cent of the total number of cars interchanged between Nickel Plate and the TP&W.

Q. Can you state the amount of revenue the Nickel Plate receives from traffic which it interchanges with the TP&W?

A. Yes. Studies were made for the months of April and September, 1955, of all cars interchanged. This information was taken from our auditor's abstracts on which settlements of revenue were made. This study developed average revenue per car of $153.57. Applied against the 14,497 cars interchanged with the TP&W in 1954, our annual revenue from this traffic is $2,226,304.29.

Q. Have you made a separation as to Santa Fe traffic alone?

A. Yes. In the months of April and September 1955 the average revenue per car for the Nickel Plate on the shipments handled via the TP&W between Nickel Plate and Santa Fe was $162.41. Applied to 11,221 cars for 1954, Nickel Plate total revenue on an annual basis is $1,822,402.61 on this traffic.

Q. Are you familiar with the character of the Santa Fe traffic which is interchanged between the TP&W and Nickel Plate?

A. Yes. The majority of the eastbound traffic consists of fresh meat and fresh fruits and vegetables; however, a substantial proportion of the traffic consist of miscellaneous [fol. 1475] commodities such as flour, lumber, chemicals, etc. Westbound, the traffic consists principally of manufactured commodities such as auto parts, machinery, radio tubes, appliances, pipe, merchandise, et cetera.

Q. Is the TP&W one of the principal connections of the Nickel Plate on perishable traffic from the west?

A. Receipts of perishable traffic from the TP&W are larger than from any other connection at Peoria and are comparable with our receipts from any single railroad at other gateway points.

Q. Can you state the importance of the TP&W traffic to the Nickel Plate in relation to the percentage such traffic constitutes of the number of cars handled in Nickel Plate trains?

A. Yes. The number of cars interchanged with the TP&W in the Peoria District represented 26.4 per cent of the total cars handled in our trains into and out of Peoria in 1954. Eastbound TP&W traffic amounted to 29.4 per cent of cars in Nickel Plate trains and 21 per cent westbound. This is set forth in my Exhibit H-61.

[fol. 1476] Q. What would be the effect on Nickel Plate of the loss of any of this traffic?

A. Nickel Plate operates three scheduled trains into Peoria and three scheduled trains out of Peoria daily, which also handle traffic to and from the TP&W at Farmdale. In addition, extra trains are operated when needed to handle any additional traffic that is beyond the practicable capacity of the scheduled trains. We have always maintained competitive schedules to, from and through Farmdale and Peoria with the service to, from and through Chicago, St. Louis and the other gateways with western lines. Nickel Plate's traffic via Farmdale has been built up on that kind of service. We could not reduce the number of trains that we operate to and from Peoria, and there are no operating economies that we could effect to compensate

for any traffic that we may lose through a change in the status of the TP&W as a wholly independent carrier and in the present neutrality of the Santa Fe. With a financial interest in the TP&W the Santa Fe would have a very important interest in having the traffic move via the TP&W's long haul routes to the detriment of our route via Farmdale. The importance of Santa Fe traffic to the Nickel Plate has been shown, but the proposal also affects the Nickel Plate in its ability to serve the Peoria district in which it has held a foremost position on traffic to and from the east. Any impairment of our ability to solicit and participate in Santa Fe traffic on an equal basis via the TP&W [fol. 1477] would affect our ability to maintain and improve our present service to and from the Peoria district and our other connections at Peoria.

Q. Please describe the major working routes on eastbound and westbound traffic in connection with the TP&W.

A. The Nickel Plate has through rates and routes to and from Farmdale and Peoria as local points and as gateways to and from all points in Eastern Territory, including the New England and Pocahontas regions. Exhibit H-58 shows the volume of traffic which originated and terminated on the Nickel Plate and also which the Nickel Plate handled as a bridge line to and from its connections beyond. Of the traffic that moved overhead via the Nickel Plate, practically all of the eastbound terminated in Trunk Line and New England Territories after movement via Nickel Plate to Buffalo and thence Lackawanna, Lehigh Valley or Erie, or after movement via Nickel Plate to Lima, Ohio and thence Erie.

Page 7 of Exhibit H-4 in this proceeding is a map showing the TP&W in relation to the Nickel Plate. I gather from this exhibit the inference that the Nickel Plate-TP&W relations are restricted to the area served directly by the Nickel Plate. To properly reflect the traffic movement, the map should show connections of the Nickel Plate in Eastern Territory via which fast coordinate schedules are operated daily.

Nickel Plate's schedules to and from Peoria and at [fol. 1478] Farmdale are coordinated with the Lackawanna, Lehigh Valley and Erie to and from points in New York

State and New England, and with the route of the Pittsburgh & West Virginia, Western Maryland and Reading to and from points on those lines and on perishable traffic to Philadelphia, Pennsylvania. The Nickel Plate provides for these lines their only competitive schedules to, from and through Peoria. These Nickel Plate schedules from Peoria are further coordinated back of the Nickel Plate with the schedules of the TP&W and the Santa Fe and other connections of the TP&W from and to Trans-Continental Territory and Western Territory generally, and also from and to other connections of the Nickel Plate at Peoria on traffic from and to Trans-Continental Territory and Western Territory generally.

On August 1, 1955 terminal facilities of the Pennsylvania and Erie at New York for handling perishables were consolidated. This, of course, makes the fruit and vegetable traffic for New York more competitive with the Pennsylvania insofar as the Nickel Plate is concerned, because the only railroad connection with which it can work on Pacific Coast fresh fruits and vegetables traffic for the New York market is the Erie Railroad.

Q. Please describe how rates on traffic moving overhead via the TP&W are divided among eastern and western railroads.

A. Rates on TP&W overhead traffic moving between all points in Eastern Territory and points in Western Trunk Line, Trans-Continental and Inter-Mountain Territories [fol. 1479] divide over Peoria, Illinois and other Peoria group junctions including Farmdale; that is to say, the eastern lines receive a lump proportion for the service east of the Peoria break point, and the western lines receive a lump proportion west of Peoria. The territorial proportions in turn are dividend among the lines participating in the haul on established per cents applicable to the individual roads over which the shipment travels. The same division which applies to and from Peoria is also applicable on traffic interchanged at Farmdale which is specified as a division break point between the TP&W and Nickel Plate. To clarify the point, the TP&W, in respect of the division of revenue on interterritorial traffic, is an eastern

line east of Peoria and Farmdale, and a western line west thereof.

Q. Please describe the TP&W.

A. Exhibit H-62 is a map of the TP&W Railroad. The TP&W operates from Keokuk, Iowa, and Lomax, Illinois, on the west to Effner, Indiana, on the east. The Nickel Plate interchange at Farmdale is shown circled in red. Interchanges of the TP&W with the Pennsylvania Railroad at Effner and at Peoria are shown in blue, and with the Wabash, a wholly owned subsidiary of the PRR, at Elvaston, Fairbury and Forrest, Illinois, circled in green. Interchanges with the Santa Fe at Eureka (Streator Junction) and Lomax are shown circled in yellow. The TP&W operates by trackage rights from Peoria to Iowa Junction over the Chicago, Burlington & Quincy a distance of 2.8 miles, [fol. 1480] and over the Peoria Terminal Company from Iowa Junction to Hollis, a distance of 4.3 miles.

The TP&W serves very few industries with its own rails. In the Peoria-Pekin District it draws its traffic from industries on other railroad such as the P&PU Railway which is a terminal railroad owned by the Illinois Central, New York Central, Nickel Plate, Chicago & North Western Chicago & Illinois Midland, and Pennsylvania Railroads, and also from industries on other lines in the district.

Its facilities in the Peoria District consist of a yard, shops, a scale, and the only icing facility in the district which, plus good service, is of tremendous importance in the handling of perishable traffic from the west, in respect of which traffic it is an important connecting link between its western connections and its eastern connections. My Exhibit No. H-63 shows how the TP&W effects interchange with other carriers at Peoria.

Q. Do you have a breakdown as between traffic originating and terminating locally on the TP&W and traffic which it handles as a bridge line?

A. I.C.C. Freight Commodity Statistics Report for the year 1954, Statement No. 55100, contains the following information concerning the TP&W at pages 239 and 240:

[fol. 1481] Carload Traffic

	Tons	*% of Total*
Originated and terminated at lines	354,200	10.8
Originated and delivered to connections	387,271	11.8
Received from connections—Terminated on line	426,481	13.0
Received from connections—Delivered to connections	2,102,667	64.4
Total —	3,270,619	100.0

These figures show the importance of the TP&W Railroad as a bridge carrier. Previous exhibits show its importance to the Nickel Plate as a bridge carrier on traffic which it handles between the Nickel Plate and the Santa Fe.

I have another Exhibit H-64 which is taken from page 11 of the TP&W report to stockholders for 1954. It shows the breakdown between traffic originated on line and received from connections and percentages of traffic by commodity groups.

Q. Please describe the Pennsylvania Railroad system.

A. I have prepared a map, Exhibit H-65, which shows the lines of the railroads comprising the Pennsylvania system.

The Pennsylvania Railroad is shown in red. It extends from the western gateways of East St. Louis, Peoria, and Chicago, Illinois, to the north Atlantic Ports of New York, New York; Philadelphia, Pennsylvania, Baltimore, Maryland, and Norfolk, Virginia. It reaches with its own rails [fol. 1482] practically all of the important cities in the states of Ohio, Indiana, Illinois, Pennsylvania, Delaware, and New Jersey. In Michigan it reaches the important cities of Detroit, Grand Rapids, Kalamazoo, and Muskegon. In western New York it reaches Buffalo, Rochester, and Sodus Point on Lake Ontario.

Its wholly owned subsidiary the Wabash Railroad is shown in blue. The Wabash Railroad extends from Kansas City, Missouri, Omaha, Nebraska, and Des Moines, Iowa, on the west through the gateways of St. Louis, Missouri,

and Hannibal, Missouri-Illinois to Toledo, Ohio. It has a line extending east from Keokuk to its line from Kansas City. It also has lines from St. Louis, Missouri, to Chicago, Illinois, and from Chicago, Illinois to Detroit, Michigan, and through Detroit to Buffalo, New York.

The Ann Arbor, a wholly owned subsidiary of the Wabash Railroad, is colored in tan. The Ann Arbor Railroad extends from Toledo, Ohio to Frankfort, Michigan, and by car ferry across Lake Michigan to the west bank of Lake Michigan ports of Kewaunee, Wisconsin, Manitowoc, Wisconsin, Menominee, Michigan, Marinette, Wisconsin, and Manistique, Michigan, where it connects with all of the important northwestern railroads.

The Lehigh Valley Railroad in which the Pennsylvania and the Wabash have a substantial and possible majority interest is shown in green. The Lehigh Valley extends from Niagara Falls and Buffalo, New York to Jersey City, New Jersey and New York City, serving important cities [fol. 1483] in Pennsylvania, New Jersey, and New York.

Q. Is the stock of the Lehigh Valley trustee pursuant to order of the Commission?

A. It is.

Q. Would you proceed, please.

A. The Norfolk and Western Railway in which the Pennsylvania Company owns a substantial interest and is the largest stockholder is colored in orange. The Norfolk and Western Railway extends from Cincinnati and Columbus, Ohio through southern Ohio, West Virginia and Virginia to Norfolk, Virginia, Bristol, Virginia, Winston-Salem, North Carolina and Durham, North Carolina.

The Detroit, Toledo & Ironton Railroad Company, of which the Pennsylvania and Wabash own all of the capital stock, is shown in dashed black and operates from Detroit south through Springfield, Ohio, to Ironton, Ohio.

The Long Island Railroad Company is also shown in red.

The TP&W has been included on this map to show the further extension of Pennsylvania interests as contemplated by this application.

This map shows that Pennsylvania Railroad interests extend from Kansas City, Missouri, Omaha, Nebraska, and

Des Moines, Iowa, on the west to practically all of the important industrial cities and ports in eastern United States north of the Ohio and Potomac Rivers except New England. It is the only eastern system extending into the [fol. 1484] west and with acquisition of control of TP&W without Nickel Plate participation it would have two such railroad subsidiaries extending into the west.

Q. Please describe the extent of the competition between the Pennsylvania Railroad and system, on the one hand, and the TP&W, on the other.

A. The Pennsylvania Railroad reaches Peoria over its line which extends from Farington, Illinois, on its St. Louis-Indianapolis line just west of Terre Haute through Decatur, Illinois, to Peoria. On traffic to or from the east the Pennsylvania Railroad has a similar competitive situation with that of the Nickel Plate in that it is competitive over its own line east of Peoria. The Pennsylvania serves all of the other gateways between the east and the west with a complete line of rates and routes, and in addition it is a part owner of the P&PU.

In addition to the competition provided by the Pennsylvania Railroad east of Peoria, the Pennsylvania system is competitive with the TP&W west of Peoria. The line of the Wabash extends west to Kansas City and it has a line to Keokuk, the western terminus of the TP&W, so that traffic can be handled east from Keokuk entirely by lines of the Pennsylvania System. Together the Wabash and Pennsylvania form a direct service route from Kansas City to the eastern seaboard so as to avoid the St. Louis and Chicago gateways. The Commission relied on this consideration in approving control of the Wabash by the Penn- [fol. 1485] sylvania in Wabash Railroad Company Control, 247 I.C.C. 365 (1941).

Mr. Lucas: Excuse me—

Mr. Davis: I was going to ask, Mr. Examiner, that that be stricken as a conclusion of this witness. The report will speak for itself.

Mr. Broker: We are willing to let the report speak for itself.

Exam. Albus: Very well.

Mr. Lucas: Mr. Examiner, may I object to the next sentence. I object to it going into the record.

Exam. Albus: On what ground?

Mr. Lucas: On the grounds that the way it is stated obviously shows that the witness does not have personal knowledge and it is very remote and has no evidentiary value to this proceeding or any issue here involved.

Mr. Broker: Are you willing to agree, Mr. Lucas, that the Pennsylvania Railroad had a 50 per cent interest in the TP&W prior to the time the McNear interest took it over?

Mr. Lucas: Subject to objection I am willing to—

Mr. Broker: I am asking whether you are willing to agree to that as a fact to go into the record.

Mr. Lucas: No, I think I shall not agree to it, Mr. Examiner.

Exam. Albus: Very well. The objection is overruled.

[fol. 1486] You may proceed, Mr. Witt.

A. The Pennsylvania Railroad formerly had a 50 per cent stock interest in the TP&W and it is common knowledge that the TP&W did not prosper during such period of control.

Mr. Lucas: I move to strike the sentence and particularly the part based on common knowledge that the TP&W did not prosper during such period of control.

Exam. Albus: The motion is overruled.

Proceed, Mr. Witt.

By Mr. Broker:

Q. Do you have a two-page exhibit, Mr. Witt, marked for identification as H-66, summarizing income and financial position of the TP&W 1893 up through 11 months of 1955?

A. Yes, sir.

Mr. Lucas: Mr. Examiner, may my objections go to those as well as the other?

Exam. Albus: Everything from now on pertaining to the remote control of the TP&W or before the McNear interest obtained it?

Mr. Lucas: Very good, and an exception, I take it, for the record.

Exam. Albus: Surely.

Mr. Broker: Do you include in that an objection for such information that indicates that you had a 50 per cent interest?

Mr. Lucas: Yes.

[fol. 1487] Exam. Albus: Absolutely. That is what started it all.

Q. Please describe the extent of the competition, if any, between the TP&W and Nickel Plate.

A. The TP&W in connection with the PRR via Effner and the NYC via Sheldon may be said to be competitive with the Nickel Plate as an eastbound carrier on traffic to, from and via Peoria, to and from the East. As a line operating west of Peoria, the TP&W is complementary to the Nickel Plate in its haul to and from Peoria.

Q. Have you made a study of the comparative size of the Pennsylvania system in relation to the other railroad systems in the eastern region operating in the territory competitive with the Pennsylvania system?

A. I have prepared Exhibit H-67 which shows this information. Column 2 shows the mileages of the Pennsylvania Railroad, of lines of railroads wholly owned by the Pennsylvania Railroad or Pennsylvania Company, and the lines of railroads in which they have a substantial ownership, as a group. It also shows the mileages of the New York Central System, Baltimore & Ohio Railroad, Chesapeake & Ohio Railway, Erie Railroad, and the Nickel Plate Road. The total mileage of the railroads shown which constitute the principal railroad mileage in the competitive eastern territory is 43,492 miles. The mileage of the Pennsylvania group is 16,857 miles or 38.76 per cent of the total.

[fol. 1488] Q. That is of the total shown here, isn't it?

A. That is right.

Q. Please continue.

[fol. 1489] A. TP&W mileage, which is 239 miles, is also shown. While TP&W mileage is small, it would add another strategic finger between the east and the west and would bring another line into the Pennsylvania orbit.

Column 3 of this exhibit shows the freight revenue of the same railroads as shown in Column 3 and in the same

manner. The total freight revenues of all of the lines in the eastern region in 1954 were $3,179,883,000. Earnings of the Pennsylvania group were $979,084,000 or 30.8 per cent of the total freight revenue of all lines in eastern territory.

TP&W freight revenues as shown were $6,703,000. The only possible reason for the Pennsylvania's desire to acquire a one-half interest could be to strengthen its competitive position at the expense of the Nickel Plate and its connections and the other eastern connections of the TP&W.

Column 5 shows the total number of tons transported by the same railroads shown in Columns 1 and 3 and in the same manner, and the total tons handled by all lines in the eastern district.

Total tons handled in the eastern district in 1954 were 1,117,105,926. The Pennsylvania group handled 284,931,576 tons or 25.5 per cent. The TP&W handled 3,273,630 tons.

Summarizing the information, contained in this exhibit, it shows the already dominant position of the Pennsylvania System in the eastern district and that control of the TP&W with exclusion of other eastern lines will serve to [fol. 1490] increase that dominance.

Q. You have heard Mr. Gurley's testimony in which he said that there would be no economic incentive to the Nickel Plate to develop the line of the TP&W between Effner and Peoria. Would you comment.

A. That is not correct. The TP&W presently owns property at Farmdale which it has been holding for industrial development purposes. Part of this property lies north of the Nickel Plate and is adjacent to its tracks. To reach it, the TP&W requires a crossing and, depending on how the property is developed, some trackage rights over the Nickel Plate for switching service to reach the property. The Nickel Plate and TP&W have agreed to an arrangement whereby the TP&W will be permitted to cross the line of the Nickel Plate and give such trackage rights as are necessary to develop the property on a mutually beneficial basis with the TP&W performing the switching service. With respect to the incentive to develop the eastern end of the TP&W, I think it is fair to say that all railroads

including the applicants, would first make the effort to locate an industry on their own railroad. Failing to do this, they would naturally endeavor to locate the industry on a subsidiary line such as the TP&W would become, and in this respect the Nickel Plate would certainly lend all the assistance it possibly could to the TP&W in this direction if it had no locations on its own railroad that were satisfactory. The Nickel Plate maintains a large Industrial [fol. 1491] Development Department which would be of material assistance to the TP&W in the location of industries.

[fol. 1492] Q. Would the Nickel Plate be satisfied with imposition of conditions as earlier proposed in this proceeding, including the maintenance of all existing routes and channels of trade without discrimination between connecting lines of railroads?

A. Those conditions would not satisfy and protect the Nickel Plate. Service is of equal importance with rates and routes to the individual lines as well as to preservation of Peoria as an important gateway between the west and east. At present the Santa Fe's only direct connection to and from the east is via Chicago. Car icing facilities at Chicago are located on the Indiana Harbor Belt and interchange of perishable traffic is via that line. The Santa Fe cost for this switching service is $10.96 per car. I do not mean to say that Peoria will replace Chicago as the Santa Fe's principal interchange on perishable traffic but with equal or better service via Peoria it is a reasonable assumption that more traffic may move via the Peoria gateway using the TP&W icing facilities at East Peoria. Based on Mr. Gurley's testimony that their Lomax interchange with the TP&W would be placed on an equal footing with Chicago, and his statements that the volume of traffic would increase via Lomax and the TP&W, and decrease via Chicago, the assumption I have just made becomes a fact. This then poses a dual disadvantage in that, first, the traffic interchanged between the Santa Fe and Nickel Plate at Chicago will diminish, and, secondly, the diversion of traffic to the TP&W long haul will diminish [fol. 1493] our present volume of interchange with the TP&W at Farmdale. The present TP&W management is

independent and its western connections, including the Santa Fe, are neutral in respect of the eastern connections of the TP&W, which permits and accounts for the free flow of traffic via short haul as well as long haul routes of the TP&W, based on the service given to the public who use the Peoria gateway. The proposal in the application would not insure to the Nickel Plate the neutrality which is essential to the protection of the traffic which we have built up in connection with the TP&W, nor would there be strict neutrality without an equal ownership by the Nickel Plate in the TP&W with the Santa Fe and the PRR.

Exam. Albus: At this time we will take a recess until 1:30.

(Whereupon, at 12:25 p.m., a recess was taken until 1:30 p.m. of the same day.)

[fol. 1494] AFTERNOON SESSION 1:30 p.m.

Exam. Albus: The hearing will please come to order. We will continue with the direct testimony of Mr. Witt.

S. J. WITT resumed his testimony as follows:

Direct examination (continued):

By Mr. Broker:

Q. Would the Nickel Plate accept, as a condition of its acquiring equal ownership in the TP&W, the obligations referred to in the second full paragraph on page 14 of the Application filed in Finance Docket No. 18991, reading as follows:

"The agreement also provides for the future operation of TP&W as a separate and independent carrier, soliciting traffic in its own interests and with a majority of its board of directors composed of prominent citizens not connected with applicants; for the maintenance and improvement of its properties, including line and equipment, in keeping

with the requirements of a railroad of its character and importance; and for the maintenance of all existing routes and channels of trade without discrimination between connecting lines of railroad."

A. Yes, with the qualification that the obligations stated in the Application would be reworded in such manner as to clearly include the Nickel Plate and all other connections of the TP&W. We feel strongly that equal ownership by the Nickel Plate in the TP&W is the only way in which the [fol. 1495] neutrality and independence of the TP&W can be preserved and at the same time assure the public of good transportation service. This would not only protect the Nickel Plate as a direct connection of the TP&W but its other connections as well. In fact, if the applicants intend true independence and neutrality, they should have no objection to the admission of other lines to ownership. The support through ownership of another strong railroad such as the Nickel Plate will add to the stability of the TP&W, will provide added assurance for industry to locate along the line of the TP&W, aad will insure its continuance as an important link between the east and the west. Every public interest consideration advanced by the applicants is more likely of accomplishment if the Nickel Plate is admitted to a share of control.

Q. Do you have any comments in respect of Mr. Coulter's testimony (Tr. 975) concerning cooperation between Nickel Plate and TP&W in developing industrial property at East Peoria?

A. I have read Mr. Coulter's testimony. His statement that the Nickel Plate had declined to give TP&W a crossing over our main tracks to reach the property in 1952 is correct. This subject was reactivated by the TP&W with me one year after I became Vice President, or to be exact, on January 4, 1955. I had the matter investigated promptly. Subsequently Mr. Gaiennie mentioned the matter to me personally and at that time stated that they were obtaining options for a right-of-way to reach the property. He stated that the cost of the property would be between $90,000 [fol. 1496] and $100,000 and before taking up the options he was making another approach to us to work the matter out. I told him that the matter was being actively progressed.

On May 16 I wrote Mr. Gaiennie stating that we were prepared to negotiate an arrangement to serve the property and suggested a conference at either Cleveland or Peoria to work out the details. On June 14 I heard from Mr. Miller, who succeeded Mr. Gaiennig, asking if it would be convenient for me to meet with him in Peoria during the week of June 20. A conference was arranged with Mr. Miller on June 23, at his office in Peoria. The arrangement to serve the property was worked out on that date and subsequently confirmed in writing. I had no knowledge at any time that the TP&W had purchased the property until Mr. Coulter so testified at this hearing. There certainly was no lack of cooperation on my part when the matter was handled with me.

Q. Previous witnesses have referred to alleged benefits to be derived in the way of car supply to TP&W if it were owned by Santa Fe and PRR. Do you have any comments in this connection?

A. The Nickel Plate's ownership of cars meets the Association of American Railroads' quota and our ratio of bad order cars to serviceable cars is less than most of the large eastern lines. The Nickel Plate will obligate itself to provide the additional cars necessary to take care of its proportion of ownership in the TP&W provided it would be the policy of the owners to fulfill the car requirements [fol. 1497] in that way. However, we would prefer that the TP&W provide its own equipment in order to enable it to draw from the national car pool because there are times when the owning lines will find it extremely difficult to supply cars to the TP&W due to an inadequate supply of cars on their own railroads to take care of their own industries.

In respect of car supply and its relation to the location of industries, there are quite a number of industries which require special types of equipment. The general practice is for the industry to work out its car requirements with the originating line, which, in turn either agrees to furnish the full supply, or it agrees to furnish its quota of cars and obtain the balance of the cars from the connections which are to handle the traffic from the shipping point to destination. It would only be natural for the TP&W, in the case of

an industry which requires special equipment, to contact its owner lines to provide their share of the cars to the extent that those lines could participate in the movement of the traffic. Once the car supply is set up, the traffic is channeled to move via the lines which furnish the equipment. The Nickel Plate, through ownership in the TP&W would have an equal opportunity to offer its service to the industry by providing its share of the necessary special equipment. Without an equal ownership in the TP&W, the Nickel Plate would be at a serious disadvantage in connection with the growth potentials of the TP&W.

[fol. 1498] Q. What is the position of the Nickel Plate on the application of the M&StL to acquire ownership of the TP&W?

A. The M&StL application seeks complete ownership and joint operation of the TP&W. This in effect would integrate the TP&W into the M&StL. On this basis the Nickel Plate is opposed to the proposal and application of the M&StL. If, however, the M&StL application is approved, Nickel Plate seeks an equal share of control on the same basis as the M&StL and any other railroad authorized to participate in control.

Q. Will you please state the reason for your position?

A. The M&StL is an important connection of the Nickel Plate at Peoria. Traffic interchanged, divided between received and delivered loaded cars for the years 1953, 1954, and 1955, is as follows:

	Received from M&StL	*Delivered to M&StL*	*Total*
1953	7,815	6,960	14,775
1954	6,618	5,881	12,499
1955 (11 mos.)	6,649	5,517	12,166

The Nickel Plate presently has the status of an eastern connection of the M&StL, and in that respect its situation is identical with that of other eastern connections at Peoria, including the TP&W—that is, it is free to solicit traffic for its haul to and from Peoria independent of the line or lines west of Peoria. In so doing, the Nickel Plate does not meet with the opposition of the M&StL as an originating, ter-

[fol. 1499] minating or intermediate carrier. In other words, at the present time there is no conflict of interest between the M&StL and Nickel Plate in reference to traffic in the territory east of Peoria. Should the M&StL be permitted to acquire the TP&W it would project its line into eastern territory and solicit for the long haul to Effner, Sheldon and other points at which the present TP&W connects with eastern carriers in order to obtain the TP&W proportion of the revenue east of Peoria.

Q. Can the M&StL now send its traffic via the TP&W east of Peoria?

A. Yes. The M&StL is able to use any line east of Peoria to and from all of eastern territory, including the Nickel Plate, TP&W, NYC and PRR.

Q. Does the M&StL have a direct connection with the TP&W through which it interchanges traffic?

A. Yes. It has a direct interchange at Peoria.

Q. Have you developed the volume of loaded cars interchanged between the TP&W and M&StL at Peoria for the years 1953 and 1954?

A. Yes. The figures which I have were taken from TP&W Exhibit H-52 in Finance Docket No. 18752—Illinois-Missouri Terminal Railway Company Control. The exhibit shows that the interchange for the years 1953 and 1954 was as follows:

	1953	1954
TP&W delivered to M&StL —	5,779	4,826
M&StL delivered to TP&W —	8,359	7,173
Total —	14,138	11,999

[fol. 1500] It will be noted that the interchange of loaded cars closely approximates the number of cars interchanged between the M&StL and Nickel Plate. The number of cars susceptible of diversion from the Nickel Plate represents a substantial part of the traffic the Nickel Plate handles through Peoria.

Q. Would the Nickel Plate object to the M&StL acquiring an equal interest with the other lines in the TP&W?

A. The Nickel Plate would not have any objection. However, the application of the M&StL seeks complete ownership, control and joint operation which we oppose as being contrary to the best interest of Peoria as an industrial district and as a primary gateway between the east and west in that its service will be directed to preferring one line rather than to giving equally good service to all of its connections. The future development of the TP&W depends on retaining close relationship with its many connections with which it presently works and which need the TP&W as much as the TP&W needs them to provide a fluid and flexible transportation system to and from the Peoria district and via Peoria as a primary gateway.

[fol. 1501] Q. Do you have a one-page exhibit marked for identification as No. 68?

A. I do.

Q. Which summarizes income and financial position of the RF&P and Lehigh and Hudson River Railway?

A. Yes, I do.

Mr. Broker: Subject to cross examination, Mr. Examiner, I offer Exhibits H-56 to H-68, inclusive, for receipt in evidence.

Exam. Albus: We will wait until after the cross-examination, please.

We are ready for cross-examination, I assume, is that correct?

Mr. Broker: Yes, sir.

Exam. Albus: Who is going to lead off?

Mr. Davis, do you have any questions?

Mr. Davis: No, sir.

Exam. Albus: Mr. Cassell?

Mr. Cassell: No, sir.

Exam. Albus: Mr. Lucas.

Mr. Lucas: I hope only one or two, Mr. Examiner.

Exam. Albus: Thank you.

Cross examination.

By Mr. Lucas:

Q. Mr. Witt, will you turn to page 2 of your prepared statement, please, the paragraph that appears at the top

[fol. 1502] and the second sentence, if the Nickel Plate is not admitted to share of ownership then the application should be denied, is if your understanding that the McNear estate intends to sell the stock to somebody, the stock of the TP&W to some purchaser?

A. I understand, Mr. Lucas, that the Santa Fe at the present time has purchased the stock subject to approval by the Interstate Commerce Commission. If in case the Commission does not approve the transaction I wouldn't know. I am not in the finance department and wouldn't know what would happen to the stock or what might occur in respect to its ownership.

Q. I wonder if you share the understanding or know of the testimony of record that the trustees consider they must diversify the portfolio, the investment portfolio, in the McNear estate?

Mr. Broker: I object. There is no such testimony.

Exam. Albus: The record will speak for itself.

If that was the testimony, what would your answer be?

A. I would say I heard that or had that impression.

By Mr. Lucas:

Q. Will you turn, please, to page 18 of your prepared statement.

A. I have it.

Q. The second full paragraph there, the fourth line, I see the use of the word earnings of the Pennsylvania group. Are you referring there to gross revenues?

[fol. 1503] A. Freight revenues.

Q. Gross freight revenues?

A. That's right.

Q. Are you familiar with how the Pennsylvania System is set up on the form A reports to the Interstate Commerce Commission?

A. I believe, Mr. Lucas, the form A shows all railroads that I have shown with the exception of the N&W and the Lehigh Valley.

Q. Do you know whether there is any differential in the Commission reports between the system and certain railroads such as the Long Island, the Wabash, the DT&I?

A. I do not know that, Mr. Lucas.

Mr. Lucas: That is all, Mr. Examiner.

Exam. Albus: Mr. Thomas.

Cross examination.

Q. The Nickel Plate connects with a large number of western lines at St. Louis, does it not?

A. Yes, sir.

Q. And at Chicago?

A. Yes, sir.

Q. Do you treat those lines in a neutral manner, in respect one to another?

A. Yes, sir.

Q. Why do you do that.

A. Well, the Nickel Plate has a very liberal policy in [fol. 1504] respect of its interchange and routing of traffic via connections. I believe I can say this—

Q. (Interrupting) Mr. Witt, could we tie it down just to St. Louis first?

A. Yes, go ahead. What is the question.

Q. Would you answer the question?

A. I will answer it as soon as I get it.

(Questions and answers read as follows:

"Question: Do you treat those lines in a neutral manner, in respect one to another?

"Answer: Yes, sir.

"Question: Why do you do that?")

A. Well, Mr. Thomas—

Mr. Broker (interrupting): Excuse me, what is the question, is it about St. Louis?

Mr. Thomas: Yes, I asked him to—

Mr. Broker: Could you reframe it, please?

By Mr. Thomas:

Q. Suppose, Mr. Witt, that we confine ourselves to St. Louis.

A. All right.

Q. Why do you treat the lines connecting with you at St. Louis on a equal basis?

A. Well, Mr. Lucas we do that because of our relations with each of those railroads. They are friendly, and we have set up our service in such a manner that all are treated [fol. 1505] equally in respect of deliveries to those lines so as to make connections into the southwest and specifically it is a policy with us to do so.

Q. Is that a policy confined to the Nickel Plate?

A. Well, I don't know the policy of any other railroad, Mr. Thomas, I can only speak for the Nickel Plate, for which I shape the policy.

Q. Let's take the Missouri Pacific at St Louis. Do they treat you as well as they treat the other railroads?

A. I don't know. Expressing an opinion of my own I think so but I have no definite information that they do. They will have to speak for themselves in that respect.

Q. On Page 11 of your prepared statement, Mr. Witt, you spoke of your schedules to and through Peoria and at Farmdale are coordinated with the Lackawanna and other railroads named there.

A. That is right.

Q. Is that so called the Alphabet route?

A. No, the Alphabet route is the Nickel Plate, Pittsburgh and West Virginia, Western Maryland and Reading Railroads.

Q. Is good service provided on that route?

A. Very good service.

Q. Does it get a substantial part of the business moving between the points it serves?

[fol. 1506] A. Mr Thomas, you are asking a substantial part of the business between the points that it serves. That would mean Philadelphia, Baltimore, Hagerstown, York, and those places. I don't know what the total business of those places are. Consequently I can't say whether our traffic is substantial or not in relation to the total but it is substantial.

Q. Do you consider it a competitive route with the route of the Pennsylvania between the same general territory?

A. Yes.

Q. You referred to your interchange, I think, the interchange in 1953-1954 and 11 months of 1955 between the M&StL and the Nickel Plate at Peoria?

A. Yes, sir.

Q. That's effected through the Peoria and Pekin Union, isn't it?

A. That's correct.

Q. Do the figures you show which were copied into the record include cars on which there was a local switch move in Peoria, that is, originated and terminated cars in this area?

A. No, sir, they are all roadhaul cars.

Q. Roadhaul cars for both lines?

A. That's correct.

Q. Now, you also quoted some figures of TP&W-M&StL interchange they were taken from Finance Docket 18752, Exhibit H-52. Do you know whether or not those cars in-
[fol. 1507] cluded only interchange where both lines had a roadhaul?

A. I do not.

Q. Yesterday Mr. Nelson of the M&StL when testifying about the solicitation policy of the M&StL, if it should acquire the TP&W, stated that he would, or that he had absolutely no intention of disturbing the present flow of tonnage now moving in connection with the Nickel Plate. He mentioned no other line connecting with the TP&W. Have you ever discussed that subject with the M&StL people?

A. I have not, Mr. Thomas. I am very happy to hear the statement.

Q. On page 22 of your prepared statement you discussed the agreement between the Nickel Plate and the TP&W with respect to certain property in East Peoria.

A. Yes, sir.

Q. You state that the negotiations, that is, after they were resumed when you dealt with the subject, were carried on at least through June of 1955, and I think you said the arrangement was worked out on June 23, and subsequently confirmed in writing. That was after the Santa Fe had entered into its contract for the purchase of the TP&W stock with the trustees of the McNear estate, was it not?

A. I don't know, Mr. Thomas. The first I heard of the Santa Fe-Pennsylvania negotiation for TP&W stock was in the latter part of May. I happened to be at White Sul- [fol. 1508] phur Springs at the time and Mr. Carpi come down there and the newspapers reported of the acquisition of the TP&W by the Santa Fe and Pennsylvania, and I asked Mr. Carpi about it and he says that was correct. Now, that's the first I ever heard of it.

Q. Will you refer to your Exhibit 67?

A. Now, which is that?

Q. That deals with the RF&P.

A. Oh, yes.

Mr. Broker: That would be 68.

Mr. Thomas: Somebody wrote the wrong number on this.

By Mr. Thomas:

Q. Are you familiar in a general way, Mr. Witt, with the geographical setup between the RF&P and the owning lines?

A. I am to this extent, Mr. Thomas, I have been over the RF&P many times.

Q. Would you describe—I am not interested in any precise description, but in a general way—how the owning lines reach the RF&P?

A. Well, the Baltimore and Ohio and the Pennsylvania Railroad reached the RF&P at Potomac yards Virginia.

Q. Pardon me, is that the northern—

A. (Interrupting) That is the northern terminus.

Q. Of the RF&P?

A. And the southern terminus so far as my recollection goes is at Richmond, Virginia, where the Coast Line and [fol. 1509] the Seaboard, I think the Seaboard and the Atlantic Coast Line connect with it.

I think the Southern also delivers traffic to them, whether it is Richmond or some place in that vicinity, and they also have their own line into Washington, let me say.

Q. Who?

A. The Southern.

Q. The Southern?

A. Yes. And the C&O interchange in the vicinity of Richmond, that's my recollection.

Q. Does the Pennsylvania have any lines extending south of the northern terminus of the RF&P?

A. It has a line into Norfolk, Virginia.

Q. Norfolk?

A. That's correct.

Q. Does it have any line serving the territory with which the RF&P connects to the south?

A. No. To my knowledge it does not.

Q. Does the B&O?

A. No, sir.

Q. Does the Coast Line have any line extending north to serve the territory reached by the northern end of the RF&P?

A. No.

Q. Does the Seaboard?

A. No.

[fol. 1510] Q. The exhibit shows, I think, that 73.79 per cent of RF&P common stock is owned by the Richmond Washington Company. Do you know how the rest of the stock is held?

A. I think it is owned—I say I think—there is ownership, the rest of the ownership is in the State of Virginia, either directly by the state or some part of the commonwealth. It is state owned, in any event.

Mr. Thomas: That is all I have.

Exam. Albus: Mr. Wheeler, please.

Cross examination.

By Mr. Wheeler:

Q. The C&O doesn't come north of Washington, does it, Mr. Witt?

A. Mr. Wheeler, I cannot answer that specifically. They do have a line north of Richmond. It doesn't go into Washington directly, as I understand it, but they do have a line north of Richmond.

lines of the RF&P?

Q. Mr. Witt, do you know whether or not any or all of the railroads in question run their own power through the

A. My understanding is that on freight equipment they do not. Passenger equipment I think they do. I won't be too sure of that either, Mr. Wheeler. I won't be too sure of that.

Q. You wouldn't be sure, for instance, whether or not the Chesapeake & Ohio ran its own power into Washington on freight equipment as well as passenger?

[fol. 1511] A. No, I couldn't say positively.

Q. When I say Washington I mean the Potomac Yard.

A. I couldn't say positively, Mr. Wheeler.

Q. Mr. Witt, does the RF&P do much independent traffic solicitation?

A. I would say they are quite active in their own territory around Richmond and places of that sort, yes, sir.

Q. But I am speaking now, do they on a national basis?

A. I don't think so.

Q. Is the same thing true with respect to the Lehigh and Hudson?

A. The Lehigh and Hudson River, I think, are more active in the solicitation of traffic via the Lehigh and Hudson River Railroad. They have a traffic department which does solicit traffic.

Q. But neither railroad has extensive offices throughout the country, do they?

A. No, they do not.

Q. Is there another gateway paralleling the RF&P to the south along the Atlantic Coast?

A. Well, you have the line of the Pennsylvania through Norfolk that makes connections with the Southern Lines. You have the routes down through Hagerstown, down through Winston, Salem, through the Central Railroad in New Jersey, and the Reading Railroad, and the B&O Railroad with the N&W and down through Hagerstown, down [fol. 1512] through the South, southeast, N&W is in there, too, through Winston and Salem.

Q. Mr. Witt, is there any figure on this exhibit or is there any way of concluding from this exhibit how much better the financial and physical condition of the RF&P or the Lehigh and Hudson River Railway Companies would have been if they were operated under individual ownership?

A. There isn't any figure on here that shows that, Mr. Wheeler.

[fol. 1513] Q. Is there an ownership line in Lehigh and Hudson River Railway Company that is competitive with the whole line of that company?

A. No, that is a bridge line.

Q. Refer to Exhibit H-65, Mr. Witt.

A. What is that?

Q. That is your colored map.

A. All right.

Q. Is there any line of the Pennsylvania Railroad extending south as far as Richmond on that map?

A. No.

Q. When you spoke of the Pennsylvania having a competitive route there, were you speaking of the Cape Charles, I believe it is, route of the Pennsylvania on the east side of the Chesapeake Bay?

A. Did you say a competitive route before? I thought you said did they have a line that was parallel, and I said that the Pennsylvania did have a line down to Norfolk.

By Mr. Wheeler:

Q. Well, is the Pennsylvania's line to Norfolk parallel with the RF&P?

A. Oh, no. No, it is not parallel.

Q. Is it competitive?

A. Servicewise I would say not, because I would say 90 per cent of the traffic going into the south, maybe 95 that goes through the Potomac Yards are RF&P, it could be a hundred.

[fol. 1514] Q. Well, the route down the eastern shore there is not competitive, either, is it?

A. No, servicewise, I will speak that way.

Q. Servicewise?

A. Yes.

Q. Mr. Witt, would it be a fair summary of your statement that the principal reason you want to have an ownership in the TP&W is to preserve not only the present routes and interchanges that you have, but the service connections that you now have with the TP&W and through the TP&W with the other carriers?

A. We want that, to be sure, Mr. Wheeler. We want more. We want the opportunity to see that they are continued, and strict neutrality on the part of the TP&W.

Q. What you primarily want, though, is the maintenance of the present service, do you not?

A. I will go further than that. We want the TP&W to be strictly neutral as to records, as to contacts, everything, so that business that we are now handling is not the property and does not become the property of any of the other railroads.

Q. Mr. Witt, I am asking you the question whether or not your primary consideration—and I am not interested in the others for the moment, we will get to those—but isn't your primary consideration a continuation of the service that you now receive from the TP&W in connection with your interchange business with them and through them your interchange with other lines?

[fol. 1515] A. Well, let's say that is a reason.

Q. Is it the predominant reason?

A. I think, Mr. Wheeler, I have to expand the question, as I did before, to make it primary and a complete answer.

Q. Can you answer yes or no?

A. No.

Mr. Broker: The witness has answered the question, Mr. Examiner.

Exam. Albus: I think he has.

May we have the next question.

By Mr. Wheeler:

Q. The answer is no?

A. Mr. Wheeler, you can't ask a question that you can answer yes or no if it has a meaning differently than what I am trying to imply by my answer, and the answer must be complete, and I propose to make it complete, and I think it is in the record.

Exam. Albus: The next question, please.

By Mr. Wheeler:

Q. Mr. Witt, if the applicants in this proceeding would agree to a condition in any order of approval by the Com-

mission which would require the continuation of the present service that you are now receiving from the TP&W, would that satisfy your primary requirements insofar as this proceeding is concerned?

A. I would want to see that condition first before I would answer that in the affirmative or negative.

Q. Can you tell me what kind of a condition with respect [fol. 1516] to service would satisfy you?

A. I cannot at this time, Mr. Wheeler; I have given it no thought.

Q. You do not believe you can indicate to the Examiner, in general, the type of condition which might be provided with respect to service in addition to the other condition which you testified to in your direct?

Mr. Broker: Now, I object, Mr. Examiner. This question makes it appear and tries to twist the answer around as though Mr. Witt had said that the sole thing that we were after or the primary thing we were after was service. He specifically gave a broader answer than that, and he testified on direct that he wouldn't be satisfied with just conditions.

Mr. Wheeler: Mr. Examiner, he testified on direct that he would not be satisfied with the specific set of conditions, none of which, so far as I can tell, related to service. I believe he also testified on direct that he was very much interested in preserving service. All I am interested in knowing from him is whether or not insofar as he so testified, that is, with respect to service, that could be met, that requirement of the Nickel Plate or that interest of the Nickel Plate could be met, at least so far as the M&StL is concerned, by our agreeing to a condition, because I propose on the record to state that the M&StL will agree to such a condition in order to satisfy the Nickel Plate. [fol. 1517] Exam. Albus: But I understood Mr. Witt to say that he is not in a position at this time to state what that condition would be.

By Mr. Wheeler:

Q. Is that correct, Mr. Witt?

A. That is correct.

Q. Mr. Witt, do you believe it would be possible for you and representatives of the M&StL to work out such a condition that would meet your requirements with respect to service?

A. Mr. Wheeler, I couldn't answer that. That would be a matter for my superior executives to shape the policy and possibly to the extent of going to the board. I don't, I couldn't state.

Exam. Albus: Then, let's not have any more questions about conditions to Mr. Witt.

Mr. Wheeler: Mr. Examiner, I wish to state on the record, on behalf of the M&StL, that the M&StL is prepared to accept as a condition of the approval of its application a condition which would guarantee to the Nickel Plate the type of service they are now receiving from the TP&W.

Exam. Albus: Thank you very much.

Let's go on to something else.

By Mr. Wheeler:

Q. Mr. Witt, at the bottom of the first page of the second section of your prepared statement, you state that should the M&StL be permitted to acquire the TP&W it would project its line into eastern territory and solicit for the long haul to Effner. Mr. Witt, have you discussed [fol. 1518] the solicitation, the proposed solicitation, policies of the M&StL with any of its officers or directors?

A. I have not, Mr. Wheeler.

Q. Can you tell me the source of the statement which you have made?

A. My information is based on deduction and what has happened in the past in cases of carrier consolidation or joint operation?

Q. Mr. Witt, did you hear the testimony of Mr. Nelson?

A. I did.

Q. Did you believe that his testimony was contrary to the statement that you have made here with respect to the future policy of the M&StL?

A. N I don't believe it is contrary and I have the utmost confidence in the word of Mr. Nelson, but manage

ments change as time goes on, policies change as time goes on, and I have observed change in policies as the years go by and have experienced them in many cases, Mr. Wheeler.

Q. Well, Mr. Witt, such ancient adages as avoiding being pennywise and pound foolish don't change with time or management, do they?

A. Well, there is such a thing as an adage, "A child once burnt don't go back to the fire."

Q. Now, Mr. Witt, that has no particular application to the M&StL, does it?

[fol. 1519] A. None whatsoever, Mr. Wheeler.

Q. Mr. Witt, you stated at page 11 of your testimony, at the bottom of the page, the "Nickel Plate's schedules from and to Peoria are coordinated with the Lackawanna, Lehigh Valley & Erie to and from points in New York State and New England."

A. I think there are added there, Mr. Wheeler, Pennsylvania and New Jersey. I could have gone on and on, but I did add Pennsylvania and New Jersey.

Q. "And with the route of the Pittsburgh & West Virginia, Western Maryland and Reading to and from points on those lines and on perishable traffic to Philadelphia, Pa." Then you added: "The Nickel Plate provides for these lines their only competitive schedules to, from and through Peoria." As to the traffic originating on those lines, would the M&StL have any choice but to use the Nickel Plate?

A. Yes.

Q. As its eastern connection?

A. Yes.

Q. Will you please tell me how?

A. Well, the Pennsylvania Railroad and the New York Central Railroad reach many of those destinations, and they also connect with the Erie, with the Lackawanna, the Lehigh and our other connections by simply stepping up service that can be accomplished.

Q. Why did you say, then, that the Nickel Plate provides [fol. 1520] these lines their only competitive schedules?

A. I think it does at the present time, Mr. Wheeler, on perishable traffic through Peoria.

Q. Is it limited to perishable traffic?

A. No. No. But perishables form a large part of the interchange at Peoria.

Q. With the M&StL?

A. No.

Q. I speak now of the M&StL traffic.

A. No.

Q. Isn't it a fact, as you have indicated it there, that this interchange traffic between the Nickel Plate and the M&StL is the only truly competitive route to the points that you have mentioned, schedulewise?

Mr. Broker: Would you read the question.

(The last question was read.)

Mr. Wheeler: Mr. Examiner, I would like to withdraw the question and restate it again.

Exam. Albus: Thank you.

By Mr. Wheeler:

Q. How does your service, Mr. Witt, compare with that of the other lines to the points and the railroads which you have mentioned and which I have just read?

A. How does Nickel Plate service—you mean compared with competing lines?

Q. Your schedules.

[fol. 1521] A. How do our schedules compare with lines competitive with the Nickel Plate?

Q. Yes, sir.

A. Our schedules are competitive with the schedules of the other lines from Peoria, from the Peoria gateway.

Q. That is your statement?

A. That is correct.

Q. Now, tonwise how do they compare, for instance, how does your schedule compare with the Pennsylvania's to Cleveland? I am speaking now of the traffic off of the M&StL?

A. Our schedules are superior.

Q. To Buffalo?

A. Superior.

Q. To Baltimore?

A. I would say that they are no more than competitive.
Q. To Boston?
A. Competitive.
Q. To points served by the Lehigh Valley?
A. Superior.
Q. Lackawanna?
A. Superior.
Q. Erie?
A. Mr. Wheeler, I will say superior, but I wouldn't take an oath that that's one hundred per cent correct.
Q. Would your answer be that it would be superior to the [fol. 1522] additional railroads that are shown and that you have named in your direct testimony at the bottom of page 11?
A. Yes.
Q. Does your superiority run as high as 24 hours, Mr. Witt?
A. I couldn't say, Mr. Wheeler, I couldn't say that.

Exam. Albus: Let's go, gentlemen.

By Mr. Wheeler:

Q. Does the TP&W solicit for its Peoria-to-Effner route against the Nickel Plate now?
A. I can't state definitely on that point, Mr. Wheeler, at all.
Q. Irrespective of who owns the TP&W, would ownership in and of itself have anything to do with whether the TP&W solicited its long or its short haul?
A. I think that it might, Mr. Wheeler. Today the TP&W undertakes to get a haul for itself on all railroads. In connection with the Nickel Plate, I would say that where they find that the Nickel Plate is in a reasonably favorable position, they would solicit or wouldn't object to the Nickel Plate, let's say that. On the other hand, if they get away from our railroad, they probably would solicit for the long haul if the service was reasonably competitive.
Q. Does the M&StL work with you in the solicitation of traffic?
A. Very closely, Mr. Wheeler.

Q. Mr. Witt, you said at one point in your testimony that all of the public interest factors could be achieved by joint ownership. Do you believe that the economies in [fol. 1523] operation that were testified to yesterday by, Mr. Schroeder and Mr. Nelson and Mr. Provo for the M&StL could be achieved in a multiple ownership, under multiple ownership?

A. That's a large question. I think possibly in time they might be, except for the physical operation—the economies that might come from the physical operation of the trains, of one line over that railroad, I think many economies might be effected if there was cooperation among the carriers.

Q. What economies do you have in mind?

A. Oh, Mr. Wheeler, I have made no detailed study of the questions asked me. That's not a five-minute answer.

Q. You are not an operating man?

A. No, sir.

Q. Mr. Witt, would you have a preference as between the sole ownership of the TP&W by the M&StL as against ownership of the TP&W by the Santa Fe-Pennsylvania?

A. I'd prefer not to answer that, Mr. Wheeler.

Q. Have just one last question, Mr. Witt. Did you enjoy your stay at White Sulphur?

A. Very much indeed, sir.

Mr. Wheeler: Thank you.

Exam. Albus: Is there anything further?

Mr. Hoag: I have one question.

Cross examination.

By Mr. Hoag:

Q. Mr. Witt, I don't know whether the question is prop- [fol. 1524] erly addressed to you or not; if not, counsel can correct me. In this proceeding so far the applicants in both finance dockets, likewise the intervenor the Wabash, have agreed or they have stated for the record, I should state, that in the event the decision is rendered in their particular favor, that they have no objection to the Com-

mission imposing the Washington Job Protection Agreement.

A. We would expect it, Mr. Hoag.

Q. You have no objection?

A. None whatsoever.

Mr. Hoag: Very well, thank you.

Exam. Albus: Are there any further questions?

Mr. Broker: May I just comment on that. Mr. Witt and I are both authorized to agree to that.

Exam. Albus: Thank you very much.

Mr. Thomas: I have just one more question.

Exam. Albus: Yes, Mr. Thomas.

Further cross examination.

By Mr. Thomas:

Q. You show a direct connection, as I understand it, in one of your exhibits or your testimony between the Rock Island and the Nickel Plate at Peoria.

A. No, I don't recall that. Our interchange with the Rock Island, I am sure, is through the P&PU.

Q. Through the P&PU?

A. That is correct.

[fol. 1525] Q. Do you interchange a substantial volume of traffic with the Rock Island at Peoria?

A. No, it isn't too substantial, Mr. Thomas, at Peoria.

Q. How does it compare with that which you have shown for the M&StL?

A. Very much less, substantially less.

Q. Would you agree to furnish it for the record for the same period?

A. Yes.

The Witness: Do you have the figures, Mr. Broker?

Mr. Broker: We may be able to give it to you right now.

A. If we have it, I will be glad to read them into the record, Mr. Thomas.

By Mr. Thomas:

Q. Thank you. Are those figures of the same type as the ones shown here, that is, road haul for—

A. (interrupting) No, no, no, the Rock Island would not all be road haul. I'd have to furnish that, Mr. Thomas, and we would do that. These would include switch traffic, Mr. Thomas, and, if you will permit me, we will furnish these figures for, what do you want, '51 through '55?

Mr. Thomas: I would suggest the period as for the M&StL, '53, '54 and 11 months of '55.

Mr. Broker: We will supply the three years.

The Witness: Yes, we will be glad to do that.

Mr. Broker: You will give us a period of time to do that? [fol. 1526] I don't think it will be before the conclusion of this hearing.

Exam. Albus: I will state on the record you will have 15 days to supply that. Is that sufficient?

The Witness: Yes, sir.

Mr. Broker: Yes, it is sufficient, Mr. Examiner.

Exam. Albus: All right.

(The document described to be furnished by intervenor Nickel Plate.)

Mr. Thomas: My attention has been called to Exhibit H-63, and it may be there is some misunderstanding—oh, that deals with the TP&W. Strike that.

Exam. Albus: Are there any further questions of Mr. Witt?

Do you have anything else, Mr. Thomas?

Mr. Thomas: No.

Exam. Albus: Is there any redirect?

Mr. Broker: Just one thing, yes, that arose on cross.

Redirect examination.

By Mr. Broker:

Q. About the Alphabet Route, will you describe the carriers in that route before the Wheeling lease became effective?

A. The carriers before the effective date of the lease between the Wheeling—the lease of the Wheeling, Lake Erie and Nickel Plate, was the Nickel Plate, Wheeling and Lake Erie Railroad, Pittsburgh and West Virginia Railroad, Western Maryland Railroad, and Reading Railroad. [fol. 1527] Q. And since the lease the name "Wheeling" has been dropped out because that's part of the Nickel Plate operation?

A. That is correct.

Mr. Broker: No other questions.

OFFERS IN EVIDENCE

At this time I offer in evidence, Mr. Examiner, Exhibits H-56 to H-68, inclusive.

Mr. Lucas: Mr. Examiner, may I make a short statement in connection with an objection to part of Exhibit H-66?

Exam. Albus: Yes.

Mr. Lucas: Sheet 2, which shows certain statistics starting with the year ending December 31, 1927, and from there on through 1955, is in my opinion relevant to the issues.

The similar data on Sheet 1 relates to a time period which seems to me to be entirely too remote in respect to any issue and the statistics have no materiality or any relevancy to any issue here involved. I object on those grounds.

Exam. Albus: Is there any objection to these exhibits?

The objection is overruled. Let the record show that all exhibits presented through Mr. Witt, H-56 through H-68, are received at this time.

(Intervenor Nickel Plate's Exhibits Nos. H-56 through H-68, inclusive, Witness Witt, were received in evidence.)

Mr. Broker: May I call Mr. Phipps.

Exam. Albus: You are excused, Mr. Witt. Thank you very much.

(Witness excused.)

[fol. 1528] Mr. Broker: Mr. Phipps, please.

At this time, Mr. Examiner, I request that Mr. Phipps' exhibits be marked for identification.

The first one showing the connection between the TP&W and the Nickel Plate at Farmdale as H-69.

Exam. Albus: It may be so marked.

(Intervenor's Exhibit No. H-69, Witness Phipps, was marked for identification.)

Mr. Broker: The next one showing schedule connections of TP&W freight trains with Nickel Plate and Pennsylvania freight trains as H-70?

Exam. Albus: That is correct.

(Intervenor's Exhibit No. H-70, Witness Phipps, was marked for identification.)

Mr. Broker: The next exhibit schedules connections of M&StL and Nickel Plate freight trains as H-71.

Exam. Albus: Very well.

(Intervenor's Exhibit No. H-71, Witness Phipps, was marked for identification.)

Mr. Broker: May I say, Mr. Examiner, that this testimony was distributed and available for anyone last night who wanted it and it was distributed to the others this morning, and if no one has any objection we would like to copy it in and proceed with cross-examination.

Exam. Albus: Is there any objection to that?

[fol. 1529] Mr. Lucas: No objection, Mr. Examiner.

Exam. Albus: That may be done.

M. B. Phipps was sworn and testified as follows:

Direct examination.

By Mr. Broker:

Q. Please state your name, title and address.

A. M. B. Phipps, General Manager, the New York, Chicago and St. Louis Railroad Company, Room 744, Terminal Tower Building, Cleveland, Ohio.

Q. Please outline your railroad experience.

A. I entered railroad service in 1917 and have held numerous positions in the operating department including train dispatcher, yardmaster, trainmaster, superintendent, general superintendent and since 1952, general manager.

Q. Please outline your duties as general manager.

A. My duties include supervision of all transportation operations of the Nickel Plate.

Q. Please describe the facilities for interchange between Nickel Plate and TP&W.

A. Interchange between Nickel Plate and TP&W is performed primarily at a location known as Farmdale in East Peoria, Illinois. These facilities, which provide the only direct connection between Nickel Plate and TP&W, were placed in operation on July 1, 1949. As shown on my Exhibit H-69, the facilities consist of two tracks, each with [fol. 1530] a clear length of 1,341 feet, lying just south of the Nickel Plate main track and just north of the TP&W terminal yard. Interchange is also made between TP&W and Nickel Plate through the Peoria and Pekin Union.

Q. How is the interchange made at Farmdale?

A. At this location, westbound traffic is delivered by Nickel Plate road crews direct from road trains, ordinarily filling the No. 2 track first. The westbound traffic is then handled by TP&W yard crews to the TP&W yard, where the cars are incorporated and dispatched in TP&W road trains.

Eastbound traffic is delivered by TP&W yard crews to the Nickel Plate at this facility, ordinarily using the No. 1 track first. These cars are picked up by Nickel Plate road crews and incorporated directly into Nickel Plate's eastbound road trains.

Q. What is the schedule of operations of the TP&W in connection with the Nickel Plate and Pennsylvania Railroads?

A. As shown on my Exhibit H-70, TP&W operates two through scheduled trains between Lonax, Peoria, (including Farmdale) and Effner daily in each direction. Each of these trains is scheduled to stop in the Peoria territory to set off and pick cars to and from the Nickel Plate.

Q. Please describe the method of interchange between

the Minneapolis & St. Louis Railway Company and the Nickel Plate.

A. There is no direct connection between the M&StL and [fol. 1531] the Nickel Plate, and cars are handled in interchange service between those railroads at Peoria by the Peoria & Pekin Union. My Exhibit H-71 shows the connecting schedules of the M&StL in connection with the Nickel Plate.

Q. If traffic interchanged between the Nickel Plate and the TP&W should be diverted from the Nickel Plate, would there be any operational savings which could be made to offset the loss of revenues?

A. We could not reduce the number of scheduled trains either eastbound or westbound in order to remain competitive on the other traffic which we handle. No operational savings would result from the loss of this traffic.

Q. If traffic interchanged between the M&StL and the Nickel Plate should be diverted from the Nickel Plate, would there be any operational savings which could be made to offset the loss of revenues?

A. The answer to this question is the same as that given to the previous question.

Q. If both the TP&W and M&StL interchange of the Nickel Plate should be diverted from the Nickel Plate, what would be the effect on Nickel Plate's operations into and out of Peoria?

A. We could not reduce the number of trains without seriously affecting other traffic. No operational savings could offset the loss of such revenues.

Q. What has been the attitude of the TP&W in connec- [fol. 1532] tion with cooperating and setting up schedules by the Nickel Plate?

A. The TP&W has cooperated in meeting any changes in schedules of the Eastern Roads. They have set up train schedules to meet those via other gateways. The cars for Nickel Plate are delivered promptly by the TP&W, including cars iced by the TP&W when necessary. This has permitted traffic routed TP&W NKP to meet the second and third morning schedules of our competitors. Thus, fast and dependable competitive service is rendered cars routed TP&W NKP on coordinated schedules applying via

Lima, Ohio with the Erie, via Pittsburgh Junction, Ohio with the P&WVa, Western Maryland and Reading to Philadelphia and Baltimore, and via Buffalo to the Lehigh Valley, Delaware, Lackawanna & Western, Erie and New York Central. Through schedules are set up via all of these routes.

Through schedules from Atlantic Seaboard and intermediate points via Nickel Plate-TP&W have been provided and offer a route competitive with other gateways.

Mr. Broker: The witness is tendered for cross-examination.

Exam. Albus: Mr. Davis?

Mr. Davis: I have none.

Exam. Albus: Mr. Cassell.

Mr. Cassell: No questions.

Exam. Albus: Mr. Lucas.

Mr. Lucas: None.

[fol. 1533] Exam. Albus: Mr. Thomas.

Mr. Thomas: No, sir.

Exam. Albus: Mr. Wheeler.

Cross examination.

By Mr. Wheeler:

Q. Do you have any reason to believe the traffic now interchanged between the M&StL and the Nickel Plate would be diverted from the Nickel Plate?

Mr. Broker: Excuse me, this man was not tendered in connection with the subject of diversion. His testimony relates only to existing service.

Mr. Wheeler: I practically read the question out of his own testimony on page 3

Mr. Broker: I am sorry.

Exam. Albus: The witness may answer.

A. Under what circumstances, Mr. Wheeler?

By Mr. Wheeler:

Q. Under acquisition of the TP&W by the M&StL?

A. Read the question again, please, will you.

(Question read.)

A. Only after acquisition, solicitation may be by the long haul.

By Mr. Wheeler:

Q. By the long haul of the Nickel Plate or—

A. (Interrupting) The road who acquired the TP&W.

Q. When you speak of the Longhaul, to what are you referring?

[fol. 1534] A. East of Peoria to Effner.

Q. East of Peoria to Effner?

A. Yes, sir.

Q. And your assumption is based on what facts?

Mr. Broker: Mr. Examiner, this witness—

Exam. Albus: That's an opinion.

A. Human nature in the railroad business.

Mr. Broker: Mr. Examiner, this witness did not say it would be diverted. He said if it is diverted there would be no operational savings. Now, that's just all that he said.

By Mr. Wheeler:

Q. Is your answer to the last question on page 3 of your prepared statement based on an assumption that or does it contain an inference that the present service being afforded the Nickel Plate by the TP&W would be changed?

A. That question and answer, or the answer is set up to indicate the cooperation existing on schedules, both those existing now and the general changes in the past where additional trains or services were added, that the Nickel Plate was given the advantage of such change in schedules.

By Mr. Wheeler:

Q. You have gotten cooperation from the M&StL, have you not, in connection with your schedules?

A. Yes, sir, Mr. Wheeler.

Q. And do you think that cooperation has been in their strike that.

Mr. Wheeler: I have no further questions.

[fol. 1535] Exam. Albus: Mr. Hoag.

Mr. Hoag: No questions.

Exam. Albus: Anyone else?

Mr. Broker: I just want to say no inference was intended in that answer, to the best of my knowledge.

Exam. Albus: Very well.

Are there any further questions of Mr. Phipps?

(No response.)

Exam. Albus: You are excused. Thank you very much.

(Offers in Evidence)

Mr. Broker: I offer in evidence at this time exhibits H-69 to 71, inclusive.

Exam. Albus: They are received.

(Intervenor's Exhibits H-69 to H-71, Witness Phipps, were received in evidence.)

(Witness excused.)

Mr. Broker: Now may I ask a question, Mr. Examiner?

Exam. Albus: Yes.

Mr. Broker: Will the Commission take judicial notice of statements in its reports published?

Exam. Albus: Yes, indeed, that's my understanding.

I would like to suggest, though, that anything of that kind be included in the brief, not in this record. I am only out here to get the facts. I don't want to have any argument included in it. I mean that would be the ideal record, but this isn't an ideal record. I will guarantee you that.

[fol. 1536] Mr. Broker: Thank you very much, sir. That concludes the presentation of the Nickel Plate.

Exam. Albus: You are very welcome, sir.

May I inquire if there is anyone else who would like to testify this afternoon and be excused so they will not have to come back after the weekend.

(No response.)

Exam. Albus: Apparently not.

We will take a 10-minute recess.

[fol. 1537] Exam. Albus: The hearing will please come to order.

I think we will hear from Mr. Wheeler now.

Mr. Wheeler: Mr. Examiner, I would like to have Mr. Mahoney, the general superintendent of transportation of the Santa Fe returned to the stand for a few questions.

Exam. Albus: Is Mr. Mahoney present?

J. J. MAHONEY was sworn and testified as follows:

Direct examination.

By Mr. Wheeler:

Q. Mr. Mahoney, you are the same gentleman who appeared here earlier as a witness in this case for the Santa Fe, are you?

A. Yes, sir, I am.

Q. Mr. Mahoney, there has been a great deal of talk here about the possibility of the M&StL abandoning the west end of the TP&W if it should acquire that property. Now, the policy of the Santa Fe is in favor of keeping the west end of the TP&W open, is it not?

A. That is correct.

Q. Isn't it a fact, Mr. Mahoney, that the Santa Fe could pretty well determine whether the M&StL could close the Lomax gateway in favor of Nemo by the service that the Santa Fe would agree to give at those two interchange points?

Mr. Thomas: I wonder if this is within the scope of Mr. Mahoney's knowledge. Mr. Mahoney was offered as an [fol. 1538] operating man not a man who has knowledge of solicitation of traffic or routing of traffic or not any of those items which seem to be involved in the kind of conclusion that Mr. Wheeler is asking for.

Mr. Wheeler: Mr. Examiner, I want only operating testimony here. I am not asking him for anything to consider traffic or any other aspect, I am talking solely about his own department.

Mr. Thomas: Then I object to that question because it is too broad to be narrowed down to that subject.

Mr. Wheeler: Mr. Examiner, I don't believe that is true. I said by the service and attempted to relate it strictly to Mr. Mahoney's competence.

Exam. Albus: Mr. Mahoney may answer as to the service that would be afforded.

A. Would you read that question, please.

Exam. Albus: Reframe the question, please, or restate the question.

By Mr. Wheeler:

Q. Isn't it a fact, Mr. Mahoney, that the Santa Fe could pretty well determine whether the M&StL could close the Lomax gateway in favor of Nemo by the service that the Santa Fe agreed to give at those two interchange points.

Mr. Thomas: That seems to me to involve how shippers route traffic and all the considerations that go into that.

Exam. Albus: It is limited to service only.

[fol. 1539] Mr. Wheeler: Correct.

A. Well, as I testified, Mr. Wheeler, in my direct testimony in the early part of these proceedings, I stated that one of the duties of my office was to supervise the interchange of all traffic with all carriers. That includes the establishment of the cutoff times for the delivery of traffic on guaranteed schedules, and what I mean by guaranteed schedules is primarily the handling of perishable traffic. Now, in negotiating the cutoff times with the M&StL and the TP&W and other carriers, I set up the time at which my trains will arrive at those junction points. I asked those carriers to provide a connection with me at those junction points to establish a continuity of service in transcontinental service. So it takes two, like my negotiations with Mr. Rux of the M&StL, he negotiates with me, and he agrees that he will cut off, accept traffic from me at a certain time, and it is my obligation to meet that cutoff time that he establishes. Now, if we don't agree, the question that you are asking, I think, and we can't get together on a common meeting time to establish this traffic, then we have no interchange or guaranteed schedul .

By Mr. Wheeler:

Q. So that if you did not agree with Mr. Rux with respect to the interchange at Nemo assuming that the M&StL had control of the TP&W, the only interchange it would have with the Santa Fe would be at Lomax, would it not? [fol. 1540] A. That would be correct insofar as the guaranteed schedules is concerned, Mr. Wheeler, but the common run of ordered freight traffic we'd interchange at any time we got there with it, but on a guaranteed schedule we'd have to meet a common time.

Q. You could take Nemo out of your service routes, could you not, if you thought that was necessary to insure that the Lomax gateway would be kept open?

A. No, I don't think I could insofar as the interchange of traffic is concerned, if a shipper or a consignee elected to route the traffic through that gateway, I'd have to route it that way.

Q. Well, I understand that, sir, but I am speaking of service now, couldn't you make the service by the scheduling of your trains so much more desirable via Lomax than at Nemo that shippers would naturally route via Lomax?

A. I doubt that, Mr. Wheeler, because the distance, they are too close together.

Q. Well, supposing you in effect discontinued service at Nemo—supposing you did discontinue service and didn't stop any of your trains at Nemo, what effect would that have on Lomax?

A. I'd say to you, in answer to your question, if we were privileged to close the Nemo gateway, the answer is obvious that you'd close that in favor of Lomax, but I don't believe we'd be privileged to do that. The Commission [fol. 1541] wouldn't let us do it.

Q. When you say the Commission wouldn't let you do it, Mr. Mahoney, to what do you refer?

A. I refer to this fact, that we have had this established interchange point with the M&StL, I'd say for 50 years at Nemo, and that's an established service through that gateway, and I am convinced in my own mind, but I could be wrong, that we just couldn't tear up our tracks and discontinue that connection without authority from the Commission.

Q. No, but supposing, couldn't you just cease stopping your trains at Nemo?

A. No, I doubt that.

Q. You don't think you could do that?

A. No, I think we'd be compelled, Mr. Wheeler, to interchange traffic, perishable and all, if the consignee and consignor elected to use that gateway, but on a guaranteed schedule we've got to agree on the time we make the delivery.

Q. And if you don't agree, if you don't agree, then you can run your train at such hours as to preclude the use of the Nemo gateway?

A. That's right, and that's what took place from 1941 to 1950. We couldn't agree on the cutoff time on perishable traffic.

Q. Mr. Mahoney, assume that the Commission has no jurisdiction over whether you stop your trains, your freight trains at Nemo for interchange with the M&StL., could you [fol. 1542] not by stopping that, by refusing to stop your trains there, effectively close the Nemo gateway?

A. Yes, if we were permitted to do that. That's obvious.

Q. And then the M&StL. if it owned the TP&W would have no recourse but to use the Lomax gateway for interchange with the Santa Fe?

A. That's correct.

Q. Mr. Mahoney, can't you in practical effect by changes in service connections take Nemo out of the transcontinental traffic and insure that the M&StL would have to keep the Lomax gateway open?

A. You are asking that question providing the M&Stl. controlled both gateways?

Q. Yes, sir. Supposing you felt that it was the interest of the Santa Fe to keep the Lomax gateway open, couldn't you by the scheduling of your trains effectively force the retention of the Lomax gateway?

Mr. Thomas: I want to clarify this and maybe a couple of other questions.

When you say-you felt, I suppose you refer to Santa Fe Company policy? You are not asking Mr. Mahoney questions dealing with Santa Fe policy, are you?

Mr. Wheeler: I previously asked him if it wasn't the Santa Fe Policy to keep the Lomax gateway open, yes.

Mr. Thomas: But I mean in your question now, when [fol. 1543] you say you felt you mean the Santa Fe?

Mr. Wheeler: Correct.

Mr. Thomas: Good.

A. In dealing with that question it is just about an hour's difference between the two junction points, and it would be quite difficult to say to me, no that you wouldn't stop there and stop over here at Lomax to make an interchange. As long as we had the facilities there, Mr. Wheeler, to interchange traffic, now, there is just the one thing that I could say to that, if your people on the M&StL and I couldn't agree with a cutoff time or an interchange of traffic to provide a continuity of service, then we'd break that connection.

By Mr. Wheeler:

Q. That would be the Nemo connection?

A. Yes, sir.

Q. And the result of that would be that the M&StL would have only one connection left with the Santa Fe and that would be at Lomax, would it not?

A. That would be right.

Mr. Wheeler: I have no further questions.

Exam. Albus. Are there any further questions of Mr. Mahoney?

Mr. Davidson: I have a couple of questions, if I may.

Exam. Albus: All right, sir.

Cross examination.

By Mr. Davidson:

Q. Mr. Mahoney, now, this question about the Santa Fe [fol. 1544] being able to close Lomax or close Nemo, doesn't that work both ways, in other words, if the M&StL should be successful in its application and be granted control of the TP&W, if it gives inferior service at Lomax and superior service at Nemo, which will you use?

A. We will use the superior service.

Q. And as a matter of fact, on traffic bound from west to east, which is longer haul from point of view of the Santa Fe, Lomax or Nemo?

A. Nemo from the west.

Mr. Davidson: No further questions.

Exam. Albus: You are excused, Mr. Mahoney. Thank you very much, sir.

(Witness excused.)

[fol. 1345] Exam. Albus: May we have the next witness, please.

Mr. Wheeler: I will call Mr. David Hill.

Mr. Thomas: Mr. Examiner, before you proceed with Mr. Hill, Mr. Wheeler has furnished me a copy of the data that Mr. Swanson used in computing his estimate of revenue losses to the M&StL, and if Mr. Wheeler has no objection I suggest that it simply be copied into the record.

Mr. Wheeler: I have no objection. I want to make just one reservation. I have not personally been able myself to check that to make certain it is accurate, but I have no reason to believe it is not. If I find any inaccuracies I will supply them for the record.

Mr. Thomas: May I furnish it to the reporter?

Exam. Albus: Yes, if you will, please.

Category	Description	1954 Revenue	Loss Range (%)	Percentage Applied	Loss
1	Eastbound Nemo-Peoria Bridge	$ 201,830	70-80	75	$ 151,372
2	Westbound Nemo-Peoria Bridge	462,567	70-80	75	346,925

	Total	$7,084,805			$1,109,576

DAVID A. HILL was sworn and testified as follows:

Direct examination.

Mr. Wheeler: Mr. Examiner, I would now like to have marked for identification exhibit showing Mr. D. A. Hill as the witness.

Exam. Albus: Very well, that exhibit may be marked for [fol. 1547] identification II-72.

(Applicant M&StL Exhibit No. II-72, Witness Hill, was marked for identification.)

By Mr. Wheeler:

Q. Mr. Hill, will you please state your name and address?

A. My name is David A. Hill. I am a consultant on railroad investments and maintain an office at 208 South LaSalle Street, Chicago.

My clients consist of two principal groups, the first being primarily institutions that must regularly invest and reinvest their large funds, and have well equipped and well staffed investment research departments; and the second consisting of underwriters and dealers, some of whom are members of the New York Stock Exchange, who also have investment research departments staffed with investment analysts.

Among my clients in the first group are included such institutions as Investors Diversified Services, Inc., of Minneapolis, the Northwestern Mutual Life Insurance Company of Milwaukee, the Continental Assurance Company of Chicago, the Central Standard Life Insurance Company of Chicago, the Aid Association for Lutherans at Appleton, Wisconsin, the Modern Woodmen of America, Rock Island, Illinois, and others.

Among my clients in the second group are investment dealers such as H. Hentz & Co., New York, Schwabacher & Co., San Francisco, A. G. Becker & Company of Chicago, [fol. 1548] and Brew-Jenkins of Milwaukee, Wisconsin.

In addition to serving investors, I have prepared reports for and rendered advice to a number of railroads, including the following: The Burlington, the Chicago and Eastern Illinois, the Toledo, Peoria & Western, the Minneapolis & St. Louis, the Bangor and Aroostook, the Kansas City Southern, the Tennessee Central, and the Chicago Great Western.

As a consultant, most of my work involves advising my clients as to the investment quality of particular railroad issues. At times my advice may include the prudence or desirability of including a particular railroad issue in a certain fund or as part of the portfolio. In addition, I respond to specific inquiries from my clients with reference to a particular railroad that has important lines in growth territory, whether its property is adequately maintained, and whether it has good management. I am also asked on

occasion to make personal inspections of railroads, and write a report of my observations and conclusions for my client. I have made personal inspections of a number of railroads, and in addition have been a member of large inspection parties over many railroads.

In addition, the work that I have done for railroads has included appearing as a witness before the Interstate Commerce Commission in Ex Parte 175, a hearing on railroad rates, and appearing as a witness before state commissions in abandonment and tax cases. I have been consulted by [fol. 1549] railroads and have written reports for some of them in anticipation of their doing some financing.

In addition to the foregoing, I have lectured on railroad investments at Northwestern University. For about six years, I have lectured at the same university before a class of the Investment Bankers Association. I have also lectured at the University of Minnesota. In addition, under the auspices of the University of Chicago, I have lectured at Beloit, Wisconsin, before the American Life Convention, which lecture was published by Railway Age. I have also written articles for Modern Railroads, a trade magazine.

The nature of my work is governed largely by the requirements of my clients. Accordingly, my work changes from time to time, but it is now, and for many years has been, exclusively with regard to railroads, and usually in matters of railroad credit.

For the past several years I have had under consideration the ability of the M&StL. to finance the purchase of the Toledo, Peoria & Western Railroad. I have made three inspection trips over the M&StL., the last two being in the years 1954 and 1955. In addition, in the year 1954 I made an inspection trip over the TP&W.

[fol. 1550] After examining the financial statements of both carriers for a number of years and having satisfied myself that they were maintained adequately for their needs and type of traffic, I expressed my opinion, and it is now my opinion, that the acquisition of control of the TP&W by the M&StL. at a purchase price of approximately $12,000,000 could be financed at competitive bidding at a reasonable interest rate.

It is my considered opinion, that a first mortgage collateral trust bond with a sinking fund secured by a first mortgage on the M&StL and by the pledge of the acquired stock in the TP&W would be readily salable. The sinking fund would enhance the salability of the bonds and at the same time could be planned to conform with the case requirements of the railroad. By planning the sinking fund so as to fit the cash requirements of the railroad, it would be possible to issue bonds that would be extinguished by maturity without placing a heavy burden on the railroad in any single year.

It is my recommendation that the sinking fund should not begin to operate until after five years from the date of the bond issue. As the proposed issue is in a principal amount of $12,000,000, an annual sinking fund payable from income of $480,000 would entirely extinguish the issue by its maturity of thirty years.

I would like to refer to combined and pro forma financial data for the M&StL and TP&W already received in evi- [fol. 1551] dence as Exhibit H-23. It is to that exhibit that I now refer.

Exhibit H-23 consists of five schedules. Schedule 4 of this exhibit shows the combined depreciation of both the M&StL and the TP&W based on the provision for depreciation for the year 1955 and projected forward through the thirty-year estimated life of the bonds. The exhibit also shows the combined equipment maturities on an actual basis, and the proposed bond sinking fund requirements. It will be noted that for the next five years the equipment maturities are substantial, but that nevertheless, there is an excess of depreciation over those maturities and over the maturities of all other long term debts.

Based on the last column of Schedule 4 to Exhibit H-23, it is apparent that depreciation alone would be ample to retire all present debt, including equipment obligations, retire the entire proposed bond issue and still leave an excess for the period of $23,002,000. This excess of more than $20 million would be more than adequate to take care of additional equipment financing in future years, or build up the cash reserves of the combined companies. Moreover, this figure does not include additional depreciation which would

be realized from any additions to the property out of net income.

The earnings coverage of fixed charges by the combined properties would be approximately seven times. It should be noted, however, that even if the combined property earned its fixed charges only one time, the proposed issue [fol. 1552] could be serviced in every year and the cash flow would be adequate to pay off the entire bond issue by maturity. Hence, the earning power of the combined property, not taken into account in the exhibit to which I have reference, would be additional and very substantial protection.

In evaluating the quality of a railroad bond, the most dependable and generally used factor is the historical coverage of fixed charges before all income taxes. In order to make a relative comparison of the proposed issue with seasoned bonds now outstanding, I have prepared Exhibit H-72 to which I now wish to refer.

In particular, I wish to refer to Schedule 1 of that exhibit. Schedules 2 to 11, both inclusive, are merely work sheets showing how Schedule 1 was computed. Schedule 1 is a summary sheet which shows that the contemplated bond issue would be att (sic) to institutional investors, and that it should command a bank rating which would enable it to be sold competitively.

In examining Schedule 1, I wish to say that the other railroads compared with the combined M&StL and TP&W were selected statistically, and I believe without prejudice. Only carriers that had earnings of nearly seven times, it is evident that even if wide fluctuations might occur in future years earnings, there would still be a substantial earnings cushion to service the bonds.

To summarize, the protected depreciation which consti- [fol. 1553] tutes cash available for payment of interest in itself is more than adequate to service the proposed bonds. The combined excess of depreciation over maturities of long term debt, including retirement of the proposed bonds, which excess as shown totals over $20 million, and the earnings in excess of the fixed charges, indicate strong protection of the interest charges and complete retirement of the proposed bonds.

The lower portion of Schedule 1 of Exhibit H-72 compares the several bond issues selected to ascertain the marked appraisal of bonds having a quality not unlike the proposed issues. In selecting for comparative purposes the particular bond of a railroad that has several outstanding, wherever possible I chose an issue that had a maturity as close as possible to 1986. As the coupons vary greatly, the yield at which those bonds are selling is the best statistical guide to the market appraisal of the several credits selected. This market valuation is, in my opinion, confirmatory of my own.

Schedule 1 of the Exhibit indicates that after a bond issue such as that proposed by the M&StL is seasoned, it will sell close to a 4 per cent basis. In order to make the M&StL bond attractive at the time of sale, I have recommended that it bear a 4½ per cent coupon.

It is my opinion that the M&StL will have no difficulty in financing the acquisition of all of the outstanding shares of the TP&W through the issuance of bonds of the type that [fol. 1554] have been described here. Moreover, my opinion and all of the statistics upon which I have relied, ignore very obvious operating savings. All such savings since they would increase the net earnings of the combined system would both increase the coverage of the fixed charges in good business years, or provide an additional cushion in lean years.

[fol. 1555] Q. Does that conclude your direct statement?

A. It does.

Mr. Wheeler: The witness is available for cross-examination.

Exam. Albus: Mr. Thomas.

Mr. Thomas: No questions.

Exam. Albus: Mr. Lucas.

Cross examination.

By Mr. Lucas:

Q. Mr. Hill, on the last sheet, the statement you have just said that this does not take into account very obvious operating savings—

A. That is right.

Q. Are you adopting the testimony of any other witness as to potential operating savings?

A. I heard them, but I wrote that long before I came to Peoria and, as you know, I have been over both roads. I could see two transportation yards, one on each side of the river, one is high and dry, it is a gravity yard, and it seems to me to be obvious, combine the roads, there would be no need of both of them.

Q. In your opinion, will the TP&W contribute to the collateral phase of this proposed mortgage?

A. The stock definitely would.

Mr. Lucas: That is all.

Exam. Albus: Mr. Hoag?

Mr. Hoag: No questions.

[fol. 1556] Exam. Albus: Mr. Broker?

Mr. Broker: No, no questions.

Exam. Albus: Mr. Cassell?

Mr. Cassell: No questions.

Exam. Albus: Are there any further cross-examination?

(No response.)

Exam. Albus: Is there any redirect?

Mr. Wheeler: No, sir.

Exam. Albus: You are excused, Mr. Hill.

(Witness excused.)

Mr. Wheeler: Mr. Examiner, we only have one more witness to present. Unfortunately he is a witness who came in from out of town, and his testimony has not been reproduced as yet and will not be reproduced in final form until Monday.

Exam. Albus: Is Mr. Provo available for examination, cross examination?

Mr. Wheeler: No, sir, both Mr. Provo and Mr. Schroeder had to return to Minneapolis in connection with an urgent matter that has arisen, Mr. Examiner, on the M&StL.

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

This hearing is adjourned until 9 o'clock Monday morning in the LaSalle Room.

(At 4:15 p.m., February 10, 1956, the hearing in the above-entitled matter was adjourned to Monday, February 13, 1956, at 9 a.m.)

[fol. 1557]

BEFORE THE INTERSTATE COMMERCE COMMISSION

Finance Docket No. 18991

Finance Docket No. 19086

[Title omitted]

LaSalle Room,
Pere Marquette Hotel,
Peoria, Illinois,
February 13, 1956.

TRANSCRIPT OF HEARING

Met, pursuant to adjournment at 9:00 a.m.

Before: Paul C. Albus, Examiner.

APPEARANCES:

(As heretofore noted.)

ADDITIONAL APPEARANCES

Oliver A. Ossanna, 401 State Office Building, St. Paul, Minnesota, executive secretary and appearing on behalf of the Minnesota Railroad and Warehouse Commission.

[fol. 1559] PROCEEDINGS

Exam. Albus: The hearing will please come to order.

I understand there are some additional appearances to be entered at this time.

Mr. Ossanna: Oliver A. Ossanna, 401 State Office Building, St. Paul, Minnesota, I am an attorney at law and admitted to practice before the I.C.C. and I am the executive secretary of the Minnesota Railroad and Warehouse Commission and I am here in behalf of that Commission.

Exam. Albus: Thank you very much, Mr. Ossanna.

Mr. Lucas has a statement, I think.

Mr. Lucas: May I have the record show that this morning I have handed to Mr. Wheeler the information which he requested in pursuance of the items appearing at pages 10, 11, 10, 12, with the exception of items 5 and 6.

Exam. Albus: Thank you very much.

Mr. Wheeler: Mr. Examiner, we would like to have that made part of the record, if we can.

Mr. Lucas: We have already made an objection to furnishing it.

Exam. Albus: You want what furnished?

Mr. Wheeler: We want this made a part of the record. The information he has furnished, of course, we want it to be a part of the record.

Exam. Albus: You mean physically copied into the record?

[fol. 1560] Mr. Wheeler: Yes, sir.

Exam. Albus: Let me see it, please.

Mr. Wheeler: Or we can have it marked as an exhibit, if that would be more convenient. Perhaps we could have it all marked as an exhibit, Mr. Examiner.

Exam. Albus: All right.

Mr. Lucas: May I renew my objection to it as heretofore appearing in the record at page 1,013.

Exam. Albus: Yes, sir.

Let the record show that the information furnished by Mr. Lucas is marked for identification as Exhibit H-73.

(Applicant's M&StL Exhibit No. H-73, was marked for identification, Mr. Wheeler.)

Mr. Cassell: May copies of that be furnished for the parties?

Exam. Albus: Are copies available?

Mr. Lucas: I have just two copies available. I wonder if Mr. Wheeler shouldn't reproduce it.

Mr. Wheeler: I will.

Exam. Albus: H-73, and it is received in evidence.

(Applicant's M&StL Exhibit No. H-73, Mr. Wheeler, was received in evidence.)

Mr. Wheeler: Mr. Examiner, may we go off the record for just a moment?

Exam. Albus: Yes.
Off the record.

[fol. 1561] (Discussion off the record.)

Exam. Albus: On the record.
The first thing this morning we will hear from Monon. Mr. Shepard, please.
Mr. Shepard: I will call as witness for the Monon Mr. Ragland.

[fol. 1562] Charles E. Ragland was sworn and testified as follows:

Direct examination.

By Mr. Shepard:

Q. Mr. Ragland, will you give your full name to the reporter.
A. Charles E. Ragland.
Q. What is your position with the Monon Railroad?
A. Assistant Vice-President of Traffic.
Q. Will you state your experience with that carrier.
A. I started my career with the Monon at Birmingham, Alabama, in 1935 as Chief Clerk and served in the capacity as Chief Clerk, Traveling Freight Agent and Assistant District Traffic Manager until 1945. I was transferred to New York as Eastern Traffic Manager in charge of the New York office at that time, and in 1948 was given supervision of four eastern offices, and in 1954, February 1954, was transferred to Chicago as Assistant Vice-President.
Q. That is, Assistant Vice-President (Traffic), is that correct?
A. That is correct.
Q. Have you prepared a statement on behalf of the Monon Railroad for presentation at this proceeding?
A. Yes.
Q. Would you read that statement, if you please, for the record.
[fol. 1563] A. This will be a very brief statement as to the position of the Monon in this proceeding.

As a preliminary, I would like to state that the corporate name of the Monon has been changed from Chicago Indianapolis and Louisville Railway Company to Monon Railroad.

The Monon's position in this case is the result of three considerations; first, the fact that its principal gateway for the handling of through traffic is Chicago; second, that it has no direct connection with the TP&W; and third, that its Michigan City branch logically could and should form a part of what has been referred to as an outer outer belt transportation highway lying outside the Chicago metropolitan area.

I understand that testimony appears on the record in this case that the Pennsylvania is opposed to the effectuation of a connection between the Monon and the TP&W through trackage rights over its line between Reynolds, Indiana, and Effner. It is the position of the Monon that such a connection would be desirable in its own interest and in the public interest, which in this instance I believe are identical.

The Monon affords a useful north and south connection in which it functions as a bridge line with respect to east-west traffic which it interchanges at various of its junctions with carriers lying both east and west of its route. We believe that the existence of such a transportation highway is in the public interest in affording additional competitive [fol. 1564] routes to the shippers of the country.

We believe that it would be clearly in the public interest to strengthen and make more available those routes through an opportunity to open up the Effner gateway to a direct connection with the Monon.

To the extent that the development of the Peoria route, as envisioned by the applicants in this case, draws traffic from the Chicago gateway the Monon may suffer loss of some of its traffic through that gateway in common with other carriers similarly situated. A connection for the Monon at Effner would on an equality with our more powerful competitors in the solicitation of business as between the Chicago and Peoria routes.

As to the eventual possibility of the development of an outer-outer belt route around metropolitan Chicago, I be-

lieve that the Commission should bear in mind the inevitable increase in the transportation needs of the country and do nothing in this case that would jeopardize such a future development. Both from the point of view of the long range interests of the shipping public and from the point of view of the national defense, such a route may well become extremely important.

In conclusion, from the point of view of the Monon it does not believe that its interests would be served by the acquisition of control of the T. P. & W. by any of the applicants who are seeking control in these proceedings, except in the event that Monon access to an interchange at Effner would be included as a part of the transaction.

[fol. 1565] As I believe has been testified, the route via Peoria has prospered and progressively developed since the opening of the Lomax gateway. As indicated by exhibits already introduced, the financial position and operating efficiency of the T. P. & W. are of the first order. There appears to be no reason why this condition should not continue in the future under the present able management of the T. P. & W., leaving the T. P. & W. as an independent bridge carrier subject to no outside railroad control and therefore affording maximum service to all carriers equally with which it participates in the handling of traffic.

Mr. Shepard: That is all Mr. Examiner. You may cross.

Exam. Albus: Is there any cross-examination?

Mr. Thomas.

Mr. Thomas: No questions.

Exam. Albus: Mr. Lucas.

Cross examination.

By Mr. Lucas:

Q. Mr. Wogland, will you state what railroads your Michigan City branch crosses going north of a point between Effner and Logansport on your line?

A. Starting with Reynolds, of course, is the Pennsylvania.

Q. I beg your pardon.

A. We intersect interchange, of course, with the Penn-

sylvania at Reynolds, and from there north at Wilder, [fol. 1566] Indiana, at Erie, La Crosse with the New York Central, South Wanataw with the Nickel Plate, Wanataw with the Pennsylvania, Haskells with the Grand Truck, the latter with the B. & O., Westville with the Wabash, Otis with the New York Central, Michigan City the C. & O., New York Central and the C. S. S. & S. P.

Q. And generally speaking, the roads you have enumerated are east and west lines at your points of intersection?

A. That is right.

Mr. Lucas: That is all.

Exam. Albus: Mr. Cassell.

Mr. Cassell: No questions.

Exam. Albus: Mr. Broker?

Mr. Broker: No questions.

Exam. Albus: Are there any further questions?

(No response.)

Exam. Albus: You are excused, Mr. Ragland, thank you very much.

(Witness excused.)

[fol. 1567] Mr. Wheeler: Mr. Examiner, I have a few additional questions to ask Mr. Provo. Both the questions and answers listed here are in incomplete form but for whatever value it will be to the counsel I want them to have them.

LARRY S. PROVO resumed his testimony as follows:

Direct examination (Continuing).

By Mr. Wheeler:

Q. Mr. Provo, could the economies to which you have testified, those detailed in Exhibit H-44, be accomplished under multiple ownership?

A. Not in my opinion.

Q. Mr. Provo, if you know, who on the M&StL was re-

sponsible for initiating the accounting modernization program that you have discussed?

A. Well, there is really no doubt about that, Mr. Heineman has been the driving force behind the whole accounting modernization program. He initiated it, it was his personal project, he has participated in the movement of that program from start to finish. He has also provided direction in many instances in the progress that we have made on the modernization program.

To clarify that a little bit, I might say when I was with Arthur Anderson I participated in writing the report that was the basis for the modernization program. That report, I believe, is about 150 pages long. It has many detailed graphs and flow charts in it. Mr. Heineman has read that [fol. 1568] many times and there are sections that I think he knows better than I do. I don't want to infer here, however, that Mr. Heineman has only participated in the modernization program. There are very few things of consequence on the M&StL that he is not very familiar with and has not participated in all of the planning.

Q. Have you had occasion to observe the decisions made by Mr. Heineman or recommended by him and the board of directors and the executive committee in connection with the various aspects of the M&StL?

A. I have.

Q. In light of your experience in public accounting, would you discuss some of these decisions and recommendations.

A. Of course, in the course of a year's time there are many decisions that have to be made. There are some, I think, that are more illustrative than others. One I referred to somewhat in my direct testimony, and that was in connection with the cost of the modernization program. The M&StL was really faced with an alternative. They could have taken the costs of the modernization program and amortized them over a period of years, since the benefits from the program will cover many subsequent years, and certainly bearing the cost in any one year is not necessary. However, Mr. Heineman made the recommendation to the board of directors that, in view of wage increases for 1956 and everything, he felt it conservative policy and a good

business practice to absorb those costs in the year 1955. [fol. 1569] Now, I think there is one other illustration. When Mr. Heineman first became associated with the M&StL, I think he immediately became concerned over the inadequate insurance coverage we had for our public liability exposure, and at that time a large insurance firm was brought in to make a survey of the insurance program of the M&StL. It so happens that the president of that firm is a very dear friend of Mr. Heineman's. At a subsequent date I met the vice-president of another insurance firm, one who Mr. Heineman did not know at all; in fact, he had never heard of them. This firm came up with a proposal which in my mind was far superior and something the first firm had not even thought about. I made my recommendation, Mr. Heineman accepted it, and he recommended it to the board of directors and we subsequently took the policy with the second firm, although, as I mentioned, Mr. Heineman knows the president of the first firm very, very well.

Now, another illustration might be that when we had our annual board of directors' meeting last year one of the directors started out and proposed that Mr. Heineman's compensation on the M&StL be increased because of the significant contributions he had made to the road and the time that he was spending on the property. He flatly refused this and would not even allow the matter to be discussed. I think one of the really significant points in that was that the director who proposed it was not a member of the eight-man slate that Mr. Heineman had proposed, but [fol. 1570] was a man who had been a director of the M&StL for many, many years.

Now, there are many more. I think one is on capital expenditures. Mr. Heineman has always been concerned that we are not sure, we are not sure that we have the proper criteria for determining where to spend our money, whether we buy freight cars or whether we build diesel houses. This has always bothered him to a great extent. He has or is going to recommend that we engage Joel Dean to help us on the M&StL to employ sound business criteria in determining our capital expenditures.

[fol. 1571] Q. Mr. Provo, what is your view with respect to these decisions—well, I believe you have covered that.

A. Well, I would like to make one additional statement, if I may. Exhibit H-25 was introduced, I believe, by the Santa Fe. I was in an unique position in that. I was with Arthur Andersen at the time of the proxy contest.

Q. (Interrupting) Pardon me, Mr. Provo, H-25, as I recall, is the proxy statement that was put out by the group seeking control, the group headed by Mr. Heineman of the group seeking control of the M&StL?

A. Yes, sir.

Q. Will you proceed.

A. As I say, I was in a rather unique position in connection with this because I was employed by Arthur Andersen at that time. Arthur Andersen was employed by his firm and his associates to investigate some of the expenses of the M&StL. I have read this document very carefully. I know of nothing in here that was not factual and very true. Also I know of nothing in the program recommended by Mr. Heineman and his group that has not been carried out in full or in part. And if it has only been carried out in part the only reason it hasn't been completed is a matter of time. For an example, in our accounting modernization program it is a big project and one that takes a little time to accomplish.

[fol. 1572] I might say that you cannot look at the income statements of M&StL and tell this. They are just not comparable. I know being comptroller of the railroad what has gone on, and I know that these recommendations in the program have been carried out. Since that time we have had wage increases. We have the costs of the accounting modernization program. We have made certain reclassifications in our account. The only point I want to make is that you cannot take the summary income statements of the M&StL or for that matter the Form A filed with the Interstate Commerce Commission and determine whether our not these measures have been carried out.

Q. Mr. Provo, do you have any comment to make with respect to the employment of your assistants?

A. During the time that the survey was made of the railroad and during my time there it became apparent that

we needed some help, we needed some top-flight accountants, and Mr. Heineman was highly in favor of this, and we then employed a Mr. Walter Hanson of Haskins & Sells, a nationally known accounting firm, who was 30 years old. Mr. Hanson has proved to be a very valuable addition to the M&StL. Just recently we have employed a Mr. Rogers, a senior with Arthur Andersen & Company, who is 27 years old, to be the second assistant comptroller in our department.

Q. Did you recommend the employment of these people to Mr. Heineman?

A. I did.

[fol. 1573] Q. Did he have any comment to make with respect to their employment?

A. Mr. Heineman has always been in favor of getting top personnel in the company. He was very enthused about getting these men. I will say, however, that there was only one concern that he had and that was that the first man we employed would not be fully apprised of his progress with the railroad, so that Mr. Heineman instructed me to discuss it fully with him and then report back to Mr. Heineman. I reported that the man was very favorable to the move and Mr. Heineman then agreed to the employment of the second assistant comptroller and wrote a letter to the first man thanking him for his view and his consideration of the M&StL.

Mr. Wheeler: That concludes his direct examination, Mr. Examiner.

Exam. Albus: Very well.

We will have cross-examination of Mr. Provo for all of his

Mr. Thomas, please.

[fol. 1574] Cross examination.

By Mr. Thomas:

Q. Do you have your prepared statement before you, Mr. Provo?

A. Yes, sir.

Q. Just as a matter of clarification, on page 4 you refer to certain items.

A. Which paragraph?

Q. Regarding reduction of general expenses. I can't by adding the items you have cited there arrive at the total of $341,102. Would you explain how that is done.

A. Are you $38,000 off?

Q. Yes.

A. Well, the figure instead of the two-eleven I see now should be two hundred fifty thousand shown on schedule 16. The two-eleven represents the compensation economy shown on schedule 15, that total should be two hundred fifty thousand five zero four.

Q. Thank you.

You referred, I think in your earlier testimony, and again today, to a non recurring item of general expenses dealing with the modernization of your accounting system.

A. Yes, sir.

Q. Did you indicate what that modernization is expected to save on an annual basis?

A. I did not.

[fol. 1575] Q. What would that be?

A. We think on all of our estimates at this time which have been confirmed in many of the modernization areas will be in excess of three hundred thousand, probably between three hundred and three hundred fifty thousand on an annual basis.

Q. Will you turn to your Exhibit H-44, schedule 1. At the foot of the page entitled "Schedule 1 Notes."

A. Yes, sir.

Q. You indicate why you have used a figure of 15 per cent in estimating the decrease in expenses by reason of your estimated traffic decline. You indicate it isn't practicable to estimate those expenses more accurately. Are you familiar with the cost formula used by the Interstate Commerce Commission known as "Rail Formula"?

A. I am not.

Q. You do not know that the Commission has a formula for estimating expenses variable with traffic?

Mr. Wheeler: I object to the statement the Commission has a formula.

Mr. Thomas: I asked the question, Mr. Wheeler.

Mr. Wheeler: I want to know what you mean has a formula. Do you mean to indicate by that that the Commission has adopted that formula for use in all cases?

Mr. Thomas: I simply asked the question. I am not making the statement.

[fol. 1576] Mr. Wheeler: I object to the question as not being sufficiently clear for the witness to answer.

Exam. Albus: Do you understand the question, Mr. Provo?

The Witness: No, sir.

Exam. Albus: Restate the question, please.

By Mr. Thomas:

Q. Do you know whether or not the Commission has a formula for estimating expenses to vc iable with traffic?

A. I would like to answer your question this way: I have heard that attempts have been made to measure incremental costs. It has been my understanding in visiting other railroads and discussing this matter with them that no one has come to the point where they have a good method of approximating or estimating reliably the costs of incremental traffic.

Q. But you are not familiar with the formula which has been used by the cost section of the Interstate Commerce Commission.

Mr. Wheeler: Mr. Examiner, if it has been used, I think the witness should be informed where it has been used.

Exam. Albus: Where has it been used, in what case?

Mr. Thomas: It has been used in Docket 28300, the class rate case.

Exam. Albus: All right.

Mr. Wheeler: Mr. Examiner, may we have the question restated.

By Mr. Thomas:

Q. Are you familiar with the formula which the cost section of the Commission has developed for estimating [fol. 1577] expenses variable with traffic and which was used in Docket 28300, the class rate cases.

A. No, sir.

Mr. Thomas: That is all.
Exam. Albus: Is that all, Mr. Thomas?
Mr. Thomas: Yes, sir.
Exam. Albus: Mr. Lucas, please.

Cross examination.

By Mr. Lucas:

Q. Mr. Provo, may I refer you to the top of page 4 of your prepared statement in which you refer to having visited the offices of the TP&W in December 1955. Can you give us the day or date, days that you were there?

A. I believe it was December 12. It was on a Monday, either 12th or 19th. I think it was December 12.

Q. Am I correct in the assumption, then, it was one day?

A. Yes, sir.

Q. Any other day that you made any visit to the TP&W accounting offices?

A. No, sir.

Q. In your economies and benefits to the M&StL what did you project for the future as to whether the returns would be consolidated or in what form to the Interstate Commerce Commission or in what form would they be filed?

Mr. Wheeler: Mr. Examiner, I object to the question. I don't think it is pertinent to any issue in this proceeding. [fol. 1578] Exam. Albus: Objection overruled.
You may answer.

A. We made the assumption that all reports to the Interstate Commerce Commission would be filed on an individual company basis.

Mr. Lucas: That is all.
Exam. Albus: Mr. Cassell.
Mr. Cassell: No cross.
Exam. Albus: Mr. Broker.
Mr. Broker: No cross.
Exam. Albus: Mr. Davis.
Mr. Davis: No cross.
Exam. Albus: Mr. Hoag.

Cross examination.

By Mr. Hoag:

Q. Mr. Provo, in your financial data you have worked up here have you included anywhere in there your cost as to the Washington job agreement?

A. No, as Mr. Heineman testified we have not.

Q. Have you made any study into the number or amount of home ownership of the TP&W employees, say specifically as far as clerical forces, shop forces and dispatchers?

A. I have not.

Q. Under the Washington job protection agreement there would likely be additional costs for that, is that correct?

A. It is my understanding that there would be, yes.

[fol. 1579] Q. On Exhibit 44, starting with schedule 19, on your last column, on each one of those respective schedules, what wages and salaries did you use as a base in arriving at those figures, the wages of the TP&W employees or the M&StL?

A. Well, that varied, that varied in certain instances the figures we used were the actual salaries of M&StL positions. In other instances they were the actual salaries of TP&W positions, but for the most part they were the average compensation for these particular groups as reported in the 1954 Form A to the Commission.

Q. Mr. Provo, I believe on schedule 19, if I am correct in interpreting that, you indicate a possibility of 256 employees that could be adversely affected?

A. No, I don't believe we have ever stated that, Mr. Hoag. We have said that through unification 256 positions could be reduced. Now, we believe and we sincerely believe that we have an unusual situation on the M&StL and that we have, as testified, a number of people who are 65, a number 64, and that extends on down. We have an over-age group in many respects. Also there is the normal attrition that will take place. We have never said that 256 people would be adversely affected. We think there are many things in our particular situation that will make the displacement minimal.

Q. Would 256 positions be eliminated?

A. Yes, sir, except as there may be other—I'd like to put [fol. 1580] it this way: For example in the accounting department with which I am most familiar we think there is a tremendous area for equipment and repair. Now, if we go into a cost accounting system for controlling the cost of equipment maintenance there will be more accounting positions. However, at that time we think it will be economically justifiable as a project in and of itself. I think that is another one of the things we have in mind when we say we think the displacement will be minimal.

Q. Mr. Provo, turning to schedule 25, on the next to the right-hand column, you have a figure of 267. Would you please indicate what that means.

A. I would say that is a last minute change that did not get corrected. It should be two fifty-six.

Q. Is the figure two fifty-six or two fifty-seven?

A. Two fifty-six.

[fol. 1581] Mr. Hoag: I believe that is all I have of Mr. Provo.

Exam. Albus: Are there any further questions? Redirect, please.

Redirect examination.

By Mr. Wheeler:

Q. Did the T. P. & W. supply you with information which was used as a basis for Exhibit H-44?

A. I am not sure that I understand what you mean by supply, Mr. Wheeler.

Q. Did you get from them information as to their organization and general setup and salaries, and so forth, which was used by you in the preparation of Exhibit H-44?

A. Yes, sir. The purpose of my visit down there was to determine their corporate structure, their departmental organization, and I received that information from the T. P. & W. as far as salaries used were those that were set forth in the form A plus averages developed from the detailed compensation employee schedule on their form A.

Q. Now, you have mentioned form A. Did you have available to you and did you use the T. P. & W. form A's for

past years and, if so, how many past years in the preparation of Exhibit H-44?

A. H-44 is based on the 1954 form A. I did have available for review the 1953 and 1952 form A's of the T. P. & W.

Mr. Wheeler: I have no further questions.

Exam. Albus: Are there any further questions?

Mr. Davidson.

[fol. 1582] Cross examination.

By Mr. Davidson:

Q. On your form schedule 19 there, Mr. Provo, the bulk of that $1,327,000 will be saved by reduction of moneys to be paid out to people employed within the State of Illinois, is that not correct?

A. The positions, I believe, are substantially, of the total number of positions the substantial portion of them are within the state.

Q. And the bulk of the people—the bulk of the positions to be abolished are right here in Peoria, are they not?

A. Yes, sir.

Mr. Davidson: That is all.

Exam. Albus: Are there any further questions?

(No response.)

Exam. Albus: You are excused, Mr. Provo.

(Witness excused.)

[fol. 1583] Albert W. Schroeder resumed his testimony as follows:

Offer in Evidence

Mr. Wheeler: Mr. Examiner, I would like to offer Exhibit H-44 at this time.

Exam. Albus: Is there any objection?

(No response.)

Exam. Albus: Exhibit H-44 is received in evidence.

(Applicant M&StL's Exhibit No. 44, Witness Provo, was received in evidence.)

Direct examination (Continuing).

By Mr. Wheeler:

Q. Mr. Schroeder, can the economies which you have testified to be accomplished under multiple ownership by a number of railroads?

A. No, they cannot, in my opinion.

Q. Have you any comment on the effect of these economies on service to the public?

A. On the basis that I outlined it, there would be no change in the service as it exists now either by the M&StL or the TP&W.

Q. When Mr. Heineman discussed with you the possibility of your leaving the C&IE to become vice-president and ultimately president of the M&StL, did he tell you what he wanted to achieve with respect to the property, that is, the M&StL?

A. Yes, sir, he told me he wanted to make the M&StL the best railroad in the United States from an operating standpoint.

Q. Since coming to the M&StL, have you had occasion [fol. 1584] to prepare and discuss with Mr. Heineman a capital budget for the M&StL for the year 1956?

A. Yes, sir.

Q. What is the amount of that budget?

A. About $1,600,000. That is A and B.

Q. What is the purpose of the budget?

A. Well, this is the first budget in a series of what we are now talking about, a five-year plan, toward obtaining our objectives in making the operation of the railroad the very best we can do.

Q. Will you please name a few of the principal items that are included in this budget.

A. In 1956 we are buying a considerable amount of equipment, maintenance of way, mechanized equipment, such as power tampers, power jacks, ballast distributors, the use of trucks for our section and extra gangs. We

are going into the head end-rear end radio on the wayside stations to some degree. We are getting that started. We are finishing the rebuilding of a pole line that was started about three or four years ago that will give us a heavy copper-weld type line all the way from Minneapolis to Peoria. We have and are including in our budget some covered hopper cars to be purchased in 1956. We are increasing the utilization of our shops with added types of machinery of various kinds, such as overhead cranes and equipment of that kind. We are studying industrial development very closely with the thought in mind of [fol. 1585] increasing our activity tremendously in that field.

Q. How does this capital budget, that is, the one that you have spoken of for 1956, compare as to size with the capital budgets of the M&StL for prior years?

A. Well, just going back two years, in 1955, as compared to our proposed 1956 budget, '56 will be approximately 60 per cent larger than 1955 and it will be almost double that of 1954.

Q. Did you discuss with Mr. Heineman the size of the budget and the objectives that you wish to accomplish by the particular items in it?

A. Yes, sir, I did. Mr. Heineman is chairman of the executive committee of the M&StL.

Q. What was the reaction of Mr. Heineman to your proposed budget?

A. He was very enthusiastic about it and always has been in our discussion of such plans.

Q. Have you plans and recommendations for the capital budget for 1957?

A. Not specifically. Of course, there are things that come up that you are sure you cannot do under 1956 capital expenditure, but it takes time to study and it will take additional funds, I think, only by nature it is carried over into the next year by all railroads. We have discussed a number of things we hope to do.

Q. Have you any program with respect to the CTC or [fol. 1586] equivalent operation, Mr. Schroeder?

A. Yes, we do. The traffic density on the M&StL is not the controlling factor necessarily as far as our need of

CTC is concerned. On the other hand, we think it offers some advantages, the improvement in service over the railroad, and at the present time we have Union Switch and Signal studying a modified or simplified form of CTC. We will not expect to get the results of their study for sometime to come, but we have gone that far with it so far.

Q. But CTC, either in full or modified form, is in your future plans?

A. Yes, it is usually referred to as the poor man's CTC, with a spring switch on one end and a power switch on the other.

Q. Have you any comment with respect to your diesel power, your future plans with respect to that?

A. We have talked with at least one of the locomotive builders on some of our problems toward tailoring our diesel power on the M&StL exactly to the type of business that we have. During the period of dieselization—I think this is true on most railroads—what they were purchasing and what they desired and what they were able to get were to some degree two different things, and the M&StL is no exception in this respect. For instance, at the time of dieselization a 600-horsepower switcher looked like it would be a very practical switcher, but as time went on and then use was made of the larger [fol. 1587] type of switcher in yards and the road switcher in the yards it was found that certain advantages could be realized by using either greater horsepower, greater tractive effort and so forth, and we have had some talks with Electromotive Corporation on what they would recommend in our particular case. That is something that we hope to be able to finish discussions with them on in the next two or three weeks.

Q. Have you discussed these proposals and plans for the future that you have outlined with Mr. Heineman?

A. Completely.

Q. What has been the reaction of Mr. Heineman?

A. He has always been very enthusiastic about it. He is very deeply interested in all phases of railroad operation, regardless of what kind or type, what department or what the problems are.

Q. Did you recommend to Mr. Heineman and did the two of you interview new executives, officers, for the M&StL?

A. Yes, sir, I did.

Q. Would you please describe the men to whom you refer and discuss their qualifications.

A. Well, to date we have hired three men whom I recommended very soon after I arrived on the M&StL property. The first one I might tell you about is Mr. W. P. Colliton, who was elected at our last board meeting as vice-president in charge of operations, to succeed me on March 1, 1956. Mr. Colliton is presently superintendent of [fol. 1588] the Great Northern Railroad at Seattle on their Cascade Division. He has a background of transportation and maintenance. He is 35 years old. He is a graduate of the Wharton School of Commerce and Finance of the Pennsylvania University. He has gone through the student training program of the Great Northern, served as assistant trainmaster, trainmaster, assistant superintendent on two or three divisions and superintendent on two of their divisions.

The second I might mention is Mr. S. J. Owens, who is at the present time assistant to the chief engineer, the Burlington Railroad, for the entire system. He has had a background of engineering and maintenance. Mr. Owens is 46 years old. He has had a lot to do with mechanization of maintenance of way practices on the Burlington. He has handled some of their largest engineering projects, such as the opening of one of their longest tunnels out in Wyoming. He has had relocation work in connection with government projects with respect to the Burlington Railroad and, I think, has a fine background in general, all-round knowledge.

The third man, Mr. Jim Sullivan of the Illinois Central, who will come to us March 1, 1956, as chief personnel officer, is a graduate of St. Thomas College in Minnesota. He has a Master's Degree in economics and in labor management from the University of Minnesota. He has studied [fol. 1589] at Northwestern University Business School, but more importantly, has been with the Illinois Central since, I believe, about 1938. He served in the capacity of

fireman, fuel inspector, assistant trainmaster on at least two divisions, trainmaster on at least three more divisions, was to be appointed one of their division superintendents when certain supervisory personnel were requested to be planned on the Illinois Central, and he was picked by Mr. Wayne Johnson as the man to head that.

Those three men, first of all, Mr. Colliton, as I mentioned, succeeds to the vice-president of operations, which will be vacant; Mr. Owens is brought on the property because our chief engineer will arrive at 65 years of age in August, and we have created the new position of consulting engineer for our present chief engineer, so that he may help Mr. Owens to know the property and yet Owens has the opportunity of starting with the mechanized maintenance system; Mr. Sullivan will replace Mr. Barry who is the second-oldest employee on the M&StL Railroad and wishes to retire.

Q. What general qualifications for new personnel has Mr. Heineman outlined to you?

A. Well, the very best that can be obtained.

Mr. Wheeler: That concludes the examination of Mr. Schroeder at this time.

Exam. Albus: Thank you.

Cross-examine, please, Mr. Thomas.

[fol. 1590] Cross examination.

By Mr. Thomas:

Q. On page 16 of your prepared statement, Mr. Schroeder, you show a proposed consolidated schedule for the M. & St. L.-T. P. & W. I just want to ask you a question for clarification, on the westbound schedule you show arrive Lomax and in paren Keokuk and then you show 4:48 a.m. and then paren 12:44 a.m. Do I understand that the arrival in paren. relates to the Keokuk which is also in paren?

A. That's right. And that's right in line with timetable number 18 of the T. P. & W.

Q. Thank you. Now, on pages 20 and 21 of your prepared statement you show certain average figures relating

to boxcars, among others?

A. Yes, sir.

Q. Do you report all of your car surpluses and car shortages to the A. A. R. on form CS 44?

A. I believe that is the form, Mr. Thomas. The usual form used by all the railroads.

Q. Would these boxcar averages be found on your form CS 44 reports, the ones that are shown on pages 20 and 21?

A. On page 20 we broke it down as to various types of equipment if you are referring to that table.

Q. Yes.

A. On page 21 we took the A. A. R. CS 44 report, which, if I can recall correctly, and I am sure I am right, in-
[fol. 1591] cludes all types of equipment.

Q. Are the figures on page 19, would they be found in your form CS 44?

A. Yes, sir.

Q. And on page 20?

A. Yes, sir.

Q. Is that a continuation? That's a separate year?

A. One is 1954 on page 19 and 1955 on page 20.

Mr. Thomas: That is all I have.

Exam. Albus: Mr. Lucas, please.

Cross examination.

By Mr. Lucas:

Q. Mr. Schroeder, your map, Exhibit H-43, appears to show a direct connection on the part of the P. R. R. with the T. P. & W. Are you familiar that now the Pennsylvania Railroad does not connect direct with the T. P. & W. but has to work in to the T. P. & W. over the Nickel Plate?

A. Yes, sir.

Q. May I refer you to page 2 of your prepared statement, the one trip to which you refer there to study the unification of a property. Can you give me the date of that trip, please?

A. I am not sure that I can. I can certainly furnish it to you.

Q. Can you give me an approximation perhaps as to the month?

A. As I recall it, it was late in November.

Q. Of what year, please?

[fol. 1592] A. Of last year, 1955. I may be wrong. It may have been right after the first of December. It was right in that period.

Q. And you also stated that you made one additional visit to the Peoria yard. Was that subsequent to your trip?

A. About three weeks ago.

Mr. Lucas: That is all, Mr. Examiner.

Exam. Albus: Mr. Cassell?

Mr. Cassell: No cross.

Exam. Albus: Mr. Broker?

Mr. Broker: I have one question.

Cross examination.

By Mr. Broker:

Q. Mr. Lucas said the Pennsylvania has to work in to the T. P. & W. over the Nickel Plate?

A. I believe he did, but I believe it is through the T. P. & P. U.

Mr. Broker: That is what I mean.

Mr. Lucas: My information for what it may be of value to you, Mr. Broker, the Pennsylvania now connects direct to the Nickel Plate over which it operates from Farmdale to Wesley Junction as shown on map on page 2, Exhibit H-16.

By Mr. Broker:

Q. I don't disagree with that. The only point is, as shown by Mr. Witt's exhibit, interchange between the Pennsylvania and the T. P. & W. is affected through the P. & P. U., isn't that right, Mr. Schroeder?

A. That is the way I understand it, Mr. Broker.

[fol. 1593] Q. Do you know whether the Pennsylvania

actually operates over the Nickel Plate to get over to Peoria?

A. No, I do not know.

Q. In looking at your Exhibit 43, please. On the right-hand margin is the word "Farmdale" or most of it. Actually isn't Farmdale today at the point of the arrow N. K. P.?

A. That's correct, yes, sir.

Mr. Broker: Thank you.

Exam. Albus: Mr. Davis?

Mr. Davis: No questions.

Exam. Albus: Mr. Hoag.

Cross examination.

By Mr. Hoag:

Q. Mr. Schroeder, are you acquainted with the present bargaining agreements now in existence on the M. & St. L.?

A. Somewhat, yes, sir.

Q. Are you acquainted with the collective bargaining agreements on the T. P. & W.?

A. No, sir, I am not.

Q. Do you know or have you been informed as to any differences in Pennsylvania rates that prevail as between T. P. & W. contracts as compared to M. & St. L. contracts?

A. No, sir, I have not been informed in any way, Mr. Hoag.

Q. I assume that should your present application before the Interstate Commerce Commission be approved there [fol. 1594] would be no question but what the present collective bargaining agreements now in eixstence on the T. P. & W. would continue in effect?

A. I would say as far as it affects T. P. & W. employees, yes, sir, that would be correct.

Q. Now, along about page 3 of your testimony—you don't necessarily have to turn to it—you have been talking about this matter of attrition. Briefly could you state what you mean by attrition?

A. Attrition to me means three things generally: retirements, death, leaving the job for other employment, that is, in other companies, doing other things.

Q. Now, you speak of retirement. Could you enlarge upon that a little bit?

A. Well, retirement is set up by the railroad retirement board, I think means to most of us 65 years of age. That, of course, is not mandatory as far as contract employees are concerned. But, generally speaking, we think in terms, at least I do and I was thinking in what I have said here, a man reaching the age of 65 is eligible for that retirement.

Q. There is no provision in your present contract forcing a man to retire at the age of 65, however?

A. No, sir, that is correct.

Q. There are men beyond the age of 65 now working for the M. & St. L.?

A. That's right. I might add there are also occasions [fol. 1595] where men retire in advance of 65 due to disability or desire or for some other reason.

Q. Do you have any figures on the number that have retired before the age of 65?

A. No, I do not.

Q. Is it a relatively small number?

A. I would say it would be, yes, sir.

Q. Likewise, at page 3 you speak of your unification program. Do you have any general idea how long it would take to place that program into effect?

A. No, sir. I believe I said, if I recall correctly, I elaborated on what was said here, that we have not attempted to set up a timetable on when unification would be effected and realized completely that we would also take fully into account the Washington Job Protection provisions, this matter of attrition, and, of course, work with the respective general chairmen on those matters. I think it would be very difficult to try to give any kind of an estimate of the—certainly I am not able to do it now—when that might be fully realized. It might take some time. On the other hand, it might be realized much quicker than we think. It would depend entirely upon the circumstances at that time.

Q. I think throughout your testimony you have pointed out that your basic savings would be achieved by eliminating, say, the T. P. & W. clerical forces in Peoria, certain [fol. 1596] yard forces and certain dispatching groups. Now, let's take for a sample the T. P. &. W. office in Peoria.

How would that fit into your program, exactly what would be your procedure by which you would eliminate or close down the T. P. & W. office?

A. Let me go back just a minute. I did not, if I did, say, mean, to indicate that we would eliminate necessarily positions in Peoria to any more of a degree than similar positions, and I believe I mentioned our superintendent's office in Oskaloosa, dispatching, which you have mentioned, could be done as easily at Peoria. How you would do that is something that would have to be determined at the time. In all probability we might keep the clerical force in Peoria, including the superintendent's office, dispatching and consider discontinuance of ours in Oskaloosa. Now, that's merely to clarify the question as much for me as anything.

Now, as to the office force here most of the operating activity, such as dispatching, and so forth, are in the yard office here, in fact, the superintendent's office of the T. P. & W. is here. We have given no precise and considered thoughts on what the disposition of the office building would be. I think I mentioned two or three things. It might be sold, because it is an attractive piece of real estate. It might be rented as an office building for office space. Now, does that answer your specific—

Q. (Interrupting) No, it doesn't. You are talking about [fol. 1597] the physical property. I am concerned basically about the office. From your testimony, I understand that the Toleda, Peoria—T. P. & W. office in Peoria would in effect be consolidated with the M. & St. L. in Minneapolis. Now, how do you go about taking those employees or positions, as you prefer to call them, from Peoria and incorporating those in the office in Minneapolis?

A. Our needs in the Minneapolis office vary from time-to-time. It would be very much, as I have tried to outline here, by sitting down with the representatives of the employees of the T. P. & W. and our own in Minneapolis, determining what jobs would be combined and using the Washington Job Protection agreement perhaps as the basis for it.

[fol. 1598] Q. Wouldn't it necessarily mean, almost a simultaneous move to eliminate the office and consolidate it with the Minneapolis office?

A. Not necessarily, no, sir.

Q. How could it be worked out—

Mr. Wheefer: They are making noise upstairs. Can you speak up just a little louder. I can hear about one word in two.

By Mr. Hoag:

Q. How could it be worked out on a piecemeal basis?

A. I am not sure about the mechanics of it. Certainly it could be. When the time arrived the situation, for instance, might be different than it is today. Perhaps our requirements at Minneapolis might be greater. I am not suggesting that, but I think, and I have tried to give this a lot of weight in making my study, that it would be pretty difficult to go beyond what I have tried to outline and the manner in which we would do this thing until actually we knew what the situation was. And one other thing I think is important in this respect and that is it would depend upon some degree upon any impositions that the Commission might put in their decision on this matter. I believe Mr. Heineman testified to the effect that we would have no objection that the Commission made a part of their final decision the fact that we would abide by the Washington job protection agreement.

Q. The M&StL is a signatory at the present time to the [fol. 1599] Washington job protection, are they not?

A. Yes, sir.

Q. Could a copy of Exhibit 11-41 be made available to you, please.

Q. Is that the map?

Q. Yes, that is the map.

A. Yes, sir.

Q. I believe that shows the combined roads of the M&StL and the TP&W.

A. Correct.

Q. Would you please advise me where the dispatching offices are presently located in the Minneapolis and St. Louis?

A. One at Cedar Lake, which is Minneapolis. Cedar Lake is our yard at Minneapolis and therefore it does not appear as a station, but actually it is between St. Louis Park

and Minneapolis at the top of the map. Oskaloosa is the other point. Oskaloosa handles the dispatching on the M&StL between Mason City and Peoria, and between Oskaloosa and Albia, and therefore you can see that it would very naturally be logical to add the dispatching for the TP&W to that particular territory.

Q. What office controls the dispatching on your so-called western line here, say Albia running north up through Ruffton, Spencer and Winthrop?

A. From Albia, you say?

Q. Yes.

[fol. 1600] A. From Albia to Des Moines we operate jointly with the Wabash and CB&Q between Albia and Des Moines. I might say everything else but the territory that Oskaloosa had is handled from Cedar Lake.

Q. Have any attempts been made by the M&StL to enlarge the present dispatching office at Oskaloosa to include possibly territory presently covered by your Cedar Lake office?

A. No, sir.

Q. How many miles of main track are presently controlled out of your Cedar Lake office by the dispatching?

A. Well, let's see. I can tell you roughly here in a minute. Approximately slightly over a 1,000 miles. What it is is the difference between—

Q. (Interrupting) On the main track?

A. Well, that is correct, to the balance of the railroad. What it is is the difference between the mileage of the Oskaloosa dispatchers office area and the total main line lines operated on the railroad so it is three forty-two plus the distance from Oskaloosa to Albia of roughly about 20 miles, thirteen ninety-seven or very slightly over 1,000 miles.

Q. If you were to install CTS where would etc be installed?

A. I can't tell you, Mr. Hoag, we have not got that far in our examination, and, as I said, we are having an outside firm do it. We have not studied it carefully as yet.

Q. Would there be additional savings of personnel on [fol. 1601] installation of CTC?

A. I presume so, yes, sir.

Q. If the present TP&W line was incorporated into your Oskaloosa dispatching office how much main line of track would that leave under the Oskaloosa office or Peoria office, whichever way you prefer to set it up?

A. You mean total?

Q. Yes.

A. It would be about three forty-two plus two forty, it would be about five-ninety. It would be around 600 miles, roughly.

Q. In your experience in railroading is that a rather small or large amount of traffic to control, track to control?

A. I would say it would be about equal to a normal dispatching territory on most railroads.

Some other thing that I think is important is to take into account the density of the traffic over the lines. I know of some places on some railroads where a dispatcher has considerably more territory than that of like traffic. On other railroads, one other than I have experience on, he has much less but he has high density of traffic. So I would say this would be a representative district for dispatching.

Q. The track between Mason City to Oskaloosa to Peoria and likewise the TP&W track is that single-line track or double track?

A. Single line track would be the description of it gen- [fol. 1602] erally. May I make a correction, and I meant to say and I should have said, from Manley we operate joint track between Albert Lea and Manley and I believe I have been saying Mason City consistently. We are talking about from Manley instead of Mason City. It is a correction in station number.

Q. Are there foreign carriers that operate over a portion of this line?

A. Very small organizations. For instance, the Chicago North Western operates between Peoria and the mines at Middlegrove over the M&StL. I believe that is the principal tenant on that part of the railroad.

Q. Are there any foreign operations over the track of the TP&W?

A. Yes, sir, there is the Wabash on the west end of the TP&W, and also Forrest City on the TP&W, the Santa Fe.

I believe, operates some mileage around Eureka on the TP&W.

Q. Likewise does this trackage cross a number of other roads?

A. Yes, sir, many interlocking points.

Q. Can you point out an instance to me of dispatching office that controls single-line track with foreign lines operating over crossing a number of tracks approximately 500 miles in length?

A. I think except for the qualification that you have put in your question as to foreign line operation there is very little of it. I think a typical operation of that kind would be between Lincoln, Nebraska, and Hastings, Nebraska.

[fol. 1603] Q. What line is that?

A. On the Burlington. Now, that is a distance of about 180 miles, as I recall, having quite heavy train density and a number of interlocking plants. I have forgotten how many, but it comes to my mind that would be about as close an answer to your question that I could think of.

Q. That is approximately 180 miles in length?

A. Yes, sir.

Q. Not 500?

A. No. However, with the additional branch lines—I used to know what the territory was. It seems like the main line was CTC and they had branch lines of about 300 to 400 miles. As I recall that dispatcher handled about 500 miles of traffic. It was not all main line, that is right.

Q. Does the M&StL at the present time have any outstanding agreements, contracts, or understandings for the purchase of TP&W stock?

A. Not that I know of.

Exam. Albus: How do you propose to acquire it, then, if the Commission approves your application?

The Witness: Well, that's a question that I don't know that I am prepared to answer because I haven't studied the matter. Quite obviously there are some things that come to your mind, such as here is a property for sale, presumably property cannot be sold without or could be sold only [fol. 1604] to the bidders or offerers to buy as decided and determined by the Commission. As I see, there would be

only two alternatives, either to operate it as it has been operated or sell it to the ones that the Commission decides in favor of.

Exam. Albus: Yes, but the Commission can't force the trustees to sell the stock to the M&StL, could they?

The Witness: I don't know how they could, I will put it that way.

Exam. Albus: I don't either.

Mr. Wheeler: Mr. Examiner, we do have an outstanding offer.

The Witness: Yes.

Mr. Wheeler: And I think the record also shows, testimony of Mr. Gurley, that the trustees were about on May 26 were about to sell to the M&StL until the Santa Fe came along and offered them one hundred thirty-five instead of one hundred thirty-three dollars.

Exam. Albus: Are there any further questions, Mr. Hoag?

Mr. Hoag: Yes, I have a few questions here.

By Mr. Hoag:

Q. You spoke of this matter of unification. I think that is a kind word that has been used here. Am I correct, you also used the word integration would be synonymous?

A. Yes, sir, consolidation would also be synonymous.

Q. Consolidation would also?

A. I believe I mentioned that in my direct.

Q. Staying away from the legal aspect of it but rather [fol. 1605] attempting to find it on the physical aspect, how would what you propose to do be different than a merger?

Mr. Wheeler: Mr. Examiner, I don't see how you can get away from the legal connotations of merger.

Can you mention a specific example, Mr. Hoag, which might clarify your question? Because merger is a legal concept, I think, beyond question.

Mr. Hoag: I have tried to keep away from legal concept, Mr. Wheeler.

Mr. Wheeler: I understand.

Mr. Hoag: I attempted to phrase the question that way. It seems to me that so far we have merely had a play of

words of integration, unification, and consolidation, and I am attempting to find out why how physically it would differ from a merger.

Mr. Wheeler: I am not sure that this witness can give you a definition of merger in that I don't think he is a lawyer and with legal qualifications of merger. That is why I say that if you have an example in mind that might help it to understand your question.

By Mr. Hoag:

Q. How would the repair equipment of the companies be handled?

A. I beg your pardon?

Q. How would the repair equipment of the companies be handled?

A. I don't understand what you mean by repair equipment.

[fol. 1[illegible]] Q. Well, let's say we have a certain crane or a certain snowplow that is presently an asset on the books of the TP&W.

A. In the same manner that we would handle the repair of that equipment on the M&StL.

Q. Would the snowplow, say, continue to be an asset of the TP&W?

Mr. Wheeler: Mr. Examiner, I think Mr. Provo should be asked this question, this is an accounting question rather than operating.

Exam. Albus: No, I think it may have something to do with the operation of the equipment.

A. I don't really understand what you mean when you say will it remain under the ownership of the TP&W. It would be used—let's say that there is a snowplow on the TP&W at Peoria, and if we needed that in a heavy snowtime or periods we would certainly use that on lines on the M&StL. If it needed heavy repair or attention of that kind we would give it the same attention as we would other attention on the M&StL.

By Mr. Hoag:

Q. Turning to shop equipment, would there be any shop equipment of the TP&W remaining, and, if so, where?

A. I would have to say this, certainly—I have testified that the locomotives would be given attention here like any other outside point on any railroad.

Q. That is as far as running repairs?

A. That is right. To that degree that equipment would [fol. 1607] be retained. Now, to go a little further, probably not in line with your question, but I did say this, that I did testify, to, that every opportunity would be given to trying to lease the facilities that TP&W have now for warehouses and for foundry or anything like that. Now, to that degree certain shop machinery might make it attractive property.

A. As I understand it, you propose to have all of your heavy shop repairs done, am I correct, in Marshalltown?

A. For car repair, yes.

Q. Car repair?

A. That's right.

Q. And that is the only place a car repair would be performed either the TP&W or the M&StL?

A. Heavy repair, that is, the kind that requires the heavy work to be done.

Q. And all the assets and equipment at Marshalltown are those of the M&StL?

A. They are presently, yes, sir. If there is any material or equipment here that could be used we would probably integrate it with that that we have at Marshalltown. For instance, if there was a lathe on the TP&W that was physically better and able to do certain types of work, why, obviously we would keep that in favor of the one that was probably older and more inefficient than we might have at Marshalltown.

Mr. Hoag: I believe that is all I have at the present time. [fol. 1608] Exam. Albus: Mr. Davidson.

Cross examination.

By Mr. Davidson:

Q. You really haven't given much concern to what the effect of pulling all this operation out of Peoria will have on the economy of this city, have you?

A. Yes, sir, Mr. Davidson, we have been—I think I mentioned the other day in my direct that we have given a lot of consideration to what we might be able to do here industrially in the use of the facilities that we have here for attracting maybe new industries and which in turn would attract employment.

Q. That could be done just as well under an operation such as proposed by these other carriers and which would still leave this million three hundred thousand dollars in pay rolls in Peoria, couldn't it?

A. I presume to some degree the attraction of industry could be done in the same way that we plan to do it.

Mr. Davidson: No further questions.

Exam. Albus: Are there any further questions?

Mr. Lucas: May I just ask, not cross-examination but a point on clarification?

Exam. Albus: Yes, Mr. Lucas.

By Mr. Lucas:

Q. In your Exhibits H-42 and H-43 I see a point on the M&StL on a point just outside of Peoria called Maxwell and there is a reference in your testimony to Maxwell Hill. Can we understand they are the same points?

[fol. 1609] A. Yes, sir.

Q. What is the ruling grade on Maxwell Hill?

A. I believe it is 2.08.

Mr. Lucas: Thank you.

Exam. Albus: Any further questions.

Mr. Wheeler.

Redirect examination.

By Mr. Wheeler:

Q. Mr. Schroeder, were you furnished information by the TP&W which furnished in part the basis for your estimated saving and your proposed operation of the integrated M&StL, TP&W?

A. Yes, sir, and they were very cooperative.

Mr. Wheeler: I have no further questions.

Exam. Albus: Are there any further questions of Mr. Schroeder?

(No response.)

Exam. Albus: You are excused. Thank you very much.

Mr. Wheeler: Mr. Examiner, I would like to offer, if I have not done so, Exhibits H-41, H-42 and H-43.

Exam. Albus: My records indicate that they have already been received.

(Witness excused.)

[fol. 1610] Mr. Wheeler: I would like to call Dr. William Leonard.

Dr. William N. Leonard was sworn and testified as follows:

Direct examination.

Mr. Wheeler: Mr. Examiner, I should like to have marked for identification two exhibits that will be introduced by Dr. Leonard. The first is entitled "Selected Statistics".

Exam. Albus: "Selected Statistics" may be marked for identification Exhibit H-74.

(Applicant's Exhibit No. H-74, Witness Leonard, was marked for identification.)

Mr. Wheeler: The second exhibit is entitled "Distribution of Freight Tonnage".

Exam. Albus: "Distribution of Freight Tonnage" is marked for identification Exhibit H-75.

(Applicant's Exhibit No. H-75, Witness Leonard, was marked for identification.)

By Mr. Wheeler:

Q. Dr. Leonard, would you please state your name and address?

A. William N. Leonard, 208 Houston Road, Garden City, New York.

Q. And your present occupation?

A. Professor of economics and chairman of the department of Hofstra College, Hempstead, New York.

Q. Have you prepared a statement for presentation to the Commission in these proceedings?

[fol. 1611] A. I have.

Q. Will you proceed to give that statement.

A. By way of education and experience I have a B. A. from the University of Virginia, an M. A. from Texas, and a Ph.D. from Columbia. During the Second World War I served for three years in the War Production Board as a transportation analyst, and from 1945 to 1946 worked as Coordinator of Planning for Trans-World Airlines in Kansas City. I have taught transportation for 10 years and written books and articles in the field. For two years of the Korean War, 1950-1952, I served as consultant on transportation to the Secretary of the Interior. My doctoral thesis "Railway Consolidation under the Transportation Act of 1920" was published in book form by Columbia University Press, and articles on railroad consolidation have appeared in "Journal of Economic History" and "Traffic World".

I have appeared as an expert witness before the Interstate Commerce Commission in a number of cases, one of which involved consolidation, and before committees of both houses of Congress on matters relating to railroads.

I have a strong interest in railway consolidation, for I feel that it provides a valuable means of effecting economies railroad costs and of promoting more efficient railroad service. Consolidation represents a powerful weapon in the hands of the railroads to ensure their own solvency and to withstand competition from other agencies of trans-

[fol. 1612] portation. It is indeed a pleasant privilege to appear before the Interstate Commerce Commission and discuss the issues of this case, involving control of the Toledo, Peoria & Western Railroad Company, particularly as they concern the public interest in a strong, well-balanced, and efficient railroad system. I am happy, in this connection, to support the application of The Minneapolis & St. Louis Railway Company to acquire control of the Toledo, Peoria & Western, and would like to offer my reasons for doing so.

First, control of the T. P. & W. would provide a desirable strength and diversity to the M. & St. L., which far exceeds any value which the T. P. & W. could have to the Pennsylvania or Santa Fe systems.

To support this point, I should like to refer to Exhibit H-74 entitled "Selected Statistics, Toledo, Peoria & Western; Minneapolis & St. Louis; Atchison, Topeka & Santa Fe; Pennsylvania; and Wabash. Effect upon M. & St. L., Santa Fe, Pennsylvania of Acquiring the T. P. & W."

On the first page of this exhibit are shown selected statistics on the five roads in question taken from reports to the Interstate Commerce Commission in 1954, grouped under three headings:

(1) Size of Plant;

(2) Freight Volume, Density and Revenues;

(3) Total Revenues and Earnings.

While the Minneapolis & St. Louis appears from its miles [fol. 1613] of road to be a tenth of the Santa Fe or a seventh of the Pennsylvania, a fairer comparison of its proportions is indicated by investment in road and equipment where the M. & St. L. is about 1/20th the size of the Santa Fe and 1/40th the size of the Pennsylvania. Approximately the same ratios obtain if the number of employees are compared. By most standards the M. & St. L. is about one-fourth the size of the Wabash, a road competitive with the T. P. & W., which is almost completely owned by the Pennsylvania.

Perhaps a clearer indication of relative size of these rail companies can be gained from their rank among Class I

carriers based upon the valuations established by the I.C.C.

Road	Valuation (I.C.C.)* (000)	Rank among 127 roads
Pennsylvania	$3,817,145	1
Santa Fe	1,830,468	3
Wabash	312,627	30
M. & St. L.	93,628	60
T. P. & W.	19,288	100

* Cost of reproduction less depreciation, 1954.

The M. & St. L. lacks the investment per mile of road of the Pennsylvania and Santa Fe as well as their length and coverage of the east and west respectively. Traffic generating capacity throughout its line is also considerable lower, as attested by revenue ton-miles of freight handled per mile of road, which for the M. & St. L. are less than one [fol. 1614] half of those of the Pennsylvania. Its revenue ton-miles per mile of road of 1,008,000 are less than half the average for all Class I railroads of 2,441,000 in the year 1954. This thinness of traffic is a salient feature, and shows a profound need of the M. & St. L. for additional traffic strength.

On the second page of this exhibit are shown the effects of adding the T. P. & W. to the rail systems that have applied for control of that carrier, measure by the statistics shown on page 1 of the exhibit.

With regard to size of plant, the T. P. & W. would add substantially to the M. & St. L. Railway. Specifically, it would increase the M. & St. L.'s road mileage by 17 per cent, its investment by 14 per cent (I.C.C. valuation) and the number of employees by 20 per cent, that is, before economies are taken into account.

The contribution of the T. P. & W. to the rail plants of the Pennsylvania and Santa Fe would, of course, be far less. In this exhibit the Pennsylvania and Santa Fe are shown separately as systems, and the T. P. & W. statistics are added to each in turn. Actually this tends to understate the importance of these systems, and hence overstates the contribution of the T. P. & W. for two reasons:

(1) The Pennsylvania owns the Wabash, the Norfolk & Western, the Long Island Railroad, and other carriers which have not been included in this comparison;

[fol. 1615] (2) Since this is a joint application of the Pennsylvania and Santa Fe, in the event the application were granted, neither one by itself should be considered as having acquired the T. P. & W. properties.

It is nonetheless clear from these data that the addition of the T. P. & W. to these larger systems does not materially increase their size. In fact, the increases in plant size for the Santa Fe range between .9 and 1.8 per cent, and for the Pennsylvania, between .5 and 2.4 per cent.

While the T. P. & W. would add more than 1/6th to the M. & St. L. in plant size, its contribution to the Pennsylvania and Santa Fe nowhere exceeds 1/40th, and tends actually to be less than 1/100th.

With regard to freight volume, density and revenues, the gains accruing to the M. & St. L. from control of the T. P. & W. are even greater than those which size of plant would suggest. In magnitude, the freight business of the T. P. & W. adds 1/3rd to that of the M. & St. L. The greater density of freight traffic of the T. P. & W. helps to offset the thinness in M. & St. L. freight and to increase its revenue ton-miles per mile of road from 1,008,000 to 1,066,000, up 5.8 per cent.

On the other hand, the benefits to the Pennsylvania and Santa Fe systems from the additional freight traffic and revenues of the T. P. & W. are slight, ranging from one to [fol. 1616] one and five tenths per cent, and there would occur some reduction in density of traffic through adding the T. P. & W.

Statistics grouped under total revenues and earnings indicate that the acquisition of the T. P. & W. by the M. & St. L. would add 33 per cent to the latter's gross operating revenues, 36.9 per cent to its net railway operating income and 39.6 per cent to net income. Since net income is subject to wide fluctuations from year to year, a check of net income for the five year period 1950-54 reveals that over this period the net income of the T. P. & W. would add 40.3 per cent to that of the M. & St. L. These figures

are before any economies to which other witnesses have testified. This increase in earnings, net income, is indeed a very substantial improvement.

Against this, the gain in net income to the Santa Fe and Pennsylvania systems from control of the T. P. & W. is very slight. Gross operating revenues of the Santa Fe would increase 1.3 per cent, and those of the Pennsylvania, .8 of 1 per cent. Net railway operating income of the Santa Fe would rise 1.0 per cent; of the Pennsylvania, 1.4 per cent. Net income of the Santa Fe would be improved by 1 per cent through addition of the T. P. & W., and that of the Pennsylvania would gain 3.5 per cent.

While 1954 was a fairly good year for our economy, it did not achieve the level of employment, output and sales of 1955. I have, therefore, obtained data for the first nine [fol. 1617] months of 1955 (the latest I.C.C. reports available to me) on freight traffic and revenues, and net income, for the M. & St. L., the T. P. & W., the Pennsylvania, the Santa Fe, and the Wabash. These are shown on page 3 of the exhibit.

Compared with the first nine months of 1954, freight tonnage and revenues for the M. & St. L. rose by only a few percentage points, and net income by 5.6 per cent. The Pennsylvania enjoyed substantial increases in freight tonnage (nineteen per cent) and revenues (twelve per cent), and its net income shot up by 171.7 per cent. The Santa Fe added 11.5 per cent to its tonnage; 11 per cent to freight revenues and 22.4 in net income.

The Pennsylvania and Santa Fe systems are two of the strongest in the country. The Pennsylvania ranks number one among Class I carriers by investment, freight traffic and revenues, or by practically any standard used to indicate size and volume of business handled.

The Pennsylvania Railroad operates through 13 states and the District of Columbia, with a total population of 72,815,281 persons in 1950. It taps the major industrial centers of the nation, and its freight business is diversified and well balanced between extractive and manufactured products.

Ownership of the Wabash, a 2,393-mile system, ranking 30th in size among roads in investments, further increases

the size and power of the Pennsylvania Railroad, especially as regards traffic in the Midwest. When the further [fol. 1618] control by the Pennsylvania over the Norfolk & Western, Long Island Railroad, the Wabash's Ann Arbor, and the Detroit, Toledo-Ironton, is taken into account, we find that this aggregate received $924,334,525 in freight revenues in 1954, an amount equal to 11.9 per cent of the freight revenues of all Class I carriers and 170.6 per cent of the freight revenues of the next largest aggregate, the New York Central, Pittsburgh & Lake Erie combination. Adding the T. P. & W. to such an aggregate of line-haul properties as the Pennsylvania already possesses, is like tendering a mouse to a well-fed lion.

Exam. Albus: Let the record show a recess until 11 o'clock.

(Short recess.)

[fol. 1619] Exam. Albus: The hearing will please come to order.

We will continue with the direct testimony of Mr. Leonard.

You may proceed, sir.

The Witness: Among railways of the United States, the Santa Fe ranks first in mileage operated, 4th in number of employees, 5th in freight volume, 3rd in freight revenues, and 3rd in total revenues. This was in 1955. It operates in 12 states, with a total population of 44,488,858, in 1950. It is a strong road, with diversified traffic, a long haul of freight, and a good earnings record. The Santa Fe is strong in two of the fastest growing sections of the nation, the Southwest and California. The TP&W can add little to the Santa Fe's size or earning power.

On the other hand, the Minneapolis and St. Louis ranks 60th in size among the 127 Class I railroads, based on investment, and ranks approximately the same in other comparisons of size and business. It operates through only four states, with a population in 1950 of 14,968,000, and 8,712,000 of this population lives in Illinois where the M&StL has only 90 miles of road. It taps an area that is primarily agricultural in character, and one which is not gaining in population and industry as much as other sections of the nation. In fact, the three states of Minnesota,

South Dakota and Iowa, in which 80 per cent of the traffic of the M&StL is originated, gained only 3.7 per cent in population between 1940 and 1950, whereas the population [fol. 1620] increase for the entire country averaged 14.5 per cent. According to Mr. Nelson's Exhibit H-49, the 13 states and District of Columbia served by the Pennsylvania gained 12.0 per cent in population between 1940 and 1950, while the 12 states served by the Santa Fe enjoyed increases averaging 18.6 per cent in this decade. The area in which the M&StL operates depends largely on agriculture for its income, and the plight of this industry is too well known to require elaboration here. Clearly, the M&StL needs the diversification and strength which the TP&W can provide in order to bolster its earnings position and withstand the continued decline in agricultural income and the possibility of a general economic slump.

On the subject of freight, the contribution of the TP&W to the lightly-trafficked M&StL has been cited. There is another important regard in which the TP&W complements and offers strength to the M&StL, namely diversity of traffic. Exhibit H-28 reports tonnage handled by the two carriers, by product classification. The M&StL is a Granger road with a high percentage of agricultural products. In 1954 these represent 41.2 per cent of its originated tonnage. And I think my Exhibit H-74 shows this also, on the first page of H-74, the originated column under the M&StL. This agricultural product class accounted for 25.9 per cent of total tonnage and 30.4 per cent of freight revenues. Other extractive items—products of animals, mines and [fol. 1621] forest—combined with farm products, aggregated 80.6 per cent of its originated tonnage and 52.4 per cent of its revenues. Manufactures and miscellaneous represented only 18.6 per cent of originated tonnage, 33.4 per cent of all tons handled and 43.6 per cent of revenues. It is apparent that the M&StL, which originates so little tonnage in manufactures, is highly dependent upon its connections for this high revenue traffic. Even so, manufactured products amount to only one-third of all tonnage handled.

In the case of the TP&W, manufactures represented 35.3 per cent of originated tonnage in 1954, 49.7 per cent of ton

nage handled, and 58.5 per cent of revenues. Products of agriculture made up 25.7 per cent of originated tonnage and only 19.8 per cent of tonnage handled. Thus the TP&W's freight mix nicely complements that of the M&StL. In 1954 the revenue freight handled by the TP&W would have added 46 per cent to the total freight tonnage carried by the M&StL and 68 per cent to the tonnage of manufactured articles. In combination, the TP&W and M&StL would have a freight mix in which manufactures and miscellaneous would represent 39 per cent of all freight handled, a commendable improvement over the 33 per cent of such freight now carried by the M&StL.

Both the Pennsylvania and Santa Fe have a high proportion of their originated tonnage and freight revenues in manufactured products. These represent 51.1 per cent of [fol. 1622] the Pennsylvania's freight revenues and 64 per cent of those of the Santa Fe. They are also much less dependent proportionately upon farm products than the M&StL. Because of their present wide diversity of products, and the tremendous volume of traffic which they carry, the addition of the TP&W's freight traffic to their systems is small.

My second point deals with the Gateway problem. Approval of the Pennsylvania-Santa Fe application will tend to create a monopoly of gateways in the Midwest, without real benefit to Peoria, while control by the M&StL will keep Peoria an active competitive gateway. As I understand the term "gateway", it represents an important interchange point between different regions of the country served usually by a number of carriers operating in these differing regions, and may also represent a rate-break point on through traffic. Chicago, St. Louis and Peoria serve as gateways between western and eastern roads and territories with the Wabash route via Hannibal Bridge and Decatur constituting competition to all three.

Both the Pennsylvania and Santa Fe systems have routes and gateways other than Peoria which they control or where they have pre-eminent positions in the interchange of freight. Chicago is the major point of interchange in the midwest for the Santa Fe and Pennsylvania railroads. St. Louis represents a major point of interchange where the

Pennsylvania turns over traffic to the Wabash and other [fol. 1623] systems connecting with the Santa Fe at Kansas City. Still another important competitor to these gateways is the Wabash route via Decatur to which I referred, and which the Pennsylvania controls by its control of the Wabash. This route also connects the Pennsylvania with the Santa Fe at Kansas City. This line of the Wabash through Decatur also connects with other carriers at Omaha and Des Moines, and has branches to connections at Sullivan, Illinois; Champaign, Illinois; Streator, Illinois; Quincy, Illinois; Keokuk, Iowa; Ottumwa, Iowa; and Columbia, Missouri. The Wabash is competitive with the TP&W for the length of its route, and has a substantial advantage over the TP&W in the fact that it can receive westbound freight at points to the east of the TP&W, especially from its parent company, the Pennsylvania, and carry these farther into the Midwest than the TP&W. It is directly competitive with the M&StL-TP&W route on transcontinental traffic to and from all parts of the West, including the North Central section which the M&StL serves directly. The Pennsylvania-Wabash route through Decatur is even a little shorter than the TP&W route from Official Territory to Kansas City (494.7 miles from Logansport to Kansas City, using Decatur, against 499.3 miles, using Peoria).

The Pennsylvania-Wabash and Santa Fe Systems are already well provided with gateways in the Midwest. They enjoy a substantial position in the traffic moving through or to Chicago and St. Louis, and have the Pennsylvania-[fol. 1624] owned Wabash as a further strong link. To permit them to control Peoria by ownership of the TP&W would place them in an unduly strong position as against all other railroads operating through the midwestern gateways, and especially the M&StL. It gives them a conflict of interest which requires them to talk of parity of treatment and the like.

Actually, the availability of other gateways to the Pennsylvania-Wabash and Santa Fe systems could well militate against Peoria, and consequently against other railroads operating into and through that gateway.

There has been testimony from Mr. Symes that the Pennsylvania prefers for westbound movements (1) St. Louis,

where it gets a longer haul, (2) Chicago, and (3) either Effner or the Wabash route through Decatur. However, it is my opinion that because of the Pennsylvania's 99 per cent control of Wabash, a long-haul carrier, against the proposed 50 per cent control of TP&W, a relatively short-haul carrier, the Pennsylvania would not actually be neutral as between Decatur and Peoria for very long. Economic self-interest is too strong a motivating force to the contrary.

Likewise, the Santa Fe's route to Chicago, where it makes connections with the Pennsylvania, is directly competitive with the TP&W. Evidence has been introduced to show that, on the basis of effective division of freight revenues, it is clearly to the profit of the Santa Fe to haul eastbound [fol. 1625] transcontinental traffic by way of Chicago instead of giving it to the TP&W at Lomax.

On the other hand, Peoria is an indispensable junction and terminus for the M&StL in the midwest, and in contradistinction to Pennsylvania-Santa Fe, its only gateway in this area.

Figures of interchange traffic of the M&StL at Peoria indicate a total for 1954 of 30,660 cars received, 45,335 delivered, or a total of 75,995 cars handled at that point (Illinois Terminal Case, Docket 18752). This represents 36 per cent of all cars handled by the M&StL during that year. The M&StL, therefore, handles more than a third of its freight carloads through Peoria.

Of the M&StL's business at Peoria, 15.9 per cent is with the TP&W. Testimony has been entered showing that the M&StL solicits business through Peoria. Its advertising, e.g., in the Official Guide of the Railways, reads "The M&StL Ry. Co.... The Peoria Gateway."

The M&StL has no conflict of interest with any other gateway competitive with Peoria and can be expected to maximize use of the Peoria gateway.

Because of their adverse interests, the Pennsylvania and Santa Fe systems will not be inclined to make maximum, but rather incidental, use of the Peoria gateway. They have little incentive to increase their use of the Peoria gateway, except for local traffic. In fact, it is to their [fol. 1626] economic advantage to discontinue the competitive solicitation of the TP&W now in effect. By favoring

routes through other gateways which represent a longer haul or greater division of revenue to them, they will draw traffic away from the Peoria gateway and tend to dry it up as a competitive route. There is also the presumption that the M&StL will lose a large part, if not all, of that traffic it handles with the Santa Fe between Nemo and Peoria, representing 5.6 per cent of its freight revenues. This will reduce the earnings of the M&StL, and its ability to maintain the efficiency of its service and its traffic solicitation. The consequent atrophy of Peoria as a gateway would certainly not be in the interests of the City of Peoria, the TP&W, or the M&StL. Nor, may I add, would it be in the national interest in a strong competitive transportation system, in which Peoria is an important gateway, and a bypass for through traffic around Chicago, extremely valuable in peacetime, and indispensable in case of war.

Third, while the possible gain to the Pennsylvania and Santa Fe railroads from acquisition of the TP&W is slight, injury to the M&StL would be serious. The Pennsylvania and Santa Fe are in no real need of the added revenue from the traffic which they could obtain by acquiring the TP&W or which they could divert to themselves by control of the TP&W. As has been shown, the total traffic of the TP&W adds only fractionally to the large volume of freight busi- [fol. 1627] ness of the Pennsylvania and Santa Fe and to their freight revenues. These roads are large, well-balanced, have large proportions of high-revenue manufactured products already on line. Population and industry along the lines of the Pennsylvania and Santa Fe are growing rapidly, and their freight revenues and net income reflect this. The Pennsylvania has paid a dividend each year since 1847, a long and commendable record of payment to stockholders. The Santa Fe has paid a dividend on its stock each year since 1901, with the exception of 1933, 1938 and 1939. It has a large modernized rail plant and low fixed charges. It is known as a "blue chip" among rail stocks, has recently had a five-for-one stock split, and net income has lately hit new peacetime highs. Neither the Pennsylvania nor the Santa Fe had to be reorganized during the depression of the 1930's.

On the other hand, the Minneapolis & St. Louis has not in the past been a strong road. It is surpassed physically

and traffiewise in a highly competitive area by systems such as the Rock Island, Burlington, Northwestern, and Milwaukee, and it must also compete with the Chicago Great Western and the Great Northern. In 1923, when other railroads were improving their financial position, the M&StL entered receivership. In 1934 consideration of a loan to the M&StL led the Reconstruction Finance Corporation to recommend that it be split among other railroads in the region, and eight roads in the area applied for parts of the M&StL in [fol. 1628] an acquisition proceeding. However, the Commission kept the Minneapolis & St. Louis alive by denying that application on the grounds chiefly that its services and facilities were needed by the area which it served (228 I.C.C. 277, 1938). Since that time the M&StL has been reorganized, has emerged from bankruptcy, and has paid dividends since 1943.

However, the M&StL, despite vigorous and effective management, despite its improved financial position, could easily suffer a reverse. The wartime boom and general economic prosperity since World War II have helped a great deal, but the lines of the M&StL serve in large part sparsely settled counties whose chief, if not sole, economic activity is agriculture. This is indeed a frail basket in which to have all one's eggs. As a matter of fact, despite the prosperity of recent years, the M&StL has handled fewer freight cars in each year since 1950. In 1954 freight cars of the M&StL were only 89 per cent of the number handled in 1950. While 1955 saw a reversal of this downward trend and an increase of 2.9 per cent in the M&StL's freight revenues, the gain is small and could easily be lost. Today at the height of prosperity, farm surpluses have piled up and farm prices have declined, creating an unstable condition for the future. A crop control program through a soil bank could reduce shipments. A business recession reducing domestic markets for agricultural products could [fol. 1629] easily provoke a crisis in the farm belt and throw some of the roads in Granger territory into bankruptcy once again.

Should the M&StL lose traffic as the result of the success of the Pennsylvania-Santa Fe application for control of the TP&W, and preferential routing by these lines through Lomax, amounting to anything like the $1,110,000 annually

in freight receipts, or 5.6 per cent of its freight revenues in 1954, testified to by Mr. Swanson, this could place the property in critical position. Such a loss to the M&StL is far out of proportion to any gain to the Pennsylvania and Santa Fe accruing from control of the TP&W.

Fourth, the M&StL needs the TP&W as an active part of its freight traffic system. Some prosperous railroads get their strength from a copious supply of a raw material, such as coal or iron ore, and favorable operating conditions, as in the Pocahontas Region. But most strong railroads are anchored in large centers of population with industry at each end of their system, and tap large intermediate centers to provide further nourishment, particularly in manufacture. In this way not only is high revenue freight obtained, but a two-way flow of such traffic adds to the efficiency of operations.

The M&StL serves only one important industrial area, the Twin Cities of Minneapolis and St. Paul. Its next most important manufacturing center is Des Moines, with 180,000 [fol. 1630] persons, then Peoria, with 115,000. In all of these centers the M&StL encounters strong competition from other roads. The system lacks balance since it has no industrial metropolis comparable with Minneapolis-St. Paul at the eastern end of its system. In order to survive, it must obtain as much through or bridge traffic as possible, and particularly must it balance its eastbound freight with westbound movements of manufactured products at Peoria.

At the present time, the M&StL is delivering about three cars of traffic at Peoria for every two it is receiving. Figures for 1954 show the M&StL delivered 45,335 cars and received 30,660 cars at that center. In recent years the M&StL has not been receiving as many cars from the TP&W at Peoria as it has been delivering to the TP&W, though in 1950 the exchange was about equal. (In 1950 the M&StL turned over 5,995 cars to the TP&W at Peoria and received 5,880; in 1954 the M&StL delivered 7,473 cars and received 4,826).

It is imperative, if the earning capacity of the M&StL be maintained, that it not only hold its eastbound bridge traffic through Peoria, but increase its receipt of westbound freight at Peoria. The surest way of bringing this about

is by authorizing the M&StL to acquire control of th TP&W.

Fifth, the economies contemplated by the M&StL ap plication for control of the TP&W are important savings i transportation costs.

[fol. 1631] The matter of possible economies and servic improvements has always occupied an important place i I.C.C. decisions on control applications, and in my opinio consideration of this factor should always be in the fore front. Mr. Gurley's testimony did not mention any specifi economies or improvements in operations, inasmuch as th Pennsylvania-Santa Fe application assumes that the T &W would continue to operate as an independent railroad pretty much as it does today. Mr. Gurley stated that h had no knowledge of any improvement which the Penn sylvania-Santa Fe control would produce. He stated tha the Santa Fe had made no special study of economies, an added only that it might trade "ideas" on the subject wit the TP&W.

Mr. Symes also stated that he expected the TP&W t remain in its present state and offered no testimony o economies.

The M&StL, however, through Mr. Schroeder testifie that its application for control of the TP&W contemplate integrated operation which could produce savings of $960, 063. These economies could be effected in Maintenance o Way and Equipment, and in Transportation expense. Mr Provo introduced testimony showing further savings i accounting, traffic and other departments, aggregating $810,882. All told, these savings in operating expense com to $1,770,945. This amount is equal to 8.5 per cent of the combined operating expense of the M&StL and TP&W i 1954, and will to the extent realized help to ensure th [fol. 1632] financial future of the two roads. It is in keep ing with and in furtherance of the National Transportation Policy enunciated in the Act to foster "sound economic con ditions in transportation and among the several carriers." [fol. 1633] Sixth, multiple ownership of the TP&W will not be as productive of efficiency and economy as single ownership by the M&StL. There has been considerable testimony on the possibility of multiple ownership of the TP&W by the Pennsylvania, Santa Fe and other carriers.

including the Nickel Plate, the Rock Island, the Burlington and the Wabash. It is my considered opinion that joint ownership can and usually does lead to indecision and stagnation. It is definitely inferior to ownership of a line haul road by a single carrier.

As Mr. Gurley has stated, too many cooks may spoil the broth. Among the six carriers mentioned above who might become parents of the TP&W, there necessarily would be serious conflicts of opinion on how to raise the child. To please one road in a multiple ownership facility is often to displease one or more of the others. The result is a paralysis in policy.

Secondly, many of the carriers involved have serious conflicts of interest with the TP&W route through Peoria. The Santa Fe prefers Chicago, the Pennsylvania prefers St. Louis or Chicago or the Wabash, the Burlington has a longer haul to Chicago, and so has the Rock Island, and both of them also enter St. Louis.

Third, if the earnings of the TP&W have to be split among two, three, four or more carriers, the incentive of any one of the participating carriers to make the line profitable would be decreased. Mr. Carpi stated that the Penn- [fol. 1634] sylvania would not be interested in promoting the growth of traffic via the Effner route if there were divisions of ownership beyond the Pennsylvania and Santa Fe, and his position on multiple ownership would, I believe, be shared by other railroad men. I am talking about multiple ownership of line haul properties.

Only the M&StL is utterly dependent upon the Peoria gateway. Its paramount interest is in improving and augmenting service through Peoria, and the gains therefrom would make a substantial contribution to its total and net revenues, providing an incentive for efficient operation of the TP&W. Furthermore, the granting of the Pennsylvania-Santa Fe application would place them in a position to exercise undue power and influence over routes and competing gateways in the Midwest. This would be contrary to our National Transportation Policy.

The converse is true of control of TP&W by the M&StL. There a historically weak road would be united with a strategically located bridge line at its eastern end, in a natural

extension of its line, a road with which M&StL already does a substantial business, and whose control would not only protect the important artery of the M&StL stretching into Peoria, but would provide density and diversity of traffic for the combined carriers. While channels would be left open, acquisition of control of the TP&W by the M&StL, and the improvement in service resulting from integrated operation, should augment the movement of freight over the M&StL. So strengthened, the M&StL would be [fol. 1635] better able to survive depression in the farm belt, and to offer more effective competition to the stronger systems now operating in Granger territory.

The Commission is fortunate in this proceeding to have an affirmative choice between two applications, that of the Santa Fe and Pennsylvania, and that of the M&StL. Ordinarily, the Commission does not have the alternative of deciding whether a road should be acquired by one carrier or another in a case, comparing the benefits flowing from one proposal with those flowing from another, but only whether in a single application for control, the advantages outweigh the disadvantages. In this combined proceeding the Commission's choice is wider. Here, I believe, we have convincing proof that the gains to the Pennsylvania and Santa Fe and their shippers are minimal in comparison with the injury which could easily befall the M&StL, its shippers, and the area it serves.

As for possible injury to the Santa Fe and Pennsylvania from the proposed control by the M&StL of the TP&W, this would be negligible. Such control would be as injurious to these great systems as a gnat's bite would be to an elephant.

In the light of these considerations, I believe the application for control of the TP&W by the M&StL eminently meets the tests of public interest, and requires approval by the Commission.

Q. Does that conclude your direct testimony, Dr. Leonard?

[fol. 1636] A. It does.

Mr. Wheeler: The witness is available for cross-examination.

Exam. Albus: Mr. Thomas, please.

Cross examination.

By Mr. Thomas:

Q. Have you ever been employed on the staff of a railroad, Mr. Leonard?

A. Only as a consultant.

Q. You have never had any experience in the solicitation of freight traffic?

A. No, sir.

Q. On your Exhibit H-74, page 3, you compare certain figures, including revenues and net income for the Pennsylvania showing the year 1954 and the first nine months of 1955?

A. I have that.

Q. Do you know whether the Pennsylvania figures which you have used are on the same accounting basis for the two years, for the year '54 and the nine months for the year 1955?

A. No, I don't. I merely used the OSD reports filed by the Pennsylvania in the office of the Interstate Commerce Commission.

Q. You speak about the traffic moving through the Peoria gateway. Is it your understanding that that traffic must move via the TP&W?

A. Which traffic are you speaking of?

Q. East and west traffic moving through the Peoria gateway.

A. No, I assume that Peoria is a gateway at which a sum [fol. 1637] of interchanges are possible.

Q. Are there other roads there having interchanges on the east and west which are not controlled by the Santa Fe or the Pennsylvania?

A. Yes.

Q. As I take it, it is your view that the Pennsylvania attempts to influence the routing of traffic through Decatur with the Wabash?

Mr. Wheeler: Mr. Examiner, I don't believe that is a statement in his testimony.

Exam. Albus: He may so, then.

Mr. Thomas: I am not sure what he means, but he says the Pennsylvania, if it owned the TP&W, or part of it

would not actually be neutral as between Decatur and Peoria for very long.

A. I was referring there to the testimony by Mr. Atkinson of the Wabash in which he said that arrangements had been worked out with the Pennsylvania Railroad on the fast freight schedule between Kansas City and eastern points and that as between other carriers, other things being equal, the Wabash prefers the Pennsylvania.

By Mr. Thomas:

Q. Are you familiar, without commenting on whether that is an accurate statement of what Mr. Atkinson said, are you familiar with the relative volume between the Pennsylvania, as between the Pennsylvania and the TP&W at Effner?

A. No.

[fol. 1638] Q. On the top of page 14 of your statement you say that the M&StL handles more than a third of its carloads through Peoria, are all of the carloads that you have referred to through traffic?

A. Of the 75,000 cars?

Q. Yes.

A. A majority of them are. However, this includes a figure of approximately 12,000 cars originated by the M&StL, terminated at Peoria, and/or originated—well, that's where most of the cars would come from.

Q. Are they included in that third that you mentioned as being handled through Peoria?

The 75,995 cars is 36 per cent of the total of 210,000 cars handled by the M&StL in 1954.

Mr. Thomas: Will you read the question.

(Question read.)

A. My statement says 75,995 cars are handled at Peoria.

Q. Then you say—

A. (Interrupting) This includes some terminations.

Q. Then your statement that the M&StL handled also more than a third of its freight cars through Peoria is not correct?

A. The total handled through Peoria is 63,709 cars in 1954.

Q. Is that a more than a third of the total freight carloads of the M&StL?

A. I will have to work that out.

[fol. 1639] Q. Did you give us the total figure?

A. 63,709 cars. The total of carload freight, the total cars of carload freight, reported in 1954 as handled by the M&StL was 198,000. The figure of interchange or cars handled through Peoria would be 31.7 per cent of the total cars handled by the M&StL in 1954, which is almost a third.

Q. You state on page 19 that the M&StL is delivering about three cars of traffic at Peoria for every two cars it is receiving. Do you know whether or not the westbound movement of traffic through the Peoria gateway has declined in the last year or so?

A. What page is that, please?

Q. Page 19, near the top.

A. Would you repeat the question, please.

(Question read.)

A. No.

Q. Do you know whether or not the other western connections at Peoria are also receiving less cars than they deliver through that gateway?

A. No, I don't.

Q. I take it that your statement on page 21 that the Pennsylvania prefers St. Louis or Chicago or the Wabash was made without any knowledge of the interchange at Decatur versus Effner, is that correct?

Mr. Wheeler: Mr. Examiner if the predicate for this [fol. 1640] question is the Pennsylvania interchanges traffic with the Wabash only at Decatur, I object to it, because the facts of record point to the contrary.

Exam. Albus: Read the question, please.

(Question read.)

Exam. Albus: He may answer.

A. I am not sure that that is a very relevant factor. I was using Decatur only as a major junction on the Wabash system. The total interchange of the Wabash with the Pennsylvania system would be made at many other points besides Decatur and hence to get its proportions you would

have to take the total of all these points and relate them with the interchange of the TP&W through Peoria. I have no doubt but that the result would show a large, a considerable volume of freight handled by the Wabash and Pennsylvania at these other points in excess of that handled through Peoria, that is, between the Pennsylvania and the TP&W.

By Mr. Thomas:

Q. You don't know the volume handled at St. Louis?
A. I don't have that figure.
Q. Or at Logansport?
A. I don't have that figure.

Mr. Thomas: That is all.
Exam. Albus: Mr. Lucas, please.

Cross examination.

By Mr. Lucas:

Q. Dr. Leonard, are you connected with any other organ-[fol. 1641] ization that has some interest in the railroad industry?

A. I am connected with a railway trade association, the Federation for Railway Progress.

Q. What is your position with the last-named organization?

A. President. It is an honorary title, I might add, since I receive no compensation.

Q. I want to ask you one further question or two that Mr. Thomas touched upon, and that is the change in the Pennsylvania accounting practices, 1955 versus 1954. At the top of page 7 you speak of the Pennsylvania's net income shot up, and I emphasize those words 171.7 per cent, did you make any effort to ascertain why there was that degree of change for the first nine months in 1955 compared with the same nine months for '54?

A. No, sir, I just took the figures reported to the Interstate Commerce Commission.

Q. If one of the changes they made was to report other income, either monthly or quarterly, in 1955, whereas in

1954 and previous years it had all been appearing in the December reports, that would make quite a difference in net income, would it not?

A. It could.

Q. So that you are not there saying for the benefit of the Commission here in this case that that's all attributable to the increases in freight tonnage for those nine months?

A. No, there would be many other factors than freight [fol. 1642] tonnage in this but certainly the record shows an improvement in freight tonnage and freight revenues.

Mr. Lucas: That is all, Mr. Examiner.

[fol. 1643] Exam. Albus: Mr. Cassell, please.

Mr. Cassell: No cross.

Exam. Albus: Mr. Broker.

Cross examination.

By Mr. Broker:

Q. Dr. Leonard, in your consideration under item 6, on page 21 of your testimony on multiple ownership and the alleged disadvantages of it, that's an expression of opinion on your part, isn't it?

A. What page was that, sir?

Q. Page 21.

A. Would you give me the reference again, please.

Q. The point is this, that your statements on pages 21 and 22 relative to multiple ownership represent opinion on your part, do they not, rather than the assertion of facts?

A. This represents my considered opinion.

Q. Now, your statement says on page 21, and I quote it: "It is my considered opinion that joint ownership can and usually does lead to indecision and stagnation." Are you talking there of line haul railroads as opposed to terminal railroads?

A. Yes, sir.

Q. Have you any specific examples where it has led to indecision and stagnation?

A. I think the New Haven where you had the—no, I will withdraw that. I have heard executives of the SP&S, which is jointly controlled by the Great Northern and [fol. 1644] Northern Pacific linehaul carriers, indicate that

there are sometimes differences of opinion between managements of those two roads. As you know, the president of that road is alternately the president of the Great Northern and the Northern Pacific in the following year, and that because, that because sometimes of the change in top management that there is a certain amount of indecision there, and I think also a certain lack of incentive on the part of the supervisory personnel, since the top position is already blocked off.

Q. Could you identify the SP&S for the record?

A. Spokane Portland & Seattle.

Q. How many owners does that have?

A. Two.

Q. Are you familiar at all with the Lehigh & Hudson River and the RF&P?

A. Yes, I would consider the RF&P more of a terminal operation.

Q. Generally, they are prosperous, though, by normal standards, aren't they?

A. Referring to the RF&P, I think there is such an avalanche of traffic that moves through that area that it would have to be prosperous.

Q. Now, in your study of consolidation, have you noticed the tendency of the combined freight revenues to shrink somewhat below the individual revenues of the component lines—and when I use the term "consolidation" I mean unification?

[fol. 1645] The Witness: Would you repeat that question, please.

(The reporter read the last question.)

By Mr. Broker:

Q. Let me just correct the sentence this way: Have you noticed whether or not there is a tendency in that direction?

A. For the combined revenues of the two merged properties to fall below the total of the two individual?

Q. Yes.

A. I don't think there is any such tendency. It would depend upon traffic conditions, which would be external in many cases to the railroads themselves.

Q. In other words, each situation must be looked at individually?

A. Yes, sir.

Mr. Broker: No other questions.

Exam. Albus: Mr. Davis.

Cross examination.

By Mr. Davis:

Q. Mr. Leonard, from what source did you obtain your information as to junction points of various railroads and their connections at those points?

A. From the Railway Guide and from Mr. Atkinson's exhibits. You mean of the Wabash?

Q. Well, of any of these junctions that you mentioned in your testimony. Well, tell me what line is it that connects with the Wabash at Columbia, Missouri, for example?

A. The Katy, the Missouri, Kansas and Texas.

[fol. 1646] Q. Any other railroad?

A. Not to my knowledge.

Q. Do you have the interchange figures for the Wabash interchange with its various connections on certain lines that you mentioned at the junction points on page 12?

A. Could you indicate what junction points on page 12?

Q. Do you have the—

A. Oh, I have it.

Q. Do you have the figures of the Wabash interchange at each of those junction points with its connecting carriers?

A. No, I haven't.

Q. Do you know how many railroads enter St. Louis, or East St. Louis—I will add that?

A. Twenty-three, I believe.

[fol. 1647] Q. Do you know of that total how much of that traffic is carried by the Wabash into or out of that gateway?

A. No, sir.

Q. Do you know how much is carried by the Pennsylvania into or out of that gateway?

A. No, I don't.

Q. Is that gateway monopolized by the Wabash?

A. I wouldn't call it monopolized, no.

Q. When you speak of monopoly, you are referring to total cars handled in and out of a particular gateway?

A. As between gateways?

Q. Yes.

A. I am speaking about the control of traffic and routing which can be effected by large systems.

Q. Would you say that a particular route competes with a particular gateway if that route carries freight on either side of that gateway without actually passing through it?

A. Yes, I would think that a route that passed from one official territory into another, from one major region of the country, economically speaking, into another, and that by-passed gateways, where you have major interchange among many railroads would in a sense be a route which serves as an access to a territory and perhaps could be regarded as a gateway, though I did not strictly define a gateway as such.

Q. But that is what you mean by a route competing with a gateway?

[fol. 1648] A. That is right.

Mr. Davis: Thank you.

Exam. Albus: Mr. Hoag.

Mr. Hoag: No questions.

Exam. Albus: Mr. Davidson.

Mr. Davidson: Yes.

Cross examination.

By Mr. Davidson:

Q. May I ask you this, referring to page 15 of your prepared testimony, you say in the interest of the City of Peoria. Should the Commission infer from that that you think that the interest of the City of Peoria should be considered?

A. I would think the interest of the city should be, yes, sir.

Q. Would you feel that the interest of the City of Peoria is served by destroying $1,330,000 in payrolls?

A. Well, sir—

Q. (Interrupting) I have asked you a question.

Exam. Albus: He is going to answer it, now, give him a chance.

A. I can't certify as to this figure but I know that the economic interests are not served by the immediate situation alone. That a great deal of money that comes to the city comes from the federal government, it comes from general economic conditions in the country, it comes from firms that are national in their operation and that have offices and businesses in Peoria and hence to consider only an immediate situation of the kind you refer to is not to [fol. 1649] the interest of the City of Peoria.

Mr. Davidson: No further questions.
Exam. Albus: Mr. Thomas?
Mr. Thomas: I have one or two.
Exam. Albus: Yes, sir.

Further cross examination.

By Mr. Thomas:

Q. You spoke of the S. P. & S. example of joint ownership and indicated it was to a certain extent unsatisfactory. It isn't your understanding, is it, that anyone in this proceeding is proposing to change presidents of the T. P. & W. every year, is it?

A. I don't believe the Pennsylvania or Santa Fe have proposed that.

Q. Has anyone else?

A. Not to my knowledge.

Q. Are you familiar with the Burlington Railroad?

A. Yes.

Q. Is it owned by the same two roads that own the S. P. & S.?

A. It is controlled by them, but it has an immediate management, its own president.

Q. It is a pretty successful road, isn't it?

A. Definitely.

Mr. Thomas: That is all.
Exam. Albus: Anything further?
Mr. Thomas: No, sir.

[fol. 1650] Exam. Albus: Is there any further cross-examination?

(No response.)

Exam. Albus: Any redirect?

Mr. Wheeler: I want to check one exhibit. I am not sure whether it was corrected or not.

I have no further questions.

Exam. Albus: You are excused, Dr. Leonard. Thank you very much.

(Witness excused.)

Mr. Broker: I would just like to make a point for the record. I think at one time Dr. Leonard referred to Exhibit H-74 and he meant H-75.

Dr. Leonard: That is correct.

OFFERS IN EVIDENCE

Mr. Wheeler: Mr. Examiner, I would like to offer Exhibits H-74 and H-75.

Exam. Albus: Is there any objection?

(No response.)

Exam. Albus: They are received.

(Applicant's Exhibits H-74 and H-75, Witness Leonard, were received in evidence.)

Mr. Wheeler: Mr. Examiner, that completes the direct case of the M. & St. L. Railway Company.

Exam. Albus: Thank you very much.

Are you ready to proceed?

Mr. Cassell: Off the record, if we may.

[fol. 1651] Exam. Albus: Off the record, please.

(Short recess.)

Exam. Albus: On the record.

Let the record show an adjournment until 1:30.

(Whereupon, a recess was taken until 1:30 p.m. of the same day.)

[fol. 1652]

AFTERNOON SESSION

1:30 p.m.

Exam. Albus: The hearing will please come to order. We will proceed at this time with the rebuttal witness on behalf of the Santa Fe.

Mr. Thomas, please.

Mr. Thomas: I will call Mr. Patterson.

GRIER D. PATTERSON was sworn and testified as follows:

Direct examination.

By Mr. Thomas:

Q. Will you state your full name and address for the record.

A. Grier D. Patterson, 1400 First National Bank Building, Chicago, Illinois.

Q. What is your occupation?

A. I am a member of the law firm of Winston, Strawn, Smith and Patterson.

Q. Did you have some conversations with Mr. Heineman on May 26?

A. Yes.

Q. Of this year?

A. Yes.

Q. Are you the Mr. Patterson that Mr. Heineman referred to in his testimony—pardon me, that was 1955.

A. Yes, '55, yes.

Q. Will you outline what took place on May 26 in connection with your conversations with Mr. Heineman?

[fol. 1653] A. I called Mr. Heineman on the phone around about 10 o'clock on May 26 and asked if I could come over to his office and he said yes, and we made an appointment for me to come over there at 11 o'clock. I went to his office at 11 for the purpose of presenting to him a request of the Wilmington Trust Company and Guy A. Gladson as trustees under the will of George P. McNear, Jr., for

an extension of an offer that Mr. Heineman had submitted on behalf of the Minneapolis and St. Louis Railway Company to purchase stock of the TP&W owned by the trustees. I presented that written request of the two trustees to Mr. Heineman, and after reading it he told me that his inclination was not to grant the request and was not to extend the offer. I was in his office, I suppose, a half an hour or 45 minutes, and at the conclusion of that time he told me that he wanted to confer with some of the members of his executive committee and that while his own inclination was not to extend the offer, that he would telephone me later after having conferred with some of his associates and let me know their definite answer.

About a quarter after 12 Mr. Heineman called me on the phone at my office and told me that—he called me to say, I made a note at the time of what he said, that his offer would be open until 5 o'clock that afternoon, if not accepted he would announce to the press that the offer was not accepted and had been withdrawn and that no negotiations were pending.

Q. Was there any understanding between you and Mr. [fol. 1654] Heineman that if some one else should bid for the property that he would have another opportunity to make an offer?

A. There was no such arrangement or understanding with me.

Q. What happened after you had received that telephone call from Mr. Heineman which you just described?

A. I tried to reach Mr. Gladson, who was the individual trustee and who was in Chicago at the time, and succeeded in getting him about a half an hour later, and I told him, relayed to him the message that Mr. Heineman had given me for transmittal to the trustees. Gladson said that in his opinion therefor the offer of the M&StL should be accepted unless the Santa Fe or the Pennsylvania that afternoon agreed to take all of the stock owned by the trustees on the basis of at least equal to or better than the offer of Mr. Heineman, and he asked that I try to get in touch with the Wilmington Trust Company and advise him of his attitude, Gladson's attitude. I tried to reach the Wilmington Trust Company, both Mr. Chinn and Mr.

Bancroft, and found that they were out for lunch. I then tried to call Mr. Robert Richards and found that he was out for lunch. I left word for them to call me back.

Q. Who is Mr. Richards?

A. Mr. Richards is a member of the law firm of Richards, Lawton and Finger in Wilmington, Delaware, who were counsel for the trustees of the McNear estate.

Q. Will you proceed?

[fol. 1655] A. After having left the message for either Chinn or Bancroft or Richards to call me back, the next thing I did was to call Mr. Ed Austin who was the principal for the beneficiary of the McNear estate and informed him of Mr. Heineman's decision with respect to his offer. Shortly thereafter I received a call back from Mr. Richards, and I told him of Mr. Heineman's decision and of Mr. Gladson's attitude with respect to it. Richards said that he would immediately try to get in touch with Chinn and Bancroft of the Wilmington Trust Company and would call me back as soon as he was able to contact them. Sometime later, another half an hour or 45 minutes later, as near as I can recall, Mr. Richards did call me back and said that he had talked, as I recall it, to Mr. Chinn, and that Mr. Chinn had agreed with the position taken by Mr. Gladson that the Santa Fe and Pennsylvania should be advised that if they did not that afternoon agree to meet or better the M&StL offer that the latter offer would be accepted, and we then discussed the manner of acceptance of it. Pointed out that Mr. Heineman had made it perfectly clear, to me, that his offer had to be accepted as is by 5 o'clock that afternoon or it would be withdrawn, and it was suggested that I proceed immediately to prepare a form of acceptance of the M&StL offer, and I started to work on that. Mr. Richards had said to me that Mr. Chinn was going to call the Pennsylvania and Santa Fe but didn't know how to reach Mr. Gurley. I [fol. 1656] called Mr. Gurley's office and was told by some one there that he could be reached at a certain address in New York, and I called Richards back and gave him that address.

At that time Mr. Richards told me that Mr. Chinn had already talked to the Pennsylvania, to Mr. Symes, and that

Mr. Symes had told Chinn on the long distance phone that the Pennsylvania would not make any further or additional offer, that it regarded the so-called April 15 letter agreements as being binding commitments and that the Pennsylvania expected to stand by them. As Richards said at that time, or rather at that time Mr. Chinn had not talked to the Santa Fe.

I then spent the next hour or so working on the acceptance of the M&StL offer—

Exam. Albus: Wait a minute, please.

Mr. Wheeler: Could I have that part of it read back there, I didn't get it.

(Part of answer read beginning with paragraph starting at line 4 on page 1,565.)

Mr. Wheeler: Thank you.

Exam. Albus: Proceed, Mr. Patterson.

A. (Continuing) —the next word I heard was from Mr. Richards stating that Mr. Chinn had talked to Mr. Gurley over the long distance phone, Mr. Gurley was in New York, and that Mr. Gurley had said that his board was in session and that he would consider the matter and take it up with [fol. 1657] his board and would call Mr. Chinn back very shortly.

[fol. 1658] Meanwhile I had prepared a draft of the acceptance of the M&StL offer and had telephoned Mr. Austin and read it to him over the phone and had called Mr. Richards to read it to him over the phone. There were certain questions involved in the preparation of the acceptance that were commented on and discussed and as a result of that I have started making some further revisions of the acceptance of the M&StL offer.

Late in the afternoon I was advised by Mr. Richards that Mr. Gurley had called Mr. Chinn back and had made a proposition that had been agreed to by Mr. Chinn to the effect that the Santa Fe would buy all of the trustees' stock at $135 a share, on condition that the contract covering that purchase was drawn that day and executed by both of the trustees. I raised the question as to the ability of the trustees to commit themselves to deliver the stock

covered by the so-called April 15 letter agreement with the Pennsylvania, in view of the position taken by the Pennsylvania, and it was explained to me that Mr. Chinn and Mr. Gurley had discussed that phase of it and that the Santa Fe's offer would be to take it all, if the trustees could deliver it, or all except the stock covered by the Pennsylvania offer if the trustees were not in a position to deliver that stock.

By Mr. Thomas:

Q. What time was it when you had that conversation with Mr. Richards?

A. As near as I can recall, about quarter of 5.

[fol. 1659] Q. What did you do then?

A. I called Mr. Heineman and advised him that the trustees were allowing his offer to expire.

Mr. Thomas: That is all.

Exam. Albus: Cross-examine, please.

Mr. Wheeler: May we have a minute?

Exam. Albus: Yes.

Cross examination.

By Mr. Wheeler:

Q. Mr. Patterson, do you have a copy of the instrument that you drew on May 26 to accept the offer of the M&StL?

A. Yes, sir.

Q. May I see it, please.

A. Yes, sir.

Mr. Wheeler: Mr. Examiner, I would like to have marked for identification, with the assurance that we will have photostatic copies made of it, and circulate them to all counsel immediately.

Exam. Albus: I will have to use this as your original.

By Mr. Wheeler:

Q. Do you have any objection to that, Mr. Patterson?

A. I have none.

Exam. Albus: Let the record show that the document referred to is marked for identification as H-76 and that counsel for the M&StL will undertake to supply copies to other counsel.

(Applicant M&StL's Exhibit No. H-76, Witness Patter-
[fol. 1660] son, was marked for identification.)

Exam. Albus: Are you going to have this reproduced this afternoon?

Mr. Wheeler: Yes, sir.

Exam. Albus: Very well. I want this back right away because it should not get out of my possession.

Mr. Wheeler: I will assure you that we will have it reproduced and returned at once.

I have no further questions.

Exam. Albus: Are there any further questions?

(No response.)

Exam. Albus: You are excused, Mr. Patterson. Thank you.

The Witness: Thank you, sir.

(Witness excused.)

Exam. Albus: We will now proceed with the testimony of the Minnesota Railroad & Warehouse Commission.

Mr. Soderberg, do you want to mark these exhibits before we proceed with Mr. Nightingale's testimony?

Mr. Soderberg: Yes, sir.

Exam. Albus: Which one will be first?

Mr. Soderberg: There is just one exhibit, sir.

Exam. Albus: Let the record show that the exhibit to be introduced through Mr. Nightingale will be marked for identification H-77.

(Intervenor's Exhibit H-77 (Minn. Railroad & Ware-
[fol. 1661] house Commission), Witness Nightingale, was marked for identification.)

Exam. Albus: You may proceed, Mr. Soderberg.

EDMUND A. NIGHTINGALE was sworn and testified as follows:

Direct examination.

By Mr. Soderberg:

Q. Would you state your name for the record, please.

A. My name is Edmund A. Nightingale. My residence is 2120 Niles Avenue, St. Paul 16, Minnesota. I am Professor of Economics and Transportation, School of Business Administration, University of Minnesota, Minneapolis 14, Minnesota.

My education includes the degrees of B.B.A., M.A., and Ph.D. earned at the University of Minnesota and study of the British tax and transportation systems abroad in 1937. My transportation and traffic management experience includes 12 years after high school in operations, traffic, freight claims, accounting, and statistical work in various assignments ranging from labor to assisting management with the former Chicago, Milwaukee and St. Paul Railway Company, the American Railway Express Company, and the present Railway Express Agency, Inc. In 1942-43 I served the War Production Board in Washington as Principal Transportation Specialist and Principal Transportation Economist. During the Korean War, 1950-53, I served the Office of the Secretary of Defense as Consultant to the Director, Military Traffic Service; my duties included advice on general policy determinations [fol. 1662] concerning military traffic management. Consulting assignments over the years for the State of Minnesota include that as consulting transportation economist in the Class Rate Case, Docket Nos. 28300-28310, from July 1941 to the Supreme Court stage in 1947, including appearance before the Interstate Commerce Commission as expert witness. My admission to practice before the Interstate Commerce Commission by examination occurred in 1948; I have assisted the Department of Defense in several proceedings before the Interstate Commerce Commission.

Special committees of the Minnesota State Legislature and the Minnesota Railroad and Warehouse Commission have asked me to serve as consultant on transportation matters from time to time. I served the Minneapolis Mayor's Citizens Advisory Committee on Street Railway and Bus Matters as consultant in 1952-53 in connection with problems of full conversion from street railway to bus operation. I have also served various carriers or carrier groups as consultant from time to time.

My university teaching since 1936 has been primarily in the transportation and traffic management fields. My research activities have been in these fields and also in taxation. I have contributed numerous articles to professional journals, written several reports on and have been joint author of several studies pertaining to transportation and traffic management.

[fol. 1663] My appearance here today for the intervenors, State of Minnesota and Minnesota Railroad and Warehouse Commission, in support of the applicant Minneapolis and St. Louis Railway Company (hereinafter referred to as M&StL) in Finance Docket No. 19086 is at the request of and under the authorization of Attorney General Miles Lord of the State of Minnesota and the Minnesota Railroad and Warehouse Commission.

The State of Minnesota and the Minnesota Railroad and Warehouse Commission are vitally interested in the provision and continuance of adequate, economical and efficient transportation service for the people of that state. This objective is consistent with those of the National Transportation Policy, as stated in the Interstate Commerce Act. If the petition of the M&StL, the future interests of which are here at stake, is denied, the adverse effects upon the objectives stated above are likely to include curtailment or withdrawal of rail service from certain communities on light-traffic lines of the M&StL in western and southern Minnesota and South Dakota.

Possibility of curtailment of service or abandonment on mileage of low-density lines of the M&StL is not something remote. In I.C.C. Finance Docket No. 15619, the M&StL sought authority and permission to abandon 40.66 miles of line between St. James, Minnesota, and Estherville, Iowa.

some 36 miles of which is in Minnesota (see Ben W. Heineman's map in either Exhibit No. H-19 or H-21). A hearing was held at St. James, Minnesota in July 1947. By [fol. 1664] stipulation among the parties to that proceeding, passenger service was withdrawn and carload freight service was reduced to a tri-weekly basis.

My testimony in this proceeding will be confined to the following points: (1) that the acquisition of control of the Toledo, Peoria and Western Railroad Company (hereinafter referred to as the TP&W) by the M&StL is wholly consistent with (a) the requirement for "adequate transportation service to the public" (Sec. 5(2) (c) of the Interstate Commerce Act), and (b) the requirement in the National Transportation Policy of the Congress "to promote safe, adequate, economical and efficient service and foster sound economic conditions in transportation and among the several carriers . . . all to the end of developing, coordinating and preserving a national transportation system by water, highway and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense", (2) that the acquisition of control of the TP&W by the applicants in Finance Docket No. 18991, The Pennsylvania Railroad Company, the Pennsylvania Company, and the Atchison, Topeka and Santa Fe Railway Company (hereinafter referred to as the Pennsylvania-Santa Fe combination) is inconsistent with each of the above-stated requirements since the resulting diminution of the existing competitive relations between the Pennsylvania and Santa Fe and the M&StL will tend to produce adverse financial results to the [fol. 1665] M&StL through loss of east-west traffic now available to it between Peoria, Illinois, and Nemo, Illinois, and other interchange points in Illinois and Iowa, and thereby reduce the capabilities of the M&StL to render adequate service over the rest of that system, with special reference to movements between the cities of St. Paul and Minneapolis, Minnesota, and communities located on thin-traffic lines in western and southern Minnesota and South Dakota; and (3) that the failure to include other petitioning railroads in the transaction proposed in Finance Docket

No. 19086, upon equitable terms, is consistent with the public interest.

The railroad known as the M&StL has had a long and interesting history since its inception in Minnesota in 1870. Public interest in this railroad, a corporation under the laws of the State of Minnesota, reached a high peak when this carrier, in great difficulty in the middle 1930's, was faced with dismemberment in 1936 in the Associated Railways Company Case, Finance Docket No. 10947, 228 I.C.C. 277 (1938). The people of the State of Minnesota have not forgotten the heroically successful efforts of the management and employees, and improved public patronage, which kept the property together. The public applauded when the I.C.C. denied in 1938 the application to dismember and sell portions of the property to various applicants, and affirmatively demonstrated their faith in the future of this carrier, which was improving its physical plant and service, by [fol. 1666] increased patronage as general economic activity arose. I should interject here and say the word "applauded" really should be "celebrated", because there was a three-day celebration in Minneapolis July 21, 22 and 23, 1938, the story of which is told in "Mileposts on the Prairie" by Frank P. Donovan, Jr., Chapter 16, pages 199 to 211, 1950.

The people of the State of Minnesota cheered again when the long receivership ended in 1943. The motive power was completely dieselized; improved ballast and heavier rails were laid; over 70 per cent of the freight cars were purchased in the past ten years, and only 12 per cent of the cars are over 15 years old. We have H-19 remounted on the [fol. 1667] board this afternoon once more.

It is axiomatic that most railroads cannot live on traffic which originates and terminates on their own properties; additional interline traffic must exist in order to build up sufficient revenues to render adequate service under honest, economical, and efficient managements. The M. & St. L. is at a crucial point in the present decade. Will the M. & St. L. be permitted to acquire control of the T. P. & W., a small but good railroad, thereby extending its service eastward to Effner, Indiana, from Peoria, Illinois, to connect with the Pennsylvania, and westward from Peoria to

Lomax, Illinois, to the connection with the Santa Fe and to Keokuk, Iowa, where the T. P. & W. interchanges with the Chicago, Rock Island and Pacific Railroad.

Acquisition of control by the M. & St. L. over this 239-mile line of the T. P. & W. currently up for sale by the trustees of an estate, will open up many opportunities for improvement of railroad service to the public by activating through service routes over which joint rates currently apply. Under the regulated private enterprise system, common carriers within their mode of transportation must be reasonably competitive if that mode is to progress and merit increasing public approval. Where rates between common points are the same, as is usually the case, competition takes place on the basis of over-all service.

The effects of existing divisions of joint rates on relative [fol. 1668] attractiveness of gateway points have been testified to by witnesses Fred Carpi and G. E. Duffy for the Pennsylvania-Santa Fe combination, and James A. Swanson of the M. & St. L. The best interests of the Pennsylvania Railroad on east-west and east-southwest traffic are protected on originated west-bound hauls in divisions applicable over the St. Louis Gateway. On eastbound traffic originated on or interlined to the Santa Fe, it is to the best interest of the Santa Fe to solicit and enjoy its maximum haul wherever possible to Chicago rather than passively to let traffic move through Lomax or Nemo, Illinois. Interchange with T. P. & W. at Effner, Indiana, yields the Pennsylvania less on eastbound or westbound hauls than that on traffic interchanged at the Chicago Gateway. The net effect on the T. P. & W. should the Pennsylvania-Santa Fe combination prevail in these proceedings, would appear to be a minimum of support sufficient to earn a reasonable return on the net transportation investment.

It is unlikely that the industrial development department of the smaller but very active M. & St. L. would be less active in making every effort to attract new industries to the existing T. P. & W. property than the Pennsylvania-Santa Fe group. If the M. & St. L. should prevail, the latter group—meaning the Pennsylvania-Santa Fe—would tend inevitably to benefit from newly-created traffic by their sheer size and the number of major producing and consum-

ing areas which they reach in their respective territories, [fol. 1669] that is to say, the traffic originated as it spreads off the T. P. & W. whoever operates it, is bound to have routings that will in considerable degree hit on east or westbound traffic the Santa Fe or the Pennsylvania.

The M. & St. L. management in control of the T. P. & W. would appear to be motivated further to improve through service via the newly-available direct connections with Official Territory and Mississippi Valley carriers. Witness James A. Swanson has indicated in his Exhibit H-28 how the blending of the revenue tonnage of the T. P. & W. with the M. & St. L. would improve the "product mixture" of the combined system, leaving less reliance on agricultural and mineral traffic and bringing about a decided improvement in the proportion of "manufactures and miscellaneous" traffic. Further diversification of traffic of the M. & St. L. is needed; a crop failure would have severe effects on this carrier. Intensive activity on the part of the M. & St. L. industrial development department should further improve the "manufactures and miscellaneous" ratio in the event the M. & St. L. should prevail.

The effect of the grant of authority to acquire control of the T. P. & W. to petitioners in Docket No. 18991 upon the net income of the Pennsylvania-Santa Fe combination, or either of them, would be minute. Actually, with operation of the T. P. & W. as a separate property, the net income effect, assuming a 50 per cent net equity of Pennsylvania [fol. 1670] and Santa Fe in net income of T. P. & W., will be $320,584. In the case of the Pennsylvania Railroad, this would amount to 1.1 per cent of the 1954 consolidated net income, or .02 cents per share of common stock; in the case of the Santa Fe this amount would produce 0.5 per cent of 1954 consolidated net income, or .07 cents per share of common stock. By way of contrast, the estimated annual value of the T. P. & W. to the M. & St. L. is $1,732,000 or 105.2 per cent of the 1954 net income of $1,647,000 or $2.17 per share of common stock (Witness L. S. Provo, Exhibit H-44, Schedule 2).

According to the "Interstate Commerce Commission's Sixty-eighth Annual Report on Transport Statistics in the United States for the Year ended December 31, 1954",

total assets of the T. P. & W. are $9,893,197, those of the Pennsylvania Railroad are $2,455,547,988, and those of the Santa Fe are $1,484,889,559, and those of the M. & St. L. are $37,807,778. The T. P. & W. assets in relation to the combined assets of almost $4,000,000,000 for the Pennsylvania-Santa Fe combination are hardly visible at only 0.025 per cent of this huge total. Viewed in broad perspective, the effect therefore of adding the 1954 net income and assets of the T. P. & W. to those of the Pennsylvania-Santa Fe group is negligible, or about that of a peanut tossed by a child at a zoo to a hippopotamus.

M. & St. L. freight revenue losses in the Peoria-Nemo traffic and that through Peoria to or from other gateways in [fol. 1671] the event the application of the Pennsylvania-Santa Fe combination were granted, have been estimated by Witness James A. Swanson at approximately $1,110,000 in his Exhibit H-32, Schedule 1, and testimony. His estimate of potentially vulnerable traffic revenue is $7,000,000. Highly desirable traffic like that between Peoria and Nemo not only pays its way but gives substantial support to the entire M. & St. L. system. It is highly doubtful that the grant of authority of acquire control of the T. P. & W. to the Pennsylvania-Santa Fe group which would further reduce the already thin cushion which enables the M. & St. L. to provide needed service on thin-traffic lines, is consistent with the National Transportation Policy and the requirements of Section 5 (2) of the Interstate Commerce Act.

Inclusion or exclusion of other lines in the territory affected must properly be weighed under Section 5 (2) (c) and (d) of the Interstate Commerce Act. In the absence of any showing of major injury to lines which have petitioned for inclusion in the event authority to acquire control is granted, namely, the Chicago, Rock Island and Pacific Railroad Company, the Chicago, Burlington & Quincy Railroad Company, the New York, Chicago & St. Louis Railroad Company, the Wabash Railway Company (99 per cent of common stock of which is held by the Pennsylvania), et cetera, a grant of authority to the M. & St. L. to acquire sole control would appear to be in the public

interest and consistent with the National Transportation [fol. 1672] Policy.

The State of Minnesota is vitally concerned with the availability of transportation facilities for movement of goods between that state and other areas of the United States. Between Minnesota and Official Territory, which includes Central, Trunk Line and New England Territories, export or eastbound rail movement naturally includes the very large movement of "Products of Agriculture". The large Minnesota iron ore traffic which in recent years, other than 1954, when we had the steel production decline, averaged about 75,000,000 tons, generally moves eastward from Duluth, Minnesota, Superior, Wisconsin, and Two Harbors, Minnesota, by lake. In order to keep up supplies of particular grades of ores at certain steel mills in Official Territory for national defense purposes, movements of several millions of tons have been made during winter in certain years by rail since 1950. The westbound rail movement from Official Territory into Minnesota is largely "Manufactures and Miscellaneous" and "Products of Mines" (coal traffic). In addition to the Minnesota originations and terminations, a very large amount of overhead traffic between the East and Southeast on the one hand, and the northwestern portion of Mountain-Pacific Territory passes through the Twin Cities (Minneapolis-St. Paul) Gateway, one of the several major gateways of the United States.

The gateway situation and the importance of the Peoria Gateway to rail traffic between Minnesota and Official [fol. 1673] Territory can easily be seen by referring to Witness Ben W. Heineman's large map, Exhibit H-19 immediately to our rear.

Starting at the Canadian Border at Sault Ste. Marie, Michigan, and Sault Ste. Marie, Ontario, we see the Soo Gateway. In addition to the interchange of American-Canadian traffic between the Minneapolis, St. Paul and Sault Ste. Marie Railway Company (Soo Line), the Duluth, South Shore and Atlantic Railroad Company, and the Canadian Pacific Railway Company, traffic having both United States origin and destination is interchanged. Some of this American traffic moves westbound on "differential routes" and "differential rates" (slightly lower than all-

rail standard rates on most all-American routes) from New York, New York, and New England Territory to Minnesota points. Some miles to the south another smaller interchange occurs between the New York Central and Pennsylvania and the Duluth, South Shore and Atlantic Railroad over the Mackinaw City-St. Ignace, Michigan car-ferry route.

Car-ferry routes are also operated across Lake Michigan: (1) by the Chesapeake & Ohio Railway Company between Ludington, Michigan, and Kewaunee, Manitowoc, and Milwaukee, Wisconsin; (2) by the Grand Trunk Railway between Muskegon, Michigan, and Milwaukee, Wisconsin; and (3) by the Ann Arbor Railroad between Frankfort, Michigan, and Manistique and Menominee, Michigan, and Manitowoc, Wisconsin (see also, Witness Ben. W. Heineman's maps, Exhibit Nos. H-20 and H-21 for clear depiction of [fol. 1674] these car-ferry routes).

If need be, Mr. Examiner, I can point these out.

Exam. Albus: Yes, sir.

A. If we were at the Twin Cities gauging this thing and seeing our relationship between Minnesota and the Official Territory, this is what we would have to look at.

The next, and most important, interchange point is, of course, the great Chicago Gateway (Chicago Switching District), the primary significance of which need not be developed in my testimony.

Some 160 miles to the Southwest, the Peoria gateway is seen as the second most important gateway with respect to Minnesota movements in view of its geographic position and the number of Official Territory railroads which reach this gateway. Three Western Trunk Line (or Granger) railroads serving the Twin Cities, reach the Peoria Gateway on their own rails, M. & St. L., Rock Island Lines, and the Burlington Lines. It has already been pointed out that the Twin Cities-Peoria line of the M. & St. L. is the main line of that railroad. The Peoria Gateway is also a point of interchange for traffic destined from or to the Ohio River Gateways into Southern Territory, and traffic to or from Southwestern Territory via St. Louis, Missouri, Thebes or Cairo, Illinois. Hence the significance of this gateway and of the M. & St. L. as one of three major rail

carriers serving the Twin Cities on their own rails, and [fol. 1675] the only one with main-line service cannot be overlooked. Moving south from Peoria, we see that Decatur, Illinois, has significance as an interchange point for certain traffic, but Decatur is not served by any of the lines reaching the Twin Cities.

Next in our consideration is the great St. Louis Gateway, easily observed to be a natural gateway for certain traffic such as East-West and East-Southwest, Mississippi Valley, and East-Mississippi Valley movements. The St. Louis Gateway is geographically out of line for movements between Minnesota and most of Central Territory, and all of Trunk Line and New England Territories. Other major gateways to the south, such as Memphis, Tennessee, and New Orleans, Louisiana, are out of the question from the standpoint of rates and service between Minnesota and Official Territory.

The Peoria Gateway, in my considered judgment, is and will continue to be of second highest concern to the State of Minnesota and its users of rail transportation service to or from Official Territory. The importance of the Peoria Gateway to the national defense aspects of the National Transportation Policy cannot be overstated in view of the unsettled world political conditions in the atomic age and the "high opportunity" afforded by such strategic targets as the Soo locks and bridge and the great Chicago industrial and transportation complex.

Evidence of the Pennsylvania and Santa Fe here discloses that for transcontinental and East-Southwest traffic, [fol. 1676] their two principal gateways are respectively, St. Louis and Chicago, and that these carriers are primarily concerned with these gateways above all other gateways on transcontinental and East-Southwest traffic.

In view of their understandable primary interest in St. Louis and Chicago, success of their application here could result in augmentation of their interest in these (St. Louis and Chicago) gateways, and a declining interest in the Peoria Gateway.

The State of Minnesota cannot be dependent in time of peace or of national emergency on the Chicago Gateway and strongly urges that the importance of the Peoria Gate-

way with good competitive service to the people of that State, the Frankfort routes are shown here (indicating) in red, be maintained and preserved.

Consequently, the proposed acquisition of control of the T. P. & W. by the Pennsylvania-Santa Fe group, which would tend seriously to weaken the M. & St. L. giving direct service between the Twin Cities and other Minnesota points and the Peoria Gateway, appears to be inconsistent with the National Transportation Policy and should be denied.

Will you please turn now to my Exhibit No. H-77, which was prepared under my direction and supervision from data available at both the offices of the Minneapolis & St. Louis headquarters, on the one hand, and the Minnesota Railroad and Warehouse Commission and the State Division of Taxation, on the other hand. This exhibit purports [fol. 1677] to show the importance of some of the principal facets of M. & St. L. Minnesota operations to those of the entire system, for five years ended December 31, 1954.

[fol. 1678] The lines of the M&StL and of other railways in Minnesota are shown in Witness Ben W. Heineman's Exhibit H-19. His Exhibits H-21 and H-22 also depict these lines in somewhat larger cartographic scale or ratio. To avoid repetitious material in the record of this proceeding, M&StL system figures for railway operating revenues, operating expenses, and transportation investment have not been included, but will be referred to in exhibits of other witnesses or elsewhere. System operating revenues, operating expenses, taxes, and the like, are included in Witness Ben W. Heineman's Exhibit H-23, Schedule 2. System revenue tons are included in Witness James A. Swanson's one-sheet exhibit, H-28. County agricultural and manufacturing data are shown in Witness Roy W. Nelson's Exhibit H-39, sheet 3, and that, of course, gives some idea of what goes on in the industrial community in the metropolitan area with roughly a million and a half people at the present time out of the state population exceeding some three millions.

The M&StL serves 57 communities in Minnesota.

Page 4 of my Exhibit H-77 indicates that Minnesota operated mileage amounts to 399 of the total of 1,397 miles in the system, or 28.56 per cent. Page 1 shows that operat-

ing revenues allocated to the State of Minnesota on the basis of the operated mileage formula applied to interstate business, plus the total of intrastate business, amounted in 1954 to $6,576,659, or 33.1 per cent, which is approximately [fol. 1679] the five-year average. Total operating revenues for 1954 were $7,039,437 or about one-third of the system total. Revenue carloads in 1954 moving in Minnesota, shown on page 1, amounted to 129,432 which is 65.1 per cent of the total of 198,813 for the M&StL system, as shown in I.C.C. Statement No. 55100. Freight Commodity Statistics for Year Ended December 31, 1954. The five year average is about 65 per cent.

Page 2 of my exhibit deals with railway operating expenses by principal categories allocated to Minnesota operations. The figure of $5,302,466 for 1954 in relation to the system figure of $16,275,294 amounted to 32.7 per cent. The five-year average would be about 33⅓ per cent.

Page 3 shows allocation of Federal Government taxes to Minnesota operations and the Minnesota gross earnings tax. Railroads in Minnesota are taxed on a gross earnings basis, in lieu of all other taxation on transportation property and operations. The rise or fall in allocated interstate operating revenues plus those derived from intrastate hauls affects immediately gross earnings taxes; and any action proposed here which will affect operating revenues and hence tax collections, is naturally of concern to the State of Minnesota.

Page 4 shows the allocations of investment in equipment property allocated on the basis of operated mileage, road, and general expenditures chargeable to property investment accounts. Accrued depreciation has not been deducted [fol. 1680] from figures on this page. The figure of $26,583,682 for 1954 represents 35.8 per cent of the I.C.C. figure of $74,376,381 for the corresponding items, I.C.C. Sixty-eighth Annual Report on Transportation Statistics for Year Ended December 31, 1954, page 393, line 1.

Page 5 shows the number and compensation paid to all employees located in the State of Minnesota. According to the I.C.C.'s sixty-eighth annual report on transportation statistics for the year ended December 31, 1954, page 415, line 22, the M&StL had 2,543 employees whose compensa-

tion amounted to $10,879,825. Employees located in Minnesota for that year numbered 1,459, and received compensation of $5,676,899. Minnesota, therefore, had 57.3 per cent of the employees and 52.2 per cent of the pay roll of the M&StL in 1954.

The importance of Minnesota to the operations of the M&StL is seen from the foregoing data in this exhibit and my testimony. Conversely, the importance of the M&StL to the State of Minnesota and its citizens, in terms of transportation investment, service, operating revenues, pay roll, purchases of materials and supplies, and gross earnings taxes is likewise understood.

[fol. 1681] Mr. Soderberg: Does that complete your direct testimony?

The Witness: It does, Mr. Soderberg.

Mr. Soderberg: That is all.

Exam. Albus: Cross-examine, please.

Mr. Thomas?

Mr. Thomas: No questions.

Exam. Albus: Mr. Lucas?

Mr. Lucas: No questions.

Exam. Albus: Mr. Cassell?

Cross examination.

By Mr. Cassell:

Q. Hasn't the financial picture of the M&StL been constantly improving recently?

A. Generally speaking, it has been getting better over the last few years, although the revenue gains in relation to the M&StL and in relation to other lines in this territory, in my judgment, leaves something to be desired.

Q. The present management have indicated they have substantial plans for improvement of the property as presently constituted, haven't they?

A. That is correct.

Mr. Cassell: That is all.

Exam. Albus: Mr. Broker.

Cross examination.

By Mr. Broker:

Q. How did you allocate the federal income taxes among the states?

[fol. 1682] A. The federal income taxes, Mr. Broker, again were allocated, to my knowledge, on the basis of the mileage.

Mr. Broker: Thank you.
Exam. Albus: Mr. Davis?
Mr. Davis: No questions.
Exam. Albus: Mr. Hoag?
Mr. Hoag: No questions.
Exam. Albus: Mr. Davidson?

Cross examination.

By Mr. Davidson:

Q. You are not concerned with what happens to the people in the State of Illinois or what happens to its citizens' transportation investment, service, payroll, purchase of material, supplies, are you?

A. In broad terms, my first representation would be that of my principals, the Attorney General and the Railroad & Warehouse Commission of the State of Minnesota.

Q. You haven't taken those into account at all, as to the State of Illinois?

A. I have made no check as to the changes. I am speaking for the State of Minnesota.

Mr. Davidson: Thank you very much.
Exam. Albus: Is there any further cross-examination?

(No response.)

Exam. Albus: Is there any redirect?

(No response.)

[fol. 1683] OFFER IN EVIDENCE

Mr. Soderberg: I offer H-77.

Exam. Albus: Is there any objection?

(No response.)

Exam. Albus: It may be received.

(Intervenor Minnesota Railroad & Warehouse Commission's Exhibit No. 77, Witness Nightingale, was received in evidence.)

Exam. Albus: I think Mr. Ossanna has a statement to make at this time.

Mr. Ossanna: The Minnesota Railroad & Warehouse Commission takes the same position as our State Witness, Professor Nightingale. The Commission is of the opinion that the approval of the sale of capital stock to any other rail carrier would be detrimental to the public interest insofar as the State of Minnesota is concerned. For this reason, the Commission filed its petition in intervention in support of the Minneapolis & St. Louis application.

Exam. Albus: Thank you very much, sir.

(Witness excused.)

Exam. Albus: Copies of Exhibit H-76 are now being circulated among counsel. Let the record show that that exhibit is now received in evidence.

(Applicant M&StL's Exhibit No. 76, Witness Nightingale, was received in evidence.)

Exam. Albus: Now I think we are ready to proceed with the testimony of the Rock Island.

[fol. 1684] Mr. Cassell: Yes, sir.

Exam. Albus: If you will, please, Mr. Cassell.

Mr. Davidson: Mr. Examiner, may I be excused?

Exam. Albus: Yes, indeed, Mr. Davidson. Thank you very much.

D. B. JENKS was sworn and testified as follows:

Direct examination.

By Mr. Cassell:

Q. Please state your name, address and by whom you are employed.

A. My name is D. B. Jenks. My business address is 139 West Van Street, Chicago, Illinois. I am President of the Chicago, Rock Island and Pacific Railroad Company.

Mr. Cassell: May we go off the record and, for convenience, number the exhibits?

Exam. Albus: You may. Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

By Mr. Cassell:

Q. Would you please give a short resume of your railroad experience.

A. I started railway service as a chainman on the SP&S Railway in 1934. After getting my engineering degree at college, I entered service with the Engineering Department of the Pennsylvania Railroad. In 1938 I joined the Great Northern as a roadmaster. After that, I worked as division [fol. 1685] engineer and then trainmaster on various divisions of the Great Northern. During this time I spent three years in the Army, two and one-half years overseas with the Military Railway Service in Africa, Italy, France and Germany.

In 1947 I was division superintendent on the Great Northern and at the end of 1948 went to the C&EI Railway as General Manager, later becoming Vice-President. In December 1950 I joined the Rock Island as Assistant Vice President-Operations, becoming Vice-President-Operations in July 1951. In May 1955 I was made Executive Vice President and became a member of the Board of Directors in October 1953. In April 1955 I became a member of the Executive Committee of the Board and was elected Presi-

dent January 1st of this year, to succeed Mr. J. D. Farrington, who has been President since 1948. At the time of my election Mr. Farrington became, and still is, Chairman of the Board.

Q. Mr. Jenks, are you familiar with the two applications being presented to the Commission in this hearing?

A. Yes. I have read both the application of the Santa Fe and Pennsylvania, and that of the M&StL. I have also read the testimony of Messrs. Gurley and Symes.

Q. Referring now to the application of the Santa Fe and Pennsylvania, when did the possible purchase by those two railroads of control of the TP&W first come to your attention?

A. For some time there had been general rumors—I do [fol. 1686] not recall any specific source—to the effect that the TP&W might be sold. In May of 1955 we became aware that the Santa Fe and Pennsylvania were each planning to purchase 26 per cent of the stock of the TP&W.

Q. What was the reaction of the Rock Island management to this information?

A. Mr. Farrington and I had a number of discussions about it and the effect upon the Rock Island of any possible change in TP&W ownership. There were also informal discussions with members of the Executive Committee. It was our considered opinion that while we would prefer the TP&W to remain under its present ownership and management, if that ownership went into railroad hands, especially those of competitors, it would be essential for the protection of the Rock Island to secure equal participation with any such railroad owner.

Q. Was any action taken to implement that decision?

A. Yes, under date of May 13, 1955, Mr. Farrington wrote a letter to Mr. Guy A. Gladson and The Wilmington Trust Company, Trustees of the McNear Estate, offering to purchase a companion block of 26 per cent of the TP&W stock at the same price we understood the Pennsylvania and Santa Fe were offering; namely, $100.00 a share. The details of this offer, on behalf of the Rock Island, are more fully set out in the letter of May 13, 1955, a copy of which is in the Rock Island's files, the original of which was mailed to the Trustees.

[fol. 1687] Q. Did the Rock Island ever receive acknowledgment of that offer?

A. Yes. On May 16, 1955, we received an acknowledgment from the office of Winston, Strawn, Black & Towner, over the signature of Grier D. Patterson, on behalf of Guy A. Gladson, individual co-trustee of the estate of George P. McNear, Jr., a copy of which has been marked Exhibit H-79 for identification.

Q. Do you know whether or not the Santa Fe or Pennsylvania acquired knowledge of this offer prior to May 26, 1955?

A. The Santa Fe knew of it prior to that date, and I am informed that Mr. Gurley has so testified. As to the Pennsylvania, I do not know.

Q. What was the reaction of the Rock Island upon learning of the purchase by the Santa Fe on May 26, 1955, of all of the T. P. & W. stock?

A. That reaction is fully revealed by the correspondence between Mr. Farrington and Mr. Gurley following the 26th of May. Mr. Farrington wrote a letter to Mr. Gurley on June 16, 1955, a copy of which has been marked Exhibit H-80 for identification. You will note in this letter that there is a reference to a meeting on June 7 and a call from Mr. Gurley to Mr. Farrington when Mr. Farrington was in Fort Worth, Texas. This exhibit is a correct copy of the original carbon from our files, the original of which was sent to Mr. Gurley. I call your attention particularly to the paragraph beginning at the bottom of the first page, which [fol. 1688] reads as follows:

"As I told you, from the standpoint of our own protection we could not agree to the entrance of the Santa Fe into Peoria, either on their own or as owner in whole or in part of the T. P. & W.; I would be willing to go along with a proposition which would in fact be a partnership of either joint or multiple ownership and would assure the T. P. & W. continuing to function as an independent line in a neutral manner. Likewise, we would oppose vigorously the acquisition of the T. P. & W. by Mr. Heineman of the M. & St. L. or any partnership in which he or the M. & St. L., and possibly the Monon, might become involved, unless we were

permitted to become a party to such a combination, with sufficient voice to assure adequate protection of the interests of the Chicago, Rock Island and Pacific Railroad Company."

Under date of June 20, 1955, Mr. Farrington received a reply from Mr. Gurley, a copy of which has been marked Exhibit H-81 for identification. This is a correct copy of the original in our possession, signed by Mr. Gurley. I call your attention to the fact that in the first paragraph a letter dated June 13th is referred to. However, this is an obvious typographical error and should read "June 16th," as the letter of June 16th is the only letter Mr. Farrington had written previously to Mr. Gurley in regard to this transaction. Otherwise, I believe the letter speaks for itself. [fol. 1689] This letter in turn was acknowledged by Mr. Farrington's letter of June 21, 1955, a copy of which has been marked Exhibit H-82, the same being a true and correct copy of the original carbon in the files of the Rock Island, the original of which was sent to Mr. Gurley.

The next communication between the Rock Island and Santa Fe in regard to this matter took place on June 28, 1955, when Mr. Gurley wrote a joint letter addressed to Messrs. Heineman, Murphy, White, and Farrington. A copy of this letter has been marked Exhibit H-83 for identification, and is a correct copy of the original in our file which bears Mr. Gurley's personal signature.

The final letter of the series is Mr. Farrington's letter of June 30, 1955, which acknowledged Mr. Gurley's letter of June 28, 1955, and indicated that if it correctly stated the position of the Santa Fe, and the Rock Island was to be excluded from equal participation, the Rock Island would have to take action to protect itself. The action, of course, is that which we are now taking before the Interstate Commerce Commission: namely, the Rock Island's request for inclusion. A copy of this letter has been marked Exhibit H-84 for identification.

Q. Mr. Jenks, would you go into the basis for the Rock Island's decision a little more in detail?

A. The Santa Fe and the Rock Island compete as rail- [fol. 1690] road systems. The Santa Fe has its own lines from Chicago to the West Coast through Kansas City, and

its lines throughout the southwest. The Rock Island operates from Chicago to Kansas City and into the southwest where it has a connection to the West Coast through the Southern Pacific Railroad at Santa Rosa, New Mexico. We are highly competitive for business to and from the east through the Chicago and Peoria Gateways, and to and from the west through the Kansas City and southwestern gateways. Both the Santa Fe and the Rock Island connect with the T. P. & W. at its western end.

The Santa Fe has no operation into Peoria at the present time. I am aware that the Santa Fe does have a branch line from Eureka down to Pekin, but this does not afford any real competition in the Peoria area, as was acknowledged by Mr. Gurley in his testimony.

Peoria is very important to the Rock Island. While we compete generally with the Burlington, Milwaukee, North Western, Illinois Central, New York Central, Nickel Plate, Illinois Terminal, and T. P. & W. in and out of Peoria, it is a most important point to us. In fact, it is the fourth or fifth from the standpoint of revenue of any city on our line. We have also, of course, developed it into a major passenger point. As other railroads have dropped their passenger service into Peoria, we have taken up this burden so that today we afford the only real passenger service by rail in and out of this important city.

[fol. 1691] I have been speaking primarily of the Santa Fe rather than the Pennsylvania. That is because the Pennsylvania's influence, so far as we are concerned, does not extend west of Peoria, whereas we are in direct competition with the Santa Fe, Kansas City to Chicago, and if the Santa Fe is permitted to have control of the line between Lomax and Keokuk on the west end, and Peoria on the east, it means bringing the Santa Fe into this territory to compete through the Peoria Gateway, and this is competition we do not have today.

The entrance of the Santa Fe into Peoria will not provide any service not available today. It will not generate any traffic; it would merely divert, divide, and dilate traffic which is presently moving. This statement is made on the assumption that the applicants take no action beyond that indicated in their presentation before the Examiner here.

If any through passenger service or through freight service were inaugurated, or the operation changed as a result of this acquisition, then, of course, we would be presented with an entirely different picture, and one which might have a much greater and more serious impact on the Rock Island. [fol. 1692] We do not believe that the Santa Fe and the Pennsylvania should be permitted to enter this territory in any form without adequately protecting the carriers presently in the field. These railroads are two of the largest in the United States. The Santa Fe, with which we are in active competition, and the Pennsylvania, are not only very large railroads, but are also exceedingly wealthy. There is an additional point which should be borne in mind in regard to the resources of the Santa Fe. While a line like the Rock Island has to depend on revenues derived from rail operations for its continuance, the Santa Fe is not only favorably situated in regard to rail revenue, but it has large revenues from other sources. The Commission should be aware of these facts and should not consider this as an isolated case. Here is the Santa Fe Railroad which has made it a point in the past to have a short line from Kansas to Chicago and has enjoyed the advantage of that line. Now that it has become a wealthy railroad, it should not be allowed to pick and choose favorable locations which have been served by other railroads throughout the years. If the Santa Fe through its great wealth is permitted to enter desirable markets, retaining its short line and bypassing the less remunerative points, a railroad such as the Rock Island, which must depend solely upon its rail revenue, simply will not be able to survive and continue to provide service to those less desirable communities which have been bypassed.

[fol. 1693] Since there is no service which is required by the shipping public which will be provided by the Santa Fe and Pennsylvania, nor any service which could not be supplied by the TP&W independently of the Santa Fe and Pennsylvania, it seems to be that this Commission should give special consideration to the effect upon competing carriers. The impositions of conditions by the Commission as to routes and gateways, or voluntary statements by the Santa Fe and Pennsylvania, afford no adequate protection

to the competing carriers. The Santa Fe and Pennsylvania, should they each have 50 per cent of the ownership of this stock, would have complete control of its policies and management. They would elect the directors. The officers, in turn, are controlled by those directors. The only way effective protection can be assured to the carriers now in the field and the public they serve, is through equal participation by the Rock Island in the ownership of the stock. Otherwise, the TP&W inevitably will cease to be the neutral, independent railroad that it now is; and we would find the Santa Fe, to all intents and purposes, in our territory under the name of TP&W.

Q. Mr. Jenks, the Santa Fe and the Pennsylvania contend that ownership of the TP&W by more than two railroads—multiple ownership, they call it—would result in inefficient operation and unprogressive policies. Do you agree?

A. No. If the TP&W is to continue under present management as a separate and independent operation and [fol. 1694] neutral as to all its connections in solicitation and otherwise—all as the Santa Fe and Pennsylvania have promised, and as the Rock Island desires—then I cannot imagine why ownership by more than two stockholders would render it inefficient or unprogressive; nor can I see why the Santa Fe or Pennsylvania should object to participation in the transaction by the Rock Island and other competing connections.

Of course if the TP&W is not to be managed and operated with neutrality towards all its connections, but with the object of capturing traffic from those connections, then I can readily see why the Santa Fe and Pennsylvania would believe that "multiple ownership" would be "inefficient and unprogressive," and might even "spoil the broth."

Q. If the Rock Island were included in this purchase, what would be its position with respect to efficient operation and progressive policies?

A. It would cooperate in every way with the other owners, whoever they may turn out to be, to perpetuate and improve upon the present efficient operation of the TP&W. It would cooperate in building up the property and every

part of it to the end that the TP&W might become an even better and more prosperous railroad than it now is.

Our intervention involves the possible expenditure of four million dollars. That indicates the sincerity of the Rock Island's position. Four million dollars, or three mil-[fol. 1695] lion dollars, is a great deal of money to the Rock Island. I am sure that an investment of this size is every bit as great an incentive to us as six million dollars would be to the Santa Fe.

I do not believe that anyone would deny that the eastern half of the TP&W is entirely complementary to the Rock Island and necessary to it in the development of the Peoria gateway in which the Rock Island has so large a stake. While our volume of traffic may be smaller in number of cars through Keokuk than that of the Santa Fe through Lomax, this does not mean that it is a connection that we value less than the Santa Fe values Lomax. It is our service route from and to the west through the Peoria gateway. It is necessary to us to be able to compete on anywhere near equal terms. Certainly this very vital interest would compel us to have every bit as much interest in the continued healthy existence of the western half of the TP&W as the Santa Fe.

Q. By the way, back on page 7 of your statement where you were listing the names of the various railroads operating in and out of Peoria, the Rock Island is in competition with the M&StL there, too, isn't it?

A. Yes, definitely.

Q. Returning to page 13.

As part owner of the TP&W, what would be the Rock Island's position with respect to industrial development in Peoria?

A. I do not believe that anyone could deny that the Rock [fol. 1696] Island over the years has made a substantial contribution and has evidenced a very great interest in the development of Peoria, both as a gateway and as a local point; yet the Rock Island today has only ten acres of land in Peoria available for industrial development and that is subject to flooding. Consequently, it would be to our interest as a participant in the TP&W purchase and as a Peoria line to encourage, to the best of our ability, industrial de-

velopment in the City of Peoria and on the property now held by the TP&W for that purpose. There would be no conflict between Peoria and Chicago. As Mr. Carpi said, an industry usually has smaller areas in mind for alternative locations that would include both Chicago and Peoria. With our railroad laid out as it is, Peoria or Chicago is equally attractive as a producer of revenue and we would certainly like to see more traffic generated by the communities served by the Rock Island, and Peoria in particular.

Q. Mr. Jenks, you have directed most of your remarks thus far to the application of the Santa Fe and Pennsylvania. What have you to say in regard to the Rock Island's position in regard to the application of the M&StL to acquire sole ownership of the TP&W?

A. As indicated in Mr. Farrington's letter of June 16, 1955, the Rock Island feels it is compelled, in order to protect its interests, to oppose the acquisition of the TP&W by any railroad or combination of railroads unless it is [fol. 1697] included as an equal participant. Just as the Rock Island is in competition with the Santa Fe through the southwest, and more particularly, the Kansas City and Chicago gateways in relation to the TP&W, so we are in competition with the M&StL through the Twin Cities gateway and, in effect, through the Chicago gateway, and, of course, for traffic to and through the Peoria gateway. The extent of the traffic which is vulnerable to the M&StL will be shown in greater detail by our traffic witness. Just as with the Santa Fe and Pennsylvania, I do not believe that the imposition of restrictions by the Commission as to the maintenance of routes and gateways is adequate protection for the carriers with which the TP&W now connects, and with all of whom it now exercises an impartial neutrality. Again, the only adequate protection for the revenues and traffic, especially of a line situated as ours, is through equal participation. And in this connection I would like to say that if the Commission should decide to grant the M&StL application, the Rock Island believes that the Commission's order should not only require equal participation in ownership by the Rock Island, but that it should contain conditions requiring the continuance of the TP&W as a separate, independent, and neutral carrier.

Q. Would the general remarks you have made as to multiple ownership with respect to the Santa Fe-Pennsylvania transaction have similar application here?

A. Yes. And also having similar application are the [fol. 1698] statements I have already made that the investment of such a large of money in the TP&W provides not only a guarantee of the sincerity of our position, but a great incentive to develop this property to its greatest potentiality.

Q. There has been fear expressed by public witnesses in favor of the Santa Fe-Pennsylvania acquisition that acquisition by the M&StL might ultimately result in abandonment, or at least deterioration, of service on the western half of the TP&W. Do you have any comment on this?

A. If there are any questions in the mind of the shipping public as to the continued operation of the western half of the TP&W, the inclusion of the Rock Island would act as additional insurance in that regard because of our Keokuk connection. The statements I have made in regard to location of industri ould, of course, remain the same whether our inclusion results in either one of the cases.

Q. What then is the essential position of the Rock Island in regard to both of these applications?

A. We concur in the statements that have been made in this proceeding to the effect that the present management of the TP&W has been efficient and that it should be maintained in the operation of the property with its present officers and corporate setup. We believe that the preservation of the TP&W as nearly as possible in its present form will best provide that service which the shipping public has indicated it wants and needs. The inclusion of the [fol. 1699] various lines of railroad interested in the preservation of the several junctions of the TP&W will act as a further insurance of the preservation of the present service.

We believe that, whether the Santa Fe-Pennsylvania application or the M&StL application is granted, the Commission's order should require inclusion on an equal basis, or the opportunity to be so included, of not only the Rock Island and Nickel Plate, but every other connection of the TP&W so desiring. The Rock Island will pay its share of

the purchase price out of available cash, or will participate in any appropriate financing of the purchase price.

Q. Mr. Jenks, are you familiar with the fact that Mr. Gurley and again Mr. Symes have both stated that if any other railroads were included as a condition to their acquisition of the TP&W that they would have to consider at that time as to whether or not they would accept such an order?

A. Yes.

Q. Has the Rock Island determined its position if the Commission approves the application of the Santa Fe and Pennsylvania conditioned upon the inclusion of any other railroad and those applicants refuse to complete the acquisition subject to such a condition?

A. Yes.

Q. Similarly, if the Commission should approve the [fol. 1700] M&StL application conditioned upon the inclusion of any other railroad and the M&StL should refuse to accept such an order, has the Rock Island taken any position in regard to such an eventuality?

A. Yes.

Q. Would you please state what that is?

A. This morning this matter was considered by our Board of Directors and I am authorized to state that in either of such eventualities as you have referred to that I am authorized to state on behalf of the Rock Island that in the event the Interstate Commerce Commission authorizes the purchase of the capital stock of the Toledo, Peoria & Western Railroad Company by the Atchison, Topeka and Santa Fe Railway Company, the Pennsylvania Railroad Company and The Pennsylvania Company, and the Chicago, Rock Island and Pacific Railroad Company and other railroad companies and that thereupon The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company and/or The Pennsylvania Company decline to accept the inclusion of the Chicago, Rock Island and Pacific Railroad Company with other railroad companies in the said purchase, the Chicago, Rock Island and Pacific Railroad Company will purchase the said capital stock of the Toledo, Peoria & Western Railroad Company at $135 per share with one or more other railroad com-

panies and will take the necessary steps to effectuate said purchase. I am further authorized to make the same state-
[fol. 1701] ment with respect to participation of the Chicago, Rock Island and Pacific Railroad Company with the Minneapolis & St. Louis Railway Company in the purchase if the Minneapolis & St. Louis Railway Company would refuse to agree to the inclusion of the Chicago, Rock Island and Pacific Railroad Company and others in its purchase.

Mr. Cassell: If I can just complete this, Mr. Examiner, I will be completely through with his direct.

Exam. Albus: Very well.

Mr. Cassell: Would you please mark this for identification as the next exhibit?

Exam. Albus: H-85.

(Intervenor's, Rock Island, Exhibit No. H-85, Witness Jenks, was marked for identification.)

By Mr. Cassell:

Q. Mr. Jenks, I hand you a document which has been marked Exhibit H-85 for identification. Is that a copy of the resolution which you just referred to as having been adopted by the Rock Island board today?

A. It is.

Mr. Cassell: I will furnish copies to the other members here later in the afternoon, if I may, please.

OFFERS IN EVIDENCE

I offer Exhibits H-78 to H-85, inclusive, subject to cross-examination and tender the witness.

Exam. Albus: Very well.

Let the record show that Exhibits H-78 through H-85 are
[fol. 1702] received subject—

Mr. Lucas: Mr. Examiner, I would like to make an objection. I thought he said subject to cross-examination.

Exam. Albus: We will receive them after cross-examination.

Mr. Broker: Mr. Examiner, this is an appropriate time for me to make a statement, if I may.

Exam. Albus: Yes, indeed.

Mr. Broker: I have been authorized by our management to state that in the event the Commission approves the application of the Pennsylvania and the Santa Fe or of the M&StL subject in either case to the inclusion of the Nickel Plate, and then the applicants refuse to proceed to consummate the purchase, that the Nickel Plate is willing to join in the stock purchase on the basis of $135 per share with the Rock Island or any other connection of the TP&W on the understanding that any other connection may participate in the purchase on an equal basis. I'd furnish a board resolution to this effect along with that to be passed in March along with our participation in the M&StL application.

Exam. Albus: Very well, Mr. Broker.

Does that complete the direct testimony of Mr. Jenks?

Mr. Cassell: It does, sir.

Exam. Albus: We will take a 10-minute recess.

(Short recess.)

(The document described to be furnished by intervenor Nickel Plate.)

[fol. 1703] Exam. Albus: The hearing will please come to order. We will continue with the cross-examination of Mr. Jenks.

Mr. Thomas, please.

Cross examination.

By Mr. Thomas:

Q. Mr. Jenks, I understood you to say that Keokuk is your service route through the Peoria gateway from the west.

A. Yes, sir.

Mr. Cassell: I might interject there that we will have an operating witness on as our next witness who will explain more in detail concerning that service route.

Exam. Albus: Thank you very much.

Mr. Cassell: And how that operates.

Mr. Thomas: That will save a little time.

Exam. Albus: Very well.

Mr. Thomas: I will withdraw the question.

By Mr. Thomas:

Q. You indicated if you were to participate in the ownership of the TP&W you would be interested in helping to develop industries on the TP&W at Peoria.

A. Yes, sir.

Q. Has the Rock Island recently acquired an important industrial property in the Lake Calumet area around Chicago?

A. We acquired some property sometime ago. We have added to it small amounts from time to time.

Q. Was that the Pullman Railroad property?

[fol. 1704] A. Yes.

Q. Are you an owner of the Belt Line, Chicago Belt Line?

A. We are a part-owner.

Q. Isn't it true that you are trying to keep them out of that area?

A. There have been some conversations about it, no definite action as yet.

Q. Well, you haven't asked them in, have you?

Mr. Cassell: I think that is inappropriate to this case.

Mr. Broker: I think it is utterly irrelevant, Mr. Examiner.

Exam. Albus: All right, I will sustain the objection.

By Mr. Thomas:

Q. You mentioned that the Rock Island serves both the Chicago and the Peoria gateways. It also serves the St. Louis gateway, doesn't it?

A. Yes.

Q. You talked about the possibility of the Santa Fe-Pennsylvania ownership of the TP&W as a means of diverting traffic from the Rock Island, is that right?

A. Yes.

Q. Are you familiar with traffic solicitation work of the traffic departments of the various railroads? Have you had any experience in that field?

A. I have been spending quite a little time on that just recently.

Q. Just recently?

A. Yes, sir.

[fol. 1705] Q. I gathered from some of your testimony an implication that I don't think you meant to convey, that the Santa Fe doesn't serve a lot of unremunerative points. I think you would concede, wouldn't you, that the Santa Fe does serve a lot of unremunerative points just like a lot of other railroads?

A. Undoubtedly I was referring, I believe, in this portion of my direct statement you mention, to the Santa Fe having a direct line from Kansas City to Chicago. When that line was built, as I understand it, they could just as well have built into Peoria but they built the short route to Chicago. We have been serving Peoria for about a hundred years now.

Q. Does your route to Chicago go through Peoria?

A. Our route from where?

Q. Kansas City.

A. From Kansas City to Chicago, no, it does not go through Peoria, but a very important part of our railroad is the line from Bureau to Peoria.

Q. Have you any specific plans on the part of the Rock Island for helping the development of the TP&W if you should become part-owners?

A. We don't know yet whether we are going to become a part owner. We hope that we are. Undoubtedly there are many ways in which we can help the TP&W, but we do not expect to hurt other railroads in doing so.

Q. Do you think the development of the TP&W would [fol. 1706] hurt other railroads?

A. The development of the TP&W along the lines proposed by the Pennsylvania-Santa Fe application and the development of the TP&W along the lines proposed by the M&StL application would definitely hurt the Rock Island, and our traffic with it will have some evidence as to just how much. I believe from the testimony I have heard already here that it will do harm to other railroads.

Q. That wouldn't extend to the development of industry on the TP&W, would it?

A. I don't quite understand your question.

Q. That wouldn't harm other railroads, would it?

A. What wouldn't harm other railroads?

Q. Development of new industry on the TP&W.

A. No; I believe I stated in my direct testimony that we would be glad to help with the development of industry on the TP&W.

Q. That is the only thing you mentioned, is that right?

A. In what?

Q. In that line of thinking.

A. What is the only thinking I mentioned?

Q. The location of industry.

A. I mentioned the location of industries, yes.

Q. You didn't mention anything else?

A. I mentioned the location of industries, yes.

Q. You didn't mention anything else?

[fol. 1707] A. I mentioned quite a little, about 15 or 20 minutes of conversation there.

Mr. Thomas: That is all.

Exam. Albus: Mr. Lucas.

Cross examination.

By Mr. Lucas:

Q. Mr. Jenks, has the Rock Island had any recent acquisitions in which the Commission has imposed conditions upon them incident to the approval of any such acquisition?

A. I don't recall any.

Q. You have no personal knowledge since you went with the Rock Island in 1950 of any such situation?

A. I don't recall any now, no.

Q. In coming to the Rock Island, have you inherited any such situations that have come to your knowledge?

A. There may be some; I don't recall any specifically.

Q. But you don't know any as of now, to your personal knowledge?

A. Not specifically, no.

Q. In connection with your willingness to become a part owner here, your counsel, as you probably know, has agreed to certain conditions that have been put into the record.

A. For example, what?

Q. As to the maintenance of routes and gateways.

A. Oh, yes.

Q. Those conditions, if imposed upon you, were you to become a part owner, you would live up to them, would you? [fol. 1708] A. Oh, yes. We are anxious to preserve the TP&W as an independent carrier.

Q. Your offer or the resolution that sets forth the proposal to go in with one or more railroads, does that mean that the Rock Island is not considering purchasing this as a sole owner?

A. We are not considering purchasing it as a sole owner.

Q. Have there been any—

A. I believe that the Nickel Plate made a statement that they wished to go in with us, and I believe the Burlington has an application already in to that effect, so that automatically sets up three, and I understand the Wabash made a similar application, which would make it four.

Q. That is right. Has there been any conversation since these hearings started between you and any official of the Nickel Plate?

A. Yes.

Q. With reference to the possibility of joining on the purchase, such as covered by your resolution?

A. Yes.

Mr. Lucas: That is all.

Exam. Albas: Mr. Wheeler, please.

Cross examination.

By Mr. Wheeler:

Q. Mr. Jenks, have you talked to the trustees of the McNear estate regarding purchase of partial interest in the TP&W stock?

[fol. 1709] A. I mentioned a letter which was introduced in evidence from Mr. Farrington to the trustees of the McNear estate.

Q. That isn't the extent of the Rock Island efforts in that regard?

A. Yes.

Q. You make a good many references throughout your testimony, Mr. Jenks, to traffic, traffic considerations. Is

your testimony in that regard based on information that you obtained from a traffic witness who will follow you on the stand?

A. A traffic witness will follow me on the stand and will give you the details as to what we think our loss of traffic will be in the event the M&StL acquires the TP&W alone or in the event that the Santa Fe and Pennsylvania acquire the TP&W together.

Q. Mr. Jenks, what I am basically trying to get at is whether I should examine you on traffic or direct those questions to a traffic witness who will give in detail the breakdown of the possible erosion of business from the Rock Island in the eventuality of the approval of either transaction without our inclusion.

Mr. Wheeler: Is Mr. Jenks' testimony based upon information obtained from the witness who will follow?

Mr. Cassell: Essentially it must be based on the study that was made. He didn't make any individual and prolonged study; however, he has general knowledge of the [fol. 1710] competition which the Rock Island encounters from the various railroads operating in its territory.

Mr. Wheeler: Is that general knowledge, is that knowledge obtained from this witness that is to follow? That is what I am trying to get at.

Mr. Cassell: His general knowledge would not be, but as to any specific figures, it would be.

Exam. Albus: I suggest you reserve the traffic questions for the traffic witness, Mr. Wheeler.

By Mr. Wheeler:

Q. There is one point here I would like to ask you about, Mr. Jenks. On page 7 of your statement you say that "Peoria is a most important point to us, in fact it is the fourth or fifth, from the standpoint of revenue, of any city on our line." Now, when you said "revenue", to what were you referring?

A. Passenger and freight revenue.

Q. That is, passenger and freight revenue originating at that point?

A. Yes, originating and terminating.

Q. Originating and terminating?

A. Yes, sir.

Q. Would it include interchange?

A. It would include some. Actually what it is is a statement of the station earnings, which we make up every month, showing the station earnings of each of our princi- [fol. 1711] pal stations in the order of their importance.

Q. What would the Peoria station, what relation would the Peoria station bear to Chicago?

A. Chicago is first on the list.

Q. And what would the relationship be, ten to one or what?

A. No; Peoria's earnings would be much greater than that. I don't recall the exact figures, but I can get them very readily and give them to you.

Q. I would like to have them if you can furnish them. Could we also get those broken down as between freight and passenger?

A. Yes.

Q. What are the other cities that you refer to that would be ahead of Peoria?

A. Well, there is some variation each month in the relative standing. Kansas City is a very important point, Des Moines, sometimes Minneapolis is ahead of Peoria—generally it isn't, the Tri-Cities are quite often right up in the top rank.

Q. What about St. Louis?

A. No; St. Louis is generally farther down, below Peoria.

Q. Houston?

A. Houston would be below Peoria.

[fol. 1712] Q. Mr. Jenks, you refer to industrial development on the TP&W. As I gather, the most you expect to have would be a fourth interest in the railroads, isn't that correct?

A. It would appear that way, although the more that come in the better as far as we are concerned.

Q. But you would rather have an industry on your own lines rather than on a line of which you only own a fourth or less interest, would you not?

A. Naturally. But in many instances an industry wants to locate in a general certain area, if they wanted to locate

down in this area we'd certainly like to see them on the TP&W.

Q. But you'd rather see them on the Rock Island first?

A. Naturally.

Q. Even in this area?

A. Why, certainly. I mentioned we didn't have very much property, though.

Q. Your annual report for 1954 shows a substantial rental accruing on leases of land. Wouldn't that indicate that the Rock Island has substantial quantities of industrial property along its line that is available for the location of industry?

A. May I see the report, maybe I can tell better?

Q. Yes.

A. Yes, that is land that we have leased to industry. Some of those leases are, for instance, in station ground. Generally speaking, it is the lease of ground that is im-
[fol. 1713] mediately adjacent to the track, to the main line. For instance, the lease for a building or a coal yard or something like that, it might be a large station or a small station.

Q. Mr. Jenks, you made a comparison between the size and wealth and amount of traffic the Santa Fe has, revenues it derives annually, in comparison to the Rock Island, did you not?

A. Yes.

Q. Wouldn't you say that the M&StL was to the Rock Island in those terms what the Rock Island is to the Santa Fe?

A. That's a mathematical calculation that I haven't made. I can't say positively what such a ratio would be. The M&StL obviously is smaller than the Rock Island just as the Rock Island is smaller than the Santa Fe. I believe the Rock Island has some good divisions, our divisions generally aren't as good as some of our neighbors. The Santa Fe gets the very long haul and doesn't have quite the division worry about like a railroad like the Rock Island does that doesn't go all the way. The M&StL got pretty good divisions, I believe, when it was re-organized so as to keep it healthy.

Q. The Rock Island has been doing fairly well on its earnings on its common stock, has it not, since the war?

A. Yes, the Rock Island has been doing fairly well.

Q. I wonder if you could furnish for the record the statement of earnings per share from 1946 through 1955?

A. There is certainly no objection to that. I believe it [fol. 1714] was mentioned earlier that the Form A's with the various railroads would be put in evidence and put in the record. The record should be there.

Q. All right.

Mr. Cassell: Do you want that in addition to the Form A's which you may refer to?

Mr. Wheeler: I would like those additional years.

Mr. Cassell: '46 to '55?

Mr. Wheeler: Yes.

By Mr. Wheeler:

Q. What is the relative amount of business that you do at Keokuk versus Peoria?

A. Our business at Keokuk is quite a bit smaller than Peoria. Our traffic witness will have the detailed figures available for you. We hope that our Keokuk business will increase. We have just spent a lot of money in repairing our railroad from Eldon to Keokuk in recent years and now have a railroad down there which is good for about the same speed, I believe as the Pennsylvania make on their line to Effner.

Q. Mr. Jenks, on page 15 of your testimony, your last answer begins, "If there are any questions in the mind of the shipping public as to the continued operation of the western half of the TP&W," do you know whether or not such questions are in the minds of the shipping public?

A. I believe there was mention made in the hearing a number of times—I forget offhand by just what witnesses [fol. 1715] —statements about the possibility of taking up the western half of the TP&W. Possibly that was in connection with the M&StL. But we are certainly anxious that the western half of the TP&W be left in.

Q. You are aware of the statements on the record by the M&StL witnesses, are you not, with respect to the continued operation of that part of the line, are you not?

A. Yes.

Q. And your reference here was to the testimony that's been given in this proceeding?

A. Yes.

Q. Mr. Jenks, as I recall, and I don't locate it immediately in running through your testimony, you stated that regardless of who acquired the TP&W it ought to be continued under independent management?

A. Yes, sir.

Q. Did you hear the testimony of Mr. Schroeder with respect to savings in operations that would result from integrated operation of the TP&W with the M&StL?

A. I did not hear his testimony directly.

Q. Don't you believe—he testified that very substantial savings could be made by integrated operation, and that on an independent operation those savings could not be made, in substantial part, would you have any reason to disagree with that conclusion?

[fol. 1716] A. It is rather difficult for me to agree with it without making a detailed study. However, I do think that considerable economies and increased efficiency can be reached under independent operation, merely to absorb a railroad into another railroad does not necessarily mean that you can make very much greater economies. You can eliminate probably the general office, but a great many of the other things that you could do, when you absorb one railroad by another, you can still do under an independent operation.

Q. What sort of things are you talking about?

A. Like greater efficiency of your maintenance of way work, efficiency in your bridge work, your increased efficiency in the maintenance of cars, the repair of locomotives, better efficiency in transportation.

Q. Now, those items are items that have no relation to control one way or the other, do they?

A. Well, that's what I am saying that irrespective of—let me put it this way: I think you can make considerable economies with independent operation just as you may be able to make considerable economies if, for example, the M&StL takes over the TP&W.

Q. But the type of economies you are speaking of could be made only in the event that the present management has not accomplished them already, isn't that correct?

A. Oh, yes, that's absolutely true. But I have never yet [fol. 1717] seen a management that was so efficient that it could not be improved.

Q. But the type of economies to which you refer would have no relation to acquisition of control or be dependent upon—

A. (Interrupting) You mean are they possible?

Q. Yes.

A. Certainly they are possible.

Q. Independent of an acquisition of control?

A. Yes.

Q. Can you conceive that substantial further economies could be made by integrated operation of two properties, such as the M&StL and the TP&W that could not above and beyond those that could be accomplished of the kind that you have spoken of?

A. I suppose you could cut off some of your general offices, eliminate your general offices. Sometimes you can do that and sometimes you can't. Sometimes it is desirable to keep some kind of a general office, subgeneral office in a city, as important as this would be to the TP&W.

Q. Is that the only economy that you can think of that might be achieved by an integrated operation of two railroad properties previously—

A. (Interrupting) There are other economies such as operating locomotives over the two railroads, but you can do that even with independent operation. For example, on the C&EI and the L&N they ran their power through [fol. 1718] for quite a while, other railroads do it, there are all sorts of cases of that kind. The same way on repair power.

Q. Mr. Jenks, one of the things that I couldn't quite square with your answers to me is the fact that you have testified on your direct statement that top management at the TP&W is efficient?

A. Why, certainly. I think the management of the Rock Island is efficient but I think we can do a lot better than we are doing now. We hope to be improving all the time. I think the operation of the Santa Fe is efficient but I am sure that it can be made more so.

[fol. 1719] Q. Do you think that $135 a share is a rea-

sonable price for the Rock Island to pay for the stock of the T. P. & W.?

A. I think $135 a share for a portion of the T. P. & W. is a reasonable price in the sense that if we were not to pay that to get it, assuming that such would be permitted, we would lose a great deal more. In other words, our losses would be considerable, as our traffic witness will point out, in the event of M. & St. L. control, ownership and sole control of the T. P. & W., and our losses would be great in the event of Santa Fe and Pennsylvania joint control of the T. P. & W. We think it is quite worthwhile to pay for a part of the T. P. & W. to avoid that eventuality. And, after all, the T. P. & W. is a pretty good property, it makes money.

Q. Now, I believe the net income is around seven or eight hundred thousand dollars a year, which isn't too bad a return for an expenditure of about twelve million.

Q. How do the times earning ratio, how does the times earnings ratio for the T. P. & W. at $135 a share compare with the times earning ratio with most railroad properties?

A. I don't know. I haven't figured that one out.

Q. It represents primarily a protective insurance, then, so far as you are concerned?

A. Yes.

Mr. Wheeler: I have no further questions.

Exam. Albus: Mr. Broker.

[fol. 1720] Mr. Broker: No questions.

Exam. Albus: Mr. Davis?

Mr. Davis: No questions.

Exam. Albus: Mr. Hoag?

Mr. Hoag: One question.

Cross examination.

By Mr. Hoag:

Q. In regard to the Washington Job Protection Agreement in the event the Rock Island were successful in becoming a part owner of the T. P. & W. is the Rock Island agreeable that the Commission impose the Washington Job Protection Agreement on the employees?

A. I don't see that the Washington agreement would apply but in any event we have no objection to it.

Mr. Hoag: Very well.

Exam. Albus: Are there any further questions on cross-examination?

(No response.)

Exam. Albus: Redirect?

Mr. Cassell: None.

Exam. Albus: Thank you very much. You are excused, Mr. Jenks.

(Witness excused.)

Exam. Albus: Now, we will consider the introduction of exhibits.

Mr. Cassell: H-78 to H-85 inclusive.

[fol. 1721] Mr. Lucas: I have no objection to the authenticity of the documents but the testimony fails to show that they came to the knowledge of the Pennsylvania Railroad and I object on that ground.

Exam. Albus: Very well. The objection is overruled.

Let the record show the exhibits marked for identification H-78 to and including H-85 are received at this time.

(Applicant's Exhibits Nos. H-78 to H-85, Witness Jenks, were received in evidence.)

E. E. Foulks was sworn and testified as follows:

Direct examination.

By Mr. Cassell:

Q. Please state your name, address, and by whom you are presently employed.

A. My name is E. E. Foulks. My business address is 139 West Van Buren Street, Chicago, Illinois. I am employed by the Chicago, Rock Island and Pacific Railroad Company as Assistant Vice-president-Operating Department.

Q. What has been your railroad experience, Mr. Foulks?

A. I entered railroad service in June 1920 with the Santa Fe Railway, working as a clerk and telegrapher at various stations on their territory south of Albuquerque, New Mexico. In 1922 I transferred to the Coast Lines, a portion of the Santa Fe system which comprises the lines west of Albuquerque and Belen, New Mexico, serving as clerk, secretary to the superintendent, telegrapher-agent, car distributor, train dispatcher, chief dispatcher, transportation [fol. 1722] inspector, trainmaster, assistant superintendent, and division superintendent until March 1942, when I was ordered to active duty with the United States Army.

With the army I commanded a railroad operating battalion and a railway grand division of the Military Railway Service, Transportation Corps, in North Africa, Italy, France and Germany.

On returning to railroad service November 1, 1945, I was appointed Superintendent of Transportation of the Santa Fe system with headquarters in Chicago. I resigned from this position in March 1952 when I was appointed General Superintendent of Transportation for the Rock Island Lines. I held this position until October 1, 1954, when I was promoted to my present position, namely, Assistant Vice-president-Operating Department.

Q. Will you please describe the present service that the Rock Island affords in and out of Peoria?

A. Our railroad presently operates three passenger trains daily in each direction between Peoria and Chicago. In addition, there are two bus trips in each direction daily which are operated between Peoria and Bureau to provide connections at Bureau with through passenger trains either to or from Chicago and the West.

As to freight, we operate train 901 daily, except Saturday, from our Burr Oak Yard in Chicago to Peoria. This train departs from Chicago at about 8 p.m., arriving in Peoria at 5 a.m. the following morning. By having this [fol. 1723] early morning arrival, it permits us to begin working these cars immediately and have some of them placed during the morning and the bulk of them placed during the balance of the day. Traffic for Peoria, or for delivery to connecting lines at Peoria, received during

the day or loaded at Chicago during the day, is handled in this evening train with the early morning arrival which I have just described. Our train 902 leaves Peoria at 2:30 a.m. daily, except Sundays, and arrives in Chicago at 9:30 a.m., providing service for traffic originating in Peoria or received in Peoria from connecting lines for termination in Chicago, or delivery to connections at that point. By leaving Peoria at 2:30 a.m., it permits us to have assembled all the cars which have been loaded at the close of the business day. This departure shortly after midnight enables us to take delivery from the T. P. & W., P. & P. U., and P. T. at about midnight. We also make a late evening pull of certain industries in the Peoria area after the close of the business day.

Just as our train coming into Peoria is available for early morning working, similarly you will note that this schedule is set up not only to take care of all the business that has accumulated during the day, but also is set up to arrive at Chicago in time to be distributed to the various connections and make important outbound trains over connecting lines. Of course this train also handles traffic for delivery to connections at Joliet, Joliet being an important [fol. 1724] interchange point with the Michigan Central, E. J. & E., and G. M. & O.

On traffic coming from the north or northwest and from the west or southwest and moving over our lines down from the Twin Cities or east from Kansas City or Denver-Des Moines, we have train 908-909, which leaves Silvis at 10:30 p.m. daily. At Silvis we have a new modern retarder yard with a capacity of 4,372 cars. This yard is located approximately 1.4 miles east of the Tri Cities of Rock Island, Moline, and Davenport. This train arrives in Peoria at 5:20 a.m. the following morning. Again you will note that this train, by leaving Silvis at 10:30 p.m., is set to leave at a time which permits the taking of all the cars which have come in during the day; and similarly the arrival time in Peoria at 5:20 a.m. makes them available for working in Peoria with the opening of the business day. As I have said, this train handles traffic originating in the Twin Cities area or from connections in the northwest; from Denver, Council Bluffs, or western connections at

those points, as well as that moving over our own line from our western connection at Tucumcari, New Mexico, and from Arkansas, Oklahoma, and Texas origins. In the reverse direction we have train 910-911, leaving Peoria at 10:05 p.m. daily and due to arrive at Silvis, Illinois, at 2:30 a.m. This evening departure again is to accommodate the traffic which has been made available during the business day at Peoria. Most cars are made available for movement toward the end of the business day rather than in [fol. 1725] the morning so that an evening departure hour is best capable of the earliest possible movement of cars which are tendered to us by industries, and further provides an arrival time at our Silvis yard to permit forwarding of traffic in proper connecting trains routed to or via the Twin Cities, Denver, Kansas City, and Tucumcari Gateways.

In addition, we operate tri-weekly locals from Silvis over our line running through Cambridge, Galva, and Princeville to Peoria, which is generally known as the R. I. P. line. In addition to the scheduled trains which I have mentioned between Peoria and Bureau, we have extras in local service between Peoria and Bureau on a daily basis. Although these are primarily to provide local service for industries located in the area between Peoria and Bureau, that is to say for cars moving only between Peoria and the intermediate points, these trains do provide an extra service in making connections with freight trains moving through Bureau to or from the west, which, in some instances, permit expediting cars that are made available at the time these trains leave. By far, the greater part of the cars from the T. P. & W. at Peoria move to the northwest.

[fol. 1726] Q. What service does the Rock Island have in and out of Keokuk, Iowa?

A. We have a daily freight train from Eldon, Iowa, which departs from Eldon at 1:10 p.m. for Keokuk. This time of departure is set in order to afford a connection with our train no. 98 which handles perishables and other important traffic from California, Arizona, New Mexico and Texas origins. This train to Keokuk, which is train 1076, arrives at 5:15 p.m. for a close connection with

TP&W train 120, which is scheduled to depart at 6:44 p.m. The TP&W cut-off time set by the TP&W is 6:15 p.m. for forwarding in their train 120. However, the TP&W has been very cooperative in not adhering strictly to this cut-off, but has held its train to assure forwarding traffic secured from us in proper connection.

Westbound from Keokuk we have train 1077, which leaves Keokuk at 5:30 p.m. It takes care of the westbound business out of Keokuk which will be worked through Eldon, Iowa, for connections with our westbound train 91, which furnishes through freight service to transcontinental points. It also has a close connection at Kansas City for Texas, Oklahoma, and Arkansas destinations. I would like to call your attention to the fact that at the present time our schedules between Keokuk and Eldon are set up for four hours running time. Actually our freight running time is approximately two hours and thirty minutes. The present schedules were set up before the track improve- [fol. 1727] ments were made on our line between Eldon and Keokuk which permitted us to materially increase the maximum permissible speed. While the line improvements have materially shortened the running time on this line, we have left the schedule in its present form as it permits greater flexibility to effect meets. This permits us to hold longer for connections and still make the same delivery time in Keokuk or Eldon, as the case may be. The line from Keokuk to Eldon also extends on to Des Moines, Iowa, to provide freight service on traffic originating on our Denver-Council Bluffs-Des Moines line or on our lines north of Des Moines.

Q. You have outlined in some detail your scheduled freight service from Chicago, Silvis and Eldon to junction points with the TP&W. Do these schedules constitute a link in through transcontinental schedules comparable with other similar junctions and interchange?.

A. Yes, sir. The through service performed by the route in trains I have described, such as Kansas City to Keokuk via Eldon by use of the Rock Island, then TP&W from Keokuk and eastern connections, is a route providing comparable and competitive service to a route such as Kansas City to Lomax to eastern connections via Santa

Fe-TP&W, and, of course, both of these routes I have just mentioned would be in competition with the routes which the Santa Fe and Rock Island both have, using their own lines from Kansas City to Chicago for eastern con-
[fol. 1728] nections.

Q. Have you completed your description of the service in and out of Keokuk?

A. No. Certain of the important packers rotate their meat shipments between various serving railroads. As an example, each sixth weeks the Rock Island gets a substantial number of cars from the various packers at Kansas City and St. Joseph, Missouri. Part of this meat routes via Chicago and connections, and part of it via Keokuk and the TP&W. During the weeks when the Rock Island is handling the Kansas City and St. Joseph meat, we run an extra train leaving Eldon, Iowa, at 3:15 a.m. to deliver to the TP&W at Keokuk at 6:30 a.m., and the TP&W operates a close connection from this train. The TP&W is an extra train, just like our own, put on to handle this meat business. Their train is held for our arrival to handle this traffic. If there were sufficient business we would be glad to operate this extra on a regular daily basis rather than on a periodic basis as it is presently set up and this has been under consideration. As I have indicated, this is an extra train for the TP&W. It is competitive with the Santa Fe at Lomax and the Santa Fe is one of the lines which alternates in handling the meat, including that which routes via the TP&W.

Q. Are your presently scheduled trains both as to Peoria and those operating over the line into Keokuk handling full tonnage?

A. No. None of these trains either in or out of Peoria, or
[fol. 1729] in or out of Keokuk, have a full load. The Peoria trains have heavier loadings than the Keokuk trains. However, the trains in and out of Peoria, as well as the Keokuk trains, have additional capacity at the present time without increasing the size of the engine or the crew to haul substantially increased tonnage.

Q. If there was a falling off in tonnage on either the Keokuk or Peoria business, would this permit any operating savings?

A. No. We would still have to operate the same trains with the same crews and power to handle the business which remains. The effect of a diversion of traffic would be to increase our unit cost since our over-all costs would remain constant. We could not effect any road economies nor is there any terminal savings which we could effect without curtailing service and the business which would remain would require the service in its present form.

Q. As an operating man, are you at all familiar with the Rock Island relations with the TP&W?

A. Yes. My work requires me to know the nature of our interchange performance with the TP&W.

Q. What have you found that relationship to be?

A. The TP&W has always been most cooperative. We have found them neutral insofar as their various connections are concerned. As a specific example, when due to unforeseen operating circumstances if our trains are late [fol. 1730] into Keokuk, which occasionally happens, they have held departure of their trains to secure the business from us and endeavor to expedite the movement of their train to run off any delays which would otherwise have been chargeable to us, thus providing a dependable service route. This has been particularly important in our meat traffic. Sometimes these delays have been occasioned by operating problems, and at others due to late receipt of the meat at Kansas City.

Q. What could be done by a non-neutral operation on the TP&W in regard to the Rock Island connections, for instance, at Keokuk?

A. One of the easiest ways to dry up a connection is to strictly observe a cut-off time or set such a close connection that it cannot be effected regularly. Just take our meat traffic, the meat shippers are very sensitive to the effecting of connections on their routing. If for any reason proper connections were not made at Keokuk and eastern junctions, I am sure that this traffic would be taken away from us and transferred to other routing rather than the Rock Island. So here it would be a very simple matter to effectively dry up the Rock Island traffic by merely setting too tight a connection on scheduled operations and then to observe the cut-off time rigidly or to fail to hold on even

the present schedules, or in the event the TP&W held for the connection but did not make a special effort to run off this delay in order to effect delivery at the other end of the line—this would have the same final result.

[fol. 1731] Q. What is the nature of the connection of the Rock Island and TP&W at Keokuk?

A. We have interchange tracks with the TP&W directly in front of the passenger station at Keokuk. These are located less than one-half mile from our yard. From the interchange track, the TP&W then hauls them over the bridge and onto their main line east into Peoria. The close proximity of our yard to the interchange point at Keokuk makes a very expeditious move. The TP&W's operating timetable no. 18, effective April 10, 1955, as well as prior issues I have seen, shows the principal or main line of the TP&W as extending from Peoria yard to Keokuk, this being their second subdivision.

Q. Have you seen Exhibit 6 as attached to the application of the Santa Fe and Pennsylvania to acquire the TP&W, this being the map of the TP&W line?

A. Yes.

Q. Have you any comments to make on that in this record?

A. Yes. The map shows a heavy red line extending from Effner to Peoria to LaHarpe; and then up to Lomax, and a small line from LaHarpe down to Keokuk. This would seem to indicate that the Pennsylvania and Santa Fe intend to make the main line of the TP&W from Peoria to Lomax, and the light line, LaHarpe to Keokuk, would become a branch or secondary line. As I have just said, their main line, according to their timetable, is into Keokuk. This same timetable shows a third subdivision extending [fol. 1732] from LaHarpe to Lomax, which I would consider to be in the nature of a branch connecting with the main line at LaHarpe. Also, in the TP&W annual report for 1954, Item 411 reports the line into Keokuk as main line and the line into Lomax as branch line.

Q. What is the situation as to interchange at Peoria?

A. The Rock Island yard and TP&W yard are approximately two and one-half miles apart. Shortly after arrival of our freight trains 901 and 909, which I have previously

mentioned, we deliver traffic routed to or via the TP&W during the morning to permit forwarding of such traffic in their train 22 due to depart at 12:01 p.m. for the east, or their train 121 due to depart at 1:00 p.m. for the west. We also make a delivery to the TP&W about 9:00 or 10:00 p.m. The TP&W regularly makes a delivery to us at Peoria during the afternoon, usually around 3:30 or 4:00 p.m., which permits forwarding of such traffic in our trains 910 or 902 that night. Here again I have described the cooperation existing with the TP&W's handling of traffic from Keokuk. They have worked closely with us by forwarding traffic we deliver to them in first trains and in getting important traffic to us in time for our forwarding in our evening trains. The Rock Island has also worked closely with the TP&W to provide schedule service on traffic received from them. If the TP&W were not strictly neutral, they could cause cars to be delayed which would discredit routing via our respective lines.

[fol. 1733] Q. Have you made any check as to the daily average interchange of loads and empties between the Rock Island and the TP&W?

A. Yes, a check of our interchange records with the TP&W for the months of April, July and October 1955, shows that at Keokuk, Iowa, we received and delivered a daily average of 23 loaded and 13 empty cars during April; 19 loaded and 10 empty cars during July; and 17 loaded and 5 empty during October. At Peoria we received and delivered 26 loaded and 18 empty cars during April; 18 loaded and 13 empty cars during July; and 18 loaded and 10 empty cars during October.

Q. If a car came to the Rock Island which showed shipper routing of RI-TP&W and an eastern connection of the TP&W, but did not have any junction specified so that the Rock Island was free to move it through either its Keokuk connection or its Peoria connection with the TP&W, how would it move?

A. A car moving through Kansas City, Denver, or west thereof, routed RI-TP&W, thence an eastern route without junction specified, would be delivered to the TP&W at Keokuk rather than Peoria due to the fact that the Keokuk-TP&W route is the service route. If we were to

handle the car through Silvis and into Peoria, and thence to the TP&W, it would result in delay to the traffic and I am sure would result in that shipper selecting other routing.

And I would like to add in there, I was familiar with the instructions we had in effect at Kansas City on any [fol. 1734] traffic routed Rock Island-TP&W without junctions shown. I heard Mr. Coulter's testimony last Wednesday, and in order to verify the instructions that were in effect, I checked with our yard forces at Kansas City who have the instructions, and all understand that the traffic will be delivered at Keokuk due to it being the service route.

In my opinion, one of our major operating problems on all the railroads today is to devise ways and means of reducing delays in terminals, and particularly at interchange points. Our patrons are becoming more critical of the loss of time with their freight traffic in getting it through the terminal areas. It seems to me that this factor is going to make a route such as that provided by our line in connection with the TP&W at Keokuk of ever-increasing importance.

[fol. 1735] Q. How much delay would there be on through traffic moving via Peoria versus Keokuk?

A. I would say at least one day in arrival at destination, and possibly more.

Q. Did you hear the testimony of Mr. Symes in regard to the Pennsylvania route through Terre Haute versus Effner-TP&W route into Peoria?

A. Yes.

Q. Would you say that your disability on the route through Terre Haute versus Effner-TP&W route into Peoria?

A. Yes.

Q. Would you say that your disability on the route via Eldon-Silvis-Peoria as against the TP&W through Keokuk was substantially the same?

A. Yes. Our circuity is substantially the same and, as I have said, this is not the service or competitive route and takes a day or more in transit time.

Some mention has been made by the applicants' witnesses, Mr. Symes among others, of the fact that the Rock

Island has two lines into Peoria, one of which is our principal line from Bureau and the other a branch line from Colona into Peoria. This we usually refer to as the RIP line. The distance from Silvis to Peoria via Bureau is about 116 miles, and via the RIP line, about 86 miles. However, this RIP line is strictly a branch line on which speed is restricted to a maximum of 30 miles per hour and, [fol. 1736] on portions of the line, 20 miles an hour. It is not a service route. We only operate tri-weekly service in one direction on this line, primarily to handle the local communities.

Q. What direction is that tri-weekly service?

A. It is eastbound, from Silvis to Peoria, the crews returning in local service via Bureau to Silvis on the main line.

Q. What is the nature of the Rock Island connection with the TP&W at Keokuk?

A. We have a line, which we usually refer to as the KD line, which extends from Des Moines to Keokuk. This crosses our Kansas City-Rock Island line at Eldon. It is about 64 miles from Eldon to Keokuk, and it is a stub end line very similar in that respect to the Pennsylvania line which connects with the TP&W at Effner. It is essential to the Rock Island to retain this connection with the TP&W at Keokuk for while we do not have the volume of business interchanged at Keokuk between our line and the TP&W that the Santa Fe has at Lomax—I might say we wish we did—it is my belief that if we lost any of the traffic moving in either direction between our line and the TP&W, we would still have to operate train service to Keokuk with business destined to that point and would still maintain the 64 miles of railroad from Eldon to Keokuk.

Mr. Fitzgerald, our maintenance engineer, will testify as to the improvements and expenditures we have made in [fol. 1737] recent years on this line to permit us to improve it as a through service route.

If we had to support that line on the freight that would remain without the interchange, or if the interchange were diminished, it would be a real hardship and the retention of the line in service could become burdensome.

As I see it, our interest in the TP&W at Keokuk is as important, or more important to us than the Santa Fe with their connection at Lomax as that is a connection on their main line and they would not be confronted with a problem of maintaining a branch with diminished traffic such as we would have.

Further illustrating the relative importance of Keokuk to the Rock Island versus Lomax to the Santa Fe, is the fact that the Rock Island has had an interchange with the TP&W ever since it went into Keokuk, which, as I understand, is from about 1878, whereas the Santa Fe went right by the TP&W and had no connection with it until Mr. McNear asked for one in 1927, although the Santa Fe went by it from 1887 on.

Q. In regard to refrigerator cars, both empty and loaded, would you tell us how the line that is moving a refrigerator car pays the owner for the movement of that car?

A. The handling railroad pays the car owner a rate per mile for each mile the refrigerator car moves on its line whether loaded or empty. The present mileage rate is four cents per mile on RS type refrigerator cars, which is [fol. 1738] the principal type of refrigerator car moving. RBs are three and one-half cents a mile.

Q. Are you familiar with the amount of industrial property the Rock Island has in Peoria?

A. Yes. We have only ten acres of property which is available for industrial development. It is located down by our roundhouse and is subject to flooding.

Q. The Rock Island is competitive with the M&StL between Peoria and the Twin Cities of Minneapolis and St. Paul?

A. Yes.

Q. Now you have given the service in and out of Peoria as far north as Silvis. What is your service route between the Twin Cities and Peoria?

A. This traffic would move over our line from Silvis through Cedar Rapids, Manly, thence to Inver Grove yard, which is located just south of St. Paul.

Traffic from Peoria arriving at Silvis on train 911 at 2:30 a.m. would move in train 99-98, leaving Silvis at 8 a.m., for arrival at Inver Grove 11 p.m. the same day, and is de-

livered promptly to Minnesota Transfer for close connection with the Great Northern or Northern Pacific.

In the reverse direction, traffic for Peoria would be forwarded from Inver Grove on our train 915, due to depart at 6:15 a.m. This train, which also is operated as a close conection with traffic from the northwest, would arrive at [fol. 1739] Silvis at 8:15 p.m. the same day for forwarding in 908-909 to arrive in Peoria at 5:20 a.m. the following morning.

Q. Mr. Foulks, who sets the cut-off time for deliveries to and from the TP&W in Peoria?

A. Well, the TP&W sets the cut-off time for traffic we deliver to them for forwarding in certain trains, and we have a set cut-off time for receipt of traffic from the TP&W, or any other railroad in Peoria, for forwarding in our outbound train.

Q. You have discussed the possible difficulties as to your interchange at Keokuk if the TP&W were not neutral. What would be the situation at Peoria under similar circumstances in effecting connections at Peoria?

A. Generally speaking, our freight service from competitive points with the M&StL, such as Mason City, Albert Lea, Minneapolis-St. Paul, is comparable with that provided by the M&StL. It is my observation that the greater portion of traffic we interchange with the TP&W at Peoria is traffic to or from that territory, I mean by that territory the Northwestern territory, or connections to and from the northwest. Here again, as I have pointed out at Keokuk, the cooperation between our lines has been excellent. The TP&W has been very good in protecting through service, each of us, when necessary, holding our freight trains to protect the through service. Under a changed managerial policy, if the TP&W became a part of a line competitive with ours up to the Twin Cities, it is [fol. 1740] only natural that the owning line would give preference to its own traffic and possibly create cut-off times or schedules in connection with ours which would not provide comparable service to that which we enjoy today under neutral ownership.

Mr. Cassell: You may cross-examine.

Exam. Albus: Mr. Thomas, please.

[fol. 1741] Cross examination.

By Mr. Thomas:

Q. Isn't that meat traffic that you referred to divided up by the shippers to spread the business among a number of railroads?

A. That is my understanding.

Q. Do you think they'd give a greater share to one railroad if they found out it was using its control of another railroad to make the service less?

A. I am very sure that any railroad that doesn't provide proper schedule service will lose the business because we have had that happen.

Q. Don't you think when shippers divide business that way they would retaliate against a railroad by its control of another railroad to cut that line out of the service?

A. I couldn't say—

Q. (Interrupting) And connecting lines?

A. I couldn't say what the shippers policy would be. I know particularly the packers will not tolerate any schedule failures.

Q. You mentioned the map which showed the line of the TP&W from Lomax to Effner as a heavier line than the line from Keokuk from LaHarpe.

A. That is right.

Q. How does the traffic move over the TP&W when you think of it in volume?

[fol. 1742] A. I believe there has been evidence submitted in the case to show a greater volume at Lomax than at Keokuk.

Q. Isn't it many times greater?

A. I believe that evidence was in the case.

Mr. Cassell: I will ask counsel, that map prepared to show volume of traffic?

Mr Thomas: It reflects that to some extent in a through route.

Mr. Cassell: Is there any indication of that in your application?

Mr. Thomas: It is in the record here.

Exam. Albus: All right, next question, please.

By Mr. Thomas:

Q. You say that Keokuk is your service route from the west and southwest?

A. On traffic moving through Kansas City, yes.

Q. Why does a substantial volume of that move through Peoria for interchange with the TP&W there?

Mr. Cassell: I object to that. There is no such indication in this case that that is true.

Exam. Albus: Read the question, please.

(Question read.)

Exam. Albus: You may answer.

Mr. Cassell: Mr. Examiner, that is assuming a fact that is not in evidence, and a fact that is exactly contrary to the fact, if it were in evidence.

[fol. 1743] Exam. Albus: The objection is overruled.

A. According to my best information the traffic we exchange at Peoria is primarily that from the Northwest. The traffic that is interchanged at Kansas City is an interchange from Keokuk. There may be a car through error or a later version that might be routed through Peoria. But that traffic routed through Kansas City without a junction shown would be delivered to the TP&W at Keokuk.

By Mr. Thomas:

Q. Is it only the Kansas City traffic that you route through Keokuk?

A. That off the Kansas City line because on the other lines the other route is a better service route.

Q. Is that true as to traffic from Des Moines, Iowa?

A. That would depend on when the traffic was available there. We operate one train a day in the morning out of Des Moines over the so-called KD line, and if it were available for that it would move via Keokuk, otherwise it would move via Silvis.

Q. You referred to these instructions that were issued to your people to route via Keokuk when the junction wasn't named in the waybill.

A. That's right.

Q. Did you ever advise the TP&W that that was being done?

A. I am quite sure they were familiar with it, certain of their people were.

Q. What ones?

[fol. 1744] A. Oh, I think their traffic department is.

Q. When did you issue those instructions?

A. Well, they were in effect as far as I know when I went to the Rock Island. They have been effective ever since I have been with the line.

Mr. Thomas: I have some questions along this line but I will save them for the traffic witness.

Mr. Cassell: We will have that split for you.

Exam. Albus: Very well.

By Mr. Thomas:

Q. You spoke of the line extending from Eldon to Keokuk and improvements and expenditures that have been made on that line. It was in pretty bad shape, wasn't it, before these improvements were made?

A. That's my understanding. I didn't see it prior to that time. Mr. Fitzgerald will testify as to that.

Q. Weren't the speed limits pretty low?

A. As I say, I wasn't familiar with that. Mr. Fitzgerald can testify to that.

Q. Did the TP&W complain to you about the service over that line?

A. Not since I have been with the Rock Island.

Q. Are you certain of that?

A. The only complaint that I recall was the fact that they wanted us to operate a second train daily there. We didn't feel we could justify it.

[fol. 1745] Q. Are you sure that no complaints were made about the service under the existing schedules?

A. Not to my knowledge.

Q. When were these changes in that track, the improvements?

A. I would prefer that Mr. Fitzgerald would cover that.

Mr. Cassell: He will be our next witness, Mr. Thomas.

Mr. Thomas: That is all I have.

Exam. Albus: Mr. Lucas, please.
Mr. Lucas: I have no questions.
Exam. Albus: Mr. Wheeler.

Cross examination.

By Mr. Wheeler:

Q. Mr. Foulks, how does your traffic move from Minneapolis to Peoria?

A. It moves through Manley, Iowa, and then over the land through Waterloo.

Q. Will you take this slowly, I want to see if I can follow this.

A. Through Waterlook, Cedar Rapids, at West Liberty it joins the east-west line and comes into Silvis on that line, thence from Silvis through Bureau and then into Peoria.

Q. What is the distance of that route?

A. Oh, I'd have to check it. I can't recall all of them. I can tell you in just a minute.

Q. O.K.

A. That would be about 450 miles, 448 miles.

[fol. 1746] A. Approximately.

Q. Can you give me the distance from Minneapolis to Des Moines to Keokuk?

A. Yes, sir. By Des Moines and Keokuk it would be approximately 410.

Q. So that Cedar Rapids route is circuitous as against the Des Moines route, is that not correct?

A. It is longer but it is a better service route due to the operation of freight trains, scheduling of the freight trains in that territory.

Q. What part of the route is better, the route between—isn't the route between Minneapolis and Des Moines as good as the one between Minneapolis and Cedar Rapids?

A. Physically it is, yes.

Q. What about the route from Des Moines into Keokuk, how does that compare with Cedar Rapids into Peoria?

A. It isn't quite as good a railroad, particularly that part between Des Moines and Eldon, Iowa.

Q. Now, you said in your testimony that a car moving from Kansas City-Denver west thereof would encounter

delay if it were routed through Silvis into Peoria instead of routing via Keokuk?

A. That's right.

Q. Supposing the routing were by Bureau instead of Silvis, would there be any delay?

A. Well, the car actually would move via Bureau. It [fol. 1747] moves from Silvis through Bureau to Peoria.

Q. Well, I thought you were distinguishing between Bureau and Silvis as being two different lines?

A. If I did it was not intended to imply that way.

Q. How much delay would be involved—how much farther is it to Peoria from Kansas City via your Bureau line as against Keokuk?

A. From Kansas City to Peoria?

Q. Yes, sir.

A. About 45 miles further.

Q. Now, the Kansas City-Bureau would be on main line all the way, would it not?

A. That is right, but you move through a large terminal there, and you have a very close connection to effect between the scheduling of the train that normally would handle that type of traffic.

Q. Well, now, you are speaking only of meat traffic now?

A. No. I am speaking of perishable traffic from the Pacific Coast, as an example. We block this that is routed via the TP&W at Eldon, that's taken off and that train can leave there 15 minutes after the train on the main line arrives. At Silvis there is a different problem there of making a very close connection with a train that would get it into Peoria. If the car moved out of Kansas City on our train 98, we delivered it to the TP&W at Keokuk, it would be in Peoria around midnight. If we handled it around via Silvis it would be in about 5 a.m. (sic) Perishable you prob- [fol. 1748] ably could effect that connection, but if it was other than perishable I think you'd add another day to it because I don't think you can get the train humped at Silvis in order to effect that close connection.

Q. I was speaking of Bureau rather than Silvis.

A. Well, I use Silvis because that's the yard where the train is made up, but the freight train that I described that is the expedited train to Peoria operates from Silvis to

Bureau thence to Peoria. We don't operate it over that so-called RIP line.

Q. Then you can meet a fast schedule from Kansas City into Minneapolis through Bureau?

A. Wait a minute, Kansas City into Minneapolis?

Q. No, into Peoria through Bureau, pardon me.

A. No, I say if we made the same connection, taking the car moving out of Kansas City, and if it were perishable and we handled it through Silvis, Bureau, into Peoria it would arrive about five hours later than if we cut it out at Eldon, moved it to Keokuk and the TP&W handled it into Peoria. If it were other than perishable I think it would be a day longer than that.

Q. And what did you say the difference was again there, about 45 miles?

A. Approximately 45 miles.

Q. The terminal at Chicago has been referred to fre-
[fol. 1749] quently in this record as being subject to congestion at times, is that correct in your experience?

A. You mean all the railroad terminals in Chicago?

Q. Yes, sir.

A. I think that happens.

[fol. 1750] Q. Why is it you can move your traffic down from Minneapolis through Bureau without encountering this big delay at Silvis that you encounter on your traffic moving from Kansas City?

A. Well, I would say that that is a matter of scheduling. In the first place, you have to schedule the train out of Kansas City when you have the traffic available to move out of there, and as I have explained at Eldon we have this very close connection where they simply lift off the few cars that are in this train 98. At Silvis that train is subject to some icing. It is an emergency icing station. Some perishables are billed to ice there, and then the train has to be humped because it has Chicago traffic, it has various destinations traffic in there. The other train coming down from the Twin Cities is made up a little differently and it is scheduled to provide this connection between the train arriving from Cedar Rapids and the train that goes to Peoria.

Q. So that it is a problem of scheduling and the original makeup of the train?

A. That is right, when the traffic is available to move, when you can schedule the train.

Q. Don't you have the same problems with respect to when the traffic is there to move regardless of what origination points you use?

A. That is true.

Q. And when you say, on page 13, that your Eldon, [fol. 1751] Silvis, Peoria route takes a day or more in transit time than moving from Eldon to Keokuk, that derives from the same facts, is that correct?

A. That is what I was trying to describe, yes.

Q. Now, the distance from Eldon to Peoria via Keokuk is not substantially less than that via Silvis, is it?

A. About 45 miles.

Q. That would be going to Bureau, would it?

A. That's right. If you want to figure the other line, why, it would be about 25 miles.

Q. You could cut that down, cut down that differential, could you not, by improving the track between Colona and Peoria?

A. If there were sufficient traffic potential to justify the expenditure, I imagine it could be done.

Q. Just as you have speeded up your route between Eldon and Keokuk?

A. Yes, sir.

Q. The surest route is not always the best or the fastest route, is it?

A. Not necessarily.

Q. Mr. Foulks, if you were assured of the same service that you are receiving from the T. P. & W. today, wouldn't that satisfy your primary problems, primarily the problems that you have outlined here from an operating standpoint?

A. Well, I don't know how such assurance could be given and continued. It might be given and continued for a week [fol. 1752] and then changed, as I see it.

Q. Well, assume with me that you could get that assurance and it did continue, wouldn't that take care of most of your problems?

A. From strictly an operating standpoint I assume, yes.

Mr. Wheeler: I have no further questions.

Exam. Albus: Mr. Broker?

Mr. Broker: No questions.
Exam. Albus: Mr. Davis?
Mr. Davis: No questions.
Exam. Albus: Mr. Hoag?
Mr. Hoag: No questions.
Exam. Albus: Is there any further cross-examination?

(No response.)

Exam. Albus: Now, Mr. Cassell.

Redirect examination.

By Mr. Cassell:

Q. Mr. Foulks, in response to some of Mr. Thomas's questions you mentioned how traffic might get through the Peoria Gateway. Isn't there a possibility that there might be a shipper routing with a junction specified, too?

A. That is entirely possible.

Q. Isn't that done on occasions?

A. Yes, sir.

Q. On this train which would come through Silvis and Bureau to Peoria with a 5 o'clock arrival, 5 a.m., do you know whether or not that misses or meets the train to the [fol. 1753] east out of Peoria on the T. P. & W.?

A. That should make the T. P. & W. east connection out at noon but that would be 12 hours later than had we delivered it at Keokuk, if it were going to an eastern point.

Q. So you would not only have the five-hour difference at Keokuk, but you would also have the further twelve-hour delay?

A. You would have at least a 12-hour delay, yes, sir.

Mr. Cassell: That is all.
Exam. Albus: Are there any further questions?
Mr. Wheeler: Let me ask one further question.

Recross examination.

By Mr. Wheeler:

Q. Is your train, Mr. Foulks, out of the Twin Cities—
A. (Interrupting) 915 is the train number.

Q. (Continuing) —is that competitive with the M. & St. L. schedule?

A. We think it is fairly competitive with it.

Q. What is the time differential?

A. I think there is about four or five hours difference in time. I believe the M. & St. L. train is due out at 3 a.m. I think you are due in here about 11 o'clock at night, something like that. We get out at 6:15 a.m. and we are due in at 5 o'clock the next morning.

Q. 5:20 is that?

A. I would say about that, yes.

[fol. 1754] Mr. Wheeler: That is all.

Exam. Albus: Are there any further questions of Mr. Foulks?

(No response.)

Exam. Albus: You are excused, sir. Thank you very much.

(Witness excused.)

Mr. Cassell: Mr. Fitzgerald.

[fol. 1755] J. T. FITZGERALD was sworn and testified as follows:

Direct examination.

By Mr. Cassell:

Q. Will you please state your name, address, and by whom you are employed.

A. My name is J. T. Fitzgerald. I reside in Chicago, Illinois, and I am employed by the Chicago, Rock Island and Pacific Railroad Company as Maintenance Engineer.

Q. How long have you been with the Rock Island?

A. Forty-two years.

Q. All that time in the Engineering Department?

A. Yes.

Q. As Maintenance Engineer, what are your duties?

A. I have charge of the maintenance of roadbeds and tracks over the Rock Island system.

Q. How long have you been Maintenance Engineer?

A. Since January 1, 1950.

Q. Prior to that, what kind of work were you doing?

A. Construction engineer, division engineer, roadmaster, resident engineer on construction, assistant engineer, and when first employed I also worked as timekeeper and B&B carpenter for a very short period.

Q. Then in your various capacities you have had an opportunity to become familiar with the Rock Island physical plant?

A. Yes.

[fol. 1756] Q. As Maintenance Engineer, do you have charge of the programming and of the work on relaying of rail and ballasting of track?

A. Yes.

Q. Are you generally familiar with the Rock Island's line of railroad between Eldon, Iowa, and Keokuk, Iowa?

A. Yes.

Q. Would you describe in a general way the Rock Island Railroad between those two points?

A. The Rock Island track between Keokuk, Iowa, and Eldon, Iowa, is a single track line approximately 63 miles in length.

Q. What has been done on the railroad recently in the way of maintaining or improving it?

A. In the years 1954 and 1955, the 65-pound rail was relaid with second-hand 90-pound rail, using reformed bars which improved that railroad considerably. The balance of the rail between these two points is 80-pound rail. With the 65-pound rail it was necessary to reduce the speed of trains somewhat as trouble had been encountered with some breakage, particularly in the joint bar. Since the rail has been relaid the permissible speed on this line has been increased to 40 miles per hour. At the time this was 40 miles per hour; it's later been increased to 45 miles per hour. The line has very good tie conditions. The tie, rail, and ballast conditions have been considerably improved since 1950.

Q. Do you know anything about the condition or carrying capacity

[fol. 1757] is such that they will permit the use of main line power and full loading of cars.

Q. From what I understand, then, this road now is all laid with 80- and 90- pound rail?

A. Yes, and there is only 15 miles of the 80, all the rest is 90.

Q. How does the permissible speed for freight trains on this line compare with the line of railroad from say through Eldon itself going to Chicago?

A. On the main line, Eldon to Chicago, a high speed line, there is a permissible speed for freight trains of 50 miles per hour. The permissible speed between Eldon and Keokuk is 45 miles per hour. So this is within 5 miles an hour of the top speed permitted on the railroad for freight trains.

Q. Do you know what the average speed for freight trains on the Rock Island is?

A. Yes, the average speed is 61.6 miles per hour. That was the average. This statement was made from the statistics of the railroad.

Q. Mr. Fitzgerald, aren't you kind of inflating our speed there a little bit? You said 61.6.

A. 21.6.

Q. What can you say about the grades and curvatures on this line?

A. The grades and curvatures on this line are very good.

Q. What is the ruling grade on this line?

[fol. 1758] A. The ruling grade is 0.92 per cent eastbound, 1.37 per cent westbound, which permits hauling average loaded train of 33 cars eastbound or 27 westbound, using a single 1,500 horsepower diesel engine. By adding another diesel unit, number of cars per train can be doubled. In this connection this ruling grade is only two miles long for eastbound and 7,800 feet for westbound. Generally, the eastbound grade is a water grade.

Q. Can you say how many cars are moving as a rule in the present trains between Eldon and Keokuk?

A. Yes, on an average there are about 20 cars each way in freight trains now operating.

Q. From your foregoing testimony then I take it that the railroad has a capacity for hauling considerably greater tonnage and longer trains than are now being moved?

A. Yes.

Q. Have you any continuing program as to this particular piece of railroad?

A. We intend to continue to maintain the line in its present maintained condition and, in addition, to make some improvement in drainage in the vicinity of a rock out location where some trouble has previously been experienced with slides. There is also involved some maintenance on the Des Moines River, which will require some additional rock placed which is just normal maintenance for this line of railroad.

Mr. Cassell: You may cross-examine.

[fol. 1759] Exam. Albus: Mr. Thomas, please.

Cross examination.

By Mr. Thomas:

Q. What was the speed limit before this 90-pound rail was laid?

A. Twenty miles per hour generally.

Q. Wasn't it less than that in some places?

A. In some places, yes, that is true.

Q. Didn't that delay your service?

A. You couldn't run as fast for that distance.

Q. Weren't there delays?

A. There were some—yes.

Q. It was really in pretty bad shape, wasn't it?

A. Just the rail. Generally it was the rail condition. We had old 65-pound rail which has, as you know, a small joint and the trouble was experienced with those joints. By relaying practically all of our troubles were overcome. Of course there was some improvement made in surfacing.

Mr. Thomas: That is all.

Exam. Albus: Mr. Lucas, please.

Mr. Lucas: I have no questions, Mr. Examiner.

Exam. Albus: Mr. Wheeler.

Cross examination.

By Mr. Wheeler:

Q. Was this new or relay rail that you put in there?
A. It was relay rail.

[fol. 1760] Mr. Wheeler: I have no further questions.
Exam. Albus: Mr. Broker.
Mr. Broker: No questions.
Exam. Albus: Are there any further questions?
Mr. Hoag: No questions.
Exam. Albus: You are excused, Mr. Fitzgerald. Thank you, sir.

(Witness excused.)

Mr. Cassell: May we go off the record, please?
Exam. Albus: Off the record, please.

(Discussion off the record.)

Exam. Albus: On the record.
This case is adjourned until tomorrow morning at 9:00 o'clock in the Carrousel Room of this hotel.

(Whereupon, at 5 p.m., an adjournment was taken until 9:00 a.m., Tuesday, February 14, 1956.)

[fol. 1761]

BEFORE THE INTERSTATE COMMERCE COMMISSION

Finance Docket No. 18991
Finance Docket No. 19086

[Title omitted]

The Carrousel Room,
Pere Marquette Hotel,
Peoria, Illinois.

TRANSCRIPT OF HEARING—February 14, 1956.

Met, pursuant to adjournment, at 9:00 a.m.

Before: Paul C. Albus, Examiner.

APPEARANCES:

(As heretofore noted.)

[fol. 1763] PROCEEDINGS

Exam. Albus: The hearing will please come to order.

I think the first thing we will do is mark the exhibits to be presented through Mr. Bruce.

Mr. Cassell: If we may please.

I believe the first exhibit is to be numbered H-86.

Exam. Albus: That is correct.

(Intervenor's, Rock Island, Exhibit No. H-86, Witness Bruce, was marked for identification.)

Mr. Cassell: For the convenience of the parties you will find an index of the exhibits. The first exhibit, which is the train schedules, will be 86?

Exam. Albus: That is correct.

Mr. Cassell: The second exhibit which is a picture of the exterior of the new jet rocket is 87.

Exam. Albus: All right.

(Intervenor's, Rock Island, Exhibit No. H-87, Witness Bruce, was marked for identification.)

Mr. Cassell: The third exhibit which is an interior picture of one of the new coaches 88;

The fourth exhibit a copy of the union depot time table in effect on January 1, 1912 H-89;

The next exhibit, which is a copy of an item from the magazine "Trains" for December 1955 H-90;

The next exhibit being a news item appearing in the [fol. 1764] Keokuk Gate City for November 15, 1955, H-91;

The next exhibit being an item in the Peoria Journal Star, appearing on June 5, 1955, H-92;

The next being an item in the Peoria Journal Star, appearing on December 30, 1955, H-93;

The next, an item in the Peoria Journal Star appearing on July 8, 1955, H-94;

The next a reproduction of the Peoria Journal Star article of July 9, 1955, H-95;

The next a reproduction of an editorial appearing in the Keokuk Gate City, July 16, 1955, H-96;

The next, an item appearing in the Keokuk Daily Gate City on January 19, 1956, H-97;

And the last Patronage on Peoria Rockets for the last ten years H-98.

(Intervenor's, Rock Island, Exhibits Nos. H-88 through H-98, inclusive, Witness Bruce, were marked for identification.)

Mr. Cassell: Off the record, please.
Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

I. C. Bruce was sworn and testified as follows:

Direct examination.

[fol. 1765] By Mr. Cassell:

Q. Please state your name, address, and by whom you are employed.

A. I. C. Bruce, my business address is Room 723 La Salle Street Station, and I live at 461 Woodlawn Avenue, Glencoe. I am employed by the Rock Island Railroad as General Passenger Traffic Manager.

Q. Would you mind stating briefly what your duties are, and what your railroad experience has been?

A. I started out with the Texas & Pacific Railroad 39 years ago and have been with the Rock Island since 1917, except for the time when I was in service during World War I. I began my railroading in the Passenger Traffic Department in Fort Worth, Texas, with the Texas & Pacific, and have been in the Traffic Department of the Rock Island ever since I came over. From 1920 to 1926 I was not only assigned to the Passenger Department, but also to the Freight Traffic Department in Texas, and as such worked as a Freight Traffic solicitor. I have been General Passenger Traffic Manager since October 14, 1953. In that position I have over-all charge of the Rock Island's Passenger Department. Prior to becoming General Passenger Traffic Manager, I was devoting my time primarily to sales and

service. Most of my experience has been in sales and service rather than on the technical rate side. The Passenger Department under my direction and supervision is divided into a number of different functions. We have one section which handles the matters relating to mail, baggage, and [fol. 1766] express. Another section of our Passenger Department devotes its time to the technical matters of rates and divisions; and then we have the sales and service section.

Q. Are you familiar with the proposal before the Commission?

A. Yes.

Q. Mr. Bruce, would you please describe the Rock Island passenger service to and from Peoria, going back to the very beginning and bringing it up to the present time.

A. The Rock Island has been operating passenger service in and out of Peoria for approximately 100 years. The Peoria and Bureau Valley Railroad was constructed just before 1854. It never operated in its own right, but was leased by the Rock Island for 999 years, beginning on April 14, 1854. On November 7, 1854, the Rock Island operated its first passenger train into Peoria. This was an excursion train which had originated at Chicago. The line was formally opened for regular passenger service from Peoria to Chicago and with connections to the balance of the system on February 1, 1855. At the time this service was opened by connections at Bureau, service was afforded with the Rock Island trains operating to and from the West. The Rock Island had begun operations out of Chicago in 1852 and had reached the Mississippi at the Tri-Cities in 1854. It is one of the highlights of our history that we had the first bridge of any character across the Mississippi. We [fol. 1767] were into Kansas City with passenger service by 1879. It appears we began our Peoria operations with one train each way each day. Our Peoria service has continued without interruption down through the years. At the present time we are operating two round-trips a day with Rocket service into and out of Peoria to Chicago, and in addition we have a bus operating between Peoria and Bureau, giving three round trips a day, which makes connections with trains coming to and from the West and

Chicago to afford additional service. Our Peoria Rocket service is set up to afford the maximum utility to Peorians particularly with an eye to affording what might be called commuter service to and from Chicago. Accordingly, our first Rocket leaves Peoria at 7 a.m. and is into Chicago at 9:40 a.m., an elapsed time of two hours and 40 minutes for a distance of 161 miles. Our last Rocket back to Peoria leaves Chicago at 7 p.m. and gets into Peoria at 9:40 p.m. As you will see, this gives an opportunity to have an entire business day in Chicago with both schedules going and coming at convenient hours. The Rocket trains are equipped with a diner so that the patron may eat his breakfast, luncheon, or dinner on the train for his greater convenience. I should also point out here that these schedules not only afford the traveler an opportunity to spend an entire business day in Chicago, but also to provide connections through the Chicago gateway with major trains operating in all directions on other railroads. While the foregoing are our [fol. 1768] principal passenger carrying trains, we have another train which is important to Peoria, namely, our trains 21 and 22. These are particularly important because of the mail and express service they provide. For instance, train 1 leaving Chicago at 11:55 p.m. and train 21 leaving Bureau at 3:30 a.m. provide a 5 a.m. arrival at Peoria in order to afford early morning delivery of mail and express traffic. From Peoria, our train 22 leaves Peoria at 12:01 midnight, connecting with train 2 at Bureau, arriving in Chicago at 5 a.m., affording the Peoria people early morning mail and express delivery to Chicago and for connections to the East. I have set out the six train schedules, the six bus schedules, and the two trains I have just mentioned, which are primarily mail and express trains although they do, of course, have coach service as well, on my exhibit marked H-86 for identification.

Q. Mr. Bruce, you have mentioned your Rocket service in this testimony you have just completed. Would you mind describing that in a little more detail?

A. Yes. The Rock Island was one of the first to acquire what was then new lightweight, streamlined, high speed passenger equipment, together with diesel operation. Our first train was acquired September 17, 1937. This was our

Peoria Rocket. In other words, the first train of this type which we acquired and which is one of the first of its kind in the country was put into service for the benefit of Peorians before we had similar service anywhere else on the system. This train was very well received and has enjoyed [fol. 1769] good patronage ever since its inauguration. This is the Peoria Rocket which is still in operation today except, of course, it has had replacement and expansion over the original cars. Today it consists of a diesel engine normally four coaches, and a parlor car with a dining-car as a separate car. On week-ends and holidays when additional traffic is anticipated, this is expanded by from two to four additional lightweight, high speed coaches. The coaches on this train, as I have said, are of the new type, high speed, lightweight, and equipped on the inside with what has been the latest in seating comfort for passengers. The seats are divided so that each passenger, in effect, has his own seat which is adjustable for three positions, and has a foot rest. The dining-car is equipped to serve complete meals to 32 people at one time. The parlor car has the usual accommodations found in the highest type equipment of this kind and also has drawing-room accommodations. This train, which was put in for practically the sole benefit of Peorians, represented an investment of $553,040.

Q. Is there anything in the way of new or different equipment for the Peoria service?

A. Yes, and I would like to talk about it right here. The Rock Island has purchased a Talgo type, lightweight, streamliner which is being placed in our Peoria service about February 1, replacing the present Peoria Rocket. [fol. 1770] This will be the first train of this type placed in regular daily service by any railroad in the United States. Here again we are following our policy of giving our Peoria friends the newest and best possible transportation. There will be a slight improvement in our Peoria schedules when this train goes into daily operation. We propose to make the turn of the morning train, which is to leave Peoria at 7 a.m. within a period of 45 minutes of Chicago, which will have this train back in Peoria at 12:50 p.m. The afternoon Rocket will leave on the same schedule as our present afternoon Rocket, namely, 3 p.m.

That schedule was arrived at by several personal visits by me to Peoria, meeting with the Peoria Chamber of Commerce and the Peoria and Pekin Transportation Club, as well as leading citizens of Peoria in order to determine just what schedule suited them best. On the new schedule, the afternoon train will arrive at Chicago at 5:35 p.m., will be turned immediately, and the early evening schedule from Chicago will leave at 6:30 p.m. instead of 7 p.m. as at present. This train will arrive back in Peoria at 8:50 p.m. instead of 9:40 p.m. as now, which will enable our Peoria friends to have a complete evening at home. This last change in our schedule again was made at the particular request of the Peorians so that they could have a complete evening at home. My exhibit marked H-87 for identification shows a picture of the exterior of the new Jet train and my exhibit marked H-88 gives an interior shot of one of the [fol. 1771] coaches. This new train is being purchased at a cost of about $750,000. This train was tailor-made for the Peoria-Chicago run.

Q. Mr. Bruce, have you been able to accommodate all those who wish to travel in and out of Peoria with the service you presently have available?

A. Yes, as I have already said, our present Rocket service is tailored specifically to meet the needs of Peorians, and, as I have mentioned, the new schedules for the new Jet Rockets again are set up to meet the wishes of the Peorians, and, as I have shown, we are making some changes over the present schedules for the sole reason that they were requested by the Peoria travelers. The four coaches and parlor car on week days have an excess capacity for those presenting themselves so that I know that we are providing adequate service on those days, and if there is any need for additional service, we can, of course, put on additional cars as the occasion demands. The same is true on week-ends. We put on additional cars to accommodate additional patrons on holidays. It has always been our policy to provide all of the service required by Peorians on all occasions down through the years. I am, of course, aware that there have been isolated instances when we have had no advance warning and where unusually heavy loads have presented themselves where we have not been able to find a seat for every passenger, but those cases are exceedingly rare, how-

ever, and are all due to the fact that they come as a com-
[fol. 1772] plete surprise for which we have had no time to provide the additional equipment. As an interesting comment on our policy of providing all of the service required by Peorians, I should like to point out the fact that we have maintained our passenger service into and out of Peoria down through the years, improving it and providing the latest available equipment, and we have taken care of the passengers which formerly had other service available to them which has since been discontinued. My exhibit marked H-89 for identification is a copy of a Union Depot timetable in effect on January 1, 1912. Those in Peoria know that the old Union Depot was just south of the Rock Island Depot and they also know that at the present time there is not a single passenger train operating in or out of that station. Yet on January 1, 1912, there were 116 trains per day operating in and out of that station. Among others, I call your attention to the trains which were operating to and from Chicago. I call your attention to the schedules of the Toledo, Peoria and Western, which are shown about six inches from the top. On the left-hand side they show four schedules with service to Chicago, and on the right-hand side they show five schedules with service to Chicago. The Toledo, Peoria and Western has no passenger service of any kind today. At that time it afforded its passenger service to Chicago by operating its own passenger trains via TP&W to Chenoa and the Alton to Chicago. In 1868, company owned palace sleepers were being operated via TP&W to Chicago, and on January 12, [fol. 1773] 1869, the first pullman sleeping cars were operated from Peoria via TP&W to Gilman, thence Illinois Central to Chicago. In 1880, the Wabash took control of the TP&W and the IC refused to handle through cars from Chicago to Gilman. Through cars were then operated via the Wabash from Forrest. In 1885, the TP&W was released from control of the Wabash, service was then performed TP&W Chenoa, thence Alton to Chicago. An actual date of discontinuance of this service has not been located; however, from local sources, it is indicated that it was on or about September 1926. Then there are the Chicago and Alton Railroad schedules, which, you will note, sets itself up specifically as the "Chicago Line," now the Gulf, Mobile

& Ohio. All of these schedules shown by the Alton have long since been discontinued and the Rock Island, of course, has provided the service. Of the 116 trains that served the Peoria Union Station, all have been discontinued. Of all these services, only two remain, namely, a CB&Q motor car which terminates at a small office near the Hiram Walker Distillery, and a New York Central train which terminates at Pekin, Illinois. The CB&Q also operates three bus trips from their office to Galesberg, Illinois. On the other hand, the Rock Island from its Fulton Street station now has six services inbound and six outbound, as compared with four in 1912. This shows that the Rock Island has provided the service for the benefit of Peoria which has been discontinued by the other carriers.

[fol. 1774] Q. Mr. Bruce, is the Peoria Rocket service at present earning its way?

A. With our present volume of traffic we have been operating at a profit on an out-of-pocket basis. For these six trains we are averaging $2.67 per train mile.

Q. What would be the effect on the earnings of these trains by the diversion of any substantial volume of these passengers?

A. This figure which I have just given you of train earnings is based on an average loading of 42,628 persons per year, plus head-end traffic. The Peoria-Chicago one-way coach ticket costs $3.77 and a round trip $6.80. The one-way first-class fare is $5.27; the round-trip first-class fare is $8.80; parlor seat one way 95 cents. Practically all of our Peoria passengers are for round-trips as they both go and return through the Rock Island service. This means that for practical purposes we can assume that each passenger taken out of Peoria represents the value of a round-trip ticket to and from Chicago. I am aware, of course, that there are some passengers who have only a local ticket to some intermediate point, but, on the other hand, there are many passengers who have tickets for beyond. It would only take a reduction of 60 passengers per day to reduce this profitable operation to a nonprofitable one on a bare out-of-pocket basis.

Q. Mr. Bruce, what has been your expectations for the future?

[fol. 1775] A. We have anticipated that we would continue to enjoy at least our present patronage. This is evidenced by the fact that we are just placing in service the new Jet Rocket which I have mentioned previously. If we could not look forward to a continued patronage at least as great as that which we have been enjoying, we could not justify the purchase of the new equipment nor could we have maintained in service a train like our Peoria Rocket.

Q. Mr. Bruce, have you had any occasion to concern yourself about the maintenance of the present volume of traffic?

A. Under the conditions under which we have been operating in recent years, I have no concern. We, of course, compete with private automobiles, and to a more limited extent the buses, and to a certain extent with the airlines. We have assumed that we will more than hold our own competitively with the inauguration of our new Jet Rocket. However, with this case which this Commission is hearing today an entirely new element is being introduced which gives us very grave concern and, should it materialize in a way in which we fear, it would jeopardize the service which we give to Peoria. By that I refer to the possible introduction of a new passenger line to and from Peoria, or the diminution of freight revenue which this line now enjoys.

Q. What is the basis of your concern, Mr. Bruce?

A. First, I should like to emphasize again that my state- [fol. 1776] ment about the number of passengers it would take to convert this from a profitable to an unprofitable run was based solely on a bare out-of-pocket basis. This line, of course, is used by both passenger and freight service. If, for any reason, the freight revenue which this line now enjoys was reduced substantially so that the line would have to depend upon the passenger earnings for any portion of its maintenance, supervisory or other costs not carried in the bare out-of-pocket passenger figures, but supported by the freight service, our passenger operation of course, would be in trouble. The passenger operation out of Peoria could not exist by itself. Mr. Davidson will testify as to the possible freight consequences of this acquisition, and so I am merely calling attention to that factor now. As a passenger man I am immediately con-

cerned with the potential loss of passenger traffic, as well as head-end revenue, the head-end traffic, of course, being a part of the passenger department earnings. By head-end I am referring to the mail, express, and baggage which are carried on the passenger trains. While I have understood that the Santa Fe and the Pennsylvania, and I should say that it is primarily the Santa Fe we are concerned with, have stated that they do not intend to inaugurate passenger service via the TP&W, at the same time the Santa Fe has made statements, and I have particular reference to quotations from its president, which indicate to me that they apparently intend to inaugurate passenger service some [fol. 1777] time after this acquisition, if it is approved.

Q. What is that based on concretely?

A. My Exhibit H-90 is a copy of an item taken from the magazine, "Trains," December 1955 issue. The item began on page 6 and is part of a section of the magazine entitled, "Railroad News and Editorial Comment" by David P. Morgan, its editor. I wish to call your attention to that portion which purports to give quotations from an interview with Mr. Gurley, president of the Santa Fe, particularly the following questions and answers:

"'What about transcontinental passenger trains operated via Peoria?

"'That would be a major job. It would be cruel to hold out any hope now,' said Gurley."

This same purported conversation as written up in a news item appearing in the Keokuk Gate City, a newspaper published in Keokuk, on the 15th of November, as shown by my Exhibit H-91. Similar newspaper statements have been appearing from time to time. On June 5, 1955, there was a comment in the Peoria Journal Star which I have reproduced as my Exhibit H-92; I call your attention to the caption, "Passenger Train from Santa Fe appears in Peoria." The article is about an inspection trip being made by Santa Fe and Toledo, Peoria and Western officials. I call your particular attention to the next to the last paragraph which refers to remarks of Mr. Coulter, who is now president of the Toledo, Peoria and Western, and who, I [fol. 1778] understand, is to be retained as president by the Santa Fe and Pennsylvania if their acquisition is suc-

cessful: "Coulter declined comment on the possibility of Santa Fe passenger trains serving Peoria, but agreed it was an interesting speculation not beyond accomplishment."

In the Peoria Journal Star, the lead article for Friday, December 30, 1955, was captioned, "Future of the Toledo, Peoria and Western." The next to thy last paragraph reads as follows:

"Santa Fe-Pennsylvania connection through Peoria via the Toledo, Peoria and Western is an opportunity this area is not likely to see again. Some Peorians are even speculating on the possibility that it might open the way to future transcontinental passenger service through Peoria."

This editorial is reproduced as my exhibit H 93. On July 8, 1955, appeared a feature article in the Peoria Journal Star which is reproduced as my Exhibit H 94. Among other things, the article says, "No passenger service is involved in the immediate transaction."

On July 9, 1955, appeared another under the byline of Leslie B. Ernest, Journal Star staff writer, which said:

"To the question of whether Peoria is to soon realize its long cherished hope of being located on a transcontinental railroad line with direct passenger service to both coasts, both railroad presidents were affable but adamant.

"'Careful consideration,' they said almost in unison, 'will [fol. 1779] be given to passenger service if the I.C.C. application is approved.'

"But both Gurley and James M. Symes, President of the Pennsylvania Railroad), were positive in asserting that routing of passenger trains through here over the tracks from the Pennsylvania terminal at Effner, Indiana, and into the Santa Fe at Lomax, Illinois, appears to be 'impractical in the intermediate future.'" This is exhibit H 95.

My Exhibit H 96 is a reproduction of an editorial appearing in the Keokuk Gate City for Saturday, July 16, 1955. It mentioned transcontinental trains and, among other things, states, in speaking of the acquisition: "Passenger as well as freight service should be enhanced." Of course, the Toledo, Peoria and Western has not had any passenger service for many years so if the Toledo, Peoria and Western passenger service is to be enhanced, it would have to be through some new service. While all of these

statements I have referred to deny any immediate inauguration of passenger service, they all leave the implication that it is not only to be hoped for, but anticipated as a result of the proposed acquisition.

Q. Would it be at all feasible for the Santa Fe in some manner to inaugurate or participate in passenger service in and out of Peoria?

A. Yes. This can readily be done as may be seen from the application which was filed by the Santa Fe and Penn- [fol. 1780] sylvania in this case. Attached to the application as Exhibit 6 is a map which shows the Toledo, Peoria and Western and its connections with the Santa Fe at Lomax, and again at Eureka, Illinois. The Santa Fe has nine trains operating to and from Chicago and the West over its line and through Lomax. The Rock Island has only two trains—Chicago to Kansas City and the West. Santa Fe could very well reroute two or more of those trains so that the route would be Chicago, Streator, Ancona, Eureka, where it would join with the Toledo, Peoria and Western though Peoria, and, out at Lomax on to the Santa Fe main line and, of course, from the West in the reverse direction. This rerouting would only add 22.2 miles to the Santa Fe mileage between Kansas City and Chicago. The Santa Fe is already the short line, Kansas City to Chicago, they having a mileage of 451.1. The Rock Island mileage, on the other hand, is 495. It would give the Santa Fe a mileage of 146 between Peoria and Chicago as against the Rock Island's 161 miles. In addition, as you can see from this exhibit attached to the application, the Santa Fe would only have the interference of Streator and Joliet between Peoria and Chicago so that its schedules could be very fast. Any schedules inaugurated by the Santa Fe between Chicago and Peoria would be high competitive with those of the Rock Island. The Santa Fe would have this advantage: That these would be trains which would be operating with very little additional cost since there would be only a rerouting involved with very little additional mileage. Ac- [fol. 1781] cordingly, any patronage they picked up would mean additional net revenue, whereas the Rock Island trains operating in and out of Peoria depend substantially on Peoria for their continued existence. I do not believe

that any trains operated by the Santa Fe through Peoria in this manner would generate any additional traffic since we provide so many schedules in and out of Peoria, but that it would merely mean a diversion and a dividing of traffic. Accordingly, if any patrons were picked up by the Santa Fe it would mean a reduction of patronage to the Rock Island. With the trains of the type the Santa Fe would probably reroute through Peoria it would be inescapable that they would pick up patronage in an amount sufficient to reduce the Rock Island below the profitable level I have heretofore referred to. Now I have talked about the Peoria to Chicago service in particular, but we would also have other traffic which would be very seriously endangered by any such rerouting. The Santa Fe today operates through Chillicothe as its nearest point to Peoria and affords no direct connection. I am aware, of course, that some people today drive up to Chillicothe to make use of the Santa Fe service to and from Chicago or to the West. This competition does not concern us, but if it were a direct service out of Peoria it would have a very damaging effect to the Rock Island revenue and consequently to the service we could make available. Peorians travel not only to and from Chicago, but they travel to and from the West. At [fol. 1782] the present time, because of our more convenient connections, we enjoy very favorable patronage for the long haul to the West. If the Santa Fe were to reroute trains through Peoria, it would mean a diversion of these long haul passengers.

Q. Is there any other reason why you are concerned about the proposal before the Commission?

A. Because of the foregoing facts, I would be greatly concerned about the acquisition of the TP&W by the Santa Fe jointly with the Pennsylvania without our inclusion without regard to any of the statements I first mentioned. The approval of the application as proposed, would place our entire Peoria passenger operation in jeopardy. In my position as head of the Rock Island Passenger Department I am particularly concerned because of our current investment in new equipment for the Peoria-Chicago run. Since the Santa Fe would have the ability to reroute trains through Peoria, and since it has a large number of trains

over its main line through Chillicothe, any number of which would be available for such diversion, and since it is a large and wealthy railroad with resources and equipment capable of giving us the most intense sort of competition, I feel strongly that if it had this opportunity and the ability to exercise this invasion, it would so imperil our operation that I could not have recommended, for instance, the purchase of the new equipment which we are just placing in operation.

Q. Mr. Bruce, is there anything further you care to say [fol. 1783] about the Rock Island service?

A. Indicative of the Rock Island's desire to serve Peoria is the fact that we have only recently refurbished our passenger depot. No other railroad since the disappearance of the Union Station and the Illinois Traction Depot has any passenger terminal in Peoria. I would like to also mention the fact that not only have we renovated our depot recently, but it is the first rail terminal in this country to have drive-in ticket selling facilities whereby the prospective passenger can transact his entire business without leaving his automobile. Also, for the convenience of our patrons, we are at present working on providing for parking space for those who wish to ride our trains at a convenient location near our depot. This, of course, is to be furnished as a courtesy to these patrons. Finally, I wish to re-emphasize the fact that if a competing carrier were to skim off some of the more lucrative long haul passengers either to the West Coast or other distant points, or to Chicago, which might be done through this proposal now before the Commission at a relatively low cost, it would place an impossible burden upon the Rock Island to continue to provide the over-all service it now affords and upon which Peoria has been depending. My Exhibit H-98 shows the patronage on the Peoria Rockets for the last ten years. You will note that after the war there is an increase for a while, and then as automobiles became more available after World War II, and with their ever increasing registrations, [fol. 1784] we have experienced a continuing falling off in patronage. I might say here that from my experience and observation in the railroad passenger business generally, our falling off in patronage of these Peoria Rockets has

not been as server as has been experienced by the industry generally. To me this indicates that our trains are serving their purpose very well and are well received in Peoria. However, it is because of this declining patronage due to competition with the private automobile and services already in the field that I view with particular alarm the possibility of dividing the passengers now available to us with another rail carrier. It also emphasizes the fact, as I have said previously, that there is no possibility of generating additional traffic, but only dividing that which is now available. The diversion, concerning which I have been testifying, might also extend into the mail and express patronage we now enjoy. I have mentioned the schedules we have set up on our trains 21 and 22. Again, I do not believe that there is any possibility of generating additional head-end business; that is, the mail and express into and out of Peoria, and an additional carrier will but bilute and divide this. This again will mean that we might not have enough revenue to support a train such as 21 and 22. Certainly they could not exist on their passenger revenue which is presently almost nonexistent. In passing, I should like to point out the fact that although these trains to and from [fol. 1785] Peoria are relatively heavily loaded as trains go, but a very small diversion of patronage can convert them from profitable trains to a losing proposition due to the fact that they are run in such short haul traffic. The maximum haul for the Peoria Rocket is, of course, the entire distance from Chicago to Peoria, or 161 miles. Even if the patron is going on to New York, we still only get revenue for the 161 miles. Because of the relatively small revenue per passenger it is necessary that the trains be heavily loaded in order to protect their earnings.

Q. The Rock Island and Santa Fe both operate out of the same station at Joliet for service between Chicago and Joliet, do they not?

A. Yes.

Q. However, they use different trackage between those two points, and different Chicago stations?

A. Yes.

Q. Does the Rock Island provide special commuter service between Chicago and Joliet?

A. Yes. We operate 25 commuter trains in and out of Joliet every day which operate to Chicago, and various intermediate points, and 17 trains on Saturdays, and 12 on Sundays.

Q. Is this operation generally profitable or unprofitable?

A. It is a burdensome and unprofitable operation.

Q. Does the Santa Fe operate any suburban trains between Joliet and Chicago?

[fol. 1786] A. No.

Q. Mr. Bruce, will you please refer to page 8 of your prepared testimony. In the answer you have given there you say there is no passenger service of any kind today on the TP&W. Would you elaborate on that a little bit, please.

A. The TP&W operate no regular schedule passenger trains and they own no passenger equipment. However, they do handle an occasional passenger in a caboose on a couple of their freight in mixed trains. Their annual report for 1954 shows the total passenger revenue of only $30.

Q. Will you turn to page 10 of your prepared testimony. There you give some computations. Would you please state what you used as the expense per train mile in arriving at that figure.

A. I got these figures from our operating people. They furnish me rough out-of-pocket expenses of all kinds at all times. I need them when there is a question of running a special train and we have to know whether it is a profitable or a loss operation. They gave me a figure of $1.85 or $1.95 per mile and I used the figure of $1.95.

Q. Will you please turn to page 15. There you have mentioned a number of articles appearing in various publications. Have you also an additional exhibit which has been identified as Exhibit 97 and which you believe bears on this transaction?

A. Yes, sir.

[fol. 1787] Q. And that is the article which has been identified as Exhibit No. 97?

A. Yes, sir.

Mr. Cassell: I offer Exhibits 86 through 98, inclusive, subject to cross-examination and tender the witness.

Exam. Albus: Cross-examination.
Mr. Thomas.
Mr. Thomas: None.
Exam. Albus: Mr. Lucas.
Mr. Lucas: Mr. Examiner, just one question.

Cross examination.

By Mr. Lucas:

Q. Mr. Bruce, in your investigation to the extent of present passenger service did you ascertain that there are tariffs covering some passenger service whatever may be the extent of it?

A. On the TP&W?

Q. That is right.

A. They have no passenger tariffs, to my knowledge I have never seen any passenger.

Q. Did you examine to the fact whether they do or do not?

A. No, I didn't.

Mr. Lucas: That is all.
Exam. Albus: Mr. Wheeler.

Cross examination.

By Mr. Wheeler:

Q. Mr. Bruce, do you know whether or not it is a com- [fol. 1788] mon practice among railroads and railroad officials to conduct inspection trips in normal passenger equipment or do they ordinarily use business cars?

A. If you have reference to inspection of passenger equipment it would be made in passenger equipment.

Q. I have reference to the type to which you have referred in your testimony in exhibits as was conducted by officials of the Santa Fe and the Pennsylvania of the TP&W property.

A. A trip of that kind, Mr. Wheeler, would be made in a business car, I would say.

Mr. Wheeler: That is all.
Exam. Albus: Mr. Thomas.

Cross examination.

By Mr. Thomas:

Q. I am not sure I understood your testimony, Mr. Bruce, on that score. Does your testimony suggest that the trip you referred to was not made in business cars?

A. Just which testimony, now, Mr. Starr, do you have reference to?

Q. As I understand it-

A. (Interrupting) The question I was trying to clear up is the fact that I made a statement that the TP&W did not operate any passenger service.

Q. Yes.

A. I find later that they do, that is, the 1951 annual reports showed a total passenger earning of $30. In arriv-[fol. 1789] ing at just where that $30 came from I find they do in two of their mixed trains handle passengers in the caboose. That's as far as the revenue is concerned.

Mr. Cassell: Right there, Mr. Bruce, in answer to Mr. Lucas you said they have no tariffs. They would have to have tariffs to collect revenue.

The Witness: That is correct. I have never seen the tariffs.

Mr. Cassell: That is what you meant to say?

The Witness: Yes.

By Mr. Thomas:

Q. What I wanted to get clear, Mr. Bruce, I didn't get any implication from your testimony or the exhibits that any inspection trip of the TP&W referred to there by Pennsylvania or Santa Fe officials was taken in regular passenger equipment as distinguished from business cars, did you so imply?

A. I didn't make the statement that there had been any so-called passenger trains operating during this inspection. The trains were referred to as passenger trains in the news items.

Q. You didn't mean to imply that they were not business cars?

A. No, sir, I did not.

Mr. Thomas: That is all.

Exam. Albus: Are there any further questions?

Further cross examination.

By Mr. Wheeler:

Q. Refer to Exhibit 92 for a moment, Mr. Bruce.

[fol. 1790] Exam. Albus: What is the reference?

Mr. Wheeler: 92 I have.

Mr. Cassell: That is B-7?

A. Yes, sir.

By Mr. Wheeler:

Q. Do you think that exhibit refers to business cars or to passenger train cars when it says three streamliner cars?

A. The quotation that I have reference to, I presume you have reference to the Peoria Journal Star of June 5, 1955, is that correct?

Q. Yes, sir.

A. The quote I was using was Mr. Coulter's, the reference to Mr. Coulter where he declined to comment on the possibility of the Santa Fe passenger trains serving Peoria but agreed that it was an interesting speculation not beyond accomplishment.

Mr. Cassell: Mr. Bruce, I believe that Mr. Wheeler was referring to the first line of that article.

The Witness: Passenger train from Santa Fe appears in Peoria, that is the headline reference.

Mr. Cassell: Do you know what kind of equipment was on that train?

The Witness: I did not see it. I could not say.

By Mr. Wheeler:

Q. Do you believe that the description there is applicable to passenger equipment or to business cars?

A. Well, the type cars that might have been used in this [fol. 1791] inspection, Mr. Wheeler, I am not concerned

about those cars. I am concerned with the possibility of passenger service.

Q. I understand what you are concerned about. It is what I am concerned about now.

A. Passenger train from Santa Fe appears in Peoria?

Q. Yes, sir.

A. I would think that they would be business cars.

Q. Business cars?

A. Yes, sir, if it is an inspection trip by Santa Fe and the TP&W. officials.

Q. Will you refer to Exhibit 92. Do you have it before you?

A. Yes, sir.

Q. Will you please read it, read it for yourself first. Have you finished reading it?

A. Yes, sir.

Q. Did you notice in there a distinction between three streamliner cars and an office car?

A. Yes, sir.

Q. Now, do you now believe that the three streamliner cars that are referred to therein were passenger cars or office cars?

A. Well, it makes quite a distinction there between Mr. Coulter's office car being switched out and returned and the two Santa Fe cars being switched to the main line to continue to Des Moines and the office car cut out. I still contend if it was an inspection trip there are such things [fol. 1792] as streamlined business cars. They could have been business cars, I don't know, I didn't see them.

Mr. Wheeler: I have no further questions.

Exam. Albus: Is there any further cross-examination?

Mr. Broker: No, sir.

Mr. Hoag: No, sir, no questions.

Exam. Albus: You are excused, Mr. Bruce, thank you very much.

(Witness excused.)

Mr. Thomas: Has he offered the exhibits?

Exam. Albus: No, he is going to offer them now.

Mr. Cassell: They have been offered subject to cross-examination.

Mr. Thomas: I want to offer an objection. The news items included in the exhibits may not be understood as evidence of the facts that appear to be stated in those news items.

Exam. Albus: Very well. Subject to that exception the exhibits marked for identification H-86 to and including H-98 are received in evidence.

(Intervenor's Rock Island, Exhibits Nos. H-86 through H-98, inclusive, Witness Bruce, were received in evidence.)

Mr. Cassell: Off the record.

Exam. Albus: Off the record.

(Discussion off the record.)

[fol. 1793] Exam. Albus: On the record.

Mr. Cassell: Mr. Miller, please.

HAROLD MILLER was sworn and testified as follows:

Direct examination.

Q. Will you please state your name, address, and by whom you are employed?

A. My name is Harold Miller. My address is 2265 One Hundred Twenty-third Place, Blue Island, Illinois. I am employed by the Chicago, Rock Island, and Pacific Railroad Company as statistician in the general auditor's office.

Q. As such, do you have access to the books and records of the Rock Island Railroad?

A. Yes, I do.

Q. How long have you been statistician?

A. Three years.

Q. How long have you been employed by the Rock Island?

A. Thirty-eight years.

Q. All of that time in the accounting department?

A. Yes.

Q. Did you work in the statistical department prior to assuming your present title?

A. I did.

Q. Please state the general nature of your duties?

A. I have prepared statements and statistics for pro-
[fol. 1794] ceedings before the Interstate Commerce Commission, the Illinois Commerce Commission, and various regulatory commissions of other states, and have appeared as a witness before these bodies. I also have made investigations of costs of various services performed by the Rock Island and its subsidiary companies.

Q. Have you worked up the out-of-pocket cost of the Rock Island's Rocket trains operating between Chicago and Peoria?

A. Yes, I have.

Q. What have you found to be the out-of-pocket cost per mile of those trains?

A. $2.08 per train mile.

Q. How did you arrive at that figure?

A. Using enginemen and trainmen wages, fuel, dining and buffet service on actual experience for 1954, repairs to diesel locomotives, passenger cars, lubricants and supplies on a system average based on either car or locomotive miles.

Q. Do you have the cost per passenger mile of train service in Illinois on the formula the Interstate Commerce Commission uses for the break between passenger and freight expenses?

A. Yes.

Q. What do you have for the cost per train mile for passenger service in Illinois?

A. The solely related is $4.24 per train mile. I took this from the report which we make every year to the Illinois Commerce Commission which uses the same formula and
[fol. 1795] accounting rules for this statement as does the Interstate Commerce Commission. These figures are for the year 1954. The 1955 figures are not yet available.

Q. In addition to the solely related or I.C.C. formula train-mile expenses in Illinois, do you have an additional amount which might be said to be that which would have to be added to obtain a fully distributed cost?

A. Yes. The apportionment would add $1.29, making a total of $5.53 for the fully distributed cost per train mile in the State of Illinois.

Q. How did you get your apportionment to add on to the solely related cost?

A. By taking the figures that were reported to the State under the "Apportioned to Passenger and Allied Service" column and dividing it by the total passenger miles made in the State of Illinois.

Q. Do you have in your annual report to the Illinois Commerce Commission an entry showing the fully distributed as well as the solely related expenditures?

A. Yes. The entry in the report shows the total apportioned expense. I merely had to divide by the train miles to get the cost per train mile.

Mr. Cassell: You may cross-examine.

Exam. Albus: Cross-examination, please.

Mr. Thomas: No questions.

[fol. 1796] Exam. Albus: Mr. Lucas.

Mr. Lucas: No questions, Mr. Examiner.

Exam. Albus: Mr. Wheeler.

Mr. Wheeler: No questions on cross.

Exam. Albus: Is there any cross-examination?

(No response.)

Exam. Albus: You are excused, Mr. Miller. Thank you very much.

(Witness excused.)

Mr. Cassell: Mr. Davidson.

Mr. Examiner, may we identify the exhibits?

Exam. Albus: Yes, sir.

Mr. Cassell: For the convenience of the parties you will find an index with symbol identification and reference to the prepared testimony.

I believe the first exhibit is 99.

Exam. Albus: 99 is right.

Mr. Cassell: May the exhibit which bears the symbol reference D-1, a map showing the Rock Island, Santa Fe, and TP&W be identified as Exhibit 99?

Exam. Albus: Yes, sir.

(Intervenor's, Rock Island, Exhibit No. H-99, Witness Davidson, was marked for identification.)

Mr. Cassell: The next exhibit, Decision of I.C.C. "Acquisition by TP&W Railroad" 124 I.C.C. 181, H-100;
[fol. 1797] A detailed map symbol D-3; H-101.

Exam. Albus: Right.

Mr. Cassell: Symboled D-4, a two-page add of the TP&W, H-102.

Exam. Albus: Right.

Mr. Cassell: Statement showing 1954 interchange with TP&W, D-5, Exhibit 103.

Exam. Albus: Right.

Mr. Cassell: D-6, statement showing the 1954 freight traffic in carloads which the TP&W delivered to or received from a connecting line and upon which the Rock Island secured a road haul, H-104.

Exam. Albus: Right.

Mr. Cassell: D-7, which is a copy of the I.C.C. decision, "Construction by TP&W R.R." 124 I.C.C. 278, H-105;

Symbol D-8 symbol is statement showing the 1954 carload freight traffic handled jointly by the Rock Island and TP&W, H-106.

Exam. Albus: Correct.

Mr. Cassell: Symbol D-9, statement showing the 1954 freight traffic in carloads which the Rock Island handled as the road haul carrier from or to Peoria, from or to points or junctions competitive with the Santa Fe System, H-107.

Exam. Albus: All right.

Mr. Cassell: D-10, a mileage exhibit, H-108;
[fol. 1798] D-11, net and gross revenue of Rock Island and Santa Fe for five years, H-109;

D-12, a map of the United States showing TP&W-Rock Island, M&StL and Monon, H-110;

D-13, Symbol "M" statement showing the 1954 carload freight handled jointly by the Rock Island and TP&W, H-111;

D-14 Symbol "ME" statement showing freight traffic in carloads, which the Rock Island handled jointly in road haul service via junctions with other carriers, H-112;

D-15 Symbol "MW" statement showing freight traffic, in carloads, which the Rock Island handled jointly in road haul service via junctions with other carriers, H-113;

Symbol D-16, Symbol "M-EX" statement showing freight traffic, in carloads, which the Rock Island handled jointly in road haul service with other carriers, H-114;

Symbol D-7, Symbol "MWX" statement showing freight traffic, in carloads, which the Rock Island handled jointly in road haul service with other carriers, H-115;

D-18 statement showing cities where railroad traffic offices are maintained as shown in official guide of railways, H-116.

May we go off the record?

Exam. Albus: Yes.

Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

[fol. 1799] R. C. Davidson was sworn and testified as follows:

Direct examination.

By Mr. Cassell:

Q. Please state your name, business address, and by whom you are employed.

A. My name is R. C. Davidson, my business address is La Salle Street Station, 139 West Van Buren Street, Chicago, Illinois. Prior to March 1, 1955, I was employed by the Rock Island as freight traffic manager in charge of administrative matters in the Rock Island freight traffic department. After my retirement I was recalled to resume work with the Rock Island, especially with relation to the preparation of this case.

Q. What has been the nature of your railroad experience, Mr. Davidson?

A. I have been in the railroad business since 1904, a period of 51 years. All of my experience throughout these years has been in freight traffic and all of it has been with the Rock Island. I began as a messenger and office boy in the year 1904. After I had been with the railroad about one year I became a clerk in the Rock Island tariff bureau. After I had been with the Rock Island some three years,

I was placed on one of the rate desks, which we had in those days, and worked on tariff preparations, general correspondence relating to the freight traffic department, and shippers' inquiries. In 1910 I became assistant to the assistant general freight agent and in that capacity I be- [fol. 1800] came entrusted with more important work relating to the matters handled by the assistant general freight agent which covered initiation of rates and other rate freight traffic matters.

My next assignment was to the staff of the assistant freight traffic manager. Again this was on the technical side dealing with rates and other phases of the freight traffic work. This assignment was in 1915.

In 1922, I became chief clerk to the vice-president-freight traffic manager. In this capacity, of course, I was working with all matters which came through the freight traffic department. The assignment which I held at that time no longer exists on the Rock Island. The work which I did is not performed by assistant freight traffic managers or other officers.

I held that position until 1924, when I became assistant general freight agent. As assistant general freight agent I had to be familiar with the solicitation efforts of the entire Rock Island system, not only on line, but off line. The problems I was dealing with required me to be familiar in a general way with traffic that moved over the Rock Island and the problems of the shipping public with whom we came in contact. I spent part of my time dealing with the shipping public.

In 1927, I was made general freight agent in charge of rate matters in Western Trunk Line territory. During the time I did this work, I, of course, was attending all of the [fol. 1801] various bureau meetings and working on the day-to-day rate adjustments and rate cases as they came along.

I continued in this rate work until 1935, when I was promoted to the position of assistant freight traffic manager. In this capacity, and also following my promotion in 1943 to the position of freight traffic manager, I did special assignments designated by the chief traffic officer, such as research matters and inquiries into finance problems, and

remained in that type of work thereafter. Of course, I continued to deal from time to time with shippers. I have worked on all of our branch line studies, studies which we have made to determine whether various branch lines should be abandoned or retained, studies to ascertain whether or not extensions of the railroad should be made, studies to determine whether or not various acquisitions would be profitable or unprofitable. In that work I have studied various railroads, large and small, to determine what their capacities were. All of this work, of course, has been done from the traffic potential. My work did not include operation problems as such, although naturally they did creep in. Not only did I make these studies for the benefit of our management to enable them to determine their policy questions, but when these studies have resulted in applications before this Commission for extensions, acquisitions, or abandonments, I have frequently appeared as the Rock Island witness to testify concerning the traffic potential and [fol. 1802] problems in general relating to the case in question.

In the course of this work I have made some 67 studies of railroads ranging in size from very small ones to Class I railroads. I have appeared in some seven acquisition cases, two extension cases, and sixteen abandonment cases. The result of this has been that for some twenty years I have devoted my time almost exclusively to the study of railroad lines.

Q. Will you please describe the Rock Island system?

A. The map, which has been marked Exhibit H-99 for identification, shows the Rock Island system in black. As shown by the Rock Island's 1954 annual report, Account 531, we have 7,895 miles of railroad. The Rock Island's eastern terminus is in Chicago. Its line then runs west to the Mississippi at the Tri-Cities of Rock Island, Moline, and Davenport, and down to Peoria, Illinois. We have very heavy mileage in Iowa with lines out to South Dakota and up to the Twin Cities of Minneapolis and St. Paul. Then we have the Denver line running west through Des Moines, Iowa, Omaha and Lincoln, Nebraska, to Denver and Colorado Springs, Colorado. We, of course, are one of the principal carriers serving the Kansas City gateway with

lines running through Kansas City and to the southwest where we tie in with the Southern Pacific at Santa Rosa, New Mexico to form a transcontinental line to the West Coast. The other main direction of our railroad is to the South through Oklahoma to Fort Worth and Dallas, Texas, and on down to Houston, Texas City, and Galveston, Texas. [fol. 1803] You will note that we also have a line through Oklahoma City to Memphis, Tennessee, and a line down from Little Rock, Arkansas, through Alexandria, Louisiana, to Eunice, Louisiana. As such, the Rock Island serves the vast middlewest plains territory from Lake Michigan and the Chicago gateway through the Kansas City gateway to the Rocky Mountains on the West, and from the Twin Cities on the north to the Texas Gulf Coast on the South. The Rock Island serves most of the important agricultural areas in the territory traversed and most of the principal cities.

Q. What is the nature of the traffic handled by the Rock Island?

A. The Central States produce for the company a heavy diversified tonnage of which the following commodities comprise the principal volume: Wheat and coarse grains, soy beans, flour, grain and cereal products, meat and packing house products, and products of industrial plants, such as cement, iron and steel articles, agricultural implements, road-building equipment, brick, glass, sugar, syrup, and starches, industrial sand, liquor and beverages, automobiles and rubber tires, coal, livestock, dairy products and vegetables are also transported in volume. The southwestern states likewise yield heavy volume business such as wheat, grain products, cotton, cotton-oil and products, livestock, lumber, petroleum, petroleum products, liquefied petroleum gas, helium gas, carbon black, bauxite ore, aluminum and alumina, paper, iron and steel including pipe, chemicals, [fol. 1804] barites, salt, fertilizer, and anhydrous ammonia, sulphate of ammonia, rice, sugar, and vegetables.

Q. What is the nature of the gateways and connections served by the Rock Island?

A. The company serves important gateways on the east at Chicago, Joliet, and Peoria, Illinois; St. Louis, Missouri; Memphis, Tennessee; and on the west at Denver and Colo-

rado Springs, Colorado; and Tucumcari, New Mexico; and on the north the Twin Cities of St. Paul and Minneapolis, Minnesota. I might also mention the important gateways such as Fort Worth, Dallas, and Amarillo, Texas, which are to the south. The Rock Island has over 200 interchange points with connecting lines, enabling competitive participation in the movement of business requiring joint line hauls. The location of our railway and the gateways which it serves permits us to participate; in volume traffic such as citrus and deciduous fruits, vegetables, canned goods, and forest products moving from the Pacific Coast states to destinations within the Middlewest and beyond through the eastern gateways. This position also permits the company to participate in the movement of traffic, largely manufactured goods, to the West Coast area.

Q. Will you please tell us something of the history of the Rock Island?

A. The Rock Island was a pioneer in railroad construction in this western territory. The Rock Island's first ser- [fol. 1805] vice was inaugurated with the completion of its line extending from Chicago westward to Joliet in 1852. Pushing westward across Illinois, the railroad reached the towns of Ottawa, La Salle, and Peru in the year 1853. In the year 1854, service was extended to Peoria and on west to the Mississippi at Rock Island, Illinois. The service to Peoria, Illinois was provided by the Peoria and Bureau Valley Railroad Company, incorporated in the year 1853, by the construction of a line southward from Bureau, Illinois. The Rock Island holds a 999 year lease on this railroad and owns more than 95 per cent of its stock. With the completion of service to Rock Island, Illinois, in the year 1854, extensions were made from time to time westward. The Rock Island reached Council Bluffs, Iowa, in 1869; Leavenworth, Kansas, in 1870; and Atchison, Kansas, in 1871. It got into Kansas City, Missouri, in 1879 through a contract with the Hannibal & St. Joseph Railroad starting at Cameron, Missouri. We were in St. Joseph, Missouri in 1886. Further extensions were made until the Rock Island system arrived at its present form.

Q. Are you familiar with the proceeding now before this Commission?

A. Yes.

Q. Are you familiar with the Toledo, Peoria & Western Railroad?

A. Yes.

Q. What is the basis of your knowledge of the TP&W? [fol. 1806] A. As I have said, I was called back by the Rock Island specifically to undertake a study of the TP&W and the effect this acquisition might have upon the Rock Island. One of the first things I did was to go over the TP&W from one end to the other on an inspection trip. This I did last summer. I began at the eastern terminus, Effner, Indiana, and by automobile rode as close as I could get to the right of way at all points and visited every station shown by the TP&W on its timecard. On the east end, Effner, Indiana to Peoria, Illinois, the highway in most places is quite close to the railroad so that I was actually able to see not only the stations, but also a good deal of the right of way. From Peoria west the line is through rougher territory and for the most part there are no parallel highways so that my inspection was for the most part limited to the stations or towns served by the TP&W. I wanted to be personally familiar with the territory served by the TP&W, the nature of the industries and towns it served, as well as have a concrete idea of its interchange facilities. The rest of my investigation was made from books and records, either of our own company or of I.C.C. reports or various publications, such as Poor's. I also had access, among other things, to the report that was made on September 28, 1943 to the Honorable Joseph B. Eastman, Director—Office of Defense Transportation, and to V. V. Boatner, Esquire, Director, Division of Railway Transport, Office of Defense Transportation, by Mr. John W. Barringer, reporting on [fol. 1807] the TP&W, of which he had been federal manager during 1942. I, of course, have also known something of the TP&W and its activities in a general way throughout the years of my railroad work, as it is a railroad with which we have had connections during all that time. In fact, it is probably that our connection with the TP&W

at Peoria was made in 1859, when the TP&W came to Peoria, and at Keokuk in 1878 when the Rock Island came in. The map to which I have already referred, Exhibit H-99 for identification, which is the map of the United States, showing, among other things, the Rock Island system, also shows by a red line the location of the TP&W. As can be seen, it is almost a straight east and west railroad going across the middle of Illinois from Effner, Indiana, to Keokuk, Iowa, and having connections, as I have said, with the Rock Island at Peoria in its center and Keokuk at its extreme west end. The TP&W began its present independent existence as a result of the approval by the Commission of the acquisition of its properties by George P. McNear in 1927. This acquisition is reported in the Commission's bound volume, "Acquisition by TP&W Railroad," 124 I.C.C. 181, and was decided March 15, 1927. My exhibit H-100 is a copy of this decision. This same decision gives you something of the history of the railroad. The old corporation was set up in 1887 to take over a prior corporation, the Toledo, Peoria & Western Railroad Company. It was shown to have been in receivership from July 2, 1917, until it was sold on [fol. 1808] April 30, 1926, to George P. McNear, Jr., a minority bondholder, for $1,300,000. This same decision on page 187 showed that the old company which was in receivership from 1917 to 1926, when it was sold at the bankruptcy sale, was "controlled jointly by the Pennsylvania Company and the Chicago, Burlington & Quincy Railroad through stock ownership." Since 1927, it has been operated as a neutral and independent railroad and was under the management of Mr. McNear himself until his death in 1947. After a short interim, Mr. Coulter came into the presidency in that same year and, of course, he is still its president. The TP&W has relatively little local business and is primarily an overhead railroad serving 16 connections in the transportation of through traffic. This can be demonstrated in two ways: First by viewing the property as I did you can visually see that there is very little industry on it. It does originate a good deal of grain as it has a good number of elevators along its line. And the other way is through looking at maps

and records. My exhibit marked H-101 for identification is a detail map which was drawn to show the railroad situation in the territory through which the TP&W runs. On this map the TP&W is shown in red. The dots along the TP&W indicate its 16 points of interchange with its various railroad connections. The TP&W itself has asserted its importance as an overhead railroad and that its importance lies in its 16 connections and this type of service. My exhibit marked H-102 for identification, is [fol. 1809] a two-page ad taken from pages 50 and 51 of the Traffic World for August 20, 1955. You will note that the caption across the top of the ad reads: "Connections are a vital advantage of transcontinental service," and then in regular print to the right: "Being able to divert cars to any part of the continent is a requisite of transcontinental service. TP&W makes this possible by direct connections with 16 railroads—more than you would expect to find in a length of track many times longer than the 239 miles across Illinois." On the left-hand side you will note it shows the symbols of the 16 railroads with which the TP&W interchanges traffic. I was present during the proceedings in Finance Docket 18752, which concern the acquisition of the Illinois Terminal properties by 11 railroads, including the Rock Island, and in that case E. H. Gaiennie, then vice-president-traffic of the TP&W, testified, as shown at page 493 of the record, that "roughly 75 per cent" of the traffic of the TP&W was through overhead business and only 25 per cent originated or terminated on line. As I have said, since 1927 the TP&W has been operating as an independent and neutral railroad with joint working arrangements with all its connections. There has existed a cooperative and friendly relationship throughout these years between the TP&W and the Rock Island and a substantial volume of road haul traffic has been interchanged annually between these two companies at Keokuk, Iowa, and Peoria, Illinois. The yearly average interchange for both points combined [fol. 1810] during the five-year period, 1950 to 1954, was 11,509 carloads, of which volume the TP&W delivered to the Rock Island 4,445 carloads and received from the Rock Island 7,064 carloads. Exhibit H-103 of ten

pages, of which the first page is a summary, shows the 1954 direct interchange by types of movement via Keokuk, Iowa, and Peoria, Illinois, separately. The total interchange at both points in that year amounted to 10,608 cars. This traffic did not all originate or terminate on the TP&W as 9,396 cars moved in "bridge" service over the TP&W via TPUW junctions with other railroads. As sheet 1 of this exhibit indicates by reference mark, the various routes by which these cars moved is shown on sheets following sheet 1. As stated, the figures in this exhibit are only those cars which were directly interchanged at Keokuk and Peoria. Analysis of all the 1954 joint Rock Island-TP&W traffic shows that in addition to the 9,396 cars directly interchanged, to which I have already referred, the TP&W interchanges a total of 1,312 cars with lines performing intermediate road haul service to or from the Rock Island; that is, these were cars which showed both Rock Island and TP&W in their routing, but were not interchanged directly between these two lines. Exhibit H-104 of nine pages shows the separate routes via which these 1,312 cars moved. The sum of these two figures is significant in two respects: They are significant from the mere size in that an interchange of 10,708 carloads is a material number of cars in any circumstances. Secondly, it indicates that the TP&W is [fol. 1811] a friendly and independent railroad in that this substantial volume of business was interchanged via the Rock Island without there being any evidence of undue preference for or against this connection for any other. Incidentally, if the figures of my Exhibit H-103 should be compared with the interchange exhibit introduced by the TP&W in Finance Docket 18752, it will be seen that my figures are slightly smaller than those shown by the TP&W for the same interchange. This is due to the fact that the TP&W counted switch cars whereas I only counted road-haul cars.

From my studies of the TP&W, which included not only the interchange with the Rock Island, but with all other railroads with which it connects, it appears that the natural function of the TP&W is that of a neutral

and independent bridge line working all 16 of its connections to afford the maximum opportunity to the shipping public in the selection of transportation routes, just as the TP&W itself has emphasized in its advertising, an example of which I have given as my Exhibit H-102.

Q. Why is the Rock Island interested in the proposal now before the Commission?

A. If you will refer to my Exhibit H-99, on that map you will see the Rock Island in the large black line and its trans-continental connection, the Southern Pacific, on to California from Santa Rosa, New Mexico, in a slightly [fol. 1812] smaller black line. The Santa Fe system is detailed in green. The Santa Fe, of course, is a larger system than the Rock Island, and except for our northern lines and our line into St. Louis and, of course, the line into Memphis, the Santa Fe parallels and overlaps the Rock Island service throughout its entire length. Between Chicago and Kansas City the short line mileage of the Santa Fe, with which the Rock Island competes, shows very graphically. Then west of the Missouri River on down throughout the entire southwestern portion of the Rock Island Railroad we compete not only at common points, but also for through traffic. And, of course, you will note that the same is true on the lines to the South from the Missouri River down through Texas to the Gulf. Furthermore, you will see that the Santa Fe has its own line of railroad all the way to the West Coast whereas the Rock Island system terminates at Denver, Colorado, and Santa Rosa, New Mexico, and must work through connections for the interchange of freight to or from the far West. This map also shows that the Rock Island and the Santa Fe are also very similarly situated in regard to the TP&W. There are two pertinent exceptions, however, one being that the Rock Island has a connection with the TP&W at Peoria, which the Santa Fe does not, and the other being that the Rock Island connection with the TP&W at Keokuk as against the Santa Fe's connection at Lomax affords the TP&W a longer haul and a greater division. In fact the Rock Island's connection at Keokuk affords the TP&W its maximum haul and division on traffic to and from the West.

[fol. 1813] Incidentally, while the Rock Island's connection with the TP&W is made with the TP&W's main line as shown from its annual report, and, as I have said, was effected in 1878, the TP&W did not have a connection with the Santa Fe until after the TP&W had made an application for it requesting approval for such a connection shortly after McNear obtained control, such authority being covered by the Commission's report in Construction by T.P.&W. R.R., 124 I.C.C. 278, having been submitted on March 16, 1927, and decided April 7, 1927. A copy of this report and order is reproduced as my Exhibit H-105. If you will look at this map, my Exhibit H-99, you will see that the situation of the Santa Fe and Rock Island is substantially the same both in regard to competition with the TP&W at Chicago and Joliet Gateways versus traffic which may move over the TP&W through Effner, Indiana, and for business as between themselves which may be interchanged with the TP&W at Keokuk or Lomax, as the case may be. Because of the competition which exists between the Santa Fe and the Rock Island, and because their relationship and the opportunity for the movement of traffic through the TP&W connections is substantially the same, the Rock Island is greatly concerned by the application which is now before the Commission. My studies indicate that almost three million dollars annually of Rock Island revenue is vulnerable to diversion if this application is approved without the inclusion of the Rock Island as an equal par-[fol. 1814] ticipant. The exhibits which I will now describe demonstrate the traffic which is vulnerable and which totals the three million dollars I have referred to. My Exhibit H-106 of sixty pages, identified with an "S" at the top of the first page covers traffic handled jointly by the Rock Island and the TP&W. This covers the traffic I have previously referred to, which 1954 total is included in the 9,306 cars interchanged directly and 1,312 cars interchanged through connecting carriers. Of course, it does not cover all of these cars; in fact the study relates to 6,358 cars and shows a total of $1,048,760.01 of revenue. The first two pages are summary sheets, the detail of which is shown in the following 58 sheets. I

have broken this portion of my study into ten groupings, each group covering a particular type of traffic. Along the left-hand column on the summary sheet a letter designation is given. In the center is a brief description of the type of movement covered in the group and on the right hand side is shown the number of cars in that particular group and on the extreme right, the revenue derived. In regard to the revenue, it should be understood that my figures show only the Rock Island division of the gross revenue. This exhibit was made up by going to the abstracts of the shipments in the Accounting Department. You will note on the succeeding pages the detail for the several groups is kept in a unit relating to its particular group. The detail shows the origin, destination, commodity, the number of cars in that particular category, [fol. 1815] and the Rock Island revenue. All of the traffic covered by this exhibit is susceptible to loss by the Rock Island to the Santa Fe since it is all competitive with the Santa Fe system. Let us take the third sheet, for example, which is a part of the detail of Group A covering traffic which moved from TP&W origins to Rock Island destinations, which were destinations also reached by the Santa Fe system. The first line covers two cars which moved from Canton, Illinois, to Kansas City, Missouri. The movement was Canton to Keokuk via TP&W, Keokuk to Kansas City via Rock Island. I have shown this as susceptible to loss because it could be moved TP&W to Lomax, although by this connection it gets a smaller division, Santa Fe, Lomax to Kansas City. Similarly, all of the other shipments in this group could move by either the Santa Fe or the Rock Island in connection with the TP&W. The second group, bearing the designation "B", covers movements from TP&W origins to destinations on Rock Island connecting lines, where the destination or junction points are also reached by the Santa Fe system. Again, referring to the detail on this, which is shown on the fourth page under the designation "B" in the upper right-hand corner, take the first shipment which originated at Cruger, Illinois, a point on the TP&W just east of Peoria and destined to Velasco, Texas. This moved TP&W, Cruger to Keokuk; Rock Island,

Keokuk to Kansas City, and then via a connection to Velasco, Texas. It could have moved Cruger, Illinois, to [fol. 1816] Lomax via TP&W and then Santa Fe, Lomax to Kansas City, a connection to Velasco, although the TP&W again would have gotten a smaller division. And so you can take each one of these ten groups of traffic and it can be seen that each group is a type of traffic for which a Santa Fe movement could be substituted for that of the Rock Island. On this exhibit, dates of shipment, waybill numbers, and car numbers are not shown. It can be determined, if necessary, by returning to the original waybills or their abstract, which would be in possession of both the TP&W and Rock Island accounting departments.

Q. Have your studies indicated that there is any other traffic which is in jeopardy if this application is approved in its present form without the inclusion of the Rock Island?

A. Yes. That relates to traffic to and from Peoria. The Rock Island was the first railroad to serve Peoria, Illinois, and for over 100 years by its investment in facilities there and general cooperation has aided the growth of that important city and its vicinity. The current value of the Rock Island properties in Peoria is approximately seven million dollars, which includes the value of the 47 miles of the Peoria and Bureau Valley Railroad extending from Bureau to Peoria. It includes the value of the Peoria Terminal and other facilities in the immediate Peoria vicinity and when I say "Peoria", I, of course, am not limiting myself to the corporate limits. However, I have not included the value of the RIP line, that is, the line [fol. 1817] which extends from Peoria to Rock Island through Orion and Colona. I have omitted that as that segment at the present time is not being used to any substantial extent for the handling of Peoria business, although, of course, it handles all of the local business in and out of Peoria, local to that line. The apprehension of the Rock Island regarding the loss of traffic and revenue should the Santa Fe and Pennsylvania succeed in their effort to alone control the TP&W Railroad is centered not only in the traffic which the Rock Island handles

jointly with the TP&W, but applies to traffic which the Rock Island handles into and out of Peoria via its own line of railroad. Incidentally, at this point I should like to make known that Peoria is served at the present time not only by the Rock Island and TP&W and Pennsylvania, but also by the Illinois Central, Nickel Plate, North Western, GM&O, Burlington, New York Central, Illinois Terminal, C&IM, M&StL, and the Santa Fe through its line to Pekin, which places it in the Peoria-Pekin industrial district, all of which has the same rate and through which service can be had through reciprocal switching. The traffic in mind is that which funnels through the Missouri River Gateways on the west or through Joliet and Chicago on the east. As stated previously, both the Rock Island and the Santa Fe serve these latter two points of Joliet and Chicago. They also serve the southwestern Missouri River cities of Kansas City, Missouri; Atchison, Kansas; and St. Joseph, Missouri. In addi-
[fol. 1818] tion, the Santa Fe reaches many common and junction points in the southwestern states which are also served by the Rock Island, and in the western states, such as Arizona and California, the Santa Fe serves many points which are also reached by the Southern Pacific Company with which the Rock Island works closely. All of this Peoria traffic to and from the East, as well as that from the west as referred to, is susceptible to loss by the Rock Island. I realize that in making this statement it may be questioned since the Santa Fe now serves the Peoria area in the manner I have previously related through its line into Pekin. The answer, as I see it, lies in the obvious conclusion that the Santa Fe in seeking jointly with the Pennsylvania authority to acquire the TP&W Railroad expects to improve its traffic opportunities and as Peoria, Illinois, is the most important city on the TP&W and possessing the greatest volume of traffic on the line, the Peoria area is the one place where the Santa Fe's expectations will be centered. At the present time, its line is indirect, coming down as it does from Ancona to Eureka, then by trackage rights over to Pekin Junction and thence down to Pekin over what is for the Santa Fe a very minor piece of railroad. In fact, I be-

lieve this entry into Pekin is as much an accident as any thing else inasmuch as my reading of the history of the Santa Fe indicates that when it decided to come east of Kansas City and get into Chicago in 1888, it did so in part by acquiring the Chicago & St. Louis Railway, which [fol. 1819] they were interested in, to provide a right of way into Chicago from the vicinity of Streator. The Chicago & St. Louis extended from Chicago to Pekin so, as I say, the Pekin entrance just happened to go along with the acquisition of the right of way which was used to get into Chicago. The Santa Fe today is not a strong competitor in Peoria. The origin of the Santa Fe's trackage into Pekin appears in "Steel Trails to Santa Fe", by Waters. On page 86, it is stated:

"If the Santa Fe were to enter Chicago, new tracks would have to lead the way. Strong hoped that the 'two streaks of rust' of the Chicago and St. Louis Railway could be purchased on favorable terms to provide an excellent right of way into Chicago from the vicinity of Streator. The C&SL extended from Chicago to Pekin, Illinois, hopefully en route to St. Louis. The venture had been launched in 1859 but did not float well. F. E. Hinckley, its most successful president, fought a hard but losing battle against creditors and competitors. The odds were too great, and the line deteriorated. When makeshift repairs rendered one part passable another section went bad. Hinckley was more than willing to talk terms with the Santa Fe. As early as October of 1886, a 'meeting of minds' had been reached, and actual sale occurred on December 15."

Consequently, since the Santa Fe apparently expects to improve its position, and if it is able to do so through its sole control with the Pennsylvania, a new competitive [fol. 1820] situation is created so that traffic which we presently enjoy may be lost. Apparently this is anticipated by more than ourselves. In the Peoria Journal Star on July 15, 1955, there appeared an editorial from which I read the following:

"All those who desire to see the sale become an actuality and the T. P. & W. become the link making possible fast intercontinental freight service should communicate im-

mediately with Governor Stratton and the Illinois Commerce Commission at Springfield."

Again, on December 30, 1955, in the Peoria Journal Star, in an editorial there was the following:

"The advantage to Peoria and all shippers on the T. P. & W. of being situated on such a transcontinental route are quite attractive."

In the Daily Gate City of Keokuk for Saturday, July 16, 1955, there was an editorial, which, among other things, said: "Huge trains will be speeding from East to West coasts and vice versa. * * * Passenger, as well as freight service should be enhanced."

All of this would seem to indicate that the Santa Fe anticipated an improvement of its competitive position in Peoria. It is one thing to have the Santa Fe competing through the indirect route that it now has, which is hardly a service route to the west from Peoria; another to be forced to compete with the Santa Fe in a more direct manner. Consequently, I feel that there is a large volume [fol. 1821] of Peoria business which is vulnerable to the Santa Fe, and to a lesser degree to the Pennsylvania, if this acquisition is approved. My Exhibit H-107, consisting of seven pages, including a summary page, shows the traffic which would be susceptible to diversion. The exhibit consists of a cover page which has the summary and shows the 1954 freight traffic in carloads, which the Rock Island handled as the road haul carrier from Peoria, Illinois, or to Peoria, Illinois, to or from points and junctions competitive with the Santa Fe system. These origins and destinations are segregated by stations. In the preparation of this exhibit I have not felt it necessary to burden the record with every origin or destination and exact commodity but have some of the details with me which may be inspected, and if that is not enough, the original waybills or abstract waybills can be examined. The study originated with the original or abstract waybills. This exhibit shows a total of 13,468 cars and $1,935,549.17 of Rock Island traffic susceptible to diversion. As in my previous exhibits the revenue shown is only the Rock Island revenue and not the gross revenue derived from

the shipments. In this study covered by my Exhibit H-107 which I have just referred to, I have included only the more direct competitive traffic. I have not included traffic where the Santa Fe might have been included in the routing in place of part of the Rock Island haul, but have taken traffic only where a direct competitive relationship [fol. 1822] existed, namely, an origin or destination or junction served by both the Rock Island and the Santa Fe. As in my previous exhibit, you will note that the summary is broken down into types of traffic. The first group covers a movement from Peoria to destinations on the Rock Island also reached by the Santa Fe System. Referring to the second page which covers the detail of these cars—in the left-hand column is shown the commodity grouping in which the traffic falls. For instance, the first item is Group I, that is to say, Products of Agriculture. The second column shows the destination; the third the number of cars and the destination was Chicago, Illinois, with 825 cars being involved. Accordingly, this means that there were 825 cars involved which had Group I commodities; namely, Products of Agriculture which produced $17,226.81 for the Rock Island which could have been routed Peoria to Chicago via the Santa Fe in place of the Rock Island. The second group is the reverse of the First Group; namely, from origins on the Rock Island which origins are also reached by the Santa Fe, with destination at Peoria. As with the first group the Santa Fe could have been substituted for the Rock Island and the haul. The third Group, which is lettered Group CC, covers shipments from Peoria which moved via the Rock Island and were interchanged by the Rock Island to connecting lines, either at a junction point also served by the Santa Fe, or to a destination point which was served by the Santa Fe. Referring to the page labeled "CC" which gives [fol. 1823] the detail, the first item shows that there were 53 cars having Group V Commodities; namely, manufacturers and Miscellaneous which moved from Peoria via the Rock Island to Amarillo for destinations in California, Arizona, and New Mexico. Amarillo is a junction served also by the Santa Fe and, of course, in addition, some of the destination points may also have been served

by the Santa Fe. As a matter of fact, the Santa Fe is our connection at Amarillo which handles movements into California, Arizona, and New Mexico. It is quite apparent that the Santa Fe could have been substituted for the entire movement on these 53 cars. The next group, as shown by the summary page and lettered "DD", covers shipments just in the reverse of what I have described. While it happened all the shipments which I have mentioned have been westbound movements, it is to be noted from the exhibit there were also several thousands of shipments moving to the east that would have been vulnerable.

Q. What then have you calculated to be the Rock Island traffic which is susceptible to diversion should this application be approved as requested by the Santa Fe and Pennsylvania?

A. My traffic exhibit, Exhibit H-106, covered joint Rock Island-TP&W traffic and involved 6,358 cars and $1,048,768.01 of revenue. My traffic exhibit, Exhibit H-104, covering traffic to and from Peoria covers 13,468 cars and $1,935,549.17, or a total of 29,826 cars producing $2,984,309.18.

[fol. 1824] Q. Do you believe there is any substantial possibility of this acquisition, as proposed, creating any additional traffic or providing better service than that now available?

A. No.

Q. Why?

A. This is not a case of a railroad being built into a new and undeveloped territory, where new traffic is to be tapped such as in a new coal field, a new lumbering region, or a line into a presently undeveloped area. The TP&W is presently operating across Illinois and through Peoria, and its plant will not be changed as a result of this acquisition. Accordingly, traffic-wise, there will be nothing to be tapped or brought in that is not already available. That is to say, no new traffic will be generated and the only thing that can happen is that the volume of the traffic presently available and moving via one carrier will be diverted to another or diluted and moved via several carriers. There will be no new routes made available as Peoria is presently an open

Gateway. The connections with the Santa Fe at Lomax and Effner with the Pennsylvania are available today without restriction. Accordingly, there can be no creation of additional routes by this acquisition in that regard. So far as the shipping public is concerned, there will be no service available as a result of this acquisition which could not be made available at the present time. From my inspection of the TP&W property it appears to be in a good operating [fol. 1825] condition and capable of providing all the service which is required by the shippers and the connections which the TP&W serves. This comes back again to the point that I made earlier that the function of the TP&W is as a direct "overhead" or "bridge" route, serving 16 connecting railroads as an independent and neutral line. Without regard to the attitude of the Santa Fe and Pennsylvania, it is inevitable that the neutrality of the TP&W will be impaired by the very existence of the purchase itself. Irrespective of the manner of operation, shippers are inclined to look upon the line of a controlled company as part of the road which exercises control, and this will have a very direct effect on their choice of routing.

Q. Do you believe that any conditions which the Commission might impose upon applicants would be an effective safeguard as against the diversions concerning which you have testified?

A. No.

Q. Why?

A. The TP&W solicitors now know that they are working solely for the interest of the TP&W. They know that both Rock Island and Santa Fe compete between the two gateways of Keokuk and Lomax. If this acquisition were approved in its present form, it is inconceivable TP&W solicitors, knowing that control of the TP&W would be half in the Pennsylvania and half in the Santa Fe, would solicit against its two owning lines. Wherever there is a choice he would favor the owning line as against other carriers [fol. 1826] who otherwise might participate in the traffic. This feeling would undoubtedly prevail through the whole TP&W organization. An investment of this size, which would be made by these two carriers, would effect control and would displace the neutrality of the TP&W even though

it is left as a separate corporation with separate officers and staff and without any undue interference by the new owners. This very minimum of destruction of neutrality would be sufficient to cause a very noticeable change in position.

Q. Mr. Davidson, have you prepared a mileage exhibit showing some of the principal rail mileages which involve the gateways and lines in this proceeding?

A. Yes. My exhibit marked H-108 for identification has set up a number of different mileages which may be of assistance to the Commission and to the parties in this proceeding. For instance, it enables you to see the competitive relationship of the Santa Fe and Rock Island between Kansas City and Chicago, and the position of the TP&W.

Q. Mr. Davidson, to supplement the testimony you have already given, do you have the interchange with the TP&W with the latest available figures?

A. Yes. For the first ten months of 1955, at Keokuk, the Rock Island delivered to the TP&W 2262 cars and received 2857. At Peoria, the Rock Island delivered 3156 cars and received 1297. The November and December figures were not available at the time these figures were [fol. 1827] obtained.

Q. Mr. Davidson, have you checked the annual reports of the Rock Island and the Santa Fe to ascertain a comparative gross and net revenue of these two railroads?

A. Yes. My exhibit marked H-109 for identification shows the net and gross of these two railroads for the last five years. This shows the breakdown between income derived from railway operations and other income.

Q. Mr. Davidson, in addition to your investigation and studies showing the relationship to the Rock Island of the proceedings now before the Commission concerning the Santa Fe and Pennsylvania acquisition, have you made similar studies concerning the request of the M&StL to acquire sole control of the TP&W?

A. I have.

Q. Would you describe the relationship of the M&StL to the TP&W versus that of the Rock Island?

A. First of all, I would like to refer to my exhibit marked H-110 for identification, which is a map of the United States

showing on it in black the lines of the Rock Island, in red the lines of the TP&W, in purple the lines of the M&StL, and in brown the lines of the Chicago, Indianapolis and Louisville Railway. From this map you can see the relative position of these several railways. While the Rock Island has a connection with the TP&W, at its extreme west end at Keokuk, and again in its middle at Peoria, the M&StL has but one connection, namely, at Peoria. While the map [fol. 1828] which I have just referred to, my exhibit marked H-110 for identification, permits a general over-all check of the M&StL, my exhibit marked H-101 for identification, being the large detail map, permits a more intimate view of the M&StL and TP&W inter-relation and that of the Rock Island in the immediate territory, particularly of the M&StL and TP&W. Since Peoria, Illinois, is the eastern terminus of the M&StL, and since the principal volume of traffic which the TP&W handles is that which passes over its line moving between, on the one hand, points and places east of the Indiana-Illinois State Line and the Ohio and Mississippi Rivers, and on the other, the great western empire west of the Mississippi River, obviously the interchange of traffic between the M&StL and the TP&W complements the TP&W for only that portion of the TP&W east of Peoria. On the other hand, the Rock Island-TP&W interchange complements the TP&W not only for the haul east of Peoria, but also east of Keokuk, and on freight interchanged with the Rock Island at Keokuk, the TP&W gets its maximum haul and revenue. The M&StL not only has no connection with the TP&W west of Peoria, but it is also in competition with it for movement to and from the west. West of Peoria the M&StL obtains its long haul on traffic from the northwest moving via the Twin Cities, M&StL to Peoria and thence TP&W for connections to the east, necessarily bypassing that portion of the TP&W from Keokuk to Peoria. On traffic moving from the central [fol. 1829] west and southwest, which might come either from the Pacific Coast, Texas, or the southwest and move through the Kansas City gateway, or the Omaha gateway, the long haul of the M&StL would be through its various connections as may be seen from my exhibit marked H-101 for identification, the Wabash at Albia, Iowa, which is just

west of Ottumway and southeast of Des Moines, and at Tara, Iowa, with the Illinois Central, Tara is northwest of Des Moines and immediately west of Fort Dodge. On the latter connection, traffic moving either through Omaha or Sioux City could be interchanged. It is interesting to note that in the Railway Guide the M&StL system map shows its connection with the Wabash and with the Illinois Central in a pronounced way which is generally used to indicate preferred connections. As I have said, the reason for this is apparent as it gives the M&StL its long haul on traffic from or to western origins or destinations. If the M&StL is to participate in the movement to and from this territory, it must compete with the TP&W to the exclusion of its western half from Peoria to Keokuk. As may be seen from these same maps, the Rock Island is in competition with the M&StL. The Rock Island has its own line of railroad from the Twin Cities of Minneapolis and St. Paul to Peoria. These maps show that for large segments of this route the M&StL and Rock Island are parallel. The Rock Island then is in competition with the M&StL on all traffic originating in the territory, Twin Cities to and [fol. 1830] including Peoria through which their lines operate, and, in addition, they are in competition for all the traffic from the northwest which funnels through the Twin Cities gateway. These lines are in competition for traffic moving to and from the intermediate territory and for overhead traffic destined to the south and east, traffic which can move either through the Chicago gateway or such gateways as Joliet, Depue and Peoria. Of course, traffic in the reverse direction is also competitive. As I have previously indicated, the M&StL participates in traffic to the west and southwest through its connections. The Rock Island, of course, also is vitally interested in traffic from the west and southwest, either through its own line of railroad or through connections.

Q. Have you analyzed the Rock Island traffic to see what might be susceptible to diversion to the M&StL should it acquire sole control of the TP&W?

A. Yes.

Q. Would you please describe the results of your study?

A. I made a study of the 1954 joint traffic which the Rock Island handled with the TP&W and its connections and found the volume of business which moved over routes or from points and places competitive with the M&StL and which might be diverted should the TP&W be acquired by the M&StL. My exhibit marked M-111 for identification, which bears the letter "M" at the top, consists of 54 pages. The cover page and page 2 are summary pages showing [fol. 1831] in ten different groups ten different types of traffic which might be lost. In the following 52 pages is to be found the detail from which these summaries were drawn. Taking the first group, which is lettered "(A)", this shows that from TP&W origins to Rock Island destinations, where the destinations are also reached by the M&StL, I found 24 cars producing $4,456.16 of Rock Island revenue. Again, my exhibit shows only the Rock Island division and not the gross revenue derived from the traffic in question. On page 3 is shown the detail. For instance, the first entry covers one car which moved from Canton, Illinois, via the TP&W to Keokuk, and Rock Island to Des Moines, Iowa. This could have moved Canton, Illinois, to Peoria, Illinois, via the TP&W, M&StL-Peoria to Des Moines. Similarly, in all of the other groups covered by this exhibit you can reroute the traffic covered to show an M&StL rather than a Rock Island participation in the movement. From the summary on page 2 of this exhibit you will note that I have found there are 5,189 cars which moved in 1954 in joint service with the TP&W and which produced $914,383.74 of revenue for the Rock Island, which might be diverted from the Rock Island to the M&StL.

Q. Did you find any other traffic in your analysis of the Rock Island traffic which you determined might be susceptible to diversion.

A. Yes. I believe that there is traffic susceptible to diver- [fol. 1832] sion should the M&StL be successful not only as to points served jointly by the TP&W, but the Rock Island would also suffer the loss of traffic which is handled entirely by the Rock Island line today with no participation by the TP&W. The traffic I have in mind is that which on the one hand has an origin or destination at points:

(a) Reached by the M&StL which are also reached by the Rock Island; also

(b) On road haul connecting railroads beyond competitive junction points;

and on the other hand the vast territory embraced within the states east of Lake Michigan, Indiana-Illinois State Line and the Ohio and Mississippi Rivers and which funnels through the Chicago, Joliet, Depue, and Peoria gateways. There are numerous Iowa and Minnesota cities which are served both by the Rock Island and the M&StL and which in and of themselves are important from the traffic they produce or as points of interchange with other carriers. Of these interchange points, Minneapolis, Minnesota Transfer, and St. Paul are the important points representing natural gateways to and from the great northwest. While the M&StL presently reaches Peoria and engages in the interchange of traffic there with other railroads, there are other important gateways via which the Rock Island handles traffic to or from the east and south, namely: Chicago, Joliet, and Depue, Illinois, and of which Chicago [fol. 1833] is the greatest in importance. Acquisition by the M&StL of the TP&W would place the M&StL in a more favorable position to engage in competitive traffic than it is at the present time with its line terminating at Peoria. Since the M&StL then would reach eastern railroads at eastern Illinois junctions or at Effner, Indiana, the entire route and junctions being competitive with the Rock Island routes and junctions I have just referred to.

Q. Have you prepared any exhibits to cover this traffic?

A. Yes. The traffic covered by my foregoing general remarks is set forth in four exhibits. Each of these four exhibits covers a different type of traffic which moved via the Rock Island in 1954. I should say as a preliminary remark that my study is based on six months, the second and fourth quarters of 1954, and not all of the twelve months. I took the second and fourth quarters as being the most representative. My exhibit marked H-112 for identification, which bears the symbols "(ME)" at the top, covers traffic originating at points common to the Rock Island and the M&StL. The cover sheet is a summary and on the follow-

ing pages is shown the detail. Again, as in my previous exhibit, you can take each one of the shipments and cars which are shown to have moved and substitute an M&StL movement for a Rock Island movement. The possibility of diversion to the M&StL is enhanced by its sole acquisition of the TP&W. This exhibit shows a total of 6,866 cars, producing a total of $1,192,561.50 of traffic susceptible to [fol. 1834] diversion. My exhibit marked H-113 for identification, which bears the symbol letters "(MW)" at the top, covers the same groupings as the exhibit which I have just described, except that it is for traffic in the reverse direction, namely, westbound. It is made in the same way and on the same basis. It shows a total of 2,107 cars, producing a total of $410,347.68 susceptible to diversion.

My next exhibit, which bears the symbol "(M-EX)", H-114 covers traffic crossing over the Rock Island eastbound; in other words, bridge traffic. This exhibit was drawn in the same manner, namely, the first page is a summary with the detail on the following pages. As an example of the type of traffic involved refer to the first page of the detail on this exhibit and the first item which shows two cars of traffic which originated in Minnesota destined to Indiana, which moved over the Rock Island from Albert Lea to Chicago. An M&StL move might be substituted. The exhibit shows a total of 6,890 cars, producing $652,183.30 of revenue. My exhibit marked H-115 for identification, which bears the symbols "(M-WX)" at the top, covers the same groups of traffic as the exhibit I have just referred to only in the reverse direction, namely, westbound. It is constructed in the same manner and shows a total of 2,931 cars, producing $373,343.48 of revenue for the Rock Island.

These last four exhibits cover a total of 18,794 cars and $2,628,435.96. Since these four exhibits are only from an [fol. 1835] actual six months, to project them to cover the entire year of 1954 it would mean doubling the cars to 37,588 and the revenue to $5,256,871.92. Accordingly, on the basis of my complete study of the 1954 business, the freight revenue susceptible to loss annually by the Rock Island by acquisition of the TP&W by the M&StL is as follows:

	CARS	R.I. REVENUE
Joint TP&W-Rock Island Traffic	5,189	$ 914,383.74
Rock Island traffic to or from points competitive with the M&StL or via competitive junctions, from or to eastern and southern territories	37,588	5,256,871.92
	42,777	$6,171,255.66

Q. Mr. Davidson, why did you take the year 1954 in making your studies?

A. It was a recent year and I believe that 1954 is a conservative year on which to base studies of this kind. The traffic consists should have been substantially normal as I am not aware of any particular distortions which would have been made by unusual conditions such as war, or any other abnormality which would cause traffic to flow in other than the pattern which we would expect to be normal year after year. Furthermore, it was a year in which the railroads had a smaller volume than that experienced in either 1953 or 1955 and consequently, it is a more conservative year. It would mean, if anything, my figures are understated. The present traffic moving would indicate [fol. 1836] that for the foreseeable future, traffic of like volume or greater might be anticipated, but what is more important for this case, the commodities, channels, and traffic patterns experienced in 1954 are representative.

Q. These statements which you have just made apply equally to all of your exhibits, both as to the M&StL and the Santa Fe, do they not?

A. Yes, sir.

Q. Will the M&StL by virtue of its proposed acquisition of the TP&W create any new traffic route or service not presently available?

A. No. The routes for the movement of traffic and the service which might be performed as a result of the application are all presently available.

Q. Will the proposed acquisition generate any new traffic?

A. No, I cannot see that it will as all of the facilities are presently available and no new territories are to be opened up such as new timberlands or new mines, nor will there be the creation of any new industrial areas. The proposed acquisition will generate no new traffic. Consequently, the only effect of the proposed acquisition can be to divert traffic presently available to the detriment of carriers such as the Rock Island.

Q. Mr. Davidson, in the Pennsylvania's Exhibit H-18, on page 1, are figures, which are set out again in the map on page 4, which show the interchange between the Rock Island [fol. 1837] and the TP&W both at Keokuk and Peoria. This study covers the twelve months ended June 30, 1955. In your own testimony you have similar figures for your study period of 1954, haven't you?

A. Yes, they are set out in Exhibit H-103. On the cover page of this exhibit these figures are shown. For Peoria there was a total of 1,335 cars received by the Rock Island from the TP&W, and 3,555 cars which the Rock Island delivered to the TP&W.

Q. Now as to these cars which were interchanged at Peoria, have you analyzed these figures to determine how many of them can be said to be cars that moved in competition with the TP&W?

A. Yes. I considered as competitive any car which the Rock Island interchanged with the TP&W at Peoria which moved from or to points served by both the Santa Fe and Rock Island Missouri River or west, including Denver and Pueblo (which is not a Rock Island point), or which moved via Kansas City with any railroad beyond Kansas City from or to points in Kansas, Oklahoma, Arkansas, Texas, or Louisiana, including Rock Island local points, or from or to points in the States of New Mexico, Arizona, and California.

Q. How many such cars did you find?

A. Of the 3,555 cars which we delivered to the TP&W at Peoria, 319, or 9 per cent, came from the territory I have just described. Of the 1,335 cars which the TP&W delivered to us at Peoria, 63, or 4.6 per cent moved to the territory which I have just described.

[fol. 1838] Q. Mr. Davidson, in yesterday's cross-examination of Mr. Foulks, were you present in the hearing room?

A. I was, yes.

Q. And have you had an opportunity to look at the transcript since then?

A. I did this morning.

Q. In response to Mr. Wheeler's questions he gave some mileages from the Twin Cities via Keokuk and via Bureau to Peoria.

A. He gave part of the mileage from Minneapolis to Keokuk which was 448 or 450 miles. He did not include the Keokuk to Peoria mileage of 113 miles. The sum of the two—I am mis-stating, let me start again.

The mileage from Minneapolis to Peoria which he gave via Bureau was 448 to 450 miles. He gave from Minneapolis to Keokuk via Des Moines, a distance of 410 miles. He did not include from Keokuk to Peoria the 113 miles, which would have made the through mileage via Keokuk 523 miles.

Q. And then the responses he gave to Mr. Wheeler were in error because of the failure to include the TP&W mileage and only to state the Rock Island?

A. That is correct. Mr. Wheeler asked him if the mileage, the route via Cedar Rapids and Bureau was circuitous, which was not the fact.

Q. With the additional mileage, then, the Keokuk route is the circuitous route?

[fol. 1839] A. That is right.

Q. Just for a matter of making the record clear, Mr. Davidson, does the TP&W have its own tracks through Peoria on its route across the State of Illinois?

A. As far as I know, except for the distance from Hollis to a point where they connect with the Burlington, that is, to the Burlington tracks, East Peoria Line. They use the Rock Island or the PT, rather from Hollis Junction to Iowa Junction, a distance of approximately five miles.

Q. So then for five miles they use Rock Island tracks rather than their own?

A. That's right.

Q. What is the PT?

A. Peoria Terminal.

A. That is a wholly owned switching subsidiary of the Rock Island road.

Mr. Cassell: Subject to cross-examination I offer Exhibits 99 through 116, inclusive, and tender the witness for cross-examination.

Exam. Albus: Cross-examination, please.

Mr. Thomas.

Cross examination.

By Mr. Thomas:

Q. Mr. Davidson, on page 12 of your prepared statement you refer to the exhibit introduced by the TP&W in Finance Docket 18752.

[fol. 1840] A. Yes.

Q. Do you know the number of that exhibit in that docket?

A. I think it was H-52.

Mr. Cassell: Wasn't that introduced in this proceeding by Mr. Witt?

The Witness: Yes, Mr. Witt introduced that, I believe.

Mr. Cassell: It is now in evidence in this case.

By Mr. Thomas:

Q. Mr. Davidson, are you familiar with the testimony of Mr. Foulks that Keokuk is the service route, the Keokuk branch from Eldon to Keokuk is the service route for Rock Island interchange with the TP&W on traffic moving through Denver and Kansas City?

A. As I remember his answer, he gave that as traffic flowing through principally Kansas City gateway.

Q. Have you seen a copy of his prepared statement?

A. I don't believe I have.

Mr. Cassell: Did you hear him testify?

The Witness: I heard him testify.

Mr. Thomas: Did he change that, Mr. Cassell?

Mr. Cassell: Sir?

Mr. Thomas: Did he change the language in his prepared statement when he read it?

Mr. Cassell: I don't know. I was just helping you out.

By Mr. Thomas:

Q. Did you hear Mr. Jenks' testimony?

A. I did, sir.

[fol. 1841] Q. On that same subject?

A. Yes.

Q. And didn't he say that Keokuk was the service route on traffic from the West?

A. I believe he did.

Q. And it is your understanding that Mr. Foulks confined himself to Kansas City, didn't mention Denver?

A. He may have mentioned Denver but I think he had reference particularly to the Kansas City gateway as the service route. He mentioned the instructions which had been placed at Kansas City for unrouted business. He may have included the Denver gateway in his comments but I didn't so understand it.

Q. Isn't there a substantial volume of traffic moving on the Rock Island through Kansas City and through Denver which is interchanged with the TP&W at Peoria as shown by your exhibits?

A. Not a great deal of business through Kansas City. There is some business through the Omaha gateway that is interchanged at Peoria. As I remember it, the traffic through the Kansas City gateway interchanged via Peoria is approximately nine per cent, a small number of cars relatively.

Q. You show on page CCC of your Exhibit H-103 down near the middle of the page 98 cars—

A. Yes.

Q. (Continuing) —moving Rock Island, Peoria, TP&W Farmdale.

A. That is correct.

[fol. 1842] Q. Don't a good number of those cars come through the Kansas City gateway?

A. I can't tell you as to those particular 98 immediately. I can furnish the information later if it is necessary.

Q. I think some of your other exhibits show that what I said is true, isn't that correct?

A. I know there is some business that moves through Kansas City that might move via Farmdale.

Q. What sort of a haul does the TP&W get when it interchanges traffic with you at Peoria and delivers it at Farmdale?

A. Rather a short haul.

Q. It is just across the river, isn't?

A. That is correct.

Q. Do you know why traffic is routed that way?

A. Probably because the lines that participated in the movement solicited it that way.

Q. One of those lines would be the Rock Island, would it not?

A. That is right. But I had reference more to the other lines.

Q. That wouldn't include the TP&W, would it?

A. It might.

Q. Do you know whether or not the TP&W has complained to the Rock Island about this traffic on which it gets a haul only between Peoria and Farmdale?

A. No, I do not.

Mr. Thomas: That is all.

[fol. 1843] Exam. Albus: Mr. Lucas.

Mr. Lucas: No questions, Mr. Examiner.

Exam. Albus: Mr. Wheeler, please.

Cross examination.

By Mr. Wheeler:

Q. Mr. Davidson, refer for a moment to page 34 of your testimony, isn't all the traffic there, the $6,171,000 of traffic that you refer to there as being susceptible to loss to the Rock Island susceptible to loss to it right now?

A. That is true. The first group $914,000 was traffic which was obtained for the Rock Island by the Toledo, Peoria and Western solicitors. We did not solicit the traffic that way. We solicited for a long haul. The balance

of the traffic and the revenues shown pending there which is traffic to or from points which are competitive between the M&StL and the Rock Island, and we believe that it is all susceptible to loss, based upon the statements which have been made in the record by Mr. Nelson that they propose to solicit traffic away from Chicago and the Minneapolis gateway and that the Rock Island would be one of the railroads from which they expected to get the traffic.

Furthermore, the soliciting points of the M&StL are in very good standing in my opinion to the public evidence by their success of the railroad since they came out of receivership some years ago.

Q. Mr. Davidson, just so there will be no doubt, I believe [fol. 1844] you answered, I want to make sure of this, that all of that traffic is susceptible to loss by the Rock Island at the present time.

A. It is all competitive, and consequently is subject to loss.

Q. Mr. Davidson, there has been a good deal of testimony of record by the various traffic witnesses who have appeared in this case that the originating carrier has a great influence or is able to influence greatly the routing of traffic. Do you agree with that statement?

A. I think there is some foundation to it, yes.

Q. Would you say that the terminating carrier similarly had an advantage with respect to the routing of traffic over a carrier which did not terminate the traffic?

A. There is an advantage there, yes.

Q. You have referred to Newton, Iowa, in one of your exhibits.

A. That is right.

Q. I take it you regard that as a representative destination?

A. Well, it is a point that is competitive with the M&StL.

Q. It is a representative competitive point with the M&StL?

A. That is right.

Mr. Cassell: Mr. Davidson, will you keep your voice up so people can hear.

By Mr. Wheeler:

Q. Mr. Davidson, doesn't the Rock Island require the delivery of traffic destined for Newton to be given to the Rock Island—I am talking about traffic now originating in the East—given to it at or east of the Mississippi River, [fol. 1845] at or east of the Mississippi River interchange point?

A. It may be the case, I am not sure.

Q. You are not sure?

A. No, sir.

Q. Do you not know that that's the only basis upon which they will accept the traffic and apply the through rates?

A. I just said I wasn't sure.

Q. If that is a fact, wouldn't that affect the statements or affect your exhibits with respect to Newton and with respect to the traffic?

A. With respect to part of the revenue, yes.

Q. It would affect it with respect to all of those at Newton, would they not?

A. I say partly.

Q. And points similarly situated?

A. I don't know of any such points.

Q. Mr. Davidson, you show a good bit of traffic interchanged with the MN&S Railroad.

A. Minneapolis North Field and Southern, yes.

Q. That traffic moves via the MN&S almost entirely on their solicitation rather than on Rock Island solicitation, does it not?

A. Well, I can't answer as to that. They are soliciting the business and we are maintaining an open policy with respect to the traffic routed that way, we don't work against [fol. 1846] it, so in a measure we are in favor of the route.

Q. You are in favor of your interchange with the Minnesota Transfer first of all, are you not?

A. Oh, yes, that is right.

Q. And the MN&S when it participates takes part of the revenue from you, does it not?

A. That is correct.

Q. Does the M&StL have a track connection with the MN&S?

A. I don't know, sir.

Q. You don't know?

A. No.

Q. You didn't ascertain that fact in connection with the preparation of these exhibits or your study?

A. No, I didn't. I included the traffic that moved via that route because it would clear through the Twin City gateway and therefor would be competitive to my idea just as much as the traffic moves through Minneapolis without the MN&S.

Q. You have included South St. Paul traffic, have you not, in your studies?

A. I believe there is some of that in there.

Q. Do you believe that the South St. Paul traffic is competitive from the standpoint of service over the M&StL as against the Rock Island?

A. Well, I wasn't looking at it exactly from that standpoint. The traffic was all competitive in a sense and there-
[fol. 1847] fore I included it.

Q. Do you know how much time would be incurred in switching from South St. Paul to the M&StL line?

A. No, I am not familiar.

Q. Do you know that the M&StL doesn't even try to solicit that traffic to South St. Paul?

A. No, I don't.

Q. Do you know that the M&StL doesn't try to solicit traffic via the MN&S?

A. I assume they do not.

Q. Mr. Davidson, do you regard traffic as being competitive if they are in a particular town if there is no reciprocal switching arrangement as between the Rock Island the M&StL?

A. No, I probably wouldn't. It all depends upon whether it is industry business or team track business.

Q. You included a substantial amount of team track business in your study?

A. I imagine so.

Q. Mr. Davidson, do you regard the M&StL as being competitive with the Rock Island service-wise on shipments from the East into Des Moines?

A. Oh, I think they are fairly competitive, yes.

Q. Do you regard 24 hours difference in time as being competitive?

A. Well, some traffic is not susceptible to as fast service [fol. 1848] as others.

Q. What kind of traffic would you refer to now as traffic that, as to which a 24-hour time differential would not eliminate the competition?

A. Of course I don't know that the difference is 24 hours, but the dead freight probably could, we will say, stand the 24-hour—

Q. You say could stand?

A. Could stand.

Q. In dead freight you refer to what?

A. Other than perishable.

Q. What is your service from Chicago to Des Moines?

A. Well, I am really not an operating man. I am not posted as to the individual schedules.

Q. Why do you tell your shippers your time schedule then when you solicit traffic?

A. Well, I am not soliciting traffic myself.

Q. What do your employees, or the employees of the Rock Island tell them with respect to that service?

A. I am not prepared to answer.

Q. Don't you know that the Rock Island advertises an overnight Rocket service from Chicago to Des Moines?

A. I know they have done so in the past.

Q. But you don't know whether that is true today?

A. No, I do not.

[fol. 1849] Q. Can the M&StL compete against that service, Mr. Davidson, in—

Mr. Cassell: Mr. Examiner, I object. We had an operating man on the stand yesterday who was thoroughly conversant with the operating facts. He tried to give the various schedules. He was available for cross-examination and all of these facts could have been brought out specifically through that witness, operating questions should have been asked an operating witness of that kind.

Exam. Albus: It seems to me this witness is doing all right. If he doesn't know he will tell him.

By Mr. Wheeler:

Q. Isn't service an important consideration in the solicitation of traffic, Mr. Davidson?

A. Yes, over-all picture I think the answer is yes.

Q. Isn't it the most important consideration?

A. Well, there is a difference of opinion about that. I am disposed to agree with you.

Q. Isn't it true, Mr. Davidson, that most of the industries in Des Moines are located on Rock Island tracks?

A. We have a goodly number there.

Q. In fact, isn't Des Moines known as a Rock Island town?

A. Well, we have been so classed, I believe.

Q. Mr. Davidson, are you familiar with the high switching charge which the Rock Island charges the M&StL at Estherville, Iowa?

[fol. 1850] A. I don't know what the measure of it is if that is what you mean.

Q. If there is a high switching charge at Estherville, Iowa, charge by the Rock Island, wouldn't that make the M&StL non competitive as to the industry located off its lines?

A. I wouldn't know. It would all depend upon whether the M&StL absorbs the switching charges.

Q. Well, if the switching charge is very high the M&StL would have no incentive to get that traffic or take that traffic, would it?

A. I don't know. If I were on the Rock Island a matter of switching charge wouldn't deter me from soliciting the freight.

Q. Even though you got the freight and absorbed the switching charge your traffic would be non compensatory?

A. Well, I wouldn't know that until I made some test myself.

Q. You wouldn't know until you knew what that switching charge was, would you?

A. No, I would not.

Q. Did you ascertain that switching charge in making your study?

A. I did not, no.

Q. Of the traffic that you originate, Mr. Davidson, what per cent goes through Chicago as compared to Peoria?

A. Are you talking about—

Q. (Interrupting) By Chicago I include Joliet and Depue, Illinois.

[fol. 1851] A. Are you talking about all the traffic which the Rock Island handles, is that what you mean?

Q. Through the two gateways, considering Chicago-Joliet and Depue as against Peoria, what is the relationship?

A. Oh, I would say the greatest portion moves through Chicago without a doubt.

Q. Now, doesn't your Exhibit 112 also show that traffic originating at points competitive, as you have used that term, between the Rock Island and the M&StL in the states of Iowa and Minnesota go primarily through Chicago, Joliet and Depue as against Peoria?

A. Well, that is the way the traffic moves but there is no requirement that the traffic must move that way. It could move through the Peoria gateway.

Q. Now, that is true despite the fact, Mr. Davidson, that there is better service via Peoria on the M&StL at the present time than there is via the Rock Island at Chicago?

A. I don't think that I understand your question. I heard what you said but I don't know what you led from.

Q. Well, let me ask this question. Isn't the service on the M&StL between the Twin Cities and Peoria faster than the service between the Twin Cities and Chicago via the Rock Island, speaking of freight service?

A. Again I am not familiar with the respective operating schedules of the two lines.

[fol. 1852] Q. Turning to page 17 of your testimony, Mr. Davidson. There is a reference there to the RIP line. Does that stand for Rock Island, Peoria?

A. That's right.

Q. Mr. Davidson, when you were head of the traffic department of the Rock Island—

Mr. Cassell: I think you have promoted him.

A. I wasn't head of the traffic department.

By Mr. Wheeler:

Q. When you were with the traffic department of the Rock Island did you request that that line be improved in order to improve the Rock Island's service?

A. I did not myself.

Q. Do you know whether any consideration was given to improving that line in order to improve service?

A. I wouldn't know, sir.

Q. Mr. Davidson, when you decrease or eliminate the time in transit differential between truck and rail deliveries, don't the rail deliveries become more competitive with the truck deliveries?

A. Oh, I think that's so.

Q. When you are more competitive service-wise with the trucks don't you have a better chance to get traffic from the trucks?

A. If you mean by that the service is comparable to the trucks I'd say yes.

Q. And the same thing would apply, would it not, of the [fol. 1853] inroads of the trucks into traffic now enjoyed by the rails, if your service is improved those inroads would be less?

A. I think that is so.

Q. The RIP line could be improved, could it not, and speed up your service?

A. I suppose if the management concluded that that was the thing to do they would have done so before.

Mr. Wheeler: I have no further questions.

Exam. Albus: Thank you very much.

Is there any further cross-examination?

(No response.)

Exam. Albus: Redirect.

Redirect examination.

By Mr. Cassell:

Q. Mr. Davidson, Mr. Thomas has asked some questions concerning goods going through Farmdale. Couldn't those cars also be routed by the shippers in giving routing in junction points?

A. That is right.

Q. It was suggested by Mr. Thomas, he asked if you did have the breakdown, you said you could secure it.

Mr. Cassell: Mr. Examiner, in order that the record may be complete to secure that breakdown and furnish it as an exhibit.

Exam. Albus: Late filed exhibit?

Mr. Cassell: If I may.

Exam. Albus: You have 15 days within which to do that, [fol. 1854] is that sufficient?

By Mr. Cassell:

Q. Is that sufficient, Mr. Davidson?

A. Yes.

Q. Will you make a note and do it?

A. Yes.

Exam. Albus: Thank you.

By Mr. Cassell:

Q. In regard to some of the questions asked by Mr. Wheeler what other carriers are in Des Moines other than the Rock Island?

A. Well, there is the North Western, the Milwaukee, the Wabash, and the M&StL, Des Moines Central Iowa, Fort Dodge, Des Moines and Southern, and then there's a couple of terminal lines there.

Q. Did you hear the testimony of Mr. Nelson?

A. I did.

Q. He is in charge of the M&StL freight traffic department?

A. I did, yes.

Q. Did you hear his direct testimony, which is reported on page 1275, wherein he stated, "These interchange points will provide additional traffic to the unified lines of the M&StL and TP&W, this would create traffic, new traffic, via these lines which currently moves principally through the Chicago gateway and which to a large extent moves via the direct Chicago-Twin Cities lines"?

A. I heard that, yes.

Mr. Wheeler: Mr. Examiner, I am going to object to any [fol. 1855] further questions along this line solely because they go beyond the cross-examination of this witness.

Mr. Cassell: I don't believe they do. You cross-examined concerning the $6,000,000 that he has shown.

Mr. Wheeler: O.K., if that is what it relates to.

Exam. Albus: Very well, proceed.

By Mr. Cassell:

Q. And did you hear the cross-examination of Mr. Nelson as well—

A. I did.

Q. (Continuing) —by myself?

A. I did.

Q. Wherein he said on page 1306.

"Q. The traffic you are talking about that you expect to get that is now moving via the Chicago gateway and other gateways, that is now moving by other carriers, isn't it?

"A. Not altogether, we get some.

"Q. The traffic you expect to get?

"A. Would be new traffic.

"Q. New traffic to you?

"A. Yes.

"Q. But it is not new traffic to railroads, is it?

"A. That is correct.

"Q. That is traffic presently moving by other railroads, isn't that true?

"A. Yes.

[fol. 1856] "Q. So that you expect to divert traffic from other railroads to yourself?

"A. Yes.

"Q. Then it is not new traffic but diverted traffic?

"A. That is correct."

Exam. Albus: How much of this are you going to read?

Mr. Cassell: Until I get down to the Rock Island.

By Mr. Cassell:

Q. Skipping:

"Q. The Rock Island is one of those roads, isn't it?

"A. Yes, we compete. We also have connections with you."

Did you hear those statements?

A. I did.

Q. And the following questions:

"Q. That's right, and the Rock Island serves the Twin Cities, doesn't it?

"A. It does."

Would any of that traffic to which Mr. Nelson is referring be included in the $6,000,000 you have referred to on page 34 of your prepared statement?

A. Would any of that traffic be included in the $6,000,000?

Q. Yes.

A. It would, yes.

Exam. Albus: One minute, please.

Mr. Wheeler: Mr. Examiner, I move to strike the witness's answer on the grounds that this is something that he [fol. 1857] just can't possibly know. These are facts within the knowledge of Mr. Nelson and not this witness.

Exam. Albus: The motion is overruled.

By Mr. Cassell:

Q. Just in the light of Mr. Wheeler's objection is there traffic included in that $6,000,000 of the character described by Mr. Nelson?

A. Yes.

Q. He asked you about ~~team~~ track traffic up at the Twin Cities, would you think there would be much team track traffic involved?

Mr. Wheeler: Mr. Examiner, I didn't limit team track traffic to the Twin Cities by any manner or means.

By Mr. Cassell:

Q. Or any place else?

A. Relatively I would say it was small contrasted to the industry business.

Mr. Cassell: That is all.

Recross examination.

By Mr. Wheeler:

Q. How about elevators local to your lines, Mr. Davidson, isn't their business substantial?

A. Yes. Generally speaking, we do not class elevators at common points any differently than we do other industries at common points.

Q. Is grain out of an elevator on the Rock Island, say at Livermore subject to reciprocal switching?

A. It depends on whether the traffic were, the grain was grown in the vicinity it could be switched to the Rock Island [fol. 1858] but grain generally at small towns is subject to transit, and the railroad upon whose rails the industry is located usually requires a haul, line haul.

Q. Now I am talking about elevators on your lines, on the Rock Island. Are they subject to reciprocal switching?

A. The tariff doesn't provide that the switching charge will not apply to or from the elevator.

Mr. Wheeler: I have no further questions.

Exam. Albus: Are there any further questions?

(No response.)

Exam. Albus: You are excused, Mr. Davidson. Thank you very much, sir.

The Witness: Before I leave the stand I would like to make a couple of corrections on page 15—

Exam. Albus: Very well.

The Witness (continuing): —about the sixth line the number of cars should be ninety-three ninety-six instead of ninety-three zero six.

Then on page 24 there is another typographical error, the second answer it reads 29,826 cars; it should read 19,826 cars.

Exam. Albus: Is that all from Mr. Davidson?

Mr. Cassell: Yes, sir.

Exam. Albus: You are excused.

(Witness excused.)

RE-OFFER OF EXHIBITS IN EVIDENCE.

Mr. Cassell: I would like to re-offer Exhibits 99 to 116, [fol. 1859] inclusive.

Exam. Albus: Is there any objection to those exhibits?

(No response.)

Exam. Albus: Let the record show that they are received at this time.

(Intervenor's, Rock Island, Exhibits Nos. H-99 to H-116, inclusive, Witness Davidson, were received in evidence.)

Mr. Cassell: Mr. Examiner, I have for distribution now Exhibit H-85, which was identified on the record yesterday, of which we had no copies other than the original exhibit.

Exam. Albus: Yes.

Mr. Cassell: That is available for distribution.

Exam. Albus: Thank you very much. May I have a copy, please.

Mr. Cassell: I also have available for identification—I am also tendering for identification and offering at this time a copy of the resolution which was referred to at the time the Rock Island presented its petition to amend its petition in regard to the M&StL, in which we asked to participate and be included. This is the supporting resolution which I said would be furnished at a later time.

Exam. Albus: Very well.

Mr. Cassell: May it be identified?

Exam. Albus: It may be identified as Exhibit H-117 and [fol. 1860] is received in evidence.

(Intervenor's, Rock Island, Exhibit No. H-117, Mr. Cassell, was marked for identification and received in evidence.)

Mr. Cassell: The resolution supporting the petition in regard to the M&StL, the Rock Island's petition for inclusion is marked, then, for identification as Exhibit 117?

Exam. Albus: That is correct, and it was received in evidence.

Mr. Cassell: I also would like to have marked an extract from the by-laws of the TP&W as Exhibit 118.

Exam. Albus: It may be so marked.

(Intervenor's, Rock Island, Exhibit No. H-118, Mr. Cassell, was marked for identification.)

Exam. Albus: Is there any objection.

Mr. Lucas: What is the purpose of that, may I ask?

Mr. Cassell: The purpose of that is to show the operation of the board of directors on the TP&W at the present time and how the corporation business would be affected through its board of directors.

Exam. Albus: The extract of by-laws of the TP&W is marked for identification as H-118 and is received in evidence.

(Intervenor's, Rock Island, Exhibit No. H-118, Mr. Cassell, was received in evidence.)

Mr. Cassell: That completes the Rock Island presentation.

[fol. 1861] Mr. Wheeler: Mr. Examiner, I think there was marked for identification but I don't believe received, Exhibit H-73, and I have had additional copies made of that for all counsel. This is the information that Mr. Lucas furnished me.

Exam. Albus: Very well.

Is there anything further.

Mr. Wheeler: I would like to ask Mr. Lucas to stipulate for the record in the absence of the one study, the further information that we asked of him with respect to the total revenues, freight revenues received from the Dupont Company, I would like him to stipulate for the record, if he will, that the Dupont Company is one of their largest shippers.

Mr. Lucas: Mr. Examiner, that comes under the statutory prohibition and the policy situation to which I referred, and I am not willing to so stipulate.

Exam. Albus: Very well, there will be no stipulation unless everybody is agreeable to it.

Mr. Broker.

Mr. Broker: Just to clear the record in this respect, the Nickel Plate is still required to furnish some information as to interchange between the Rock Island and the Nickel Plate, breakdown between switching and line haul cars and that is being worked up.

Exam. Albus: That will be a late filed exhibit?

Mr. Broker: Yes, sir.

[fol. 1862] Exam. Albus: Very well. When it is received it will be given an exhibit number.

Mr. Broker: In addition, we still have to furnish resolutions, as you know.

Exam. Albus: Very well.

Mr. Broker: Now, our Exhibit H-2, which is the general information that is ordinarily included in an application was made applicable in the M&StL case, but I notice that the opinion of counsel refers specifically to the Santa Fe-Pennsylvania application. Now, if it can be agreed that that opinion applies in the other case, well and good, otherwise we would like to file a separate opinion of counsel.

Mr. Cassell: I have the same problem, of course, in the Rock Island's.

Exam. Albus: Is there any objection to that, Mr. Wheeler?

Mr. Wheeler: No, sir.

Exam. Albus: Thank you.

Mr. Broker: Which is it?

Mr. Wheeler: I have no objection to its applying to both.

Exam. Albus: Both applications.

Mr. Broker: Thank you very much.

Mr. Wheeler: Mr. Examiner, there is one thing more I would like to request of the Pennsylvania which I forgot to, and that is the compensation—

Exam. Albus: Off the record.

[fol. 1863] (Discussion off the record.)

Exam. Albus: On the record.

Mr. Wheeler: I would like to have it stipulated that we can refer to this publication put out by the Commission showing the salaries of various officials of the railroads. I would like to ask Mr. Lucas to furnish for the record in the event it is not included in that the salaries paid to the managers of the various divisions of their railroads that were put in evidence by Mr. Symes, that is, the regions.

Mr. Lucas: For what purpose do you have in mind, Mr. Wheeler?

Mr. Wheeler: I want to show the comparison between those salaries and the salary paid to Mr. Coulter. It is relevant to testimony that was given also by Mr. Heineman.

Mr. Lucas: Mr. Examiner, it seems to me that we are

going very far afield but if that seems to be of some interest to the Commission, why, we'd be willing to furnish it.

Exam. Albus: Thank you very much.

Mr. Broker: I say off the record.

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

Mr. Wheeler: May we refer to that other document I referred to, does anybody have any objection to that?

Exam. Albus: You may refer to that.

[fol. 1864] Exam. Albus: Is there anything further?

Mr. Thomas: Mr. Examiner, while we are discussing these questions, it has already been stipulated that the parties involved may refer to the Form A reports of each other?

Exam. Albus: Yes.

Mr. Thomas: I was going to suggest that if the briefs are filed before the Form A for '55 is out for any road the parties be permitted to refer to the so-called R. & E. reports which are monthly cumulative reports.

Exam. Albus: That is satisfactory.

Is there anybody present who desires to testify and who has not had an opportunity to do so?

Mr. Thomas: We have some witnesses.

Exam. Albus: At this time all exhibits identified which may not have been received are received right now.

There have been so many of them that I don't know if they have all been received in the record or not. If they haven't, they will be received at this time.

Now, for the rebuttal.

Mr. Lucas: Mr. Clutz, will you take the stand, please.

[fol. 1865] John Jacob Clutz was sworn and testified as follows:

Exam. Albus: All right, Mr. Lucas.

Mr. Lucas: Mr. Examiner, may there be marked for identification a blue bound document which has just been distributed which carries no title page but the index refers to boxcar shortages.

Exam. Albus: That may be marked for identification Exhibit H-119.

(Applicant's, Pennsylvania, Exhibit No. H-119, Witness Clutz, was marked for identification.)

Direct examination.

By Mr. Lucas:

Q. Mr. Clutz, has there been prepared under your supervision during your sojourn here in Peoria the document which has been marked for identification Exhibit H-119?

A. There has.

Q. You are familiar with the contents of the document?

A. I am.

Q. And both the material appearing on page 1 and the graphs that follow were prepared under your supervision and direction?

A. They were.

Mr. Lucas: That completes the direct, Mr. Examiner.

Exam. Albus: Is there any cross-examination?

Mr. Broker: May I just look at this, please?

I don't have any objection.

[fol. 1866] Mr. Cassell: I don't have any objection to it.

Mr. Wheeler: I would like to ask a question.

Exam. Albus: Yes, sir.

Cross examination.

By Mr. Wheeler:

Q. Refer to page 6 of your exhibit. Wouldn't the relative showing of the Santa Fe-Pennsylvania and any other smaller line, any other line that was smaller than they, be the same as that shown on Exhibit 6?

A. Not necessarily.

Q. Why do you say that?

A. It is true that the more cars that are loaded on a line the smaller the percentage is, the smaller the TP&W shortages would be as a percentage of those loadings.

Q. In other words, if you took a very short line, this

might go through a 100 per cent, might it not?

A. Oh, yes.

Q. So this exhibit really just shows the relative size of the Pennsylvania and Santa Fe as compared to the M&StL with respect to boxcar loadings, doesn't it?

A. It shows what—

Q. (Interrupting) Doesn't it show that, in fact?

A. It shows that also.

Q. Now turn to page 4. This is not related, is it, to boxcar ownership of the properties involved?

A. No, that is correct.

[fol. 1867] Q. So that if a line such as the M&StL were not receiving from other roads the share of boxcars that it is entitled to by reason of its ownership, that would not be shown by this exhibit?

A. This exhibit simply shows the boxcar shortages as reported by each of the roads as a percentage of the boxcar loadings as reported by that.

Q. And this exhibit would not be affected in any way by additional ownership on the part of the M&StL, would it?

A. It might or it might not.

Q. Well, how might it?

A. If the additional ownership resulted in their having more cars available for loading they would.

Q. If that did not, if the M&StL had twice the ownership of cars in—

A. (Interrupting) These are all 1955.

Q. In 1955, this would not, this exhibit would not be affected one iota, would it?

A. It might well be, depending on whether that resulted in their having more cars—

Q. (Interrupting) I want to know whether it would. I don't want to know whether it might well be or anything of the kind. I want to know if this exhibit would have been affected in the slightest if the M&StL had four times the boxcar ownership in 1955 that it did have.

[fol. 1868] A. I still say it might have been. In other words, this relates reported shortages to reported loading. It is conceivable that if the M&StL owned more boxcars than it did it would have had more cars available for loading, have had higher loadings and lower shortages.

Q. Well, what it comes down to, does it not, is that this relates solely to boxcar loadings on line and not to boxcar ownership?

A. It so states.

Q. What is the significance of this loadings on line? In other words, to what is this exhibit directed, what testimony of record is this exhibit directed to, what testimony put in by the M&StL is this exhibit directed to, what is it designed to rebut?

Mr. Lucas: It is directed toward the—

Mr. Wheeler: I would like to get the statement from the witness.

Exam. Albus: Counsel can answer that.

Mr. Lucas: If he prefers the witness, that is quite all right with me, I do too, as a matter of fact.

A. There was considerable testimony to the fact that the Pennsylvania and the Santa Fe had greater boxcar shortages than the M&StL.

By Mr. Wheeler:

Q. Does this exhibit in any way refute that?

A. No, it shows the actual figures.

[fol. 1869] Mr. Wheeler: Mr. Examiner, I object to the acceptance in evidence of this exhibit as not being in refutation of any evidence placed in the record by the M&StL or any other party to this proceeding so far as I know. This is further direct. It is not rebuttal.

OFFER IN EVIDENCE

Mr. Lucas: I haven't offered it but I will now offer it nunc pro tunc so he can get his objection in.

I offer the Exhibit H-119.

Exam. Albus: Do you still object to it?

Mr. Wheeler: I object to it because I don't think it is proper rebuttal. The witness says it doesn't refute anything that has been put in evidence here by the M&StL.

Exam. Albus: The objection is overruled.

It is received now.

(Applicant's, Pennsylvania, Exhibit H-119, Witness Clutz, was received in evidence.)

Mr. Lucas: That is all.

Exam. Albus: You are excused, Mr. Clutz.

(Witness excused.)

Mr. Thomas: I want to call Mr. Pattison.

C. L. Pattison was sworn and testified as follows:

Direct examination.

By Mr. Thomas:

Q. Mr. Pattison, I want to hand you a couple of exhibits, H-31 and H-29 in this proceeding, you will note that those [fol. 1870] exhibits show that—let's take H-29—

By Mr. Thomas:

Q. Mr. Pattison will you state your full name.
A. C. L. Pattison.
Q. Your address?
A. 2000 East Washington, East Peoria.
Q. What position do you hold with the TP&W?
A. I am comptroller of the TP&W Railroad.

Mr. Thomas: I referred Mr. Pattison to Exhibits H-29 and H-31, which were introduced by the M&StL in this proceeding.

By Mr. Thomas:

Q. The record shows that the figures representing cars interchanged between the M&StL and the TP&W, I mention specifically the 11,999 cars shown in column B of Exhibit H-29 and the same number of cars shown on Exhibit H-31.

I further direct your attention to the situation, let me point out that Mr. Swanson, who introduced those two exhibits, testified that those cars were obtained from Exhibit H-51 in the so-called Illinois Terminal case. Was that

Exhibit H-51 prepared under your supervision and direction?

A. Yes, sir.

Q. Did that exhibit reflect the total interchange for the year 1954 between the M&StL and the TP&W?

A. Yes.

Q. And for other years?

A. Yes.

Q. Were there included in those figures cars as to which [fol. 1871] the TP&W had only a switch movement?

A. Yes.

Q. And no road haul?

A. That's right.

Mr. Thomas: That is all I have of Mr. Pattison.

Exam. Albus: Is there any cross-examination?

Mr. Wheeler: I just want to clarify something.

What was the number of that exhibit in this hearing?

Mr. Thomas: H-31.

Mr. Broker: Mr. Witt introduced it but I can't recall the number.

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

Mr. Wheeler: Mr. Examiner, there has been a reference here to an Exhibit H-51 in the Illinois Terminal case. I think it might be proper for counsel to stipulate that that is Exhibit H-60 in this docket.

Mr. Cassell: It has also sometimes been referred to as H-52 of the Illinois Terminal case.

Exam. Albus: It may be so stipulated.

Mr. Thomas: I agree.

Exam. Albus: Is there anything further?

By Mr. Wheeler:

Q. Mr. Pattison, do you have with you information which would show the number of cars involved in that Exhibit [fol. 1872] H-60 which did not involve a line haul by the TP&W?

A. Any particular year?

Q. 1954.

A. I don't have all of the cars that were given switch movement but I know that there were at least 1,240 cars, that were a particular type of move.

Q. If the M&StL figures indicate that it is somewhere between eleven and twelve hundred would you think that was in error?

A. To a degree.

Q. What range would you think?

A. I would say it was somewhere between twelve and thirteen hundred.

Mr. Wheeler: That is all.

Exam. Albus: You are excused, sir.

(Witness excused.)

Mr. Thomas: I will call Mr. Mahoney.

J. J. MAHONEY was sworn and testified as follows:

Direct examination.

Exam. Albus: Proceed, please.

Mr. Thomas: Mr. Mahoney has been sworn?

Exam. Albus: He was sworn before.

This is the same Mr. Mahoney who testified on direct, isn't it?

Mr. Thomas: Yes.

[fol. 1873] Mr. Examiner, I have two exhibits here which I would like to have identified.

Exam. Albus: Very well.

Mr. Thomas: One begins, "Freight Car Surpluses."

Exam. Albus: That may be marked for identification H-120.

(Applicant's, Santa Fe, Exhibit No. H-120, Witness Mahoney, was marked for identification.)

Mr. Thomas: The other one has the caption "Eastward" in the upper right-hand corner.

Exam. Albus: Very well, that is H-121.

(Applicant's, Santa Fe, Exhibit No. H-121, Witness Mahoney, was marked for identification.)

By Mr. Thomas:

Q. Mr. Mahoney, did the M&StL maintain guaranteed schedules at the Nemo connection prior to July 10, 1950?

A. Yes, sir. Prior to December 1941 we had an agreement and a guaranteed schedule with the M&StL with a connection at Nemo which provided for the M&StL to hold at Nemo until 8:45 p.m. for our connection from the west handling the perishable traffic. In December 1941 Mr. Conley, then the transportation officer of the M&StL, cancelled that agreement providing for a 8:45 p.m. hold for the Santa Fe at Nemo.

Q. Did you reach an agreement with the M&StL on July 10, 1950 about the establishment of a cut-off time at Nemo?

A. Yes, on July 10, 1950, made an agreement with Mr. Rux representing the M&StL that the M&StL would hold [fol. 1874] at Nemo until 8 p.m. for the perishable traffic delivered in the evening, and that hold would provide a connection at Peoria with the Nickel Plate trains 62 and 68, the big 4 trains, 94 and 90, and the PRR SL-30.

Q. Has there been any change since July 10, 1950, in the agreed cut-off time at Nemo of 8 p.m.?

A. No, sir, it is still 8 p.m.

Q. Have any complaints come to your attention in connection with this established cut-off time?

A. No, sir, not to my knowledge.

Q. Have any attempts been made by the M&StL to renegotiate this cut-off time?

A. No, sir.

Q. Has it come to your attention that the M&StL broke this guaranteed schedule by breaking their connection with the Nickel Plate at Nemo?

A. Yes.

Mr. Broker: Excuse me, break in connection with the Nickel Plate at Nemo?

Mr. Thomas: At Peoria, pardon me.

A. At Peoria.

Yes, we have a record in our claim office at Los Angeles that on October 2, 1943, N. Helwig, the resident vice-president of the M&StL at Los Angeles, notified Mr. R. C.

Neal, traffic manager of the Sunkist Growers, Incorporated, [fol. 1875] that effective immediately the connection between the M&StL and Peoria and the Nickel Plate at Peoria, the Nickel Plate train departing at 2:30, would be broken for traffic routed to Buffalo. Now, insofar as the Santa Fe is concerned, all through '50 and '53 we have continued to apply the 8 p.m. guaranteed connection at Nemo. We have never broken that connection because of the M&StL connection with the Big 4 and the Pennsylvania.

Q. In your answer, Mr. Mahoney, I thought you said 1943 at one point. Did you mean—

A. (Interrupting) I mean October 1953.

Q. Mr. Mahoney, to your knowledge has the M&StL ever protested to the Santa Fe about Santa Fe cut-off times either eastbound or westbound at Nemo?

A. No, we have exchanged correspondence with Mr. Rux since about 1950, I think, when he took over, and he has asked me on several occasions, in fact, quite often, as to what time our trains pass Nemo for the west and what time they pass for the east, but insofar as filing a protest against our times that has not been done.

Q. Will you refer to Exhibit which has been identified as H-120.

A. Yes.

Q. And explain what it shows.

A. The figures in this exhibit were drawn from an A.R.C.S. 44-A report. It shows the shortages and the [fol. 1876] surpluses of the several types of cars. In the column to the left-hand it will be noted that the M&StL reported a shortage of boxcars starting the week of February 12 and continued throughout the balance of the year. Now comparing that boxcar situation with Mr. Schroeder's statement in his prepared statement—I think it was pages 19 and 20—he shows a surplus of boxcars in 1954 and 1955 each month except six months, and that surplus ranged from 13 to 97 cars in 1955. That is a daily average surplus according to the statement Mr. Schroeder stated.

Now, in addition to the other types of cars shown in the

CS-44 report in regard to shortages and surpluses they balance out with the CS-44 report but the boxcars do not.

Q. Will you refer to an exhibit which has been identified as Exhibit 121, Mr. Mahoney.

A. Yes.

Q. And explain the schedules shown there, pointing out where the information doesn't appear on the face of the exhibit the railroad which operates the train whose number is shown.

A. Yes, this exhibit is introduced in these proceedings for the purpose of showing the over-all elapsed time from Kansas City to Effner in each direction via the Lomax gateway compared with that of the Nemo gateway. I think the figure in the statement is self-explanatory.

Q. Let me ask you one or two questions, Mr. Mahoney.

A. Yes, sir.

[fol. 1877] Q. Is the Lomax gateway shown on the first page?

A. No; it is on the second page of the exhibit. It shows connection with both trains, M&StL 96 and M&StL number 20.

Q. Pardon me, I don't think you got my question, Mr. Mahoney. I said is the Lomax gateway shown on the first page.

A. Pardon me, yes, it is. Schedule through the Lomax gateway is shown on the first page of the exhibit.

Q. And the schedules through Nemo on the second page?

A. Yes, sir.

Q. And the trains shown by certain numberings would you run down through those numbers and indicate the railroad which operates the train, just to make it clear, it doesn't show on the face of the exhibit in all cases.

A. Santa Fe No. 40 on the first page leaves Kansas City at 5 a.m.—

Q. (Interrupting) Isn't that 140?

Exam. Albus: 140.

A. (Continuing) —arrives at Lomax at 8 p.m.

By Mr. Thomas:

Q. Mr. Mahoney, I think it would be enough just to

indicate the railroad which operates the train. I think the schedules themselves are self-explanatory.

A. Well, the TP&W operates the train from Lomax to East Peoria and also from East Peoria to Effner.

Now, on the second page the M&StL operates between Nemo and Peoria and the TP&W from Peoria to Effner.

[fol. 1878] Q. And the Kansas City to Nemo is what line?

A. Santa Fe.

Q. Have you anything further to say about that exhibit?

A. Yes, I want to say just this, in Mr. Schroeder's proposed schedules shown on page 16, trains operated under his proposed schedules, that the trains departing Lomax both in the morning and evening would miss the Santa Fe connection.

Mr. Cassell: Page 16 of what?

The Witness: Mr. Schroeder's prepared statement.

Mr. Cassell: Thank you.

By Mr. Thomas:

Q. Mr. Mahoney, on this page for arrival at Lomax, for example, what is shown, is it the scheduled time or the actual time?

A. It is the agreed time entered into with the TP&W Railroad. It is not their timetable schedule.

Q. I see. Thank you. Is that true also as to Nemo?

A. No, Nemo operates their timetable schedule.

Mr. Thomas: Thank you. That's all.

Exam. Albus: Cross-examine, please.

Cross examination.

By Mr. Wheeler:

Q. Mr. Mahoney, if you had been in Mr. Schroeder's place would you have taken the time schedule that was published by the TP&W as likely to be accurate?

A. Well, I think Mr. Schroeder's experience as a railroad man prompts him to say that freight trains shown [fol. 1879] in an employees' timetable is not to be recognized as the actual departures of a train.

Q. With respect to the M&StL that's not the case, is it?

A. No, because you do that, you operate on that schedule.

Q. On the basis of our own experience Mr. Schroeder might think that other railroads operated that way, too?

A. I don't think so because he's had lots more experience other than the M&StL.

Q. Mr. Mahoney, do you know whether or not these schedules could be adjusted, that is, the schedules that Mr. Schroeder put in, to meet the agreed schedules between the TP&W and the Santa Fe, as shown on your Exhibit 121?

A. I think that could be arranged.

Q. Yes?

A. Yes, sir.

Q. Mr. Mahoney, refer to Exhibit 120 for a moment, if you will.

A. Yes, sir.

Q. As I understand it, you don't have any personal knowledge with respect to the facts shown on this exhibit?

A. These figures were taken from the reports of the AAR.

Q. So that if there was an error in reporting to the AAR, that error would be reflected in this exhibit, would it not?

A. Yes, sir.

Q. And if there were an error on the part of the AAR in reporting the figures that they received that would be [fol. 1880] reflected in this exhibit, would it not?

A. That would also be reflected.

Mr. Wheeler: I have no further questions.

Exam. Albus: You are excused, Mr. Mahoney.

(Witness excused.)

OFFERS IN EVIDENCE

Mr. Thomas: May I offer exhibits H-120 and H-121.

Mr. Wheeler: I object to Exhibit H-120 on the grounds that I have previously indicated.

Exam. Albus: The objection is overruled.
Exhibits are both received.

(Applicant's, Santa Fe, Exhibits Nos. H-120 and H-121, Witness Mahoney, were received in evidence.)

[fol. 1881] Mr. Thomas: Mr. Coulter, please.
Mr. Coulter has already appeared and testified.
Exam. Albus: Yes. He has already been sworn.
Mr. Thomas: Shall I proceed?
Exam. Albus: If you will, please.

J. Russel Coulter was sworn and testified as follows (in rebuttal):

By Mr. Thomas:

Q. Mr. Coulter, did you hear Mr. Nelson's testimony about the plans of the M&StL to develop traffic between the northwest and the southeast via the TP&W junctions east of Peoria?

A. Yes.

Q. Could the M&StL participate in that traffic without ownership of the TP&W?

A. Yes. I would like to say that the TP&W schedules are already synchronized with every connection on its east end and there is no reason why the traffic, if there is any more, could not be so moved now. Our company has these interchanges east of Peoria on a scheduled basis for north-south traffic and business is moving that way. If there is any additional business to be moved via those routes, there is no reason why it cannot be moved today if the M&StL would adjust its schedules to fit.

For the past several years, I have repeatedly sent our Vice-President in charge of Traffic to Minneapolis at least twice a year to confer with the traffic officials of the M&StL [fol. 1882] to get them to have a schedule from South St. Paul to Peoria direct that would compete with the Illinois Central connection at Albert Lea.

This not only would give to shippers the fastest service but accord the M&StL the long haul into Peoria and at the same time give the TP&W more traffic.

The TP&W inaugurated these discussions five years ago with little success. The M&StL could, if they wished, put the schedules on tomorrow and we could both jointly solicit this traffic. Their train No. 20 coming into Peoria should make a connection with our train No. 20 eastbound at 2:00 a.m., and we would be very happy if they could make this service possible which we requested five years ago. Of course, there is also a great improvement that can be made in the M&StL schedule northbound.

Q. You have heard Mr. Schroeder's testimony. Do you have any comments about it?

A. Several years ago I approached the M&StL, and suggested an arrangement whereby the M&StL might use the Burlington from a point at Farmington, Illinois, to our line at Canton, Illinois, and use the TP&W into Peoria and use our yard to break up trains. This would avoid their heavy grade westbound as well as the high water they are subject to in the Kickapoo Valley in Peoria. Mr. Devins was then Operating Vice-President of the M&StL.

From a study I made, we would not have had to increase [fol. 1883] the capacity of our East Peoria Yards to take care of the M&StL. I reviewed this informally with Mr. Heineman about two or three months ago, so the unification of terminals with the TP&W now being suggested is not a new idea.

On October 1, 1946, the TP&W crews were restricted from entering the M&StL Yard when the interchange tracks were full. This caused us to miss some of our own connections. In November, 1948, we proposed that the M&StL join us in building a new interchange track. Negotiations proceeded very slowly, and finally, in October, 1951, Mr. Devins said some satisfactory arrangement would be considered. Again the negotiations were slow, and only through our persistency, an interchange track was finally built in December, 1953.

My purpose in citing these past instances is to show that we have tried to get the M&StL to cooperate on freight train service and we have tried to interest them in the past in a better interchange in Peoria. It will be noted that it took five years of effort on our part to resolve this inter-

change improvement and, even now, we haven't succeeded in the other important matter to which I just referred.

If Mr. Schroeder has any suggestions for economy between the two lines, we will be very happy to sit down and talk about it.

Now, from my knowledge of the property and operations of the TP&W, I would like to make these general comments about the economies proposed by Mr. Schroeder from the [fol. 1884] standpoint of improvement in service. We have now on the TP&W a maximum speed of 49 miles per hour for our freight trains and we use it. Their schedule shows about 30 miles per hour.

From the standpoint of maintenance of way, we are building up the property and we must continue to build it up and every dollar that is being spent on the physical property needs to be spent now and in the future. We have been welding long strings of rail, utilizing multiple power ballast tampers, truck equipped section gangs, house trailer equipped B. & B. gang, and other modern techniques for several years.

Mr. Schroeder also speaks of running power through. This can be done without unification. Diesel power is now being run through on other railroads. Through Peoria the Chicago & North Western and Litchfield & Madison are good examples of this. Of course, the schedules have to be synchronized. It is impossible to do this with the present schedules of the M&StL, but if study develops any real advantages, we would be very happy to consider pooling power if proper schedules and utilization could be worked out.

To maintain our motive power, and to keep the power in condition to meet our various services, we must continue to spend the same amount of money that is now being spent, and if any savings are to be realized in this respect, apparently they must be made on the M&StL. The same comment is also true with respect to freight car repairs. [fol. 1885] Q. Are you familiar with Mr. Devins' testimony regarding the possibility of providing direct access to the Illinois River near Hollis for loading coal on barges? Will you comment on that?

A. Mr. Devins said that if the M&StL acquired the TP&W, it would be an opportunity to provide direct contact with the Illinois River at a place not far from Hollis. Presumably he had in mind land owned by the TP&W, accessible to river transportation. If we decided to load coal there, we would have to build tracks, docksite, coal tipple, et cetera. There would also be some dredging. We have looked into this a number of times but because of the low rate on coal on such a haul, the economics did not support it.

Q. Did you hear Mr. Swanson's testimony to the effect that traffic moving from the east through Peoria and handled by the M&StL from Peoria to Nemo and thence over the Santa Fe would be subject to diversion to the TP&W if the Santa Fe-Pennsylvania application were approved?

A. Yes.

Q. What have you to say regarding this?

A. A substantial part of this traffic is traffic which came into Peoria via the TP&W and interchanged at Peoria to the M&StL for Nemo and beyond via the Santa Fe. The Santa Fe had already attempted to route that traffic via Chicago and failed. If the TP&W were able to influence that traffic, you would have it routed via Keokuk or [fol. 1886] Lomax to gain the long haul, but, here again, the TP&W had failed. I can see no reason why this traffic would be lost by the M&StL if the TP&W were acquired by the Santa Fe-Pennsylvania.

Let me say that in my traffic experience I have found that shippers like to favor small railroads with a part of their traffic, and in this particular situation it is obvious they have included two small railroads in their routing in order to divide their business to meet solicitation and friendship requirements. They certainly did not make such routing from a service standpoint.

For example, let us take a loaded car from the East. Assume that this car came off the Pennsylvania at Effner and was routed TP&W to Lomax, instead of being interchanged with the M&StL at Peoria for Nemo. The car leaves Effner at 8:15 a.m., and moves into Peoria at 11:00 a.m. for delivery to the Santa Fe at Lomax at 5:45 p.m.,

and the car is rolling to Kansas City that night. In contrast, if the car was routed to the M&StL on the route used by the TP&W and M&StL through Nemo, it would come into Peoria at 11:00 a.m., but would not leave Peoria until 1:15 a.m. the next day because the M&StL has no train service before then. In the reverse direction, the service through Lomax and Effner is substantially faster than the service through Nemo-Peoria-TP&W to Effner. I figure the difference is from 11 to 14 hours.

[fol. 1887] Q. Will you now comment on similar traffic referred to in Mr. Swanson's testimony moving from the East through Peoria to the M&StL and thence via interior junctions north of Nemo to the West?

A. The M&StL and the lines connecting with the M&StL north of Nemo obtain this routing in spite of the solicitation of the Santa Fe for that traffic from Chicago, and in spite of the solicitation of the TP&W for the movement from Peoria to Keokuk or Lomax, where such routing would be competitive. I cannot see how the ownership of the TP&W by the Pennsylvania and Santa Fe would change the volume of traffic now moving. The Santa Fe was not included in the haul before and, in my opinion, could not change the situation by virtue of ownership in the TP&W. The TP&W had attempted where it could to get the haul from Peoria to Keokuk or Lomax and failed. Sale of the TP&W to the Pennsylvania-Santa Fe would not improve its status with respect to the solicitation of this traffic. To the extent any of this traffic was interchanged from the TP&W to the M&StL at Peoria, the same service disadvantages applies as compared to the result if the traffic had stayed on the TP&W through Lomax where that route was competitive.

From my experience I know that this traffic cannot be pressured into Pennsylvania-Santa Fe routing. The same situation applies in the reverse movement. Therefore, this business would not be lost so long as the M&StL continues [fol. 1888] the same kind of a solicitation job that is being done today or does not further impair its service.

Q. Did you hear Mr. Swanson's testimony about traffic moving from the East through Peoria and the M&StL to

points north of Nemo on the M&StL that are also served by lines connected or connecting with the TP&W?

A. Yes.

Q. What have you to say about this?

A. All I can say about this is that I cannot see how the ownership of the TP&W by Pennsylvania-Santa Fe would change the competitive conditions that now exist today. None of the connecting lines obtained this traffic against the M&StL, although I assume they attempted to get it. The TP&W also failed. I would have no reason to believe that changed ownership would give either the connecting lines or the TP&W any greater advantage than now applies. The same thing would hold true with respect to traffic moving in the opposite direction.

Q. Did you hear Mr. Swanson's testimony with respect to traffic moving to and from Peoria via M&StL either to or from local points on the M&StL north of Nemo or through junctions north of Nemo?

A. Yes, and I would give exactly the same answer that I gave with respect to the previous question. If the M&StL obtains that traffic to and from Peoria today, and the TP&W or the Santa Fe is not included in the haul, it is [fol. 1889] obvious that changes in the ownership of the TP&W would not give any greater leverages to the TP&W or Santa Fe than they now have to influence the routing of this traffic.

Q. Mr. Coulter, would that same reasoning apply to situations where that traffic moved through junctions north of Nemo with other connections of the M&StL?

A. Are you on the wrong page?

Q. No. That was a double-barreled question and you answered before I got through with it.

A. I am sorry. Yes.

Q. What effect do you think the granting of the Santa Fe-Pennsylvania application will have on the traffic of all other carriers in this case?

A. It is my firm conviction that all of the railroads in this case will benefit from the acquisition of the TP&W by the Pennsylvania Railroad and the Santa Fe, and this specifically includes the M&StL, the Nickel Plate, and the Rock Island. With the Santa Fe announcing that they

will put Lomax and Chicago on the same basis, it seems to me that the TP&W will have a reservoir of traffic available to their solicitation efforts which they have not had before. This means that we will be able to bring through the Peoria gateway on the TP&W more traffic than at present. This increased traffic will be available to the Nickel Plate through Peoria, as well as the New York Central through Sheldon. Such traffic now moves through Chicago, [fol. 1890] where the Nickel Plate and the New York Central have to compete with the Erie, C&O, B&O, Grand Trunk, PRR and Wabash, and any other carriers I may have missed in that area.

On westbound traffic, with the Pennsylvania Railroad announcing that it plans to put Effner and Chicago on the same basis, there will be available to the TP&W solicitation additional traffic reservoirs. This means that when we take this business into Peoria, this traffic will also be available to solicitation by the M&StL, which does not reach Chicago.

This traffic will also be available to the Rock Island at Peoria or Keokuk, while it is now only available to the Rock Island at Chicago, but where the Rock Island has to compete with the Santa Fe, Milwaukee, CNW, Burlington, Chicago, Great Western, or any other carriers I may have missed. Of course, this would also be true of the Burlington. The lessening of competition, therefore, through the Peoria Gateway by the Pennsylvania coming west and the Santa Fe going east should redound to the benefit of all the lines that appear in this case and to the benefit of this community and will tend to put this gateway on a more competitive and efficient basis than ever before in its history.

While I have talked about the diversion of traffic that now moves through the Chicago gateway, it is obvious also that the build up of the Peoria gateway and placing it on a more efficient basis will also serve to divert traffic now [fol. 1891] moving through the St. Louis gateway and all of the carriers that I heretofore mentioned with respect to Chicago traffic would have opportunities of tapping this additional volume in a somewhat similar degree to that which I have detailed with respect to Chicago traffic.

Q. What have you to say with reference to the position that must be maintained by the TP&W under ownership by the Santa Fe-Pennsylvania to maintain a sound and efficient property?

A. The future development of the TP&W depends on retaining close relationship with its many connections with which it presently works, and which need the TP&W as much as the TP&W needs them, to provide a fluid and flexible transportation system to and from the Peoria District and via Peoria as a primary gateway. It will be in the best interest of the TP&W to maintain their close relationships with their connections and this will continue to be our policy if the Santa Fe-Pennsylvania application is granted.

I would like to add, Mr. Thomas, that that was taken almost word for word from the end of Mr. Witt's direct testimony, Vice-President of the Nickel Plate's direct testimony.

Mr. Broker: Except for the last sentence.

The Witness: Except for the last sentence.

Mr. Broker: Thank you.

By Mr. Thomas:

Q. Mr. Coulter, there was a reference here this morning to a newspaper item describing an inspection trip over [fol. 1892] the TP&W on June 5 by Santa Fe officials. Did you accompany them on that trip?

A. Yes.

Q. What kind of cars did they travel in?

A. Office cars.

Q. Were they streamlined in appearance?

A. Yes.

Q. Did the officials of the M&StL make a similar trip over the TP&W?

A. Yes.

Q. Did they travel in that type of equipment, too?

A. Yes.

Q. And the Pennsylvania?

A. Yes.

Q. A news item was referred to—

Mr. Thomas: I will try to save some time without referring to it.

Exam. Albus: All right.

By Mr. Thomas:

Q. Mr. Coulter, there was an exhibit, I think Exhibit 92, which contained a newspaper item which appeared to quote you regarding the possibilities of—here it is—regarding the possibility of Santa Fe passenger trains serving Peoria and the story said that you declined to comment but agreed that it was an interesting speculation "not beyond accomplishment". Did you make such a statement?

[fol. 1893] A. I don't recall making such a statement. I recall making statements when anybody would ask about passenger service to discourage them very definitely about any passenger service being put on the TP&W by the Pennsylvania-Santa Fe, and I go back to Mr. Gurley's remark, who, I believe, was quoted as saying it would be cruel to hold out such an aspiration.

Q. Mr. Coulter, based on your experience as an executive of a small railroad and your earlier railroad experience, would you have an opinion as to whether or not an unified traffic organization such as proposed herein by the M&StL would be likely to obtain as much traffic as the separate efforts of the M&StL and the TP&W under their present organization?

A. I would say that under a separate organization they would get more traffic.

Q. Why is that?

A. I think a good illustration of that is the Quanah, Acme & Pacific, which is owned by the Frisco, which has its own soliciting organization, and the Frisco has seen fit to keep it that way because they feel that if it was taken into the Frisco organization they would lose traffic.

Q. Mr. Coulter, has the performance of the Rock Island under its schedules through the Keokuk gateway always been satisfactory to the TP&W?

A. No.

Q. Have you ever complained about their service?

[fol. 1894] A. Yes.

Q. Did you make such a complaint in 1953 or thereabouts?

A. In 1953 I wrote a letter to Mr. Farrington, then President of the Rock Island, and I said to him as courteously as I could, I thought his line from Eldon to Keokuk was deteriorating, and I had some suspicion that he might be going to abandon it. Then I asked him if it was for sale, and if it was for sale we might be interested in acquiring it.

Q. Do your forces solicit TP&W haul on traffic moving via the Rock Island eastbound?

A. Yes.

Q. Where do they try to get the traffic?

A. Keokuk.

Q. Do they ask the shipper to insert Keokuk as a junction?

A. Yes.

Q. Did you hear the testimony yesterday by Mr. Foulks about the instructions to Rock Island employees to route traffic through Keokuk when that traffic comes from the Kansas City or Denver gateways?

A. I heard his testimony on that, and I was greatly surprised, because we on the TP&W had never heard it before. I am very happy to hear it.

Q. In your past experience as President of the TP&W have you had occasion to check to see whether or not traffic origins moving on the Rock Island from points west of [fol. 1895] Kansas City or Denver has come to your line for interchange via Peoria when Peoria was not named as the junction for interchange with the TP&W?

A. Yes, and that's what worried me yesterday with what seems to be in conflict with Mr. Foulks' testimony. We have had several cars that come into Peoria routed Rock Island, TP&W, Nickel Plate where we get, you might say, a glorified switch haul. We have been arguing with the Nickel Plate and the Rock Island about it, and to destinations east of Cleveland about that. We get about $7 a car for our haul versus about $50 had the business been delivered to us at Keokuk.

Mr. Thomas: That is all on direct.

Exam. Albus: Cross-examine.

Mr. Olson: May we have a recess first before we cross?

Exam. Albus: We will recess until 10 minutes to 12.

(Short recess.)

Exam. Albus: The hearing will please come to order. Cross-examine.

Mr. Wheeler: Mr. Examiner, I want to state at the outset that I do not think that I will be prepared to conclude my cross-examination prior to a recess in which I have time to sit down with one of my witnesses for a matter of 20 minutes to a half an hour with respect to some of the testimony that's been given by Mr. Coulter. In the light of that I would like to pass at this time until after the luncheon [fol. 1896] recess, but if that's not acceptable, why, I will proceed with as much as I have at this time.

Exam. Albus: Is there any other cross-examination of Mr. Coulter?

Mr. Cassell: No cross.

Mr. Broker: No cross.

Mr. Davis: No cross.

Exam. Albus: Off the record a minute, please.

(Discussion off the record.)

Exam. Albus: On the record.

Mr. Thomas: May the reporter copy into the record a copy of a letter dated February 7 addressed to me from Mr. Wheeler requesting certain information?

Exam. Albus: Yes, it may be copied.

(Letter of February 7 above referred to is as follows:)

"Peoria, Illinois

February 7, 1956

"Mr. Starr Thomas
Atchison, Topeka & Santa Fe RR Co.
Chicago, Illinois.

"Dear Mr. Thomas:

"We would appreciate your providing the following information for the record in Finance Dockets Nos. 18991 and 19086 now pending before the Interstate Commerce Commission.

"(1) The total number of revenue cars interchanged in [fol. 1897] Chicago during each of the past five years:

"(a) Received from the Pennsylvania Railroad Company

"(b) Delivered to the Pennsylvania Railroad Company

"(c) Received from the Wabash Railroad Company

"(d) Delivered to the Wabash Railroad Company

"(e) Received from other carriers (exclusive of the Pennsylvania and Wabash)

"(f) Delivered to other carriers (exclusive of the Pennsylvania and Wabash).

"(2) Traffic solicitation expenditures shown in I.C.C. Accounts Nos. 351 to 359, inclusive, for each of the past five years.

"(3) The number and location of Santa Fe traffic solicitation offices and the number of employees in each office who spend all or a part of their time on freight solicitation.

"(4) The beneficiary or the real party in interest for whom each of the nominees shown on page 9 of the Santa Fe application is acting.

"(5) Number of revenue cars received from and delivered to the New York Central at Streator, Illinois, during each of the past five years.

"(6) The number of revenue cars received from and delivered to the other carriers at Joliet, Illinois during each of the past five years.

"Sincerely,

[fol. 1898] "WHEELER & WHEELER

(Signed) Edward K. Wheeler
"By Edward K. Wheeler"

Mr. Thomas: I want to state for the record that the Santa Fe will furnish to Mr. Wheeler the item (1) of that letter.

Then as to Item (2), we can furnish the expenditures charged to the accounts there named, but there are no time studies available for the past five years to distinguish traffic solicitations from others charged to those accounts.

As to Item (3) we can give the number and location; traffic offices are in the record on the back of Mr. Duffy's map exhibit, and we will furnish the number of employees engaged in solicitation, although not by agencies. I mentioned that to Mr. Wheeler, and he said that would serve his purpose.

Exam. Albus: All right.

Mr. Thomas: As to Item (4), we do not have the information and have no way of obtaining it.

As to Items (5) and (6), we will furnish that information.

May we do that by an exhibit two weeks after the hearing?

Exam. Albus: Yes.

Mr. Thomas: I have made a request of Mr. Wheeler, and it is merely a summary and a restatement of what the M&StL has already agreed to furnish.

Exam. Albus: That is all right.

Mr. Thomas: Have you seen that?

[fol. 1899] Mr. Olson: Yes.

Mr. Thomas: Could you tell me whether you will furnish that? Can we have that copied in the record and whether you are willing to furnish it the same way, by an exhibit filing in two weeks?

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

Mr. Thomas: Mr. Examiner, I have handed a letter to Mr. Wheeler, and Mr. Olson here has the letter in his hand, and I want him to state for the record, first I want the letter copied into the record, and will ask him to state whether he will furnish the information requested in an exhibit to be filed in a couple of weeks.

Exam. Albus: Very well.

Mr. Olson: I understand that as to some of this material they do not have the full information for the full five years, that we can provide it for one or two years. As to that, if

it is satisfactory with Mr. Thomas, we will provide it in that form.

Mr. Thomas: Will you give us the information for the full five years to the extent you can?

Mr. Olson: That it is available.

Mr. Thomas: And break it down the best you can, and for the more recent period broken down.

[fol. 1900] Exam. Albus: The letter may be copied into the record.

(Letter of February 11 addressed to Mr. Wheeler above referred to is as follows:)

"February 11, 1956

"Mr. Edward K. Wheeler
Messrs. Wheeler and Wheeler
Hotel Pere Marquette
Peoria, Illinois

"Dear Mr. Wheeler:

"I would appreciate your providing the following information for the record in Finance Dockets Nos. 18991 and 19086, now pending before the Interstate Commerce Commission:

"1) M&StL's loaded car interchange separately with each connecting carrier at Peoria for the past five years.

"a. Where the interchange is effected through a switch connection instead of directly, show the connecting line-haul carrier and not the switch connection.

"b. Show separately those instances where the connecting carrier at Peoria has only an originating or terminating switch movement.

"2) Number of the 9,891 revenue carloads bridged eastbound and westbound Nemo-Peoria during 1954 as shown in Schedule 1 of Exhibit H-32, which are interchanged with the TP&W.

"Very truly yours,

"Starr Thomas"

[fol. 1901] Mr. Lucas: May I just clear something that is open on the record. I made a request of Mr. Wheeler, which is now merged in what Mr. Thomas has asked for.

Exam. Albus: That is fine.

Mr. Thomas: May this letter be copied into the record?

Exam. Albus: It may be copied into the record.

Mr. Lucas: Mr. Examiner, off the record.

Exam. Albus: Off the record.

(Discussion off the record.)

Exam. Albus: On the record.

Mr. Lucas: Mr. Examiner, there has been distributed four separate sheets that serve the purpose of bringing down to date in the application of the Santa Fe and Pennsylvania docket 18991 Exhibits 8-A and 8-B and 9-A and 9-B of the application, and for convenience, if the one that is identified as the Pennsylvania Railroad Company General Balance Sheet, December 31, 1955, might be marked as—

Exam. Albus: 122.

(Applicant Pennsylvania's Exhibit No. 122, Witness Lucas, was marked for identification.)

Mr. Lucas: And if the next one might be marked, which is General Balance Sheet, December 31, 1955, Pennsylvania Company, as Exhibit No. 123.

Exam. Aibus: 123.

(Applicant Pennsylvania's Exhibit No. H-123, Attorney [fol. 1902] Lucas, was marked for identification.)

Mr. Lucas: And the next in order would be The Pennsylvania Railroad Company Income Account and Earned Surplus Statement for the year 1955.

Exam. Albus: 124.

(Applicant Pennsylvania's Exhibit No. H-124, Attorney Lucas, was marked for identification.)

Mr. Lucas: And the final one is income account and earned surplus statement for the year 1955 for the Pennsylvania Company.

Exam. Albus: 125.

(Applicant Pennsylvania's Exhibit No. H-125, Attorney Lucas, was marked for identification.)

OFFERS IN EVIDENCE

Mr. Lucas: I offer those in supplementing the application and bringing it down to the end of the year 1955.

Exam. Albus: Thank you very much.

Let the record show that the exhibits marked for identification H-122 through H-125 are received in evidence.

(Applicant Pennsylvania's Exhibits Nos. H-122, H-123, H-124, and H-125, Attorney Lucas, were received in evidence.)

Exam. Albus: At this time we will take a recess until 12:30.

(Short recess.)

[fol. 1903] Exam. Albus: The hearing will please come to order, gentlemen.

We will continue with the cross-examination of Mr. Coulter.

Mr. Wheeler, please.

Cross examination.

By Mr. Wheeler:

Q. Mr. Coulter, I have asked this of other witnesses who have appeared on the stand, that is, traffic witnesses, do you agree that the testimony that's been given by them that the originating line is in a position to substantially influence the routing of traffic?

A. I wouldn't say substantially.

Q. As compared to another line that does not originate the traffic or terminate the traffic does the originating carrier have a greater influence on routing?

A. Yes.

Q. Now, does the terminating carrier also have greater influence on the routing of traffic than a carrier that is not the originating nor terminating line?

A. Well, that would depend whether the terminating carrier had the service route.

Q. Well, I am assuming all conditions to be equal.

A. If they had the service route there would be an influence there.

Q. Mr. Coulter, is the TP&W now soliciting traffic for movement through the interchanges that you mentioned on page 1 of your

[fol. 1904] for movement over those, over the M&StL beyond Peoria?

A. Yes.

Q. Where and what traffic are you so soliciting?

A. We are soliciting any traffic for the TP&W where the shipper says he wants to give the M&StL a haul from Peoria to Nemo, we don't interfere with that.

Q. Mr. Coulter, referring specifically to these interchanges that you mentioned in your testimony on page 1, and specifically the interchanges east of Peoria, to which Mr. Nelson referred and which he said would be placed on an integrated service basis if the M&StL acquired control of the TP&W.

A. Now, the question is what?

Q. As to those interchanges are you now soliciting traffic through those interchanges for movement beyond Peoria over the M&StL?

A. Yes.

Q. Will you please name specifically one solicitation for that movement?

A. Well, the meat that I spoke about in this document from South St. Paul that the M&StL are now turning over at Albert Lea we have been soliciting that movement through Peoria. Then our southeastern connections east of Peoria.

Q. Give me another example.

A. Well, there are very many, Mr. Wheeler. It would consist of all traffic where the M&StL had an influence or [fol. 1905] was the originating line.

Q. Is there any traffic or any substantial volume of traffic moving that way at the present time?

A. I don't know.

Q. Don't you know that there is not?

A. No.

Q. Why don't you know, Mr. Coulter?

A. Because I haven't the facts in front of me.

Q. If there were substantial movements through those interchange points wouldn't you know of it?

A. It depends upon what you term substantial. We are a small railroad.

Q. But substantial to the TP&W I am speaking of.

A. Substantial to the TP&W?

Q. I am sure those would come to your attention, would they not?

A. I think so.

Q. Mr. Coulter, isn't there a switching now involved in such a movement at Peoria?

A. Switching between the M&StL and the TP&W?

Q. Yes, sir.

A. And we perform it, yes.

Q. With whom did your vice-president in charge of traffic talk with at M&StL with respect to this South St. Paul movement?

A. Mr. Leek.

[fol. 1906] Q. Mr. Leek?

A. Former vice-president of the M&StL.

Q. Are you familiar with the manner in which the M&StL delivers or receives traffic from South St. Paul?

A. No.

Q. Do you know that it involves substantial terminal switching and an intermediate carrier?

A. No.

Q. Do you know that that process takes 10 hours?

A. No.

Q. To get from the South St. Paul to the M&StL line?

A. No.

Q. In Minneapolis?

A. No.

Q. Do you know, Mr. Coulter, that the Chicago lines make the run from South St. Paul to Chicago in from 12 to 14 hours?

A. Yes.

Q. Do you think that a service that would take 27 hours would be competitive with a service that took 12 hours?

A. No.

Q. Mr. Coulter, you referred in your direct statement, you made the following statement in your direct testimony, "Of course there is also a great improvement that can be made in the M&StL schedule northbound." Isn't it a fact, Mr. Coulter, that the M&StL has the fastest service be-
[fol. 1907] tween Peoria and the Twin Cities?

A. Not to my knowledge.

Q. Don't you know that their schedule is four to five hours shorter than any other schedule between Peoria and the Twin Cities?

A. I don't know that.

Q. Mr. Coulter, you also referred to an arrangement you suggested whereby the M&StL might use the Burlington from the point at Farmington to TP&W lines at Canton, and then use the TP&W into Peoria, and use TP&W yard to break up trains. Such an arrangement would involve securing trackage rights over the Burlington, would it not?

A. Yes.

Q. Do you know how much greater the mileage would be on such a route as against the present mileage?

A. I know it would be longer. You must understand these discussions were preliminary. It was an idea. And the subject was dropped because I think there was a lack of interest at that time on the M&StL. I do know that it would be longer and I do know something about the M&StL grade also out of Peoria.

Q. Mr. Coulter, do you think that that idea had never occurred to the M&StL themselves prior to your suggestion of it?

A. I don't know.

Q. Do you know whether or not the M&StL made a careful study of the use of that line?

[fol. 1908] A. When?

Q. I say do you know.

A. No.

Q. Do you know what considerations determined the M&StL not to put that into effect—

Mr. Thomas: Let me make one objection. I don't want to take time. When the witness has said I don't know anything about what the M&StL did and you ask these further ques-

tions then you are simply covering something that has already been covered.

Exam. Albus: The witness may answer.

A. What is the question?

(Question read.)

A. No, I don't, but I do know in a conversation with Mr. Heineman three months ago, it was a rather interesting subject to him.

By Mr. Wheeler:

Q. Do you know whether the Burlington has agreed to give the M&StL. trackage rights?

A. No, sir.

Q. Mr. Coulter, wouldn't the use of that line, as you suggested, leave a segment of line between Peoria and Farmington completely without rail service?

A. If it was abandoned.

Q. Do you think it would be efficient to put into effect the alternate route you propose and still maintain t' [fol. 1909] present route?

A. The efficiency of the route was never studied, it was just an idea, as far as we are concerned.

Q. Now, Mr. Coulter, you state on page 3 of your testimony, "We have now on the TP&W a maximum speed of 49 miles per hour for our freight trains and we use it." Their schedule, referring to the M&StL, as put in the record by Mr. Schroeder, shows about 30 miles per hour. Did you mean to imply that you average 49 miles per hour on your freight trains?

A. We do on one train many times.

Q. Over the length of the run?

A. Yes.

Q. Do you on all trains?

A. No.

Q. As a matter of fact, on one of your trains your time is almost double that of the other, is it not?

A. Using timecard schedules?

Q. I am just asking you, sir.

A. If you are using timecard schedules as has already been testified here as an operating max we have timecard schedules, but what we do with our freight trains is quite different because of late connections, et cetera.

Q. At times does one of your trains take almost twice as long as the other?

A. A local train would.

[fol. 1910] Q. You understand, do you not, that the 30 mile speed limit referred to by Mr. Schroeder is an average speed and not a maximum speed?

A. Yes.

Q. Now, with reference to the testimony you gave about the access to the Illinois River for the loading of coal on barges, that was given by Mr. Devins, isn't there a switching charge applicable now to that movement if it moved from the mines on the M&StL to the point designated on the TP&W?

A. No.

Q. There would be no switching charge involved?

A. To the river, you say?

Q. Yes, sir.

A. No.

Q. To the coal loading docks on the P&PU there would be a switching charge, would there not, Mr. Coulter?

A. Yes.

Q. And that would be eliminated if the TP&W were owned by the M&StL, would it not, and the operation referred to by Mr. Devins was put into effect?

A. The switching charge would be eliminated, yes.

Q. Mr. Coulter, you say there we have looked into this a number of times but because of the low rate on coal on such a haul the economics did not support it. I assume that you are referring to the economics to the TP&W, are you not?

[fol. 1911] A. The economics of both railroads.

Q. Of both railroads?

A. Yes.

Q. And that included the switching charge?

A. No.

Q. It did not. Do you conclude from your testimony or mean to imply by your testimony that the M&StL may not

have a different view of the economics of that move in the event they acquired the TP&W?

A. May not have a different view?

Q. Yes, sir.

A. I think if they have a different view they are wrong.

Q. But they might have a different view, might they not?

A. Yes.

Q. Do you know whether or not the M&StL has made a pretty complete study with respect to that operation?

A. No.

Q. On traffic originating on the Pennsylvania, Mr. Coulter, and moving through Peoria, would the Pennsylvania or the Santa Fe be more influential in the routing of that traffic?

A. I think the TP&W would be more influential; neither the Pennsylvania nor the Santa Fe.

Q. Isn't that in contradiction of your earlier testimony that the originating road is quite influential on the movement of traffic?

[fol. 1912] A. Not at all because the shipper will give the originating line a haul. He may even short haul them, but he will give them a haul, there is an influence there, but whether the originating carrier gets the full haul the length of his railroad is another matter.

Q. Does the shipper usually try to give the originating carrier his long haul?

A. I wouldn't say that is a controlling factor.

Q. All other things being equal isn't that the case, Mr. Coulter?

A. Yes.

Q. Ignoring the TP&W for a moment, if traffic originates on the Pennsylvania and moves over the TP&W or through Peoria, would not the Pennsylvania have greater influence on that traffic and in the routing of that traffic than the Santa Fe?

A. Not entirely.

Q. I don't think that's really an answer. Would it have greater influence or not?

A. If it came from an industry on the Pennsylvania?

Q. Yes, sir.

A. Served by the Pennsylvania?

Q. Correct.

A. Influence would be greater.

Q. Thank you. Mr. Coulter, when you say the Santa Fe had already attempted to route that traffic via Chicago and failed, you do not wish to imply that you have worked for [fol. 1913] the Santa Fe in their traffic department, do you?

A. No.

Q. That is merely your opinion, is that correct?

A. Based on many years of experience.

Q. Now, you say in your answer on page 5 the traffic moving from the East through Peoria and handled by the M&StL from Peoria to Nemo and thence over the Santa Fe, that as to that traffic the Santa Fe had already attempted to route that traffic via Chicago and failed. Wouldn't that depend in some measure on the point of origination?

A. You are coming westbound now?

Q. Yes, sir.

A. No.

Q. That would apply to all eastern originations?

A. If they had a route.

Q. And regardless of whether the route was circuitous?

A. Yes.

Q. Then you add, "If the TP&W were able to influence that traffic it would have routed it via Keokuk or Lomax to gain the long haul but here again the TP&W had failed." Then you conclude, "I see no reason why this traffic would be lost by the M&StL if the TP&W were acquired by the Santa Fe-Pennsylvania." Now, Mr. Coulter, if that traffic originated on the Pennsylvania Railroad and they because of their 50 per cent ownership in the TP&W sought to have [fol. 1914] it routed via Lomax, wouldn't their influence for that routing be added to the routing of the TP&W and the Santa Fe?

A. No.

Q. It would not?

A. It would not.

Q. Why not, sir?

A. Because that traffic would be subject to solicitation by the TP&W through Effner as of today as against the Pennsylvania's policy of the long haul through St. Louis,

so the factor of the TP&W solicitation is in there, and that's why the business moves through Effner and then M&StL.

Q. So that you think that despite the fact that the Pennsylvania, that the business originates on the Pennsylvania, that its influence on that traffic would add nothing to the solicitation efforts of the TP&W and the Santa Fe, is that correct?

A. That is correct.

Q. Now supposing this would mean—Mr. Carpi said in his testimony that the Pennsylvania tries to get it for St. Louis—

A. Correct.

Q. (Continuing) —but failing that they take a benevolent position toward Effner. Now, assume with me, Mr. Coulter, that that benevolent influence toward Effner changes to a positive influence in favor of Effner by reason of their ownership in the TP&W. Under those conditions would the influence of the Pennsylvania add anything to the influence [fol. 1915] now exerted by the TP&W and the Santa Fe?

A. No.

Q. Why not?

A. Because, as I said before, this benevolent influence of the Pennsylvania through the Effner gateway, which is the present policy, but they do want their haul Chicago or St. Louis, again I say that the influence of the TP&W soliciting force is greater with the eastern shippers in this case than is the Pennsylvania because we get the business.

Q. Well, now, Mr. Coulter, doesn't that end with this, then, that the ownership of the, by the Pennsylvania of the TP&W will not alter the shipments via Effner?

A. It will alter it.

Q. Why?

A. Because they propose to put Chicago and Effner on the same basis, on a parity, which is not the case today.

Q. Now on a parity on that basis but you agree when they shift their policy it makes a difference to Effner, is that correct?

A. Yes.

Q. If they shift their policy to solicit for Effner would that make a further difference?

A. It would, but they are not going to do it.

Q. Now, supposing they exercise their influence to get the TP&W the long haul clear to Lomax, would not that be helpful to the efforts of the TP&W to get that long haul? [fol. 1916] A. May I explain that, now, Mr. Wheeler?

Q. I'd like you to answer that first and then explain.

A. The answer for it is no, and the reason for it is that the Pennsylvania's influence doesn't extend that far and it won't under this application.

Q. You say the Pennsylvania's influence doesn't extend that far and I just don't understand that.

A. Because they want the haul to St. Louis and they can't get it.

Q. Supposing, Mr. Coulter, you, I believe have testified that—certainly Mr. Carpi did—that if they don't get the haul to St. Louis, that if they can't influence the traffic there, assume that that is the case with respect to this particular traffic, and the Pennsylvania then seeks to influence the traffic all the way to Lomax instead of just to Peoria, and this is a shipment that originates on the Pennsylvania, industries served by them, is it your testimony that that influence will not have any effect on the routing of that traffic?

A. It will not have any effect on that traffic west of Effner.

Q. West of Effner?

A. Yes, west of Effner.

Q. And why not?

A. Because the reason that the shipper inserts Effner and the TP&W is on account of the TP&W solicitation not on account of the Pennsylvania's solicitation.

[fol. 1917] Q. I am not talking about now, Mr. Coulter, I am talking about the future.

A. Future?

Q. Yes.

A. In the future they say they will put Effner and Chicago on the same basis, on a parity.

Q. I am not asking you that either, Mr. Coulter, I am asking you to assume with me that the Pennsylvania, dictated to by self interest arising out of their ownership in the TP&W exerts influence on a shipper on their lines

to haul traffic coming through the Effner interchange clear through to Lomax instead of to Peoria, will not that influence be effected?

A. I can only answer that question by saying I could not comprehend such an assumption.

Q. Well, if that happens, will it not have—

A. (Interrupting) If it happens?

Q. Yes, sir.

A. If?

Q. Yes, sir.

A. I don't know.

Q. You don't know?

A. I don't know.

Q. Do you think the Pennsylvania solicitation efforts are influential?

A. For themselves, yes.

[fol. 1918] Q. Do you think they are influential for their subsidiaries?

A. No.

Q. You do not?

A. No.

Q. Why not?

A. Because having spent some years around the country I have never run across any Pennsylvania influence on Wabash business. That is one example. That is one I know most about.

Q. I believe the testimony of Mr. Carpi is that they haven't exercised that influence for the Wabash?

A. That is what I just said.

Q. So that your testimony, your answer is based on an assumption that they do not exercise influence at the present time to get routings via their subsidiaries?

A. That is based on my experience.

Q. Do you think that if an originating carrier and a terminating carrier use their influence to secure the routing of traffic over an intermediate line that influence will have any effect on the routing?

A. If they do?

Q. Yes, sir.

A. It might have some effect.

Q. Wouldn't that effect be considerable?

A. Not if they say the intermediate line is to remain neutral.

Q. I don't follow your answer, Mr. Coulter. Would the [fol. 1919] neutrality of the intermediate line have any bearing on the results of the influence exerted by the originating and the terminating carrier?

A. Yes.

Q. In what respect?

A. If the originating and terminating carriers owned an intermediate line they are on strict neutrality for that intermediate line and say whatever is good for that intermediate line is good for us, then that intermediate line is not subject to pressure from, in this case, the Pennsylvania or Santa Fe.

Q. I was afraid you didn't comprehend my question. If the Santa Fe originates traffic and the Pennsylvania terminates that traffic and both the Santa Fe and the Pennsylvania go to the shipper and the receiver of that traffic and exercise their greatest influence to have that traffic routed from Lomax to Peoria, do you think that in and of itself would have an effect or would tend to have the effect of having that traffic routed from Lomax to Peoria?

A. I do not. I think it would be resented.

Q. And why?

A. Because the shipper is not, in my opinion and based on my experience, is not going to let the Pennsylvania and Santa Fe pressure them into traffic that way.

Q. Don't you believe that a parent has a right to solicit traffic for routing over a subsidiary?

[fol. 1920] A. They have the right, yes.

Q. Are you familiar with the Missouri Pacific System?

A. Yes.

Q. Are you familiar with the fact that the Missouri Pacific seeks to get routing for its subsidiaries, the Gulf Coast and the IGN?

Q. They might on the Gulf Coast and IGN but I don't think they would on the T&P.

Q. Let's stick to the Gulf Coast and IGN for the moment.

A. I consider the Gulf Coast and IGN part of the Missouri Pacific.

Q. You do?

A. Yes.

Q. Why do you so consider it?

A. Because they have the same president, as I understand it, and the same staff, whereas the Texas and Pacific have an entirely different organization, their own soliciting organization, their own president, et cetera.

Q. And you don't think that there is any cooperation between the solicitation efforts of the Missouri Pacific and the T&P?

A. I think they are acquainted.

Q. Don't you, in fact, know, Mr. Coulter, that the Missouri Pacific does and successfuly does solicit it for the T&P?

A. No, I don't, Mr. Wheeler, and I will tell you why.

[fol. 1921] Q. Would you believe if Mr. Balmer so testified before the Commission he was in error?

A. No.

Q. Would you believe if Mr. Neff so testified before the Commission he was in error?

A. No.

Q. Mr. Coulter, are you aware that the Kansas City Southern solicits traffic for the L&A?

A. Yes.

Q. Do you think that those properties and their solicitation efforts are effective?

A. Yes.

Q. Aren't they considered a number one property?

A. Yes.

Q. Do you think that the efforts of the Kansas City Southern to begin traffic for the L&A are effective?

A. Yes.

Q. Are you familiar with the solicitation efforts of the Southern Railway on behalf of its subsidiaries?

A. No, I am not.

Q. Are you familiar with the efforts of the New York Central solicitation efforts on behalf of its subsidiaries?

A. No.

Q. You don't know whether they are effective or not?

A. I don't know whether they are effective.

[fol. 1922] Q. You don't know whether they encounter shipper resistance or not?

A. No, I don't.

Q. Mr. Coulter, you say here, "Let me say that in my traffic experience I have found that shippers like to favor small railroads with a part of their traffic." Isn't it also true that shippers favor giving railroads their maximum haul, the originating carrier?

A. If the service and other factors are equal.

Q. If the service and other factors are equal don't shippers generally want as few lines in their hauls as possible?

A. No.

Q. You don't believe that that's the rule?

A. I don't believe that that's the rule, no.

Q. When you say it is not the rule are you thinking about the Alphabet Route that has been mentioned here?

A. And others.

Q. Aren't they the exception rather than the rule?

A. I don't think so.

[fol. 1923] Q. Isn't car tracing easier if fewer of the railroads are involved in the route?

A. From what I have seen, no.

Q. Are you referring to your experience with the Frisco as well as your experience here?

A. Yes.

Q. Now, Mr. Coulter, you gave an example at the bottom of page 5 of your testimony of a loaded car from the East and concluded that the M&StL service, Peoria to Nemo was vastly inferior to that of the TP&W to Lomax, did you not?

A. Yes.

Q. Do you think that that is a fair and full statement of the facts?

A. Yes.

Q. Mr. Coulter, does not the M&StL principal business from the TP&W come to it around 10 p.m. in the evening?

A. Yes.

Q. Is that the schedule to which you referred in your testimony?

A. Yes.

Q. Now, doesn't the M&StL, doesn't the traffic that comes into the TP&W around 10 p.m. in the evening depart on No. 19, M&StL train No. 19, and arrive at Nemo after 3 a.m.?

A. Traffic that comes in on the TP&W at 10 p.m.?

Q. Yes, sir.

A. We don't have any train coming in at 10 p.m.

[fol. 1924] Q. I am speaking of traffic that is delivered to the M&StL around 10 p.m. by the TP&W.

A. Yes.

Q. And doesn't that No. 19 make the same Santa Fe connection that the TP&W does?

A. No.

Q. At Lomax?

A. No.

Q. Didn't Mr. Mahoney so testify?

A. I didn't hear him say that.

Q. Did you look at the schedules that he put in evidence?

A. Not too exacting.

Q. You don't know, then, that the M&StL has a train out in the evening over which its principal business between Peoria and Nemo is carried that makes connection with the same Santa Fe train that the TP&W does at Lomax?

A. I think it does not.

Q. You think it does not. And that's the basis upon which you made this statement?

A. Yes.

Q. Isn't the interchange to which you refer in your testimony, the volume of that interchange very light?

A. M&StL Nemo.

Q. The one to which you referred—

A. (Interrupting) What page are you on?

[fol. 1925] Q. I am on pages 5 and 6.

A. Yes, I think it would be light.

Q. Isn't a volume business on another train, No. 19, of the M&StL?

A. I don't know what your No. 19 is, I am sorry.

Q. Doesn't the volume, the principal volume of traffic

handled on that run by the M&StL move on another train other than the one you have described in your testimony?

A. Not to my knowledge.

Q. Not to your knowledge?

A. No.

Q. Now, Mr. Coulter, your testimony on page 6, commenting on Mr. Swanson's testimony, and referring to the service between the M&StL, the comparative service between the M&StL, and the TP&W with the Santa Fe, based on the same information that we have discussed heretofore in connection with the prior page of your testimony, does it not?

A. Yes.

Q. It assumes no Pennsylvania influence for the long haul on the TP&W from Peoria to Keokuk or Lomax?

A. Correct.

Q. Did you hear Mr. Carpi's testimony with respect to captive traffic?

A. No.

Q. Did you hear Mr. Gurley's testimony with respect [fol. 1926] to what would happen when the Santa Fe applied its utmost efforts in connection with the traffic movement?

A. I don't recall that testimony.

Q. The traffic that now moves over the M&StL to points beyond Nemo, that is, from Peoria or to Peoria, from and to points beyond Nemo, insofar as they are served by the Rock Island, for instance, traffic to and from points that are also served by the Rock Island, could move to Keokuk over the TP&W and thence via the Rock Island to that destination, could it not?

A. No. I think there is a line there east of Keokuk where the Rock Island might have a back haul. I don't say that all traffic that can move to the Rock Island from the TP&W can move through Keokuk.

Q. Well, can traffic move from the TP&W to the Rock Island?

A. Yes.

Q. For movement to northwestern points?

A. Yes.

Q. You have heard the testimony with respect to that

being a service route, have you not, that is, a route from. I think it is Eldon, to Keokuk?

A. Well, the service route is through Keokuk and Eldon going to the Southwest in California, lower California.

Q. And Des Moines?

A. Yes.

Mr. Thomas: I think the record will show what was testi-
[fol. 1927] fied about that.

Mr. Wheeler: I think I am entitled to check this witness.

Exam. Albus: Proceed.

By Mr. Wheeler:

Q. Do you understand that a local point is one use, in railroad terminology, is a point served only by one railroad?

A. That is my understanding of it.

Q. Mr. Coulter, is it your testimony that the placing of Lomax and Chicago on a parity would not adversely affect Nemo?

A. I don't have any knowledge what the Santa Fe has plans to do at Nemo.

Q. Well, assume they do nothing at Nemo but they place Lomax on a parity with Chicago in their solicitation efforts, would that have an adverse effect on Nemo?

A. I think it might.

Q. In answering or in your prepared testimony, Mr. Coulter, did you assume—what did you assume with respect to the Pennsylvania's attitude traffic-wise, solicitation-wise, in what way did you think that the Pennsylvania's attitude toward the TP&W traffic-wise would change in the event that their application is granted?

A. Because—

Q. (Interrupting) I asked you in what way.

A. In this way, putting those two gateways on the same basis of parity—

[fol. 1928] Q. (Interrupting) You mean what two gateways?

A. Effner and Chicago.

Q. Yes?

A. Means less resistance to our solicitors.

Q. In what way do you distinguish between parity and having a benevolent attitude toward a gateway?

A. In this way, that the railroad that has two gateways, such as Effner and Chicago, are not provoked, if we get the haul through Effner.

Q. That is the benevolent attitude?

A. Benevolent.

Q. What is the difference if they are on a parity?

A. That is it.

Q. You think they are synonymous, then?

A. I think they are synonymous.

Q. Do you understand that the Santa Fe opposes the Lomax gateway as against Chicago now?

A. I testified they give us passive resistance.

Q. And you think that is going to change, as you understand the testimony of Mr. Duffy?

A. I know it is going to change, they are under oath.

Q. I just want to know what you understand.

A. Yes.

Q. And it is going to go from passive resistance to what?

A. Benevolent.

[fol. 1929] Q. To benevolent?

A. Association.

Q. Mr. Coulter, do you think that the Nickel Plate and its officers should be able to evaluate the effect of control by the Santa Fe and Pennsylvania on their traffic through Peoria?

A. They can evaluate but they might be mistaken.

Q. Do you think they would be in a better position to evaluate that effect than you?

A. No.

Q. I take it you would give the same answer with respect to the Rock Island and the Burlington?

A. Correct.

Q. Now, I believe you stated previously that your answers throughout here assume that the Pennsylvania would not solicit for the TP&W long haul from Peoria to Lomax or Keokuk, is that correct?

A. Yes.

Q. And would the same be true with respect to the Santa Fe?

A. Yes.

Q. What is your policy with respect to the use of the Nemo gateway today or the Nemo route, the Peoria to Nemo route, Mr. Coulter?

A. Our policy is to use Lomax, but if the M&StL has an influence in getting the traffic with us from Effner, Sheldon to Peoria, we go along with them.

[fol. 1930] Q. Can you equate that in terms of benevolence or parity or any of the terms that have been used here by Mr. Duffy or Mr. Carpi?

A. The only way to equate it would be the vigorous solicitation of the M&StL.

Q. Now, thinking in these terms: Does your policy toward the Peoria and Nemo route, is it similar to the benevolent policy that the Pennsylvania has between Effner and Chicago?

A. No, we are not that benevolent.

Q. Is it one of passive resistance, as you used the term or as Mr. Duffy, or as you said Mr. Duffy indicated as between Lomax and Chicago?

A. It would be somewhat along that line, yes, sir.

Q. Now, Mr. Coulter, you referred to a Quanah and something else railroad.

A. Acme and Pacific.

Q. Do you believe that the operation of that railroad is comparable, truly comparable, to the TP&W?

A. Yes.

Q. You do?

A. Yes.

Q. With what railroads does that railroad connect?

A. Santa Fe and Frisco.

Q. Any others?

A. There might be one or two others, I am not sure.

Q. As a matter of fact, there are only the two, are there not?

[fol. 1931] A. I think only the two.

Q. They connect those two railroads?

A. Yes.

Q. That railroad connects the Frisco and the Santa Fe?

A. Yes.

Q. Does it have a gateway in the middle of it?

A. No.

Q. Mr. Coulter, if the M&StL substantially increased the number of offices that were soliciting business for the M&StL and the TP&W, do you think that would increase or might have a tendency to increase the business over the two lines?

A. It might.

Q. If you eliminate joint facilities, repair facilities, and the like, don't you believe you would make a savings, Mr. Coulter?

A. Yes.

Mr. Wheeler: I have no further questions.

Exam. Albus: Are there any further questions of Mr. Coulter?

Mr. Cassell: No, sir.

Exam. Albus: You are excused, sir. Thank you very much.

(Witness excused.)

Exam. Albus: Is there any additional evidence to be introduced?

JAMES A. SWANSON was sworn and testified as follows:

Direct examination.

[fol. 1932] Mr. Wheeler: Will you take the stand, Mr. Swanson.

By Mr. Wheeler:

Q. Mr. Swanson, there was read into the transcript at pages 1,547 and 1,546 a traffic loss study prepared by you, and I believe you stated with Mr. Nelson of the M&StL, is that correct?

A. That is correct.

Q. In the light of your cross-examination and more particularly in the light of the testimony that has been given here by Mr. Coulter, do you believe that any changes

should be made in your estimate of losses or your study as it was read into the record?

A. No. I am convinced that with the Pennsylvania-Santa Fe acquisition these estimates are accurate in my best judgment.

Mr. Wheeler: I have no further questions.

Exam. Albus: Is there any cross-examination?

Mr. Thomas: No cross.

Exam. Albus: You are excused, Mr. Swanson. Thank you.

(Witness excused.)

Exam. Albus: Is there anything further?

Did counsel waive a proposed report in this case?

Mr. Cassell: No, sir.

Mr. Broker: No, sir.

Exam. Albus: Let the record show there will be a proposed report by the Examiner.

Do you desire to file briefs?

Mr. Cassell: Yes, sir.

[fol. 1933] Mr. Lucas: Yes, sir.

Mr. Broker: Yes, sir.

Exam. Albus: Briefs will be due simultaneously on April 2, 1956. There will be no reply briefs at this stage.

If nothing further appearing the hearing is closed.

(Whereupon, at 1:30 p.m., Tuesday, February 14, 1956, the hearing in the above-entitled case was closed.)

Agreement Between The Santa Fe and Elizabeth M. McNear, Individually and as Guardian of the Estate of John W. McNear, for the Purchase of 450 Shares of the Stock of the TP&W.

This Agreement made and entered into as of July 8, 1955, between Elizabeth M. McNear, individually and as Guardian of the Estate of John W. McNear, a minor (hereinafter referred to as "Shareholder"), party of the first part, and Toledo, Peoria & Western Railroad Company, a corporation organized under the laws of the State of Delaware (hereinafter called "TP&W"), party of the second part, and The Atchison, Topeka and Santa Fe Railway Company, a corporation organized under the laws of the State of Kansas (hereinafter called "Santa Fe"), party of the third part,

WITNESSETH:

RECITALS.

Santa Fe wishes to purchase and shareholder desires to sell all of the capital stock of the TP&W held by Shareholder at a price of $135 per share. By an option agreement dated as of February 15, 1954, between TP&W and certain individuals, including Shareholder, Shareholder and the other parties agreed not to sell or otherwise dispose of any portion of the capital stock held by them without first offering to sell such stock to the TP&W. The TP&W does not desire to exercise its rights to purchase such stock under the contract from the individuals who were parties to the agreement or their representatives at $135 per share, and for a consideration of $100 payable by Santa Fe, TP&W is willing to release Shareholder and such other individuals of their representatives from the obligations under the

said option agreement to the extent necessary to permit the sale of such stock to Santa Fe at $135 per share.

[fol. 1978] AGREEMENT.

NOW, THEREFORE, for and in consideration of the premises and of the mutual undertakings and obligations herein contained and expressed, the parties agree as follows:

SECTION 1. Elizabeth M. McNear agrees to sell and the Santa Fe agrees to buy 450 shares of the capital stock of the TP&W (being all of said stock held by her) at a price of $135 per share, or an aggregate purchase price of $60,750.

SECTION 2. Elizabeth M. McNear, as Guardian of the Estate of John W. McNear, a minor, agrees to sell and the Santa Fe agrees to buy 254 shares of the capital stock of the TP&W (being all of said stock held by her in such capacity) at a price of $135 per share, or an aggregate purchase price of $34,290.

SECTION 3. The purchase of the stock of the TP&W provided in Sections 1 and 2 of this Agreement is subject to the approval of the Interstate Commerce Commission; and Santa Fe agrees that it will promptly file and diligently prosecute an application or applications to the Interstate Commerce Commission for authority to carry out the transactions herein proposed. Shareholder will, in all reasonable ways, cooperate with Santa Fe in the prosecution of such application and the assembly of data pertinent to its presentation and consideration. Settlement hereunder shall take place not more than a reasonable time, which shall not exceed sixty days, after the order of the Interstate Commerce Commission granting its approval has become effective.

In the event approval of the purchase of the stock of TP&W by Santa Fe shall be denied by the Interstate Commerce Commission and the order of the Commission shall become final, and any proceedings instituted in court to set aside such an order shall have been finally terminated without said order having been set aside, then this Agreement shall cease and determine.

SECTION 4. Shareholder represents and warrants to Santa Fe that the shares of stock of TP&W delivered by her to Santa Fe will be free and clear of all liens, encumbrances, trusts or obligations of any kind or nature.

[fol. 1979] SECTION 5. Settlement hereunder shall be made at the general offices of Santa Fe at Chicago, Illinois. Shareholder shall pay all transfer taxes with respect to the sale of the stock. Stock certificates are to be delivered at settlement with all endorsements or assignments necessary for transfer of the stock. Payment shall be made by Santa Fe upon such delivery in cash, or by certified check, or cashier's or treasurer's check to the order of Shareholder. If settlement for the stock is made on a payment date for the payment of a quarterly dividend, such dividend shall be paid, endorsed or assigned to Shareholder by Santa Fe. If settlement for the stock is made on a date other than a payment date for the payment of a quarterly dividend, the next succeeding quarterly dividend on such shares of stock (and also any extra dividend which may be paid during such quarter yearly period) shall be apportioned to the date of settlement, and Santa Fe shall pay to Shareholder her pro-rata portion thereof promptly after the receipt of such dividend. The sum payable to Shareholder by Santa Fe shall be computed by dividing by ninety the dividend paid on the shares of stock on the quarterly dividend payment date next following settlement hereunder (and also any extra dividend which may be paid during such quarter-yearly period), and then multiplying the quotient of such division by the number of days which shall have elapsed from (but not including) the dividend payment date preceding settlement to (and including) the date of settlement for such stock. To the extent that dividends herein referred to have not been paid at time of settlement, the provisions of this Section shall survive the settlement.

SECTION 6. For and in consideration of the sum of $100 hereinbefore referred to, the receipt of which from Santa Fe is hereby acknowledged, TP&W agrees to release and relinquish any and all rights accruing to it under the terms of the option agreement dated as of February 15, 1954, insofar as is necessary to permit Shareholder and the other

parties to such agreement to sell and transfer their TP&W stock to Santa Fe at a price of $135 per share, but said option agreement shall in all other respects remain in full force and effect until such sale and transfer have been consummated.

SECTION 7. This Agreement shall be binding upon and inure to the benefit of the parties hereto, their heirs, successors and assigns.

[fol. 1980] IN WITNESS WHEREOF, Shareholders, TP&W, and Santa Fe have signed and sealed this Agreement, or caused it to be signed and sealed, in four copies, each of which shall constitute an original, as of the date first hereinabove written.

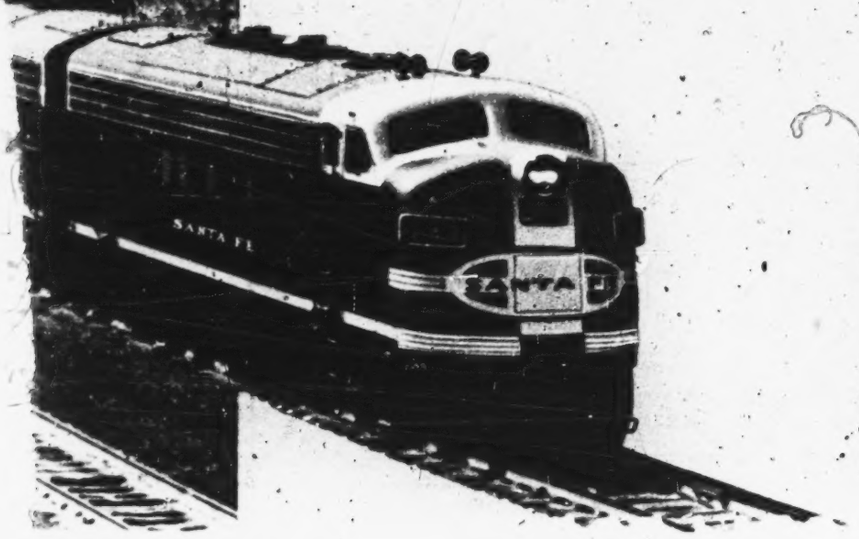
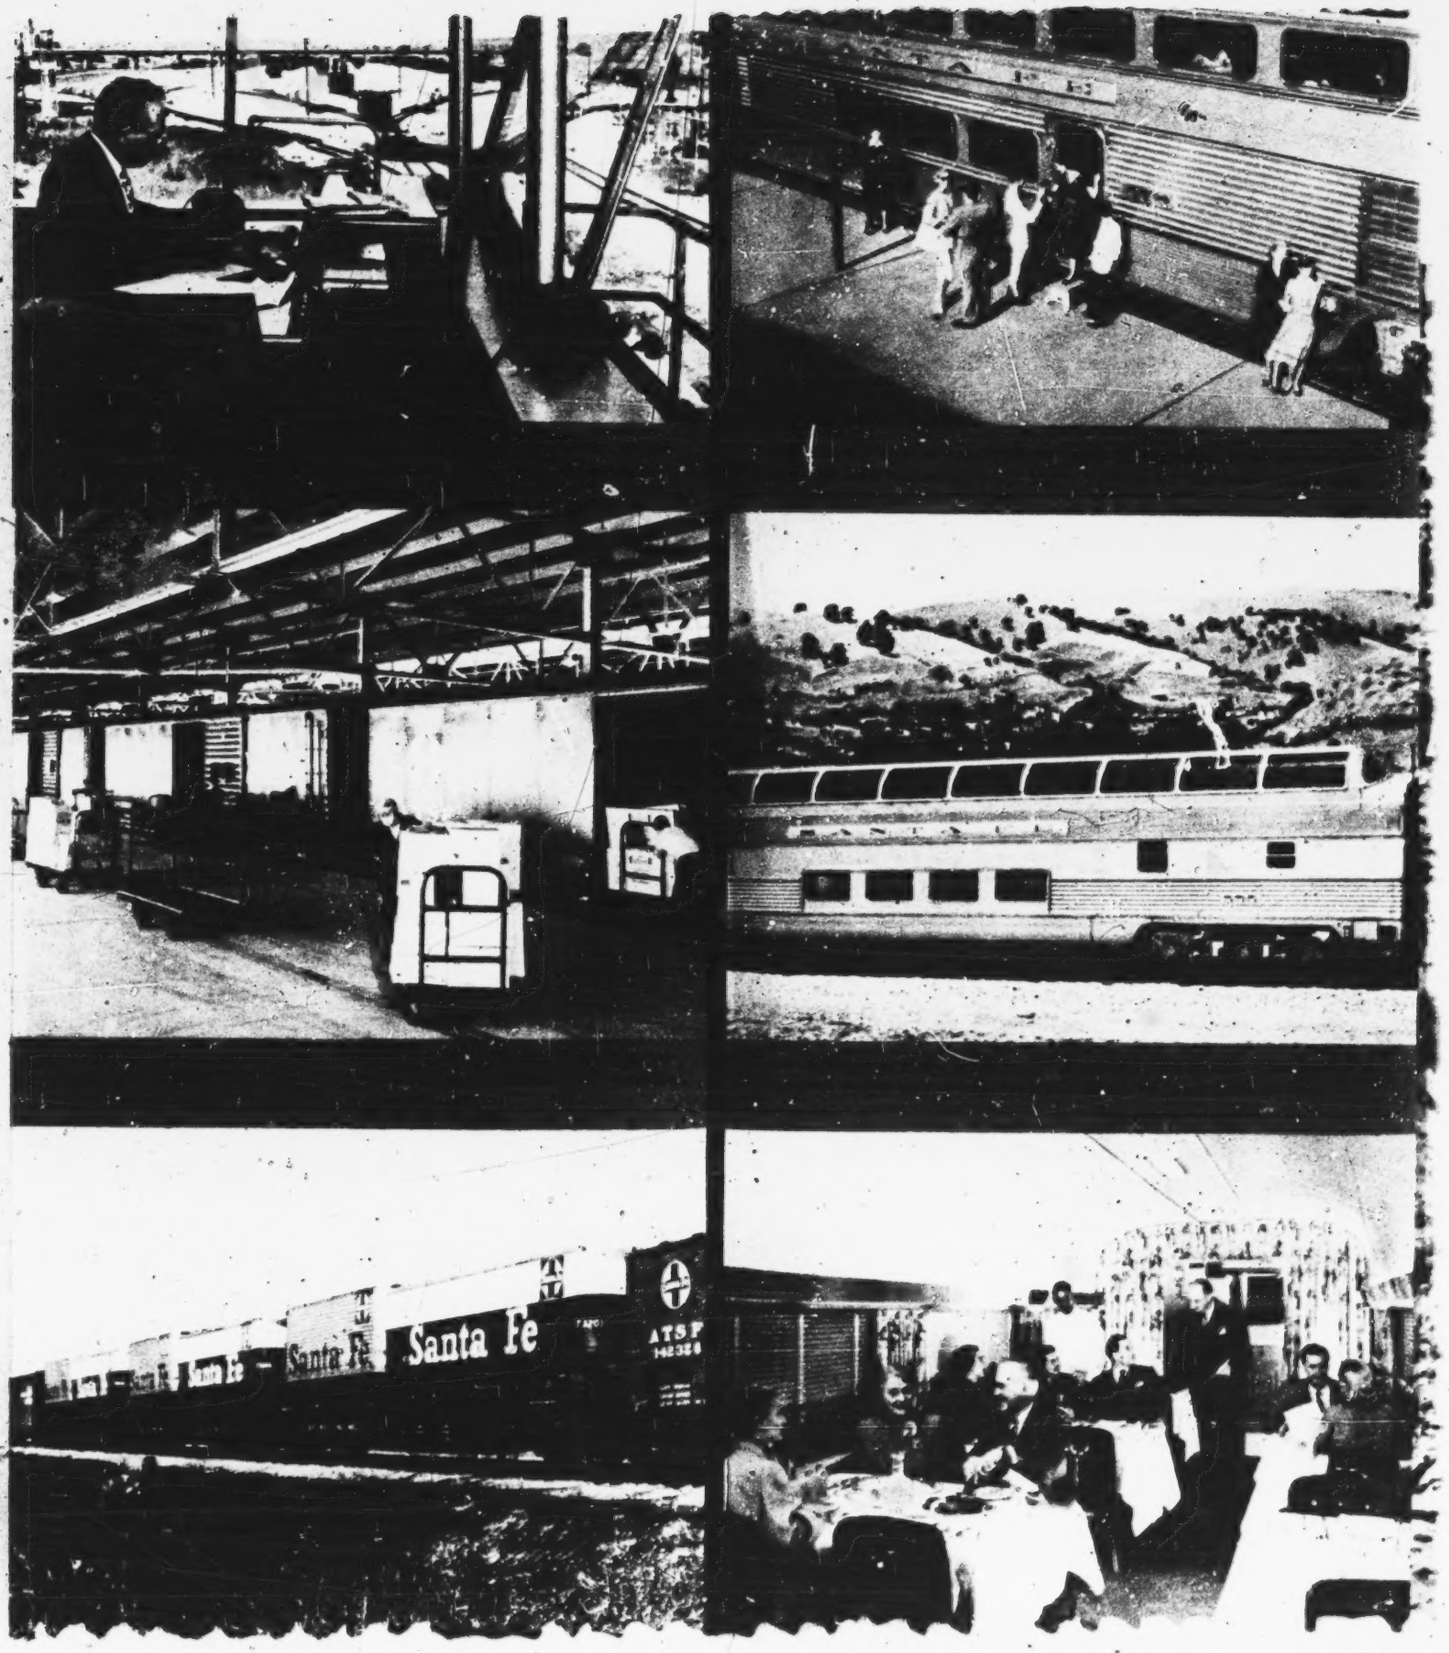
Ship
Santa Fe
all the way





A good way to appraise Santa Fe freight operations is to glance over a map of the United States.

On this map we have highlighted our route to show how Santa Fe stretches from the Great Lakes to the Pacific and to the Gulf of Mexico. Santa Fe is the only railroad under one management between Chicago and California and Phoenix.

This means you can route your freight Santa Fe *all the way* and benefit from the advantages of one railroad operation in this vast territory. It means less chance for delays en route, and less chance for special handling instructions being misunderstood.

Our giant fleet of freight diesels and modern cars of all types, combined with the experience of skilled Santa Fe freight people, will prove that it pays to ship Santa Fe *all the way!*

I.C.C. FINANCE DOCKET _____
PAGE 5, EXHIBIT #_____
WITNESS_____

Train 146 takes traffic from trains 40 from southern and central Texas, Oklahoma and Kansas points; 42 from Colorado and Kansas points; 70 from eastern Oklahoma and southern Kansas points; 68 from Topeka, Kansas.

Train 40 handles all classes of traffic from Texas, Oklahoma and Kansas into Kansas City, protects meat and livestock originating Oklahoma City destined Kansas City and east. At Emporia or Kansas City, gets connection from Train 42 of perishable and livestock originating at Wichita and in Colorado. Kansas City protects perishable and livestock received from connecting lines by 7:30 AM in special deliveries.

Train 46 handles in preference livestock, packinghouse products, and other perishable originating Kansas City and St. Joseph.

At Kansas City, traffic from east arriving in sections of train 59 is passed through retarder yard and connections provided with trains as follows:

39 to Central and southern Texas points and connections

81 to western Texas, New Mexico and Arizona points and connections

41 to central Kansas points and connections

161 and 67 to Lawrence and Topeka, Kansas

69 to southern Kansas and eastern Oklahoma points and connections

59 to central and northern California points and connections

53 to southern California points and connections

339 to Kansas, Oklahoma and Texas points and connections

35 to western Kansas, Colorado and northern New Mexico points and connections

37 to Oklahoma and Texas points and connections

Railway System

Always on the Move Toward a Better Way

We will gladly prepare a cu: to help you choose the best location in the vast territory served by

When you're considering a plant site or warehouse in the territory served by Santa Fe, you want to get all the facts.

Well, we have them. We make it our business to know practically everything about every desirable site on Santa Fe's 13,150 miles of mainline track . . . about sites situated within already-organized industrial districts, sites in open country, and sites in big cities, small towns and rural areas.

And for any of these sites, we can give you accurate statistical information about housing, labor supply, schools, taxes, water, electricity and power, sewers, raw materials, markets, wage scales, pollution, fuel, transportation and hundreds of other vital questions.

Facts up to the Minute

All these facts, moreover, are right up to the minute, since our Industrial Development Department keeps in constant touch with local and state governmental authorities, as well as chambers of commerce and other local sources of information throughout the Santa Fe System.

As a result, we have most of the answers before you ask the questions. But if there's something we don't know, we find it out for you. We would be glad to assist you with your preliminary planning for plant and mum utilizat

We will gladly prepare a custom survey to help you choose the best location for your plant in the vast territory served by Santa Fe

When you're considering a plant site or warehouse in the territory served by Santa Fe, you want to get all the facts.

Well, we have them. We make it our business to know practically everything about every desirable site on Santa Fe's 13,150 miles of mainline track . . . about sites situated within already-organized industrial districts, sites in open country, and sites in big cities, small towns and rural areas.

And for any of these sites, we can give you accurate statistical information about housing, labor supply, schools, taxes, water, electricity and power, sewers, raw materials, markets, wage scales, pollution, fuel, transportation and hundreds of other vital questions.

Facts up to the Minute

All these facts, moreover, are right up to the minute, since our Industrial Development Department keeps in constant touch with local and state governmental authorities, as well as chambers of commerce and other local sources of information throughout the Santa Fe System. . .

As a result, we have most of the answers before you ask the questions. But if there's something we don't know, we find it out for you. We would be glad to assist you with your preliminary planning for plant and trackage to give you maximum utilization of your choice site.

This information, and the services of our Industrial Development Department are yours without obligation on your part. (And of course—very important—absolutely confidential.)

Why? It's a matter of business: if you decide to move into our 12-state area, we want to haul your freight. What's more, if you make the move, we think you'll *want* us to haul it. For Santa Fe's 13,150 miles of track—under one management all the way—connects you swiftly with the nation's biggest markets.

Custom Survey

So if you're casting an eye on a plant site or warehouse in the growing Southwest, just ask us to prepare a custom survey for you—a survey that will give you *all* the facts, tailored specifically to your industry, your company, your requirements.

If you can give us specific or general information about your requirements, it will expedite handling.

Phone your nearest Santa Fe representative or contact us direct.

Travel Santa Fe

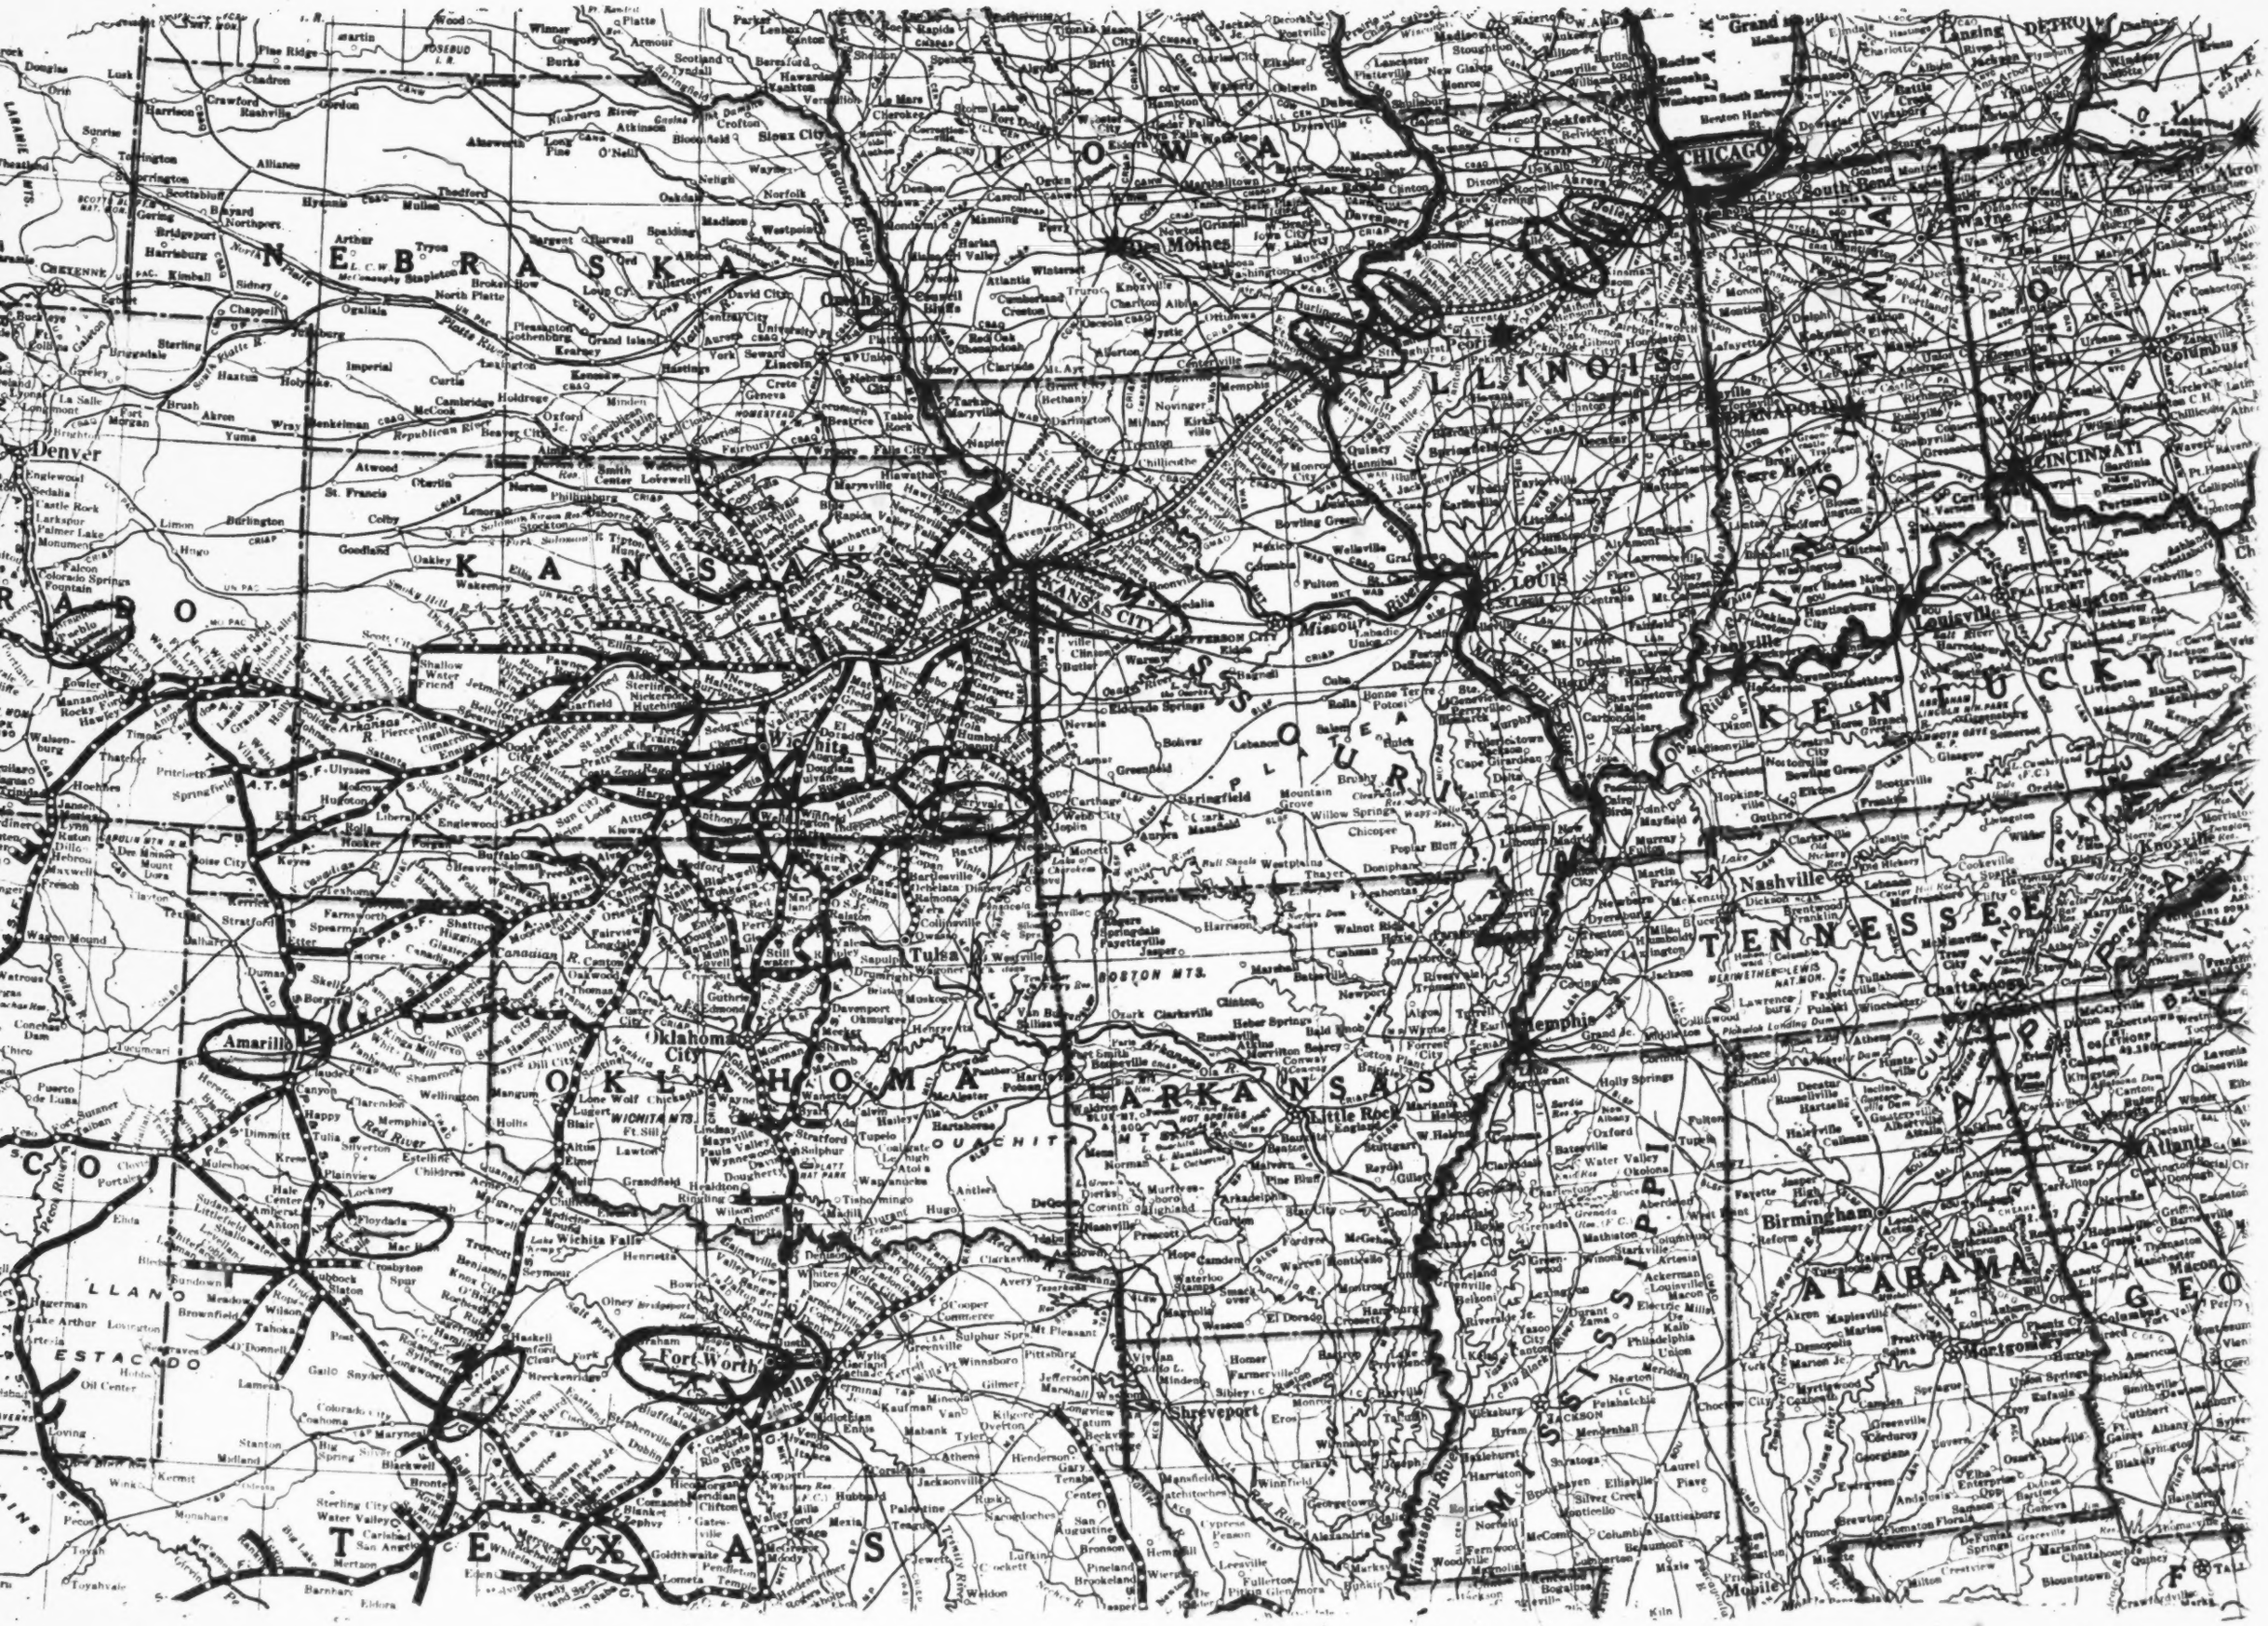
ride great trains through a great country

Unfold this map and look at the wonderful scenic attractions of the western United States—then trace the Santa Fe route.

You will see how Santa Fe traverses the colorful Indian country of New Mexico and Arizona.

Note the outstanding scenic attractions, such as Grand Canyon, Carlsbad Caverns, Yosemite and many others that are a part of the great sights to see when you travel Santa Fe.

In California take special note that the Santa Fe serves its three biggest cities: Los Angeles, San Diego and San Francisco.



Western trips are easy to plan via Santa Fe for our great fleet of trains provide a variety of accommodations to suit your travel pleasure and your travel budget.

On the back of this folder map is a list of Santa Fe Travel Centers throughout the nation that will gladly assist with your travel plans and arrange details of your trip.

REMARKS OF

[illegible] AT THE PEORIA, ILLINOIS, ANNEX

at

PEORIA, ILLINOIS, JULY 8, 1959

Today should be a great occasion for this area. It marks the filing of a joint application with the Interstate Commerce Commission on the part of the Santa Fe and the Pennsylvania Railroads for permission to acquire joint and equal ownership in the Toledo, Peoria and Western Railway. That railroad has been made possible and has been successful largely because of it being a very important connecting link between these two large railroads — one of which serves nearly all of the West — and the other which serves nearly all of the East. These two railroads are not competitors with one another but they very importantly supplement each other. So, when it was determined that the T. P. & W. was definitely for sale, what could be more logical than for the two railroads who have contributed so much to its success in the past, to be the owners thereof — and that is particularly so when these two railroads, as I say, do not compete with each other, or with the railroad they are acquiring. That should make for a very healthy long-term situation insofar as the T. P. & W. is concerned.

Even though we see many small businesses being absorbed by larger ones, that is not the intent in this particular case. It is proposed that the individual identity of the T. P. & W. will continue to be maintained. It will have its own independent management with headquarters here in Peoria, as in the past. It will have its own soliciting forces located at strategic points throughout the country. Competitive routes and conditions with other carriers, with which it connects, will be maintained just as they are today.

It is to the mutual advantage of the owners of this property that present competitive conditions do continue — and in our joint application to the Interstate Commerce Commission we are taking that position — and undoubtedly it will be appropriately covered as a condition of approval in the Commission's Order — and, as I say, we are in complete accord with it being done that way.

Because of the importance of the T. P. & W. to the new owners, I do not think anyone need fear its future success from the standpoint of improving the property, and in the service it will perform.

So, I am here today to say to the citizens of Peoria, the patrons of the Road, and all railroads connecting with the T. P. & W. that the Pennsylvania Railroad is acquiring an ownership in this property because we think it is geographically logical and because it should be a good investment — and the only way it can be a good investment is in the movement of more and more traffic over it — and the only way that can be done is through better service over a better railroad. It is just as simple as that — and we solicit your help in supporting the application before the Interstate Commerce Commission in having it become a reality — for we believe it to be in the best interest of the T. P. & W., the City of Peoria, Central Illinois, the Santa Fe, the Pennsylvania Railroad, and the public in general. In short — it just makes "an awful lot of common sense".

As you know, in our proposed acquisition of joint control with the Santa Fe of the TP&W, our agreement of June 28, 1955 contains the following covenants:

(a) TP&W will continue to be operated as a separate and independent carrier with responsible management located along its lines in order to preserve to shippers and communities the present direct access to its officials.

(b) The properties of the TP&W, including line and equipment, will be maintained and improved in keeping with the requirements of a railroad of its character and importance.

(c) TP&W will continue to maintain its own solicitation forces and will be entirely free to solicit traffic in such manner as best to serve the interests of TP&W.

(d) All existing routes and channels of trade via TP&W will be maintained and kept open without discrimination between connecting lines of railroad.

The foregoing covenants appear also in our Application for approval filed with the Interstate Commerce Commission on July 8th.

A hearing before the Commission is expected sometime in the Fall and considerable opposition to our Application is anticipated.

Our opponents at the hearing will undoubtedly contend that Santa Fe and PRR intend, notwithstanding the foregoing assurances, to alter present relations with TP&W to their respective advantages.

It is highly important that there be no factual basis for such contention.

There should be no change in our present normal relations with TP&W. It is particularly important that presently existing joint traffic routes and rates between PRR and TP&W be continued without any change interpretable as being detrimental to TP&W and beneficial to PRR.

All persons exercising any degree of responsibility in respect to operations and traffic matters should be instructed promptly to exercise every precaution in order that our testimony at the approaching hearing will be unimpeachable.

ASSIGNMENT OF TOLEDO, PEORIA & WESTERN RAILROAD COMPANY IN VARIOUS CONSOLIDATION PLANS

CONSOLIDATION OF RAILROADS

IN THE MATTER OF CONSOLIDATION OF THE RAILWAY PROPERTIES OF THE UNITED STATES INTO A LIMITED NUMBER OF SYSTEMS. No. 12964, 63 I.C.C. 455 (August 3, 1921)

In its Report dated August 3, 1921 entitled "Tentative Plan of the Commission", 63 I.C.C. 455, the Commission made the following finding at page 456:

> "We find for the purposes of this tentative plan that the railway properties of the continental United States may be consolidated under the statute into the following systems: * * * "

System No. 2 was that of the "Pennsylvania", and such System included the "Toledo, Peoria and Western", as appears from the following at page 457 of the Commission's Report:

> System No. 2.--Pennsylvania.
>
> * * *
>
> Toledo, Peoria & Western.
>
> * * *

CONSOLIDATION PLAN PUBLISHED IN NOVEMBER, 1921, AND PREPARED BY JOHN E. OLDHAM OF MERRILL, OLDHAM & CO., OF BOSTON, FOR THE INVESTMENT BANKERS ASSOCIATION OF AMERICA

The next consolidation plan having the merit of some official recognition was that published in November, 1921 and prepared by John E. Oldham, of Merrill, Oldham & Co. of Boston, for the Investment Bankers' Association of America.

The so-called Oldham Plan received recognition both before the Interstate Commerce Commission and before the Committee on Interstate and Foreign Commerce, House of Representatives, 69th Congress. The latter proceedings appear in a government publication entitled "RAILROAD CONSOLIDATION" consisting of the transcript of hearings before the above-named Committee on H. R. 11212, "a bill to permit the unification of carriers engaged in interstate commerce, and for other purposes." Said hearings commenced May 24, 1926 and at stated intervals extended through June 18, 1926. Included among the witnesses appearing before the House Committee was Mr. Oldham whose statement commences at page 285 of the Committee's report. At page 309 the Honorable James S. Parker, Chairman of the Committee, requested that Mr. Oldham put in the record his testimony before the Interstate Commerce Commission on railroad consolidations, including his proposed plan. Pursuant to the Chairman's request, under date

of June 11, 1926, Mr. Oldham forwarded to the Committee a copy of a pamphlet dealing with the grouping of the railroads of the country which he had prepared "and which was published by the Investment Bankers' Association in November 1921;" also, his testimony before the Interstate Commerce Commission in regard to consolidations given under dates of November 23, 1923 and January 12, 1924. Mr. Oldham's letter indicates that he had testified also before the Senate Committee on Interstate and Foreign Commerce under date of May 21, 1926 and a copy of this statement was also supplied to the Chairman of the House Committee.

At page 508 of the House Committee report appears the following:

> "3. Pennsylvania system.- The Pennsylvania system remains practically intact with the exception of sharing with other systems in the joint control of the New England roads."

Mr. Oldham's Plan provided for five systems in Eastern Territory, System 3 being that of the Pennsylvania. At page 497 of the House report appears an enumeration of the railroads comprising the Pennsylvania System. The Toledo, Peoria & Western with its entire mileage there shown of 247.70 is listed. Mr. Oldham's Plan was accompanied by maps, each of which appears reproduced in the government document. Map 3 covering the Pennsylvania System shows the extension of line from Logansport to Effner, there connecting with the Toledo, Peoria & Western extending across Illinois through Peoria and with two termini on the Mississippi River, one Burlington and the other Keokuk, both in Iowa.

Following the Commission's "Tentative Plan" of consolidation of railroads, 63 I.C.C. 455, the report of August 3, 1921 referred to above, two consolidation plans were evolved on the part of certain Eastern railroads.

"THREE-PARTY PLAN OF NEW YORK CENTRAL, BALTIMORE & OHIO AND NICKEL PLATE, EXHIBIT A-20, DOCKET 12964"

The next plan receiving a sufficient measure of official consideration was suggested jointly by the New York Central, Baltimore & Ohio and Nickel Plate. Concerned only with the northeastern section of the United States, it divided the railroads in that area into four groups headed by the New York Central, Pennsylvania Railroad, Baltimore & Ohio and Nickel Plate.

The proposal of the three roads named was embodied in a printed document entitled "BEFORE THE INTERSTATE COMMERCE COMMISSION -- SUGGESTED CONSOLIDATION OF RAILROADS OF THE EASTERN DISTRICT INTO A LIMITED NUMBER OF SYSTEMS." Further authentication of the foregoing consists of its identification as Exhibit A-20 received into the record in Docket 12964 at the hearing of January 7, 1932, page 180 of the transcript of testimony. The said document, submitted first informally and subsequently made a matter of record, Exhibit A-20 as described above, consisted of a statement by Messrs. P. E. Crowley, Daniel Willard and J. J. Burnett, each President, respectively, of the

[fol. 2020]

ASSIGNMENT OF TOLEDO, PEORIA & WESTERN RAILROAD COMPANY IN VARIOUS CONSOLIDATION PLANS (Continued)

New York Central Lines, Baltimore & Ohio System and Nickel Plate System. Their Plan was presented, as stated in the three-party document, "at an informal conference with the Consolidation Committee of the Interstate Commerce Commission, January 26, 1925". At page 5 of the document appears the following:

> "The allocations to the four Systems as recommended by the New York Central, Baltimore & Ohio and Nickel Plate Systems at the conference above referred to, are stated in Appendix 'A' hereto attached and hereinafter referred to as the 'Recommended Plan.'"

In Appendix A under the column headed "N. Y. C., B. & O. and N. P. Suggested Grouping of October 11, 1924" appears the entry: "Toledo, Peoria & Western Ry. (East of Peoria)".

CONSOLIDATION OF RAILROADS

IN THE MATTER OF CONSOLIDATION OF THE RAILWAY PROPERTIES OF THE UNITED STATES INTO A LIMITED NUMBER OF SYSTEMS

December 9, 1929

Pursuant to section 5 of the interstate commerce act, plan adopted for consolidation of the railway properties of continental United States into a limited number of systems as stated in the report.

Under date of December 9, 1929, the Interstate Commerce Commission issued its further report in Docket No. 12964, Consolidation of Railroads, etc., 159 I.C.C. 522. Under the heading "Plan of the Commission", the report points out that following its tentative plan of August 3, 1921 extensive hearings had been conducted and that the Commission

> "does now proceed to prepare and adopt a plan as hereinafter set out for such consolidation of the railway properties of the continental United States into a limited number of systems, all as requested by Section 5(4) and (5) of the Interstate Commerce Act."

With reference to Trunk Line Region, the plan included five systems, number 7 thereof comprising the so-called "Wabash-Seaboard" system. Therein was included the Toledo, Peoria & Western Railroad (page 532). Such assignment was accompanied by trackage rights "over the Pennsylvania from Logansport to Effner, Ind." (page 533).

No. 12964

CONSOLIDATION OF RAILROADS

IN THE MATTER OF CONSOLIDATION OF THE RAILWAY PROPERTIES OF THE UNITED STATES INTO A LIMITED NUMBER OF SYSTEMS

Submitted April 28, 1932. Decided July [illegible], 1932

Plan for consolidation of the railway properties of continental United States into a limited number of systems, 159 I.C.C. 522, in so far as it concerns the properties in eastern territory, excluding New England, modified in part.

On October 1, 1931 the major eastern railroads submitted their "Four-Party Plan" comprising four systems for the Eastern District. These systems were headed, respectively, by the New York Central, Pennsylvania Railroad, Baltimore & Ohio and Chesapeake & Ohio-Nickel Plate.

Such "Four-Party Plan" was embodied in an Application filed with the Interstate Commerce Commission under date of October 1, 1931 by legal representatives of the four proponents. The document in question was entitled:

> "APPLICATION
> of
> THE BALITMORE AND OHIO RAILROAD COMPANY
> THE CHESAPEAKE AND OHIO RAILWAY COMPANY
> THE NEW YORK CENTRAL RAILROAD COMPANY
> and
> THE PENNSYLVANIA RAILROAD COMPANY
>
> To Reopen the Subject and to Change and Modify, in Certain Respects, the Plan Adopted and Published Herein Under date of December 9, 1929, for Consolidation of the Railway Properties of the Continental United States Into a Limited Number of Systems."

At page 8 appears, in part, the following:

"The changes proposed to be made in the Commission's complete plan may be stated as follows: * * *

> "8 -- Wabash Railway, Toledo, Peoria & Western Railroad and Norfolk and Western Railway from System No. 7- Wabash-Seaboard to System No. 4-Pennsylvania;"

VOVO

In pursuance of the foregoing Application, the consolidation proceeding, Docket 12964, was reopened and again extensive hearings were held, briefs filed and oral argument conducted, following which the Commission issued its further report of July 13, 1932, 185 I.C.C. 403. Therein the Commission proposed a slightly different grouping of the eastern railroads but in large measure approved the grouping of eastern railroads as proposed in the October 1, 1931 Application of the Baltimore and Ohio, Chesapeake & Ohio, New York Central and Pennsylvania.

With respect particularly to the Toledo, Peoria & Western, the following paragraph appears in the Commission's report at page 424:

> "The Toledo, Peoria & Western Railroad considers the plan of the applicants as unsound and contrary to the intent of Congress. It desires to remain an independent system and is opposed to the proposal of the applicants that this property be allocated to system No. 4. In our plan it is allocated to the Wabash-Seaboard system. This road extends from Effner, Ind., on the east through the important gateway of Peoria, Ill., to the Mississippi River at Lomax, Ill., and Keokuk, Iowa, on the west, 224 miles. It is primarily a bridge road. As indicated, in our plan the Toledo, Peoria & Western is allocated to the same system as the Wabash. The applicants would do likewise by allocating it to system No. 4. The Toledo, Peoria & Western objects to such or any allocation, but offers no aid to us in our statutory duty of allocating this property. We can not find upon this record any greater public use for this property than as a part of system No. 4, and it will be so allocated."

Under date of September 23, 1932 the railroads for the Eastern District of the United States agreed to the Four-Party Plan, this being practically the same as the Four-Party Plan approved by the Commission. In connection with such agreement there were some very minor modifications but these did not disturb the allocation of the Toledo, Peoria & Western to the Pennsylvania System.

During the course of the foregoing activity there was still another plan, to wit, the so-called Prince Plan, as well as a further proposal known as the Poland Report on the Prince Plan.

The Prince Plan, submitted March 15, 1933, divided the railroads of the United States into seven major systems and one additional jointly owned system. This assigned the T.P.&W. between Peoria and Effner to System No. 2, built around the PRR, and between Keokuk and Peoria to System No. 7, built around the Santa Fe and Missouri Pacific Railroads.

The Poland Report on the Prince Plan was issued on January 1, 1934. This contained the same separation and allocation of the eastern portion of the TP&W to System No. 2, and the western portion of the TP&W to System No. 7.

Please have it understood by all concerned that where traffic is specifically routed by shipper or consignee via Effner and TP&W, no action will be taken by any of our people to change or interfere with such routing.

Furthermore, please make it clear to your people that we are entirely willing, when conditions justify, to cooperate with the Toledo, Peoria & Western Railroad in handling traffic through the Effner gateway.

CORRESPONDENCE WITH WABASH RAILROAD REGARDING COMPLIANCE WITH [illegible] ATTACHED BY THE [illegible]

COPY

THE PENNSYLVANIA RAILROAD COMPANY

Personal
Mr. L. E. Clarahan, V.P. [illegible]

July 29, 1955
File O

Personal

Mr. L. E. Clarahan
Vice President - Traffic
Wabash Railroad Company
St. Louis 2, Mo.

Dear Mr. Clarahan:

In the application of The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company and Pennsylvania Company for authority under Section 5 (a) of the Interstate Commerce Act to acquire control of Toledo, Peoria & Western Railroad Company by purchase of its capital stock (Finance Docket No. 18991) there is published the agreement, dated as of June 28, 1955, between the AT&SF Railway, Pennsylvania Company and PRR setting forth the conditions under which acquisition of joint control is proposed.

Among other covenants in this agreement are the following:

"TP&W will continue to be operated as a separate and independent carrier with responsible management located along its lines in order to preserve to shippers and communities the present direct access to its officials."

"All existing routes and channels of trade via TP&W will be maintained and kept open without discrimination between connecting lines of railroad."

It is quite possible that those in opposition to the application will contend that Santa Fe and PRR intend, notwithstanding the foregoing assurances, to alter present conditions or relations with TP&W to their respective advantages.

To assist us in refuting such a contention, should it be advanced, we would appreciate answers from you to the following questions for use in our testimony at the hearing:

Since the approval by the Interstate Commerce Commission of acquisition of control in Wabash Railroad Company Control, Finance Docket No. 13836, 247 I.C.C. 365:

1. Has the Wabash or Ann Arbor [illegible] to join in any rates or routes competitive [illegible] Railroad, when such rates or routes have [illegible] advantageous to the interests of those [illegible]

2. Acquisition by Pennsylvania Railroad Company and Pennsylvania Company of control of the Wabash (and indirectly the Ann Arbor) was approved upon the following condition pertaining to joint rates, joint routes, etc.:

"xxx(c) that the Pennsylvania Railroad Company shall maintain joint rates, joint routes, interchange points and channels of trade through gateways of the Wabash Railroad Company now existing under the present operation of those properties xxx."

Has there been a full compliance by P.R.R. Wabash and Ann Arbor with the foregoing condition attached by the Interstate Commerce Commission in the Wabash proceedings?

Your assistance in this matter will be greatly appreciated.

With kindest regards,

Sincerely,

(s) FRED CARPI

Vice President - Traffic

Mr. O. C. Grimshaw
Vice President - Traffic
D. T. & I. Railroad Co.
Schaefer Building
Dearborn, Mich.

Dear Mr. Grimshaw:

In application of The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company and Pennsylvania Company for authority under Section 5 (2) of the Interstate Commerce Act to acquire control of Toledo, Peoria & Western Railroad Company by purchase of its capital stock (Finance Docket 18991) there is set forth the agreement dated as of June 28, 1955, between the AT&SF Ry., Pennsylvania Company and the Pennsylvania Railroad which among other covenants contains the following:

"TP&W will continue to be operated as a separate and independent carrier with responsible management located along its lines in order to preserve to shippers and communities the present direct access to its officials."

"All existing routes and channels of trade via TP&W will be maintained and kept open without discrimination between connecting lines of the railroad."

Our opponents at the hearing will probably contend that Santa Fe and PRR intend, notwithstanding the foregoing assurances, to alter present conditions or relations with TP&W to their respective advantages.

To assist us in refuting such a contention should it be advanced we would appreciate answers from you to the following for use in our testimony at the hearing:

Since the approval by the Interstate Commerce Commission of the acquisition of control in Detroit, Toledo & Ironton Railroad Company, et al. (also Springfield Suburban Railway Company, control, etc., Finance Docket No. 16426, 275 I.C.C. 455:

1. Has D.T.& I.R.R. refused to join in any rates or routes competitive with the Pennsylvania Railroad, when such rates or routes have been considered to be advantageous to the D.T.& I.R.R.?

2. Conditions prescribed by the I.C.C. as a basis for its approval of the acquisition of control in Finance Docket No. 16426 are set forth in the attached statement. Has there been a full compliance by PRR, Wabash and D.T.& I. with each one of the conditions attached by the I.C.C. as abasis for its approval in the D.T.& I. proceeding above mentioned

Your assistance in this matter will be greatly appreciated.

With kindest regards,

Sincerely,

(s) FRED CARPI

Vice President - Traffic.

INTERSTATE COMMERCE COMMISSION

PRESCRIBED IN FINANCE DOCKET NO. 16426 (ATTACHMENT TO LETTER ON PAGE 9)

Conditions prescribed by the Interstate Commerce Commission as a basis for its approval of the acquisition of control in the proceeding set out below:

Detroit, Toledo & Ironton Railroad Company, et al. (also Springfield Suburban Railroad Company) Control, etc., Finance Docket No. 16426, 275 I.C.C. 455.

"1. That under applicants' control, Ironton and Springfield Suburban shall maintain and keep open all routes and channels of trade via existing junctions and gateways, unless and until otherwise authorized by us.

"2. The present neutrality of handling traffic in-bound and out-bound by Ironton and Springfield Suburban shall be continued so as to permit equal opportunity for service to and from all lines reaching the rails of those carriers without discrimination as to routing or movement of traffic and without discrimination in the arrangement of schedules or otherwise.

"3. The present traffic and operating relationships existing between Ironton and Springfield Suburban, on the one hand, and all lines connecting with their tracks, on the other, shall be continued insofar as such matters are within the control of the applicants.

"4. Ironton and Springfield Suburban shall accept, handle, and deliver all cars in-bound and out-bound, loaded and empty, without discrimination in promptness or frequency of service as between cars destined to or received from competing carriers and irrespective of destination or route of movement.

"5. Applicants shall not do anything to restrain or curtail the right of industries located on Ironton and Springfield Suburban to route traffic over any or all existing routes and gateways."

Mr. Fred Carpi, Vice President-Traffic
The Pennsylvania Railroad Company
Suburban Station Building
Philadelphia 4, Pa.

Dear Mr. Carpi:

Replying to your letter July 29th, file O, requesting certain information in connection with Finance Docket 18991, Application of the ATSF, PRR and Pennsylvania Company for authority under Section 5(2) of the Interstate Commerce Act to acquire control of Toledo, Peoria & Western Railroad Company:

Answers to your questions follow:

1. The DT&I RR has not refused to join in any rates or routes competitive with the Pennsylvania Railroad when such rates or routes have been considered to be advantageous to the DT&I RR. On the contrary, the DT&I frequently seeks concurrence of its connections in rates and routes competitive with the Pennsylvania Railroad when they are considered to be advantageous to its interests.

2. The conditions prescribed by the Interstate Commerce Commission in Finance Docket No. 16426, Detroit, Toledo & Ironton Railroad Co., et. al. (also Springfield Suburban Railroad Company) Control, (275 I.C.C. 455) on which acquisition of the DT&I was predicated have been and are being strictly adhered to.

I trust the foregoing gives you the information desired. If we can be of further assistance, please call upon us.

Very truly yours,

O C Grimshaw
Vice President-Traffic

WABASH RAILROAD COMPANY

RAILWAY EXCHANGE BUILDING
ST LOUIS 1, MO

LEO E. CLARAHAN
Vice President - Traffic

August 4, 1955

J - 23199 (TP&W)

Dear Mr. Carpi:

This refers to your letter of July 29, file O, regarding application of the Atchison, Topeka and Santa Fe Railway Company, the Pennsylvania Railroad Company and Pennsylvania Company for authority under Section 5 (a) of the Interstate Commerce Act to acquire control of the Toledo, Peoria & Western Railroad Company.

As to Question No. 1, the Ann Arbor and Wabash Railroads have never refused to join their connections in any rates [illegible] competitive with the Pennsylvania Railroad when such rates or routes are considered in the best interest of the Ann Arbor Railroad or the Wabash Railroad. It has also been the policy of the Wabash Railroad not to dictate the rates or routes that the Ann Arbor Railroad may desire to establish, even though such rates or routes may be competitive with the Wabash Railroad.

Regarding Question No. 2, the Pennsylvania Railroad, Ann Arbor Railroad and Wabash Railroad have complied fully with the requirements set forth by the Interstate Commerce Commission when the Pennsylvania Railroad Company and the Pennsylvania Company acquired control of the Wabash and Ann Arbor as to maintaining joint rates, joint routes, interchange points, and channels of trade through the gateways of the Ann Arbor and Wabash Railroads.

With kindest regards.

Sincerely,

L E Clarahan

NOTE: The pro forma consolidated balance sheet reflects the changes in capital stock, long-term debt, earned surplus and investment in road and equipment resulting from the sale and issuance of $12,000,000 principal amount of 4-1/4% First Mortgage Bonds for a 100% interest in common stock of Toledo, Peoria & Western Railroad Company if it were acquired as of December 31, 1955.

No effect has been given on this pro forma balance sheet to any discount, premium or expense of issuance of the bonds. Such net premium or expense will be amortized over the life of the bonds.

Schedule 3

THE MINNEAPOLIS & ST.LOUIS RAILWAY COMPANY

AND

TOLEDO, PEORIA & WESTERN RAILROAD COMPANY

PRO FORMA CONDENSED COMBINED STATEMENTS OF INCOME AND EARNED SURPLUS

FOR THE EIGHT YEARS ENDED DECEMBER 31, 1955 (NOTE)

(000 omitted)

Year Ended December 31	Income Before Fixed Charges and Taxes on Income	Fixed Charges	Ratio of Income Before Fixed Charges and Taxes on Income to Fixed Charges	Provision For Taxes on Income	Income Available For Fixed Charges	Ratio of Income Available For Fixed Charges to Fixed Charges	Net Income	Earned Surplus			
								Balance Beginning of Year	Cash Dividends	Other (Net)	Balance at End of Year
1955	$ 4,989	$ 818	6.1	$ 1,797	$ 3,192	3.9	$ 2,374	$ 6,453	$(1,392)	$ (43)	$ 7,392
1954	4,363	858	5.1	1,462	2,901	3.4	2,043	11,077	(1,188)	(5,479)	6,453
1953	5,828	872	6.7	2,363	3,465	4.0	2,593	13,115	(1,162)	(3,469)	11,077
1952	6,037	825	7.3	2,445	3,592	4.4	2,767	11,369	(900)	(121)	13,115
1951	5,278	735	7.2	2,342	2,936	4.0	2,201	10,128	(895)	(65)	11,369
1950	6,633	734	9.0	2,278	4,355	5.9	3,621	7,595	(1,045)	(43)	10,128
1949	3,177	725	4.4	759	2,418	3.3	1,693	6,953	(839)	(216)	7,595
1948	4,950	744	6.7	1,378	3,572	4.8	2,828	7,461	(3,340)	4	6,923
Average	5,157	789	6.5	1,853	3,304	4.2	2,515				

NOTE: Effect has been given in combining the income and earned surplus accounts of the two companies for the years shown above to the following:

(a) Additional annual fixed charges of $510,000 representing interest at 4-1/4% on $12,000,000 principal amount of first mortgage bonds assumed to have been outstanding since January 1, 1948.

(b) A related reduction in provision for taxes on income for each of the years of $265,000 representing the tax reduction (computed at 52%) resulting from the increased interest charges.

No effect has been given to estimated economies from unified operations.

	$6,178	$ 807	$6,985	$37,170	$30,185	$ 156	$1,477	$1,633	$6,450	$4,817	$8,618	$43,620	$35,002	$12,000	$23,002

NOTES: (1) Amounts shown for depreciation represent provisions for the year 1955 as follows:

	The Minneapolis & St. Louis Railway Company	Toledo, Peoria & Western Railroad Company	Combined
Equipment	$ 905	$ 137	$1,042
Road property	334	78	412
Total	$1,239	$ 215	$1,454

(2) Sinking fund requirements are based on the proposed issue of $12,000,000 principal amount of 30-year sinking fund bonds with equal annual sinking fund payments of $480,000 commencing in 1961.

(3) Since this schedule is intended to show only the excess of total depreciation over long-term debt maturities and proposed sinking fund requirements, it does not show funds provided from net income nor funds expended for new equipment or additions and betterments.

For: Investors in The Minneapolis & St. Louis Railway Company Chicago

FOR RELEASE IN NEWSPAPERS OF SUNDAY, MAY 9, 1954

The incumbent management of The Minneapolis & St. Louis Railway Company was charged today with issuing "grossly misleading" figures on the road's first quarter operations this year "in a brazen attempt to influence stockholders" in a proxy fight for control of the road.

Ben W. Heineman, spokesman for a group of major shareholders seeking the election of a majority of the M&StL board of directors, said the management deferred maintenance expenditures during the first quarter of 1954 in order to show an increase in net income. The amount deferred, he said, will have to be spent eventually.

Lucian C. Sprague, chairman of the board, told the road's stockholders in a proxy solicitation that net income for the first three months of 1954 was $484,951.12, compared with $476,788.72 last year, or an increase of $8,162.40.

In his letter to shareholders, Sprague boasted that the M&StL was "one of the few Class I railroads" in the country to make such a record.

"The management's figures are grossly misleading," Heineman said in a statement. "What Mr. Sprague does not tell stockholders is that in order to make such a record, the management had to cut maintenance expenditures by $94,624.20 in the first quarter.

"This is not money saved. It is only a deferred expense, and because of the delay in making repairs and maintaining the property, more than this amount will probably have to be spent later.

[fol. 2056] "It is an even more brazen attempt to influence stockholders when it is realized that in the first quarter the management failed to reduce general and

overhead expenses, where the investors in the road have charged gross waste, extravagance and misuse of company funds.

"Instead, they chose to bleed the road to make a good showing."

Heineman and his group, which includes the largest stockholders in the road, seek to elect seven out of 11 members of the M&StL board of directors at the annual shareholders' meeting next Tuesday, May 11, in New York.

TO THE SHAREHOLDER:

INVESTORS IN THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY consists of major shareholders in the Company organized to solicit your support in the election of a majority of the Board of Directors of the Company at the annual meeting on May 11, 1954.

We seek your support for the following reasons:

1. Dividends to shareholders of the Company have not been adequate. They can and should be maintained at a minimum of 50 percent of net income. 1953 earnings warranted dividends of $1.60 a share. Had our program been

---

Note: Please execute, date and return promptly the enclosed Blue Proxy, using the accompanying return addressed envelope which requires no postage if mailed in the United States.

in effect in 1953, earnings of $4.00 to $4.25 and dividends of $2.00 a share would have been feasible.

2. A new, more aggressive and efficient Board of Directors having a real stake in the Company can materially cut operating expenses, increase net income and dividends and effect a substantial improvement in the conduct of the Company's affairs.

3. Prompt consideration should be given to capitalizing upon the strategic position of the M&StL through its merger or consolidation with other railroads.

4. In important areas, the present Board of Directors and management of the Company have been wasteful, extravagant, self-serving and inefficient. They cannot be depended upon to carry out this constructive program for the benefit of the road, its shareholders, its employees or the public that it serves.

These goals have been set and these statements made only after the most careful consideration and study.

The entire management slate elected to the Board at the last annual meeting owned but 3,690 shares of the Company stock, or less than two-thirds of one percent. Beginning in July 1953, and repeatedly thereafter, we outlined to the management and to the Board an aggressive program for the improvement of the road and urged its adoption. Further, we pointed out to the management that the real owners of the road—the shareholders—were without adequate representation on the Board. We were hopeful that if we were accorded minority representation, the program we urged could be put into effect. But the refusal of the incumbent Board to give us even minority representation has left us no alternative but to seek your support in electing a majority of the Board.

Originally, in July 1953, at the behest of owners and representatives of 125,000 shares of stock, we requested that three large shareholders be elected to the eleven-man Board, and that two of the three be members of the five-man Executive Committee which we proposed be created. We also pointed out that new Directors could add real

strength to the Board, which then had two members nearing eighty years of age and two other members, in addition to the President, who were salaried corporate officers whose contributions to the Company would be the same whether or not they were Directors. On December 21, 1953, Lucian C. Sprague, then President and now Chairman of the Board, recognized the validity of our goals and signed a letter of agreement, personally undertaking to meet these requests. But the Board of Directors, at meetings on December 30, 1953, and January 29, 1954, persisted in its course and refused to honor his commitments.

Throughout this period, it should be noted, we merely requested a voice in the Company's affairs. At no time did we seek or demand control of the Company. We now [fol. 2058] seek to elect a majority of the Board of Directors because after careful study and consideration we feel that (a) a continuation of the present Board and its policies will prevent the full realization of the potential of the M&StL, and (b) only a Board with a real financial interest in the Company can be depended upon for the wholehearted prosecution of the program we regard as vital.

Our Program

Improved Net Income

We have made numerous studies of railroads comparable to the M&StL and (after great resistance by the Board of Directors and management) we have had a firm of nationally known independent certified public accountants provide us with data from certain general and traffic expense records of the M&StL for the year 1952 and for January, February and December of 1953. The facts and figures so obtained provide firm support for our opinion that net income in 1953 could have been improved by $1,200,000 before taxes, or approximately $1.00 a share in net income after taxes.

So that you may understand the basis for this statement, we are setting out the critical figures in some detail. We urge you to take the time and effort to study them carefully.

The capital structure of the Company is such that any improvement in net income reflects itself directly in increased net income available to your shares of common stock, and hence available for dividends.

The ratio of total operating expenses to total operating revenues (usually referred to as the "operating ratio") for the year ended December 31, 1953, was 77.36 percent. The Company's total operating revenues for the year 1953 amounted to $22,001,000. Thus, each decrease of one percentage point in the operating ratio yields additional net income before taxes of $220,000. Our studies have satisfied us that, taking into account the M&StL's favorable transportation ratio, the operating ratio should have been no higher than approximately 71 percent.

Total operating revenues, total operating expenses and net income for the five years ended December 31, 1953, are as follows:

	Total Operating Revenues	Total Operating Expenses	Operating Ratio	Net Income		Dividends Per Share
				Total	Per Share	
1953	$22,001,000	$17,019,000	77.36%	$1,949,000	$3.25	$1.50
1951	21,894,000	16,476,000	75.25	1,664,000	2.77	1.00
1952	22,901,000	17,318,000	75.62	2,102,000	3.50	1.10
1950	20,882,000	15,009,000	71.88	2,765,000	4.61	1.25
1949	18,865,000	15,394,000	81.60	1,306,000	2.18	1.00

Analysis of the Company's expense data makes clear the savings that can be realized by an aggressive, forward-looking Board of Directors. For the five years ended December 31, 1953, the principal classifications of operating expenses, expressed as percentages of total operating revenues, were as follows:

	Transportation Expense	Maintenance of Way, Structure and Equipment	Traffic	General	Total Operating Expenses
1953	32.13%	32.10%	6.91%	6.22%	77.36%
1952	32.05	31.64	6.35	5.58	75.62
1951	32.15	30.74	6.40	5.96	75.25
1950	29.92	30.21	6.25	5.50	71.88
1949	33.66	35.00	7.01	5.93	81.60

These traffic and general expenses of your Company are substantially higher than those of any comparable railroad, and indeed are among the two or three highest in the [fol. 2059] United States. Still keeping in mind that a reduction of one percent in any of these expenses is equivalent to an increase of $220,000 in net income before taxes, the following comparisons are significant:

Comparison of Traffic and General Expenses of The Minneapolis & St. Louis Railway Company, the Chicago Great Western and the Monon for Twelve Months Ended December 31, 1953

	Total Operating Revenues	General Expense		Traffic Expense		Combined Total	
		Dollars	Percent of Operating Revenues	Dollars	Percent of Operating Revenues	Dollars	Percent of Operating Revenues
M&StL	$22,001,000	$1,346,000	6.22	$1,520,000	6.91	$2,866,000	13.13
CGW	31,436,000	923,000	2.94	1,342,000	4.27	2,265,000	7.21
Monon	21,888,000	952,000	4.40	1,062,000	4.80	2,014,000	9.20

It is obvious that these expenditures of your Company for traffic and general expenses are excessive. If the Company had spent no more than the Chicago Great Western, without adjusting for the greater size of the latter, savings of $600,000 before taxes, or approximately 50¢ a share after taxes, would have been realized from these two accounts alone. If your Company had the same general and traffic expense ratios as the Chicago Great Western, savings of more than $1,280,000 before taxes, or savings of approximately $1.00 a share after taxes would have been realized in these two accounts alone. The Monon, with almost the same operating revenues, had traffic and general expenses of $850,000 less.

We have analyzed the underlying accounts to determine the reason for this discrepancy. The following table discloses that it lies primarily in excessive and wasteful salaries and expenses and unnecessary costs of traffic solicitation.

The following tables are self-explanatory:

Comparison of Certain General and Traffic Expenses of The Minneapolis & St. Louis Railway Company, the Chicago Great Western and the Monon for the Twelve Months Ended December 31, 1953

	M&StL	CGW	Monon
Total Operating Revenues	$22,001,000	$31,436,900	$21,888,000
General Expense:			
Salaries and expenses of general officers	$ 307,000	$ 149,000	$ 164,000
Salaries and expenses of clerks and attendants	618,000	446,000	403,000
Law expenses	155,000	115,000	42,000
Pensions and gratuities	77,000	35,000	43,000
Other expenses	85,000	62,000	69,000
[Other items omitted]			
Total General Expense	$ 1,346,000	$ 923,000	$ 952,000
Traffic Expense:			
Superintendence	$ 531,000	$ 228,000	$ 409,000
Advertising	212,000	14,000	65,000
[Other items omitted]			
Total Traffic Expense	$ 1,520,000	$ 1,342,000	$ 1,062,000
Total General and Traffic Expenses	$ 2,866,000	$ 2,265,000	$ 2,014,000

[fol. 2060] We have compared the Company with the Chicago Great Western because it has closely similar traffic and geographical characteristics. We use the Monon because it has nearly identical total operating revenues, although it has different traffic density and operating characteristics. But these differences are of no consequence for the purposes used. For if the same comparisons were made with any Class I railroad in the United States of more than 300 miles in length they would show substantially the same thing. Any such comparison would show that there is room for a material reduction in the general and

traffic expenses of the M&StL. To drive this point home, we have analyzed for the year 1953 the general expense and the traffic expense of various classifications of railroads. These are as follows:

Comparisons of the General and Traffic Expense Ratios of The M&StL for the Year 1953 with Those of All Roads in the Northwest Region, Exclusive of The M&StL, with Seven Roads Having Total Operating Revenues of $10 Million to $25 Million (Group I), Fourteen Roads Having Total Operating Revenues of $25 Million to $50 Million (Group II), and Fifteen Roads Having Total Operating Revenues of $50 Million to $100 Million (Group III)

	M&StL	Northwest Region	Group I	Group II	Group III
Traffic expense	6.91%	2.04%	2.82%	3.08%	2.31%
General expense ..	6.22	4.37	4.12	4.34	4.15
Combined	13.13	6.41	6.94	7.42	6.46

Thus, the traffic and general expense accounts of the M&StL are conspicuous examples of how material increases in net income could have been realized under the direction of a new board having a sufficient financial interest in the Company to review and prune management expenses.

Increased Dividends

We have been consistently of the opinion that the Company could pay substantially higher dividends than it has been paying. For the last five years, dividend payments have averaged less than 36 percent of the available net income. In view of the conservative nature of the capital structure of the Company we see no reason why it should not be able to pay out at least 50 percent of its net income in dividends. Under a new Board of Directors, and in the absence of adverse economic circumstances affecting railroads generally, we would expect that net income and dividends would be materially improved. Thus, had our program been in effect in 1953, earnings of $4.00 to $4.25 and dividends of $2.00 a share would have been practical real-

ities. Even without the savings and accompanying increase in net income that we foresee under a new Board of Directors having adequate shareholder representation, the Company should pay regular dividends of at least $1.60 a share on the present shares.

Payments approached this figure for the first time in 1953. In the first half of 1953 the Board, following its prior practice, paid two quarterly dividends of 25¢ each. After we presented our program to the incumbent management and began to exert consistent pressure for representation and improvement in the direction of the Company's affairs, the Board took a different tack, declaring quarterly dividends of 30¢ each in each of the last two quarters, extras totaling 40¢, and a stock dividend of thirty-three and one third percent.

The continuance of these dividend policies should not depend upon the ability of shareholders to bring intermittent pressure on Directors. Only a Board with substantial shareholders predominant among its members can be counted on for a consistent policy of adequate dividends.

Merger

In our opinion your Company enjoys a strategic geographical position as well as basic efficiencies in its actual physical operations. We believe that these factors can be best capitalized upon by merger or consolidation with other railroads. Indeed, in our opinion, only through such a program, long neglected by the present management, can full recognition of the intrinsic value of the Company be [fol. 2061] had. Discussions to this end should, in our opinion, be instituted in the near future. A new Board pledged to efficient, aggressive management of the Company, and having significant shareholder representation, would both create the necessary foundation for an advantageous program of consolidation or merger and pursue such a program vigorously.

Improved Management

In an effort to determine whether the present management of your Company was conducting its affairs properly and efficiently, we obtained access to the Company's books

and records. In addition we engaged Arthur Andersen & Co., a nationally known firm of independent public accountants, to examine and report on certain disbursement records of the Company. Our study, together with the data furnished us by Arthur Andersen & Co., convinces us that your Company is being operated with appalling waste and extravagance. Indeed, the present management is unable to explain even where its expenditures go. We need only quote in its entirety a letter from Arthur Andersen & Co. supplementary to a detailed report on its examination of the Company's records. The letter is as follows:

ARTHUR ANDERSEN & Co.
Accountants and Auditors
Northwestern Bank Building
Minneapolis 2
February 13, 1954

Mr. Ben W. Heineman
135 South LaSalle Street
Chicago 3, Illinois

Dear Mr. Heineman:

As you have requested, we have reviewed certain records of the Minneapolis & St. Louis Railway Company for the year 1952 and have submitted our report dated January 29, 1954 thereon.

This report disclosed certain deficiencies and improprieties in disbursement procedures. Under existing company policy, each department head approves disbursements for his own department, and the accounting department does not have the authority to review or question the amount, character, or propriety of the expenditures of other departments. In our work we attempted to determine the nature and validity of certain of the company's disbursements. We found that such determination was impossible since numerous cash payments were neither explained nor substantiated by any documentary evidence made available to us so that we were unable to determine that these payments were for corporate purposes.

Very truly yours,

ARTHUR ANDERSEN & Co.

We are satisfied that a Board which permits the continuance of practices of the character described can not safely continue to manage the Company. We pledge an immediate end to laxness and inefficiency and an immediate drive for the reduction of unnecessary expense. As a first step in this direction, we intend to propose at the annual meeting that Arthur Andersen & Co. be selected as independent auditors annually to audit the books and accounts of the Company, and to insure the most careful and scrupulous accounting for your funds.

RETURN SIGNED PROXIES

A formal proxy statement is attached hereto and should be examined by you. We urge you to sign and date the enclosed proxy promptly and return it to us at once in the enclosed self-addressed envelope which requires no postage if mailed in the United States.

If stock is not held in your name but is held in the name of a bank, broker or other nominee, please instruct the record holder promptly to execute and mail the enclosed proxy.

Very truly yours,

ARTHUR S. BOWES
HENRY DEMEESTER
BEN W. HEINEMAN
FRANKLIN LYONS
JOHN P. WAGNER
as Investors in The Minneapolis & St. Louis Railway Company.

[fol. 2062]

PROXY STATEMENT

Annual Meeting of Shareholders to be Held

May 11, 1954

This statement is furnished in connection with the solicitation by a group of investors in The Minneapolis & St. Louis Railway Company (herein called the Company) of proxies to be used at the next annual meeting of shareholders of the Company to be held on Tuesday, May 11, 1954 at 2:00 p. m. (Eastern Daylight Saving Time) on the 50th floor of the Chanin Building, 122 East 42nd St., New

York, New York. The enclosed proxy is revocable at any time prior to its exercise by filing with the Secretary of the Company a subsequently executed proxy or by giving him written notice of revocation.

The Board of Directors has fixed April 13, 1954, as the record date for the determination of shareholders entitled to notice of and to vote at the meeting. As of December 31, 1953, there were issued and outstanding 589,035 shares of stock of the Company. Each such share of the Company's stock is entitled to one vote.

The Investors Soliciting Your Proxy

Your proxy is being solicited by, and at the sole expense of, the following five persons who, with their immediate families, own beneficially an aggregate of 65,994 shares having a market value at the close of business on March 3, 1954, of more than $1,550,000.

Name	Shares Held as at 3/1/54
Arthur S. Bowes	5,000
Henry DeMeester	2,169
Ben W. Heineman	5,925*
Franklin Lyons	25,000
John P. Wagner	27,900

* In addition, Mr. Heineman has options, partially contingent, to purchase 3,581 shares from certain shareholders on or before June 8, 1955, at prices of $19.29 per share and $19.68 per share.

Election of Directors

One of the purposes of the meeting is to elect eleven (11) Directors to hold office until the annual meeting of shareholders in 1955 and until their successors shall have been duly elected and shall have qualified.

The shares represented by the proxies that we are soliciting will be voted for the election as Directors of Messrs. Arthur S. Bowes, Henry DeMeester, William E. Fay, Ben W. Heineman, Franklin Lyons, Joseph S. Nye, and Jouett Shouse. None of these nominees are presently Directors of the Company, but all have indicated their willingness to

serve. Should any of these nominees for Directors become unable to accept nomination or election, the shares represented by such proxies will be voted for the election of [fol. 2063] such other person or persons for Director as the undersigned may recommend in the place of such nominee.

Information Regarding Nominees for Directors

The following is the requisite information with respect to the nominees for election as Directors for whom votes pursuant to the enclosed proxy will be cast:

Nominee	Principal Business and Business Affiliation	Beneficial Holdings of Common Stock
ır S. Bowes	Investor: Member of the Board of Directors of the Automatic Canteen Company of America and Pepsi-Cola General Bottlers, Inc.; President, Bowes Industries, Inc., manufacturers of paper products and now merged with the Continental Can Company, from 1948 to 1953	5,000
DeMeester	Investor, President and Vice-President, Northwest Cities Gas Co., 1949-1950	2,169
n E. Fay	President of Champion Machinery Co., machinery manufacturers; Director, Wisconsin Public Service Corp. and First National Bank of Joliet; Federal Court appointee to Reorganization Committee of Chicago, Rock Island & Pacific Railway Company and Director of reorganized company until 1951	1,000

Nominee	Principal Business and Business Affiliation	Beneficial Holdings of Common Stock
Ben W. Heineman	Partner, Swiren & Heineman, Attorneys	5,125*
Franklin Lyons	Investor; Member of the Executive Committee of Four Wheel Drive Auto Company, manufacturer of heavy duty trucks	25,000
Joseph S. Nye	Investor; rail analyst; partner, Neergaard, Miller & Co., members, New York Stock Exchange, 1951-2; partner, Freeman & Company, investment bankers, until 1951; former chairman, National Association of Securities Dealers, District 13 (New York, New Jersey and Connecticut)	1,000
Jouett Shouse	Attorney; director, General Aniline & Film Corp., General Dyestuff Corp.; Chairman of the Board, Anton Smitt & Co., and the Kinsey Bank, Kinsey, Kansas	750*

* Members of Mr. Heineman's immediate family and his law partner own 4,125 additional shares, and, in addition, Mr. Heineman has options, partially contingent, to purchase 3,581 shares from certain shareholders on or before June 8, 1955, at prices of $19.29 per share and $19.68 per share. Mr. Shouse's wife, Catherine Filene Shouse, owns an additional 500 shares.

Stock Dividend

On October 28, 1953, the Board of Directors of the Company voted a stock dividend payable in shares at the rate of one-third share of stock for each share of presently authorized common stock. This declaration was expressly made subject to approval by the Interstate Commerce Commission and by the shareholders. On February 4, 1954, the Interstate Commerce Commission gave the necessary au- [fol. 2064] thority. We recommend that the shareholders take the necessary action to make possible the payment of this stock dividend by increasing the presently authorized number of shares from 600,000 to 800,000.

Selection of Auditors

The undersigned intend to propose that Arthur Andersen & Co., independent certified public accountants, be selected by shareholders as independent auditors for the Company to make an annual audit of the Company. Arthur Andersen & Co. have no direct or indirect financial interest in the Company or its subsidiaries, nor do they have or have they had any connection with them.

Other Matters

We are not aware of any other matters which may be brought before the meeting. However, if any other matters not now known come before the meeting, the persons named in the accompanying form of proxy (or their substitutes) will vote the proxies in accordance with their best judgment on such matters.

The cost of preparing, assembling and mailing this statement, the form of proxy and any additional material relating to the meeting which may be furnished to the shareholders subsequent to the furnishing of this statement is being borne by the undersigned and the Company will be asked to reimburse the undersigned for the costs of the solicitation of proxies. Solicitations will be made by mail, and in addition, by The Kissel Organization. It is anticipated that 14 employees of The Kissel Organization will be utilized for that purpose at an anticipated cost of $5,000.

We will reimburse bankers, brokers and others holding stock in their name or in the names of nominees for out-of-pocket expense incurred in sending proxies and proxy material to the beneficial owners of such stock.

Respectfully submitted,

ARTHUR S. BOWES — BEN W. HEINEMAN
HENRY DEMEESTER — FRANKLIN LYONS
JOHN P. WAGNER,
as Investors in The Minneapolis & St. Louis Railway Company

March 5, 1954

9-6 IRR - Fort Wayne, Ind. - Wabash - Kansas City, Mo. - Santa Fe.

FORMULA "A"

S.W.L. D/S 200-A Initial primary break on Mississippi River (East Fort Madison, Ill., E. Hannibal, Ill. or East St. Louis, Ill.)

S.W.L. D/S 100 Subdivides proportion accruing west of Mississippi River Crossings over Kansas City.

Joint Rate Committee Percent 145 (Eastbound Traffic)
Joint Rate Committee Percent 144. (Westbound Traffic)
Joint Rate Committee Percent 20-A(Eastbound and Westbound Traffic)

Subdivide proportion East of Upper Crossings over Chicago, Peoria and Decatur (Bloomington basis)

JRC 145 and 144 covers Western Termini and East
JRC 20-A covers Western Termini and, East

AT&SF P/S 3300-I subdivides lumped proportion accruing between Kansas City and Peoria over Nemo between M&StL and AT&SF

AT&SF P/S 3101 F subdivides lumped proportion accruing between Kansas City and Peoria over Lomax in connection with T&H and AT&SF

Pennsylvania Railroad D/B 5800-A subdivides proportion accruing east of Peoria over Effner between Pennsylvania and T&H

Pennsylvania Railroad D/B 5800-A subdivides proportion accruing east of E. Hannibal over Logansport between Pennsylvania and Wabash

2133

FORMULA "B"

Trans-Continental D/C 62-B - Initial primary break at Peoria, Decatur, Chicago, East St. Louis or East Hannibal (East and Westbound)

Trans-Continental D/C 66-C subdivides proportion accruing west of Peoria, Decatur, Chicago, East St. Louis and East Hannibal over Kansas City (westbound 14.3 balance (Eastbound 3¢ cwt. 12.1¢ plus 3¢ cwt. of balance.)

ATSF P/S 3360-I subdivides proportion accruing between Kansas City and Peoria over Nemo with ATSF and MStL

ATSF P/S 3101-F subdivides proportion accruing between Kansas City and Peoria over Lomax with ATSF and TP&W

Pennsylvania Railroad D/B 5880-A subdivides proportion accruing East of Peoria over Effner between Pennsylvania and TP&W

Pennsylvania Railroad D/B 5888-A subdivides proportion accruing East of East Hannibal over Logansport between Pennsylvania and Wabash

FORMULA "C"

ATL D/S 500-A - Initial primary trunk over Chicago, Peoria, Decatur, East St. Louis and East Hannibal

ATL D/S 700 - Subdivides proportion accruing West of Chicago, Peoria, Decatur, East St. Louis and East Hannibal over Kansas City

AT&SF F/S 3360-I subdivides proportion accruing between Kansas City and Peoria over Nemo in connection with AT&SF and M&StL.

AT&SF F/S 3101-F subdivides proportion accruing between Kansas City and Peoria over Lomax with AT&SF and TP&W

Pennsylvania Railroad D/B 5880-A subdivides proportion accruing East of Peoria, Ill. over Effner between Pennsylvania Railroad and TP&W

Pennsylvania Railroad D/B 5888-A subdivides proportion accruing East of East Hannibal over Logansport between Pennsylvania Railroad and Wabash

2131

FORMULA "D"

Eastbound Lumber

TC D/C 63-M initial break over Chicago, Peoria, Decatur, and E. St. Louis to all stations except New York and Philadelphia, Pa.

TC D/C 62-B, Item 320-A initial break over Chicago, Peoria, Decatur, East Hannibal and East St. Louis to New York, N. Y. and Philadelphia, Pa.

TC D/C 66-C subdivides proportion accruing West of Peoria, Decatur, East Hannibal and East St. Louis over Kansas City.

AT&SF F/S 3360-I subdivides proportion accruing between Kansas City and Peoria over Nemo with AT&SF and MStL.

AT&SF F/S 3101-F subdivides proportion accruing between Kansas City and Peoria over Lomax with AT&SF and TP&W.

Pennsylvania Railroad D/F 5880-A subdivides proportion accruing East of Peoria over Effner between Pennsylvania and TP&W.

Pennsylvania Railroad D/F 5888-A subdivides proportion accruing East of East Hannibal over Logansport between Pennsylvania and Wabash

FORMULA "E"

Grain and Grain Products

Divisions are formulated on a prorate rate of grain rates reflecting Ex Parte 175-C increases, the proportional rates from Kansas City to Peoria and Chicago were employed

From Dodge City to Kansas City - Local grain as factor

Beyond Peoria and Chicago factors were grain rates in C.T.R. 245 and 535-Series.

EXHIBIT H-37

Exhibit No. #37
Witness Carr

BEFORE THE INTERSTATE COMMERCE COMMISSION

FINANCE DOCKET NO. 19086

APPLICATION OF THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY FOR AUTHORITY UNDER SECTION 5(2) OF THE INTERSTATE COMMERCE ACT TO ACQUIRE CONTROL OF THE TOLEDO, PEORIA & WESTERN RAILROAD COMPANY THROUGH OWNERSHIP OF ITS CAPITAL STOCK.

Table of Contents

Page	
1	Map showing the location of the M. & St. L. Railway in South Dakota.
2	Production and value of agricultural products produced in the counties traversed by the M. & St. L. Railway in South Dakota in 1954.
3 & 4	Number of cars and tons of freight originating and terminating in South Dakota on the M. & St. L. Railway from 1928 to 1954, inclusive.
5 – 10	Statements showing number of cars, weight and revenue on actual shipments of various commodities moving to and from South Dakota for the eleven months ending November 30, 1955.

EXHIBIT OFFERED ON BEHALF OF THE SOUTH DAKOTA PUBLIC UTILITIES COMMISSION

Hearing at Peoria, Illinois
February 1, 1956.

	Amount	Per Share of Common Stock
NET INCOME OF M&STL ASSUMING M&STL ACQUISITION:		
Net income of M&StL in 1954 (based on 800,000 shares)*	$1,647,000	$ 2.06
Pro forma increase in 1954 net income assuming acquisition of TP&W, unified operations and the issuance of $12,000,000 of bonds	1,279,000	1.60
Pro forma net income (Schedule 3)	$2,926,000	$ 3.66
NET INCOME OF M&STL ASSUMING SANTA FE-PENNSYLVANIA ACQUISITION:		
Net income of M&StL in 1954*	$1,647,000	$ 2.06
Estimated reduction in net income attributable to the estimated loss of traffic (Note 2)	453,000	.57
Pro forma net income	$1,194,000	$ 1.49
ESTIMATED ANNUAL VALUE TO M&STL (NOTE 4)	$1,732,000	$ 2.17

* Includes net income of wholly-owned subsidiary.

rr 10

[fol. 2211]

Schedule 1
(Notes)

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY

NOTES TO SCHEDULE OF ESTIMATED ANNUAL VALUE OF TP&W TO M&STL

(1) The estimated annual value to M&StL of $1,732,000 represents 105.2% of 1954 net income of $1,647,000.

(2) The estimated reduction in net income attributable to the estimated loss of traffic, assuming Santa Fé and Pennsylvania acquisition of the TP&W, was calculated as follows:

Revenue decrease		$1,110,000
Estimated decrease in expenses by reason of traffic decline (15% of $1,110,000)		167,000
Loss before Federal income taxes		$ 943,000
Federal income taxes (52% of $943,000)		490,000
Net loss		$ 453,000

The revenue loss of $1,110,000 represents incremental revenue; hence, expenses applicable to this revenue are not equivalent to the overall M&StL expense ratio. It is not practicable to estimate these expenses in detail; however, it is known that most expenses are nil for incremental revenue cars and 15% has been used as an estimate of the expenses that vary almost directly with each revenue car handled.

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY
AND
TOLEDO, PEORIA & WESTERN RAILROAD COMPANY

ESTIMATED ANNUAL VALUE OF TP&W TO M&STL AS COMPARED TO ANNUAL VALUE TO SANTA FE AND PENNSYLVANIA

PERCENT TO 1954 ACTUAL NET INCOME OF ESTIMATED ANNUAL VALUE OF TP&W TO:

M. & S. L. (Schedule 1)	105.2%
Santa Fe (See below)	.5
Pennsylvania (See below)	1.1

ANNUAL VALUE OF TP&W ACQUISITION TO SANTA FE AND PENNSYLVANIA:

	Amount	Income Available For Common Shareholders Per Share of Common Stock
Santa Fe:		
Consolidated net income for 1954 less dividends on preferred stock (Note)	$49,964,310	$12.39
Pro forma increase in net income assuming acquisition of 50% of TP&W (based on 50% of 1954 net income of TP&W)	220,584	.07
Pro forma net income	$50,284,894	$12.46
Percent increase in net income	.5%	
Pennsylvania:		
Consolidated net income for 1954 (Note)	$28,259,519	$ 2.15
Pro forma increase in net income assuming acquisition of 50% of TP&W (based on 50% of 1954 net income of TP&W)	220,584	.02
Pro forma net income	$28,480,103	$ 2.17
Percent increase	1.1%	

Note--Based on comparative consolidated data in Moody's 1955 Transportation Manual. Per share net income is based on 4,894,120 shares for the Santa Fe and 13,167,754 shares for the Pennsylvania.

[fol. 2219]

THE MINNEAPOLIS & ST LOUIS RAILWAY COMPANY
AND
TOLEDO, PEORIA & WESTERN RAILROAD COMPANY
ECONOMIES FROM UNIFICATION OF
MAINTENANCE OF EQUIPMENT DEPARTMENTS

Schedule [illegible]

Wage and Salary Economies:		
Elimination of certain supervisory personnel classified in 1954 Form A reports to I.C.C. as executives, staff officials and professional and clerical personnel:		
Superintendent of motive power	$ 10,200.	
Mechanical department clerks	17,178	
Total (Schedule 21)		$ 27,378
Maintenance of equipment and stores employees (Schedule 21)	$343,118	
Less purchasing department personnel	(4,210)	
Maintenance of equipment portion of purchasing and stores salaries (Schedule 21)	33,981	
Total		[illegible]
Total		$ [illegible]
Other Expense Economies:		
Superintendence--Reduction of supervisory positions would reduce expenses incident to these positions		[illegible]
Expenses related to equipment repair operations would be eliminated by unification of maintenance facilities (estimated at 90%):		
Shop machinery		[illegible]
Power plant machinery		[illegible]
Shop and power plant machinery		[illegible]
Reduction in stationery and printing expenses		[illegible]
Work equipment repair material would be reduced by reason of sale or other disposition of work equipment		[illegible]
Locomotive repairs--Through unification four locomotives would be sold or otherwise disposed of and it has been assumed that the reduction in number of units would reduce material usage by $3,000 per unit		[illegible]
Equipment depreciation--This charge would be reduced by the depreciation applicable to the locomotives and the work equipment to be sold or otherwise disposed of:		

	Units	Cost	Annual Depreciation Rate	Amount
Locomotive -				
Baldwin	[illegible]	$ [illegible]	[illegible]%	$ [illegible]
Lima	[illegible]	[illegible]	[illegible]%	[illegible]
Total				$ [illegible]
Work equipment -				[illegible]
Total depreciation				[illegible]
Total maintenance of equipment economies from unification				[illegible]

[fol. 2219]

THE MINNEAPOLIS & ST LOUIS RAILWAY COMPANY — Schedule
AND
TOLEDO, PEORIA & WESTERN RAILROAD COMPANY
ECONOMIES FROM UNIFICATION OF
MAINTENANCE OF EQUIPMENT DEPARTMENTS

Wage and Salary Economies:
Elimination of certain supervisory personnel classified in 1954 Form A reports to I.C.C. as executives, staff officials and professional and clerical personnel:

Superintendent of motive power	$ 10,200	
Mechanical department clerks	17,178	
Total (Schedule 21)		$ 27,378
Maintenance of equipment and stores employees (Schedule 21)	$34,118	
Less purchasing department personnel	(34,240)	
Maintenance of equipment portion of purchasing and stores salaries (Schedule 21)	19,981	
Total		
Total		$

Other Expense Economies:
Superintendence--Reduction of supervisory positions would reduce expenses incident to those positions

Expenses related to equipment repair operations would be eliminated by unification of maintenance facilities (estimated at 10%):

Shop machinery
Power plant machinery
Shop and power plant machinery

Reduction of stationery and printing expenses

Work equipment repair material would be reduced by reason of sale or other disposition of work equipment

Locomotive repairs--Through unification four locomotives could be sold or otherwise disposed of and it has been assumed that the reduction in number of units would reduce material usage by $1,000 per unit

Equipment depreciation--Data charge would be reduced by the depreciation applicable to the locomotives and the work equipment to be sold or otherwise disposed of:

	Units	Cost	Annual Depreciation Rate	Amount
Locomotive -				
Switch	1	$ 74,400	.02%	$ 2,976
Diesel				
Total				$16,239
Work equipment -				
Total depreciation				
Total maintenance of equipment economies from unification				$

Schedule 2

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY
AND
TOLEDO, PEORIA & WESTERN RAILROAD COMPANY

PRO FORMA CONSOLIDATED ANALYSIS OF FIXED CHARGE COVERAGE
BEFORE ALL INCOME TAXES(NOTE)

Year	Income Taxes	Balance Available For Fixed Charges	Balance Before Income Taxes And Fixed Charges	Fixed Charges	Times Fixed Charges Covered
1954	$ 1,462,000	$ 2,901,000	$ 4,363,000	$ 858,000	5.09
1953	2,363,000	3,465,000	5,828,000	872,000	6.68
1952	2,445,000	3,592,000	6,037,000	825,000	7.32
1951	2,342,000	2,936,000	5,278,000	735,000	7.18
1950	2,278,000	4,355,000	6,633,000	734,000	9.04
Total			$28,139,000	$ 4,024,000	
Five year average			$ 5,627,800	$ 804,800	6.99

NOTE: Effect has been given in consolidating the income tax and fixed charge accounts of the two companies for the years shown above to the following:

(a) Additional annual fixed charges of $510,000 representing interest at 4-1/4% on $12,000,000 principal amount of first mortgage bonds assumed to have been outstanding since January 1, 1948.

(b) A related reduction in provision for taxes on income for each of the years of $265,000 representing the tax reduction (computed at 52%) resulting from the increased interest charges.

No effect has been given to estimated economies from unified operations.

THE PENNSYLVANIA RAILROAD COMPANY

LEGAL DEPARTMENT

February 11, 1956

REPLY TO

Edward K. Wheeler, Esq.
Messrs. Wheeler & Wheeler
Peoria, Illinois

Dear Mr. Wheeler:

Responding to your letter of February 7, 1956, there is forwarded herewith, with two exceptions, the information requested therein.

For convenience, as well as for ready identification in respect to your letter as shown at pages 1011 and 1012 of the transcript of February 8, 1956, the information in question is preceded by numbers corresponding with the numbered items set forth in your letter.

In furnishing the attached data, I wish to renew the objection appearing at page 1013 of the said transcript to the effect that with the possible exception of item 5 the information is supplied subject to the objection that the supplied material has no relevancy or any materiality in respect to any issue involved in this proceeding.

Subject to such reservation, I trust that you will find the information complies with the respective numbered requests.

Sincerely,

Edwin A. Lucas

Edwin A. Lucas
General Solicitor

May 26, 1955

Mr. Ben W. Heineman,
Chairman of the Executive Committee,
The Minneapolis & St. Louis Railway Company,
135 South LaSalle Street,
Chicago 3, Illinois.

Re: *Toledo, Peoria & Western Railroad Company*

Dear Sir:

I have been instructed by Guy A. Gladson and Wilmington Trust Company, as Trustees under the Will of George P. McNear, Jr., to advise you of their ~~decision to~~ acceptance of your offer, dated May 5, 1955 (as extended by you under date of May 13, 1955 and as again extended by you today to 5 P.M. Chicago Time this date) to purchase all of the shares of capital stock of Toledo, Peoria & Western Railroad Company at a price of $133.33 per share.

We have advised you of the exchange of letters (copies of which are attached) between the Trustees and Pennsylvania Railroad Company and Atchison, Topeka & Santa Fe Railway Company relating to the proposed purchase from the Trustees by each of said companies of 23,400 shares of Toledo, Peoria & Western stock; and the Trustees' acceptance of your offer is of necessity subject to the rights, if any, of the Pennsylvania Railroad Company and of the Atchison, Topeka & Santa Fe Railway Company under said letters. The Trustees have been advised by this firm and by Messrs. Richards, Layton & Finger of Wilmington, Delaware, that in their opinion said letters did not result in a ~~definite~~ legal and enforceable commitment between the Trustees and said two companies. The Trustees [fol. 2268] have today advised said two companies that all negotiations with them have been withdrawn and terminated; and that the Trustees have today accepted your offer. The Trusties, of necessity, can make no other representation or warranty to you as to the rights, if any, of

the Pennsylvania and the Santa Fe arising from said letters.

By the terms of your offer, upon notification of the Trustees' acceptance thereof, you are to forthwith deposit with the Trustees "the sum of $500,000.00, or some other appropriate amount, as earnest money to secure the performance" of your obligations. The Trustees feel that the earnest money deposit should be 10% of the total purchase price payable to the Trustees; and will discuss this point further with you.

Thus far no discussions have been had with respect to dividend payments to the present stockholders pending consummation of the sale to you. It is the Trustees' suggestion that the agreement with you would provide that no dividend payments prior to consummation of the sale to you would reduce the earned surplus of TP&W below the amount thereof at December 31, 1954; and will discuss this phase of the matter further with you.

Your offer also expressed your willingness to extend to all of the other stockholders of the Toledo, Peoria & Western the right to sell their stock to you at the same price and upon the same terms and conditions as are agreed upon between you and the Trustees; and it is of course the Trustees' understanding that you are still prepared to and will afford the other stockholders such an opportunity.

Representatives of the Trustees are prepared at the earliest possible moment to sit down with you and clarify and work out such other details as to procedure or otherwise as require a further understanding.

Very truly yours,

1958

EXHIBIT H-78

May 13, 1955

Mr. Guy A. Gladson, Trustee
Geo. P. McNear, Jr., Estate,
4875 N. Kendall Drive, Miami 43, Fla.

The Wilmington Trust Company, Trustee
Geo. P. McNear, Jr., Estate,
Wilmington, Delaware.

Gentlemen:

On behalf of the Chicago, Rock Island and Pacific Railroad Company, I should like to make the following offer which you may consider as a firm offer:

For the purchase of 23,400 shares of stock of the Toledo, Peoria & Western Railroad, which I understand is ap-

proximately 26% of the outstanding stock, at a price of $100.00 per share.

If, however, in the judgment of the Trustees it is desirable that the estate dispose of all of their remaining holdings, which I understand equals 27,000 shares, we would be willing to purchase that number.

This offer is made contingent upon the consummation of an agreement which I understand has been reached with the Pennsylvania Railroad and the Atchison, Topeka and Santa Fe Railway Co. whereby they will each acquire from the Trustees of the Estate 26% of the outstanding stock of the Toledo, Peoria & Western Railroad at a price of $100.00 per share, and with the further understanding that if either of the above companies make any adjustment in the price of the stock, the Chicago, Rock Island and Pacific Railroad will be given an opportunity to meet any adjustment offered.

If it is the desire of the Trustees of the Estate that the entir remaining stock held be disposed of, and the Santa Fe or Pennsylvan companies, or both, so desire, we would have no objection to an equal division of the total amount of stock held by the Trust estat In other words that each of the three railroads would be permitted to purchase 33⅓% of the total.

The above offer shall be effective for sixty days from May 13, 1955 unless extended in writing.

This is also contingent upon the approval satisfactory to the Rock Island Railroad of any regulatory body that might have jurisdiction over this transaction.

Yours very truly,

(Signed) J. D. Farrington

EXHIBIT H-79

WINSTON, STRAWN, BLACK & TOWNER
First National Bank Building
CHICAGO 3

May 16, 1955

Mr. J. D. Farrington, President,
Chicago, Rock Island and Pacific Railroad Company,
La Salle Street Station,
Chicago, Illinois.

Dear Sir:

Mr. Guy A. Gladson, individual co-trustee of the Estate of George P. McNear, Jr., has requested me to acknowledge on his behalf receipt of your letter dated May 13, 1955 offering on behalf of the Chicago, Rock Island and Pacific Railroad Company to purchase from the Trustees of said Estate certain shares of the capital stock of the Toledo, Peoria & Western Railroad Company.

I note that your offer is contingent, among other things, "upon the consummation of an agreement which I understand has been reached with the Pennsylvania Railroad and the Atchison, Topeka and Santa Fe Railway Co. whereby they will each acquire from the Trustees of the Estate 26% of the outstanding stock of the Toledo, Peoria & Western Railroad at a price of $100.00 per share." Mr. Gladson does not concur that a binding and legal commitment has been reached between the Trustees and the Pennsylvania and Santa Fe; and so assumes that your offer should be considered to be contingent upon the concurrent acceptance by the Trustees of the Pennsylvania and Santa Fe proposals and the subsequent consummation thereof.

Very truly yours,

(Signed) Grier D. Patterson

EXHIBIT H-80

June 16, 1955

—PERSONAL—

Mr. F. G. Gurley,
President, Santa Fe Lines,
80 E. Jackson Blvd.,
Chicago 4, Ill.

Dear Fred:

Considering our previous discussion regarding the TP&W situation I was somewhat disturbed yesterday when you called me and stated that you could see no point in any further meeting or discussion of the subject until after your board meeting the latter part of this month. The more I thought about it the more disturbed I became, hence this letter.

I have felt that you have been eminently fair in your approach to the entire situation, and appreciated greatly that of your own volition you called me in Fort Worth and gave me a brief history of what had taken place in New York, and inferred at the time without making any commitment that you felt it would probably be desirable to take the Rock Island in as a partner in this new venture. You made it very clear, however, that you were making no commitment of any character at the time.

At our last discussion when we had lunch together at the club, on June 7th, you advised me that Mr. Heineman had asked to meet with you, and you stated that after the meeting you would get in touch with me again and let me know what took place. Rightly or wrongly I had the feeling that you would get in touch with me, and we would be able to clarify the situation and come to some fairly definite understanding so that your statement over the phone that there was no point in us meeting prior to the meeting of your board, quite naturally came as a surprise, and I could only assume that some proposal had been made of a character which you preferred not to discuss

with me, and which will, I assume, be presented to your board for action.

Because of your friendly and frank approach to the entire subject up to now, I had refrained from writing any letters establishing any records of any character for future use, preferring to handle it as a personal matter and along the pattern which you originally established.

As I told you, from the standpoint of our own protection we could not agree to the entrance of the Santa Fe into Peoria, either on their own or as owner in whole or in part of the TP&W; I would be willing to go along with a proposition which would in fact be a partnership of either joint or multiple ownership and would assure the TP&W continuing to function as an independent line in a neutral manner. Likewise, we would oppose vigorously the acquisition of the TP&W by Mr. Heineman of the M&StL or any partnership in which he or the M&StL, and [fol. 2278] possibly the Monon, might become involved, unless we were permitted to become a party to such a combination, with sufficient voice to assure adequate protection of the interests of the Chicago, Rock Island and Pacific Railroad Company.

It may be that I am jumping at conclusions, but I would feel much better if we could have had the discussion, laid the cards on the table and followed the course as it was originally charted by you; possibly it is still not too late.

With best regards, I remain

Sincerely,

(Signed) J. D. Farrington

F. G. GURLEY
President

June 20, 1955

Dear John:

I have just received this morning your letter of June 13, and hasten to write you.

The only possible difference in our respective understandings of our conversation may be in the first sentence of the third paragraph of your letter. Frankly, I don't remember just as you state it, i.e., "I would tell you what took place." I do recall clearly that I promised I would call you to explain what I thought our position warranted us doing and it is with reference to that decision that upon reconsideration and in the light of the various angles I felt I ought not to move too quickly.

I have no hesitancy in telling you what Heineman requested. His request was that I agree that Santa Fe and M&StL alone join in the acquisition of the TP&W. I told Mr. Heineman, as I thought I had said to you, Murphy, and Lynne White, that as soon as possible I would communicate with all of you again.

The same day I phoned you, I phoned all the others saying practically the same thing I said to you on the telephone.

I have tried my very best to say the same thing to everyone and I can't believe that I have failed to do that.

In the meantime, with kind regards, I am

Yours sincerely,

FRED

Mr. L. L. White, Chairman of the Board
The New York, Chicago & St. Louis R.R. Company
Terminal Tower
Cleveland, Ohio

Gentlemen:

Each of you and the writer have had conversations about the TP&W Railroad and I promised I would have something to say after the matter had been discussed with the Santa Fe Board on June 28.

I should say first that, since I made that promise, I have been admonished that formal advice to the I.C.C. is accomplished only through the filing of an application and that any publicity prior to the filing of the application is undesirable. I hope, therefore, that you will comply with my personal request, which is that you treat this information in strict confidence until our application is filed. We are working upon that diligently but, in the light of the work incident to an application and the work of printing,

coupled up with the July 4, weekend, it is obvious that a little time will run against us.

It seems to me that we should enter into an arrangement with the Pennsylvania Railroad on a 50-50 division of the whole, just as we had contemplated at one time with 52% of the stock and, while I suppose that each of you will feel his own measure of disappointment upon receipt of this advice, I hope that you will not think the plan is unreasonable or unworkable.

[fol. 2282] Our plan is that a copy of the application will be sent to you the day it is filed but, in the meantime, it occurred to me that you might like to have now what I presume it is fair to say are the salient features in which you may have a particular interest.

(a) TP&W will continue to be operated as a separate and independent carrier with responsible management located along its lines in order to preserve to shippers and communities the present direct access to its officials.

(b) The properties of the TP&W, including line and equipment, will be maintained and improved in keeping with the requirements of a railroad of its character and importance.

(c) TP&W will continue to maintain its own solicitation forces and will be entirely free to solicit traffic in such manner as best to serve the interests of the TP&W.

(d) All existing routes and channels of trade via TP&W will be maintained and kept open without discrimination between connecting lines of railroad.

(e) The Board of Directors of TP&W shall consist of eleven members, of whom one shall be the president of the company, two shall be officers of Santa Fe, two shall be officers of Pennsylvania, and the remaining six shall be prominent citizens not connected with either Santa Fe or Pennsylvania.

In the meantime, with kind personal regards, I am

Yours sincerely,

F. G. Gurley

PERSONAL

Mr. F. G. Gurley,
President A. T. & S. F. Railway System,
80 East Jackson Boulevard
Chicago 4, Illinois

Dear Fred:

This will acknowledge receipt of your letter of June 28, which has reference to your program in connection with the acquisition of the TP&W Railroad.

I regret exceedingly that you have apparently reached the conclusion that it is inadvisable to take the Rock Island into partnership in this venture, and I am fearful that we will be forced to take action from a competitive standpoint, which for personal reasons I would much prefer not doing.

I might add in this connection that if your decision is based upon a similar request made by the M&StL interests, that I see no parallel in their interest and ours in that you are not in any way competitive with them, and therefore would not be invading their territory from the standpoint of a competitor, while in our case the situation is completely reversed.

I appreciate your having kept me fully informed on the subject.

Sincerely,

(Signed) J. D. FARRINGTON

Paul C. Albus
Examiner

WABASH RAILROAD COMPANY
44 WALL STREET
NEW YORK 5, N. Y.

W. D. STEELE,
VICE-PRESIDENT
SECRETARY
TREASURER

Extract from minutes of meeting of Board of Directors held March 15, 1956

WHEREAS, pursuant to the resolutions adopted at the meeting of the Board of Directors held on January 19, 1956, Wabash Railroad Company intervened in Interstate Commerce Commission Finance Docket No. 18991, Application of The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company and Pennsylvania Company for authority under Section 5(2) of the Interstate Commerce Act to acquire control of Toledo, Peoria & Western Railroad Company through purchase of its capital stock, and requested that, in the event other carriers were authorized to participate equally with the aforesaid applicants in acquisition of such control, this Company should be authorized to participate equally in the transaction proposed; and

WHEREAS, on or about October 12, 1955, The Minneapolis & St. Louis Railway Company filed an application with the Interstate Commerce Commission for authority under Section 5(2) of the Interstate Commerce Act to acquire control of the Toledo, Peoria & Western Railroad Company through purchase of its capital stock, which application was assigned Finance Docket No. 19086; and

WHEREAS, the Interstate Commerce Commission consolidated said application in Finance Docket No. 19086 for hearing with said application in Finance Docket No. 18991; and

WHEREAS, the same vital interests of this Company which occasioned its intervention and request for participation in the transaction proposed in Finance Docket No. 18991 being present in the transaction proposed in Finance Docket No. 19086, this Company through Arthur K. Atkinson, its President, intervened in said Finance Docket No. 19086 and requested:

(a) That the authority sought by The Minneapolis & St. Louis Railway Company therein be denied by the Commission for the reason that said application does not present a transaction within the meaning of Section 5(2) of the Interstate Commerce Act for approval of the Commission, and that control of Toledo, Peoria & Western Railroad Company will operate to the competitive disadvantage of Wabash Railroad Company, would disturb the contractual and operating arrangements and relationships between Wabash Railroad Company and Toledo, Peoria & Western Railroad Company and would, therefore, adversely affect the public interest;

(b) That in the event The Minneapolis & St. Louis Railway Company is, or The Minneapolis & St. Louis Railway Company together with any other parties to said proceeding are, authorized by the Commission to acquire control of Toledo, Peoria & Western Railroad Company through stock ownership, then Wabash Railroad Company should [fol. 2315] be authorized to participate and be included in any such transaction upon equal terms with The Minneapolis & St. Louis Railway Company and any other parties thereto; and

(c) That in the event the Commission does not authorize Wabash Railroad Company to participate in any such transaction, then the public interest demands that the Toledo, Peoria & Western Railroad Company and the parties authorized to acquire control thereof, and each of them, be required, as a condition to such authorization, to main-

tain and keep open or in effect as between themselves and Wabash Railroad Company:

(1) All existing routes and channels of trade via existing junctions and gateways; and

(2) All existing traffic and operating relationships and arrangements;

and

WHEREAS, a hearing in the said proceeding was held before an examiner of the Interstate Commerce Commission at Peoria, Illinois, beginning on February 1, 1956, and concluded on February 14, 1956, and The New York, Chicago and St. Louis Railroad Company, the Chicago, Rock Island and Pacific Railroad Company, and Chicago, Burlington & Quincy Railroad Company have requested the Commission's authorization to become equal participants with the applicants in the transactions proposed in said Finance Dockets 18991 and 19086; and

WHEREAS, The New York, Chicago and St. Louis Railroad Company and the Chicago, Rock Island and Pacific Railroad Company have stated at the aforesaid hearing that in the event the applicants in Finance Docket No. 18991 or the applicant in Finance Docket No. 19086 are authorized to acquire control of Toledo, Peoria & Western Railroad Company on condition that other carriers be included in such transaction on an equal basis but said applicants or applicant refuse to complete the acquisition upon such condition, then said two carriers desire to purchase together, or together with such other carriers as may desire to participate equally, the capital stock of Toledo, Peoria & Western Railroad Company at the price a share proposed in the aforesaid applications, namely, $135.00 a share; and

WHEREAS, this Company has a vital interest in the subject matter of said application in Finance Docket No. 19086 and in the control of Toledo, Peoria & Western Railroad Company generally for the reasons, among others, that the railroad of this Company connects directly with the line of the Toledo, Peoria & Western Railroad Company at Forrest, Elvaston, Fairbury, Hamilton and Hon-

egger, Illinois, and Keokuk, Iowa; that there exist between this Company and the Toledo, Peoria & Western Railroad Company many vital contractual and traffic arrangements and relationships, examples of which are trackage rights over the line of the Toledo, Peoria & Western Railroad Company which connects disconnected sectors of the railroad of this Company and permit this Company to reach its Streator Branch and Keokuk, Iowa; that this Com- [fol. 2316] pany interchanges a substantial volume of carload and less-than-carload business with the Toledo, Peoria & Western Railroad Company and with the applicant and other intervening carriers in Finance Docket No. 19086; and that in the movement of traffic jointly with the Toledo, Peoria & Western Railroad Company and its connections, this Company is a party to service routes and competes in varying degrees with the applicant and other carriers who have intervened in said proceeding and have requested to be included in the transaction; and

WHEREAS, the interests of this Company required the intervention and position taken by this Company in Finance Docket No. 19086, and it is recommended that said actions be ratified and the proper officers of this Company be authorized to take such further action as may be required to permit this Company to participate equally in the transaction proposed in Finance Docket No. 19086 with the applicant therein and with any other parties thereto, and be authorized further to take such action as may be required to make this Company an equal participant with the intervening carriers in Finance Docket No. 18991 and Finance Docket No. 19086 in acquiring control of the Toledo, Peoria & Western Railroad Company independent of the participation in such control by the applicants and applicant in the aforesaid Finance Dockets:

NOW, THEREFORE, BE IT

RESOLVED, That all actions taken and all documents filed with the Interstate Commerce Commission by Arthur K. Atkinson, President of this Company, in intervening in and in requesting authority to become an equal participant in the transaction proposed in Finance Docket No. 19086 be and the same hereby are approved, ratified and confirmed.

FURTHER RESOLVED, That Arthur K. Atkinson, President, or C. A. Johnston, Vice President, of this Company, be and he hereby is authorized and directed to do any and all other and further things and to take all other and further action and execute in the name of this Company and under its corporate seal any and all instruments and documents which may be necessary or proper in the opinion and discretion of the President of this Company to effect and carry out the equal participation of this Company in the proceedings and transactions described in the foregoing resolution and preambles preceding these resolutions as set forth therein, including the purchase of shares of the capital stock of Toledo, Peoria & Western Railroad Company in the event the Interstate Commerce Commission should authorize this Company and any other carriers to be included in the transaction proposed in Finance Docket No. 19086, and including the purchase of shares of the capital stock of the Toledo, Peoria & Western Railroad Company in such numbers as will be equal to the number of shares which may be acquired by the Chicago, Rock Island and Pacific Railroad Company or The New York, Chicago, and St. Louis Railroad Company, or any other [fol. 2317] intervening carriers in Finance Docket No. 18991 or Finance Docket No. 19086 in the event the Interstate Commerce Commission should authorize such intervening carriers to acquire said stock independent of the participation of the applicants or applicant in the aforesaid proceedings in such transaction.

I, W. D. Steele, Secretary of Wabash Railroad Company, do hereby certify that the foregoing is a true and correct copy of preambles and resolutions duly adopted by the Board of Directors of Wabash Railroad Company at a meeting duly called and held on March 15, 1956; a quorum being present at said meeting.

W. D. Steele

(SEAL)

[fol. 2319]

BEFORE THE

INTERSTATE COMMERCE COMMISSION

FINANCE DOCKET No. 18991

In the Matter of:

Application of the Atchison, Topeka & Santa Fe Railway Company, The Pennsylvania Railroad Company and the Pennsylvania Company for authority under Section 5(2) of the Interstate Commerce Act to acquire control of The Toledo, Peoria & Western Railroad Company, through purchase of the capital stock.

FINANCE DOCKET No. 19086

In the Matter of:

Application of the Minneapolis and St. Louis Railway Company for authority under Section 5(2) of the Interstate Commerce Act to acquire control of The Toledo, Peoria & Western Railroad Company, through ownership of its capital stock.

REPLY OF INTERVENOR RAILWAY LABOR EXECUTIVES' ASSOCIATION TO EXCEPTIONS OF THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY AND THE STATES OF MINNESOTA AND SOUTH DAKOTA TO EXAMINER'S PROPOSED REPORT—February 11, 1957.

Preliminary Statement

The Railway Labor Executives' Association, on whose behalf this reply is filed, encompasses standard railway labor organizations which are the collective bargaining representatives for the great majority of the employees of the carriers here involved. Because the interests of

those employees constitute an important segment of the public interest to which the Commission is required to give [fol. 2320] weight by Section 5 (2) (c) of the Interstate Commerce Act, and to protect by appropriate conditions attached to its approval of any transaction here involved (Sec. 5 (2) (f) of the Act), said Association sought and was granted leave to intervene herein.

Because our primary concern is with the interest of the employees involved, our discussion will emphasize that aspect of the public interest, and will not undertake any detailed analysis of the other considerations raised by these applications.

Statement of the Case

For purposes of the points to be discussed here, the facts of the case may be simply stated.

The present owners of the Toledo, Peoria, and Western Railroad Company, as a matter of their own desires and investment policies, determined to dispose of their interest in the company, and after a series of negotiations agreed, subject to approval of the Commission, to sell all of the outstanding stock of the TP & W to The Atchison, Topeka and Santa Fe Railway Company. (Exhibits 7, 7-a, 7-b, and 7-c, of application in F.D. 18991, and H.-7.) Santa Fe in turn entered into an agreement with the Pennsylvania Company (a wholly-owned subsidiary of The Pennsylvania Railroad Company) to sell it sufficient shares to make each company the owner of 50 per cent of the TP & W stock. (Exhibit 7-d of application in F.D. 18991.)

The agreement between the Santa Fe and the Pennsylvania provided that the TP & W would continue to be operated as a separate and independent carrier with responsible management located along its lines in order to preserve to shippers and communities the present direct access to [fol. 2321] its officials; that the TP & W would be properly maintained and improved; that the TP & W would continue to maintain its own solicitation forces, and be free to solicit traffic for its own best interests; that existing routes and channels of trade would be maintained and kept open without discrimination between connecting lines; and that the Board of Directors would consist of the president of the

company, two officers of the Santa Fe, two officers of the Pennsylvania, and six prominent citizens selected by, but not connected with, the Santa Fe and the Pennsylvania. In seeking Commission approval of the purchase, the Santa Fe and the Pennsylvania represented to the Commission that they would maintain the present independent management and operation, that there would be no change in the TP & W as a route open to all roads on an equal basis, and that existing interchange points, through routes and other traffic arrangements would be continued in effect. (Application in F.D. 18991, p. 19.) And at the hearing, these applicants expressed willingness to have the aforementioned provisions in their joint agreement incorporated as conditions in any order of the Commission approving the transaction. (R. 190.) It should further be noted that approval of the Santa Fe and Pennsylvania application would result in no issue of securities or increase in debt or fixed charges.

Subsequent to the application in F.D. 18991, The Minneapolis and St. Louis Railway Company filed its application for authority to acquire the TP & W stock (F.D. 19086), and both applications were consolidated for hearing. Although it had offered to buy the stock at a lower price before the Santa Fe's stock purchase agreement was consummated, and has subsequently expressed willingness [fol. 2322] to pay the same price as the Santa Fe and the Pennsylvania, the M & StL has no outstanding agreements, contracts, or understanding for the purchase of any TP & W stock. (R. 1603.) The M & StL proposal calls for financing the purchase of the TP & W stock by issuance of $12,000,000 first mortgage sinking fund bonds, but no application has been filed with the Commission for approval of such a security issue.

The M & StL contemplates an "integration" of the TP & W into the M & StL, whereby, though the two would retain separate corporate identities, they would be managed and operated as one railroad. They urge that economies would result, principally through reduction in the total number of employees, which we shall discuss in more detail later. The headquarters of the combined railroads would be at Minneapolis instead of Peoria.

A number of other carriers intervened, and took varying positions with respect to the two applications. The Rock Island and Nickel Plate opposed both applications unless they should be permitted to participate on an equal ownership basis with any acquiring carrier or carriers. The Burlington and Wabash did not object to acquisition by the Santa Fe and Pennsylvania *only*, but took the position that they should participate on an equal basis with all carriers involved if the M & StL application should be granted, or if any carrier other than the Santa Fe and Pennsylvania were authorized to acquire an interest in the TP & W. All four of these intervening carriers opposed the M & StL applications insofar as it would terminate the existence of the TP & W as a separate independent, "neutral" carrier. (See, for example, testimony of President Jenks of the Rock Island, expressing such sentiments and advocating that the present officers and management of the TP & W should be maintained. R. 1697-1698.)

[fol. 2323] The foregoing, and all other carrier intervenors, including the Illinois Central, GM & O, North Western and Monon, sought the imposition of conditions for maintenance of existing routes and channels of trade, and the Monon urged an additional condition giving it access to an interchange with the TP & W at Effner.

All of the shippers, communities, and civic organizations which intervened or appeared as witnesses supported the application of the Santa Fe and Pennsylvania, excepting the States of Minnesota and South Dakota, and their utility commissions, which supported the M & StL application.

In his proposed report Examiner Albus recommended approval of the application of the Santa Fe and Pennsylvania (F.D. 18991), without inclusion of any of the other carriers seeking to participate in the acquisition, and dismissal of the application of the M & StL (F.D. 19086).

Exceptions were filed by a number of parties to the proceedings, including the M & StL and the States of Minnesota and South Dakota and their utility commissions. Because of our primary concern with the employee aspect of the public interest, this reply is directed to the exceptions of these latter named parties, the only ones favoring discontinuance of the TP & W as a separate operating company, with attendant severe adverse effect upon employees.

Argument

Introduction

As noted above, several different arrangements have been suggested with respect to the future of the TP & W, and a considerable record has been made with respect to the merits of the various proposals. We do not believe, [fol. 2324] however, that the situation presented is necessarily to be resolved on the basis of a choice of the best plan by the Commission. Thus, it is conceivable that in any case such as this, a number of different plans might meet the requirements of Section 5 (2) of the Act. Here, however, we have the rather unusual situation of having only one plan, that proposed by the Santa Fe and Pennsylvania, which would certainly be consummated if approved by the Commission. Neither the M & StL, which has applied for authority to acquire full ownership of the TP & W, nor the intervening carriers which seek, under varying conditions, equal ownership participation, have negotiated any contracts for the purchase of TP&W stock. Approval of the M & StL application, or of the requests for participation by the other carriers, could have no more than an advisory effect, there being no assurance that a plan thus approved would be consummated. For it is clear, as pointed out in the Supreme Court's decision in *St. Joe Paper Co.* v. *Atlantic C.L.R. Co.*, 347 U.S. 298, that the Commission's authority to approve transactions under Section 5 of the Act is strictly limited to proposals voluntarily initiated by the participating carriers.

The only proposal before the Commission which meets the test thus laid down by the Supreme Court is that contained in the application of the Santa Fe and the Pennsylvania.

The paramount interest of the employees on whose behalf this brief is presented is in the continued operation of the TP & W as an independent carrier under conditions assuring its continued strength and stability. This result would be guaranteed by approval of the application of the Santa Fe and Pennsylvania in F.D. 18991. It necessarily would be defeated by approval of the M & StL application in F.D. 19086.

[fol. 2325]

I. The Transaction Proposed by the M & StL Is Not Consistent With the Public Interest. With Respect to the Factor of Employee Interest.

There is in this case no issue as to compliance with the requirements of Section 5 (2) (f) for the protection of employees who may be adversely affected by approval of any of the various proposals before the Commission. The applicants in both dockets, and the intervening carriers, indicated that they had no objection to conditioning approval of any proposal for acquisition of the TP & W upon compliance with the provisions of the Washington Job Protection Agreement of 1936. (R. 187-188, 1055 A, 1425, 1523, 1720.) The Commission has recognized the reasonableness of those conditions in numerous cases, and has used them as a pattern in cases where employee protection was not stipulated, and the requirements of Section 5 (2) (f) had to be met. We therefore respectfully request that approval of any transaction herein be conditioned upon compliance with the provisions of the Washington Agreement. Such was the recommendation of the Examiner (Sheet 26, Proposed Report), to which no exception has been taken by any of the parties.

It is well established, however, that in a proposed transaction under Section 5 (2) of the Act, the Commission's duty to give consideration to the interests of employees is not discharged by simply providing for compensatory allowances to dismissed and displaced personnel for a limited period pursuant to the provisions of Section 5 (2) (f). These provisions make such compensatory allowances mandatory only *after* a transaction subject to Section 5 (2) has [fol. 2326] been determined to be "consistent with the public interest". Thus before the Commission reaches Section 5 (2) (f) it has a prior obligation with respect to employees, to consider *their interests* in making the *public interest* determination. Indeed, Congress considered the employee interest so vital a part of the public interest as to specify it as one of four factors which, aside from any other con-

siderations, the Commission was *required* to give weight to. (Section 5 (2) (c) of the Act.)[1]

Acquisition of the TP & W by the Santa Fe and the Pennsylvania under the conditions proposed for future operation of the former carrier as a separate, independent railroad would obviously have little adverse effect upon employees. While such a transition would in all probability affect some employees, the total impact would undoubtedly be so slight as to create little or no problem from a public interest point of view.

The effect upon employees of approval of the M & StL application, however, involving as it would a complete integration of the TP & W into the M & StL, would be extremely severe. Indeed, the principal argument of the M & StL in support of its proposal is based on alleged economies the greatest proportion of which would be accomplished at the expense of the employees. Thus, the M & StL introduced evidence that by unification, the combined operating expenses of the two roads could be reduced to $1,770,945 (R. 1384-1385), of which $1,327,062 would take the form of savings in wages and salaries, to be accomplished by elimination of 256 positions on the com- [fol. 2327] bined roads (Exhibit H-44, Schedule 19). *It further appeared that this cost of $1,327,062 to the employees would result in an increase in the net income of the two roads of only $1,279,900.* (R. 1387.)

The figure of 256 positions to be abolished is of course no adequate indication of the total number of employees who would be adversely affected by the M & StL proposal. It is a *net* figure, and fails to show the additional TP & W positions that would be abolished in connection with a *transfer* of the work of the positions from Peoria to Minneapolis, for example. In such case, an employee would be out of work at Peoria, but the 256 figure would not include him because of the hiring of a new employee at Minneap-

---

[1] Even apart from the mandatory provisions of Section 5 (2) (c), the Supreme Court has recognized that employee interest is part of the public interest which the Commission must consider in passing upon transactions under the Interstate Commerce Act. *United States v. Lowden*, 308 U.S. 225, at 235-236.

olis. While it is true that some TP & W facilities would be continued on the present line of road, it is also true that others, such as the general offices, would be closed down and the work transferred to Minneapolis. Thus the total positions abolished would be somewhere between 256 and 527. (See Exhibit H-44, Schedule 19, showing 527 current TP & W positions; proposed abolishment of 256 positions *net*; and increase in total M & StL employees, under the new operation, of 271.)

It further appeared that the bulk of the positions to be abolished would be in Peoria. (R. 1582.) Most of the positions transferred (and thus not listed as "abolished") would involve a move from Peoria to Minneapolis, a distance of approximately 430 miles. Even though the M & StL indicated that displaced TP & W people would be given preference to fill the transferred positions, as well as other vacancies occurring from normal attrition of the M & StL working forces, such a move would involve an "uprooting" [fol. 2328] that most people would find a serious hardship, if they were willing to undertake it at all.

It should also be pointed out that in many instances the number of positions to be abolished or transferred is not determinative of the number of employees who will be adversely affected by a transaction such as the M & StL proposes. Thus in the railroad industry, operating as it does under an elaborate seniority system, the abolishing of one position will frequently lead to a chain reaction of displacement of junior men by those having greater seniority, with the result that a number of men will have to take lower paying positions and the last one in the "chain" will be laid off.

It is of course true that employee interest, while one of the most vital matters to be considered by the Commission, has been found to be outweighed by other factors in some cases where it appeared that irrespective of the effect on employees, very substantial benefits to the rest of the public could be achieved. But here we do not have such a situation. Essentially the only substantial benefit to be achieved from the M & StL proposal is the economic strengthening of the M & StL. No new or greater services to the public would be realized. Economies from the proposed unifica-

tion of the two roads would simply inure to the benefit of M & StL stockholders, in the form of increased dividends or greater book value of their stock. As we have shown, these savings would be more than offset by the cost to employees. The only parties supporting the M & StL proposal were the States of Minnesota and South Dakota, with their respective public utilities commissions; and their position with respect to the "public interest" can be boiled down [fol. 2329] to the bare proposition that "what's good for the M & StL is good for the territory it serves".

Under such circumstances, where no decisive advantage or benefit would inure to the public from the proposed transaction, and where a definite and substantial hardship would be worked upon the employees involved, a balancing of the factors consideration of which is made mandatory under Section 5 (2) (c) compels the conclusion that the transaction proposed by the M & StL would not be consistent with the public interest. Such was the ruling in *Fort Worth & D. C. Ry. Co. Lease*, 247 I.C.C. 119, where the Commission said:

> "Railroad organization consists of four important and indispensable factors, namely, land, labor, capital, and management. High specialization is necessary for each railroad factor. Whenever expert railroad labor is compelled to readjust and adapt itself to another industry, there is substantial loss to the individuals and to the general public. Congress has recognized this fact and in revising the statute has specifically required us to give consideration to 'the interest of the carrier employees affected.' Heretofore, we have given consideration to the interest of the carrier employees affected to the extent of imposing appropriate conditions in our order of approval. See *Chicago, R. I. & G. Ry. Co. Trustees Lease*, 233 I.C.C. 21. *We are now specifically required to give consideration to the interest of such employees in determining whether the transaction is consistent with the public interest.* . . ."
> (P. 127; emphasis supplied.)

Accordingly we submit that in the instant case, insofar as the M&StL application is concerned the factor of em

ployee interest would require its disapproval. By the same token, this and other factors support the conclusion that the public interest will be best served by continuance of the TP & W as a separate, independent carrier, as proposed by the Santa Fe and Pennsylvania.
[fol. 2330]

II. Other Public Interest Factors Support the Examiner's Recommendation of Approval of the Transaction Proposed by Santa Fe and Pennsylvania.

Because our primary interest relates to the welfare of the employees involved, and because we are confident that other aspects of the case will be exhaustively analyzed by the various applicant and intervening carriers, we shall comment only briefly on what seem to us to be the significant points with respect to the other public interest factors involved.

(a) *Service to the Public*

Insofar as *ability* to assist the TP & W management in rendering service to the public is concerned, it would be difficult to name two stronger carriers than the Santa Fe and the Pennsylvania. In terms of past performance, they have established a record of cooperation with the TP & W, in building up its traffic and improving service to the communities and shippers along its right of way. And the additional incentive which would be provided these two carriers by their respective 50% ownership of the TP & W could only increase assurance of their continued efforts on behalf of this line and the territory it serves.

Over 91% of the revenues of the TP & W are derived from interline traffic. (Exhibit H-5, p. 3.) Nearly 70% of its interline revenues are derived from traffic interchanged with the Santa Fe, the Pennsylvania or both. (Exhibit H-5, p. 5.) The geographical relation of the three railroads further emphasizes their interdependence and importance to each other, the interchange points for service routes on [fol. 2331] east-west traffic being located at the eastern and western extremities of the TP & W. The Santa Fe

and Pennsylvania are thus the only carriers involved which do not tend to shorthaul the TP & W on interchange traffic. With their simple, "corn-field" interchanges, avoiding expense and delay attendant upon interchange at large cities like Chicago, the direct, through route provided by these three carriers affords economical and expeditious service to the public.

The additional incentive afforded by ownership of the TP & W will without question increase the utilization of this desirable route. While they have supported this route in the past, as the record conclusively demonstrates, the Santa Fe and Pennsylvania in the past naturally preferred the longer haul and greater divisions obtainable by routing traffic through Chicago. However, under their proposed plan of operation, both applicants represented to the Commission that they would place their respective TP & W interchanges, at Lomax and Effner, on a parity with Chicago in their traffic solicitation practices. (R. 224, 358.) These representations are backed up by the economics of the situation. The expense and delay of interchanging at Chicago has in the past offset to a considerable extent the advantage of the long haul. And the practical effect of co-ownership of the TP & W by these two applicants would be comparable to an increase in their divisions on traffic routed through the Peoria gateway.

This increased attractiveness of the TP & W route to its principal users would also spur industrial development in [fol. 2332] the Peoria area. The TP & W has many acres of desirable industrial property around Peoria and elsewhere on its right of way. (R. 227.) Witnesses for the Santa Fe and the Pennsylvania testified that both roads are lacking in sufficient industrial sites in the Chicago area and in Illinois (R. 225-26, 358, 378-79), and that their large industrial staffs would be made available to assist the TP & W in developing this territory (R. 227-228, 358.)

Perhaps most significant from the point of view of public interest, however, is the fact that *all* of the shippers and representatives of community interests in the territory served by the TP & W supported the application of the Santa Fe and Pennsylvania. Most vital to them, as to the employees we represent, was the assurance of continued

operation of the TP & W as a separate, independent carrier of assured stability, and with a local and readily accessible management.

(b) *Interests of Other Carriers*

With respect to the question of the inclusion of other carriers in any transaction that may be approved herein, we leave to the various carriers the detailed analysis and arguments that will certainly be made on the complex competitive and economic factors involved. It appears to us, however, that substantial protection would be afforded other carriers both by the conditions with respect to preserving existing interchanges, routes and channels of traffic that all of the involved carriers have agreed to, as well as the system of "checks and balances" against impairment of service or discriminatory solicitation that would be in- [fol. 2333] herent in an equal division of ownership between the largest connecting carrier in the east and the largest one in the west. And finally, we do not believe that any plan for participation by other carriers should be entertained if, in the Commission's opinion, it would so impair the economic incentive of the Santa Fe and Pennsylvania for future development of the TP & W as to present a substantial threat to that road's continued existence as a separate and independent carrier.

(c) *Resulting Fixed Charges*

The proposal of the Santa Fe and the Pennsylvania requires no discussion here. This aspect of the public interest, as specified in Section 5 (2) (c) of the Act, is disposed of by the simple fact that no increase in fixed charges would result.

Recommended Findings and Conclusion

In our discussion we have emphasized the importance of continued operation of the TP & W as a separate, independent carrier of assured stability. Its integration into another carrier, as the M & StL requests, would result in hardship to employees far outweighing, from the point of view of the public interest, benefits to the stockholders of

the acquiring carrier. And we have shown that other public interest considerations, irrespective of employee interest, clearly require approval of a plan for preservation of the TP & W.

We therefore submit that the exceptions of the M & StL, the States of Minnesota and South Dakota, and their utility commissions should be overruled, and that the application [fol. 2334] of the Santa Fe and the Pennsylvania in F.D. 18991, with the addition of the various conditions agreed to herein, including the requirement of compliance with the provisions of the Washington Job Protection Agreement for the protection of employees who may be adversely affected, be found by the Commission to be consistent with the public interest, and approved.

Oral Argument Is Requested

[fol. 2337]

IX.

Protection of the Minneapolis Requires Its Inclusion in the Owning Group in the Event Joint or Multiple Ownership of the Western Is Approved by the Commission.

The Pennsylvania, the Santa Fe and the Pennsylvania's 99% owned subsidiary, the Wabash, all compete with the Western in its entirety.

It would not be in the public interest to permit a competitor, or a group of competitors, such as Pennsylvania-

Santa Fe, to acquire stock control of the Western. Legitimate competition can be an incentive for progressive development, but where there is a probability of existing or potential competition being diminished or strangled, public interest will not be enhanced.

The competitors here would be more interested in their wholly-owned lines through other competitive gateways [fol. 2338] than they would be in the part-ownership of the Western. Any plan calling for control by these competitors offers little or no prospect that the Western's properties would continue to be operated as vigorously in the solicitation of rail traffic as they are now. On the other hand, everything points to the inevitable conclusion that the status of the Western would soon deteriorate to an inferior position, subordinate in all respects to the best interests of its competitor owners. It is as unsound for rail carriers as for motor carriers to conduct duplicate and ostensibly competitive operations under two distinctive names. This is precisely what the Pennsylvania and the Santa Fe would be doing whether either of them alone owned the Western or if they were parties to a joint ownership arrangement. See *Bender—Control—Arco Auto Carriers*, 39 M.C.C. 161.

On the other hand, the Peoria Gateway is the lifeblood of the Minneapolis. The Minneapolis is the only interested carrier which does not enter any gateway other than Peoria. Under these circumstances, we respectfully submit that it would flout the National Transportation Policy to make Minneapolis' very existence dependent upon the "benevolent" attitudes of Pennsylvania-Santa Fe. Congress decreed that Section 5 shall be administered to foster sound economic conditions among the several carriers. In the event the Commission approves ownership of the Western by Pennsylvania-Santa Fe, protection of the Western requires that it be included in the ownership group.

BEFORE THE INTERSTATE COMMERCE COMMISSION

Finance Docket No. 18991

In the Matter of:

Application of the Atchison, Topeka & Santa Fe Railway Company, The Pennsylvania Railroad Company and the Pennsylvania Company for authority under Section 5 (2) of the Interstate Commerce Act to acquire control of The Toledo, Peoria & Western Railroad Company through purchase of the capital stock.

In the Matter of:

Finance Docket No. 19086

Application of the Minneapolis and St. Louis Railway Company for authority under Section 5 (2) of the Interstate Commerce Act to acquire control of The Toledo, Peoria & Western Railroad Company, through ownership of its capital stock.

REPLY OF INTERVENOR RAILWAY LABOR EXECUTIVES' ASSOCIATION TO PETITION OF THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY FOR RECONSIDERATION OF THE REPORT AND ORDER OF DIVISION 4, DATED MAY 31, 1957—August 20, 1957

In its petition for reconsideration of the report and order of Division 4 herein, the Minneapolis & St. Louis Railway Company has advanced substantially the same arguments as those previously set forth in its exceptions to the proposed report of the Examiner in these proceedings. In our reply to those exceptions we opposed the application of the M. & St. L., which contemplated "integration" of [fol. 2341] The Toledo, Peoria and Western so that the two carriers would be operated as one railroad, and supported the acquisition of the T.P. & W. by the Atchison, Topeka & Santa Fe Railway Company and the Pennsyl-

vania Railroad Company for the reason that the latter application would assure continued operation of the T.P. & W. as a separate, independent carrier. Such continued operation, we pointed out, is essential to the public interest factors which the Commission is required to consider under Section 5 (2) (c) of the Interstate Commerce Act.

Since the ultimate purpose of the present petition of M. & St. L. for reconsideration is to have the Commission reverse the order of Division 4, deny the application of the Santa Fe and Pennsylvania, and approve acquisition of the T.P. & W. by the M. & St. L., it is respectfully requested that this intervenor's original brief, and reply to the exceptions of the M. & St. L. to the Examiner's proposed report, be referred to as stating our position in opposition to the present petition for reconsideration. The public interest, and particularly that aspect thereof bearing upon employee interest, demands the continued operation of the T.P. & W. as a separate, independent carrier.

Wherefore, it is respectfully submitted that the Report and Order of Division 4 should be permitted to stand as the order of this Commission, and that the petition for reconsideration thereof should be denied.

Respectfully submitted,

Finance Docket No. 18991

TOLEDO, PEORIA & WESTERN RAILROAD COMPANY CONTROL

Finance Docket No. 19086

TOLEDO, PEORIA & WESTERN RAILROAD COMPANY CONTROL

ORDER—December 13, 1955

It appearing, That on July 8, 1955, an application was filed by The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company and Pennsylvania Company for authority to acquire joint control of the Toledo, Peoria & Western Railroad Company through purchase of its capital stock in equal amounts by The Atchison, Topeka and Santa Fe Railway Company and by Pennsylvania Company, a wholly-owned subsidiary of the Pennsylvania Railroad Company, Finance Docket No. 18991;

It further appearing, That on October 13, 1955, The Minneapolis & St. Louis Railway Company filed application for authority to acquire control of said Toledo, Peoria & Western Railroad Company through purchase of capital stock and suggested that a comparative or consolidated hearing be held with the application on file in Finance Docket No. 18991, Finance Docket No. 19086;

It further appearing, That on November 16, 1955, The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company and Pennsylvania Company filed their petition for leave to intervene in opposition to the application in Finance Docket No. 19086 alleging that their application in Finance Docket No. 18991 is based on duly executed contracts with the holders of the capital stock of Toledo, Peoria & Western Railroad Company while the application in Finance Docket No.

19086 is totally devoid of any contracts or agreements for purchase of said stock; requested denial of the suggestion of The Minneapolis & St. Louis Railway Company that a comparative or consolidated hearing be held; and, that the application in said Finance Docket No. 19086 be denied after hearing thereon;

It is ordered, That said The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company and Pennsylvania Company be, and they are hereby, permitted to intervene and be treated as parties to said proceeding in Finance Docket No. 19086;

It is further ordered, That these proceedings be consolidated for hearing at a time and place to be hereafter designated by the Commission; and petitioners' request in this respect be, and it is hereby denied;

It is further ordered, That action on the protest filed by the interveners in opposition to the application in said Finance Docket No. 19086 be, and it is hereby deferred [fol. 2344] until after hearing and any other appropriate proceedings before the Commission;

And it is further ordered, That a copy of the petition and of this order be served upon the Governor and public regulatory commissions of the States of Illinois and Iowa, and that a copy of this order be served upon each of the parties to these proceedings and the Governors and public regulatory commissions of the States of Arizona, California, Colorado, Delaware, Indiana, Kansas, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New Mexico, New York, Ohio, Oklahoma, Pennsylvania, South Dakota, Texas, Virginia and West Virginia.

By the Commission, division 4.

In the
Supreme Court of the United States

OCTOBER TERM, 1958

No. ———

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY, A MINNESOTA CORPORATION

Appellant

vs.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION

Appellees

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA

JURISDICTIONAL STATEMENT

Appellant appeals from the final order of the United States District Court for the District of Minnesota, entered September 16, 1958, dismissing the appellant's complaint and refusing to set aside an order of Division 4 of the Interstate Commerce Commission issued May 31, 1957, and an order of the Interstate Commerce Commission issued October 30, 1957. Those orders, in substance, granted the application of The Atchison, Topeka and Santa Fe Railway

Company, the Pennsylvania Company and The Pennsylvania Railroad Company to purchase the stock of, and acquire control of, the Toledo, Peoria & Western Railroad Company, and dismissed the competing application of this appellant.[1] This statement is submitted to show that the Supreme Court of the United States has jurisdiction of the appeal and that substantial questions are presented.

OPINIONS BELOW

The opinion of the District Court for the District of Minnesota, 4th Division, is reported in 165 F. Supp. 893. A copy of that opinion is attached hereto as Appendix A. The report of Division 4 of the Interstate Commerce Commission is reported in 295 I.C.C. 523. Copies of that report and of the orders of Division 4 and of the full Commission are attached hereto as Appendix B.

JURISDICTION

This action was brought under 28 U.S.C. § 1336, to set aside the above-mentioned orders of Division 4 of the Interstate Commerce Commission and of the Interstate Commerce Commission. It was heard by a District Court of three judges, as provided in 28 U.S.C. § 2284 and §§ 2321-2325. The final order of the District Court was entered September 16, 1958, and the Notice of Appeal was filed

---

[1] The interested railroads will be referred to hereinafter as follows:

Toledo, Peoria & Western Railroad Company	Western
The Pennsylvania Railroad Company	Pennsylvania Railroad
The Atchison, Topeka & Santa Fe Railway Company	Santa Fe
Chicago, Burlington & Quincy Railroad Company	Burlington
Wabash Railroad Company	Wabash
The Monon Railroad	Monon
New York, Chicago & St. Louis Railroad Company	Nickel Plate
Chicago, Rock Island & Pacific Railroad Company	Rock Island

in that Court October 2, 1958. The jurisdiction of the Supreme Court to review that decision by direct appeal is conferred by 28 U.S.C. §§ 1253 and 2101(b). The following decisions sustain the jurisdiction of the Supreme Court to review that decision on direct appeal in this case: *Chicago, M., St. P. & P. R.R. Co. v. Illinois*, 355 U.S. 300 (1958); *Allegheny Corp. v. Breswick & Co.*, 353 U.S. 151 (1957); *United States v. I.C.C.*, 352 U.S. 158 (1956); *United States v. Pierce Auto Freight Lines*, 327 U.S. 515 (1946).

STATUTES INVOLVED

Section 1 of the Sherman Act, as amended (15 U.S.C. § 1), sections 7 and 10 of the Clayton Act, as amended (15 U.S.C. §§ 18 and 20), and the National Transportation Policy and sections 5(2) and 5(11) of the Interstate Commerce Act, as amended (49 U.S.C. preceding § 1, and §§ 5(2) and 5(11)) are set forth in Appendix C hereto.

THE QUESTIONS PRESENTED

1. The orders of the Interstate Commerce Commission should be set aside because of the failure to make findings and the making of improper findings, including the following instances:

(a) The Commission failed to make any findings with respect to appellant's showing of large economies in operation, improved efficiency in service, promotion of the Peoria gateway, strengthening of a small carrier, enhancement of competitive conditions and related material issues.

(b) Substantial evidence is lacking to support the Commission's findings with respect to adequacy of the

appellant's service, the fairness of the proposed purchase price, the effect of a Pennsylvania-Santa Fe acquisition on appellant's revenues, competing freight car availability, and the illusory notion of "independent" operations of Western under Pennsylvania-Santa Fe ownership.

(c) The Commission's findings that Pennsylvania-Santa Fe would solicit Peoria gateway traffic on a parity with their long haul gateways is in direct contradiction to the sworn testimony of the principal officers of both carriers. There are similar conflicts between the Commission's findings and the testimony of the successful applicants respecting industrial development and operating economies.

2. The orders of the Interstate Commerce Commission should be set aside because the Commission failed to give appellant a true comparative hearing, by virtue of the following actions:

(a) The Commission made no determination of the standards required by the National Transportation Policy and the Interstate Commerce Act as applied to these applications, and made no comparative findings of the extent to which the competing applications would comply with or promote each of such standards.

(b) The Commission erroneously adopted, as the determinative standard of public interest and the National Transportation Policy, the continued operation of Western as a "separate" entity. Such erroneous standard (i) ignored the reality of actual control by Pennsylvania-Santa Fe, (ii) was unsupported by any findings of fact as to public advantage of such separate entity, and (iii) precluded consideration of the merits of appellant's

competing application which contemplated merger of service and enormous economies.

(c) In adopting the sole standard of separateness, the Commission ignored the following considerations: the contrasting motives and objectives of the competing applicants, the contrasting economic self-interests of the competing applicants in the Peoria gateway, the advantages to commerce and the national defense of strengthening small carriers and promoting competing gateways, and appellant's proposed improvement in public service by integration of operations and operating economies approximating 35 per cent of the total operating expenditures of Western.

(d) The Commission applied different standards with respect to the results, particularly the diversion of traffic from other carriers, which would follow from the grant of either of the competing applications.

3. Does the authority of the Commission, under section 5(11) of the Interstate Commerce Act, to relieve carriers and their employees of the restraints of the antitrust laws, "insofar as may be necessary to enable them to carry into effect the transaction so approved", carry with it power to condone the violation of section 10 of the Clayton Act occurring prior to the Commission proceedings? If such statutory authority does exist, may it be exercised without any findings with respect to the violation or the considerations motivating the Commission to condonation? Can the statute be avoided by the fact that only one of the Pennsylvania-Santa Fe partnership signed the second contract of purchase, as suggested by the Commission, or by the fact that Pennsylvania Railroad acted through its wholly-owned subsidiary, as suggested by the District Court?

4. Has the Commission authority to sanction a violation by Pennsylvania Railroad and Santa Fe of section 1 of the Sherman Act and section 7 of the Clayton Act without findings of fact respecting the nature and scope of such violations and without disclosing the facts or considerations that warrant relief from the operation of the antitrust laws pursuant to section 5(11) of the Interstate Commerce Act? Was appellant deprived of adequate judicial review and due process by the absence of findings or a statement of the considerations upon which the Commission's sanction of such antitrust violations was predicated?

5. Did the District Court err in holding that "within the limits of the jurisdiction conferred upon it, the power of a court or an administrative agency to decide questions is not confined to deciding them correctly"? Has appellant been deprived of judicial review and due process by the application of that standard without distinction between questions of law, questions of fact, and mixed questions of law and fact, and without regard to the Commission's failure to grant procedural due process to the appellant?

STATEMENT OF THE CASE

1. The Purposes and Motives of the Competing Applicants.

Appellant, whose operating slogan is "The Peoria Gateway", is a small carrier with its main line operating between Minneapolis, Minnesota, and Peoria, Illinois. The latter city is its sole gateway to the east. Western is a short railroad spanning Illinois east and west through Peoria, utilizing the Peoria gateway to avoid the longer haul and congestion through Chicago or St. Louis.

Western has long been regarded as a natural extension of appellant by leading rail experts including the President of Western (Mr. Coulter) and the President of Pennsylvania Railroad (Mr. Symes). The Interstate Commerce Commission denied appellant's application to purchase the stock of Western and instead awarded it jointly to Pennsylvania Railroad, the largest railroad in the east, and Santa Fe, the largest railroad in the west.

More than four years ago appellant began negotiating vigorously for the purchase of Western for the purpose of consolidating operations, effecting economies of almost $2 million per year, and effecting improved and integrated service through the Peoria gateway. The self-interest of appellant is in promoting and maximizing the use of the Peoria gateway upon which its operations are dependent.

Pennsylvania Railroad had previously owned Western in partnership with the Burlington and such ownership resulted in a disastrous receivership of Western. Pennsylvania Railroad had no interest in re-acquiring Western until its President learned that interests close to appellant had acquired the Monon and would be in a position to operate an "outer-outer belt" line around Chicago, whereupon he decided to put an end to that "nonsense" (Tr. 1040).[2] This he proceeded to do by negotiations with Wilmington Trust Company, the corporate cotrustee of the McNear estate, holding 82 per cent of Western's stock. Pennsylvania Railroad invited Santa Fe as its partner. Undisputed evidence establishes that the interlocking directorate between Pennsylvania and Wilmington Trust afforded Pennsylvania decisive preference in the negotiations and the purchase.

---

[2] Since the record has not yet been printed, these references are to the typewritten transcript of the testimony before the Commission. That transcript has been certified to this Court.

The self-interest of the Pennsylvania Railroad and the Santa Fe is in their long hauls through the St. Louis and Chicago gateways and their objective in acquiring Western was to stifle competition through the Peoria gateway, which provides the only outlet to appellant.

2. The Negotiations.

In June, 1954, shortly after new management took control of the appellant, Mr. Heineman, then Chairman of the Executive Committee of the appellant, opened negotiations with Mr. Gladson, the individual cotrustee of the McNear estate, for the purchase of the stock of Western. Negotiations continued during the balance of 1954. By the end of that year the trustees had indicated a desire to sell, the appellant had indicated a desire to purchase, cash as the medium of payment was agreeable to both parties, and the appellant had made a firm offer. On January 25, 1955 Mr. Bancroft of Wilmington Trust Company wrote Mr. Heineman stating that he had learned that there were others interested in acquiring the stock of Western.

At just about that time a representative of Wilmington Trust Company approached Mr. Symes with respect to the possible interest of Pennsylvania Railroad in purchasing Western. Mr. Symes was interested. As indicated above, the reason for his about-face was publicity given to rumors of a connection between the appellant, Western and the Monon to form an outer-outer belt around Chicago. He flatly opposed any such plan (Tr. 309, 310, 1040).

During March representatives of Wilmington Trust Company ignored the appellant's negotiations and the appellant's expressed willingness to pay the highest price, and dealt with the Santa Fe and Pennsylvania Railroad. On

April 15, 1955, Wilmington Trust Company, acting on behalf of both trustees, entered into letter agreements to sell 26 per cent of the stock of Western to Santa Fe and 26 per cent of the stock to the Pennsylvania Company at a price of $100 per share. The appellant received no prior notice of these agreements and no opportunity to bid a higher price despite its earlier offers.

As soon as the appellant learned of these letter agreements, it took vigorous action in its further efforts to purchase the stock on terms more favorable to the sellers. For a substantial period of time the further offers of the appellant were not even communicated by Wilmington Trust Company to the individual cotrustee. On May 5, 1955, the appellant made a formal written offer to buy all the stock at the basis of $133.33 per share. The duration of that offer was subsequently extended to and including May 26, 1955. On the afternoon of May 26th an officer of the Wilmington Trust Company informed Mr. Gurley, then President of the Santa Fe, that the appellant's offer would be accepted unless a higher offer were received by 5 o'clock. The Santa Fe then made an offer to purchase the stock at $135.00 per share, which offer was immediately accepted.

The agreement of May 26, 1955 was between the trustees and the Santa Fe. It was followed by a later agreement among Santa Fe, Pennsylvania Railroad, and the Pennsylvania Company, whereby Santa Fe agreed to sell half the stock to the Pennsylvania Company.

During the period of these negotiations and contracts, four directors of Wilmington Trust Company were also directors of Pennsylvania Railroad and/or its affiliates or subsidiaries.

3. Proceedings before the Interstate Commerce Commission.

On July 8, 1955, Santa Fe, Pennsylvania Railroad and the Pennsylvania Company filed with the Commission a joint application for authority under section 5(2) of the Interstate Commerce Act, as amended, to acquire control of Western through exercise of the several stock purchase contracts. That application became Finance Docket No. 18991. By order of the Commission dated August 2, 1955, appellant was authorized to intervene and to become a party in opposition to that joint application.

On October 13, 1955, appellant filed with the Commission an application for authority under the same statute to acquire control of Western. Appellant did not have a contract, but proposed that, if its application were approved, it would purchase for cash all the outstanding stock of Western at the same price and on the same terms and conditions proposed by Pennsylvania-Santa Fe. Appellant also requested comparative consideration of the two applications. That application became Finance Docket No. 19086. Santa Fe, Pennsylvania Railroad and the Pennsylvania Company were authorized to intervene in opposition to that application. By order dated December 13, 1955, Division 4 assigned the two applications for consolidated hearing.

Numerous parties intervened in the two dockets. They included the Nickel Plate and the Rock Island, each of which requested authority to be included in the acquisition of the stock of Western on an equal basis with the successful applicant or applicants. The Burlington and the Wabash intervened, expressing no objection to the granting of the Pennsylvania-Santa Fe application provided appropriate conditions were attached for the continued maintenance

of the present routes and channels and the continuance of existing traffic and operating relationships and arrangements; they also asked, however, that, if any railroad other than the Santa Fe or the Pennsylvania Railroad were authorized to acquire an interest in the stock of Western, each of them be included in the transaction to the same extent as any such other railroad. Certain other railroad companies, without further participation, requested the inclusion of certain conditions in the event of an order authorizing control. The States of Minnesota and South Dakota, together with their respective utility regulatory bodies, supported the appellant's application and opposed the Pennsylvania-Santa Fe application. The State of Illinois opposed the appellant's application. Certain other bodies intervened in support of the Pennsylvania-Santa Fe application.

A consolidated hearing was held in Peoria in the period February 1-14, 1956, before an examiner of the Commission. The transcript of the testimony comprises 1,933 pages, and there are 136 hearing exhibits.

The proposed Report of the Examiner, served on or about November 9, 1956, recommended (a) dismissal of the appellant's application, (b) approval of the Pennsylvania-Santa Fe application, and (c) denial of the petitions of the other intervening railroads to participate in the acquisition. There followed exceptions, replies and oral argument before Division 4 of the Commission. On May 31, 1957, Division 4 issued its Report and Order (a) approving and authorizing the Pennsylvania-Santa Fe acquisition, (b) dismissing the appellant's application, and (c) denying the request of the Rock Island and the Nickel Plate for inclusion.

Thereafter, appellant filed a petition for reconsideration by the full Commission of the Report and Order of Division 4, and requested oral argument before the full Commission. The Nickel Plate and the States of Minnesota and South Dakota and their regulatory bodies took like action. Other parties filed replies. The Commission did not hear oral argument. Under date of October 30, 1957, it denied all petitions for reargument and reconsideration and made the Order of Division 4 effective thirty days from the date of service of the Order of the full Commission.

4. The Action in the District Court.

On November 29, 1957, the appellant commenced its action against the United States of America and the Interstate Commerce Commission in the United States District Court for the District of Minnesota, seeking to suspend, enjoin, set aside, and annul the orders of the Interstate Commerce Commission. Thereafter a temporary restraining order issued, a 3-judge court was constituted, various parties were permitted to intervene and file pleadings on both sides of the action, and the action was argued and submitted. On September 16, 1958, the Court filed its order dismissing the appellant's complaint. Subsequently the appellant filed its Notice of Appeal and secured an injunction pending appeal. Two later Notices of Appeal have also been filed, one by the State of Minnesota and the Minnesota Railroad and Warehouse Commission on November 10, 1958 and the other by the State of South Dakota and the Public Utilities Commission of the State of South Dakota on November 12, 1958. Those parties have been intervenors throughout the entire administrative and judicial proceedings, representing the public interest of their

respective jurisdictions and supporting the position of the appellant.

THE QUESTIONS ARE SUBSTANTIAL

These proceedings present a sorry picture of administrative procedure at its worst. Two large railroads decided to cut off potential competition by thwarting a joinder of two small railroads—the appellant and Western—despite the logic of that joinder, despite the contributions it would make to the nation's transportation, and despite prior expressions of approval. They accomplished their initial aim of securing a purchase contract when Wilmington Trust Company, having interlocking directorates with Pennsylvania Railroad, obligingly closed its doors to the appellant. Thereafter the Interstate Commerce Commission whitewashed the transaction; in so doing, it ignored the motives and objectives of the competing applicants, it ignored the nation's antitrust policy, it distorted the standards of the Interstate Commerce Act and the National Transportation Policy, and it wholly failed to make proper, requisite findings. Finally, the District Court abdicated its duty of judicial review and gave a startling example of judicial obeisance to administrative "expertise".

The questions presented by this case urgently require full review by the Supreme Court. They are important to carriers regulated under the Interstate Commerce Act, to persons in and out of the regulated industries who are subject to the antitrust laws, and to all persons whose rights are determined by administrative agencies.

1. The Findings.

Proper findings are required by section 8 of the Administrative Procedure Act, 5 U.S.C. § 1007. Section 10 of that

Act (5 U.S.C. § 1009) requires that the reviewing court shall set aside findings unsupported by substantial evidence and that in making that determination the court shall review the whole record. This Court has made it clear that, "The substantiality of evidence must take into account whatever in the record fairly detracts from its weight." *Universal Camera Corp. v. N.L.R.B.*, 340 U.S. 474, 488 (1951).

In the instant case, the appellant adduced substantial and persuasive evidence that its plan conformed to the applicable standards of the Interstate Commerce Act and the National Transportation Policy, and that its plan was entitled to the approval of the Commission in preference to the Pennsylvania-Santa Fe plan. The duty then rested on the Commission to make three classes of findings, viz.: (1) ultimate findings that the appellant's plan was fair and reasonable and consistent with the public interest, and that it better advanced the National Transportation Policy than did the Pennsylvania-Santa Fe plan; (2) basic findings that the appellant's plan would result in substantial transportation economies (which would not be realized in any major degree under the Pennsylvania-Santa Fe plan), that appellant's plan would result in one unified transportation system comprising the present mileage of appellant and Western, thereby, in contrast to the opposing application, developing, coordinating and preserving a valued and essential part of the national transportation system, and serving the needs of our country's commerce and our national defense; and (3) subsidiary and factual findings supporting the basic findings and covering such matters as the dollar amount of annual transportation economies to be anticipated under appellant's plan (approximately $1,800,-

000) as contrasted with the other proposal, the specific advantage of having only one operating yard for the two companies in Peoria, and the specific advantage of having only one management headquarters, as contrasted to the duplication which the Pennsylvania-Santa Fe plan proposed to continue.

Neither in form nor in substance can there be found in the Division 4 report ultimate findings, basic findings and subsidiary and factual findings sufficient to justify the approval of the Pennsylvania-Santa Fe plan and the rejection of appellant's plan. Division 4 did not make the findings indicated in the preceding paragraph. It did not, and on the record it could not, make findings to the contrary.

In *Central of Georgia Railway Company Control*, — I.C.C. — (Finance Docket No. 19159, November 14, 1958), the Commission held that the acquisition of control of a carrier in violation of section 5(4) of the Interstate Commerce Act would not be approved as in the public interest. The dissenting opinion, while agreeing with the recommendation of criminal prosecution, felt nevertheless that, "the public interest would best be served by the operational efficiencies and economies which would result from single control of the Central by the Frisco. The indicated benefits to the public which would flow therefrom outweigh, we believe, the considerations for barring the Frisco from control because of the indicated violations". Since the Commission's most recent pronouncement finds operating economies and improved service to be considerations of such vital import in the public interest, the failure of the Commission in the instant case even to make findings on that subject cannot be justified. This is underscored by the pains that the Commission took to opine that the Santa Fe-Pennsylvania acquisition would yield some operating economies, notwithstanding

the absence of evidence of a single dollar of savings in their proposed "independent" operation of Western.

In the present case the Commission saw in the fact that the acquiring carriers were Western's largest connections, an assurance of the future development of the acquired property. Lurking in the record, however, are certain historical facts which, standing unexplained by either evidence or findings, are inconsistent with that assurance. Western already had a history of ownership by Pennsylvania and Burlington, a large western carrier, both of which had strong interests in competing gateways. The property was permitted to deteriorate and drop into a long receivership from which it was rescued by George McNear, a man of great vision and industry. It was his forceful leadership and aggressive solicitation that built Western into a successful bridge property. The large interchange of traffic with Pennsylvania and Santa Fe, while facilitated by schedule coordination and other cooperation, was nevertheless attributable to the energetic and effective efforts of Western's traffic department. It may well be that the Commission is warranted in expecting the Pennsylvania-Santa Fe acquisition to chart a different course from the long, tragic record preceding the receivership, but the reasons are not revealed. If the number or competition of the gateways or the self-interest of the large carriers or the pattern of traffic has undergone a change in the intervening years, the circumstances and effect of these changes were deserving of consideration or at least mention in the Commission's report.

In at least thirteen instances, the Division 4 report sets forth appellant's position on various necessary facts and issues vital to the determination of the question as to which of the applicants should prevail. In these instances the Com-

mission contented itself with merely a recital of the position appellant presented, by such language as "Minneapolis contends", "Minneapolis estimates", "Minneapolis states", "Minneapolis insists", and the like. Under no possible view can such recitals rise to the dignity of holding, by implication or otherwise, that the Commission either approved or disapproved of these various positions. It was not enough to report that appellant claimed economies aggregating $1,770,945 from the integration of operations with Western, or that it asserted that such economies would inure to the benefit of the shippers and the public through improved service and industrial development. It was incumbent upon the Commission in the application of its expert knowledge to determine and to state in findings whether these economies and public benefits could in fact be achieved. It was not enough to recite appellant's contention that Western is a natural extension of its railroad, or that its interchange with Western at Peoria is proportionately greater in carloads and freight revenues than that of any other carrier appearing in these proceedings, or that Minneapolis proposes to provide new service routes via Western's junctions with connecting carriers for moving traffic in all directions. The absence of findings formulated in the exercise of the Commission's special competence leaves the validity of these assertions and their implications unanswered.

In this case, the District Court's opinion completely ignored the Commission's failure to make findings except in a boilerplate sentence in the penultimate paragraph of the opinion. In so doing, the District Court ignored the requirements of the Administrative Procedure Act and the many cases which have emphasized and re-emphasized the necessity for proper findings by administrative agencies on all important points. *E.g., Chicago, M. St. P. & P. R.*

R. Co. v. Illinois, 355 U.S. 300 (1958); *Carroll Broadcasting Co. v. F.C.C.*, 258 F. 2d 450 (D.C. Cir. 1958); *Boston & Maine R. R. v. United States*, 162 F. Supp. 289 (D. Mass. 1958), appeal dismissed, — U.S. — (November 17, 1958).

In a number of instances where the Commission did make what seemed to be findings, those findings are not supported by substantial evidence upon the record, considered as a whole. Thus, the conclusion that acquisition by Pennsylvania-Santa Fe would not jeopardize a substantial amount of the appellant's present traffic completely lacks support because it ignores not only the appellant's unchallenged accounting studies, but also the successful applicants' own testimony as to solicitation policies. The purchase price was stamped as reasonable by the Commission on the ground that it was negotiated in an arm's length transaction and that appellant was willing to pay as much. Ignored is the fact that appellant's offer was predicated upon economies that would double the income to be derived from the Western property. No consideration was given to the earnings-price ratio that far outstrips the levels established for any railroad on the public exchanges. The Commission's brief in the District Court decries the "speculative test of potential earnings". We had thought it too well settled for argument that "the commercial value of property consists in the expectation of income from it". *Galveston, Harrisburg, etc., Ry. Co. v. Texas*, 210 U.S. 217, 226 (1908); *Consolidated Rock Products Co. v. Du Bois*, 312 U.S. 510, 526 (1941); *Group of Investors v. Milwaukee R. Co.*, 318 U.S. 523, 540 (1943). The Division 4 report fails to explain in terms of value the fact that the contract approved by the Commission calls for a purchase price 35 per cent higher than the one agreed upon by the same "will-

ing buyers" and the same "willing seller", one month earlier. The extent to which considerations unrelated to the public interest—such as the stifling of competition—may have influenced the price enhancement was not considered in the Commission's report.

With respect to these unsupported findings, the Commission and the District Court again ignored the commands of the Administrative Procedure Act and the *Universal Camera* case, and such recent decisions as *Public Service Commission of Utah v. United States*, 356 U.S. —, 2 L. Ed. 2d 886 (1958). For the guidance of administrative agencies and litigants generally, it is imperative that this Court redefine what is required under the substantial evidence rule. See Cooper, *Administrative Law: The "Substantial Evidence" Rule*, 44 A.B.A.J. 945 (Oct. 1958).

Finally, a number of the findings the Commission did make were patently erroneous because contrary to the evidence and, in some instances, contrary to the sworn testimony of officers of the successful applicants. The Commission found that the successful applicants would permit traffic through, and industrial development of, the Peoria gateway in competition with the St. Louis and Chicago gateways, which would provide them with longer hauls, greater revenues and more effective utilization of their expensive facilities in both cities. The President of Pennsylvania Railroad testified that his line gave preference in solicitation first to St. Louis and then to Chicago, without soliciting for the Effner interchange with Western. He added that this solicitation would not be changed, and that is consistent with the long haul, self-interest of his company (Tr. 280-282). The Santa Fe testimony was that Lomax and Chicago would be put on a parity, but unrouted traffic would be moved through Chicago; and the President of

Santa Fe testified that the influence of the originating carrier was of tremendous importance in routing the traffic (Tr. 98, 210, 259). With respect to industrial development the officers of Pennsylvania-Santa Fe testified that they would seek to locate on Western only such industrial concerns as they could not locate on their own respective properties.

The Commission found that the successful applicants would give improved car supply and other operating benefits to Western. Yet the evidence shows that both Santa Fe and Pennsylvania Railroad have suffered substantial car shortages whereas appellant, as the Commission's report concedes, has an enviable record of car supply. The Commission made findings as to the adequacy and speed of appellant's service west of Peoria and the "neutrality" of connections in appellant's proposal. These findings are in direct contradiction to the only evidence on those subjects in the record.

The District Court apparently felt that these matters were ones peculiarly within the province of the Commission. Be that as it may, an administrative determination based on findings which are flatly and demonstrably erroneous cannot be sustained. As Mr. Justice Brandeis observed in *Baltimore & O. R. R. Co. v. United States*, 264 U.S. 258 at 265 (1924):

> "The provision for a hearing implies both the privilege of introducing evidence and the duty of deciding in accordance with it. To refuse to consider evidence introduced or to make an essential finding without supporting evidence is arbitrary action."

The superficial plausibility of the Division 4 report in this case cannot withstand analysis. The District Court refused to undertake that analysis. Unless the decision of the

District Court is reviewed by this Court, it will stand for the proposition that the legal requirement of proper findings on all essential points supported by substantial evidence on the record, considered as a whole, can be satisfied by recitals, by failures to make findings, by the making of unsupported findings, and by the making of blatantly wrong findings.

2. The Failure to Accord a Comparative Hearing.

The legal requirement that an administrative agency must grant a "comparative hearing" when presented with two mutually exclusive applications had its origin in *Ashbacker Radio Corp. v. F.C.C.*, 326 U.S. 327 (1945). The specific duty of the agency was summarized as follows in *Johnston Broadcasting Co. v. F.C.C.*, 175 F. 2d 351 at 357 (D.C. Cir. 1949):

> "In respect to comparative decisions, these are the essentials: (1) The bases or reasons for the final conclusion must be clearly stated. (2) That conclusion must be a rational result from the findings of ultimate facts, and those findings must be sufficient in number and substance to support the conclusion. (3) The ultimate facts as found must appear as rational inferences from the findings of basic facts. (4) The findings of the basic facts must be supported by substantial evidence. (5) Findings must be made in respect to every difference, except those which are frivolous or wholly unsubstantial, between the applicants indicated by the evidence and advanced by one of the parties as effective. (6) The final conclusion must be upon a composite consideration of the findings as to the several differences, pro and con each applicant."

The same Court has recently announced that when an administrative agency merely gives lip service to the require-

ment but fails to grant a true comparative hearing, the courts should step in to prescribe the correct action. *Midwestern Gas Transmission Co. v. F.P.C.*, 258 F. 2d 660 (D. C. Cir. 1958). This Court has also held that the Interstate Commerce Commission is not relieved from the duty to evaluate conflicting proposals in the light of the statutory standards or from the duty of articulating in findings the steps it has taken to measure the evidence against those standards. *Schaffer Transportation Co. v. United States*, 355 U. S. 83 (1957).

In the instant case the Commission ordered and held a consolidated hearing. But the consolidated hearing did not provide any true comparative consideration of the opposing applications. Some of the respects in which the Commission erred are as follows:

(1). The National Transportation Policy (49 U.S.C., preceding § 1) declares that the Interstate Commerce Act shall be administered so as to "promote safe, adequate, economical and efficient service and foster sound economic conditions in transportation * * * all to the end of developing, coordinating and preserving a national transportation system * * * adequate to meet the needs of the commerce of the United States, of the Postal Service and of the national defense." The criteria of economic and efficient service were ignored in this case. The appellant's application and its supporting evidence clearly demonstrated operational economies, improved efficiency of operation and the strengthening of two small carriers. The successful application proposed no such advantages in accordance with the Congressional mandate. The Division 4 report notes, without comment, appellant's position that it has no incentive other than to maximize service and traffic through

the Peoria gateway, its only outlet to the east. On the other hand, the successful applicants as a matter of self-interest must, and the President of Pennsylvania Railroad stated under oath that he would, favor the longer more lucrative hauls through the Chicago and St. Louis gateways (Tr. 280-282). The Commission saw no occasion to weigh these economic facts or even the motivation of Pennsylvania-Santa Fe in seeking to acquire Western.

To be meaningful a comparative hearing requires specific findings which set out, compare and weigh the advantages and disadvantages of the competing applications to determine the extent to which each accords with the public interest and the statutory standards. Upon a composite consideration of such comparative findings the Commission would be enabled to reach a conclusion, taking into account the public interest balance of the merits of the competing applications.

In this case, however, the Commission never reached this point of comparing and weighing the competing applications. At the outset the Commission decided that the public interest and statutory policy required "separate and independent operation" of Western. The difficulty with that approach is twofold. First, it is illusory to assume independence of a property wholly owned by two of the largest carriers in the country. Secondly, the adoption of that standard automatically ruled out an application which would give effect to the integration and operating economies expressly contemplated by the National Transportation Policy. We might add that nowhere in the report is there a single finding of fact that justifies the Commission's assumption that the illusory independence of Western would in any way serve the public interest or advance the National Transportation Policy. The closest approach is the thought that the largest

connections ought to own the bridge carrier, but what public benefits might be derived from such competition-stifling approach remain unrevealed.

If, as the Commission concluded, the continuation of the present policies of Western is required in the public interest, the only course open would be to deny all applications for acquisition. Certainly the "separate and independent" status of Western, controlled as it would be by Pennsylvania Railroad and Santa Fe, would not continue undiminished Western's aggressive solicitation in competition with the St. Louis, Chicago and Decatur gateways that are more lucrative to its prospective owners. Stripped of empty phrases this is the realistic meaning of the so-called standard adopted by the Commission, and we respectfully suggest that the Court should have the courage to penetrate the veil and strike down the illusion. The truth is, (a) that the appellant is the only carrier in this proceeding which depends exclusively on the Peoria gateway, and (b) that Pennsylvania Railroad and Santa Fe compete directly not only with Western but with every one of Western's connections.

(2) Particularly in an atmosphere of competitive complexities, no true comparative hearing could be afforded without regard for the underlying motivations of the competing parties and the historical background of the property to be acquired. Neither area of inquiry was pursued by the Commission, and both are obviously vital in a determination of the public interest. Pertinent in this regard is the recent instruction to the Federal Communication Commission in *Massachusetts Bay Telecasters v. F.C.C.*, — F. 2d — (D.C. Cir. July 31, 1958), to determine, "Whether the conduct of any applicant, if not of a disqualifying character, has been such as to reflect adversely upon such ap-

plicant from a comparative standpoint". That is particularly pertinent to our case in which the successful applicants combined an attempted purpose to stifle competition with the utilization of interlocking directorates for special advantage in violation of the Clayton Act.

(3) The Commission applied different standards with respect to the loss or diversion of traffic which might be occasioned by one proposal as against the other. On the one hand, it stated that the appellant's application would be "extremely harmful" to other carriers. It instanced only unsupported, vague fears by the Wabash, a subsidiary of the Pennsylvania Railroad. On the other hand, it dealt with the appellant's detailed evidence of the damage it would suffer if Western were owned by Pennsylvania-Santa Fe in the following language:

> "Of course, if service over the Western is improved under the control of the Santa Fe and the Pennsylvania and traffic can be handled over it more economically and efficiently than under existing routes, there may be some diversion of traffic but such diversion would not jeopardize the maintenance of adequate transportation service by the objecting intervening carriers."

The Commission's conclusions on both points are patently erroneous. At the very least, however, minimum standards of fair play would require that the Commission should test the threatened loss of traffic by the same standards in both instances.

(4) As a final example, the Commission imposed certain conditions (for the continuance of existing traffic connections, etc.) as adequate for the protection of others in its approval of the Pennsylvania-Santa Fe application. Those were standard terms. The appellant offered to ac-

cept exactly the same conditions. If they are adequate for the protection of others in the event of acquisition by the two giant railroads, *a fortiori*, they would be adequate to protect the interests of other railroads in the event of an acquisition by this small appellant. The Commission nowhere explained the disparity of its treatment. Before the District Court, counsel for the Nickel Plate, who favored neither side in this controversy, agreed with appellant that the standard terms would be at least as adequate protection in one instance as in the other.

It is readily apparent that the Commission in this case gave no more than lip service to the requirement for a comparative hearing. That this appellant was harmed by that evasion of the Commission's duty is one reason for this appeal. Of broader importance, however, is the consideration that this agency must not be allowed to evade its duty. If it is successful once, it will do the same thing again. If it succeeds, other agencies will do likewise. The end result can only be a further deterioration of administrative justice. This Court alone can guard against that danger by restating the guiding principles with sufficient frequency so that they cannot be overlooked. This case is a sufficient indication that a restatement of those principles is needed and needed now.

3. The Violation of Section 10 of the Clayton Act.

In relevant part, Section 10 of the Clayton Act (15 U.S.C. § 20) provides:

> "No common carrier engaged in commerce shall have any dealings in securities, supplies, or other articles of commerce, or shall make or have any contracts for construction or maintenance of any kind, to the amount of more than $50,000, in the aggregate,

> in any one year, with another corporation, firm, partnership, or association when the said common carrier shall have upon its board of directors or as its president, manager, or as its purchasing or selling officer, or agent in the particular transaction, any person who is at the same time a director, manager, or purchasing or selling officer of, or who has any substantial interest in, such other corporation, firm, partnership, or association, unless and except such purchases shall be made from, or such dealings shall be with, the bidder whose bid is the most favorable to such common carrier, to be ascertained by competitive bidding under regulations to be prescribed by rule or otherwise by the Interstate Commerce Commission."

This Court has not heretofore had occasion to construe this statute. Neither the Commission nor the District Court seriously attempted so to do. The purchase of Western, which the Commission was asked to, and did, approve, had its roots in a direct unequivocal violation of this statute. Two legal questions confronted the Commission: The first was whether the authority of the Commission, under section 5(11) of the Interstate Commerce Act, to immunize any steps required to consummate the approved transaction inferentially carried authority to condone *prior* antitrust violations. Neither the language of the statute nor the only prior decision on the subject, *In Re Missouri Pacific R. R.*, 13 F. Supp. 888 (E.D. Mo. 1935), which held that the prohibition of the statute was absolute, was noticed in either the Commission report or the District Court opinion. If it is assumed that the Commission did have such inferential authority, the second question is whether there were any circumstances warranting the exercise of its discretion. No showing on that subject was tendered by the successful applicants and no findings appear in the Division 4 report.

The shallowness of the consideration below is revealed

by the Commission's impression that taking the second contract in the name of Pennsylvania's partner and then dividing the Western shares rendered the statute inoperative, and the District Court's intimation that Pennsylvania Railroad could avoid the statute through the simple device of acting through its wholly-owned subsidiary. Public interest demands that the statute be enforced in the fullest Congressional spirit and that transparent devices stamped with approval below be condemned by this Court.

The Commission's brief in the District Court argued that, "the Commission had no authority to decide whether a violation of Section 10 of the Clayton Act had already occurred." Assuming that the Commission were endowed with discretion to grant the immunity or condonation, the brief does not explain how that discretion could be exercised without noticing the violation and considering its effect upon the public interest. That the Commission has had a recent change of heart in this regard appears in *Central of Georgia Railway Company Control*, — I.C.C. — (November 14, 1958). There the Frisco sought approval of acquisition of control of Central of Georgia. The record revealed that the control had previously been acquired without the necessary statutory authorization. As a matter of sound public policy the Commission declined to exercise its asserted discretion under section 5(11) to permit the law violator to retain the benefits of its outlaw action. After noting that a violation of the Act is not necessarily a bar to approval, the Commission said that the "public interest is concerned not only with improvements in transportation service, but also with the maintenance of respect for and the observance of the law." The Commission opinion continued:

> "If Frisco is permitted to retain the fruits of its unlawful conduct, and we sanction such conduct, which we consider to have been in flagrant disregard of the law, others will be encouraged to pursue a like course and to present a *fait accompli* for our approval. Obviously, such is not in accord with the intent of the statute, i.e., that we pass upon 'proposed' acquisitions of control prior to their consummation, including the justness and reasonableness of the terms upon which such control is to be acquired. If the indicated practice were generally followed, the administration of the statute in the public interest would be seriously hindered, if not defeated."

That language applies with equal force and effect to the flagrant violation of section 10 of the Clayton Act, clearly shown by the record in this case and never denied by the successful applicants, the Commission or the District Court. At minimum, if the Commission were in fact authorized by the statute to confer upon the law violator the fruits of its misconduct, its exercise of such extraordinary authority must be supported by something more than a cavalier edict.

An authoritative construction of the statute and definition of the authority of the Commission with respect thereto is of importance to all common carriers engaged in commerce and the persons with whom they must deal.

4. The Violations of Section 1 of the Sherman Act and Section 7 of the Clayton Act.

The Division 4 report recites the size and scope of operations of the Santa Fe and Pennsylvania systems In the light of those facts, without more, it is readily apparent that the acquisition of Western by Pennsylvania-Santa Fe is a clear violation of section 7 of the Clayton Act and of section 1 of the Sherman Act. By any standard of measure-

ment, the power of these two colossi of the railroad industry is already so great that any further extension of their empire—let alone an extension like the one in the present case, which serves the added purpose of providing an additional bridge to link those two empires with each other—violates the wording, the principle and the spirit of these antitrust laws and the very basic antitrust policy of this country. The orders of the Commission and of Division 4, and the report of Division 4, do not mention either section 1 of the Sherman Act or section 7 of the Clayton Act. That failure raises the question of whether the Commission may authorize an acquisition transaction and immunize its participants from the operation of the antitrust laws where the Commission gave no consideration to the antitrust laws and where, absent such authorization, the transaction admittedly would be in violation of the antitrust laws.

We admit that if the Commission followed the standards enunciated in section 5(2)(b) of the Interstate Commerce Act and in the National Transportation Policy and if, on the facts of a particular case, the Commission explicitly found that deference to those standards outweighed the desirability of preserving or enhancing competition and outweighed the respect to be accorded to the antitrust laws of the United States, then the Commission could proceed under section 5(11) of the Interstate Commerce Act and could use its authorization powers so as to grant immunity from prosecution under the antitrust laws. But the Commission is not empowered to grant such immunity without making appropriate findings giving the basis for such action or, at minimum, without laying bare for the reviewing courts both its conclusion and the reasoning by which it reached such conclusion. In the case at bar, the Commission failed to perform that minimum duty.

The record is barren, not only of findings, but even of evidence to warrant a discretionary exemption from the antitrust laws. Mr. Symes, President of Pennsylvania Railroad, initiated the acquisition for the express purpose of blocking the "grandiose plans" for an outer-outer belt line. He wanted none of "this nonsense", which would move traffic expeditiously around Chicago in effective competition with his Chicago, Decatur and St. Louis gateways (Tr. 309, 310, 1040). While not admitting a purpose of thwarting appellant's expansion and competition, the Santa Fe President explained his joinder with Pennsylvania on the basis that "we prefer to own it" (Tr. 179-180). Wherein these disclosures revealed such social benefit or public interest as to entitle the two railroad giants to freedom from compliance with the antitrust laws, neither the Commission nor the lower court undertook to explain. Why stifling competition and thwarting the expansion of a small carrier, why the illegal use of interlocking directorates warrant the Commission, in the discharge of its duty to protect the public interest, to throw robes of immunity around Pennsylvania-Santa Fe cannot be answered by anything in this record.

The District Court purported to give two answers. First, it relied upon the decision of the Supreme Court in *McLean Trucking Co. v. United States*, 321 U.S. 67 (1944). In so doing, however, it ignored the command of the *McLean* case that,

> "Congress, however, neither has made the anti-trust laws wholly inapplicable to the transportation industry nor has authorized the Commission, in passing on a proposed merger, to ignore their policy." (321 U.S. at 86)

Secondly, the District Court stated that the Commission had given due consideration to the effect of the acquisition

on competing carriers and the possible curtailment of competition. That statement, however, cannot be supported because of the following errors by the Commission, most of which have been mentioned above: (1) the Commission attempted to substitute recitals for the findings required of it, (2) the Commission properly stated the rule as to the burden of proof on Pennsylvania-Santa Fe but failed to apply it, (3) the Commission completely ignored the motives and objectives of the Pennsylvania-Santa Fe, (4) the Commission closed its eyes to the inescapable result of the conflicting interests of the various parties in the Peoria gateway, and (5) the Commission arbitrarily applied different standards with respect to the diversion of traffic which would be occasioned by approval of either of the proposals before it. Thus, the Commission could not and did not give proper consideration to the anti-competitive consequences of its determination.

In the court below, the opposing parties all relied on the *McLean* case to support their arguments concerning the duty of the administrative agency in granting immunization from the antitrust laws. It is apparent that some further clarification by this Court is needed both with respect to the immediate question presented here and also with respect to the broader question of the effect of the antitrust laws on regulated industries currently so much mooted in legal periodicals.

The prevailing uncertainty or chaos in this field is adequately indicated by the following quotations:

> (*Report of the Attorney General's National Committee to Study the Antitrust Laws*, p. 270 (1955)):
>
> "In any instance, the weight to be accorded competitive factors in measuring 'public interest' turns, of course, on Congressional intent. At the outset, this

issue is one for agency determination. The agency must make some 'independent conclusion' concerning the Congressionally intended role for competition as well as indicate in any case the effect on 'public interest' of promoting competition.

"Ultimately, however, the agency's interpretation of Congressional design is clearly a proper subject for judicial review. True, the ' "wisdom and experience of * * * [the agency]", not of the courts, must determine whether the proposed consolidation is "consistent with the public interest" '. Equally true, however, it is the Court's 'responsibility to say whether the Commission has been guided by proper consideration in bringing the deposit of its experience * * * to bear * * * in [determining] the public interest.' Where Congress has been silent, the basic policy of our antitrust laws requires the Court's conclusion that competition, at least where all other considerations involved are equal, is in the 'public interest'. In all instances, the courts, in reviewing agency discretion, should recognize that 'administrative authority to grant exemptions from the antitrust laws should be closely confined to those (instances) where the * * * (regulatory) need is clear.' "

(Memorandum submitted December 16, 1957 by the Department of Justice to the Interstate Commerce Commission in *Consolidated Freightways, Inc.—Control*, MC-F-6135):

"In view of the harmful effects an approval herein would have on those interests which are intended to be protected by the underlying policies of the antitrust laws, we respectfully suggest to the Commission that if approval is to be granted, the Commission expressly find that factors, other than competitive, which it is to take into account under the national transportation policy, compel such approval."

(Report of Division 4 of the Interstate Commerce Commission dated February 26, 1958, in *Pacific*

Intermountain Express Co.—Control and Merger-Union Transfer Co., MC-F-6199):

> "In passing upon transactions subject to section 5, it must be borne in mind that applicants have the burden of proving that such transactions will be consistent with the public interest. Among other things, we are required to give consideration to the effect which a proposed transaction will have upon competing carriers and adequate transportation service to the public. In 1950, when Congress amended section 7 of The Clayton Act, it did so to restore its effectiveness in the struggle to maintain competitive conditions in our economy, and an examination of its legislative history discloses a clear intent to assert potential harm to competition as a test of legality under the amended section."

5. The Scope of Review by the District Court.

The opinion of the District Court in this case amounts to an affirmance of the Commission on all points and all grounds. It could hardly have been otherwise in view of the following statement in that opinion:

> "It must be remembered that, within the limits of the jurisdiction conferred upon it, the power of a court or an administrative agency to decide questions is not limited to deciding them correctly."

Admittedly the scope of judicial review of agency action is a puzzling and difficult field. See, Jaffe, *Judicial Review: Question of Law*, 69 Harv. L. Rev. 239 (1955), *Judicial Review: Question of Fact*, 69 Harv. L. Rev. 1020 (1956), *Judicial Review: Constitutional and Jurisdictional Fact*, 70 Harv. L. Rev. 953 (1957).

In the instant case, however, the District Court completely abdicated its function. It did not consider the lack of

findings, the insubstantial support for many of the findings and the direct contradiction of the Commission's findings by sworn testimony of the successful applicants. In fact, appellant did not have the judicial review commanded by section 10(e) of the Administrative Procedure Act. A reading of the District Court's opinion makes it clear that it accepted in totality the report of the Commission and that it felt unauthorized to inquire into the absence of, the sufficiency of, or the record support for, findings. Undisputed facts contrary to the Commission's conclusions, matters of obvious self-interest, and undisputed evidence were all ignored by the District Court apparently on the theory that to consider them would be to invade the sacred ground of the Commission's expert competence.

This point has a significance far transcending the instant controversy. In their brief in the District Court, the United States and the Commission stated:

> "It is significant to note that although the courts have had frequent occasion to consider orders of the Commission under section 5(2) approving carrier unifications, no case has been found in which such an order has been held invalid on the merits."

We suggest that the Commission is not infallible, and that the lower courts have not performed their proper duty. If this Court will not review the instant decision, it is difficult to know when any Commission decision under section 5(2) of the Interstate Commerce Act will ever be subject to effective judicial review.

CONCLUSION

From an analysis of the entire record, it is apparent that the Commission made up its mind at the outset and then distorted both the facts and the law in an effort to justify its preconceived conclusion. In so doing, the commission erred as a matter of law and far exceeded the limits of the discretion conferred upon it by Congress, however broad and vague those limits may be. It is respectfully submitted that the questions presented by this appeal are substantial, that they are of public importance, and that they require that the appeal be heard on the merits.

Respectfully submitted,

APPENDIX A

United States District Court
District of Minnesota
Fourth Division

4-57-Civ-123

The Minneapolis & St. Louis Ry. Co.,

Plaintiff,

and

New York, Chicago & St. Louis Railroad Co.,

State of South Dakota, and Public Utilities Commission of the State of South Dakota and

State of Minnesota, and Minnesota Railroad & Warehouse Commission,

Intervening Plaintiffs,

vs.

United States of America,

and

Interstate Commerce Commission,

Defendants,

and

The Atchison, Topeka & Santa Fe Ry. Co., The Pennsylvania Railroad Co. and Pennsylvania Company,

The City of Peoria, the City of East Peoria and the Peoria Assoc. of Commerce,

The State of Illinois,

The shippers along the lines of the Toledo, Peoria & Western Railroad Co., City of Bushnell, Illinois, Bushnell Chamber of Commerce; City of Canton, Illinois; Canton Chamber of Commerce; City of LeHarpe, Illinois; LeHarpe Golden Rule Club; Village of Lomax, Illinois; City of Keokuk, Iowa; Keokuk Chamber of Commerce; Keokuk Bridge Commission; the Hubinger Company, Keokuk; City of Warsaw, Illinois; Warsaw Chamber of Commerce; City of Forrest, Illinois; City of Fairbury, Illinois; City of Gridley, Illinois; City of Gilman, Illinois; City of Sheldon, Illinois; City of Watseka, Illinois; City of Eureka, Illinois; Village of Secor, Illinois; City of Washington, Illinois; City of Chenoa, Illinois,

Intervening Defendants.

Memorandum Decision

Richard Musenbrock and William J. Powell, Minneapolis, Minn., for plaintiff. Dorsey, Owen, Barker, Scott & Barber, Minneapolis, Minn., of counsel.

Philip Stringer, St. Paul, Minn., and Thomas O. Broker, Cleveland, Ohio, for intervening plaintiff New York, Chicago & St. Louis Railroad Company.

Phil Saunders, Attorney General and Herman L. Bode, Assistant Attorney General, Pierre, South Dakota, for intervening plaintiff State of South Dakota, and Public Utilities Commission of the State of South Dakota.

Miles Lord, Attorney General and Harold J. Soderberg, Assistant Attorney General, St. Paul, Minn., for interven-

ing plaintiffs State of Minnesota and Minnesota Railroad & Warehouse Commission.

George E. MacKinnon, U. S. District Attorney, St. Paul, Minn., Victor R. Hansen, Assistant Attorney General, Washington, D. C., James E. Kilday and P. James Underwood, Attorneys, Department of Justice, Washington, D. C. for defendant United States.

Robert W. Ginnane, General Counsel, Washington, D. C., and B. Franklin Taylor, Jr., Assistant General Counsel, Washington, D. C., for defendant Interstate Commerce Commission.

R. S. Outlaw, Starr Thomas, Carl E. Bagge, Chicago, Illinois, for intervening defendant Atchison, Topeka & Santa Fe Railway Company.

Edwin A. Lucas, and Robert H. Bierma, Philadelphia, Pa., for intervening defendants Pennsylvania Railroad Company and Pennsylvania Co. Richards, Jones, Montgomery & Cobb, Minneapolis, Minn. of counsel.

Max J. Lipkin, Peoria, Illinois, for intervening defendant City of Peoria. Fred V. Stiers, East Peoria, Illinois, for intervening defendant City of East Peoria. Verle W. Safford, Peoria, Illinois, for intervening defendant Peoria Association of Commerce.

Latham Castle, Attorney General, Chicago, Illinois for intervening defendant State of Illinois. Harry R. Bagley, Special assistant Attorney General; of counsel.

Robert H. Walker, Keokuk, Iowa, for intervening defendants Communities and Shippers along the lines of the Toledo, Peoria & Western Railroad Company. Boyd, Walker, Huiskamp & Concannon, Keokuk, Iowa, and Cant, Taylor, Haverstock, Beardsley & Gray, Minneapolis, Minn., of counsel.

Before Sanborn, Circuit Judge, and Nordbye and Devitt, District Judges.

Per Curiam.

This is an appeal by the Minneapolis & St. Louis Ry. Co. (Minneapolis) from an order of the Interstate Commerce Commission approving the acquisition of control jointly by the Pennsylvania Company and through the latter, the Pennsylvania Railroad Company (Pennsylvania) and the Atchison, Topeka & Santa Fe Railway Company (Santa Fe) of the Toledo, Peoria & Western Railroad Company (Western) under Section 5(2) of the Interstate Commerce Commission Act (49 U. S. C. A., Sec. 5(2)). Subsequently, the intervening parties were joined.

The report and decision of the Commission's Division 4, dated May 31, 1957, is recorded in 295 I. C. C. 523. The full Commission denied reconsideration and reargument on October 30, 1957. By these orders the Commission granted the application of the Pennsylvania and Santa Fe, subject to the conditions set out in the footnote[1] to

---

[1] "1. That under the control of the Santa Fe and the Pennsylvania the Western shall maintain and keep open all routes and channels of trade via existing junctions and gateways, unless and until otherwise authorized by us.

"2. The present neutrality of handling traffic inbound and outbound and in overhead service by the Western shall be continued so as to permit equal opportunity for service to and from all lines reaching the rails of that carrier without discrimination as to routing or movement of traffic, and without discrimination in the arrangements of schedules or otherwise.

"3. The present traffic and operating relationships existing between the Western, on the one hand, and all lines connecting with its tracks on the other, shall be continued insofar as such matters are within the control of the Santa Fe or the Pennsylvania;

"4. The Western shall accept, handle, and deliver all cars inbound and outbound and in overhead service, loaded and empty, without discrimination in promptness or frequency of service as between cars destined to or received from competing carriers and irrespective of destination or route of movement.

acquire joint control of the Western, dismissed the application of the Minneapolis & St. Louis Railway Company (Minneapolis) to acquire control of Western through stock ownership, and denied the petitions of New York, Chicago & St. Louis Railroad Company (Nickel Plate) and the Chicago, Rock Island and Pacific Railroad Company (Rock Island) for participation in the stock ownership and control of Western.

Western is approximately 240 miles long. It extends across the northern part of Illinois from Effner on the east through Peoria to Lomax, Illinois, and Keokuk, Iowa, on the west. It connects with the Pennsylvania at Effner, with the Santa Fe at Lomax, with the Rock Island and the Chicago, Burlington & Quincy (Burlington) at Keokuk, with the Minneapolis and Nickel Plate at Peoria. All told, Western has connections for interchange of traffic with 16 railroads. More than two-thirds of its total revenues are derived from overhead or bridge traffic, traffic that is received from one railroad to be delivered to another. Little of its revenue is produced by purely local traffic.

Western has outstanding 90,000 shares of capital stock, 73,800 of which are held by the trustees of the estate of George P. McNear, Guy A. Gladson and Wilmington

---

"5. The Santa Fe and or the Pennsylvania shall not do anything to restrain or curtail the right of industries located on the Western to route traffic over any or all existing routes and gateways;

"6. The Santa Fe and Pennsylvania shall refrain from closing any existing route or channel of trade with any carrier party to this proceeding on account of their control of the Western, unless and until otherwise authorized by us; and

"7. Any party or any person having an interest in the subject matter may at any future time make application for such modification of the above-stated conditions, or any of them, as may be required in the public interest, and jurisdiction will be retained to reopen the proceedings on our own motion for the same purpose."

Trust Company. McNear had acquired the property in 1927, after the unsuccessful operation of it by Pennsylvania and Burlington had ended in receivership. Under his ownership and operation the road became highly successful and a valuable property. Western occupied a strategic position by passing, as it did, the congested terminals of Chicago and St. Louis. It seems that much of its success came after the construction of a Western Connection with the Santa Fe at Lomax. For the year ended June 30, 1955, approximately 70% of the cars of interchange traffic and of Western gross revenues were attributable to the Pennsylvania and the Santa Fe. The Burlington and the New York Central Railroad Company ranked third and fourth in the volume of interchange, and Rock Island, Nickel Plate, and Minneapolis followed, in that order.

The trustees of the McNear Estate proposed to dispose of the capital stock of Western for $135 a share. Santa Fe agreed to pay that price after Minneapolis had offered $133. Santa Fe allowed Pennsylvania to have half of the stock, subject, of course, to approval by the I. C. C. It is apparent that Santa Fe and Pennsylvania did not favor acquisition of Western by Minneapolis or participation in ownership and control by Nickel Plate and Rock Island.

Minneapolis, supported by the Minnesota and South Dakota plaintiffs, contends, in effect, that, under the evidence and the applicable law, the Commission could not approve the acquisition of the control of Western by the Pennsylvania and the Santa Fe, and should have approved the application of Minneapolis, which would have resulted in a consolidation with increased efficiency and economy in management.

Minneapolis argues that the orders in suit are invalid for the following reasons: (1) Pennsylvania had violated

Section 10 of the Clayton Act, since it and the Wilmington Trust Company, co-trustee of the McNear estate, had directors in common; (2) the acquisition violates Section 1 of the Sherman Act and Section 7 of the Clayton Act; (3) the Commission failed to accord Minneapolis a true comparative hearing; and (4) the findings of the Commission lack adequate evidentiary support.

The Nickel Plate, which, with the Rock Island, had intervened in the proceedings before the Commission, requested equal participation and ownership of Western with whichever carrier or carriers might be authorized to acquire stock control. Rock Island did not intervene herein. Nickel Plate argues that the Commission failed to make findings on material issues relating to the effect that control by Pennsylvania and Santa Fe would have on competitors and on the general competitive situation in the industry, and that if control of Western is awarded to any carrier to the exclusion of Nickel Plate, the neutrality of Western will be destroyed, to its detriment and that of Nickel Plate.

The applications for the control of Western were filed under 49 U. S. C. A. Section 5(2), which, so far as pertinent, provides:

> "(a) It shall be lawful, with the approval and authorization of the Commission, as provided in subdivision (b)—
>
> "(i) * * * for any carrier, or two or more carriers jointly, to acquire control of another through ownership of its stock * * *
>
> "(b) * * * If the Commission finds that, subject to such terms and conditions and such modifications as it shall find it be just and reasonable, the pro-

posed transaction is within the scope of subparagraph (a) and will be consistent with the public interest, it shall enter an order approving and authorizing such transaction, upon the terms and conditions, and with the modifications, so found to be just and reasonable: * * *"

Section 5(11) of Title 49 U. S. C. A. contains this provision:

"* * * any carriers or other corporations, and their officers and employees and any other persons, participating in a transaction approved or authorized under the provisions of this section shall be and they are hereby relieved from the operation of the antitrust laws and of all other restraints, limitations, and prohibitions of law, Federal, State, or municipal, insofar as may be necessary to enable them to carry into effect the transaction so approved or provided for in accordance with the terms and conditions, if any, imposed by the Commission, and to hold, maintain, and operate any properties and exercise any control or franchises acquired through such transaction. * * *"

From these statutes, it would appear that, notwithstanding the antitrust laws and all other legal restraints or obstacles, the Interstate Commerce Commission may, if it determines that it is consistent with the public interest and with the transportation policy of the United States, authorize a carrier or carriers to acquire control of another carrier by purchase of its capital stock. Since Congress has empowered the Commission, and not the courts, to determine whether the acquisition of control of one carrier by another or by others is consistent with the public interest, the determination of the Commission may not be set aside

unless it can be said that there is no rational basis for it. Canadian Pacific Railway Co. v. United States, 158 F. Supp. 248, 251, 252 and cases cited.

That this Court would or might have arrived at a different conclusion, had it had the duty and responsibility of deciding the controversy between the applicants, is of no consequence.[2]

It must be remembered that, within the limits of the jurisdiction conferred upon it, the power of a court or an administrative agency to decide questions is not confined to deciding them correctly. Thompson v. Terminal Shares, Inc., 8 Cir., 89 F. 2d 652, 655; Pittsburgh Plate Glass Co. v. National Labor Relations Board, 8 Cir., 113 F. 2d 698, 701.

"A controversy like this always calls for fresh reminder that courts must not substitute their notions of expediency and fairness for those which have guided the agencies to whom the formulation and execution of policy have been entrusted." Railroad Commission of Texas v. Rowan & Nichols Oil Co., 310 U. S. 573, 580-581, 60 S. Ct. 1021, 84 L. Ed. 1368; Pittsburgh Plate Glass v. National Labor Relations Board, supra, 113 F. 2d at 701.

Considering now the contentions of the parties, Minneapolis lays principal stress on the argument that the Pennsylvania and the Wilmington Trust Company, co-trustee of the McNear estate, violated Section 10 of the Clayton Act

---

[2] It will be to no purpose to discuss the contentions of Minneapolis that Pennsylvania was primarily motivated in acquiring an interest in Western by a desire to thwart the plans of Minneapolis. The Commission had no authority to direct the trustees to deal with Minneapolis rather than with the other interested purchasers.

since each of them had directors in common.[3] Its position is that while the exemption provision, Section 5(11), quoted above, may be applicable to Section 7 of the Clayton Act, it is not applicable to Section 10.

However, a reading of Section 5(11) would indicate that the authority vested in the Commission is not only broad, but it is explicitly made "exclusive and plenary." The Commission having found that the acquisition of the Santa Fe and Pennsylvania is in the public interest, it would seem to follow that any antitrust restrictions or prohibitions would become inoperative. In passing, it may be pointed out that here the Wilmington Trust Company is functioning in a fiduciary capacity as Trustee in the interest of the beneficiaries of the trust. We do not have a situation where interlocking directors may be enriched by reason of dealings in their securities and thus should be required to sell securities only to a bidder whose "Bid is most favorable to the common carrier." Section 10 should be quoted. It reads, in part:

> "No common carrier engaged in commerce shall have any dealings in securities, supplies, or other articles of commerce, or shall make or have any contracts for construction or maintenance of any kind, to the amount of more than $50,000, in the aggregate, in any one year, with another corporation, firm, partnership, or association when the said common carrier shall have upon its board of directors or as its presi-

[3] It should be pointed out that it is the Pennsylvania Company, the wholly-owned subsidiary of Pennsylvania Railroad, which seeks to acquire 50% of Western stock. The Pennsylvania Company is not engaged in railroad operations nor does it operate carrier property. Section 10 refers only to a "common carrier engaged in commerce". While this distinction may not be of controlling importance, it should be mentioned.

dent, manager, or as its purchasing or selling officer, or agent in the particular transaction, any person who is at the same time a director, manager, or purchasing or selling officer of, or who has any substantial interest in, such other corporation, firm, partnership, or association, unless and except such purchases shall be made from, or such dealings shall be with, the bidder whose bid is the most favorable to such common carrier, to be ascertained by competitive bidding under regulations to be prescribed by rule or otherwise by the Interstate Commerce Commission." 15 U. S. C. A. § 20

A mere reading of this section would indicate that the common directorate which existed between the Wilmington Trust Company and the Pennsylvania Company was not the kind intended by the Congress to be covered by the prohibition. It does not appear to cover the sale of stock held by a trust company to a common carrier. This section apparently was designed to prevent a railroad company from buying securities without receiving competitive bids from prospective sellers. There is no language in Section 10 which pertains to any competitive bidding by the railroad company. In any event, Section 10 is a part of the antitrust laws. See 15 U. S. C. A. § 12. And the immunity granted by Section 5(11) is applicable thereto.

Finally, it should be added that the United States Supreme Court has made it clear that the Interstate Commerce Commission is vested with authority to relieve proposed acquisitions of one railroad by another from the operations of the antitrust laws. For it to do so is consistent with the conditions set out by the Congress in the National Transportation Policy of 1940. In McLean

Trucking Co. v. United States, 321 U. S. 67, 64 S. Ct. 370, 88 L. Ed. 544, the Court said at pp. 84-85:

> "* * * there can be little doubt that the Commission is not to measure proposals for all-rail or all-motor consolidations by the standards of the anti-trust laws. Congress authorized such consolidations because it recognized that in some circumstances they were appropriate for effectuation of the national transportation policy. It was informed that this policy would be furthered by 'encouraging the organization of stronger units' in the motor carrier industry. And in authorizing those consolidations it did not impart the general policies of the anti-trust laws as a measure of their permissibility."

And on p. 87:

> "In short, the Commission must estimate the scope and appraise the effects of the curtailment of competition which will result from the proposed consolidation and consider them along with the advantages of improved service, safer operation, lower costs, etc., to determine whether the consolidation will assist in effectuating the overall transportation policy. Resolving these considerations is a complex task which requires extensive facilities, expert judgment and considerable knowledge of the transportation industry. Congress left that task to the Commission 'to the end that the wisdom and experience of that Commission may be used not only in connection with this form of transportation, but in its coördination of all other forms.' 79 Cong. Rec. 12207. 'The wisdom and experience of that commission,' not of the courts, must determine whether the proposed consolidation is 'con-

> sistent with the public interest.' (Citing cases). If the Commission did not exceed the statutory limits within which Congress confined its discretion and its findings are adequate and supported by evidence, it is not our function to upset its order."

While this language was used with reference to consolidation in the motor truck industry, it is applicable here.

However, Minneapolis stresses the alleged stifling competition by the so-called oligopolistic control by two major railroads of a strategic bridge line whose independence heretofore assured Minneapolis access to its most important gateway. It reasons that the mere recital in the findings of the Commission as to the extensive mileage, large revenues, and manifest prosperity of these two great railroad systems, compels the conclusion that the acquisition of Western would violate Section 1 of the Sherman Act and Section 7 of the Clayton Act. Minneapolis contends, therefore, that the Commission must weigh the violation of the anti-trust laws against all other relevant factors and base its conclusion on adequate findings.

At the outset, it may be observed that, merely because these two large railroad systems have acquired a 240-mile railroad under joint control, does not in and of itself justify a finding that there will be an oligopolistic control which stifles competition. It is not the function of the Commission to determine whether the acquisition of Western by these two railroads will violate the anti-trust laws. The Commission has not attempted to do so and can make no definitive decision as to whether or not the contemplated transaction will result in a restraint of trade or a monopoly which is forbidden by law. McLean Trucking Company v. United States, supra, 321 U. S. at 79.

Suffice it to say that the Commission did give due consideration to the effect of the acquisition on competing carriers and the possible curtailment of competition, and weighed such factors as against the broad question of public interest. We recognize that the Commission's expertise is not infallible, but where there is no question as to the Commission's having given consideration to the effect of curtailing competition in the light of the National Transportation Act, and where its conclusions are not without substantial foundation, we cannot substitute our judgment for that of this administrative agency. Whether dire competitive consequences will occur, as predicted by Minneapolis and Nickel Plate by reason of the acquisition approved by the Commission, is a matter to which its attention was directed. It concluded that any adverse competitive results were far outweighed by the safe, adequate and efficient services which would inure to the public as a result of such acquisition.

Minneapolis next urges that its application was not given a true comparative consideration by the Commission. The Commission pointed out that the proceedings before it concerned two applications for control. The two applications were consolidated and submitted on a single record and disposed of in one decision. Apparently the lack of contract by Minneapolis with the trustees did not deprive it of a full and complete hearing before the Commission. As noted above, the Commission considered the advantages and disadvantages of integration of Western with Minneapolis, and with respect thereto it considered and weighed the reasons why the Santa Fe and Pennsylvania proposal was more consistent with public interest. We cannot say that the Commission acted arbitrarily, or that it did not evaluate the two competing proposals in light of

the public interest. The advantages to Minneapolis in adding Western to its railway system seems apparent. No doubt Minneapolis would be materially strengthened by its proposed integration with Western. But obviously the advantages to Minneapolis was only one of the considerations and factors which the Commission had to weigh and evaluate.

The plan which Minneapolis proposes is to abolish Western as an independent carrier, and that plan is strongly opposed, not only by the carriers and other defendants who have intervened herein, but also by many communities and industries in Illinois and Iowa, as well as the employees of Western. The removal of the offices of Western and its key personnel to Minneapolis is strongly protested. The large savings which allegedly were to follow upon an integration of Minneapolis and Western, as asserted by Minneapolis, was weighed and considered by the Commission. Likewise, the alleged economic harm which would ensue to other carriers under Minneapolis' plan to establish coordinated schedules between it and the many other lines which intersect with Western was considered by the Commission. Whether upon integration there would be such a diversion of traffic to Minneapolis which would be harmful to other carriers is a matter that the Court should not attempt to determine. Such questions are peculiarly for the Commission to decide, and we cannot say that the evidence as to such harm is not substantial. It may be noted that, of the $1,770,945 reduction in combined operating expense of Minneapolis and Western if integration took place, $1,327,062 would result from the elimination of some 256 positions now occupied by employees of Western. Whether such economies outweigh the alleged detriment to Western's employees, to its local in-

dustries and communities, and to other carriers, is also a matter which is clearly within the sound judgment of the Commission.

Nickel Plate's principal contention is that the Commission failed to make adequate findings on the general competitive situation, primarily with reference to the eastern territory of the United States. Nickel Plate states that the Commission's failure to analyze the effect on competition when railroads the size of Pennsylvania and Santa Fe take over Western and fail to make specific findings in that regard, is fatal to the validity of its order. However, the Commission was fully cognizant of the competitive situation in the light of the proposed acquisition, but it concluded that the other carriers' interchanging traffic with Western would not be injured. It specifically emphasized the protection which would be afforded carriers exchanging traffic with Western in view of the checks and balances ingrained in a system where the ownership is divided equally between the largest connecting carrier in the East and the largest in the West. If the Commission is sound in its prediction that the connecting and immediate competing carriers of Western will not be injured by the acquisition and that competition generally will not be unduly curtailed, it would not seem necessary for the Commission to discuss the question of any alleged monopolistic threat to the eastern railroads or as to the nation as a whole. None of the so-called eastern railroads have intervened here. Moreover, it may be pointed out that Western is not the only strategic bridge line from the Middlewest to the eastern carriers. There are other carriers that bisect the same east and west area and are in direct competition with Western. Such factors were undoubtedly given due consideration by the Commission. We cannot say that the

Commission's conclusion that the patent self-interest of these two large railroads, with the restrictions imposed upon them in the ownership of Western's operations and an independent railroad tends to insure an operation which will be consistent with the public interest, is erroneous.

The Commission specifically found that "Public interest demands that the present policies of Western in all respects be continued." It concluded that this result would be attained if the two carriers which had contributed the greatest volume of traffic with Western, one from the East and one from the West, should be accorded joint ownership. As stated, it appears that some 70% of Western's interline traffic is exchanged with these two railroads. This constitutes about two-thirds of Western's total traffic. Nickle Plate has not substantiated its position that the Commission acted arbitrarily in denying it the right to participate in the ownership of Western's stock. The Commission concluded that "Any reduction in the ownership interest of the Santa Fe and the Pennsylvania by the inclusion of other carriers in the control of Western would be accompanied by an equivalent reduction in their economic incentive for future development of Western and the territory served by it." That this deduction is a sound appraisal of the situation cannot be characterized as unsupported by the evidence. It is entirely reasonable to expect that the two carriers which are largely responsible for the excellent condition of Western today, will, by sheer self-interest, continue with the same incentive in the future.

The Commission might have granted the application of Minneapolis for sole control and ownership, which was strenuously opposed by all those carriers who wanted Western to remain independent and neutral. The Commission might have authorized the Rock Island and the Nickel

Plate to join the Pennsylvania and the Santa Fe in joint ownership and control of Western. The Commission concluded that the application of Pennsylvania and Santa Fe was consistent with the public interest and should be granted. That, we think, under the evidence and the law, it had power to do; and, even if that conclusion was wrong, it cannot be said to be arbitrary or capricious, and is therefore binding upon this Court.

We have fully considered all of the other arguments and contentions of the parties and conclude that they are, likewise, without merit. The Commission's Order is based on adequate findings supported by substantial evidence in the record before it.

The petitions are dismissed and the temporary restraining order is discharged. A stay of 30 days is granted.

Dated September 16, 1958.

APPENDIX B

Interstate Commerce Commission
Finance Docket No. 18991 [1]

Toledo, Peoria & Western Railroad Company Control

Decided May 31, 1957

---

1. Acquisition by the Atchison, Topeka & Santa Fe Railway Company and the Pennsylvania Company, and through the latter by the Pennsylvania Railroad Company, of control of the Toledo, Peoria & Western Railroad Company through ownership of capital stock, approved and authorized. Conditions prescribed.

2. Request of the Chicago, Rock Island & Pacific Railroad Company and the New York, Chicago & St. Louis Railroad Company, under section 5(2)(d) of the Interstate Commerce Act, for authority to be included on an equal basis in the acquisition of control, through stock ownership, of the Toledo, Peoria & Western Railroad Company, denied.

3. Application of the Minneapolis & St. Louis Railway Company for authority to acquire control of the Toledo, Peoria & Western Railroad Company through ownership of capital stock dismissed.

J. C. Gibson, R. S. Outlaw, Starr Thomas, Carl Bagge, J. B. Reeves, Edwin A. Lucas, John B. Prizer, Robert H. Bierma, and *Thomas O. Hunter,* for applicants in Finance Docket No. 18991.

---

[1] This report also embraces Finance Docket No. 19086, Toledo, Peoria & Western Railroad Company Control.

Burton K. Wheeler, Edward K. Wheeler, Richard Musenbrock, Eldon S. Olson, and *Robert G. Seaks* for applicant in Finance Docket No. 19086.

Latham Castle and *Harry R. Begley* for the State of Illinois.

Phil Saunders, Herman L. Bode, Charles A. Carr, and *C. A. Merkle* for the State of South Dakota and the South Dakota Public Utilities Commission.

Miles Lord, Harold J. Soderberg, Oliver A. Ossanna, and *Paul A. Rasmussen* for the State of Minnesota and the Minnesota Railroad & Warehouse Commission.

Bryce L. Hamilton, Howard P. Robinson, and *Martin M. Lucente* for various NcNear interests.

Bruce Dwinell, Eaton Adams, M. L. Cassell, Thomas O. Broker, Eugene S. Davis, Eldon Martin, Harold E. Spencer, Erle J. Zoll, Jr., Edgar Vanneman, Jr., Albert S. Long, Jr., Merrill Shephard, John B. Goodrich, and *John W. Adams* for railroad interveners.

Verle W. Safford, Max J. Lipkin, Fred V. Stiers, Milo Fleming, Don B. Pioletti, Lynn C. Sieberns, Fred Raney Miller, Lyman R. Fort, Leon L. Lamet, Blaine Ramsey: Lawrence B. McNunn, C. V. O'Hern, Jr., Paul C. Cation, John L. Bordes, and *Robert H. Walker* for other interveners.

Clarence M. Mulholland, Richard R. Lyman, and *H. O. Thompson*; for railway labor organizations.

Report of the Commission

Division 4, Commissioners Mitchell, Arpaia, and Winchell

By Division 4:

Exceptions and replies to exceptions were filed to the report proposed by the examiner, and the cases have been argued orally. Exceptions and requested findings not specifically discussed herein or reflected in our findings or conclusions, have been given consideration and found not justified.

The Atchison, Topeka and Santa Fe Railway Company (Santa Fe)[2], the Pennsylvania Company, and The Pennsylvania Railroad Company (Pennsylvania), on July 8, 1955, in Finance Docket No. 18991, applied under section 5(2) of the Interstate Commerce Act, as amended, for authority (1) to the Santa Fe and the Pennsylvania Company to acquire direct control of the Toledo, Peoria & Western Railroad Company (Western), through ownership by each of 50 per cent of the capital stock of the latter; and (2) to Pennsylvania, by virtue of its 100 per cent stock ownership of the Pennsylvania Company, to acquire indirect control of Western.

On October 13, 1955, in Finance Docket No. 19086, The Minneapolis & St. Louis Railway Company (Minneapolis) applied for authority under the same section of the act to acquire control of Western through ownership of its entire capital stock.

A consolidated hearing on both applications was held February 1 to 14, 1956, inclusive, at Peoria, Ill. Prior to, or at the hearing, numerous petitions for leave to inter-

[2] Hereinafter in this report, as throughout the record, the various railroads involved sometimes will be referred to by the abbreviated designations shown in parentheses.

vene were granted. Applicants in Finance Docket No. 18991 intervened in opposition to the Minneapolis application in Finance Docket No. 19086, and the Minneapolis intervened in opposition to the authority sought in Finance Docket No. 18991. Unless otherwise indicated, all points hereinafter mentioned are in the State of Illinois.

Position of intervening railroads—The New York, Chicago and St. Louis Railroad Company (Nickel Plate) and the Chicago, Rock Island and Pacific Railroad Company (Rock Island) each requests authority under section 5(2)(d) of the act to be included in the acquisition of the stock of Western on an equal basis with the successful applicant or applicants. The Chicago, Burlington & Quincy Railroad Company (Burlington), and the Wabash Railroad Company (Wabash), have no objection to the granting of the application of Santa Fe and Pennsylvania, provided appropriate conditions are contained in the order for the continued maintenance of present routes and channels of trade via existing junctions and gateways, and the continuance of all existing traffic and operating relationships and arrangements. In the event any railroad other than the Santa Fe and the Pennsylvania is authorized to acquire an interest in the stock of Western, the Burlington and Wabash ask to be included in the transaction to the same extent as any such other railroad.

The Illinois Central Railroad Company (Illinois Central) the Gulf, Mobile and Ohio Railroad Company (Gulf), and the Chicago and North Western Railway Company (North Western) request that, if either application is granted, appropriate conditions be imposed with respect to the maintenance of all routes and channels of trade via existing gateways.

The Monon Railroad requests that, in the event the application of the Santa Fe and the Pennsylvania is approved, one of the conditions to be attached to such approval includes a requirement that the Pennsylvania negotiate and enter into a contract giving the Monon trackage rights over the Pennsylvania lines between Effner and Reynolds, Ind., approximately 35 miles, upon reasonable terms and conditions, subject to our approval. If such a condition is not included, Monon requests that the application of the Santa Fe and the Pennsylvania be denied.

Other interveners—Various communities, civic organizations and shippers, many of whom are located along the line of Western, intervened in support of the Santa Fe-Pennsylvania application; and the Railway Labor Executive's Association and the Brotherhood of Railroad Trainmen intervened to protect the interests of carrier employees. The States of Minnesota and South Dakota, with their respective Public Utilities Commissions, supported, and the State of Illinois opposed, the application filed on behalf of the Minneapolis.

History, policies, and description of Western—The main line of Western extends from its eastern terminus at Effner on the Illinois-Indiana State line, via Peoria, to the western termini at Keokuk, Iowa, and Lomax, approximately 234 miles. A branch line extends from Hamilton to Warsaw, approximately 5 miles. It has connections for the interchange of traffic with 16 railroads, the principal ones being with the Pennsylvania at Effner, with the Santa Fe at Lomax, and with several carriers at Peoria, a point almost midway between Chicago and St. Louis, Mo. Other points of interchange are maintained at Keokuk, and at Sheldon, Webster, Watseka, Gilman, Forrest, Fairbury, Honegger,

Chenoa, El Paso, Eureka, Washington, Farmdale, Canton, Cuba, Bushnell, Ferris, Elvaston, and Hamilton. The headquarters, shops, and yards of Western are at East Peoria, just across the Illinois River from Peoria.

Western began its modern existence in 1927, when George P. McNear acquired the property after a prolonged ownership by the Pennsylvania and the Burlington, which ended in receivership. *T. P. & W. R. R. Acquisition*, 124 I. C. C. 181. Under the guidance of McNear, Western was built into a fine railroad, and upon his death, in 1947, the present management took over and continued with much success. The policy of Western has been, and now is, to maintain strict neutrality between all connections, and to participate in any haul of traffic no matter how slight. Such policy emphasizes the strategic position of an overhead carrier through Peoria as an alternative route, bypassing the congested terminals of Chicago and St. Louis. Much of the success of Western as a bridge line dates from the construction of a western connection with the Santa Fe at Lomax in 1927, authorized in *T. P. & W. R. R. Construction*, 124 I. C. C. 278. In 1928, the first full year after completion of the Santa Fe-Western Lomax connection, the Western interchanged a total of 29,697 carloads of traffic with the Pennsylvania and 7,264 carloads with the Santa Fe. By 1955, the corresponding figures increased to 58,543 carloads, or 97 per cent, and 34,755 carloads, or 378 per cent, respectively.

Over the years, the Santa Fe and the Pennsylvania have cooperated with Western in coordinating their schedules and services. In 1930, arrangements were made for the establishment of coordinate schedules for the handling of perishables from Santa Fe origin territory, and the Western constructed icing facilities at Peoria to accommodate such traf-

fic. Today, the Santa Fe, Western, and Pennsylvania schedules are set up to provide a fully competitive service over the Western route. On westbound traffic moving between Effner and Kansas City, Mo., the Western-Santa Fe service west of Peoria would be a full day faster than if the traffic were handled by the Minneapolis from Peoria to Nemo, thence by the Santa Fe to Kansas City. Eastbound it would be from 11 to 14 hours faster.

Western traffic and revenues—At present, more than two-thirds of the total revenues of Western are derived from overhead or bridge traffic. Much of the remainder is produced by the handling of interline traffic which originates or terminates along its line. Less than 9 per cent of its revenues is produced from local traffic.

For the year ended June 30, 1955, the latest period for which both car and revenue data were available, the total freight revenue of Western was $6,920,432. Of a total of 105,705 cars of interline traffic handled during the period, 74,772, or 70.7 per cent, were interchanged with the Santa Fe and/or Pennsylvania. Such interchange accounted for $4,404,318 or 69.8 per cent, of Western's gross revenues for that year. The Burlington and the New York Central Railroad Company ranked third and fourth in the volume of interchange with Western, and the Rock Island, Nickel Plate and Minneapolis ranked fifth, sixth and seventh, respectively. The protection of interchange traffic was one of the principal reasons advanced by the applicants, and recognized by us in approving acquisition of control in *Detroit, T. & I. R. Co., Control*, 275 I. C. C. 455.

Capitalization—Western has outstanding 90,000 shares of capital stock of which 73,800 shares, or 82 per cent, are held by the trustees of the McNear estate hereinafter re-

ferred to as the trustees. The remainder is held by the Hanover Bank, by other members of the McNear family, and by the president of Western. The Santa Fe has entered into agreements for the purchase of all the capital stock of Western at a price of $135 a share. Each agreement provides for consummation of the purchase of the stock within a reasonable time after our approval. The purchase price is to be paid upon delivery of the stock at the time of settlement, in cash or by certified cashier's or treasurer's check, and the stock is to be delivered to Santa Fe free and clear of all liens, encumbrances, trusts, or obligations of any kind or nature.

Valuation data—The value of the Western's property for rate-making purposes as reported by division 1 as of June 30, 1917, was $7,121,384. Additions and betterments less retirement from the date of valuation to December 31, 1954, as reported by the carrier, amounted to $5,708,109 for carrier-owned property and $749,974 for noncarrier-owned property.

Negotiations leading to sale of stock—The trustees determined to sell the controlling interest in Western in order to diversify the holdings of the trust estate. In June, 1954, the Minneapolis made the original offer to purchase the shares held by the trustees at a price of approximately $69.50 per share. Subsequently, the purchase price per share was increased to about $80. In the spring of 1955, the Santa Fe and the Pennsylvania actively became interested, and on April 15, 1955, actually obtained commitments from the trustees for 26 per cent of the Western stock, each at a purchase price of $100 per share.[3] A dis-

[3] About that same time, the Rock Island made an offer to the trustees for a similar block of 26 percent of the stock.

pute arose, and apparently still exists, with respect to the validity of such commitments.[4] Thereafter, the Minneapolis made a further offer of $133 a share, but on May 26, 1955, before that offer was accepted, the president of the Santa Fe, acting on behalf of that carrier alone, agreed to purchase all the stock held by the trustees for $135 per share, subject to our approval. Thereafter, separate agreements in like tenor were made with the remaining stockholders of Western.

Agreement between Santa Fe and Pennsylvania—By agreement dated June 28, 1955, the Santa Fe, subject to our approval, agreed to sell to the Pennsylvania Company, a wholly owned subsidiary of Pennsylvania, 50 per cent of the entire outstanding capital stock of Western at an average price of $135 a share. Such purchase is without prejudice to any claims, causes of action, or rights which Pennsylvania may have against the trustees with respect to the transaction of April 15, 1955, involving 23,400 shares of such stock; and in the event Pennslyvania acquires all or any of such shares, the obligation under the contract is to be reduced accordingly.

The parties to the agreement, each with the other, and not for the benefit of others not parties thereto, agree that they will exercise their stock ownership of Western to accomplish the following objectives:

1. Western will continue to be operated as a separate and independent carrier with responsible management located along its lines in order to preserve to shippers and communities the present direct access to its officials.

---

[4] Regardless of the outcome of the dispute, it is the intent and purpose of the Santa Fe and the Pennsylvania that each is to own exactly 50 percent of the capital stock of Western.

2. The properties of Western, including line and equipment, will be maintained and improved in keeping with the requirements of a railroad of its character and importance.

3. Western will continue to maintain its own solicitation forces and will be entirely free to solicit traffic in such manner as best to serve the interests of Western.

4. All existing routes and channels of trade via Western will be maintained and kept open without discrimination between connecting lines of railroad.

5. The board of directors of Western shall consist of 11 members, of whom 1 shall be the president of the company, 2 shall be officers of Santa Fe, 2 shall be officers of the Pennsylvania Company, or Pennsylvania, or both, and the remaining 6 shall be prominent citizens not connected with any one of the parties to this agreement but selected by the parties thereto and the subject of mutual agreement between them.

Proposals before the Commission—Four alternatives have been proposed for the disposition of these proceedings on the basis of the public interest involved. They are:

1. Authorization of joint and equal control of Western by the Pennsylvania and the Santa Fe.

2. Authorization of sole control by the Minneapolis.

3. Authorization of either application subject to a condition requiring the inclusion, pursuant to the provisions of section 5(2)(d) of the act, of one or more of the railroad interveners expressing a desire for such inclusion.

4. Denial of both applications, or the dismissal of the Minneapolis application in Finance Docket No. 19086, for the reason that no transaction within the meaning of section 5(2) is presented for our determination.

These proceedings represent a new and more complicated phase in the administration of section 5, since it involves 2 applications for authority to control the same property, and petitions by 4 other carriers for inclusion in the transaction under varying circumstances. We must weigh whether each application is consistent with the public interest, with or without inclusion of other railroads, considering not only other intervening petitioners seeking such inclusion but also the other applicant and nonparticipating railroads as well.

The burden of proof, therefore, has become most heavy for an applicant in a proceeding like this, because it must not only overbalance the claims of those seeking to share in the control but also of those seeking to exclude it from the transaction. As a practical matter we, in such a proceeding as this, must arrive at a standard of public interest and determine which of the various plans of control most nearly approximates it. The applications and petitions for inclusion must be denied unless there are advantages in the public interest.

Santa Fe and Pennsylvania systems—These applicants are two of the largest rail carriers in the United States. Their lines converge at Chicago. The Santa Fe system extends from that point to the Pacific coast. It serves 12 States, ranks first in mileage operated, third in freight and total revenues, fourth in the number of employees, and fifth in freight volume. The Santa Fe is strong in two of the fastest growing sections of the country, namely, the southwest and California, and is favored with the long haul of diversified traffic. Except for 3 years during the 1930's, it paid dividends on its stock each and every year since 1901. During the first 9 months of 1955, as compared with the

similar period of 1954, the tonnage and freight revenues of the Santa Fe increased approximately 11 per cent, and its net income increased 22.4 per cent. About 64 per cent of its freight revenues was derived from the transportation of manufactured products originating on its lines.

Except for the New England States, system lines of the Pennsylvania and its subsidiaries blanket the east. As owner of the Wabash, such lines extend westwardly to Des Moines, Iowa, Omaha, Nebr., and Kansas City. Although the Pennsylvania controls the Wabash through ownership of practically all its capital stock, the latter is independently operated with its own management and operating departments.

Pennsylvania operates in 13 States and the District of Columbia. It ranks first among class I rail carriers in the matter of investment, freight traffic, total freight revenues, or by practically any standard used to indicate size and volume of business handled. It has paid a stock dividend each year since 1847. In 1954, the freight revenues of the Pennsylvania, together with its independently operated subsidiaries, amounted to 11.9 per cent of the freight revenues of all class I rail carriers, and 170.6 per cent of the freight revenues of the next largest aggregate combination, the New York Central system. During the first 9 months of 1955, as compared with the similar period of 1954, the Pennsylvania enjoyed substantial increases of 19 per cent in freight tonnage, 12 per cent in revenues, and 171.7 per cent in net income. A little more than one-half of its freight revenues is derived from the transportation of manufactured products originated on its lines. In this respect it is the largest originator of rail traffic in the country.

Minneapolis—The Minneapolis operates approximately 1,400 miles of railroad lines in 4 States, the principal

route extending from Minneapolis, Minn., through Oskaloosa, Iowa, to Peoria. It also operates lines between Minneapolis, through Winthrop, Minn., to Aberdeen and Leola, S. Dak.; from Winthrop, through Tara, Iowa to Des Moines and beyond; and from Albert Lea, Minn., through Corwith, Iowa, to Fort Dodge, Iowa. Its lines do not reach the important gateways of Chicago, St. Louis, or Kansas City. At Peoria, the Minneapolis maintains direct connections for the interchange of traffic with Western, the Peoria & Pekin Union Railway, the Rock Island, and the Peoria Terminal. A complete description of the Minneapolis is contained in *Associated Rys. Co. Acquisition and Securties*, 228 I. C. C. 277. It serves 57 communities in Minnesota and 17 cities and towns in South Dakota.

Since 1936, Minneapolis has spent more than $84 million out of operating revenues on physical rehabilitation of its property. This expenditure has made Minneapolis a modern and efficient operating plant providing exceptionally good service to the public. It is completely dieselized and owns well conditioned rolling stock in adequate supply to accommodate and handle, in a safe and expeditious manner, an increase of at least 25 per cent in the volume of tonnage now available to it.

Minneapolis is predominantly an east-west railroad, bypassing the congested Chicago area. It is largely dependent upon agriculture and related products, and has not proportionately benefited from the tremendous increase in manufacturers' and consumers' goods in recent years. In 1954, agriculture represented 41.2 per cent of the Minneapolis' originated tonnage, 25.9 per cent of its total tonnage, and 30.4 per cent of its total freight revenues. Products of animals, mines and forests, together with farm products, aggregated 80.6 per cent of its originated tonnage

and 52.4 per cent of its revenues. Without doubt, Minneapolis is a substantial railroad rendering good service to the shippers and communities on its lines. It constituted one of the bright spots in providing freight cars for the 1955 grain movement.

For the period 1936-55, the Minneapolis' average annual gross operating revenues were $15,845,000, and its current annual railway operating revenues approximate $20,000,000. For the first 9 months of 1955, as compared with the similar period of 1954, the freight tonnage and revenues of Minneapolis rose by only a few percentage points, and its net income increased 5.6 per cent. On the basis of investment, Minneapolis ranked sixtieth in size among the 127 class I railroads in the country in 1955. It ranks approximately the same with respect to other comparisons usually considered in determining the relative importance and size of railroads generally. It is now reasonably prosperous, with a financial and physical picture that has been steadily improving over the past few years. Minneapolis has paid dividends regularly since 1943. Its capitalization is not burdened with outstanding preferred stock, and the relatively small amount of unfunded long-term debt will not mature until 1967.

During the 4 years 1950-53, 67 per cent of Minneapolis' aggregate loaded tonnage consisted of traffic originated or terminated on, or local to its lines, and 33 per cent constituted overhead or bridge traffic. In the same period, the Minneapolis' interchange with Western at Peoria averaged 12,995 revenue carloads per year which constituted an average of 5.9 per cent of the Minneapolis' total revenue loads and accounted for 8.1 per cent of its total annual freight revenues. In 1954, approximately one-half of the Minneapolis-Western Peoria interchanged represented Min-

neapolis bridge traffic handled in conjunction with the Santa Fe to and from Nemo.

Nickel Plate and Rock Island—These two interveners are grouped together because their respective interests are identical. Each desires a proportionate share of the capital stock of Western irrespective of which pending application is approved; and in the event the applicant or applicants are unwilling to accept, as a condition to approval of their application, participation on an equal basis of ownership by the Nickel Plate and the Rock Island, the latter are ready and anxious to undertake the purchase of the stock for their own accounts. They believe that the true independence and neutrality of Western best can be assured and intended only if the stock-control transaction is thrown open to all interested connections desiring to participate.

Nickel Plate is the sixth largest railroad in size in eastern territory. It serves directly the gateways of Chicago, Peoria, and St. Louis. Nickel Plate is dependent upon the Western for access to western lines, particularly the Santa Fe, via the Peoria gateway, and Western is Nickel Plate's largest single connection at Peoria. Statistics of record indicate that the Western interchange represents 26 per cent of all the traffic handled in Nickel Plate trains to and from Peoria.

The Rock Island operates 7,895 miles of lines in 14 States, extending generally from Chicago, St. Louis, and Memphis, Tenn., on the east, to Tucumcari, N. Mex., and Denver, Colo., on the west. Its line to Peoria branches off the Chicago-Denver main line at Bureau. In 1954, Rock Island's operating revenues totaled more than $187,000,000, and it earned $28.84 per share of preferred stock and $10.96 per share of common stock.

Wabash and Burlington—As indicated heretofore, the Wabash and the Burlington have no objection to the granting of the application of the Santa Fe and the Pennsylvania, provided the usual conditions for the maintenance of joint rates and through routes are imposed. But, if any carrier other than the Santa Fe and the Pennsylvania is authorized to acquire control or an interest in Western, then the Burlington and the Wabash desire to participate in such control to the same extent.

Since 1859, Wabash has operated under trackage rights over Western's line between Elvaston and Hamilton. At the latter point these two carriers operate a jointly-owned track which connects the Western main line with the municipal bridge across the Mississippi River used by both to serve Keokuk. The Wabash also operates over the main line of Western between Forrest and Fairbury to get to and from its branch line serving Streator. The contractual relationships between Wabash and Western include provisions for the maintenance and operation of stations and interlocking facilities. The current contract contains a 1 year cancellation provision, and it is vitally important to the Wabash, and the shipping public served by its Streator branch, that control of Western will not be acquired by a carrier or carriers detrimental to the interests of the Wabash. Loss of the trackage rights now enjoyed by the Wabash over the Western would require consideration of the abandonment of both the Streator branch and the Keokuk branch north of Meredosia. In 1955, the Wabash interchanged a total of 3,438 carloads of revenue freight with Western at 5 different junction points, the most important of which, from the standpoint of volume, was Forrest.

Minneapolis' proposals—The Minneapolis is opposed to joint or multiple ownership of Western. It seeks to ac-

quire exclusive control in order to increase the operating efficiency of its plant, diversify its traffic base, establish new service routes, provide suitable land for the location of industries on its lines, enhance its financial stability, effect substantial economies through elimination of duplicate facilities, and render an improved transportation service to the public. The Minneapolis is willing to enter into agreements similar to those now existing between the stockholders of Western, on the one hand, and Santa Fe, on the other. In payment for such stock, the Minneapolis would issue $12,000,000 of first-mortgage sinking-fund bonds, bearing interest at the rate of approximately 4¼ per cent per annum, maturing 30 years from the date of issue, with equal annual sinking-fund payments of $480,000, commencing in the sixth year. The remaining $150,000 of the purchase price would be paid in cash from funds available in its treasury.

The proposal of Minneapolis unequivocally contemplates the disappearance of Western as an independent and neutral connection for the other 15 carriers with which it presently works. Only the corporate existence of Western would remain. For all practical purposes Western would be integrated, consolidated and merged into the Minneapolis for ownership, management, and operation. Western's headquarters and general offices would be moved from the present location at Peoria to the City of Minneapolis, and all policies and directions for the operation of the joint properties would emanate from that point. An estimated 256 positions, most of them on Western, would be affected by the plan. Of the 24 executive positions on Western at the present time, only a trainmaster and a roadmaster would be retained for direct supervision of Western's trackage.

Only the Minneapolis and its supporting interveners, the States of Minnesota and South Dakota, advocate the disappearance of Western as a separate and independent operating carrier. All the other parties to these proceedings, including the railroad interveners, the communities served by Western, and the shippers who appeared as witnesses, insist that the separate and independent operation of Western under its present local management is a public necessity. In fact, all the communities on the line of Western between Peoria and the western termini are fearful that under the Minneapolis' control the western portion of the line will be abandoned because of the competition that line furnishes the line owned by the Minneapolis between Peoria and Nemo. While at one time officials of the Minneapolis considered such an eventuality, the instant record conclusively demonstrates that abandonment of any portion of Western is not included in the present plans of the Minneapolis in seeking control. The latter is willing to accept a condition to that effect.

The Minneapolis contends that its acquisition of control of Western not only will give the Minneapolis direct interchange connections with the Nickel Plate, Illinois Terminal and Burlington at Peoria, but will also provide additional direct interchange points east of Peoria with the Pennsylvania at Effner, the Gulf at Chenoa, the Illinois Central at Gilman and El Paso, the Chicago & Eastern Illinois at Watseka, the New York Central at Sheldon, the Wabash at Forrest, the Nickel Plate at Farmdale, and the Chicago, Milwaukee, St. Paul & Pacific at Webster. Under unified operations, the Minneapolis proposes to establish coordinated schedules between it, the Western, and the connecting carriers, providing new service routes via these additional junctions for moving traffic in all directions.

The record shows that such a policy would be extremely harmful to other carriers. For example, of a total of 21,041 cars interchanged between the Wabash and the Minneapolis at Des Moines and Albia, Iowa, in 1955, 7,364 cars were destined to or from points in Illinois and points east thereof. Under the Minneapolis' unified-operation theory, a new service route via Forrest would be established for such traffic which would imperil, or at least diminish, the Wabash's participation therein, and possibly could result in the abandonment of the latter's Des Moines branch. Other intervening carrier connections similarly would be adversely affected by the Minneapolis' proposal. The Minneapolis contends that such carriers can be amply protected by appropriate conditions with respect to through routes and joint rates to be attached to the order approving its control of Western.

The Minneapolis further contends that Western is a natural extension of its railroad; that its interchange with Western at Peoria is proportionately greater in carloads and freight revenues than any other carrier interested in these proceedings; that no one can operate Western to greater advantage or more economically than the Minneapolis; and that its failure to acquire control of Western would materially curtail the expansion of Minneapolis' service and the full use and development of the Peoria gateway. Acquisition of control of Western would permit the Minneapolis to abandon its yard at Peoria and use the yard of Western, thereby eliminating a switching operation at that point and reducing interchanges to 1 yard instead of the 2 now required.

The Minneapolis estimates that economies totaling $1,770,945 can be achieved jointly by it and the Western

through elimination of duplicate facilities and traffic agencies, more efficient use of work forces, plant and power, and mechanical accounting. Most of the savings would be effected at the expense of Western's employees. The Minneapolis states that it will seek to minimize any adverse effect upon employees, because it has a number of workers on the payroll who are in the upper age brackets, and as these people are automatically retired, room will be made for the absorption of Western's employees to be released or displaced. The Minneapolis states that the economies which would result from its operation of Western would redound not only to the benefit of these two small carriers, but would also redound to the benefit of shippers and the public generally through improved service, thus encouraging the development of the combined territories served and the location of new industries along their lines.

Other benefits and advantages claimed by the Minneapolis in the matter of adequate car supply and the coordinated service which would result if Western were controlled by the Minneapolis are of record, but in view of our findings herein with respect to the disposition of its application, the details thereof need not be specifically described. The Minneapolis insists that it alone has no conflict of interest with Western, or the Peoria gateway, and no incentive other than to maximize the traffic and service that would be rendered over the combined lines. Conversely, it contends that all other carriers interested in the acquisition of all or a portion of the control of Western have their main lines, interests, and investments in direct competition with Western and the Peoria gateway. Hence, acquisition of Western by any other interested carriers would sharply decrease competition, not only in that it would be the acquisition of Western by its competitors, but also in that it would

materially decrease the ability of the Minneapolis to compete with such other carriers.

Competition and diversion of traffic—The Santa Fe and the Pennsylvania are complementary to each other insofar as they work through their connections with the Western. The Rock Island and the Santa Fe are in competition; the Nickel Plate competes with the Pennsylvania and Wabash; and Minneapolis is in competition with the Rock Island and other parties. All the carriers endeavoring to participate in its control are in competition with Western. Santa Fe's and Pennsylvania's routes via the Chicago gateway compete with Western's routes through the Peoria gateway. The Nickel Plate competes with the eastern half of Western, and the Rock Island competes with the western half. The Wabash, the Burlington, and the Minneapolis also compete with Western.

The important thing is not whether there is possibility of competition, but whether there is probability of existing or potential competition being diminished or strangled by the Western under the control of the Santa Fe and the Pennsylvania. Under such control, Western would have an increased opportunity to secure traffic now moving via other gateways. While the Santa Fe and the Pennsylvania ordinarily solicit traffic for their long hauls, they have not worked against Western, and have offered only passive resistance against Lomax and Effner, respectively, in recognition of the benefits they would receive from the Western route. Considering the greater expense of operating through a large congested terminal, Santa Fe and Pennsylvania are just about as well off financially when handling traffic via Western as they would be on the long haul through Chicago. If the Santa Fe obtains a half interest in Western, it

intends to place Lomax on a parity with Chicago from a solicitation standpoint, and as the other half owner, the Pennsylvania will recognize Effner as one of its principal interchanges along with Chicago and St. Louis. While the Pennsylvania will continue to solicit its long haul to St. Louis, Effner and Chicago will be on a parity. Of course, if service over the Western is improved under the control of the Santa Fe and the Pennsylvania, and traffic can be handled over it more economically and efficiently than over existing routes, there may be some diversion of traffic, but such diversion would not jeopardize the maintenance of adequate transportation service by the objecting intervening carriers.

As for solicitation, the record shows that all but a very small part of the nation's traffic is routed by the shipper, and that many factors, the most important of which is service, influence such routing. Generally, the shipper gives the originating carrier a long haul, or at least a line haul, but junction points are seldom included in the routing. Shippers also desire to maintain friendly relations with as many railroads as possible and, for that reason, there is a tendency to divide the traffic among several railroads. Shippers like to favor small railroads with a part of their traffic, and will use the line of a particular carrier because of a friendly relationship with that railroad's solicitors. Normally, an industry feels a definite obligation to the originating carrier. The industry seeks rate and routing information from that line, places rate problems before it, looks to it for car supply, and relies upon it for tracings and diversions. These factors are operating today and are reflected in the present division of traffic among all of Western's connections, and since no change in service is contemplated

with Western under the control of the Santa Fe and the Pennsylvania, the volume of traffic handled by the protesting intervening carriers should not be materially affected. The self-interests of the Santa Fe and the Pennsylvania provide further assurance that Western's present solicitation and service policies will be continued. Those policies have been responsible for the success of Western in the past, and the best way for the Santa Fe and the Pennsylvania to insure a substantial return on their investments to be made herein is to see that the Western management is left free to continue them.

The Minneapolis contends that with Santa Fe and the Pennsylvania in control of Western $7,000,000 of its traffic would be vulnerable to diversion, of which it thought $1,100,000 was certain of loss. This last figure was obtained by dividing the traffic into 12 categories and applying a percentage to the gross revenue derived from each category. The record does not disclose the basis of the percentages used.

The Minneapolis estimates that 75 per cent of its traffic moving between Peoria and Nemo will be diverted to the Western by the combined influence of the Santa Fe and the Pennsylvania as originating and terminating carriers. It contends that this will be accentuated by the placing of Lomax on a parity with Chicago. We are of the opinion that the placing of Lomax and Chicago on the same level for the solicitation of traffic would have little effect on the Nemo-Peoria traffic of the Minneapolis. The Santa Fe has solicited that traffic for its long haul to or from Chicago. The Western has solicited it via Lomax, and all other carriers connecting with the Santa Fe west of Chicago have solicited it. Notwithstanding this intense competition, the Minneapolis has been able to handle the traffic.

It is evident that the Peoria-Nemo traffic secured by the Minneapolis is traffic which does not move on a competitive service basis. The record shows that the Minneapolis does not co-ordinate schedules with the Santa Fe at Nemo, nor has it been making its connections with the Western and the Nickel Plate at Peoria on eastbound traffic. In 1953, the Minneapolis canceled its guaranteed schedules on perishable traffic moving through Nemo in conjunction with the Nickel Plate at Peoria. The large volume of traffic presently moving via the Western route is evidence of the superior connecting service it provides.

Shippers desiring to favor the Santa Fe now route their traffic via the Santa Fe's long haul to Chicago. The diversion of this traffic to Lomax as a result of placing it on a parity with Chicago would have no effect on the Minneapolis, because the Minneapolis does not share in the haul on this traffic today. Shippers using the Santa Fe, who prefer the Peoria gateway for service reasons, presently route their traffic via the Western at Lomax because of the inferior service via Nemo. The only traffic moving via the Minneapolis is traffic on which shippers desire to give it a haul, and the Santa Fe's parity policy would not affect the continuation of such desires to favor the Minneapolis with a portion of their traffic. Consequently, there would be little or no effect upon the traffic now moving between Nemo and Peoria. On the other hand, the Pennsylvania's policy of placing Effner on a parity with Chicago would divert a portion of traffic now moving through Chicago to Effner and the Peoria gateway, thus giving the Minneapolis an opportunity to solicit the haul to and from its connection with the Western at Peoria.

The Minneapolis estimates that it would lose 50 per cent of the traffic moving through Peoria and the Kansas City

and Omaha gateways, which it now bridges between Peoria and junction points other than Nemo. It states that such traffic would be subject to diversion over the Pennsylvania-Western-Santa Fe route. The present routing of this traffic reflects the influence of the other western carriers which compete with the Santa Fe and which, to a large extent, are responsible for its movement. The fact that the other western carriers and the Minneapolis overcame the solicitation of the Santa Fe and the Western, which afford a more direct service route, indicates that other factors beyond the control of the Santa Fe influenced the routing of this traffic. Partial ownership of the Western will not alter the degree of the Santa Fe's solicitation influence and will not affect the basis on which this traffic presently moves. This business would not be lost so long as the Minneapolis and the connections handling it continue the same effective solicitation effort that is being exerted today, and the service via the Minneapolis through Peoria is not further impaired. The same solicitation situation exists with respect to the traffic originated and terminated by the Minneapolis at Peoria, a portion of which, it is claimed, would be diverted if the Santa Fe-Pennsylvania application were approved.

The Rock Island contends that its traffic vulnerable to diversion with Western under the control of the Santa Fe-Pennsylvania, primarily through the position of the Santa Fe, would amount to an estimated $2,984,309, more than $1,000,000 of which represented traffic originated or terminated at Rock Island points competitive with the Santa Fe and interchanged with the Western at Keokuk. The nature of this interchange traffic is such that the possibility of its diversion to the Santa Fe is remote, particularly in

view of the fact that much of it originated or terminated at industries served exclusively by the Rock Island.

Almost $1,500,000 of the alleged loss claimed by the Rock Island through diversion was derived from traffic which moved into and out of Peoria from and to Chicago and Joliet as competitive origins, destinations, or junctions. The small volume of traffic interchanged between the Western and the Santa Fe at Eureka, as reflected by data of record, indicates that the Santa Fe is not a factor in the movement of traffic between Chicago and Peoria via the Western. The Western's route from Peoria to Chicago is via main-line connections with the Wabash at Forrest, the Chicago & Eastern Illinois at Watseka, and the Illinois Central at Gilman. Thus, it appears unlikely that the Santa Fe's partial ownership of the Western could enhance its competitive position as to traffic for which the Santa Fe maintains no competitive route.

Neither will the Santa Fe's partial ownership of the Western affect the diversion of traffic moving via the Rock Island between Peoria and points competitive with the Santa Fe in the west. The lack of Santa Fe influence as to this traffic is evidenced by the fact that it has unsuccessfully solicited it. The Rock Island, with direct service at Peoria, enjoys the paramount influence as to this traffic, since it affords shippers at Peoria its services as an originating or terminating carrier. The Western is not afforded such influence, because it maintains direct service to very few industries at Peoria.

With Western under the control of the Santa Fe-Pennsylvania, the Nickel Plate estimates a loss of traffic amounting to approximately $2,200,000, consisting of traffic interchanged with the Santa Fe at Chicago, and with the

Western at Peoria. The Santa Fe contends that its policy of placing Lomax on a parity with Chicago will have no effect upon this traffic, because the Nickel Plate is able to solicit it both at Chicago and at Peoria. The divisions accruing to the Nickel Plate at Peoria exceed those at Chicago, and on transcontinental business are equal to those at St. Louis. Thus, it is argued by the Santa Fe that the placing of Lomax and Chicago on a parity will have the effect of increasing the revenues of the Nickel Plate.

The greatest portion of the Nickel Plate's interchange traffic with the Western is bridged via the Western to or from the Santa Fe at Lomax. In 1954, the Nickel Plate interchanged a total of 14,497 cars with Western, of which the Santa Fe participated in the movement of 11,221 cars. Most of the Nickel Plate's traffic bridged from Lomax via the Western is perishable moving, in superior service, to points on the Nickel Plate and its connections. It provides the Santa Fe with a long haul to Lomax on traffic which otherwise might move via St. Louis. If the Western's connection with the Nickel Plate were not maintained as a service route, this traffic would be routed to the Nickel Plate at St. Louis, short-hauling the Santa Fe at Kansas City. Thus, the self-interest of the Santa Fe would assure the continuance of good service to the Nickel Plate at Peoria and prevent preferential solicitation by the Western for the Pennsylvania at Effner. As stated above, the Western, being dependent upon the traffic of its connecting lines for successful operations, must continue its present policy of working closely with all its connections or lose the traffic it now interchanges with them. It is evident that such loss would be of no benefit to the Santa Fe-Pennsylvania as owners of the Western. We are convinced that the benefits to be derived from the operation of West-

ern under the control of the Santa Fe and the Pennsylvania as proposed will be in furtherance of the over-all national transportation policy declared by the Congress, and its consummation will not unduly curtail competition in connection with the other carriers. *Compare McLean Trucking Co. v. U. S.*, 321 U. S. 67.

Passenger service—The Rock Island also has a major concern in that it has made commitments in passenger operations to and from Peoria, and has only recently inaugurated a new train between Peoria and Chicago. The Rock Island fears that with the Santa Fe in 50 per cent control of Western, its Peoria passenger business is in jeopardy, and, at the hearing, suggested that the Santa Fe and the Pennsylvania stipulate to a condition that no passenger service would be operated on the Western without application to us for approval. The record shows that the Santa Fe and the Pennsylvania do not contemplate providing passenger-train service on Western, and they have not held out any hopes for such service to the people in the area which it serves. Through passenger service via the Santa Fe and the Western could be established at any time without Santa Fe's control of Western. Passenger service is not an issue in this proceeding and the imposition of a condition such as that suggested by the Rock Island is not necessary.

Trackage rights—As stated heretofore, Monon Railroad requests trackage rights over the Pennsylvania if the latter is authorized to participate on an equal basis with Santa Fe in the control of Western. To the extent that the development of the Peoria route draws traffic from the Chicago gateway, Monon contends that it may lose some of the traffic it now handles through that gateway in common

with other carriers similarly situated. Monon further contends that a connection with the Western at Effner would make it possible for Monon to recover such traffic and place it on an equality with its more powerful competitors in the solicitation of business as between the Chicago and Peoria routes. At the hearing a witness for the Monon stated its position in the premises, but made no effort to describe with any particularity the traffic which might be lost, the carriers over whose lines it moves, its volume, or the areas of origin and destination.

Ordinarily we are without authority to compel one railroad to grant trackage rights over its line to another carrier. See *Baltimore & O. R. Co. Operation*, 261 I. C. C. 535, and *Alabama, T. & N. R. Corp. Construction*, 124 I. C. C. 114. We are of the opinion that the potential loss of traffic by the Monon via the Chicago gateway as a result of our approval of the Santa Fe-Pennsylvania application is too nebulous to warrant the imposition of a condition granting that carrier trackage rights extending its operations for approximately 35 miles into new territory without proof of public convenience and necessity. Accordingly, the request for such a condition is denied.

Prescribed conditions—The Santa Fe and the Pennsylvania are committed to the maintenance of all existing routes and channels of trade via Western without discrimination. Their announced policy toward Western's other connections is expressed in specific conditions which they have agreed to accept as a part of any order approving their application. Those conditions are as follows:

1. That under the control of Santa Fe and Pennsylvania, Western shall maintain and keep open all routes

and channels of trade via existing junctions and gateways, unless and until otherwise authorized by us;

2. The present neutrality of handling traffic inbound and outbound and in overhead service by Western shall be continued so as to permit equal opportunity for service to and from all lines reaching the rails of that carrier without discrimination as to routing or movement of traffic, and without discrimination in the arrangements of schedules or otherwise;

3. The present traffic and operating relationships existing between Western, on the one hand, and all lines connecting with its tracks, on the other, shall be continued insofar as such matters are within the control of the Santa Fe or the Pennsylvania;

4. Western shall accept, handle, and deliver all cars inbound and outbound and in overhead service, loaded and empty, without discrimination in promptness or frequency of service as between cars destined to or received from competing carriers and irrespective of destination or route of movement;

5. Santa Fe and/or Pennsylvania shall not do anything to restrain or curtail the right of industries located on Western to route traffic over any or all existing routes and gateways;

6. Santa Fe and Pennsylvania shall refrain from closing any existing route or channel of trade with any carrier party to this proceeding on account of their control of Western, unless and until otherwise authorized by us; and

7. Any party or any person having an interest in the subject matter may at any future time make application for such modification of the above-stated conditions, or any

of them, as may be required in the public interest, and jurisdiction will be retained to reopen the proceeding on our own motion for the same purpose.

The foregoing conditions are broad enough to protect the interests of all lines connecting with Western, and are similar to the conditions imposed in *Detroit, T. & I. R. Co. Control, supra, Savannah & A. Ry. Co. Control,* 282 I. C. C. 39, and *Pacific Coast R. R. Co. Control,* 282 I. C. C. 600, in each of which the same arguments against the effectiveness of such conditions were advanced. The foregoing conditions will be included, by reference, in our order granting the authority herein sought by the Santa Fe and the Pennsylvania.

Purchase price—The Minneapolis contends that the purchase price of $135 per share offered by Santa Fe is neither just nor reasonable, because the consideration for a portion of that amount is in settlement of the dispute pending between the trustees and the Santa Fe as an outgrowth of the validity of the April 15, 1955, letter in which the trustees agreed to dispose of 26 per cent of the stock of Western each to the Santa Fe and the Pennsylvania. The Minneapolis states that its offer to purchase Western's stock at $135 a share is just and reasonable in view of the substantial economies, increased efficiency, improved service, and other benefits which would flow from Minneapolis' control of Western. The stock of Western, being closely held, is not listed on any exchange, but its market value was established on the basis of agreement between a willing seller and a willing buyer. The price proposed to be paid by the Santa Fe and the Pennsylvania is the same as that offered by the railroads requesting inclusion. The reason-

ableness of the purchase price is also indicated by the excellent physical and financial condition of Western, its good earnings and operating record, the value of its properties as fixed by us for rate-making purposes, its progressive and able management, and its strategic location which adds to its value as a long-term investment. If $135 per share is the proper price for the Minneapolis to pay, it is fair and reasonable as to the Santa Fe and the Pennsylvania.

State representations—The States of Minnesota and South Dakota, along with their respective Public Service Commissions, intervened in support of the Minneapolis application. They fear that with Western under the control of the Santa Fe and the Pennsylvania, the Peoria route of the Minneapolis will deteriorate to the extent that its low density lines in Minnesota and South Dakota will be in danger of abandonment. On the other hand, the State of Illinois opposes the application of the Minneapolis because of the possibility that the portion of Western's line west of Peoria may be abandoned, and the further reason that such control would have a devastating effect upon the economy of the city of Peoria and the State of Illinois generally. Of course, there can be no abandonment of any line of railroad without the issuance by us of a certificate of public convenience and necessity permitting such abandonment. So far as the instant record is concerned, no abandonments are presently contemplated.

Wabash control case—In *Wabash R. Co. Control*, 247 I. C. C. 365 and 252 I. C. C. 319, the Pennsylvania and the Pennsylvania Company were authorized to acquire control of the Wabash through ownership of its capital stock subject to conditions, among others, that the Penn-

sylvania maintain, or cause to be maintained, joint rates, joint routes, interchange points, and channels of trade through gateways of the Wabash then existing, until and unless otherwise authorized by us.

Both the Minneapolis and the Nickel Plate contend that, since the Wabash now has a substantial interchange with the Pennsylvania at Logansport, Ind., and that route will not be placed on a parity with Western's route via Effner, Pennsylvania's proposal to favor Western over Wabash will effectively alter the joint rates and joint routes in contravention of the conditions under which the Pennsylvania was permitted to acquire control of the Wabash. They state that the *Wabash Control case* must be reopened and reexamined to determine whether the joint control of Western by the Pennsylvania would be consistent with the public interest and the interest of the Wabash.

The Wabash has not raised the issue. With the imposition of the usual conditions as to the maintenance of existing through routes and channels of trade it supports the Santa Fe-Pennsylvania application. We are unable to find that the granting of that application with the conditions previously stated attached, will lead to violation of the conditions imposed in the *Wabash Control case* or prejudice their effectiveness. While the plan to place Effner on a parity with Chicago, as previously mentioned, will increase the flow of traffic through Effner, such increase will consist of traffic now moving via Pennsylvania through Chicago in which the Wabash does not at present participate. Furthermore, the Pennsylvania in the past has favored Western's route through Effner rather than the Wabash route through Logansport and there will be no change in this policy.

Clayton Act antitrust violation—The Minneapolis contends that approval of the Santa Fe-Pennsylvania application for authority to acquire control of Western would be in violation of section 10 of the Clayton Act because of the existence of interlocking directors between the Pennsylvania and its subsidiaries, on the one hand, and the Wilmington Trust, a trustee of the McNear estate, on the other. Section 5(11) of the act provides that "the authority conferred by this section shall be exclusive and plenary" and we have on several occasions pointed out that approval of a transaction consistent with the public interest under section 5 renders inoperative any prohibition of Federal, State, or municipal legislation, including the Clayton Act. Furthermore, the issue before us does not involve a purchase by the Pennsylvania from the Wilmington Trust. The Santa Fe is the only purchaser of the stock from the trustees and had no commitments to sell any of it to any other railroad. Before offering to sell a portion of the stock to Pennsylvania several other joint control possibilities were considered and rejected. Under the circumstances, the contention of the Minneapolis in this respect is untenable.

Employees—Counsel for railway labor organizations exacted commitments from all carriers involved herein to abide by the provisions of the Washington Job Protection Agreement of 1936, and our order herein will be conditioned upon compliance with such provisions. The employees unanimously favor the granting of the Santa Fe-Pennsylvania application.

Conclusion—We cannot decide these cases to the satisfaction of all participants. Our duty is to determine the pending matters on the basis of what is consistent with the public interest. It is universally conceded on the record

that Western now is a well managed, independently operated railroad furnishing a valuable rail transportation service to the public. Most of the interested parties, including all the shipping witnesses, municipal authorities, and commercial associations testifying on the subject, favored the continuation of Western in its present status, but the stockholders desire to sell, and without doubt they have that right, so the only question for determination is whether the sale of the stock to the carrier selected by them and the distribution to be made of it thereafter are consistent with the public interest. We have recognized that it is in the public interest for control of a carrier to pass from noncarrier interests, which no longer desire it, to carrier auspices. *Savannah & A. Ry. Co.-Control, supra,* and the cases therein cited.

The Santa Fe and the Pennsylvania assert that they are the logical carriers to acquire control of Western, because they are its principal connections. Situated as it is between the Santa Fe at Lomax on the west and the Pennsylvania at Effner on the east, Western receives its long haul and provides a vital direct link essential to the type of through service which is becoming increasingly important not only to the shipping public but to the railroads as well. Fast, strong, and reliable through transportation service is necessary in order for the railroads adequately to compete with the other modes of modern transportation, and Western, as a direct east-west line, supplies the short-line connection for providing this through service with a minimum of delay.

Public interest demands that the present policies of Western in all respects be continued. Any reduction in the ownership interests of the Santa Fe and the Pennsylvania by the inclusion of other carriers in the control of Western

would be accompanied by an equivalent reduction in their economic incentive for the future development of Western and the territory served by it. The case of *Illinois-Missouri Terminal Railway Company et al. Purchase, Etc.*, Finance Docket No. 18752, 295 I. C. C. —, (not printed in full), decided April 2, 1956, relied upon so heavily by the carriers seeking to be included in these proceedings, is distinguishable in that the invitation to participate in the control of the Illinois-Missouri was extended to each and every railroad connecting with that carrier, and all the participants were in agreement as to the manner by which ownership was to be effected and operations were to be conducted. Such universal agreement is not present in the instant applications. No greater protection could be afforded to carriers interchanging traffic with Western than to have ownership divided equally between the largest connecting carrier in the east and the largest one in the west. Under this built-in system of checks and balances, it is inconceivable for the Santa Fe to permit impairment of service or discriminatory solicitation with respect to eastern connections, or the Pennsylvania with respect to western ones. The contract of June 28, 1955, between the Santa Fe and the Pennsylvania pertaining to the objectives to be accomplished under their joint control, together with the conditions imposed with respect to the maintenance of all existing routes and channels of trade of Western without discrimination, is adequate to protect the latter's other connections. Only 3 of Western's 16 rail connections oppose the joint control of the Santa Fe and the Pennsylvania.

With the backing of the Santa Fe and the Pennsylvania, there are excellent prospects for locating new industries on Western which will substantially increase the traffic originating and terminating on its line. Western has large acre-

ages of potential industrial property in the Peoria area, and at other points along its line, and with the combined efforts of the industrial development departments of the Santa Fe and the Pennsylvania, such property development may be expected without undue delay.

Several nationally prominent traffic executives of large industrial concerns, which annually route a substantial volume of traffic via Western, testified in support of Santa Fe and Pennsylvania joint ownership. They based their support upon the fact that the Santa Fe and the Pennsylvania are presently rendering excellent service in conjunction with Western and that ownership by them would constitute their best assurance of continued good service via the combined Santa Fe-Western-Pennsylvania route, as well as via each of the other connections of Western.

Virtually every one of the shippers and community witnesses along the line stressed the importance of maintaining Western as a separate and independent carrier. They are anxious that Western's present management be retained and favored the plan for local representation on the board of directors. They stressed the desirability of maintaining the existing plant and facilities in the Peoria area, and the desirability of retaining Western's headquarters at Peoria in order to continue the present easy access to management which is of inestimable value to shippers. Each of the city officials and representatives of chambers of commerce of the communities served by Western recognized the advantage of Santa Fe-Pennsylvania ownership as an economic stimulus to the industrial development of their communities. They were joined by business interests which recognized that such industrial development would result in expanding markets.

The Santa Fe and the Pennsylvania representatives on the board of Western will advise and assist Western on matters involving the technique of railroad management and the realization of economies in operation. Western also can expect to realize advantages in connection with its purchases, if it is controlled by two roads which purchase in such large volume as the Santa Fe and the Pennsylvania.

Under joint control by the Santa Fe and the Pennsylvania the supply of freight cars available to Western would be materially increased. The Santa Fe and the Pennsylvania would see to it that the car ownership obligations of Western were met in full, either by having Western increase its car ownership or by increasing their own ownership sufficiently to take care of Western.

Disposition of the applications—We have before us two applications requesting authority to acquire control of the same carrier. The first filed in point of time reflects a transaction capable of being consummated upon our approval. The second would require further steps before the plan could be consummated. Under no circumstances could it be consummated unless the first is denied. The Minneapolis has no enforceable contract for the purchase of Western's stock and there is no guarantee that, if the application of the Santa Fe and the Pennsylvania is denied, the trustees automatically would turn to the Minneapolis as the only remaining prospective purchaser. Furthermore, even if the Minneapolis could prevail upon the trustees to sell their interest in Western, there still would remain a substantial minority of stock in the hands of other holders which the Minneapolis has no assurance that it could acquire. On the present record, it would not be in the public interest to have a minority block of Western stock outstanding in the hands of others.

The Minneapolis relies upon our decisions in *Beaver, M. & E. R. Co. Control*, 158 I. C. C. 219 and 170 I. C. C. 556, as authority for entertaining its application herein. That case involved an application by the Rock Island to acquire control of the Beaver, Meade, & Englewood Railroad Company through the purchase of capital stock and certain other securities. The Missouri-Kansas-Texas Railroad Company intervened in opposition to the Rock Island application and subsequently filed its own application for the same authority. The intervener had no contract with the stockholders or the owners of the securities, both stock and securities being involved in the sale, but offered to pay the same cash price therefor as offered by the Rock Island. After a joint hearing, as here, we authorized, as in the public interest, the Missouri-Kansas-Texas to acquire the control requested. In determining consistency with the public interest and the national transportation policy we are not shackled in a case like this by the first application filed, if there is presented for our consideration at the same time a different proposal which but for the situation created by the first application might easily be accomplished. The public interest is the prime consideration, and in making that determination we must have regard for all relevant factors.

Consistent with the foregoing, we have carefully considered the evidence and arguments presented relating to both the applications before us and conclude upon the basis of the whole record, and as reflected by this report, that the application of the Santa Fe and the Pennsylvania should be granted subject to the conditions previously alluded to herein. With our approval of that application, the possibility of the Minneapolis acquiring the Western's

stock is eliminated and its application becomes moot. Accordingly, the application of the Minneapolis will be dismissed.

We also have considered the request of certain connecting carriers that they be included in the transaction on an equal basis with the successful applicant or applicants and conclude that this would not be in the public interest. Such requests will be denied.

The transaction proposed by the Santa Fe and the Pennsylvania does not contemplate a guaranty or assumption of the payment of dividends or fixed charges, and there will be no increase in total fixed charges.

Findings—We find, subject to the conditions for the protection of railway employees and the maintenance of existing routes and channels of trade referred to herein, that acquisition by The Atchison, Topeka and Santa Fe Railway Company and the Pennsylvania Company, and through the latter by The Pennsylvania Railroad Company; of control of the Toledo, Peoria & Western Railroad Company through ownership of capital stock, in equal amounts, as described herein, is a transaction within the scope of section 5(2) of the Interstate Commerce Act, as amended; that the terms and conditions proposed are just and reasonable; and that the transaction will be consistent with the public interest.

We further find that the application of The Minneapolis & St. Louis Railway Company for authority to acquire control of the Toledo, Peoria & Western Railroad Company, through ownership of capital stock, should be dismissed.

An appropriate order will be entered effective 35 days from the date of service hereof.

Order

At a Session of the Interstate Commerce Commission, Division 4, held at its office in Washington, D. C., on the 31st day of May, A. D. 1957.

Finance Docket No. 18991
Toledo, Peoria & Western Railroad Company Control

Finance Docket No. 19086
Toledo, Peoria & Western Railroad Company Control

Investigation of the matters and things involved in these proceedings having been made, a hearing having been held, and said division, on the date hereof, having made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof:

It is ordered, That, subject to the conditions for the protection of railway employees and the maintenance of existing routes and channels of trade referred to in said report, acquisition by The Atchison, Topeka and Santa Fe Railway Company and the Pennsylvania Company, and through the latter by The Pennsylvania Railroad Company, of control of the Toledo, Peoria & Western Railroad Company through ownership of capital stock, in equal amounts, upon the terms and conditions in said report found just and reasonable, be, and it is hereby, approved and authorized;

It is further ordered, That the request of the Chicago, Rock Island and Pacific Railroad Company and The New York, Chicago and St. Louis Railroad Company, under section 5(2)(d) of the act, for authority to be included on an equal basis in the acquisition of control, through stock

ownership, of the Toledo, Peoria & Western Railroad Company be, and it is hereby, denied;

It is further ordered, That the application of The Minneapolis & St. Louis Railway Company for authority to acquire control of the Toledo, Peoria & Western Railroad Company, through ownership of capital stock, be, and it is hereby, dismissed;

And it is further ordered, That this order shall take effect and be in force 35 days from the date of service hereof.

By the Commission, division 4.

HAROLD D. McCOY,
Secretary.

Order

At a General Session of the Interstate Commerce Commission, held at its office in Washington, D. C., on the 30th day of October, A. D. 1957.

Finance Docket No. 18991
Toledo, Peoria & Western Railroad Company Control

Finance Docket No. 19086
Toledo, Peoria & Western Railroad Company Control

It appearing, That by report and order in the above-entitled proceedings, dated May 31, 1957, the Commission, by division 4, authorized, subject to certain protective conditions, The Atchison, Topeka and Santa Fe Railway Company and The Pennsylvania Company, and through the latter The Pennsylvania Railroad Company to acquire control of the Toledo, Peoria & Western Railroad Company

through ownership of capital stock, dismissed the application of the Minneapolis & St. Louis Railway Company for authority to acquire control of the Toledo, Peoria & Western Railroad Company through ownership of capital stock, and denied the request of the Chicago, Rock Island and Pacific Railroad Company and the New York, Chicago and St. Louis Railroad Company for authority to be included on an equal basis in the acquisition by the Atchison, Topeka and Santa Fe Railway Company and The Pennsylvania Company and through the latter The Pennsylvania Railroad Company of control of the Toledo, Peoria & Western Railroad Company;

It further appearing, That on and after July 24, 1957, the Minneapolis & St. Louis Railway Company, the State of South Dakota, the Chicago, Rock Island and Pacific Railroad Company, and the New York, Chicago and St. Louis Railroad Company filed petitions for reargument and reconsideration of said report and order;

It further appearing, That upon the filing of said petitions and pursuant to section 17(8) of the Interstate Commerce Act the aforesaid order was stayed pending disposition of the matter;

It further appearing, That on August 20 and 21, 1957, The Atchison, Topeka and Santa Fe Railway Company and The Pennsylvania Railroad Company, certain chambers of commerce and communities, and certain municipalities and shippers along the lines of the Toledo, Peoria & Western Railroad Company, the City of East Peoria, and the City of Peoria, filed replies to the aforesaid petitions;

It further appearing, That on and after August 19, 1957, the Chicago, Rock Island and Pacific Railroad Company and the New York, Chicago & St. Louis Railroad Com-

pany, the Railway Labor Executives' Association, and the State of Illinois filed replies to the aforesaid petition of the Minneapolis & St. Louis Railway Company;

It further appearing, That on September 23, 1957, the State of Minnesota and Minnesota Railroad and Warehouse Commission filed a petition for leave to file a petition for reconsideration and concurrently therewith submitted to the Commission a petition for reconsideration;

And it further appearing, Upon consideration of the record herein, and the contentions set forth in said petitions for reargument and reconsideration (including the petition of the State of Minnesota and Minnesota Railroad and Warehouse Commission) and replies thereto, that there has been presented no error of fact or law with respect to the matters complained of by the petitioners, and that no showing has been made warranting reconsideration or further hearing;

It is ordered, That the petition filed by the State of Minnesota and Minnesota Railroad and Warehouse Commission for leave to file a petition for reconsideration be, and it is hereby granted; and that said petition for reconsideration submitted by the State of Minnesota and Minnesota Railroad and Warehouse Commission be, and it is hereby, accepted for filing;

It is further ordered, That the petitions for reargument and reconsideration be, and they are hereby, denied;

And it is further ordered, That said order dated May 31, 1957, be, and it is hereby, made effective 30 days from the date of service of this order.

By the Commission.

HAROLD D. McCOY,
Secretary.

(SEAL)

APPENDIX C

Section 1 of the Sherman Act, as amended (15 U.S.C. § 1):

Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is declared to be illegal: *Provided*, That nothing contained in sections 1-7 of this title shall render illegal, contracts or agreements prescribing minimum prices for the resale of a commodity which bears, or the label or container of which bears, the trade mark, brand, or name of the producer or distributor of such commodity and which is in free and open competition with commodities of the same general class produced or distributed by others, when contracts or agreements of that description are lawful as applied to intrastate transactions, under any statute, law, or public policy now or hereafter in effect in any State, Territory, or the District of Columbia in which such resale is to be made, or to which the commodity is to be transported for such resale, and the making of such contracts or agreements shall not be an unfair method of competition under section 45 of this title: *Provided further*, That the preceding proviso shall not make lawful any contract or agreement, providing for the establishment or maintenance of minimum resale prices on any commodity herein involved, between manufacturers, or between producers, or between wholesalers, or between brokers, or between factors, or between retailers, or between persons, firms, or corporations in competition with each other. Every person who shall make any contract or engage in any combination or conspiracy declared by sections 1-7 of this title to be illegal shall be deemed guilty of a misdemeanor, and, on con-

viction thereof, shall be punished by fine not exceeding fifty thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

Section 7 of the Clayton Act, as amended (15 U.S.C. § 18):

No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.

No corporation shall acquire, directly or indirectly, the whole of any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of one or more corporations engaged in commerce, where in any line of commerce in any section of the country, the effect of such acquisition, of such stocks or assets, or of the use of such stock by the voting or granting of proxies or otherwise, may be substantially to lessen competition, or to tend to create a monopoly.

This section shall not apply to corporations purchasing such stock solely for investment and not using the same by voting or otherwise to bring about, or in attempting to bring about, the substantial lessening of competition. Nor shall anything contained in this section prevent a corporation engaged in commerce from causing the forma-

tion of subsidiary corporations for the actual carrying on of their immediate lawful business, or the natural and legitimate branches or extensions thereof, or from owning and holding all or a part of the stock of such subsidiary corporations, when the effect of such formation is not to substantially lessen competition.

Nor shall anything herein contained be construed to prohibit any common carrier subject to the laws to regulate commerce from aiding in the construction of branches or short lines so located as to become feeders to the main line of the company so aiding in such construction or from acquiring or owning all or any part of the stock of such branch lines, nor to prevent any such common carrier from acquiring and owning all or any part of the stock of a branch or short line constructed by an independent company where there is no substantial competition between the company owning the branch line so constructed and the company owning the main line acquiring the property or an interest therein, nor to prevent such common carrier from extending any of its lines through the medium of the acquisition of stock or otherwise of any other common carrier where there is no substantial competition between the company extending its lines and the company whose stock, property, or an interest therein is so acquired.

Nothing contained in this section shall be held to affect or impair any right heretofore legally acquired: *Provided*, That nothing in this section shall be held or construed to authorize or make lawful anything heretofore prohibited or made illegal by the antitrust laws, nor to exempt any person from the penal provisions thereof or the civil remedies therein provided.

Nothing contained in this section shall apply to transactions duly consummated pursuant to authority given by the Civil Aeronautics Board, Federal Communications Commission, Federal Power Commission, Interstate Commerce Commission, the Securities and Exchange Commission in the exercise of its jurisdiction under section 79 of this title, the United States Maritime Commission, or the Secretary of Agriculture under any statutory provision vesting such power in such Commission, Secretary, or Board.

Section 10 of the Clayton Act, as amended (15 U.S.C. § 20):

No common carrier engaged in commerce shall have any dealings in securities, supplies, or other articles of commerce, or shall make or have any contracts for construction or maintenance of any kind, to the amount of more than $50,000, in the aggregate, in any one year, with another corporation, firm, partnership, or association when the said common carrier shall have upon its board of directors or as its president, manager, or as its purchasing or selling officer, or agent in the particular transaction, any person who is at the same time a director, manager, or purchasing or selling officer of, or who has any substantial interest in, such other corporation, firm, partnership, or association, unless and except such purchases shall be made from, or such dealings shall be with, the bidder whose bid is the most favorable to such common carrier, to be ascertained by competitive bidding under regulations to be prescribed by rule or otherwise by the Interstate Commerce Commission. No bid shall be received unless the name and address of the bidder or the names and addresses of the officers, directors and general managers thereof, if the bidder be a corporation, or of the members, if it be a partnership or firm, be given with the bid.

Any person who shall, directly or indirectly, do or attempt to do anything to prevent anyone from bidding, or shall do any act to prevent free and fair competition among the bidders or those desiring to bid, shall be punished as prescribed in this section in the case of an officer or director.

Every such common carrier having any such transactions or making any such purchases shall, within thirty days after making the same, file with the Interstate Commerce Commission a full and detailed statement of the transaction showing the manner of the competitive bidding, who were the bidders, and the names and addresses of the directors and officers of the corporations and the members of the firm or partnership bidding; and whenever the said commission shall, after investigation or hearing, have reason to believe that the law has been violated in and about the said purchases or transactions, it shall transmit all papers and documents and its own views or findings regarding the transaction to the Attorney General.

If any common carrier shall violate this section, it shall be fined not exceeding $25,000; and every such director, agent, manager, or officer thereof who shall have knowingly voted for or directed the act constituting such violation, or who shall have aided or abetted in such violation, shall be deemed guilty of a misdemeanor and shall be fined not exceeding $5,000 or confined in jail not exceeding one year, or both, in the discretion of the court.

National Transportation Policy (49 U.S.C. preceding § 1):

It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial

regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several States and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions;—all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy.

Section 5(2) of the Interstate Commerce Act, as amended (49 U.S.C. § 5(2))

(2)(a) It shall be lawful, with the approval and authorization of the Commission, as provided in subdivision (b)—

(i) for two or more carriers to consolidate or merge their properties or franchises, or any part thereof, into one corporation for the ownership, management, and operation of the properties theretofore in separate ownership; or for any carrier, or two or more carriers jointly, to purchase, lease, or contract to operate the properties, or any part thereof, of another; or for any carrier, or two or more carriers jointly, to

acquire control of another through ownership of its stock or otherwise; or for a person which is not a carrier to acquire control of two or more carriers through ownership of their stock or otherwise; or for a person which is not a carrier and which has control of one or more carriers to acquire control of another carrier through ownership of its stock or otherwise; or

(ii) for a carrier by railroad to acquire trackage rights over, or joint ownership in or joint use of, any railroad line or lines owned or operated by any other such carrier, and terminals incidental thereto.

(b) Whenever a transaction is proposed under subparagraph (a), the carrier or carriers or person seeking authority therefor shall present an application to the Commission, and thereupon the Commission shall notify the Governor of each State in which any part of the properties of the carriers involved in the proposed transaction is situated, and also such carriers and the applicant or applicants (and, in case carriers by motor vehicle are involved, the persons specified in section 305(e)), and shall afford reasonable opportunity for interested parties to be heard. If the Commission shall consider it necessary in order to determine whether the findings specified below may properly be made, it shall set said application for public hearing; and a public hearing shall be held in all cases where carriers by railroad are involved unless the Commission determines that a public hearing is not necessary in the public interest. If the Commission finds that, subject to such terms and conditions and such modifications as it shall find to be just and reasonable, the proposed transaction is within the scope of subparagraph (a) and will be consistent with the public interest, it shall enter an order appr ving

and authorizing such transaction, upon the terms and conditions, and with the modifications, so found to be just and reasonable: *Provided*, That if a carrier by railroad subject to this chapter, or any person which is controlled by such a carrier, or affiliated therewith within the meaning of paragraph (6), is an applicant in the case of any such proposed transaction involving a motor carrier, the Commission shall not enter such an order, unless it finds that the transaction proposed will be consistent with the public interest and will enable such carrier to use service by motor vehicle to public advantage in its operations and will not unduly restrain competition.

(c) In passing upon any proposed transaction under the provisions of this paragraph (2), the Commission shall give weight to the following considerations, among others: (1) The effect of the proposed transaction upon adequate transportation service to the public; (2) the effect upon the public interest of the inclusion, or failure to include, other railroads in the territory involved in the proposed transaction; (3) the total fixed charges resulting from the proposed transaction; and (4) the interest of the carrier employees affected.

(d) The Commission shall have authority in the case of a proposed transaction under this paragraph (2) involving a railroad or railroads, as a prerequisite to its approval of the proposed transaction, to require, upon equitable terms, the inclusion of another railroad or other railroads in the territory involved, upon petition by such railroad or railroads requesting such inclusion, and upon a finding that such inclusion is consistent with the public interest.

(e) No transaction which contemplates a guaranty or assumption of payment of dividends or of fixed charges, shall be approved by the Commission under this paragraph (2) except upon a specific finding by the Commission that such guaranty or assumption is not inconsistent with the public interest. No transaction shall be approved under this paragraph (2) which will result in an increase of total fixed charges, except upon a specific finding by the Commission that such increase would not be contrary to public interest.

(f) As a condition of its approval, under this paragraph (2), of any transaction involving a carrier or carriers by railroad subject to the provisions of this chapter, the Commission shall require a fair and equitable arrangement to protect the interests of the railroad employees affected. In its order of approval the Commission shall include terms and conditions providing that during the period of four years from the effective date of such order such transaction will not result in employees of the carrier or carriers by railroad affected by such order being in a worse position with respect to their employment, except that the protection afforded to any employee pursuant to this sentence shall not be required to continue for a longer period, following the effective date of such order, than the period during which such employee was in the employ of such carrier or carriers prior to the effective date of such order. Notwithstanding any other provisions of this chapter and chapters 8 and 12 of this title, an agreement pertaining to the protection of the interests of said employees may hereafter be entered into by any carrier or carriers by railroad and the duly authorized representative or representatives of its or their employees.

Section 5(11) of the Interstate Commerce Act, as amended (49 U.S.C. § 5(11)):

The authority conferred by this section shall be exclusive and plenary, and any carrier or corporation participating in or resulting from any transaction approved by the Commission thereunder, shall have full power (with the assent, in the case of a purchase and sale, a lease, a corporate consolidation, or a corporate merger, of a majority, unless a different vote is required under applicable State law, in which case the number so required shall assent, of the votes of the holders of the shares entitled to vote of the capital stock of such corporation at a regular meeting of such stockholders, the notice of such meeting to include such purpose, or at a special meeting thereof called for such purpose) to carry such transaction into effect and to own and operate any properties and exercise any control or franchises acquired through said transaction without invoking any approval under State authority, and any carriers or other corporations, and their officers and employees and any other persons, participating in a transaction approved or authorized under the provisions of this section shall be and they are hereby relieved from the operation of the antitrust laws and of all other restraints, limitations, and prohibitions of law, Federal, State, or municipal, insofar as may be necessary to enable them to carry into effect the transaction so approved or provided for in accordance with the terms and conditions, if any, imposed by the Commission, and to hold, maintain, and operate any properties and exercise any control or franchises acquired through such transaction. Nothing in this section shall be construed to create or provide for the creation, directly or indirectly, of a Federal corporation, but any power granted by this

section to any carrier or other corporation shall be deemed to be in addition to and in modification of its powers under its corporate charter or under the laws of any State.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1958.

No. 552.

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY,

Appellant,

against

UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, ET AL.,

Appellees.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA.

MOTION TO AFFIRM.

The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company, and Pennsylvania Company, appellees in the above entitled cause, move that the judgment of the District Court be affirmed on the ground that the questions presented on this appeal are so unsubstantial as not to need further argument.

STATEMENT OF THE CASE.

This is not a difficult case. Appellant's presentation of it in its Jurisdictional Statement, in addition to being intemperate, is neither fair nor accurate.

A comprehensive recital of the facts is contained in the Report of the Interstate Commerce Commission printed as Appendix B to the Jurisdictional Statement[1] (pp. 55 *et seq.*). *Toledo, Peoria & Western R. Co., Control*, 295 I. C. C. 523 (1957). But for present purposes the essential facts may be concisely stated.

Appellee, The Atchison, Topeka and Santa Fe Railway Company (Santa Fe), on May 26, 1955, contracted, subject to the approval of the Interstate Commerce Commission, to buy from the holders thereof all of the outstanding stock of the Toledo, Peoria & Western Railroad Company (Western.) Subsequently it agreed, also subject to Commission approval, to sell 50 per cent of the Western stock to appellee, Pennsylvania Company, a wholly-owned subsidiary of appellee, The Pennsylvania Railroad Company (Pennsylvania).

At the same time, appellant wanted to purchase all of the Western stock. However, the holders thereof agreed to sell to Santa Fe.

Thereafter, appellees filed a joint application seeking Commission approval under Section 5 (2) of the Interstate Commerce Act for Santa Fe and Pennsylvania Company each to acquire and hold 50 per cent of the Western stock.

1. Numbers in parentheses preceded by "J. S." refer to pages of appellant's jurisdictional statement; those preceded by "Tr." refer to the transcript before the Commission; those preceded by "H." refer to exhibits received by the Commission.

Appellant filed a similar application seeking Commission approval of its proposal.

The two applications were considered at a consolidated hearing before a Commission examiner at Peoria, Illinois. The hearing was an extended one, from February 1 to 14, 1956. Numerous witnesses were heard and many exhibits received in evidence. Several other railroads intervened at that hearing for various reasons not now important because they have not contested the decision of the court below and are not before this Court.

The examiner issued a proposed report recommending approval of the Santa Fe-Pennsylvania acquisition and rejection of appellant's application.

Thereafter, upon exceptions and replies to exceptions to the proposed report, the case was argued orally before Division 4 of the Commission (Commissioners Mitchell, Arpaia, and Winchell). Division 4 issued a comprehensive report approving the application of Santa Fe-Pennsylvania and rejecting that filed by appellant.

The Commission was confronted, for present purposes, with two diametrically opposed plans. That of Santa Fe-Pennsylvania contemplated the continued existence and operation of Western as a separate carrier under its local management. It was supported by many interveners, including the cities and towns served by Western from one end of the line to the other,[2] leading civic and business organizations, shippers located in the area served by Western, and The Railway Labor Executives Association (representing Western's employees). Other shippers, both local and off-line, appeared and testified in support of the Santa Fe-Pennsylvania application.

2 Communities which intervened were, Keokuk, Iowa, and Warsaw, LaHarpe, Lomax, Bushnell, Canton, Peoria, East Peoria, Eureka, Secor, Gridley, Chenoa, Fairbury, Forrest, Gilman, Watseka and Sheldon, Illinois.

Appellant's application, on the other hand, proposed the extinguishment of Western as a separate and independently operated railroad, for it sought to integrate Western into appellant's railroad for ownership, management, and operation. Appellant's proposal was supported only by the states of Minnesota and South Dakota. It was strongly opposed by the State of Illinois. No shippers or local community interests lent their support.

In approving the Santa Fe-Pennsylvania application, the Commission found that "public interest demands that the present policies of Western in all respects be continued." (J. S. 89.) Those policies would only be continued under the Santa Fe-Pennsylvania plan and for that reason appellant's proposal was rejected. *Minneapolis & St. L. Ry. Co.* v. *United States*, 165 F. Supp. 893 (D. Minn. 1958). The Commission expressly found that the policies contemplated by appellant "would be extremely harmful to other carriers" (J. S. 73), and that most of the economies proposed by appellant "would be effected at the expense of Western's employees." (J. S. 74.)

The full Commission denied the reconsideration and reargument sought by appellant, terminating what appellant describes as "a sorry picture of administrative procedure at its worst." (J. S. 13.)

Appellant, as was its right under 28 U. S. C. § 1336, then appealed to a three-judge court.

The court below received comprehensive briefs and heard extended oral argument. It found that the Commission's proceedings complied with applicable law in all respects and concluded that: "The Commission's Order is based on adequate findings supported by substantial evidence in the record before it." Appellant's complaint was, accordingly, dismissed. The court, appellant charges, "abdicated its duty of judicial review and gave a startling example of judicial obeisance to administrative 'expertise'." (J. S. 13.)

In this Court, appellant attempts to present substantially the same questions resolved against it after full consideration and deliberation by the court below.

QUESTIONS PRESENTED.

Appellant's statement of "Questions Presented" is manifestly no more than an outline of argument. Put correctly, the questions presented—such as they are—would more nearly read as follows:

1. Is the order of the Interstate Commerce Commission here involved supported by adequate findings?

2. Are the findings of the Commission supported by sufficient evidence?

3. Was appellant granted the comparative hearing fairly required under the circumstances of this case?

4. Do any of the considerations involved in Section 1 of the Sherman Act and Sections 7 and 10 of the Clayton Act require judicial rejection of the order of the Commission here involved?

5. Was appellant accorded an adequate review by the District Court?

ARGUMENT.

1. THE FINDINGS ARE ADEQUATE AND APPELLANT WAS ACCORDED A COMPARATIVE HEARING.

Appellant's attack on the adequacy of the Commission's findings is closely related to its contention that it was denied a comparative hearing. As there is some duplication in these arguments, both will be discussed here. Questions raised as to the evidentiary support for the findings will be discussed in the next subdivision of this argument.

Appellant begins by citing the substantial evidence rule (*Universal Camera Corp.* v. *N. L. R. B.*, 340 U. S. 474, 488 (1951)); asserts that it "adduced substantial and persuasive evidence" that its plan conformed to applicable statutory standards; and concludes that the Commission was therefore under a "duty" to make ultimate, basic and subsidiary findings in favor of its application (J. S. 14). In presenting this argument appellant misconceives the function of the reviewing court. The court's function is not to retry the case on the merits or to review the evidence to determine what findings should have been made, *i. e.*, to substitute its judgment for that of the Commission on the broad question of the "public interest", which is committed to the Commission by Section 5(2) of the Interstate Commerce Act (49 U. S. C., § 5(2); J. S. 104-107). The court's function is to determine whether the Commission acted within its statutory authority, whether the findings actually made are adequate to support the ultimate conclusion and whether the challenged findings are supported by substantial evidence.

3. Thus in *McLean Trucking Co.* v. *United States*, 321 U. S. 67 (1944), this Court said:

"'The wisdom and experience of that commission,' not of the

This fundamental misconception as to the scope of judicial review apparently has much to do with appellant's charge that the court below abdicated its function.

Adequacy of the Findings.

Appellant says the Commission did not, and could not, make adequate findings to support its decision in favor of Santa Fe and Pennsylvania (J.S. 15); but it does not review the findings actually made. Such a review will demonstrate the lack of substance in the charge that they are inadequate.

The Commission was confronted with two radically different proposals for the future operation of Western's line. Santa Fe and Pennsylvania proposed the continued operation of Western as a separate carrier under its present local management and its present service and traffic policies. Appellant's proposal for integrating Western's line into its own operations necessarily involved the disappearance of Western as a separate and neutral connection for the other 15 carriers with which it presently connects.

In choosing between the two competing applicants, the Commission adopted a standard of public interest which reflected the unique part Western now plays in the nation's transportation system. The key finding was that the "Public interest demands that the present policies of the

courts, must determine whether the proposed consolidation is 'consistent with the public interest.' Cf. *Interstate Commerce Commission v. Illinois Central R. Co.*, 215 U. S. 452; *Pennsylvania Co. v. United States*, 236 U. S. 351; *United States v. Chicago Heights Trucking Co.*, 310 U. S. 344; *Parcell v. United States*, 315 U. S. 381. If the Commission did not exceed the statutory limits within which Congress confined its discretion and its findings are adequate and supported by evidence, it is not our function to upset its order." (321 U. S. at pp. 87-88.) And see *United States v. Pierce Auto Freight Lines*, 327 U. S. 515, 535-536 (1946); *Universal Camera Corp. v. N. L. R. B.*, 340 U. S. 474 at 488 (1951).

Western in all respects be continued" (J. S. 89 and see 65). The Santa Fe-Pennsylvania application was granted because it met this standard and was found to be otherwise consistent with the public interest and in furtherance of the National Transportation Policy (J. S. 82, 93-94). Appellant's application did not meet this standard and was dismissed (J. S. 93-94).

The basis for the finding that public interest demands continued operation of Western under its present policies appears in a number of findings throughout the report. Western's policy is to maintain strict neutrality between all its connections, thus emphasizing its strategic location as an overhead carrier through Peoria, as an alternative route, bypassing the congested terminals of Chicago and St. Louis (J. S. 60). As a result, more than two-thirds of its revenues are derived from overhead or bridge traffic (J. S. 61). "Situated as it is between the Santa Fe at Lomax on the west and the Pennsylvania at Effner on the east, the Western receives its long haul and provides a vital direct link essential to the type of through service which is becoming increasingly important not only to the shipping public but to the railroads as well. Fast, strong, and reliable through transportation service is necessary in order for the railroads adequately to compete with the other modes of modern transportation, and the Western, as a direct east-west line, supplies the short-line connection for providing this through service with a minimum of delay" (J. S. 89).[4]

The finding that public interest demands the continued operation of Western under its present policies reflects the

4 In another recent case, *Illinois-Missouri Terminal Ry. Co., Purchase*, I. C. C. Finance Docket No. 18752, the Commission recognized Western's "particularly important position in the Nation's transportation system" as a "valuable link for transcontinental shipments * * *." (Sheets 43-44 of mimeographed report, dated April 2, 1956.

interests of all parts of the public most directly concerned: off-line shippers using Western as a bridge line for through traffic; the communities along Western's line and local shippers 'who regard the present ready' access to local management as of inestimable value; the other railroad interveners; and Western's employees (J. S. 72, 88, 91). Briefly summarizing the interests of these various parts of the public, the Commission said:

> "Only the Minneapolis and its supporting interveners, the States of Minnesota and South Dakota, advocate the disappearance of the Western as a separate and independent operating carrier. All the other parties to these proceedings, including the railroad interveners, the communities served by the Western, and the shippers who appeared as witnesses, insist that the separate and independent operation of the Western under its present local management is a public necessity." (J. S. 72.)

The basis for approval of the Santa Fe-Pennsylvania application in the light of the above standard of public interest is shown clearly by the findings in the Commission's report. Under their proposal Western would continue to function as a separate carrier under its present local management and under the traffic and service policies which have contributed so much to its success (J. S. 63-64). This plan reflects the natural community of interest resulting from the geographical location of Western as an important link between the Santa Fe on the west and the Pennsylvania on the east in providing fast through service via the Peoria gateway (J. S. 89).[5] Thus Western receives its long haul on traffic interchanged with

5. The importance of this route was convincingly demonstrated by the greatly increased use of Santa Fe and Pennsylvania's connecting services in World War II. Between 1939 and the peak war year, 1944, Western's total traffic increased 62 per cent; its overhead or bridge traffic increased 91 per cent; and its interchange with Santa Fe increased 142 per cent and with Pennsylvania, 105 per cent (H-5, pp. 11-12).

Santa Fe and Pennsylvania, while its interchange with most of its other connections, including appellant, is in the Peoria area at the center of its line (J. S. 89). Much of Western's success as a bridge line dates from the construction of Western's connection with the Santa Fe at Lomax in 1927. Since that time Santa Fe and Pennsylvania have cooperated with Western in coordinating their schedules and services to provide a fully competitive service over Western's route (J. S. 60-61, 91). Service, as the Commission found, is the most important factor affecting the routing of traffic (J. S. 76). As a result, Santa Fe and Pennsylvania account for about 70 per cent of Western's interline traffic and revenues (J. S. 61).

The Commission noted the strong shipper support for the Santa Fe-Pennsylvania application based on this long record of cooperation with Western, as well as the support by the communities along Western's line and by Western's employees (J. S. 88, 91). And the Commission recognized that the self-interest of Santa Fe and Pennsylvania would provide assurance for the continuance of Western's present solicitation and service policies in the future (J. S. 75, 81). The Commission thoroughly analyzed the effect of the acquisition on competing carriers and concluded that there would be no undue curtailment of competition (J. S. 75-82).

The Commission found other advantages in Santa Fe-Pennsylvania control. These included increased traffic for Western under the joint applicants' plan to place Effner and Lomax, where they connect with Western, on a solicitation parity with Chicago; stimulation of industrial development in the area served by Western; technical assistance in the realization of economies in operation; advantages in purchasing; and the assurance of a more adequate supply of freight cars for Western (J. S. 75-76; 78, 90-91, 92).

Turning now to appellant's proposal, the Commission's findings clearly show the basis for its rejection. The Commission found that:

> "The proposal of Minneapolis unequivocally contemplates the disappearance of Western as an independent and neutral connection for the other 15 carriers with which it presently works. Only the corporate existence of Western would remain. For all practical purposes Western would be integrated, consolidated and merged into the Minneapolis for ownership, management, and operation. Western's headquarters and general offices would be moved from the present location at Peoria to the city of Minneapolis, and all policies and directions for the operation of the joint properties would emanate from that point. * * *" (J. S. 71-72).

This is directly contrary to the "standard of public interest" as determined by the Commission. Separate operation of Western is essential if it is to continue to perform its primary function as an east-west bridge line working closely with all its connections. The Commission also found that appellant's plan contemplated the diversion of traffic from Western's other connections, rather than continuance of the policy of working closely with them (J. S. 72-73). While it recognized that substantial economies could be effected under appellant's plan, it found that most of the savings would be "at the expense of the Western's employees" (J. S. 74).

In the light of these findings the District Court properly concluded that it could not substitute its judgment for that of the Commission on the broad policy question of the public interest. These findings reflect full consideration of all elements of the public interest involved—the interests of shippers, both local and off-line, using the services of Western and its connections, of the communities served by Western, of Western's employees

and of the 16 connecting railroads which interchange traffic with Western. And the decision to preserve Western's important function in the nation's transportation system as a separately operated bridge railroad linking the east and the west and working closely with all its connections squares with the objective of the National Transportation Policy to foster sound economic conditions in transportation and among the several carriers, "all to the end of developing, coordinating, and preserving a national transportation system * * * adequate to meet the needs of the commerce of the United States, of the Postal Service and of the national defense" (49 U. S. C. preceding § 1; J. S. 103-104).

Comparative Hearing.

Appellant contends that it was denied a comparative hearing because the Commission failed to make specific findings as to every difference between the two competing applications, citing *Johnston Broadcasting Co.* v. *F. C. C.*, 175 F. 2d 351, 357 (D. C. Cir. 1949). (J. S. 21-22). But the *Johnston* case dealt with two mutually exclusive applications to do the same thing—to operate a new broadcasting station—and an item by item comparison was appropriate to determine which applicant was better qualified. Here the Commission was confronted with two radically different proposals for the future operation of an existing railroad. An item by item comparison was, therefore, impracticable. The controlling question in evaluating the two competing applications was what function Western could best serve in the national transportation system. A similar approach to a somewhat similar problem by the Federal Communications Commission was upheld by this Court in *F. C. C.* v. *Allentown Broadcasting Co.*, 349 U. S. 358, 361-63 (1955).

Appellant contends that the Commission was required to make specific findings as to every detail of its proposal

(J. S. 16-17), but this would have served no useful purpose. As the District Court recognized the detailed description of appellant's proposal with all its claimed advantages makes it entirely clear that these were given consideration (J. S. 50-52, 70-75). Specific findings as to each detail were unnecessary because the entire plan to absorb Western into appellant's railroad was found to be contrary to the controlling public interest in the continuance of Western's present policies as a separately operated bridge carrier working closely with all its connections.

Appellant says the Commission's decision is contrary to the National Transportation Policy because it ignores the criteria of economic and efficient service and that the Commission was under a duty to find the "dollar amount" of the proposed economies (J. S. 22, 14).[6] Economies, however, are only one of the criteria to be considered in acquisition cases. *Virginian Ry. Co. Control*, 117 I. C. C. 67, 75 (1926). Both the National Transportation Policy and Section 5(2)(c) of the Interstate Commerce Act require that the interests of employees, as well as other factors, be considered. Here, the Commission clearly recognized that substantial economies could be realized under appellant's proposal but found that "most of the savings would be effected at the expense of Western's employees" (J. S. 74). In this case the interest of Western's employees in the retention of their jobs happily coincided with the interest of the shipping public, the communities served by Western and Western's other rail connections in its continued operation as a separate carrier under its local management.

6. As a matter of fact, the record would not support a specific finding as to the "dollar amount." It was insisted by appellant's counsel that the record clearly show "that the maximum savings are one thing and the actual program is something else" (Tr. 1315). Appellant's president, who testified as to the program, was unable to indicate how it would actually be worked out, saying that "it would be pretty difficult to go beyond what I have tried to outline and the manner in which we would do this thing until we knew what the situation was" (Tr. 159).

Appellant attacks the concept of separate and independent operation under the control of Santa Fe and Pennsylvania (J. S. 23). But the concept is not new. The Commission has recognized in other cases that separate operation of a controlled carrier under its own local management is an effective factor in preserving existing traffic relationships with connecting lines, and insuring continued neutrality in service.[7] Such separate operation of Western is essential if it is to continue to perform its primary function as an east-west bridge line working closely with all its connections. This was recognized by the Commission as far back as 1924, when it imposed a condition requiring separate operation of the Clinchfield Railway, which was also a bridge line connecting with a number of other railroads. *Clinchfield Ry. Co. Lease*, 90 I. C. C. 112, 132, 133 (1924).

Appellant asserts that the Commission ignored the motivations of Santa Fe and Pennsylvania (J. S. 24). On the contrary, the Commission recognized their perfectly legitimate interest in acquiring control of Western and their self-interest in continuing its present policies (J. S. 61, 75, 81).

Western's line is merely a continuation of Pennsylvania's line from Logansport, Indiana, to Effner and is the sole reason for the existence of the latter. Extending across Illinois between the Pennsylvania on the east and Santa Fe on the west, Western interchanges 70 per cent of its interline traffic and two-thirds of its total traffic with these two roads. It is undisputed that for over

7. *Wabash R. Co. Control*, 247 I. C. C. 365, 370-71 (1941); *Wheeling & L. E. Ry.*, 267 I. C. C. 163, 176 (1946); *Niagara Junction R. Co. Control*, 267 I. C. C. 649, 661, 663 (1947); *D. T. & I. R. Co. Control*, 275 I. C. C. 455, 490, 491-92 (1950); *Pacific Coast R. Co. Control*, 282 I. C. C. 600, 607 (1951).

30 years Santa Fe, Western and Pennsylvania have co operated in coordinating their schedules and service to build up this traffic. It is quite natural, therefore, that Santa Fe and Pennsylvania were interested in continuing this mutually beneficial relationship with Western through the acquisition of the latter's stock when it was put up for sale.

Appellant attempts to raise the ghost of Western's bankruptcy more than 40 years ago under Pennsylvania-Burlington control (J. S. 16); but as subsequent developments have proven, what Western lacked then was an effective connection at the western end of its line to complement the Pennsylvania on the east. The Burlington, with an important line directly into Peoria, had no incentive to support the western part of Western's line. The need for an effective connection on the west was met when the interchange with Santa Fe at Lomax was constructed in 1927. As pointed out in the case authorizing that interchange, "the proposed construction will aid in sustaining that part of the applicant's railroad west of Peoria" (*Construction by T. P. & W.*, 124 I. C. C. 278, 279 (1927)). The soundness of this prediction has been amply demonstrated by the successful growth of Western's traffic in cooperation with Santa Fe and Pennsylvania in the more than 30 years since the construction of the Lomax interchange (J. S. 60-61, 91).[8]

8. Santa Fe has a particularly strong interest in Western's route through Peoria because it does not reach either the Peoria or St. Louis gateways, while its western competitors, the Rock Island and Burlington, serve the Chicago, Peoria and St. Louis gateways directly. The Commission found that the movement of traffic via Western enables Santa Fe to obtain a long haul through Lomax on traffic which might otherwise move via St. Louis; in which event, Santa Fe could receive no haul east of Kansas City and might lose the traffic entirely (J. S. 81). This was recognized in the proceeding involving construction of the interchange at Lomax in 1927, where it was pointed out that "the route to be afforded by the proposed connecting track will permit of longer hauls to [Western] and the Santa Fe." *Construction by T. P. & W., supra*, 124 I. C. C. at 279.

The Commission did not apply different standards to the claims of traffic diversion, as appellant charges (J. S. 25). The facts were different. Not only the Wabash but the Nickel Plate and Rock Island offered evidence as to the effect of appellant's plan on their traffic (Tr. 1500, 1835). Appellant's own traffic vice-president testified that by integrating Western's line into its service, appellant would obtain "new traffic" by diverting it from the Rock Island, Milwaukee, North Western and Burlington (Tr. 1307, 1304, 1305), and by short-hauling the Gulf, Mobile & Ohio, the Chicago & Eastern Illinois, the Illinois Central and the Wabash (Tr. 1303, 1275-76, 1281-82). Appellant would "actively solicit" this traffic to divert it from these lines, all of which are connections of Western (Tr. 1284, 1306). This would be a far cry from Western's present policy of working closely with all its connections.

Referring to its own claims of diversion, appellant says the Commission "dealt with appellant's detailed evidence of the damage it would suffer if Western were owned by Pennsylvania-Santa Fe in the following language" and then proceeds to quote one sentence from the report discussing diversion in general terms (J. S. 25). This statement is somewhat lacking in candor. The Commission devoted five full paragraphs of its report to a specific analysis of appellant's "detailed evidence" of diversion (J. S. 77-79).

Appellant argues further that the Commission found the standard routing conditions, generally prescribed in such cases, would be sufficient to protect the other carriers in the event of a Santa Fe-Pennsylvania acquisition and that they should, therefore, be equally sufficient to protect the other carriers in the event of acquisition by appellant (J. S. 25-

26). This argument ignores the fact that the Commission did not rely solely on the prescribed routing conditions to support its finding, but also on the plan for separate operation of Western under its present policies as embodied in the contract between Santa Fe and Pennsylvania and on the checks and balances inherent in control of Western by an eastern and a western carrier (J. S. 90; and see page 27, *infra*).

Appellant's application was fully considered in the light of the public interest and the particular circumstances of the case; and it was, in no sense, denied a comparative hearing.

2. THE FINDINGS ARE SUPPORTED BY THE EVIDENCE:

Appellant's treatment of its contention that certain findings are not supported by substantial evidence is both sketchy and inaccurate (J. S. 18-21). None of the findings attacked are clearly identified by reference to the report, and what purports to be a paraphrase is often a distortion of the finding actually made. There is no analysis or even reference to all the evidence bearing on the particular findings attacked. Primary reliance is placed on general assertions and on statements taken out of context in an attempt to "manufacture" a supposed conflict.

Thus appellant says the finding that acquisition by Santa Fe and Pennsylvania will not jeopardize its traffic ignores appellant's "unchallenged" accounting studies and the testimony of the successful applicants as to their solicitation policies (J. S. 18). Far from ignoring them, the Commission analyzed in detail each category of appellant's "studies" of alleged diversion along with the evidence as

to solicitation policies and concluded there would be no substantial diversion (J. S. 77-79).

Appellant says the Commission justified the reasonableness of the purchase price for Western's stock on the ground that it was negotiated at arm's length and that appellant was willing to pay as much (J. S. 18); but fails to mention that these were only two of the several factors relied on by the Commission. Appellant says that it was willing to pay $135 per share only because of the economies under its plan for sole control of Western, but fails to advise this Court that it offered to pay $135 per share for a partial interest in Western if any other carrier were authorized to acquire control.[9]

Appellant implies that potential earning capacity was ignored, but the report shows that the Commission considered such factors as Western's earnings record, its excellent physical and financial condition, the valuation of its property for rate-making purposes, its progressive and able management and its strategic location which adds to its value as a long-term investment (J. S. 85-86). While it is true that comparisons of price-earnings ratios were not made, there was no evidence thereof in the record.

Appellant argues that the finding that Santa Fe and Pennsylvania would "permit" traffic through Peoria in competition with Chicago and St. Louis is unsupported by substantial evidence and contrary to the testimony of their presidents (J. S. 19-20). The use of the term "permit"—it was not used by the Commission—ignores the unchallenged finding that all but a very small part of the nation's traffic is routed by the skipper and that service is the most important factor influencing such routing (J. S. 76). We

9. See appellants' petition for reconsideration before the Commission, pp. 49, 50. The fact is that not only the Santa Fe, Pennsylvania and appellant, but four other railroads seeking participation in control under varying circumstances expressed their willingness to pay $135 per share.

have already pointed out that the cooperation of Santa Fe and Pennsylvania with Western for over 30 years in providing fast through service via the Peoria gateway has played a major part in the development of Western's traffic (*supra*, p. 10). As to solicitation policy, the record shows and the Commission found that as owners of Western, Santa Fe will place Lomax on a parity with Chicago, and Pennsylvania, while continuing to solicit its long haul to St. Louis, will place Effner on a parity with Chicago, thus increasing the volume of traffic available for solicitation through Peoria (Tr. 221-22, 243, 378, 416, 1889-90; J. S. 75-76, 78). The testimony on this point by the president of Pennsylvania, when read in its entirety (see Tr. 337-38 as well as 281-82), fully supports the finding as does the testimony of its traffic vice-president (Tr. 378, 416). There is no conflict between this finding and the testimony of Santa Fe's president.[10] As the traffic manager of a large Pacific Coast shipper testified, Santa Fe has in recent years "tended to lean toward Lomax gateway about as freely as they do the Chicago gateway" (Tr. 793).

Appellant next attacks the finding that with the backing of Santa Fe and Pennsylvania and the assistance of their industrial departments, there are excellent prospects for locating new industries on Western's line (J. S. 90-91). But the record is replete with testimony that the ownership of Western by these two strong connections (Tr. 227, 485, 491, 524, 630, 642, 690, 715-16, 734-35, 915, 929, 941, 485, 491, 524, 630, 642, 690, 715-16, 734-35, 915, 929, 941, 952) and the assistance of their industrial staffs (Tr. 358-59, 364-65, 465, 643, 950) would provide an economic stimulus to industrial development along Western's line. Appellant says officers of Santa Fe and Pennsylvania testified that

10. In passing, it should be noted that Santa Fe's president did not, in fact, testify about the influence of the originating carrier. The only transcript reference to his testimony cited by appellant in this connection (Tr. 98 cited at J. S. 20) supports the finding as to the parity policy.

they would prefer to locate industries on their own lines, but the testimony of the officers referred to shows that both Santa Fe and Pennsylvania will have an incentive to assist in locating industries on Western. Santa Fe, because of its late entry into Chicago, is lacking in industrial property, in that area and Pennsylvania, too, is short of industrial sites in Illinois (Tr. 225-26, 378-79).

Appellant attacks the finding with respect to car supply because Santa Fe and Pennsylvania were short of cars in 1955 (J. S. 20). Of course, all roads suffer from lack of cars during periods of general car shortage,[11] but that does not detract from the Commission's finding which was that Santa Fe and Pennsylvania would increase the supply of cars available to Western by seeing to it that Western's car ownership obligations were met in full either by having Western increase its car ownership or by increasing their own ownership sufficiently to take care of Western (J. S. 92). This is supported by the record (Tr. 50-51).

Equally insubstantial is the assertion that the findings regarding appellant's service west of Peoria and its proposed policy toward Western's connections contradict the only evidence in the record (J. S. 20). As to service the record shows (Tr. 1886, H-121) and the Commission found (J. S. 64, 78) that when appellant's line is used as an intermediate carrier between Western at Peoria and the Santa Fe at Nemo, the service is much lower than when traffic is interchanged directly at Lomax between Western and Santa Fe. As to appellant's policy, we have already discussed its plan to divert traffic from Western's other connections if it were authorized to acquire Western (*supra*, p. 16). Obviously this would not be "neutrality". For that matter, under appellant's plan to operate Western

11. Appellant's reports to the Association of American Railroads showed that it was short of cars for most of the year 1955 (H-120; Tr. 1327) and its president admitted that its car ownership was not up to A. A. R. recommendations (Tr. 1192).

as a part of its own line, there would be no "Western" to maintain a policy of neutrality. Appellant's line, now just one of Western's 16 connections, would automatically be favored.

The questions presented on this appeal show no need for a redefinition of the substantial evidence rule, as appellant suggests. The findings attacked are supported not only by substantial evidence, but by the weight of the evidence.

3. SECTION 10 OF THE CLAYTON ACT IS NOT A BAR TO THE PROPOSED ACQUISITION.

Appellant says Section 10 of the Clayton Act has not been construed by this Court (J. S. 27). The answer is, as the District Court recognized, that a definitive construction of Section 10 is unnecessary (J. S. 47). The Commission has authorized Santa Fe and Pennsylvania to acquire joint control of Western by purchase of its stock. If, as appellant contends, such purchase by Pennsylvania Company is prohibited by Section 10 of the Clayton Act because there are directors common to its parent, The Pennsylvania Railroad Company, and Wilmington Trust Company, which holds title to the bulk of the stock as one of the co-trustees of the McNear estate, Pennsylvania Company is expressly relieved from that prohibition by Section 5(11) of the Interstate Commerce Act.[12]

Appellant, ignoring the fact that no stock has as yet been purchased, says the purchase of Western "had its roots" in a "direct unequivocal" violation of Section 10 and contends that the Commission lacks power to "con-

12. Section 5(11) provides that the Commission's authority is "exclusive and plenary" and that all parties to a transaction so authorized are "relieved from the operation of the antitrust laws and of all other restraints, limitations and prohibitions of law, Federal, State or municipal, insofar as may be necessary to enable them to carry into effect the transaction so approved" (49 U. S. C. §5(11); J. S. 108-109).

done" such a violation (J. S. 27). The short answer is that the authority of the Commission is "exclusive and plenary" and that the controlling consideration under Section 5 is the public interest in an adequate transportation system. Since the Commission has determined that the proposed acquisition is in the public interest, Section 5(11) removes any bars to its consummation.

Moreover, there is nothing to condone. Section 10 is not applicable to the facts of the present case. There is no conflict between the Commission's policy under Section 5(2), as reflected in its approval of the Santa Fe-Pennsylvania application, and the policy of Section 10 of the Clayton Act. Section 10 provides, in so far as here pertinent, that no common carrier "shall have any dealings in securities" to the amount of more than $50,000 in any one year with another corporation with which it has officers or directors in common, except upon competitive bidding (15 U. S. C. § 20; J. S. 102-03). Its legislative history shows that the evil Congress intended to forbid was the exploitation of a carrier through improvident dealings in securities with another corporation in which its officers or directors were interested (51 Cong. Rec. 15943 (1914)). *Cf. Re Missouri Pacific R. Co.*, 13 F. Supp. 888 at 892-93 (E. D. Mo. 1935).

Here there have been no "dealings in securities."[13] Pennsylvania Company has purchased no securities from the Wilmington Trust. Prior to the transaction here involved Pennsylvania Company obtained a letter commitment from the trustees for purchase of 26 per cent of Western's stock, but this was later repudiated by the

13. Moreover, as the District Court pointed out, the Wilmington Trust was not acting for itself, but was functioning in a fiduciary capacity as one of the two co-trustees of the McNear estate and in the interest of the beneficiaries of the trust. Thus the situation was not one where the common directors could be enriched (J. S. 46).

trustees when appellant made a higher offer. Then Santa Fe, acting entirely in its own interest, topped appellant's offer and entered into a contract to purchase all the stock held by the trustees. It also contracted to purchase the shares of all the other holders of Western's stock. Finally, Santa Fe entered into a contract with Pennsylvania and Pennsylvania Company providing that the latter should acquire 50 per cent of the stock Santa Fe had contracted to purchase.[14]

Both contracts were expressly conditioned on approval of the transaction by the Commission and the instant application was accordingly filed. In approving the proposed acquisition, the Commission, pursuant to the requirements of Section 5(2), expressly found that the price to be paid for Western's stock was reasonable (J. S. 85-86). With such a finding, the possibility of the purchasing carrier's being milked, either directly or indirectly, by payment of an exorbitant purchase price to a corporation with which it has directors in common is eliminated and the objective of Section 10 of the Clayton Act has been met.

Appellant misses the point entirely when it cites *Central of Georgia Ry. Co. Control*, I. C. C. (Nov. 14, 1938). There the Frisco Railroad had already acquired control of the Central by stock purchase prior to seeking the approval of the Commission as required by Section 5(2) of the Interstate Commerce Act. The Commission denied the application on the ground that:

14. Appellant contends that Santa Fe was acting for Pennsylvania as well as for itself when it contracted to purchase the stock from the trustees, but the Commission specifically found that: "the Santa Fe is the only purchaser of the stock from the trustees and had no commitments to sell any of it to any other railroad. Before offering to sell a portion of the stock to Pennsylvania, several other joint control possibilities were considered and rejected" (J. S. 88). This finding is fully supported by all the testimony of record (Tr. 18, 65-69, 106-112; for corroboration, see II-83). It was given full credence by the hearing examiner (Proposed Report, sheet 26).

> "If Frisco is permitted to retain the fruits of its unlawful conduct, and we sanction such conduct, which we consider to have been in flagrant disregard of the law, others will be encouraged to pursue a like course and to present a *fait accompli* for our approval. Obviously, such is not in accord with the intent of the statute, *i. e.*, that we pass upon 'proposed' acquisitions of control prior to their consummation, including the justness and reasonableness of the terms upon which such control is to be acquired. If the indicated practice were generally followed, the administration of the statute in the public interest would be seriously hindered, if not defeated."

The present case is entirely different. No stock has as yet been acquired. There is no *fait accompli*, approval of which would undermine the administration of the statute. The proposed acquisition has been submitted to and approved by the Commission in advance of consummation. The Commission has found the proposed acquisition to be in the public interest. It has passed on the terms of the transaction and has expressly found the purchase price to be reasonable. In doing so it has also provided full protection against the evil which Section 10 of the Clayton Act was designed to prevent—exploitation of the purchasing carrier through payment of an excessive purchase price for the stock.

4. THE COMMISSION GAVE APPROPRIATE CONSIDERATION TO THE COMPETITIVE EFFECTS OF THE PROPOSED ACQUISITION.

In its argument with respect to Section 1 of the Sherman Act and Section 7 of the Clayton Act appellant refuses to come to grips with either the holding of this Court in *McLean Trucking Co. v. United States*, 321 U. S. 67 (1944), or with the Commission's detailed findings as to the effect of the proposed acquisition on the competitive situation (J. S. 29-34).

In the *McLean* case, this Court held that the "basic determinants" of Commission action in proceedings under Section 5(2) of the Interstate Commerce Act must be the policies expressed in that Act and in the National Transportation Policy (321 U. S. at 79-80). Proposals under Section 5(2) are not to be measured by the general policies of the anti-trust laws; otherwise the provisions of Section 5(11) granting immunity from the anti-trust laws to transactions approved by the Commission would be meaningless (321 U. S. at 85-86). The policy of the anti-trust laws is not to be ignored, however; and it is, therefore, the duty of the Commission to consider the scope and effect of the curtailment of competition which will result from the proposed transaction along with its advantages in the light of the over-all transportation policy (321 U. S. at 86-87).

This is exactly what the Commission did, as the Court below pointed out (J. S. 50). The Commission found that:

> "* * * [T]he benefits to be derived from the operation of the Western under the control of the Santa Fe and the Pennsylvania as proposed will be in furtherance of the overall national transportation policy declared by the Congress, and its consummation will not unduly curtail competition in connection with the other carriers. Compare *McLean Trucking Co. v. United States*, 321 U. S. 67." (J. S. 81-82.)

This finding is supported by numerous subsidiary findings already discussed relating to the public advantages in the control of Western by Santa Fe and Pennsylvania, the benefits they receive from Western's line, and their past relationship with Western, including the part they have played in the development of interchange traffic which now accounts for about 70 per cent of Western's total interline traffic (*supra*, p. 10). A major part of the report deals specifically with the competitive effects of the proposed acquisition on other carriers (J. S. 75-82,

83-85, 90). After a general discussion of the factors affecting the routing of traffic, the Commission carefully analyzed the claims of traffic diversion and concluded that the proposed acquisition would not unduly curtail competition (J. S. 76-77, 77-81, 81-82).

This conclusion is firmly grounded in the economic self-interest of the Santa Fe and Pennsylvania. In the first place, as the report states, Western's success has been built on its present service and solicitation policies; and the best way for Santa Fe and Pennsylvania to assure a substantial return on their investment in Western is to see that Western's management is left free to continue them (J. S. 77).

Next—from the standpoint of service—the Commission emphasized the fact that Western's line is not the only route between the east and the west.[15] The Commission pointed out that if Western were to render poor service to its other connections, it would lose their interchange traffic entirely without any benefit to Santa Fe or Pennsylvania (J. S. 81). A number of large shippers testified that if Western rendered poor service to these other connections, the traffic would go to other available routes which do not include either Santa Fe or Pennsylvania (Tr. 596, 597, 599, 661-63, 690, 773-74).

But the most important factor protecting Western's other connections is the built-in system of checks and balances, which was described by the Commission as follows:

> "* * * No greater protection could be afforded to carriers interchanging traffic with Western than to have ownership divided equally between the largest connecting carrier in the east and the largest one in the west. Under this built-in system of checks and

15. In fact, Western's line is only one of a number of routes through the Peoria gateway. In addition, there are any number of available routes through Chicago and St. Louis which do not include either Pennsylvania or Santa Fe. Tr. 569-70.

> balances, it is inconceivable for the Santa Fe to permit impairment of service or discriminatory solicitation with respect to eastern connections, or the Pennsylvania with respect to western ones * * *." (J. S. 90.)

Thus the Commission's finding that the proposed acquisition would "not unduly curtail competition" is based on practical considerations reflecting the realities of competition in the transportation field.[16] Appellant's argument assumes that the findings are inadequate because they do not deal with the competitive situation in terms of the anti-trust laws. Appellant asserts, without any support authority, that the proposed acquisition would "admittedly" violate the anti-trust laws,[17] and points out that the Commission "did not mention either Section 1 of the Sherman Act or Section 7 of the Clayton Act" (J. S. 30). But the

16. The "built-in system of checks and balances" works in two ways: First, Pennsylvania as an eastern road receives valuable traffic via Western from the latter's connections on the west, such as the Rock Island, Burlington and appellant's line. Santa Fe likewise receives important traffic via Western from eastern roads, such as Nickel Plate and the New York Central. Neither would want Western to be operated in such a way as to lose that traffic (Tr. 53, 365-66, 377).

Second, it is a well-known fact that railroads serving the east-west gateways cannot afford to favor one connection to the detriment of others. This was conceded by appellant's freight traffic manager (Tr. 1215) and is reflected in the policy of the Nickel Plate (Tr. 1503-04). It was recognized by the Commission in *Chicago, Burlington & Quincy R. Co. Control*, 271 I. C. C. 63, 154 (1948).

It would be "suicidal" for Santa Fe and Pennsylvania to join in any attempt to divert traffic from Western's other connections to Santa Fe-Western-Pennsylvania routing. If they attempted this, Santa Fe would antagonize all its other eastern connections and Pennsylvania would antagonize all its other western connections, including not only the lines with which each bridges traffic over Western, but also their connections at other east-west gateways which do not connect with Western (Tr. 223-24, 243).

17. The statement (J. S. 30) that the acquisition would link "two empires," *i.e.*, the Pennsylvania and Santa Fe, overlooks the finding as to the effect of the checks and balances inherent in control by an eastern and a western railroad.

McLean case makes it clear that this is not required. The Commission's report, which was sustained in that case, did not discuss the competitive situation in terms of the anti-trust laws and made no reference to the Sherman or Clayton Acts (*Associated Transport, Inc.—Control and Consolidation*, 38 M. C. C. 137 (1942)). In that case, just as in the present case, the Commission discussed the competitive situation in practical and concrete terms reflecting the evidence of record and its "past experience with transportation operations and analogous transactions." (321 U. S. at 89.)

5. APPELLANT WAS ACCORDED AN ADEQUATE REVIEW BY THE DISTRICT COURT.

The charge that the District Court abdicated its function is without merit (J. S. 34-35). A reading of the opinion below will show that the court carefully considered the questions raised, followed accepted standards of review, and merely refused to substitute its judgment for that of the Commission on matters committed by law to the latter.

CONCLUSION.

We submit that the foregoing arguments show that the District Court ruled correctly on the questions sought to be presented on this appeal, and that the questions are so unsubstantial as not to need further argument. Accordingly, the motion to affirm should be granted.

Respectfully submitted,

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY,

Appellant,

against

UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, ET AL.,

Appellees.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA.

MOTION TO AFFIRM.

The State of Illinois, appellee in the above-entitled case, pursuant to Rule 16, paragraph 1(c) of the Revised Rules of the Supreme Court, respectfully moves to affirm on the ground that the decision of the court below is wholly correct, in accord with all relevant authority and that the questions raised by the Appellant are so unsubstantial as not to require further argument.

STATEMENT.

This controversy, while directly involving the judicial review of an order of the Interstate Commerce Commission, basically concerns the question of the acquisition by the Pennsylvania and Santa Fe of the stock of Western[1] under the statutory standards of Sec. 5 of the Interstate Commerce Act (49 U.S.C. Sec. 5). That section requires that any acquisition "be consistent with the public interest." While initially there were four alternatives presented to the Interstate Commerce Commission,[2] the issue has now been narrowed to two, namely: (1) does the public interest lie in preserving Western's existing transportation function as a bridge-line through the Peoria Gateway by stock ownership by Western's two largest connecting lines, or (2) does the public interest lie in making the future operation of Western a part of appellant's railroad and substantially altering Western's present operation and transportation function?

The State of Illinois has a substantial interest in this proceeding. Western lies almost entirely within Illinois. Its executive office, yards and shops are located in Illinois. Western's employees reside in Illinois. Although Western is primarily a bridge-line, it provides an essential transportation service upon which the communities along its line

1. The interested railroads will be referred to hereinafter as follows: Toledo, Peoria and Western Railroad Company as Western, The Pennsylvania Railroad Company as Pennsylvania, and The Atchison, Topeka and Santa Fe Railway Company as Santa Fe.

2. These alternatives are described at page 64 of the Jurisdictional Statement. They included: (1) joint control by Santa Fe-Pennsylvania, (2) sole control by appellant, (3) multiple ownership, and (4) denial of both applications or dismissal of appellant's applications.

are completely dependent.[3] Its function as a bridge-line provides the communities along its line a type of service which would otherwise not be economically justified. This is particularly true as to the line west of Peoria.

The interests of the States of South Dakota and Minnesota involved in this proceeding are, at best, remote and indirect. They are based upon the unwarranted assumption that appellant's traffic would be diverted under Santa Fe and Pennsylvania's control of Western and upon the equally unwarranted assumption that appellant's absorption of Western would result in a consequential benefit to them. Unlike the conditional nature of these interests, the interests of the State of Illinois are directly and immediately affected by the admitted loss of existing benefits inherent in appellant's absorption of Western into its operations. Such losses are involved in the alteration of Western's existing transportation function, the abandonment of Western's executive offices, yards and shops at Peoria, and the effectuation of substantial reductions in personnel and cutbacks in spending within the State of Illinois.

Illinois has a direct interest in the economy of the area of Central Illinois served by Western. That interest is manifest in the continued agricultural and industrial development of that area, in the economy of the City of Peoria and the Peoria area, the continued present and further development of railroad service to the communities along Western's line, the development of Peoria as a major rail

3. All of the communities along the line of Western intervened in the proceedings before the Interstate Commerce Commission and the United States District Court in support of Santa Fe-Pennsylvania control. These communities are: the City of Peoria, the City of East Peoria, the City of Bushnell, the City of Canton, the City of LaHarpe, the Village of Lomax, the City of Warsaw, the City of Forrest, the City of Fairbury, the City of Gridley, the City of Gilman, the City of Sheldon, the City of Watseka, the City of Eureka, the Village of Secor, the City of Washington and the City of Chenoa.

gateway, and finally but of major consequence in Western's employees. Each of these interests are directly related to the preservation of Western's existing transportation function and its continued development as a bridge-line in transcontinental traffic. The disadvantages inuring to each of these points of interest by altering Western's existing transportation function under appellant's proposal is apparent and provided the basis for the State of Illinois' participation in this proceeding before the Interstate Commerce Commission, the District Court and now the State's participation in this appeal.

In dealing with the questions put by appellant, the State of Illinois will confine its argument to only the questions which relate to the interest of the State.

ARGUMENT.

I.

THE ADEQUACY AND SUBSTANTIALITY OF THE FINDINGS.

A. The Adequacy of the Findings.

First: Appellant argues that its absorption of Western and the consequent realization of operating economies and the institution of improved service via the combined property "entitled" it to the Commission's approval in preference to the Santa Fe-Pennsylvania plan which proposed no large-scale economies or changes in service. Thus only appellant's plan is said to have "conformed" to Section 5 of the Interstate Commerce Act and the National Transportation Policy. What appellant is saying, in effect, is that under the governing standards of Section 5 and the objectives of the National Transportation Policy, the Commission is required to approve a proposal involving substantial economies and "improved" service regardless of the consequences of such proposals and irrespective of the merits of another proposal which does not involve the achievement of large scale economies or new service. This is simply not so.

Appellant's argument ignores both the fact that the application of the standards of Section 5 may vary with the circumstances of each proceeding, and that the several objectives of the National Transportation Policy may, in their application to any proceeding, be mutually exclusive. The argument, furthermore, ignores that the Commission expressly found that the changes in service proposed by appellant would be "extremely harmful" to other carriers'

4. Juris. St., pp. 72-73.

and that the economies which might be achieved would be effected at the expense of Western's employees.[5] Both of these findings illustrate that, in evaluating a proposal such as this, the scope of the Commission's discretion under Section 5 is broader than appellant suggests. Section 5(2)(c) of the Interstate Commerce Act, specifically directs the Commission to give weight to the effect of a proposal upon the interests of the carrier employees affected.[6] Such consideration is directed to the merits of the proposals since labor is part of the "whole public" included in the concept of the public interest under Sec. 5.[7] The State of Illinois has a special interest in the 256 families who would be displaced through Western's absorption by appellant, and Illinois' participation in the proceeding before the Commission reflects this concern. The Commission weighed the possible economies against the interests of Western's employees and concluded that the employees' interests, the interests of the communities, shippers and other parts of the public affected by the proposal outweighed the possible achievement of economies under the circumstances presented in this proceeding.

In evaluating a proposal such as this, the Commission is further directed under Section 5(2)(c) to give weight to the effect of the transaction upon adequate transportation service to the public. In the application of this standard,

5. Juris. St., pp. 73-74.

6. It should be noted that the Railway Labor Executive Association intervened in the proceeding before the Commission in support of Santa Fe-Pennsylvania control of Western on the ground that the interests of labor would be fully recognized under such control.

7. In *Florida East Coast Railway Company Reorganization*, 267 I. C. C. 295 (1947) at page 325, the Commission said: "In cases heretofore decided, we have stated that the public interest embraces the whole public and the public as a whole, and that the interests of employees in changes of management, ownership, or operation of companies by which they are employed are of public as well as private interest."

the Commission also found that the value of the new service routes proposed by appellant via the combined operation would be outweighed by the adverse effect which the institution of such routes would have upon other carriers and the ability of such carriers to continue to provide adequate transportation service to the public. This consideration also underlies the Commission's basic finding that the public interest requires that Western's existing transportation function be retained. Sec. 5, on its face, and its application by the Commission in this proceeding, in accordance with the National Transportation Policy, indicates clearly that the "public interest" is not limited to the effectuation of economies and new service regardless of the consequences of such proposals.

Second: Appellant argues that there were no ultimate, basic or factual findings contained in the Commission's report sufficient to justify approval of the Santa Fe-Pennsylvania proposal or rejection of appellant's plan. An objective analysis of the report, however, indicates that findings were made as to all of the material issues, that such findings are sufficient to satisfy the requirements of Section 8(b) of the Administrative Procedure Act, 5 U. S. C. Sec. 1007, and that the findings reveal the "essential basis" of the Commission's decision in a manner which adequately lends the decision to effective judicial review. *Luckenbach S. S. Co., Inc.* v. *United States*, 122 F. Supp. 824, 827 (D. C. S. D. N. Y., 1954); *Capital Transit Co.* v. *United States*, 97 F. Supp. 614, 621 (D. C. D. C., 1951); *Alabama G. S. R. Co.* v. *United States*, 340 U. S. 216, 227-28 (1951).

The ultimate finding is contained in the Commission's conclusion that the Santa Fe-Pennsylvania proposal to preserve Western's existing transportation function was "consistent with the public interest," (the statutory standard of Sec. 5(2)) and that the benefits to be derived

from the operation of Western under Santa Fe-Pennsylvania's proposal would be "in furtherance of the overall National Transportation Policy declared by the Congress."[9] The basic finding was that the public interest required that Western's existing transportation function "in all respects" be preserved.[10]

The need for retaining Western's existing transportation function as expressed in the basic finding, in turn, rests upon the following subsidiary evidentiary findings: (1) that Western occupies a geographically strategic position;[11] (2) that Western performs a strategic function as an overhead carrier operating through the alternative Peoria Gateway, bypassing the congested terminals of Chicago and St. Louis;[12] (3) that Western's function as an overhead carrier and its existing traffic policies of (a) maintaining strict neutrality between its sixteen connecting lines and (b) attempting to participate in a haul of traffic no matter how slight, are a natural result of and are directly related to Western's strategic geographic position and account for Western's success;[13] (4) that, as a consequence of Western's strategic position, the function which it serves, and its traffic policies, Western has assumed national importance in the Nation's railroad system as a "vital direct link" supplying the "short-line connection" as to east west traffic;[14] (5) that Western's existing function and its traffic policies thus make available Western's natural advantages to the maximum number of its connecting railroads;[15] and that (6) the retention of Western's ex-

14. Juris. St., p. 89.
15. Juris. St., p. 89.

isting transportation function and the preservation of its existing policies have significant consequences both to the railroad industry as well as the public generally.[16] The Commission found furthermore, that, with the exception of appellant and the States of South Dakota and Minnesota, its conclusion that the retention of Western's existing function was essential to the public interest was shared by all of the parties to the proceeding, including all of the railroad intervenors, all of the communities served by Western and all of the shippers who appeared in the proceeding as witnesses.[17] These ultimate, basic and evidentiary findings are all directly related to the standards contained in Sec. 5 and to the objectives of the National Transportation Policy.

Having before it two proposals, only one of which was predicated upon the retention of Western's existing transportation function, it would have been unnecessary for the Commission to make any additional evidentiary findings other than to give expression to the fact that the appellant's plan "unequivocally" contemplated the abandonment of Western's existing transportation function, and that the Santa Fe Pennsylvania plan coincided with the basic finding and otherwise complied with the public interest.[18] The Commission went a great deal further in making findings, however, and dealt with both proposals on the merits. These findings will be discussed in the reply to the second question put by appellant relative to the alleged failure of the Interstate Commerce Commission to accord a comparative hearing.

16. Juris. St., p. 89
17. Juris. St., p. 72
18. Juris. St., p. 71

B. Substantiality of the Evidence.

Third: Appellant argues that the findings which were made are not supported by substantial evidence. In attempting to obtain a judicial re-evaluation of the weight to be accorded the evidence relating to these findings, appellant distorts both the nature of the findings and the record. In an effort to manufacture conflicts between the findings and the record, appellant uses statements of the officers of Santa Fe and Pennsylvania which are taken out of context in which they appear and, in effect, puts in issue the credibility of those officials.

One of the findings attacked by appellant is that industrial development along Western's line will be furthered as a consequence of Santa Fe-Pennsylvania's control. Another attacked finding which is closely related to industrial development is that under Santa Fe-Pennsylvania's control, Western would have an increased opportunity to secure traffic now moving via other gateways. The State of Illinois has a substantial interest in each of these objectives. The development of the Peoria Gateway and the stimulus to further industrial development along Western's line inherent in Santa Fe and Pennsylvania's control of Western provide the principal bases upon which the municipalities and business associations[19] along Western's line unanimously predicated their support for the Santa Fe-Pennsylvania proposal. The witnesses representing each of these interests recognized that the very fact of Santa Fe and Pennsylvania's owner

19. The municipalities affected by this proceeding are named in the footnote at page 3, *supra*. In addition to the municipalities along Western's line, various civic and business associations also intervened in support of Santa Fe and Pennsylvania's control of Western. They included the Peoria Association of Commerce and Industry, the Peoria Junior Chamber of Commerce, Bushnell Chamber of Commerce, Canton Chamber of Commerce, LaHarpe Golden Rule Club, Keokuk Chamber of Commerce and Warsaw Chamber of Commerce. No mention is made of these interests in the Jurisdictional Statement.

ship of Western would itself provide a strong inducement for the location of new industries in the area it serves (R. 485, 491, 524, 630, 642, 690, 715-16, 734-35, 915, 929, 941, 952). The achievement of this objective, therefore, is not dependent upon anything which either the Santa Fe or Pennsylvania might do in connection with the location of specific industries along Western.

Appellant, moreover, distorts both the finding and the record regarding industrial development by suggesting that a conflict exists between the finding and the testimony of the officials of Pennsylvania-Santa Fe that they would locate on Western only such industries as they could not locate on their own lines. The Commission's finding does not suggest that either Santa Fe or Pennsylvania will treat Western on a parity with their own lines in the location of industries.[20] The finding merely reflects the fact that the industrial development departments of both roads will assist Western in locating industries on its line. This is based in part upon the fact that both Santa Fe and Pennsylvania are short of available industrial sites in Illinois. There is substantial evidence to support this finding (R. 358, 378-79, 49, 225-26, 227, 364-65).

Appellant's argument regarding the finding concerning the development of the Peoria Gateway under Santa Fe and Pennsylvania's control of Western involves a similar distortion of both the record and the findings. Appellant's statement of the finding is completely distorted in that it assumes that the movement of traffic over Western's route is detrimental to the interests of Santa Fe and Pennsylvania. The Commission made no such finding. The Commission did find that, based upon (1) both Santa Fe and Pennsylvania's past solicitation policies of working closely with Western,[21] (2) the mutu-

20. Juris. St., pp. 90-91.
21. Juris. St., p. 75.

ality of interests among Santa Fe, Pennsylvania and West ern in the Peoria Gateway,[22] (3) the cooperation accorde Western in coordinating schedules and services,[23] and (4 the economies of Santa Fe and Pennsylvania's control,[2 Western would have an increased opportunity to secur traffic moving via other gateways.[25] In addition to this the detailed discussion of the competitive consequences o Santa Fe and Pennsylvania's control of Western full supports this finding and provides adequate assuranc that Santa Fe and Pennsylvania would not and could no stifle competition via the Peoria Gateway.[26]

II.

THE FAILURE OF THE INTERSTATE COMMERCE COM MISSION TO ACCORD A COMPARATIVE HEARING.

Appellant argues that the Commission failed to "com paratively" consider its proposal for its acquisition o Western. This question is really a restatement of th first question put by appellant relative to the adequac of the findings. As shown in the reply to that question, th Commission made adequate ultimate and basic finding which were supported by evidentiary findings. All of thes findings established that the public interest required the re tention of Western's existing transportation function. Be cause of the nature of the two proposals, it was unnecessar for the Commission to make any additional findings excep to reflect the fact that appellant's proposal was inconsisten with the achievement of this objective while the Santa Fe-Pennsylvania's proposal was in accord with it an was otherwise consistent with the public interest.

22. Juris. St., p. 75.
23. Juris. St., p. 60.
24. Juris. St., p. 75.
25. Juris. St., p. 75.
26. Juris. St., pp. 75-82.

Appellant's and Santa Fe-Pennsylvania's proposals were wholly dissimilar in their nature. This proceeding was, therefore, quite unlike the case upon which appellant relies, involving multiple mutually exclusive applicants in a licensing proceeding before the Federal Communications Commission, where the scope of the variance on the merits of the proposals is exceedingly narrow. In proceedings of that nature, it may be necessary for the administrative body to make extensive findings on the merits of the proposals in order to provide a basis for effective judicial review. Such a need for findings on the merits of the proposals does not exist in a proceeding such as this where (1) the objective sought to be attained by the administrative body is arrived at wholly apart from the specific context of any one of the proposals, (2) the basis for arriving at the objective is expressed in adequate findings, (3) the objective falls within the scope of the governing legislative standards, and (4) when the objective is related to the specific context of the several alternative proposals before the administrative body, only one of the proposals is consistent with the attainment of that objective.

As hereinbefore pointed out, the Commission made adequate findings to support the ultimate objective that the transaction which it approved was "consistent with the public interest." However, not only were the findings on the merits of the Santa Fe-Pennsylvania proposal set out but the Commission made findings on the merits of appellant's proposal. Appellant affirmatively predicated its case upon the achievement of economies which allegedly would result from its absorption of Western, and upon the establishment of new service routes via the combined properties. The Commission made specific findings on the merits of both of these proposals. It found that the economies would be achieved at the expense of labor[27]

27. Juris. St., pp. 73-74.

and that the proposed new service would be harmful to other carriers.[28] The extensive consideration accorded appellant's affirmative proposals is reflected in the detailed analysis of its plan for control contained in the report.[29] Appellant also predicated its proposal, in part, upon the alleged diversion of its traffic under Santa Fe and Pennsylvania's control of Western. This too was adequately considered by the Commission as is evident by the detailed findings contained in the report.[30]

Thus it is apparent from the findings that the Commission fully considered the merits of both proposals in arriving at its conclusion concerning the public interest.

CONCLUSION.

The motion to affirm should be granted. The grounds upon which the District Court's decision rests are fully sustained on appeal.

Respectfully submitted,

LATHAM CASTLE,
Attorney General of the State of Illinois,

OCTOBER TERM, 1958.

No. 552.

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY, APPELLANT,

VS.

UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION ET AL., APPELLEES.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA.

MOTION TO AFFIRM ON BEHALF OF MUNICIPALITIES AND SHIPPERS ALONG THE LINES OF TOLEDO, PEORIA & WESTERN RAILROAD COMPANY.

These intervening appellees,[1] pursuant to Rule 16, paragraph 1(c) of the Revised Rules of the Supreme Court,

[1] The City of Peoria, Illinois, the City of East Peoria, Illinois, the Peoria Association of Commerce, the City of Bushnell, Illinois, the Bushnell Chamber of Commerce, the City of Canton, Illinois, the Canton Chamber of Commerce, the City of LaHarpe, Illinois, the LaHarpe Golden Rule Club, the Village of Lemax, Illinois, the City of Keokuk, Iowa, the Keokuk Chamber of Commerce, the Keokuk Bridge Commission, the City of Warsaw, Illinois, the Warsaw Chamber of Commerce, the City of Forrest, Illinois, the City of Fairbury, Illinois, the City of Gridley, Illinois, the City of Gilman, Illinois, the City of Sheldon, Illinois, the City of Watseka, Illinois, the City of Eureka, Illinois, the Village of Secor, Illinois, the City of Washington, Illinois, and the City of Chenoa, Illinois. All of said appellees will hereinafter be referred to as "these intervening appellees".

move that the judgment of the United States District Court for the District of Minnesota be affirmed on the ground that the questions on which the decision of the cause depends are so unsubstantial as not to need further argument.

STATEMENT OF THE CASE.

1. Intervening Appellees Identified:

This motion is submitted jointly on behalf of the 18 municipalities, the 6 civic and business associations and the Keokuk Bridge Commission of Keokuk, Iowa, which are referred to by appellant in its description of the proceedings before the Commission as "certain other bodies" which intervened in support of Santa Fe and Pennsylvania's control of Western.[2] Collectively, these intervening appellees represent virtually every municipal, civic, business and shipping interest along the lines of the Toledo, Peoria & Western Railroad Company.[3]

2. Interests of Intervening Appellees:

Because of appellant's inadequate characterization of the scope of the interests represented by these intervening appellees, it would appear desirable to define these interests. The interest of these intervening appellees in this proceeding evolves out of the concern which they share for the economic and commercial welfare of the area in Central Illinois served by Western, of which the City of Peoria is the commercial and industrial center. Specifically, the interests of these intervening appellees include

---

2 Jurisdictional Statement, p. 11

3 Hereafter called Western. The Atchison, Topeka and Santa Fe Railway Company will be referred to herein as Santa Fe and the Pennsylvania Railroad Company will be referred to as Pennsylvania.

(1) their interest in preserving and developing adequate transportation service in this area, (2) their interest in maintaining and extending the total transportation plant available in the Peoria area, (3) their interest in the welfare of the employees in the transportation industry in this area,[4] (4) their interest in the continued further industrial development of the Peoria area and in the area along the line of Western, the achievement of which objective is so closely related to transportation, including (a) the location of new industry, (b) expansion of existing plant and (c) diversification of industrial lines, and (5) their broad interest in the economic stability of the area generally which is so vitally affected by a basic industry such as transportation.

3. Position of Intervening Appellees:

These intervening appellees intervened in Interstate Commerce Commission Finance Docket 18991 in support of the application of Santa Fe and Pennsylvania for joint control of Western.[5] They intervened in Interstate Commerce Commission Finance Docket 19086 in opposition to appellant's application for control of Western. These intervening appellees opposed at the hearing, upon brief, exceptions and oral argument before the Commission and on appeal to the District Court, appellant's proposal and the request of certain railroads for multiple ownership.

4. It should be noted that the Railway Labor Executives Association intervened in support of joint control by Santa Fe and Pennsylvania on the ground that the interests of Western's employees would be given full recognition under their proposal.

5. Direct participation in control was sought by the New York, Chicago & St. Louis Railroad Company and the Chicago, Rock Island & Pacific Railroad Company; also, Chicago, Burlington & Quincy Railroad Company and Wabash Railroad Company applied for participation in control in the event the Commission extended control to the two former railroads.

4. Basis for Position:

These parties supported the application of Santa Fe and Pennsylvania for joint control of Western on the following grounds:

1. It will insure continued separate operation of Western under its present management with its executive offices and terminal facilities located in the Peoria area;

2. It will preserve intact all of the positive benefits accruing to these communities by the continued maintenance and preservation of Western's basic function as an important link in transcontinental traffic;

3. It will best assure the continued growth and development of Peoria as a railroad gateway;

4. It will best assure the continued growth and development of Western;

5. Such control and the benefits which will inevitably flow as a consequence of ownership by Santa Fe and Pennsylvania will provide the greatest single impetus which this area could receive to an expanding economy by the further industrial development of the Peoria area as well as the entire area served by Western.

These parties opposed appellant's application for control of Western on the following grounds:

1. Such control would forever foreclose to the Peoria area the realization of the positive benefits described above which would flow as a consequence of the joint control by Santa Fe and Pennsylvania and the continued development of Western as a major link in transcontinental rail traffic;

2. Such control admittedly would visit serious economic consequences upon these communities and

particularly the Peoria area by a permanent loss of an annual payroll of over one and one quarter million dollars and a loss of employment affecting 256 families;

3. Such control would result in a substantial reduction of the total transportation plant and facilities available to the Peoria area by major abandonments of yards, shops and offices;

4. Such control, with the curtailment of existing transportation plant and personnel and particularly the shift in orientation of Western's function as a major link in transcontinental traffic, would make the Peoria area and the area served by Western less attractive as a site for plant expansion and for the location of new industry.

5. Significance of Participation by the Parties Herein:

The complete unanimity of opinion by those most vitally affected by a change in Western's control is a highly significant factor in this proceeding. Appellant cannot dismiss the importance of this fact in its reply, by contending that the interests of the parties herein reflect the typical chamber of commerce reaction to a business merger which may be disadvantageous to a community. Too broad a range of interests, both geographic and economic, are involved herein. The Commission, in defining the concept of the public interest under Section 5(2) has stated that "consideration must be given to the public affected by the transaction and the effect of the proposal upon all parts of the public which would be so affected". *C., B. & Q. Railroad Control*, 271 I.C.C. 63, at p. 146 (1948); *Detroit Toledo & Ironton R. Co. Control*, 275 I.C.C. 455, 488 (1950). These intervening appellees constitute that part of the public which is most directly affected by the transaction.

ARGUMENT.

The questions involved in this proceeding include matters lying peculiarly within the domain of transportation law with which these intervening appellees are not prepared to deal. We will leave, therefore, to counsel for the government, Santa Fe and Pennsylvania those matters which might be more competently treated by them. One area wherein these intervening appellees do, with some degree of justification, feel a sense of special competency lies in the questions which have been raised concerning the alleged invalidity of the Commission's order on the ground that no benefits to the public interest contemplated by the Interstate Commerce Act or the National Transportation Policy will flow from the proposed acquisition by Santa Fe and Pennsylvania of Western, and in the alleged invalidity of the findings respecting the specific benefits to the public interest which will inure from such control. For it is precisely in this respect that the parties herein, the cities, shippers and business associations along the lines of Western, have a special interest in the outcome of this proceeding. This is the very basis upon which these intervening appellees predicated their support of Santa Fe-Pennsylvania control and justified their opposition to appellant's control. Our reply to the Jurisdictional Statement will, therefore, be limited to these issues.

I.

The Lack of Substance As to the Questions Put by Appellant Regarding the Adequacy of the Findings.

Appellant misconceives the function of judicial review of an administrative decision when it suggests that it would

be "entitled" to the Commission's decision because of the grounds upon which appellant rested its proposal." This fundamental misconception of the function of the District Court underlies its entire Jurisdictional Statement. It has been clearly established that the reviewing court must review the decision on the basis of the grounds upon which it rests and not upon any other or alternative grounds or standards in inquiring into the adequacy of the findings. If substantial evidence supports such findings, the court cannot substitute its own judgment even where it may not have made a similar decision. *I. C. C. v. Union Pacific R. R. Co.*, 222 U.S. 541 (1912).

The purpose of providing adequate findings is to afford a basis for the exercise of judicial review. In order for the court to discharge its function, it is only necessary that the "essential basis" of the administrative decision be set out in order that the factual and legal basis upon which it has proceeded is "amply clear". *Capital Transit Co. v. U. S.*, 97 F. Supp. 614, 621 (D.C.C. 1951). In testing the adequacy of the findings upon the basis of the grounds upon which the decision rests, it seems abundantly clear that no reasonable question can be said to exist with respect to the adequacy of the findings relative to the basis upon which the Commission approved the Santa Fe and Pennsylvania's plan and rejected appellant's proposal.

The findings upon which the decision rests are related both to the standards of Section 5 and the National Transportation Policy. Appellant's proposal was thus rejected on the ground (1) that it contravened the public interest in the continued retention of Western's existing policies,[7] (2) that it contravened the interests of labor under Section

---

6. Jurisdictional Statement, p. 14.

7. Commission's Report, Jurisdictional Statement, p. 71.

5(2)(c),[8] and (3) that its traffic policies would harm other carriers[9] and thus be opposed to the consideration the Commission must accord this factor under Section 5 (2)(c).[10] This is consistent with the interests of appellees, the shippers, municipalities and business associations along Western's line. It was also consistent with the interests of labor, the other railroad intervenors, and the off-line shippers who use Western as a link in transcontinental traffic. No purpose would be served by a detailed outline of the Commission's findings upon which approval of Santa Fe and Pennsylvania control was predicated. These findings underlie the entire report.

II.

The Lack of Substance As to the Question Put by Appellant Regarding the Failure of the Interstate Commerce Commission to Accord Appellant a Comparative Hearing.

A fair reading of the Commission's report in its entirety indicates clearly the lack of substance in appellant's argument that it was not accorded a comparative hearing.[10] Appellant ignores what the Commission did as reflected in its report and undertakes to attack the subjective mental processes by which the decision was reached. Thus, appellant argues that the Commission reached its ultimate conclusion "at the outset" without a comparative consideration of appellant's proposal.[11] Appellant then inconsistently argues that in its evaluation of the two proposals, the Commission applied "different standards".[12]

---

8. Commission's Report, Jurisdictional Statement, p. 74.
9. Commission's Report, Jurisdictional Statement, p. 73.
10. Jurisdictional Statement, pp. 21-26.
11. Jurisdictional Statement, p. 23.
12. Jurisdictional Statement, p. 25.

These intervening appellees cannot reply to such an argument based as it is upon the subjective mental processes of the Commission. These intervening appellees can only deal with the objective standards reflected in the report. By these objective standards, it is clear that (1) the Commission preliminarily defined its function to include a comparative evaluation of both applications on the merits,[13] (2) the Commission did, in fact, fully discuss and evaluate all of the principal aspects of appellant's proposal on its merits,[14] and (3) that the Commission made specific findings on the merits of appellant's proposal.[15]

The Commission initially undertook to define its function in this proceeding to include a comparative evaluation of both applications in order to arrive at a decision as to which of the alternatives before it was most consistent with the public interest.[16] The Commission's function was defined as follows: (1) to arrive at a standard of public interest; (2) in arriving at a standard of the public interest, to analyze each application in relation to the other, as well as to the other interests; and (3) then determine which of the alternative plans of control most nearly approximates that standard.

Having first defined its function to include a comparative consideration of appellant's proposal, the Commission then proceeded to evaluate all of the aspects of appellant's proposal. The report shows that, in arriving at a standard of the public interest, the benefits and detriments of both applications were thoroughly considered.

---

13. Commission's Report, Jurisdictional Statement, p. 65.
14. Commission's Report, Jurisdictional Statement, pp. 70-75.
15. Commission's Report, Jurisdictional Statement, pp. 70-75.
16. Commission's Report, Jurisdictional Statement, p. 65.

This is evident by the extended discussion of appellant's proposal which followed. Appellant, nevertheless, asserts that the Commission ignored the "critieria of economies and efficient service" which have been deemed to relate to Section 5 and the National Transportation Policy. Since the Commission reached a decision that a consolidation or unification of Western was not in the public interest, it was unnecessary for the Commission to find that these considerations, upon which appellant relies, constituted the determinative elements of the public interest involved in this proceeding. To assert, as appellant has, that these objectives constitute the exclusive criteria of Section 5 and the National Transportation Policy is to foreclose the possibility of the Commission's approval of an acquisition of control under Section 5 of any proposal which does not contemplate a merger on unification.

The fact is, however, that the Commission made specific findings in this proceeding that the two criteria which were relied upon by appellant would, under the circumstances of this proceeding, be opposed to the public interest. Thus, the Commission found that most of the estimated economies would be secured at the expense of Western's employees.[17] The Commission found, furthermore, that the service policies which would be adopted under unified operations would be "extremely harmful to other carriers".[18]

17. Commission's Report, Jurisdictional Statement, pp. 73-74.

18. Commission's Report, Jurisdictional Statement, pp. 72-73.

III.

The Lack of Substance As to the Questions Put by Appellant Regarding the Substantiality of the Evidence As to the Findings.

A. Increased Car Supply.

The interests represented by these intervening appellees, the communities and shippers along Western's line, have a substantial interest in Western's car supply. Appellant argues that the finding that Santa Fe and Pennsylvania control of Western would result in an increased car supply for Western is not supported by the evidence because Santa Fe and Pennsylvania have experienced car shortages.[19] Appellant has experienced similar periods of car shortage (Tr. p. 1327). The problem of periodic periods of car shortages, however, is national in scope and is wholly unrelated to this finding. The record on this point is clear. In the first place, it was established that Santa Fe and Pennsylvania would increase Western's car supply by bringing Western's car-ownership to a proper level to accommodate the anticipated increase in originated traffic resulting from increased industrial development along Western's line (Tr. pp. 879-80).[20] Secondly, as joint owners of Western, Santa Fe and Pennsylvania would make a greater number of their own cars available to Western and in a period of car shortage, Western's shippers would be treated on a parity with their own shippers in car distribution (Tr. pp. 50-51, 505, 536, 680-81, 879, 889).

19. Jurisdictional Statement, p. 20.

20. References to the transcript are to the typewritten transcript which has been certified to this Court.

B. Economies and Operating Benefits Accruing to Western.

Appellant urges that the finding that certain operating benefits would inure to Western under Santa Fe and Pennsylvania's control is unsupported by the evidence.[21] The Commission's finding in this regard points to the advantages accruing to Western, such as economies in purchasing, advice and assistance in techniques of railroad management and the realization of economies in operation.[22] The basis for them rests on the obvious advantages inherent in the control by two large, well-staffed roads. These benefits would, moreover, accrue to the advantage of the communities and shippers along Western's line.

C. Industrial Development.

Appellant argues that the finding that Santa Fe and Pennsylvania would "permit" industrial development along Western is not supported by substantial evidence.[23] The finding, however, goes beyond the manner in which it is characterized by appellant. The finding reflects the fact that control of Western by Santa Fe and Pennsylvania will stimulate industrial development along Western's line.[24] This is based upon substantial evidence in the record establishing that the very fact that these two large roads, connecting in the east and west, would each have a substantial economic interest in Western, would itself serve to stimulate industrialization along its line (Tr. pp. 485, 491, 524, 630, 642, 690, 715-16, 734-35, 915, 929, 941, 952).

Appellant suggests that the finding is inconsistent with Santa Fe and Pennsylvania's competitive interests in the

---

21. Jurisdictional Statement, p. 20.

22. Commission's Report, Jurisdictional Statement, p. 92.

23. Jurisdictional Statement, p. 19.

24. Commission's Report, Jurisdictional Statement, pp. 90-91.

area along their own lines.[25] This ignores the fact that the finding is based upon evidence that, because of Santa Fe's late entry into Chicago, it is lacking in industrial property in that area and that Pennsylvania is short of industrial sites in Illinois (Tr. pp. 225-26, 358, 378-79). Appellant argues that the finding conflicts with the testimony of Santa Fe and Pennsylvania's officers that they would locate on Western only those industries which they could not locate on their own lines.[26] This is not an accurate statement of the record and even if it were, it is not inconsistent with the Commission's finding since merely the consulting services of Santa Fe and Pennsylvania's industrial development departments would be of material assistance to Western (Tr. pp. 465, 643, 950).

Directly related to this finding is the fact that Western's existing status as a bridge-line handling east-west traffic along its entire line "is the greatest single underwriting influence" for continued good service to the communities along Western's line and, particularly, along the segment of its line West of Peoria (Tr. p. 51). In 1927, when the application was filed to connect with the Santa Fe at Lomax, it was pointed out that the proposed construction would aid in sustaining that part of the line west of Peoria. *Construction* by *TP&W R. R.*, 124 I.C.C. 278, 279 (1927). The retention of Western's existing function, therefore, is directly related to the industrial development of the communities along its line.

Each of the municipalities, civic and business associations and shippers along Western's line represented by the appellees offered extensive evidence which provided the basis for this finding. The unanimity of opinion of the

25. Jurisdictional Statement, p. 19.

26. Jurisdictional Statement, p. 20.

organizations concerned with the industrial development of these communities regarding this question suggests that there must exist some basis in fact for this conclusion.

D. Santa Fe and Pennsylvania Parity Solicitation Policies.

Appellant's characterization of the findings involved in this point are deceptive and are designed to raise a doubt concerning them.[27] Appellant appears[28] to be raising a question as to the substantiality of the findings regarding Santa Fe and Pennsylvania's parity solicitation policies in its statement of the questions presented.[29] Appellant's statements of the findings with respect to this policy are misleading in that they equate St. Louis and Chicago with the parity policy. The Commission, however, found that Santa Fe would place Lomax on a parity with Chicago from a solicitation standpoint and that Pennsylvania, while continuing to solicit for its long-haul to St. Louis, would place Effner on a parity with Chicago.[30] This is substantially different from the implication created by appellant in its statement of the findings contained in the argument and in the statement of the questions presented.

"The basis for these findings rests upon both the existing traffic policies of Santa Fe and Pennsylvania with respect to Western and the economics of the relationship existing between Western and both Santa Fe and Pennsyl-

27 Jurisdictional Statement, pp. 4, 19.

28 These intervening appellees say "proper" because appellant's treatment of this finding in its argument relates to the issue of suppression of competition via the Peoria Gateway, which it advanced in the proceedings before the Commission.

29 Jurisdictional Statement, p. 4.

30 Commission's Report, Jurisdictional Statement, pp. 75-76.

vania as joint owners of Western. The Commission found that, while Santa Fe and Pennsylvania ordinarily solicit traffic for their long-hauls, neither of them have worked against Western in recognition of the benefits they receive from Western's route.[31] The Commission found, furthermore, that as joint owners of Western, both Santa Fe and Pennsylvania are just about as well off financially[32] when handling traffic via Western as via a long-haul through Chicago.[33] The interests of Santa Fe and Western and Pennsylvania and Western thus coincide in the movement of traffic via Western. Santa Fe has a particularly strong interest in Western's route through Peoria because it enables the Santa Fe to obtain a long-haul through Lomax on traffic which it would otherwise handle only west of Kansas City or might not handle at all (Tr. pp. 99-100, 215, 220). The Commission found, finally, that, as a consequence of these policies, Western would have an increased opportunity to secure traffic now moving via other gateways.[34]

Appellant finally attempts to manufacture a conflict between the parity solicitation findings and the testimony of the officers of Santa Fe and Pennsylvania,[35] but the record fully supports the findings (Tr. pp. 49, 221-22, 337-38, 378).

31 Commission's Report, Jurisdictional Statement, p. 75

32 This finding is directly contrary to the assumption underlying appellant's statement of the parity solicitation finding at page 19 of the Jurisdictional Statement

33 Commission's Report, Jurisdictional Statement, p. 75

34 Commission's Report, Jurisdictional Statement, p. 75

35 Jurisdictional Statement p. 19

CONCLUSION.

The District Court in holding that the Commission's order was valid was clearly right. It is submitted by these intervening appellees that it is manifest that the questions raised by the appellant on which the decision in this cause depends are so unsubstantial as not to need further argument, and the motion to affirm should be granted.

OCTOBER TERM, 1958

NO. ———

The State of South Dakota and the Public Utilities Commission of the State of South Dakota,

Appellants,

vs.

United States of America and Interstate Commerce Commission, et al.,

Appellees.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA

JURISDICTIONAL STATEMENT

This appeal is taken from the final order of the United States District Court for the District of Minnesota, entered September 16, 1958, dismissing several complaints, including the complaint of these appellants as intervening plaintiffs below, and refusing to vacate an order of Division 4 of the Interstate Commerce Commission issued May 31, 1957, and an order of the Interstate Commerce Commission issued October 30, 1957. The Commission orders authorized The

Atchison, Topeka and Santa Fe Railway Company, the Pennsylvania Company and The Pennsylvania Railroad Company to acquire control, through stock ownership, of the Toledo, Peoria & Western Railroad Company, and dismissed the competing application for acquisition by The Minneapolis & St. Louis Railway Company.[1]

Minneapolis has taken an earlier appeal from the same final order of the District Court, and has already served and filed its Jurisdictional Statement. That appeal bears Docket No. 552. In order to avoid burdening the Supreme Court, the present appellants will rely upon the statement of the Opinions Below, the Jurisdiction and the Statutes Involved contained in the Minneapolis Jurisdictional Statement, and the copies of the opinions and statutes set forth as appendices to that Jurisdictional Statement.

THE QUESTIONS PRESENTED

The Notice of Appeal filed by the present appellants presented five questions, which are substantially similar to those set forth in the Jurisdictional Statement of Minneapolis. All five questions are believed to present substantial and important issues requiring full hearing and consideration by this Court. For present purposes, however, it is desired to present only two questions which are of immediate and urgent concern to these appellants.

1. The Interstate Commerce Commission acted arbitrarily, capriciously and erroneously in disregard-

[1] Hereafter, as in the proceedings below, The Minneapolis & St. Louis Railway Company will be referred to as "Minneapolis", the Toledo, Peoria & Western Railroad Company as "Western", and The Atchison, Topeka and Santa Fe Railway Company as "Santa Fe".

ing the effect which the Pennsylvania-Santa Fe acquisition would have in causing curtailment and termination of service on the branch lines of Minneapolis in South Dakota. The Commission's decision ignoring that effect is not based on findings supported by substantial evidence, as required by section 8 of the Administrative Procedure Act, 5 U.S.C. § 1007, and has no rational basis.

2. In authorizing the Pennsylvania-Santa Fe acquisition, the Interstate Commerce Commission failed to give proper weight and consideration to the adverse competitive effect thereof on Minneapolis and to the antitrust policy and purposes of section 1 of the Sherman Act, 15 U.S.C. § 1, and section 7 of the Clayton Act, 15 U.S.C. § 18.

STATEMENT OF THE CASE

The background of this case and the prior proceedings are sufficiently described in the Statement of the Case of Minneapolis.

The State of South Dakota and the Public Utilities Commission of the State of South Dakota have participated throughout, both before the Interstate Commerce Commission and in the District Court. These appellants have done so in order to protect the public interest of South Dakota in adequate rail transportation and to assure the integrity of the marginal branch lines of Minneapolis serving South Dakota and the several railroad stations located along such lines. Absence of competitive rail lines serving much of the area renders imperative continuance of the established rail service by Minneapolis.

The Minneapolis branch line entering South Dakota extends approximately 154 miles into the northeastern part of the state. It is an important link of rail transportation in the state, serving six counties and fifteen cities and towns and the trade territory adjacent thereto. This area in South Dakota consists of 6,685 square miles of farm land, all under cultivation, with an annual average production of over $92,000,000 of agricultural commodities. Over a period of 27 years, an average of 136,581 tons of traffic originated on the South Dakota segment of Minneapolis and 92,363 tons of freight terminated thereon. That segment of rail transportation is a part of the less remunerative mileage operated by Minneapolis. Continuance of rail service on this segment is dependent upon the results of operations over the system as a whole.

Witness Swanson testified (Tr. 1,183):

> "We have analyzed this traffic and have come to the conclusion that based upon 1954 figures we would suffer an annual loss of approximately $1,110,000 in the event the application of the Pennsylvania and Santa Fe were granted.
>
> "All of this business I have described as being vulnerable to loss to the M & St. L. is very desirable traffic. It not only pays its way but lends substantial support to our entire system. *Without it our low density lines in South Dakota*, Western Minnesota, and Western Iowa *could not survive.*" (emphasis supplied)

The factual accounting basis for Mr. Swanson's estimate was in evidence and was not challenged. His testimony was corroborated by that of other witnesses, including Dr. Edmund A. Nightingale, of the University of Minnesota, an independent, unquestioned au-

thority on transportation and railroad traffic. None of the testimony was controverted.

The Interstate Commerce Commission had only this to say:

> "*State representations* — The States of Minnesota and South Dakota, along with their respective Public Service Commissions, intervened in support of the Minneapolis application. They fear that with Western under the control of the Santa Fe and the Pennsylvania, the Peoria route of the Minneapolis will deteriorate to the extent that its low density lines in Minnesota and South Dakota will be in danger of abandonment. * * * Of course, there can be no abandonment of any line of railroad without the issuance by us of a certificate of public convenience and necessity permitting such abandonment. So far as the instant record is concerned, no abandonments are presently contemplated." (Appendix B to Minneapolis Jurisdictional Statement, p. 86)

The District Court did even less. It did not even refer to the contentions of these appellants except to state that they supported the Minneapolis.

The Notice of Appeal of the present appellants was filed November 12, 1958.

THE QUESTIONS ARE SUBSTANTIAL

The two questions dealt with herein are, to a substantial extent, interrelated and dependent. In essence, the Interstate Commerce Commission both ignored the factors which are of primary importance to these appellants and should be controlling, and applied wholly different standards in testing the results of the separate competing applications. The District Court, in turn, simply by-passed the Commission's

errors of omission and commission and failed to perform, in any sense, its duty of judicial review.

1. *The Disregard of the Branch Lines in South Dakota.*

The National Transportation Policy (49 U.S.C. preceding § 1) requires the Interstate Comerce Commission "to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation." Section 5(2) of the Interstate Commerce Act (49 U.S.C. § 5(2)) commands the Commission to approve applications for control of a carrier only when the proposed transaction "will be consistent with the public interest", and orders the Commission to give weight to the effect of the proposed transaction upon adequate transportation service to the public. The meaning of the basic statutory criterion has been expressed as follows by Chief Justice Hughes in *New York Central Securities Corp.* v. *United States*, 287 U.S. 12, 25 (1932):

> "* * * the term 'public interest' * * * is not a concept without ascertainable criteria, but has direct relation to adequacy of transportation service, to its essential conditions of economy and efficiency, and to appropriate provision and best use of transportation facilities * * *"

In the instant case the evidence before the Commission established beyond question that the Minneapolis is solely dependent upon the Peoria gateway for its life blood, whereas the Pennsylvania-Santa Fe combine has no comparable interest in the Peoria gateway; that ownership of Western by the Minneapolis would foster economy and efficiency, whereas ownership by the Pennsylvania-Santa Fe combine would promote neither economy nor efficiency; that

ownership by the Minneapolis would promote adequate transportation service, whereas ownership by the Pennsylvania-Santa Fe combine would do nothing toward that end. The State of South Dakota has a vital interest in strengthening the Minneapolis to preserve the adequacy of its transportation service on the branch lines in this state. The appellants have an equally vital interest in seeing that the Minneapolis is not weakened, because the inevitable result of any such weakening will be felt first on the marginal branch lines in South Dakota.

The record is replete with uncontroverted evidence of the vulnerability of the traffic presently carried by Minneapolis. Much of that highly competitive traffic is certain to be diverted by the powerful solicitation efforts of the Pennsylvania-Santa Fe combine. The Commission recognized that there might be some diversion of traffic, but concluded, "* * * such diversion would not jeopardize the maintenance of adequate transportation service by the objecting intervening carriers." (Appendix B to Minneapolis Jurisdictional Statement, p. 76). That conclusion is empty, unexplained, unsupported and erroneous.

As indicated above, the Commission also brushed off the contentions of these appellants by stating that, "no abandonments are presently contemplated." It is clear, however, that one of the first effects of drying up the Minneapolis traffic will be an application, at some future date, for abandonment of service on the marginal branch lines in South Dakota. These appellants are interested in preventive medicine now, not curative medicine in the future. A diminution of the Minneapolis revenues must be prevented now so

that no reason can be given in the future for abandonment of the trackage in South Dakota. If the revenues are allowed to diminish and in consequence the branch lines in South Dakota become a burden on interstate commerce, it will then be the duty of the Commission to authorize the abandonment of those lines. That result was totally disregarded by the Commission in the instant case.

The Commission's shocking pre-judgment of this case is laid bare by the double standard it employed. The effect of the Pennsylvania-Santa Fe acquisition of the Minneapolis was simply brushed aside and the future abandonments it would necessitate were deemed unimportant. On the other hand, when considering the effect of an acquisition of Western by the Minneapolis, the Commission state:

> "Under the Minneapolis' unified-operation theory a new service route via Forrest would be established for such traffic which would imperil, or at least diminish, the Wabash's participation therein, and possibly could result in the abandonment of the latter's Des Moines branch." (Appendix B to Minneapolis Jurisdictional Statement, p. 73)

The Wabash, of course, is a large railroad and a subsidiary of the giant Pennsylvania. The record contains no support for the Commission's solicitude on its behalf. The contrast between the treatment accorded the competing proposals make a travesty of administrative justice.

A number of communities along the Western supported the Pennsylvania-Santa Fe application. Their intervention, however, was merely a result of a brief, intensive public relations campaign by the wealthy

Santa Fe. In truth those communities would benefit from a Minneapolis acquisition and probably would suffer from a Pennsylvania-Santa-Fe acquisition. Certain labor groups also supported the Pennsylvania-Santa Fe application. They also could not suffer from a Minneapolis acquisition they are protected by the Minneapolis commitment to abide by the provisions of the Washington Job Protection Agreement of 1936. Furthermore, the record is clear that any labor economies would come as the result of normal retirements, not discharges.

In reaching its arbitrary conclusion to approve the further aggrandizement of the two railroad giants and to overlook the harmful effects on these appellants and others, the Commission not only ignored the controlling statutory criteria but also violated the procedural requirements. It did not, because it could not, make the findings required by section 8 of the Administrative Procedure Act (5 U.S.C. § 1007). Absent such findings, there was no basis on which the District Court could perform its duty of judicial review. These appellants were denied fair treatment by the Commission. They were then deprived of judicial review by the District Court. Their only hope for any consideration in this uneven struggle lies in full review on the merits by the Supreme Court.

2. The Antitrust Effect.

The Interstate Commerce Commission and the district Court sanctioned and approved what is in effect a gigantic railroad merger. The acquisition of Western gives the Pennsylvania-Santa Fe combine a third major gateway and unifies their operations from Tidewater on the east to Tidewater on the west.

In *McLean Trucking Co.* v. *United States*, 321 U.S. 67, 86 (1944), this Court announced:

> "Congress, however, neither has made the antitrust laws wholly inapplicable to the transportation industry nor has authorized the Commission, in passing on a proposed merger, to ignore their policy."

Admittedly section 5(11) of the Interstate Commerce Act (49 U.S.C. § 5(11)) empowers the Commission in an appropriate case to give immunity from prosecution under the antitrust laws. That immunity, if it is to be granted, must be based on an explicit judgment that it is required by other factors in the "public interest". The size of the merging carriers cannot be wholly ignored as it was in the instant case. The powerful rail combine authorized by the Commission in this case dwarfs, by comparison, the few motor lines whose merger was authorized in the *McLean* case.

The Pennsylvania-Santa Fe combine is a gigantic one, by any test. Its latent power is an enormous threat to any smaller competitors and to intervenors, like these appellants, who are dependent upon such smaller competitors. The monopoly or oligopoly sanctioned in this case has no precedent. There are no findings and there is no articulation of any reasons which could justify the creation of this colossus. If this Court affirms that result or declines to review it, it will be holding that the antitrust laws are wholly inapplicable to the transportation industry. It will also be making a mockery of the standards of the Interstate Commerce Act and the requirement for adequate transportation service.

CONCLUSION

The Interstate Commerce Commission failed to perform its statutory duty. Its arbitrary conclusions have neither a rational basis nor supporting findings. It is respectfully submitted that the instant appeal presents substantial questions of public importance and should be heard on the merits.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF MINNESOTA

JURISDICTIONAL STATEMENT

The State of Minnesota and the Minnesota Railroad and Warehouse Commission (hereinafter together referred to as the State of Minnesota) join with the Minneapolis and St. Louis Railway Company (hereinafter referred to as appellant or Minneapolis) in appealing from the final order of the United States District Court for the District of Minnesota, entered September 16, 1958, dismissing the appellant's complaint and the complaint in intervention of the State of Minnesota and refusing to set aside an order of Division 4 of the Interstate Commerce Commission issued May 31, 1957, and an order of the Interstate Commerce

Commission issued October 30, 1957. Those orders, in substance, granted the application of The Atchison, Topeka and Santa Fe Railway Company, the Pennsylvania Company and the Pennsylvania Railroad Company to purchase the stock of, and acquire control of, the Toledo, Peoria & Western Railroad Company, and dismissed the competing application of the appellant.[1] This statement is submitted to show that the Supreme Court of the United States has jurisdiction of the appeal and that substantial questions are presented.

OPINIONS BELOW

The opinion of the District Court for the District of Minnesota, 4th Division, is reported in 165 F. Supp. 893. A copy of that opinion is attached as Appendix A to the Minneapolis jurisdictional statement, Docket No. 552, and is incorporated herein by reference. The report of Division 4 of the Interstate Commerce Commission is reported in 295 I. C. C. 523. Copies of that report and of the orders of Division 4 and of the full Commission are attached to the Minneapolis jurisdictional statement as Appendix B and are incorporated herein by reference.

---

[1] The interested railroads will be referred to hereinafter as follows:

Minneapolis and St. Louis Railway Company	Minneapolis
Toledo, Peoria & Western Railroad Company	Western
The Pennsylvania Railroad Company	Pennsylvania Railroad
The Atchison, Topeka & Santa Fe Railway Company	Santa Fe
Chicago, Burlington & Quincy Railroad Company	Burlington
Wabash Railroad Company	Wabash
The Monon Railroad	Monon
New York, Chicago & St. Louis Railroad Company	Nickel Plate
Chicago, Rock Island & Pacific Railroad Company	Rock Island

JURISDICTION

This action was brought under *28 U. S. C.*, §1336, to set aside the above-mentioned orders of Division 4 of the Interstate Commerce Commission and of the Interstate Commerce Commission. It was heard by a District Court of three judges, as provided in *28 U. S. C.*, §2284 and §§2321-2325. The final order of the District Court was entered September 16, 1958, and the Notice of Appeal of the present appellant was filed in that court November 10, 1958. The jurisdiction of the Supreme Court to review that decision by direct appeal is conferred by *28 U. S. C.*, §§1253 and 2101(b). The following decisions sustain the jurisdiction of the Supreme Court to review that decision on direct appeal in this case: *Chicago, M., St. P. & P. R. R. Co. v. Illinois*, 355 U. S. 300 (1958); *Allegheny Corp. v. Breswick & Co.*, 353 U. S. 151 (1957); *United States v. I. C. C.*, 352 U. S. 158 (1956); *United States v. Pierce Auto Freight Lines*, 327 U. S. 515 (1946).

STATUTES INVOLVED

Section 1 of the Sherman Act, as amended (*15 U. S. C.*, §1), sections 7 and 10 of the Clayton Act, as amended (*15 U. S. C.*, §§18 and 20), and the National Transportation Policy and sections 5(2) and 5(11) of the Interstate Commerce Act, as amended (*49 U. S. C.* preceding §1, and §§5(2) and 5(11)) are set forth in Appendix C to the Minneapolis jurisdictional statement and are incorporated herein by reference.

THE QUESTIONS PRESENTED

The statement under this heading in the Minneapolis jurisdictional statement is incorporated herein by reference.

STATEMENT OF THE CASE

The statement under this heading in the Minneapolis jurisdictional statement is incorporated herein by reference.

In addition, the State of Minnesota wishes particularly to advise the court of the reasons for its participation throughout this proceeding and the background of its position. The interest of the State stems from its duty to assure the adequacy of service by railroads operating within its boundaries. The State intervened before the Interstate Commerce Commission in support of the application of the Minneapolis for authority, under Section 5(2) of the Interstate Commerce Act, to acquire control of the Western. Support of this application was determined to be necessary to the continued adequacy of railroad service in the State of Minnesota on the basis of the preservation of the present economic strength of the Minneapolis and the preservation of the Peoria Gateway. For the same reasons opposition to the competing application of the Pennsylvania-Santa Fe group was determined to be necessary.

The position of the State was arrived at after consultation with Dr. Edmund A. Nightingale, Professor of Economics and Transportation, School of Business Administration, of the University of Minnesota, and is based only upon the interests of the State of Minnesota and not the interest, as such, of the Minneapolis. The gist of the State's concern is that acquisition of the Western by Pennsylvania and Santa Fe will likely result in loss of considerable revenue to the Minneapolis, and the consequent impairment in the strength of the Minneapolis is detrimental to the interests of the State. The State's support of the Minneapolis application also considers the positive effects of consolidation of the Minneapolis and Western which undoubtedly

would give strength to the Minneapolis and would thereby be beneficial to the interests of the State.

THE QUESTIONS ARE SUBSTANTIAL

The statement under this heading in the Minneapolis jurisdictional statement is incorporated herein by reference. Although the arguments therein make the most severe criticisms of the administrative and judicial processes so far involved in this proceeding, these criticisms are fully justified.

In addition, the State of Minnesota raises the following matters which are of special concern to it.

I.

The findings.

The commission either failed to make findings or made conclusions entirely inconsistent with any findings on the following matters which were urged by the State of Minnesota.

A. *The importance of the Minneapolis to the State of Minnesota, advantages to the State of Minnesota inherent in the granting of the Minneapolis application, and injuries to the State of Minnesota inherent in the denial of that application and the grant of the competing Pennsylvania-Santa Fe application.*

Since its low-water point in the 1930's, the Minneapolis has virtually been rebuilt and has steadily progressed to become a sound, good-service railroad. Its progress results from able management and its success in obtaining public acceptance of its freight service between the Twin Cities Gateway to the South, Southwest and East through the Peoria Gateway rather than through Chicago.

Dr. Nightingale's Exhibit, H-77, shows statistically the importance of the Minneapolis to the State of Minnesota. These data show, as may be expected, that the line renders extensive freight service, has large operating expenses, tax payments, capital investments and payroll. All of these contribute to the wealth and development of the state. Any curtailments of the line without some compensating advantage are bound adversely to affect the State of Minnesota.

If the Commission had granted the application of the Minneapolis, the railroad would have been greatly strengthened. Acquisition of the Western would give the Minneapolis direct access to interchanges with the numerous lines connecting with the Western. The Minneapolis would thereby secure both the advantage of longer hauls and also a greater competitive advantage by being enabled to render better service. The larger operation which would result from a combination of these two relatively small railroads would be conducive to many economies in management and general operations. Possibly of greatest benefit would be the resulting diversification of traffic which is so badly needed by the Minneapolis to relieve its current reliance on agricultural and mineral shipments.

On the other hand, a denial of the Minneapolis application and approval of the application of the Pennsylvania-Santa Fe combination would greatly damage and weaken the Minneapolis. This would occur primarily through the loss of Peoria-Nemo traffic handled by the Minneapolis in Illinois. The significance of this loss is so great that we feel it is appropriate to quote from the record on this point:

> "M&StL freight revenue losses in the Peoria-Nemo Traffic and that through Peoria to or from other gateways in the event the application of the Pennsylvania-

Santa Fe combination were granted, have been estimated by witness James A. Swanson at approximately $1,110,000 in his Exhibit H-32, Schedule 1, and testimony. His estimate of potentially vulnerable traffic revenue is $7,000,000. Highly desirable traffic like that between Peoria and Nemo not only pays its way but gives substantial support to the entire M&StL system. It is highly doubtful that the grant of authority to acquire control of the TP&W to the Pennsylvania-Santa Fe group which would further reduce the already thin cushion which enables the M&StL to provide needed service on thin-traffic lines, is consistent with the National Transportation Policy and the requirements of Section 5(2) of the Interstate Commerce Act" (Tr. 1670-71).

The State of Minnesota is separately concerned with Minneapolis as an existing excellent transportation agency within the State, and Minneapolis' ability to transport goods through the Peoria gateway. Anything that would lessen Minneapolis' ability in either respect would be prejudicial to the State of Minnesota. Approval of the Pennsylvania-Santa Fe deal for Western would diminish the volume of traffic and revenues of Minneapolis, with repercussions on the secondary thin traffic lines of Minneapolis in Minnesota, which repercussions could take the form of curtailed accessorial facilities at the particular Minnesota communities, or even abandonment of trackage. The testimony of witnesses Nightingale and Swanson stands undisputed in these respects.

The Commission failed to give proper consideration to, and to make appropriate findings with respect to, these inevitable consequences of a grant of either of the competing applications. That failure constituted a violation of the requirements of the Administrative Procedure Act. It also led to a conclusion in flat disregard of the standards of

the National Transportation Policy and section 5(2) of the Interstate Commerce Act. The District Court did nothing to correct any of those errors. They can now be corrected and the Commission can be guided to a proper performance of its duty under the law only if the Supreme Court will give this appeal a full hearing on the merits.

B. *The importance of the Peoria Gateway to the State of Minnesota, advantages to the State of Minnesota inherent in the granting of the Minneapolis application and injuries to the State of Minnesota inherent in the denial of that application.*

At the hearing, Dr. Nightingale presented a comprehensive picture of the various gateways important to the State of Minnesota. The gateways mentioned were the Soo Gateway, the Chicago Gateway, the Peoria Gateway and the St. Louis Gateway. Because of the geographic situation of the State of Minnesota and the nature, origin and destination of its interstate commerce by railroad, Dr. Nightingale concluded that the Peoria Gateway, next to the Chicago Gateway, is the most important to the State of Minnesota. This importance stems from the necessity of connection with Official Territory railroads and connection with the Ohio River Gateways into Southern Territory and connection through St. Louis, Missouri or Thebes or Cairo, Illinois into Southwestern Territory. Moreover, three Western Trunk Line railroads, namely, the Minneapolis, the Rock Island lines and the Burlington lines, all serving the Twin Cities, have a direct connection to the Peoria Gateway. The Minneapolis line between the Twin Cities and the Peoria Gateway is the main line of that railroad. A further consideration of the importance of the Peoria Gateway to the

State of Minnesota is seen with regard to the aspects of national defense and the added importance that the Peoria Gateway would assume during any period of national emergency.

Economic circumstances indicate that control of the Western by the Pennsylvania-Santa Fe combination would lead inescapably to stagnation of the Peoria Gateway because of the superior interest that these lines now have and would have in the St. Louis and Chicago Gateways. Any such lack of interest in the Peoria Gateway by a group in control of the Western, which railroad is so important to the future of the Peoria Gateway, would be highly detrimental to the interests of the State of Minnesota.

The interests of the Minneapolis in the Peoria Gateway, as already briefly mentioned, are altogether different from those of Pennsylvania-Santa Fe group. The Minneapolis is intimately and deeply concerned with the development of the Peoria Gateway. There is a long history of close relationship between the Peoria Gateway and the Minneapolis. Of all the lines coming into the Peoria Gateway, the Minneapolis alone gives this gateway national publicity. This advertising program is conducted for the very good reason that the Peoria Gateway is more than just the eastern terminus of the Minneapolis—it is the very genius of the enterprise. In view of the importance of the Peoria Gateway to the State of Minnesota, the state would feel more confident of its future development if the Western were placed in the hands of a railroad whose own economic well-being is tied in with the development of that gateway and its maintenance as an open gateway. That is to say, one that is not dominated by great railroad systems like the Pennsylvania and the Santa Fe whose primary and major interests lie elsewhere. Approval of Pennsylvania-Santa Fe deal

would dry up Peoria as a gateway in so far as the Minneapolis is concerned, resulting in the State of Minnesota, its industry and agriculture, being forced to rely more heavily on Chicago as their only large east and west rail gateway. The geographical location of Minnesota at the top tier of the United States and the natural barrier of the Great Lakes to the east, does not give Minnesota the choice of rail gateways, as contrasted to her sister states to the south. These factors, again, were ignored by the Commission in disregard of its statutory duty.

II.

The failure to accord a comparative hearing.

The Commission failed to conduct a true comparative hearing of the two competing applications as required by the law, all to the prejudice of the State of Minnesota as well as the Minneapolis.

In the hearing held under the provisions of the Interstate Commerce Act and the National Transportation Policy, it had always been the assumption of the State of Minnesota that since the Western was up for sale, that it would be sold to one or a combination of applicants after a hearing to determine which application was most in accordance with the public interest.

The Commission casts doubt upon Minneapolis' ability to consummate a "transaction" with the trustees and the minority stockholders of Western in the event the Commission would find for Minneapolis and against Pennsylvania-Santa Fe (Appendix B to Minneapolis jurisdictional statement, p. 92). The Commission's reasoning is that as Minneapolis has presently no enforcible contract for the purchase of Western stock (as does Pennsylvania-Santa Fe),

there would be no assurance the trustees would sell to Minneapolis if they were the only remaining prospective purchaser; and further that there would still remain a substantial minority of stock in the hands of other holders, which Minneapolis has no assurance it could acquire. As this question is primarily one for answer by Minneapolis, the State of Minnesota will leave it to it fully to cover the matter, with only one passing remark: the Commission in making its conclusion as above ignored the testimony of witness Patterson for Pennsylvania-Santa Fe and Exhibit H-76. From that evidence and exhibit it is clear the trustees would be willing to sell to Minneapolis (as they were on the verge of doing on May 26, 1955 before Santa Fe stepped in), and that the minority stockholders would have no reluctance to follow through on a sale to Minneapolis at the same price paid to trustees.

The effect of this approach of the Commission, questioning Minneapolis' ability to follow through on the "transaction", is a point which deserves scrutiny. The immediate effect is a dismissal of the Minneapolis application, which is the same as a denial of that application for all practical purposes. The dismissal operates as a denial in that the Commission then merely proceeds to compare the advantages in the public interest of the Pennsylvania-Santa Fe ownership versus ownership by the Pennsylvania-Santa Fe together with other railroads, or continuation of the present ownership of Western.

The test stated by the Commission as to the burden of proof in this proceeding is as follows:

> "These proceedings represent a new and more complicated phase in the administration of section 5, since it involves 2 applications for authority to control the same property, and petitions by 4 other carriers for

> inclusion in the transaction under varying circumstances. We must weigh whether each application is consistent with the public interest, with or without inclusion of other railroads, considering not only other intervening petitioners seeking such inclusion but also the other applicant and non-participating railroads as well.
>
> "The burden of proof, therefore, has become most heavy for an applicant in a proceeding like this, because it must not only overbalance the claims of those seeking to share in the control but also of those seeking to exclude it from the transaction. As a practical matter we, in such a proceeding as this, must arrive at a standard of public interest and determine which of the various plans of control most nearly approximates it. The applications and petitions for inclusion must be denied unless there are advantages in the public interest." (Appendix B to Minneapolis jurisdictional statement, p. 65.)

We agree with this statement as to the burden of proof, but a full reading of the Division 4 report makes it clear that the Commission did not observe its own statement. What appears to have happened is that the application of the Pennsylvania and Santa Fe survived by a process of elimination over the other possible outcomes before the Commission. The decision that the Pennsylvania-Santa Fe ownership of Western would be better than the present ownership of Western was based simply upon the desirability of having the control of a carrier pass from non-carrier interests which no longer desire it to carrier interests. The Commission's report suggests that a comparison of the Minneapolis with the Pennsylvania-Santa Fe application was made on the merits. However, that was not the basis for the Commission's decision and it does not appear that it could have been.

In comparing the advantages of acquisition of the Western to Minneapolis or the Pennsylvania and Santa Fe, Dr. Nightingale stated:

"The effect of the grant of authority to acquire control of the TP&W to petitioners in Docket No. 18991 upon the net income of the Pennsylvania-Santa Fe combination, or either of them, would be minute. Actually, with operation of the TP&W as a separate property, the net income effect, assuming a 50 per cent net equity of Pennsylvania and Santa Fe in net income of TP&W, will be $320,584. In the case of the Pennsylvania Railroad, this would amount to 1.1% of 1954 consolidated net income, or $.02 per share of common stock; in the case of the Santa Fe this amount would produce 0.5% of 1954 consolidated net income, or $.07 per share of common stock. By way of contrast, the estimated annual value of the TP&W to the M&StL is $1,732,000 or 105.2% of 1954 net income of $1,647,000 or $2.17 per share of common stock (witness L. S. Provo, Exhibit H-44, Schedule 2).

"According to the Interstate Commerce Commission's Sixty-Eighth Annual Report on Transport Statistics in the United States for the Year ended December 31, 1954, total assets of the TP&W are $9,893,197, those of the Pennsylvania Railroad are $2,455,547,988, and those of the Santa Fe are $1,484,889,559, and those of the M&StL are $37,807,778. The TP&W assets in relation to the combined assets of almost $4,000,000,000 for the Pennsylvania-Santa Fe combination are hardly visible at only 0.025% of this huge total. Viewed in broad perspective, the effect therefore of adding the 1954 net income and assets of the TP&W to those of the Pennsylvania-Santa Fe group is negligible, or about that of a peanut tossed by a child at a zoo to a hippopotamus" (Tr. 1669-70).

The test of public interest certainly includes consideration of the comparative advantages enuring to the competing applicants themselves. Acquisition of the Western could not be for the Pennsylvania-Santa Fe group, as it would be for Minneapolis, a needed economic tonic. If, then, the Pennsylvania-Santa Fe proposed purchase amounts is only for the purpose of making a profitable investment, that is surely a poor justification for their proposal. It is possible that their intention is to monopolize the gateways of the midwest and alleviate the competition of the Peoria Gateway against their long-hauls to other gateways, although the avowed objective of these parties, as expressed in their contract with each other, was to keep the Western independent, free, open and neutral. The curious contradiction of acquiring control of the Western to assure its freedom and independence is, we suppose, possible, but the Pennsylvania-Santa Fe contract being "not for the benefit of others not parties thereto" (Appendix B to Minneapolis jurisdictional statement, p. 63) protects only the parties thereto against a change of mind, and the Commission's conditions for a neutral Western could be observed equally by Minneapolis.

In view of the fact that the Minneapolis application should not have been dismissed, but should have been considered on its merits and the further fact that Minneapolis consented to the conditions imposed by the Commission, which would keep the Western open and neutral in every respect, the relative advantages of the acquisition to the competing applicants looms as the most important consequence in the public interest involved in this proceeding. Yet, that is a consequence which the Commission virtually ignored. Its error can be corrected only by this court.

III.

The scope of review by the district court.

The opinion of the District Court merely mentions the appearances of the States of Minnesota and South Dakota and fails to deal specifically with any of their contentions. The three judge court convened to review this order of the Interstate Commerce Commission was an exceptional court, notwithstanding its unfortunate decision. It is impossible to attribute the failure of this court thoroughly to review the action of the Commission to any lack of ability or lack of industry on its part. It is plain that the court disagrees with the determination of the Interstate Commerce Commission. It is also plain that the court is unduly respectful to the Commission's errors. Where a court such as this is made to pay undeserved tribute to the Interstate Commerce Commission, as the facts and results of this case demonstrate, then a need for clarification of the powers of the courts with respect to review of administrative determinations is presented.

CONCLUSION

The Interstate Commerce Commission ignored both procedural requirements and the controlling substantive standards. The District Court failed to accord any meaningful review to the Commission's determination. It is submitted that the substantial questions of public importance presented by the several appeals in this action require full consideration on the merits.

Respectfully submitted,

MILES LORD
Attorney General of the State of Minnesota
HAROLD J. SODERBERG
Assistant Attorney General

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION

ON APPEALS FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA

MOTION TO AFFIRM

Pursuant to Rule 16, paragraph 1(e) of the Revised Rules of this Court, the United States of America and

the Interstate Commerce Commission move that the judgment of the district court be affirmed.

STATEMENT

These are direct appeals from the final judgment of a three-judge district court dismissing a complaint which sought to set aside orders of the Interstate Commerce Commission authorizing the Atchison, Topeka & Santa Fe Railway Company (Sante Fe) and the Pennsylvania Railroad Company (Pennsylvania) to acquire joint control of the Toledo, Peoria & Western Railroad Company (Western) through ownership of equal amounts of Western's capital stock.

Western is essentially a bridge carrier for east-west traffic and derives more than two-thirds of its total revenues from overhead or bridge traffic. As described in the Commission's report (J. St. 59–60):

> The main line of Western extends from its eastern terminus at Effner, on the Illinois-Indiana State line, via Peoria, to the western termini at Keokuk, Iowa, and Lomax [Illinois], approximately 234 miles. * * * It has connections for the interchange of traffic with 16 railroads, the principal ones being with the Pennsylvania at Effner, with the Santa Fe at Lomax, and with several carriers [including appellant [1]] at Peoria, a point almost midway between Chicago and St. Louis, Mo. * * *.

---

[1] We use the word "appellant" to refer to the Minneapolis & St. Louis Railway Company, appellant in No. 552. Appellants in Nos. 620 and 633 will be respectively referred to as the South Dakota appellants and the Minnesota appellants. The references throughout this motion to "J. St." are to the jurisdictional statement filed by the railway appellant.

On July 8, 1955, the Santa Fe and Pennsylvania (and Pennsylvania's parent, Pennsylvania Company) filed with the Commission an application for approval, under Section 5(2) of the Interstate Commerce Act, of a proposed joint acquisition of control of Western. Subsequently appellant also applied for authority under this section to acquire control of Western through ownership of Western's entire capital stock. Appellant intervened in opposition to the Santa Fe-Pennsylvania application and the joint applicants intervened in opposition to appellant's application.

Subsections (a) and (b) of Section 5(2) provide that it shall be lawful, with the approval of the Commission, for any carrier (or two or more carriers jointly) to acquire control of another through stock ownership if the Commission finds that the acquisition "will be consistent with the public interest." Section 5(2)(c) provides that in passing upon a proposed acquisition of control, the Commission shall give weight to (1) the effect of the proposed transaction upon adequate transportation service to the public; (2) the effect upon the public interest of the inclusion, or failure to include, other railroads in the territory involved; (3) the total fixed charges resulting from the proposed transaction; and (4) the interest of the carrier employees affected. Section 5(11) provides that the authority conferred by Section 5 shall be exclusive and plenary, and that the participants in an approved transaction are relieved from the operation of the antitrust laws and of all other prohibitions of law insofar as necessary to carry the transaction into effect.

The State of Illinois, various communities, civic organizations, and shippers located along the line of

Western, and the Railway Labor Executives Association (on behalf of Western's employees) intervened in support of the Santa Fe-Pennsylvania application. The States of Minnesota and South Dakota and their respective utility regulatory bodies intervened in support of appellant's application.

The two applications were consolidated for hearing. After the taking of extensive oral and documentary evidence, the hearing examiner issued a proposed report, recommending approval of the Santa Fe-Pennsylvania application and dismissal of appellant's application. The matter was heard by Division 4 on exceptions to this report, and Division 4, after oral argument, issued a report and order authorizing the acquisition of control of Western by Santa Fe and Pennsylvania and dismissing appellant's application. The Division found, subject to the conditions for the protection of railway employees and the maintenance of existing routes and channels of trade referred to in its report, that the terms and conditions of the proposed Santa Fe-Pennsylvania acquisition are "just and reasonable", and that the transaction "will be consistent with the public interest" (J. St. 94).

By order of October 30, 1957, the entire Commission denied the petitions for reconsideration filed by appellant and others, and made the order of Division 4 effective thirty days from the date of service of the order of October 30, 1957 (J. St. 96–98). Appellant thereupon instituted the present action, and the district court issued a temporary restraining order staying the effectiveness of the Commission's orders pending its determination of the case on the merits.

The district court, in an opinion which carefully considered and rejected appellant's principal contentions, unanimously sustained the validity of the Commission's orders (J. St. 37–54). The court discharged its temporary restraining order, but granted a 30-day stay and, after appellant had filed its notice of appeal, enjoined enforcement of the Commission's orders during the pendency of the appeal to this Court.

ARGUMENT

I

Appellant contends (J. St. 13–26) that the Commission's ultimate "public interest" finding lacks the support of essential subsidiary findings and that the Commission erroneously failed to accord appellant a "comparative hearing".[2] These sweeping, but very generalized, claims of error are to be tested against the Commission's actual findings, which, we submit, furnish ample foundation for the Commission's determination and order. Application of the statutory test requires the Commission to consider numerous factors—whether a proposed acquisition will promote "adequate transportation service to the public"; the "best use of transportation facilities"; and the interests of affected shippers, railroads, and carrier employees. See Section 5(2)(c) of the Act; *New York Central Securities Co. v. United States*, 287 U.S. 12, 25.

[2] The contention that certain Commission findings are unsupported by the evidence and that others are contrary to the evidence is, we believe, sufficiently answered by the Santa Fe-Pennsylvania motion to affirm filed in No. 552 (pp. 17–21).

The Commission found that two-thirds of Western's revenues are derived from overhead or bridge traffic; that Western provides an east-west route bypassing the congested Chicago and St. Louis terminals; that over 70% of its interline traffic is interchanged with the Santa Fe or Pennsylvania or both; that only about 8% of appellant's revenues come from traffic interchanged at Peoria with Western, and only about 4% from bridge traffic so interchanged; that, among Western's 16 railroad connections, appellant ranks seventh in volume of interchange; that the Santa Fe and Pennsylvania have coordinated their schedules with Western; and that, on both westbound and eastbound traffic, service via Western's full route and the Santa Fe is substantially faster than via the Santa Fe to its junction with appellant at Nemo, via appellant between Nemo and Peoria, and via Western between Peoria and its eastern end at Effner (J. St. 60–61, 68–69).[1] The Commission further found (*id.* 89):

> Fast, strong, and reliable through transportation service is necessary in order for the railroads adequately to compete with the other modes of modern transportation, and Western, as a direct east-west line, supplies the short-line connection for providing this through service with a minimum of delay.

---

[1] Related findings are that the large volume of traffic moving via Western's route evidences "the superior connecting service it provides", whereas appellant has not coordinated schedules with the Santa Fe at Nemo or with the Western at Peoria on eastbound traffic, and that appellant's Peoria-Nemo traffic "does not move on a competitive service basis" (J. St. 78).

The Commission found that appellant's proposal "unequivocally contemplates the disappearance of Western as an independent and neutral connection for the other 15 carriers" with which it presently interchanges traffic; that while Western would remain a separate corporate entity, its ownership, management, and operation would be integrated with appellant; that its headquarters and general offices would be moved from Peoria to the city of Minneapolis; and that of Western's present 24 executive positions, only a trainmaster and roadmaster would be retained for direct supervision of Western's trackage (J. St. 71). In contrast to appellant's proposal to eliminate Western as a separate operating entity, the Santa Fe-Pennsylvania contract for acquisition of Western's stock provided, as found by the Commission, (1) that Western will be operated under local management as a separate and independent carrier, (2) that Western will maintain its own solicitation forces and be free to solicit the traffic best serving Western's needs, (3) that all of Western's existing routes will be maintained and kept open without discrimination as between connecting railroads, and (4) that Western will have 11 directors consisting of its president, two Santa Fe representatives, two Pennsylvania representatives, and six "prominent citizens" not connected with the Santa Fe or the Pennsylvania (*id.* 63-64). This would be a continuation of Western's past and present policy of maintaining neutrality as between all connecting railroads (*id.* 60).

The Commission found that the communities served by Western, the shippers who appeared as witnesses,

and all of the railroad intervenors[1] "insist that the separate and independent operation of Western under its present local management is a public necessity" (J. St. 72), and virtually every shipper and community witness stressed the desirability of retaining Western's headquarters at Peoria "in order to continue the present easy access to management which is of inestimable value to shippers" (*id.* 91). It likewise found that Western's employees unanimously favored the grant of the Santa Fe-Pennsylvania application (*id.* 88).

The Commission noted that the Santa Fe and Pennsylvania had agreed to accept certain specific conditions to any order of approval, and the Commission's order was, in fact, made subject to these conditions (J. St. 83, 85, 95). Included among these express conditions were that Western maintain and keep open all existing routes and channels of trade, continue its present neutrality of handling inbound and outbound traffic without discrimination as to routing or movement of traffic, continue its present traffic and operating relationships with all connecting lines, and accept and handle all inbound and outbound cars without discrimination as between cars destined to or received from competing carriers (*id.* 83-84).[2]

---

[1] The intervening railroads were: New York, Chicago & St. Louis Railroad (Nickle Plate), the Chicago, Rock Island, and Pacific Railroad (Rock Island), the Chicago, Burlington & Quincy Railroad (Burlington), and the Wabash Railroad (Wabash).

[2] The Commission has recognized the efficacy of separate and independent operation of a controlled carrier (*Chicago Junction* case, 71 I.C.C. 631, 638-639; *Wabash R. Co. Control*, 247

The Commission found that unification of Western's operations with that of appellant "would be extremely harmful to other carriers" (J. St. 73), but that the Santa Fe-Pennsylvania acquisition would result in no appreciable diversion of traffic from other carriers (*id.* 75–82). Particular attention was paid to the question of diversion of traffic from appellant (*id.* 77–79).

Still other findings were that the combined efforts of the industrial development departments of the Santa Fe and Pennsylvania could be expected to lead to location of new industries on Western's line and that the city officials and chamber of commerce representatives of communities on Western's line all "recognized the advantage of Santa Fe-Pennsylvania ownership as an economic stimulus to the industrial development of their communities"; that Western would be assisted in railroad-management techniques, realization of operating economies, and economical large-volume purchases by the presence on its Board of Santa Fe and Pennsylvania representatives (J. St. 90–92).

While appellant additionally contends that the Commission failed to accord a "comparative hearing" of the two mutually exclusive applications which were before it, the contention, as elaborated, merely constitutes an attack on the Commission's evaluation of the evidence or of the factors determinative of the public interest. To the extent that the contention is that

---

I.C.C. 365, 370–371; *Pacific Coast R.R. Co. Control*, 282 I.C.C. 600, 607), and it has had occasion to require such separate operation (*Clinchfield Ry. Lease*, 90 I.C.C. 113, 132–133).

the Commission erred in not making an item-by-item comparison of the competing proposals, the answer is that they differed so radically in character that such a comparison was neither requisite nor appropriate.

To summarize, the Commission was certainly right in viewing the public interest as "the prime consideration" (J. St. 93). The findings previously referred to cover all relevant factors and amply support the Commission's conclusion. The court below recognized that "the Commission's expertise is not infallible", but held, we submit properly, that its order was based on "adequate findings supported by substantial evidence", and that in these circumstances a reviewing court cannot substitute its judgment for that of the administrative agency (J. St. 50, 54).

II

Appellant contends (J. St. 26–29) that the Commission erred in sanctioning an acquisition of control which involved a prior violation of Section 10 of the Clayton Act, 15 U.S.C. 20. The section makes it unlawful for an interstate railroad to have any "dealings in securities, supplies, or other articles of commerce", aggregating more than $50,000 in any one year, with any corporation when any person who is a director of the railroad is at the same time a director of the other corporation, unless the purchase or dealings shall be pursuant to competitive bidding and with the bidder most favorable to the railroad. The alleged violation of the statute is predicated upon the following facts: 82% of Western's stock was held by two trustees, and when the Santa Fe-Pennsylvania agreed to purchase this stock, one of the two trustees, the

Delaware Trust Company, had four directors who were also directors of Pennsylvania."

The plain purpose of Section 10 is to prevent a railroad from buying at too high a price or selling at too low a price, resulting from the existence of some common relationship between it and the seller or buyer. The Santa Fe-Pennsylvania purchase of Western's stock is, however, totally unrelated to the evils Section 10 is designed to prevent. If the price paid for Western's stock was high, the factor determinative of this price was competition for the stock between appellant and Santa Fe-Pennsylvania (J. St. 62–63), not any common relationship between one of the sellers and Pennsylvania. The purchase was also remote from the evils against which Section 10 was directed because both Santa Fe's purchase agreement and the agreement by which Pennsylvania became a 50% purchaser were subject to the Commission's approval (*id.* 63), which approval entailed determination that the price paid for the stock was reasonable (J. St. 85–86).

The sole sanction for Section 10 is a criminal prosecution, and the Commission is not authorized either to enforce the section or to determine whether it has been violated. Moreover, even if the Commission had concluded that Section 10 had been violated, the statute expressly authorized it to approve the acquisition notwithstanding such violation. Section 5(11) pro-

---

"Santa Fe agreed to purchase all the stock held by the trustees at $135 a share, and also made agreements with the remaining stockholders of Western to purchase their Western stock at the same price, and, about a month after the agreement with the trustees, agreed to sell 50% of Western's stock to Pennsylvania's parent, The Pennsylvania Company, at $135 a share (J. St. 63).

vides that the authority given the Commission by Section 5 shall be "exclusive and plenary", and that any person participating in a transaction approved under Section 5 is "hereby relieved from the operation of the antitrust laws and of all other restraints, limitations, and prohibitions of law, Federal, State, or municipal * * * ". While the Commission probably may not "ignore" the policy embodied in Section 10 of the Clayton Act (see *McLean Trucking Co.* v. *United States*, 321 U.S. 67, 86), in this case it did not disregard such policy. It gave consideration to the only relevant aspect of the section when it considered the fairness of the price paid for the Western stock. The Commission would have been remiss if it had made its determination of the public interest turn on a technical breach of the provisions of Section 10, rather than on the questions of large importance relating to adequate transportation service to the public which the Commission viewed as making the acquisition "in the public interest."

III

Appellant's final contention (J. St. 29–34) is that the acquisition of control approved by the Commission "violates the wording, the principle and the spirit of" the antitrust laws, and Section 1 of the Sherman Act and Section 7 of the Clayton Act in particular (*id.* 30). Appellant recognizes that, under Section 5(11) of the Act, the Commission's approval of an acquisition immunizes it from the operation of the antitrust laws, but appellant asserts that the Commission improperly failed to set forth in its report its reasons for concluding that the transportation con-

siderations favoring the Santa Fe-Pennsylvania acquisition outweighed any opposing antitrust considerations.

In *McLean Trucking, supra,* which involved a Section 5(2) order and presented precisely the issue here raised by appellant, this Court said (321 U.S. 67, 83):

> The history of the development of the special national transportation policy suggests, quite apart from the explicit provision of § 5(11), that the policies of the antitrust laws determine "the public interest" in railroad regulation only in a qualified way.

The Court said (*id.* at 85) that Congress, in authorizing mergers and acquisitions of control, "did not import the general policies of the anti-trust laws as a measure of their permissibility". It said further (*id.* at 87) that the Commission has the duty "to consider the effect of the [acquisition] on competitors and on the general competitive situation in the industry in the light of the objectives of the national transportation policy". It said that the Commission, in determining whether an acquisition "will assist in effectuating the over-all transportation policy", has the duty of considering both the effects of any curtailment of competition and the advantages of improved service, lower cost, etc., resulting from a proposed acquisition (*ibid.*). "Resolving these considerations is a complex task", and "Congress left that task to the Commission" (*ibid.*).

In the instant case, the Commission devoted much of its long report to an analysis of the effect of the Santa Fe-Pennsylvania acquisition upon competing carriers,

including appellant. It considered whether this acquisition would have an adverse competitive effect on other carriers and found that it would not (J. St. 75–82). The Commission summarized its conclusion on this aspect of the proceeding as follows (J. St. 81–82):

> We are convinced that the benefits to be derived from the operation of Western under the control of the Santa Fe and the Pennsylvania as proposed will be in furtherance of the over-all national transportation policy declared by the Congress, and its consummation will not unduly curtail competition in connection with the other carriers. Compare *McLean Trucking Co.* v. *U.S.*, 321 U.S. 67.

We submit that, under the tests and principles enunciated by this Court in *McLean Trucking*, the Commission plainly fulfilled its statutory duty.

IV

The Minnesota and South Dakota appellants stress the importance to the economy of their respective States of the appellant railroad's transportation service. Since the legal questions which these appellants present are those which have already been considered, we believe it unnecessary to discuss separately the contentions made by the Minnesota and South Dakota appellants.

CONCLUSION

For the foregoing reasons, it is respectfully submitted that the appeals present no substantial question and that the judgment of the district court should be affirmed.

J. LEE RANKIN,

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA.

MOTION TO AFFIRM.

Appellees, The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company, and Pennsylvania Company, move that the judgment of the District Court be affirmed on the ground that the questions presented on the two above-entitled appeals are so insubstantial as not to need further argument.

STATEMENT AND ARGUMENT.

This motion is addressed to two appeals, one on behalf of the State of South Dakota and the Public Utilities Commission of that state (together referred to as South Dakota) and the other on behalf of the State of Minnesota and the Minnesota Railroad and Warehouse Commission (together referred to as Minnesota). Both South Dakota and Minnesota support the position of the Minneapolis & St. Louis Railway Company (the Minneapolis), appellant in No. 552, *The Minneapolis & St. Louis Railway Co. v. United States, et al.*

Although their arguments take a slightly different form, the jurisdictional statements of South Dakota and Minnesota raise questions which have already been raised in the jurisdictional statement of The Minneapolis. These have been fully dealt with in the Motion to Affirm filed by these appellees in No. 552 under date of December 30, 1958. Accordingly, we will refer to that motion* for the statement of the case and the argument generally, commenting only briefly on certain aspects of the arguments made by South Dakota and Minnesota in their jurisdictional statements.

Both South Dakota and Minnesota contend—as did Minneapolis—that in approving the acquisition of control of Toledo, Peoria & Western Railroad Company (Western) by Santa Fe and Pennsylvania, the Interstate Commerce Commission failed to give adequate consideration to the competitive effects of such acquisition on the Minneapolis and the area it serves. Particular stress is laid on the possibility that Minneapolis might be forced to abandon

*The Motion to Affirm filed by The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company and Pennsylvania Company in No. 552 will be referred to hereafter as "Motion to Affirm."

certain branch lines in South Dakota and Minnesota. The short answer to these arguments is that the Commission considered the competitive effects of the proposed acquisition not only generally but particularly with respect to the Minneapolis and found that the volume of traffic handled by Minneapolis and the other intervening carriers would not be materially affected. *See* Report of the Commission (Minneapolis J. S., pp. 75-82, 83-85, 90). This finding is fully supported by the evidence. *See* Motion to Affirm, pp. 26-27.

South Dakota's contentions with respect to the anti-trust laws assume that control of Western is to be acquired by a "Pennsylvania-Santa Fe combine" and that this is in effect "a gigantic railroad merger." But joint control of a carrier by two of its connections is in no sense a unification or merger of the acquiring roads. Moreover, the assumption that this is a merger overlooks the fact that Western is a bridge line between the east and the west and that the proposal is for joint control by the Pennsylvania, an eastern railroad, and the Santa Fe, a western railroad. Under such joint control Western would not be a part of either the Santa Fe or the Pennsylvania systems but would continue as a separately operated carrier. And, as the Commission found, the checks and balances inherent in such control by an eastern and a western carrier would protect Western's other connections, such as Minneapolis, from discriminatory service and solicitation policies. *See* Motion to Affirm, pp. 26-27.

Minnesota suggests that acquisition of Western by Santa Fe and Pennsylvania would "dry up" the Peoria gateway as far as the Minneapolis is concerned and thus force Minnesota to rely more heavily on the Chicago gateway. The Commission is said to have ignored this. On the contrary, the Commission found that the plan of the Pennsylvania to place Effner, where it connects with

Western, on a solicitation parity with Chicago, would make additional traffic available for solicitation by the Minneapolis through Peoria (Minneapolis J. S., p. 7). Moreover, the argument assumes that Western's line is the Peoria gateway when, in fact, the Minneapolis interchanges more traffic through Peoria with the Nickel Plate and the New York Central than with Western. Minnesota's argument also overlooks the fact that the Pennsylvania receives valuable traffic via Western from the Minneapolis and therefore would not permit Western to be operated in such a way as to lose that traffic.

The contention that Minneapolis was not accorded comparative hearing is fully answered in the Motion to Affirm at pages 12-17. In its jurisdictional statement Minnesota argues that the application of the Minneapolis was not considered on its merits because the Minneapolis had no contract to purchase the stock of Western. Minnesota also argues that the dismissal of the Minneapolis application indicates that it was not considered on its merits. These arguments simply ignore what the Commission said and did. The following excerpt from its report makes it entirely clear that the lack of a contract did not prevent full consideration on the merits and also explains the reason for dismissal of the Minneapolis application:

> "* * * In determining consistency with the public interest and the national transportation policy we are not shackled in a case like this by the first application filed, if there is presented for our consideration at the same time a different proposal which but for the situation created by the first application might easily be accomplished. The public interest is the prime consideration, and in making that determination we must have regard for all relevant factors.
>
> "Consistent with the foregoing, we have carefully considered the evidence and arguments presented to

lating to both the applications before us and conclude upon the basis of the whole record, and as reflected by this report, that the application of the Santa Fe and the Pennsylvania should be granted subject to the conditions previously alluded to herein. With our approval of that application, the possibility of the Minneapolis' acquiring the Western's stock is eliminated and its application becomes moot. Accordingly, the application of the Minneapolis will be dismissed." (Minneapolis J. S., pp. 93-94.)

Minneapolis suggests that this case should have been decided on the relative advantages of the acquisition to the two competing applicants. But this is by no means the prime consideration in determining the public interest. The interests of the applicants and their stock holders are not the public interest. The concept is a broad one, which embraces all parts of the public affected by the transaction; the interests of shippers using the services of Western, of the communities dependent on Western, of Western's employees and of the other railroads involved, are included within it. *Detroit T. & I. R. Co. Control*, 275 I. C. C. 455, 488 (1950); *Watson Bros. Transp. Co., Inc.*, 57 M. C. C. 745, 758 (1951); *Florida East Coast Ry. Co. Reorganization*, 267 I. C. C. 295, 325 (1947). And see *N. Y. Central Securities Co. v. U. S.*, 287 U. S. 12, 25 (1932). The review of the findings at pages 7-12 of the Motion to Affirm shows that all aspects of the public interest were fully considered by the Commission in arriving at its final determination.

CONCLUSION.

Neither South Dakota nor Minnesota presents a substantial question for consideration by this Court. The motion to affirm should, therefore, be granted.

Respectfully submitted,

Supreme Court of the United States

OCTOBER TERM, 1958.

No. 620.

No. 633.

THE STATE OF SOUTH DAKOTA AND THE PUBLIC UTILITIES COMMISSION OF THE STATE OF SOUTH DAKOTA,

THE STATE OF MINNESOTA AND THE MINNESOTA RAILROAD AND WAREHOUSE COMMISSION,

Appellants,

vs.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION,

Appellees.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA.

MOTION TO AFFIRM.

The State of Illinois, appellee in both of the above-entitled cases, pursuant to Rule 16, paragraph 1(c) of the Revised Rules of the Supreme Court, respectfully moves to affirm on the ground that the Decision of the Court below is wholly correct, in accord with all relevant authority and that the questions raised by appellants, are so unsubstantial as not to require further argument.

STATEMENT.

The arguments employed by South Dakota and Minnesota in an effort to establish the substantiality of the questions presented are unique. The arguments are based upon the assumption that both the Commission's report and the decision of the District Court should be ignored in determining whether the questions presented are substantial. Thus it is asserted that the District Court's decision, affirming the Commission's report, should be ignored because the Court did not actually mean what it said in its opinion since it is "plain" that the Court really disagrees with the Commission's decision (Minn. J. S. p. 15). Appellants assert that the Commission's report, moreover, should be similarly ignored because the language employed in the report is meaningless as an indication of what the Commission did. South Dakota and Minnesota argue that the Commission's decision is based upon a "shocking prejudgment" of the case (S. D. J. S. p. 6) and that the Commission "did not observe its own statement" (Minn. J. S. p. 12).

The nature of the assumptions underlying South Dakota's and Minnesota's arguments renders their position so untenable as to hardly require answering. We feel somewhat constrained to give dignity by replying to an argument which presupposes that neither the language of the report of the administrative agency nor the opinion of the Court reviewing the administrative order accurately reflect the basis for those decisions. There is no basis for any assumption other than that the Commission acted in good faith, that its statements as to the consideration it gave to the evidence are true and that the District Court did, in fact, affirm the Commission's decision on the basis of the relevant law and the record which was before it.

ARGUMENT.

I. THE MINNESOTA JURISDICTIONAL STATEMENT.

1. Minnesota Branch Lines:

Minnesota's argument concerning its branch lines is manifestly no more than a reiteration of Minneapolis'[1] claims of traffic diversion. Minnesota says that such diversion would occur primarily through the loss of the traffic moving via Minneapolis between Nemo and Peoria (p. 6).[2] Minnesota says that the evidence relating to the diversion of this traffic "stands undisputed" and that the Commission failed to make findings with respect to it (p. 7).

The Commission's extensive findings dealing specifically with Minneapolis' contentions respecting the Peoria-Nemo traffic, covering three full paragraphs in its report, provide a complete answer to Minnesota's argument and no purpose would be served by extending the discussion beyond these findings (App. B, Mpls. J. S. pp. 76-77).

1. The Railroads referred to herein will be designated as follows: The Atchison, Topeka and Santa Fe Railway Company as "Santa Fe"; The Pennsylvania Railroad Company as "Pennsylvania"; the Toledo Peoria & Western Railroad Company as "Western"; and The Minneapolis & St. Louis Railway Company as "Minneapolis".

2. Numbers in parentheses refer to pages in the Appellants' Jurisdictional Statements; numbers in parentheses preceded by "R" refer to the transcript before the Commission; numbers in parentheses preceded by "H" refer to exhibits received by the Commission.

2. The Peoria Gateway:

After first arguing that the Santa Fe-Pennsylvania acquisition will divert traffic from Minneapolis to Western,[3] Minnesota then inconsistently argues, that the Santa Fe and Pennsylvania are attempting to purchase Western in order to "dry up" Peoria (pp. 9-10) and "alleviate the competition" of Western's route between the east and the west (p. 14).

Minnesota's argument is based upon the assumption that the movement of traffic via Western's route and through the Peoria Gateway is really detrimental to the interests of Santa Fe and Pennsylvania. The findings, however, indicate that Santa Fe and Pennsylvania's interest in the Peoria Gateway are based upon their self-interest and the economics of their relationship with Western. No other reason could explain the finding respecting Santa Fe and Pennsylvania's record of cooperation with Western in coordinating schedules and services for the past thirty years (App. B, Mpls. J. S. pp. 60-61). The Commission found that Santa Fe and Pennsylvania are presently "just about as well off" financially where traffic is handled via the Peoria Gateway as via the Santa Fe and Pennsylvania's long-haul to Chicago (App. B, Mpls. J. S. p. 75) and that Santa Fe and Pennsylvania's policies as owners of Western would increase Western's opportunity to secure traffic via the Peoria Gateway which now moves via other gateways (App. B, Mpls. J. S. p. 75), which would also benefit other lines connecting with Western at Peoria (App. B, Mpls. J. S. p. 78).

Minnesota's argument also presumes that control of Western is control of the Peoria Gateway. However, this

3. Minnesota argues that the loss of traffic by Minneapolis will occur "primarily" through the elimination of traffic now moving via St. Louis and Peoria (p. 6). Minneapolis contended that all of this loss would occur by diversion to Western.

is not so. The record shows that there are a number of other western and eastern lines connecting at Peoria interchanging a large volume of traffic which does not move via Western (H-126, H-128). Minneapolis, for example, interchanges more traffic with the Nickel Plate and the New York Central at Peoria than it does with Western (H-128). Minnesota is directly served by several railroads, the Rock Island, Chicago & North Western, Burlington and Minneapolis, which all operate through the Peoria Gateway.

Minnesota's argument also presumes that the Peoria Gateway traffic could be diverted to Santa Fe's and Pennsylvania's own lines. The Commission found to the contrary, Western being only one of several routes through Peoria between the East and the West. Any attempt at suppression of Western would only divert such traffic to any number of available alternative routes via Peoria without benefit to either Santa Fe or Pennsylvania. This fact was conclusively established by a number of shippers who use Western as a bridge carrier, who testified that the self-interest of Santa Fe and Pennsylvania as owners of Western would preclude such suppression of Western's route via Peoria (R. 593, 661-62, 690, 773-74).

3. Comparative Hearing:

Minnesota makes two points in an effort to support its argument that the Commission did not accord Minneapolis a comparative hearing. First, it asserts the Commission decided the case on the fact that Minneapolis did not have an enforceable contract for the purchase of Western stock rather than a comparison of the two applications (pp. 10-12). In order to support its contention, Minnesota was obliged to discredit both the Commission's statements of its function in this proceeding and its discharge of that function as reflected by the extended discussion of the merits of both proposals contained in the report. Minne-

sota argues that the Commission did not do what it said it was going to do and then failed to do what it said it did do, *i.e.* consider the merits of both applications. Such a position is unworthy of a reply since it assumes bad faith on the part of the Commission. The Commission's conclusion, after considering the merits of both proposals, should be sufficient answer to Minnesota's contention. The report states:

> "* * * In determining consistency with the public interest and the national transportation policy we are not shackled in a case like this by the first application filed, if there is presented for our consideration at the same time a different proposal which but for the situation created by the first application might easily be accomplished. The public interest is the prime consideration and in making that determination we must have regard for all relevant factors. Consistent with the foregoing, we have carefully considered the evidence and arguments presented relating to both the applications before us and conclude upon the basis of the whole record, and as reflected by this report, that the application of the Santa Fe and the Pennsylvania should be granted subject to the conditions previously alluded to herein. * * *" (App. B. Mpls, J. S. p. 93.)

Second, Minnesota contends that the Commission could not have actually made a comparison of the two proposals since the public interest lies solely with the application of Minneapolis. It takes the position that the public interest lies only in viewing the possible economic advantage to the competing applicants and upon that basis Minneapolis should have been allowed to acquire Western (pp. 13-14). Minnesota admits that the Commission's report recites that a comparison of the applications was made on the merits, but contends that such could not be the fact since the Commission did not adopt the theory of Dr. Nightingale, the consultant and witness for Minnesota (p. 13). Actually,

Minnesota is saying that Minneapolis should have won the case and the fact that it lost is conclusive evidence that the Commission did not consider the applications on the merits.

In determining which of the proposed transactions are more nearly consistent with Section 5(2) of the Act, the Commission has more to consider than the possible benefits to the competing applicants. The interest of the applicants and their stockholders are not the public interest. The concept is a broad one and embraces all parts of the public affected by the transaction, the interest of shippers using the services of Western, the communities dependent upon Western, the employees of Western and the other railroads involved. The evidence showed that the proposal of Minneapolis was based upon the integration of Western into Minneapolis which would afford economic benefits to Minneapolis, but which would destroy Western as a financially strong, independently operated bridge railroad. The destruction of this independently operated railroad should greatly outweigh the economic benefit to the stockholders of Minneapolis. Furthermore, the Commission's finding with respect to the financial stability of Minneapolis indicates that there is no factual basis for Minnesota's argument (App. B, Mpls. J. S., p. 68).

4. The District Court's Decision:

Minnesota says that the District Court did not mean what it said in its opinion since it is "plain" that the Court really disagrees with the Commission's decision (p. 15). It thereby seeks to dispose of the District Court's decision on the same cavalier basis that it dealt with the Commission's order. We should not be obligated to reply to an argument which assumes that the language used by the Court is meaningless and is not an indication of the Court's decision. We feel that the opinion of the Court which Minnesota concedes to be "an exceptional court", stands as its own answer to such contention.

II. THE SOUTH DAKOTA JURISDICTIONAL STATEMENT

1. South Dakota's Branch Lines.

South Dakota's argument that the Santa Fe-Pennsylvania "combine" would adversely affect the branch lines of Minneapolis in South Dakota again assumes that the only public interest lies in the economic benefit to Minneapolis. The benefit to South Dakota through the creation of a theoretically stronger railroad which could then support the low density marginal branch lines in that State through either the destruction of a strong main line railroad in Illinois or by converting it into a branch line is not necessarily in the public interest. Besides, it is the very function of the Commission to weigh and determine the evidence, and, in this case, the Commission found that the acquisition by Santa Fe and Pennsylvania "will be consistent with the public interest". The record substantiates the finding by the Commission that the status of Western as a strong transcontinental bridge carrier will remain the same through the acquisition by the Santa Fe and Pennsylvania, but would be greatly changed by Minneapolis's ownership. The Commission obviously felt that the preservation of the existing 239 miles of operation in Illinois which Western performs is more in the public interest than the integrity of 154 miles of marginal branch lines of Minneapolis serving the northeastern part of South Dakota.

While completely unrelated to its branch line argument, South Dakota proceeds to attack the intervention of public bodies and the Railway Labor Executives' Association which intervened in support of Santa Fe-Pennsylvania control of Western (pp. 8-9). The significance of the unanimous public support accorded Santa Fe-Pennsylvania acquisition by the municipalities, business associations and shippers along Western's line cannot be dismissed with

the assertion that these interests have been victimized by a Santa Fe public relations campaign since their interests are really jeopardized through the acquisition of Western by Santa Fe-Pennsylvania (p. 9). No reply need be made to this assertion since South Dakota does not indicate how these interests will be hurt by Santa Fe-Pennsylvania control. Furthermore, it would seem that the communities and shippers along Western's line would be better able to judge their own interest than South Dakota. It is further stated by South Dakota that labor would not "suffer" since it is protected by the Washington Job Protection Agreement. This ignores the fact that the interest of Western's employees extend beyond the award of a dole under a job protection agreement.

2. The Anti-Trust Effect:

The argument that Santa Fe-Pennsylvania's control of Western would violate the anti-trust laws is based upon the assumption that the proposed transaction constitutes a "gigantic railroad merger" which "unifies" the operations of Santa Fe and Pennsylvania from "tide water" to "tide water" (pp. 9-10). Joint control of another carrier is not in any sense a merger of the owning roads. This is particularly true where, as here, they are an eastern and a western carrier subject to the checks and balances inherent in such control. The Commission expressed this as follows:

> "* * * No greater protection could be afforded to carriers interchanging traffic with Western than to have ownership divided equally between the largest connecting carrier in the east and the largest one in the west. Under this built-in system of checks and balances, it is inconceivable for the Santa Fe to permit impairment of service or discriminatory solicitation with respect to eastern connections, or the Pennsylvania with respect to western ones. * * *" (App. B., Mpls. J.'S., p. 90).

CONCLUSION.

The motion to affirm should be granted. The grounds upon which the District Court's decision rests are fully sustained.

THE STATE OF MINNESOTA AND THE MINNESOTA RAILROAD AND WAREHOUSE COMMISSION,

THE STATE OF SOUTH DAKOTA AND THE PUBLIC UTILITIES COMMISSION OF THE STATE OF SOUTH DAKOTA,
APPELLANTS,

VS.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION,
APPELLEES.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA.

MOTION TO AFFIRM.

These intervening appellees,[1] pursuant to Rule 16, paragraph 1(c) of the Revised Rules of the Supreme Court, move that the judgment of the United States District Court for the District of Minnesota be affirmed on the ground that the questions on which the decision of the cause depends are so unsubstantial as not to need further argument.

1. The City of Peoria, Illinois; the City of East Peoria, Illinois; the Peoria Association of Commerce; the City of Bushnell, Illinois; the Bushnell Chamber of Commerce; the City of Canton,

STATEMENT OF THE CASE.

The proceedings below are sufficiently described in the Motion to Affirm filed by these intervening appellees in response to the Minneapolis Jurisdictional Statement which was filed heretofore in this Court in Case No. 552 designated The Minneapolis & St. Louis Railway Company, Appellant, v. United States of America, Interstate Commerce Commission *et al.*, Appellees.

QUESTIONS PRESENTED.

Minnesota's arguments, that the Commission failed to accord Minneapolis[2] a comparative hearing and that the District Court failed to discharge its function of review, merely duplicate the arguments raised by Minneapolis in its Jurisdictional Statement. This is also true of South Dakota's argument that the Commission failed to give appropriate consideration to the competitive effects of the proposed acquisition. These intervening appellees rely

---

Illinois; the Canton Chamber of Commerce; the City of LaHarpe, Illinois; the LaHarpe Golden Rule Club; the Village of Lomax, Illinois; the City of Keokuk, Iowa; the Keokuk Chamber of Commerce; the Keokuk Bridge Commission; the City of Warsaw, Illinois; the Warsaw Chamber of Commerce; the City of Forrest, Illinois; the City of Fairbury, Illinois; the City of Gridley, Illinois; the City of Gilman, Illinois; the City of Sheldon, Illinois; the City of Watseka, Illinois; the City of Eureka, Illinois; the Village of Secor, Illinois; the City of Washington, Illinois; and the City of Chenoa, Illinois. All of said appellees will hereinafter be referred to as "these intervening appellees."

2. The interested railroads will be referred to hereafter as follows: Toledo, Peoria and Western Railroad Company as "Western," The Pennsylvania Railroad Company as "Pennsylvania" and The Atchison, Topeka and Santa Fe Railway Company as "Santa Fe."

upon their Motion to Affirm and the Motion to Affirm filed by Santa Fe and Pennsylvania in response to the Minneapolis Jurisdictional Statement as a response to the arguments relating to these questions.

South Dakota and Minnesota have raised three additional questions which may be stated as follows:

1. Did the Commission make adequate findings with respect to the effect of the Santa Fe-Pennsylvania proposal upon the Minneapolis' branch lines in South Dakota and Minnesota?

2. Are the findings which were made which relate to the effect of Santa Fe-Pennsylvania's control upon the branch lines, supported by substantial evidence?

3. Did the Commission make adequate findings with respect to the effect of the Santa Fe-Pennsylvania's proposal upon the Peoria Gateway?

THE QUESTIONS ARE UNSUBSTANTIAL.

I.

Minneapolis Branch Lines in South Dakota and Minnesota.

A. Adequacy of the Findings.

South Dakota and Minnesota argue that the Commission "disregarded" the effect of Santa Fe-Pennsylvania control of Western upon the Minneapolis branch lines located in those States and in Western Iowa. They contend that the Commission failed to make findings with respect to the "inevitable" detrimental consequences which would result to these lines. South Dakota and Minnesota contend first that the acquisition of Western by Minneapolis is

necessary to insure adequate rail service via its branch lines in those States (S.D. J.S., p. 7; Minn. J.S., pp. 6-7). Secondly, they contend that the traffic of Minneapolis would be diverted under Santa Fe-Pennsylvania control of Western which would result in a loss of gross revenue which, in turn, would result in the "inevitable" abandonment of the Minneapolis branch lines (S.D. J.S., p. 7; Minn. J.S., pp. 6-7). Adequate findings were made by the Commission on both of these issues. These findings indicate that there is no basis for the concern expressed by the States of South Dakota and Minnesota.

The Commission found that Minneapolis is a reasonably prosperous railroad whose financial and physical status has been steadily improving (App. B., Mpls. J.S., pp. 66, 68). It follows, therefore, that no need exists for Minneapolis to acquire Western in order to maintain its branch lines in South Dakota and Minnesota. The Commission found, furthermore, based upon exhaustive evidentiary and subsidiary findings, that the Minneapolis traffic would not be materially affected by Santa Fe-Pennsylvania control of Western (App. B., Mpls. J.S., pp. 75-79). It follows, therefore, that the abandonment of these branch lines would not result from Santa Fe-Pennsylvania's control of Western. The Commission found, moreover, that any diversion of traffic as might occur through the improvement of Western's route under Santa Fe-Pennsylvania control would not jeopardize the maintenance of adequate transportation service by Minneapolis (App. B., Mpls. J.S., p. 74).

These findings effectively dispose of the South Dakota and Minnesota contentions with respect to the impairment of branch-line service. The Commission further found, in placing these contentions in their proper context, that no abandonments were presently contemplated by Minneapolis. It observed, furthermore, that, in any event,

no abandonment could be effected without its approval (App. B., Mpls. J.S., p. 86). Although South Dakota asserts that these findings were not sufficient (S.D. J.S., p. 5); they did provide an adequate disposition of the issue in the light of the previous findings.

B. Substantiality of the Evidence.

Without conceding that adequate findings were made, South Dakota argues that the findings upon which the Commission "ignored" its abandonment claims were not supported by substantial evidence (S.D. J.S., pp. 3, 7). Three basic findings were made which relate to the contentions of South Dakota and Minnesota. Two of them, the finding with respect to the financial stability of Minneapolis and the finding that Santa Fe and Pennsylvania control of Western will not materially divert Minneapolis traffic, are ignored by South Dakota and Minnesota. The third finding, that any diversion which might occur would not jeopardize adequate transportation service is said to be "empty, unexplained, unsupported and erroneous" (S.D. J.S., p. 7).

The finding with respect to the financial stability of Minneapolis is supported by substantial evidence. The earnings record of Minneapolis during the last twenty years and its excellent financial and physical condition are evidence of this (R. 1152). Inefficient operation and excessive debt were the cause of its earlier troubles. *Associated Railways Company Acquisition and Securities*, 228 I.C.C. 277 (1938). It is now almost entirely free from debt (R. 1020). The need to diversify its traffic base to relieve its reliance on agricultural products is said to be necessary to secure its financial security (Minn. J.S., p. 6). But its excellent earnings record in the past several years in the face of an agricultural recession of major

proportions belies these fears (R. 1052; H-44). This finding is corroborated by testimony of South Dakota and Minnesota's witnesses (R. 1681, 1263).

The finding that Santa Fe-Pennsylvania control of Western would not materially affect the traffic of Minneapolis and the finding that such diversion as might occur through the development of Western would not jeopardize adequate transportation of Minneapolis are both based upon the Commission's extensive analysis of the competitive effects of the proposal and its analysis of the specific claims of traffic diversion advanced by Minneapolis. To suggest, as does South Dakota, that the findings are "unexplained" (S.D. J.S., p. 7) is to ignore five full pages of the Commission's report (App. B., Mpls. J.S., pp. 75-79). To suggest, as does South Dakota that the evidence of traffic diversion adduced by Minneapolis is "uncontroverted" (S.D. J.S., p. 7), or as does Minnesota, that it is "undisputed" (Minn. J.S., p. 7) is to ignore the record completely and the detailed findings based on that record relating to each of the categories of traffic included in the Minneapolis diversion "study."

II.

The Peoria Gateway.

Minnesota argues that the Commission failed to consider and failed to make adequate findings regarding the effect of Santa Fe-Pennsylvania control of Western upon the Peoria Gateway. It contends that control by Santa Fe and Pennsylvania will lead "inescapably to stagnation" of Peoria as a rail gateway to the detriment of Minnesota which relies upon Peoria as a secondary gateway from and to the East (Minn. J.S. pp. 8-10).

This argument is completely groundless. It is based upon the assumption that the movement of traffic via

Peoria is detrimental to the interests of Santa Fe and Pennsylvania. It ignores the record and the findings which indicate that the opposite is true (App. B, Mpls. J.S. pp. 60, 61, 75, 76). The argument assumes, furthermore, that Western *is* the Peoria Gateway. This ignores the fact that there are several other east-west routes through Peoria which serve Minnesota and do not include Western. These routes are formed by such lines as the Rock Island, Burlington and Minneapolis on the west and the Nickel Plate, the New York Central and the Chicago & Illinois Midland-Baltimore & Ohio on the east (H-4, p. 1; H-11; 771, 773). A substantial volume of traffic moves through Peoria via these routes cutting Western out entirely (H-126, H-128). Any attempted suppression of Western would only divert the Peoria Gateway traffic to these other routes without benefits to either Santa Fe or Pennsylvania (R. 593, 597, 661-62, 773-74, 690).

The argument, moreover, ignores the significance of the participation in this proceeding of the Cities of Peoria and East Peoria and the Peoria Association of Commerce, the interests having the most immediate interest in the development of Peoria as a major rail gateway. South Dakota's suggestion that these intervening appellees have participated in the case because of the "wealth" of the Santa Fe (S.D. J.S. pp. 8-9) is not worthy of a reply.

The Commission, furthermore, made findings which specifically relate to the effect of Santa Fe-Pennsylvania control upon the volume of traffic moving via the Peoria Gateway. The Commission found that under their control Western would have an "increased opportunity" to secure traffic for the Peoria Gateway which now moves via other gateways (App. B, Mpls. J.S. p. 75). This was based in part upon Santa Fe and Pennsylvania policies, as joint

owners, to solicit Lomax and Effner respectively on a parity with the Chicago Gateway. The Commission found that Pennsylvania's policy would divert a portion of its traffic now moving via Chicago to the Peoria Gateway (App. B, Mpls. J.S. p. 78). It found that, because of the increase in the volume of traffic moving via Peoria, Minneapolis would have an opportunity to solicit this added traffic at Peoria (App. B, Mpls. J.S. p. 78). These findings are adequate and are supported by substantial evidence.

CONCLUSION.

The District Court in holding that the Commission's order was valid was clearly right. It is submitted by these intervening appellees that it is manifest that the questions raised by the appellant on which the decision in this cause depends are so unsubstantial as not to need further argument, and the motion to affirm should be granted.

Respectfully submitted,

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY, A MINNESOTA CORPORATION

Appellant

VS.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION

Appellees

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA

APPELLANT'S BRIEF IN OPPOSITION TO MOTIONS TO AFFIRM

Four motions to affirm have been filed in this appeal: (1) By United States of America and Interstate Commerce Commission, (2) by the Pennsylvania-Santa Fe partners, (3) by the State of Illinois, and (4) by certain municipalities, shippers, and allied organizations. Because of the need for brevity, no attempt will be made herein to meet all of the arguments advanced in support of those motions in an effort to defend the action of the Commission. Instead, we shall attempt to deal with only some of the most egregious

errors which demonstrate why a full review of this appeal on the merits is needed. At the outset it should be noted that the moving parties have all elected to remain silent on the important questions of the contrast between the motives of the competing applicants and the tainted history of the negotiations of the Pennsylvania-Santa Fe group by which they obtained from Wilmington Trust Company an illegal preference which they now seek to preserve and defend.

ARGUMENT

I.

The Interstate Commerce Commission adopted a false, artificial and meaningless standard by which to test the competing applications; use of that standard deprived appellant of a fair hearing and of a comparative consideration of its application.

Section 5(2)(b) of the Interstate Commerce Act (49 U. S. C. §5(2)(b)) lays down the ultimate standard that an acquisition transaction is to be approved if the Commission finds that it will be consistent with the "public interest". That ultimate standard is given meaning by the National Transportation Policy (49 U. S. C. preceding §1), which provides:

> "It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; *to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers;* to encourage the establishment and maintenance of rea-

> sonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several States and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions—*all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense.* All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy." (Emphasis supplied)

The Commission repeatedly stressed the desirability of "separate and independent management" as the guiding criterion by which the competing applications would be tested. It found that the Pennsylvania-Santa Fe application met that standard and that the Minneapolis application did not. The moving parties in this Court repeatedly stressed that contrast and that standard as valid and correct (*e. g.*, U. S. A.-I. C. C. motion 7; P.-S. F. motion 3, 4, 11).

The standard of "independent management" adopted by the Commission is inherently meaningless and utterly unrelated to any statutory or judicial definition of public interest. Neither the Interstate Commerce Act nor the National Transportation Policy contains a syllable indicating that independent management of small carriers will advance the public interest. Indeed, in this very opinion the Commission itself insisted that carrier control of small lines is desirable and in the public interest (J. St. 89).

Apart from the fact that independent management of a small line collides with the emphasis on economy and efficiency dictated by the statutory statement of transporta-

tion policy is the fact that the standard is wholly illusory. It is arrant nonsense to suggest that the management of Western could be independent with all of the stock concentrated in, and voted, without Commission limitation, by, the powerful Pennsylvania-Santa Fe combination. While Pennsylvania-Santa Fe ownership might leave a "President" in Peoria as against a "Division Superintendent" under Minneapolis ownership, both executives, of necessity, would be subordinate to the owners in every meaningful sense. That incontrovertible fact cuts the ground from under the entire premise upon which the Commission reached its decision. Both the Commission and the District Court declined to recognize or examine that fact.

The Commission's adoption, at the outset, of this artificial standard, necessarily ruled out a comparative hearing. The proper approach for the regulatory agency should have been to catalog the advantages and disadvantages, from the public viewpoint, of each of the two competing applications. Advantages and disadvantages could then have been weighed by appropriate findings. Then the application which improved the public transportation system, facilitated integration and economy, and strengthened railroad carriers in the interests of commerce and the national defense—all objectives expressed in the legislative policy—should have been selected as the application most in the public interest and hence the application to be approved. Instead of pursuing that proper course, what the Commission here did was to decide in advance upon a standard that had no relation to the National Transportation Policy and which only one of the two competing applicants could possibly satisfy.

A so-called comparative hearing in the framework of that advance discriminatory determination is merely an

empty phrase, as the Commission recognized when it said, "With our approval of that [Pennsylvania-Santa Fe] application, the possibility of the Minneapolis' acquiring the Western's stock is eliminated and its application becomes moot" (J. St. 93-94). And that apparently, is the tacit explanation for the refusal of the Commission to make any findings with respect to the undisputed evidence that the Minneapolis application would promote the National Transportation Policy by (a) the integration and elimination of duplicate yard, roundhouse, accounting and other facilities, (b) the effectuation of economies reaching the level of almost 40 per cent of Western's expenses,[1] (c) the elimination of duplicate switching and transfers, (d) the acceleration of schedules and improved service, (e) the dependence of Minneapolis upon, and its self-interest in promoting traffic and industrial development for, the Peoria gateway, (f) the soundness of the purchase price under the Minneapolis program, the effect of which would be virtually to double the earnings of Western, and (g) the advantage of strengthening the 1,400 mile system of Minneapolis and diversifying and improving the density of its traffic. Nor could a truly comparative analysis omit findings on the critical issues of the motivation and economic self-interest of the competing applicants, particularly in view of the undisputed evidence that the successful applicants initiated negotiations for the express purpose

---

[1] If the Commission had addressed itself to this question, it would have been required to compare the two applications. The President of the Santa Fe testified that no special study had been made of economies which might be achieved under Pennsylvania-Santa Fe control. The most that he and his large staff could come up with after months of thought, preparation and consultation with Western officers, was that they might trade "ideas" on the subject (Tr. 69-70, 148-49, 153, 1630-31).

of blocking the purchase by Minneapolis and thus foreclosing the competition they might face from a so-called outer-outer belt line around Chicago under Minneapolis control. The Commission's shocking disinterest in the elimination of waste and duplication proposed by Minneapolis, in the added and accelerated service to the public proposed by Minneapolis, and, above all, in the competition-stifling purpose of the Pennsylvania, resulted in a discriminatory and unfair hearing and in a total failure to meet the requirements for findings enunciated by the Administrative Procedure Act. That failure, in turn, necessarily precluded proper judicial review because the reviewing court was not provided with the underpinnings for the Commission's arbitrary conclusion.

Intertwined with the Commission's mistaken emphasis on "independent management" is its discussion of the element of neutrality among connecting carriers. The moving parties maintain that the Pennsylvania-Santa Fe application was to be preferred, because it would preserve neutrality among connecting carriers, whereas the Minneapolis proposal would not. In fact, the Minneapolis testimony was clearly to the effect that service with all carriers connecting with Western would be maintained and improved (Tr. 1274-85, 1289-90). It is true that the successful applicants also testified that they would maintain neutrality with connecting carriers, but they did so, as they testified, in their own self-interest and in fear of retaliation if they adopted any other course (Tr. 221-223, 320, 360). If that economic insurance obtains when the owners are the most powerful carriers, originating the most tonnage in America, how much more effective is it with respect to a small carrier with infinitesimal originations. This economic fact of life is underscored by the powerful influence the

originating carrier has on the routing of traffic.[2] The very fact that Minneapolis is dependent solely upon the Peoria gateway provides the single true guarantee of neutrality with the connecting carriers who feed the pipeline of traffic into the gateway and carry it out.

To assure neutrality, the Commission imposed standard conditions upon the Pennsylvania-Santa Fe acquisition. In open hearing, Minneapolis had proposed to accept those same standard conditions. The Commission blatantly disregarded that fact and concluded, without foundation, that the standard conditions would be adequate to protect others in the event of control by the powerful Pennsylvania-Santa Fe combine, but not in the event of ownership by the infinitely weaker appellant. In the same vein the Commission brushed off as unimportant the clear, convincing and unchallenged evidence of the loss the Minneapolis would suffer from the Pennsylvania-Santa Fe acquisition (Tr. 1162-1175-83, 1237, 1258 *et seq.*, 1388, 1545, 1611 *et seq.*). In contrast it stated that acquisition by Minneapolis would be "extremely harmful to other carriers" (J. St. 73), naming only the Wabash. The extreme solicitude for that large subsidiary of the Pennsylvania was based on a confused and unsupported claim of one witness which was rendered meaningless on cross examination (Tr. 1415-16, 1448-50). In order to survive, the Minneapolis could not do otherwise than maintain a policy of neutrality with respect to all connecting carriers. The giant Pennsylvania and the giant Santa Fe are under far less economic compulsion. Their powerful ability to reward or punish is already all too well known to connecting lines.

---

[2] Mr. Gurley, President of the Santa Fe, in discussing the influence of the traffic solicitors on the routing of traffic, testified that "our utmost could really be quite tremendous" (Tr. 170).

By its adoption of the false standard of "independence" and by its distortion of the concept of "neutrality" and the disparity of the treatment of the competing applications thereunder, the Interstate Commerce Commission disobeyed the statutory mandate and made a farce of the concept of a comparative hearing.

2.

On certain essential issues the Interstate Commerce Commission failed to make any findings; on others its findings are contrary to undisputed record facts.

The report of the Commission makes no serious effort to present systematic and authentic findings to support its predetermined conclusion. The motions to affirm fail to discuss some of the important issues which the Commission ignored, and rely on the Commission's recitals of position as a substitute for findings on other vital areas of conflict. Finally, they deal with some of the evidence pertinent to a few of the findings which require full briefing on the merits. At this preliminary stage we shall indicate only briefly certain of the important deficiencies in the Commission report.

1. We have already noted the absence of any findings with respect to the economies and improved service proposed by Minneapolis or the benefits to the national transportation system of strengthening Minneapolis and diversifying its traffic through the combination with Western. Indeed, in at least thirteen instances the report cites the position of Minneapolis without drawing any conclusion. The terminology used is "Minneapolis contends", "Minneapolis estimates", "Minneapolis states", and "Minneapolis insists" (J. St. 72-78). Nowhere in its report does the

Commission evaluate the validity of these positions and their effect under the ultimate standard of the public interest, despite the fact that in no material respect was the supporting evidence contradicted in the record.

2. The Commission made no findings with respect to the economic motivation of the competing applicants. Minneapolis proved, and the President of Pennsylvania conceded, that he had long regarded Western and Minneapolis as a natural combination (Tr. 306-08, 970, 1040). When Minneapolis began negotiating in 1954 for the purchase of Western and the Monon (a small railroad running roughly north and south in Indiana) so as to promote an outer-outer belt line circumventing Chicago, Pennsylvania moved in to buy Western and stop that "nonsense" (Tr. 309, 310, 1040). That vital aspect of purpose and motive is completely omitted from any findings of the Commission. The seriousness of the omission is underscored by the fact that Pennsylvania had previously proved what disastrous consequences its ownership could have for Western (see pp. 13-14, *infra*).

3. With respect to the propriety of the purchase price, the Commission based its approval on the statement that the price to Pennsylvania-Santa Fe "was established on the basis of agreement between a willing seller and a willing buyer" (J. St. 85). The Commission made no findings with respect to these pertinent considerations:

(a) A few weeks before they entered the transaction at $135 per share which was subsequently approved by the Commission, the same "willing buyers" entered into contracts with the same "willing sellers" to purchase 52 per cent of Western's stock at $100 per

share (Exs. 7-f, 7-g, to I -S. F. application). Obviously the minority shares would be worth less than majority control. If the Commission had power to approve a price negotiated at "arm's length" in May, 35 per cent higher than the price negotiated at "arm's length" in April, at minimum it was incumbent upon the Commission to explore the transactions and to set out the findings of fact upon which it relied.

(b) The Commission stated that if $135 per share were a proper price for Minneapolis to pay, it would automatically be fair and reasonable for the Pennsylvania-Santa Fe group (J. St. 86).[3] The Pennsylvania-Santa Fe motion to affirm attempts to make capital of the fact that in its petition for reconsideration before the full Commission, Minneapolis requested inclusion in the ownership group if Pennsylvania-Santa Fe were successful. That request, of course, was made without regard to the purchase price and as a matter of desperate defense necessity because of the ruinous effect unfettered Pennsylvania-Santa Fe ownership would have on the traffic and income of Minneapolis.

(c) The price earnings ratio, embraced in the Pennsylvania-Santa Fe proposal, far outstripped the price earnings ratios of all other railroads in the United States, as shown by the public markets. That fact passed unnoticed and its significance was not appraised.

[3] Based on the 1954 figures used at the hearing, the Pennsylvania-Santa Fe purchase was predicated on average annual earnings from Western of some $641,000, whereas the Minneapolis offer to pay the same price was predicated, as a result of the proposed economies on average earnings of Western of some $1,279,000 (Tr. 1387-88). How those two can be equated, the Commission's report does not reveal.

In the District Court both the Commission and the successful applicants attempted to shore up the Commission's fallacious conclusions as to the purchase price by decrying the "speculative test of potential earnings". In so doing, they ignored the principle that "the commercial value of property consists in the expectation of income from it". *Galveston, Harrisburg, etc. Ry. Co. v. Texas*, 210 U. S. 217, 226 (1908). See also, *Consolidated Rock Products Co. v. DuBois*, 312 U. S. 510, 526 (1941); *Group of Investors v. Milwaukee R. Co.*, 318 U. S. 523, 540 (1943).

4. On the topic of the promotion and future of the Peoria gateway, the Commission omitted findings of undisputed facts and made findings directly contrary to the sworn testimony of officers of the successful applicants.

(a) No finding was made of the fact that, by the use of competing gateways, Pennsylvania and Santa Fe are in full and complete competition with the Peoria gateway. Conversely Minneapolis relies exclusively upon the Peoria gateway, which constitutes its lifeline.

(b) Neither Pennsylvania nor Santa Fe has solicited for the Peoria gateway because economic self-interests have dictated the longer haul through St. Louis and Chicago for Pennsylvania and through Chicago for the Santa Fe. The Commission found that all this would change, and that while "Pennsylvania will continue to solicit its long haul to St. Louis, Effner and Chicago will be on a parity" (Tr. 76). That runs directly counter to the sworn testimony of Mr. Symes, President of Pennsylvania, who testified that the past solicitation policy had been for St. Louis first, Chicago next, and Effner (for the Peoria gateway) last. When asked about the future, he said that the policy would not

"change very much" (Tr. 280-82, 291-92).[4] With respect to the Santa Fe the record is somewhat more confused, but nevertheless contradicts the bald assertion of the Commission that Lomax (at the western end of Western) and Chicago would be on a parity. Mr. Duffy, the Traffic Vice President of the Santa Fe, conceded that unrouted traffic would be sent through Chicago for the long haul (Tr. 259).

That testimony from the two successful applicants showing their preference for Chicago also contradicts the Commission's conclusion that "Santa Fe and Pennsylvania are just about as well off financially when handling traffic via Western as they would be on the long haul through Chicago" (J. St. 75). True, there was a self-serving generalization to that effect in the evidence, but if the Pennsylvania-Santa Fe partners were to sustain the notion that their economic self-interest was in the shorter, rather than in the longer, haul, they were duty-bound to produce data and figures to establish that startling fact. This Court has long recognized that the contrary is true. See *United States* v. *Southern Pacific Co.*, 259 U. S. 214, 231 (1922).

Furthermore, the Commission, with its asserted expertise, must have been aware, as is any thoughtful businessman, of the lower incremental costs and the higher margins of profit arising from more intensive utilization of yard facilities, which facilities the two successful applicants have in the major competing gateways. Subsequent to the Commission's determination,

[4] On a related point, when speaking of the Fifner interchange at the east end of Western, Mr. Symes testified (Tr. 321): "That is what I mean when I say we made it, if anything here does harm to it, we could destroy it. That is not a threat. I don't mean it that way but I could very well do it from the standpoint of economics."

Santa Fe announced the opening of a "high-speed 'push-button' railroad freight yard" in Chicago which would double the existing working capacity of the Santa Fe yard (Santa Fe Railway press release, March 25, 1958). That announced investment of 20 million dollars in improvements to double the working capacity in Chicago effectively belies the notion of preference or equality for the short haul through Peoria.

(c) The Commission expressed confidence that the Pennsylvania-Santa Fe acquisition would improve Western's car supply, despite the undisputed evidence that both lines experienced great car shortages in their own operations and that Minneapolis, as the Commission conceded (J. St. 68), was one of the "bright spots" in the country in car ownership and supply.

5. The Commission ignored the lesson of history that Pennsylvania Railroad, jointly with the Burlington (a Western carrier operating from Chicago to the west), had previously owned Western and permitted it to sink into receivership. *Acquisition by T. P. & W. R. R.*, 124 I. C. C. 181 (1927). The destruction of Western was the natural result of Pennsylvania's self-interest in the competing Chicago and St. Louis gateways, which provided the longer haul. At that earlier stage, Pennsylvania and the Burlington had more than ample time and opportunity to develop Western and to build up the Peoria gateway, but as Western itself advised the Commission, "it was against the interest of the controlling companies (Pennsylvania-Burlington) to develop the property because it competed for traffic with their lines" (Ex. 100, p. 7). In the instant case no showing was made and no findings were supplied by the Commission to suggest that there has been any change

in the economic or transportation conditions which would alter Pennsylvania's economic incentives. The Commission did not have to speculate as to what Pennsylvania might do in the future; it had only to look at what it had done in the past. The economic self-interest of Minneapolis is to promote the maximum use of the Peoria gateway upon which it is solely dependent. The economic self-interest of the Pennsylvania-Santa Fe group is to use the competing long haul gateways of Chicago and St. Louis which furnish higher revenues. All of the promises that Pennsylvania and Santa Fe made to each other (and expressly "not for the benefit of others not parties hereto") cannot erase these facts; the failure of the Commission to make appropriate findings in this regard is, we respectfully submit, fatal.

6. The findings of the Commission with respect to the shippers and local officials brought to the witness stand by Pennsylvania-Santa Fe omit any consideration of the following undisputed facts:

(a) The witnesses were assembled as part of a large scale publicity campaign (Exs. H-92, H-94, H-95, H-96, H-97). Cross examination revealed that the witnesses had not seen, and, with one or two exceptions, were not even remotely aware of, the considerations underlying the Minneapolis application.

(b) All of the shippers testified that their interest was solely in good service. Not one expressed opposition to the elimination of duplicate facilities, the acceleration of train service, and the addition of more trains. Every shipper who had ever used Minneapolis testified to the excellence of its service and its satisfaction with the way Minneapolis operated (*e. g.*, Tr. 426-28, 447-

48, 599, 602-03, 667, 700, 784, 799, 813). A mine operator who appeared on the stand to support the Pennsylvania-Santa Fe application admitted that Pennsylvania had experienced shortages of coal cars and that Minneapolis had kept his competitor supplied (Tr. 506).

(c) Finally, the Commission erred in failing to recognize that its treatment of the testimony of the shipper witnesses should have been confined to the economic substance of that testimony. Instead, the Commission concentrated on the numbers of witnesses produced by the free-spending Pennsylvania-Santa Fe promotion, as though the proceedings before it were a popularity contest.

7. The Commission's denigration of the Minneapolis program of integration, because it would result in the displacement of some employees, ignored the following considerations with respect to which no findings were made:

(a) Integration and economy are express aims of the National Transportation Policy, and those aims can seldom, if ever, be accomplished without a reduction in employment. They can, however, be accompanied by a protective cushioning program such as the program offered by Minneapolis in the present case.

(b) The only true ultimate guarantee of job security lies in economic, efficient, profitable operations such as those proposed by the appellant, with an emphasis on augmented and improved service through the Peoria gateway. Feather-bedding cannot last forever and jobs cannot be secure when based on uneconomical operations.

(c) The appellant explained fully how minimal the impact on the employees would be because of the time consumed in integration, the replacement of retired and resigned employees in lieu of displacement, the full observance of the Washington Job Protection Agreement of 1936, and other factors (Tr. 1335-36, 1579). In fact, appellant voluntarily offered to abide by the Washington Job Protection Agreement at an earlier time than counsel for railway labor organizations was able to exact a commitment to that effect from the successful applicants.

8. The Commission made no findings of fact with respect to the elements which had to be considered on the key issue of the violation of section 10 of the Clayton Act (15 U. S. C. §20). It did not identify the interlocking directors. It made no findings with respect to the preference which Pennsylvania-Santa Fe enjoyed in the negotiations as a result of the interlocking directorate. It made no finding with respect to the exclusion of Minneapolis from the negotiations, also as a result of the interlocking directorate. Finally, if it be assumed that section 5(11) of the Interstate Commerce Act (49 U. S. C. §5(11)) could be read to permit condonation of a past violation of section 10, the Commission failed to make any findings of the considerations in the public interest which could warrant such condonation.

9. The findings as to the anticompetitive consequences of the Pennsylvania-Santa Fe acquisition are wholly inadequate to sustain the grant of immunity from antitrust prosecution.

(a) The Commission did not mention either section 1 of the Sherman Act (15 U. S. C. §1) or section 7 of

the Clayton Act (15 U. S. C. §18) and hence did not examine how the Pennsylvania-Santa Fe proposal squared with those statutory interdictions.

(b) Although the Commission discussed (without making findings) some possible consequences *within the Peoria gateway*, it gave no consideration to the power of the two railroad colossi to cut off competition by *drying up the Peoria gateway in its entirety*, and their economic incentive to do so. The record is devoid of evidence that they could not and would not do so and would not profit by sending traffic through their larger gateways—precisely as Pennsylvania and the Burlington had done for years in the past.

(c) The Commission emphasized the fact that Pennsylvania and Santa Fe are the two largest connections of Western (J. St. 61) but ignored its own finding that Western's business was obtained primarily through the aggressive solicitation of its own traffic department (J. St. 60) in competition with the solicitation of Pennsylvania and Santa Fe for other gateways.

(d) The Commission ignored the fact that the successful applicants' easy assurance of the continuation in the future of Western's aggressive traffic solicitation policies was confined to a private agreement between the two partners, which agreement expressly was not for the benefit of, and will not be enforceable by, any outside party. The Commission thus rested the ultimate standard of the public interest on the shifting sands of a private assurance between the two partners completely beyond the control of the Commission, shippers or other carriers.

3.

The order of the Interstate Commerce Commission condones a direct violation of Section 10 of the Clayton Act.

The two motions to affirm which attempt to deal with the argument on this point rest primarily on the grounds that (1) there were no "dealings in securities" (P.-S. F. motion 22), and (2) that section 10 of the Clayton Act was designed "to prevent a railroad from buying at too high a price" (U. S. A.-I. C. C. motion 11), whereas the Commission, in this case, expressly found the purchase price to be reasonable (P.-S. F. motion 24). Hence, it is urged that this Court make no further inquiry. With respect to the matter of "dealings in securities"—the exact language of the statutory prohibition—we have both the letter agreements of April 15, 1955 by which Wilmington Trust Company agreed to sell 26 per cent of the stock of Western to Santa Fe and 26 per cent of the stock to the Pennsylvania Company (wholly-owned subsidiary of The Pennsylvania Railroad Company) at a price of $100 per share (Tr. 45, 1033-34; Exs. 7-f, 7-g to P.-S. F. application), and the May 26, 1955 agreement to sell stock to the Santa Fe at a price of $135 per share (Ex. 7 to P.-S. F. application), followed shortly by the agreement to sell half of that stock to the Pennsylvania Company (Ex. 7-d to P.-S. F. application). It seems abundantly clear that the negotiations leading to those contracts, and those contracts themselves, are sufficient to come within the statutory prohibition of "dealings". At least one of the successful applicants agrees. On April 14, 1958, Pennsylvania Company commenced a lawsuit against the trustees of the McNear Estate, seeking specific performance of the April 15,

1955 contract to sell at $100 per share, or, in the alternative, damages for breach of that contract in the amount of $35 per share (*Pennsylvania Company, etc.* v. *Wilmington Trust Company, etc. & ano.*, Civil Action No. 969, Court of Chancery, New Castle County, State of Delaware). That lawsuit is presently pending.

The moving parties suggest that the prohibition of section 10 applies only to a consummated purchase of securities (*e. g.*, P.-S. F. motion 24). Had Congress so intended, it would have been easy to use appropriate language to that effect. The adoption of the term "dealings" is intended to encompass all business transactions with respect to the enumerated subject matter.

Nor is there any basis for assuming that the adequacy of price was the sole consideration to which the Congress addressed its attention. The sole judicial decision on the subject is to the contrary. *In re Missouri Pacific R. Co.*, 13 F. Supp. 888 (E. D. Mo. 1935). If the hospitable approach of that decision to remedial legislation in the public interest is to be rejected, it should be done on a basis of nothing less than an authoritative determination by this Court.

It is true, as the moving parties suggest, that the penalties for violation of section 10 of the Clayton Act are criminal. Nevertheless, the fact remains that the Commission must determine whether a transaction, conceived in such illegality and ruthlessly dedicated to the suppression of competition, is so vital to the health of our national transportation system that the violators of the law should be clothed with immunity to assure them the fruits of their illegal conduct. Even if one assumes that the power to condone *prior* violations, as well as the power to immunize *future* violations, of the antitrust laws is to be read into section

5(11) of the Interstate Commerce Act, such power may not properly be exercised by edict or fiat, unaccompanied by findings which disclose the considerations in the public interest dictating its exercise."

Significantly enough, both the Commission and the District Court completely ignored and did not even mention the only judicial decision construing section 10 of the Clayton Act. That decision held that the statute must be enforced even where circumstances do not permit the competitive bidding established as an exemption by the statute. *In re Missouri Pacific R. Co., supra.* Here, of course, Wilmington Trust Company could have allowed competitive bidding and could have afforded Pennsylvania Railroad the opportunity of purchasing the stock by that means, but such action would have denied Pennsylvania Railroad the special preference which it secured. The transparency of the attempts by the tribunals below to avoid the impact of section 10 are manifest by the Commission's suggestion that taking the second contract in the name of the Santa Fe, with a subsequent division of the shares with the partner, Pennsylvania, immunized the transaction from the

---

"The law seems clear, of course, that the Commission's power under section 5(11) does not extend to the condonation of past violations. See Commissioner Eastman's concurring opinion in *Interstate Commerce Commission v. Baltimore & O. R. Co.*, 152 I.C.C. 721, 734 (1929), construing the earlier statutory version of what is now section 5(11).

"Plainly there is nothing in this provision which in any way modifies the antitrust statutes, and nothing which suspends their operation until we have made an order. In that event the operation of these statutes is suspended with reference only to *future* acts authorized or required by the order. In no way is it suspended with reference to unauthorized acts pending our subsequent approval or disapproval, such suspension to continue . . . we approve and to cease if we disapprove. If that had been the intent of Congress it could very easily have been expressed, but there is no language which even remotely suggests such an intent." (emphasis in original)

statute (J. St. 88), and the District Court's intimation that the statutory prohibition could be evaded by virtue of the fact that the Pennsylvania Railroad acted through its wholly-owned subsidiary, Pennsylvania Company (J. St. 46, ftnt. 3).

The unpleasant odor of these intimations is not dissipated by the suggestion of the Department of Justice in its motion to affirm (p. 12) that this case presents at most "a technical breach of the provisions of Section 10". Rather, this case presents, with all the ugly brush strokes highlighted, a vivid picture of the nation's largest railroad carrier using the influence of an interlocking directorate to crush the natural expansion of a small carrier—and doing that for the deliberate purpose of stifling competition. If that be merely a technical breach, let it be technically suppressed, not technically condoned.

4.

The Pennsylvania-Santa Fe acquisition was designed and calculated to restrain competition via the Peoria gateway and to afford monopolistic power to the successful applicants; the Commission's attempt to immunize that acquisition from the operation of the antitrust laws was an abuse of its statutory power.

In dealing with this argument, the several motions to affirm err primarily in (1) ignoring the motives of the successful applicants, and (2) considering the Peoria gateway alone without regard to the primary interests of the successful applicants in other, more lucrative, competing gateways.

Pennsylvania Railroad, the nation's largest carrier, enjoys a dominant position in the St. Louis and Chicago

gateways, and, through its subsidiary, the Wabash, in the Decatur gateway. Santa Fe has a dominant position in the Chicago gateway. Among all the carriers in the United States, they are two of the largest originators of traffic, and, as such, are able to exercise a tremendous influence over the routing of traffic. To allow control of a competing gateway—Peoria—to pass into the hands of the Pennsylvania-Santa Fe combine puts them in a powerful position to strangle competition through Peoria, to the advantage of their preferential positions in Chicago and St. Louis and Decatur. That the fear is not idle is made apparent by the testimony of Mr. Symes, President of the Pennsylvania, that "we could destroy it" (Tr. 321). No serious consideration was given to this subject and no substantive findings on it were provided by the Commission. Indeed, the Commission did not even mention section 1 of the Sherman Act or section 7 of the Clayton Act.

Many years ago this Court analyzed and condemned the very evils which the Commission and the District Court have here chosen to sanction. In *United States v. Southern Pacific Co.*, 259 U. S. 214, 230 (1922), the Court stated:

> "Such combinations, not the result of normal and natural growth and development, but springing from the formation of holding companies, or stock purchases, resulting in the unified control of different roads or systems, naturally competitive, constitute 'a menace to, and a restraint upon, that freedom of commerce which Congress intended to recognize and protect, and which the public is entitled to have protected.' "

The foregoing principle was then applied to the very considerations which will inevitably influence the Pennsylvania-Santa Fe group in the instant case. The Court stated:

> "Self-interest dictates the solicitation and procurement of freight for the longer haul by the Southern Pacific lines. While many practices, formerly in vogue, are eliminated by the legislation of Congress regulating interstate commerce, and through rates and transportation may be had under public supervision, there are elements of competition in the granting of special facilities, the prompt carrying and delivery of freight, the ready and agreeable adjustment and settlement of claims, and other elements which that legislation does not control." (259 U. S. at 231)

In *Interstate Commerce Commission* v. *Baltimore & O. R. Co.*, 152 I. C. C. 721, 735, 736 (1929), the Commission pointed out that (a) the effective competition in the solicitation of the acquired carrier could not survive the acquisition because, "knowledge of its relationship to its controlling lines would deprive it of force as a competitor for their traffic", and (b) the motivation of the acquiring carriers "to prevent the consummation of the plans for a competing through system" should not be ignored.

As indicated above, the Commission's report was silent on the motives of the Pennsylvania-Santa Fe group, although evidence on that point was clear, convincing and uncontradicted (Tr. 302-303, 309, 1040). Even the most ingenuous of optimists ought to be convinced by the admission made by President Symes of Pennsylvania under oath that he entered upon negotiations to acquire Western in order to block the competitive outer-outer belt line around Chicago which Minneapolis was proposing to establish by acquisition first of Western and then of the small Monon

railway (Tr. 310).[6] The Commission, the District Court, and the moving parties are unanimous in their disregard of the intent and history of the Pennsylvania-Santa Fe purposes and negotiations. If the suspicion of a purpose to suppress competition was sufficient to evoke disapproval in the *Baltimore & O. R. Co.* case, *supra*, how much more forceful is the demand for judicial condemnation in the instant case, where the improper motives are admitted under oath by the prime movers.

At times the Justice Department has shown an awareness of its duty in this respect quite at variance with the position adopted in its motion to affirm here. On December 30, 1958, the Assistant Attorney General in charge of the Antitrust Division wrote the Chairman of the Civil Aeronautics Board in response to a request for a comment on the certificated air carriers' mutual assistance pact. That letter dealt with the Board's obligation to weigh competitive factors under section 2 of the Civil Aeronautics Act (49 U. S. C. former §402) before granting antitrust immu-

---

[6] The President of the Santa Fe did not address himself to exactly the same question, but testified:

"Q. Mr. Gurley, is it proper to conclude from your testimony that when there are two competing applicants for control of a given railroad the applicant having the greatest exchange of traffic with that railroad should be preferred?

"A. Well, I think I'd answer that by saying that is pretty nearly yes, there might be some qualifications but I think the answer is yes. (Tr. 72)

* * * * *

"A. You say you don't want a lengthy answer, and the brief answer is that we prefer to own it.

"Q. Don't you feel that you are protected by those conditions?

"A. Be that as it may, I prefer to own it, that is the reason I oppose them." (Tr. 180)

That was the best showing in the public interest that Santa Fe's President was able to offer.

nity—an obligation not unlike that which rested on the Interstate Commerce Commission in this case. At the outset the Department of Justice pointed out that the Board should inquire into the motives or purposes of the proposed pact and then examine its effects upon competition.

The duty of the Commission with respect to granting immunity under the antitrust laws was spelled out by Mr. Justice Rutledge, speaking for this court in *McLean Trucking Co.* v. *United States*, 321 U. S. 67, 86, 88 (1944):

> "Congress however neither has made the antitrust laws wholly inapplicable to the transportation industry nor has authorized the Commission in passing on a proposed merger to ignore their policy. Congress recognized that the process of consolidating motor carriers would result in some diminution of competition and might result in the creation of monopolies. To prevent the latter effect and *to make certain that the former was permitted only where appropriate to further the national transportation policy*, it placed in the Commission power to control such developments.
>
> * * * * *
>
> "If the Commission did not exceed the statutory limits within which Congress confined its discretion *and its findings are adequate and supported by evidence*, it is not our function to upset its order." (Emphasis supplied)

In discharging that obligation, the Commission may not substitute its own conclusory evaluation of competitive requirements for the dictates of the National Transportation Policy. See *F. C. C.* v. *RCA Communications, Inc.*, 346 U. S. 86 (1953).

In its report the Commission did concede that the effect of the Pennsylvania-Santa Fe acquisition might be "some diversion of traffic" (J. St. 76). The Commission, how-

ever, was addressing itself solely to the narrow effect as among the several carriers within the Peoria gateway. What it failed to consider was the much more important, much broader, question of the future of the Peoria gateway itself when in the hands of powerful carriers whose primary interests lay elsewhere. It ignored the fact that its order would place it within the unrestrained power of the Pennsylvania-Santa Fe group substantially to lessen the traffic through the Peoria gateway, for the benefit of the competing St. Louis and Chicago gateways, which, at least in respect of the Pennsylvania Railroad, was the very purpose of the acquisition. It also was blind to the fact that the drying up of the Peoria gateway had been the actual result of the earlier analogous ownership of Western by Pennsylvania Railroad and Burlington. It is in this vital and sensitive area of the working of economic forces that the Commission was called upon to exercise the highest level of expertise knowledge, and it is in this very area that the greatest vacuum exists in the Commission's report.

The Commission was required to consider whether the "public interest" to be served by a grant of the Pennsylvania-Santa Fe application was so clear and convincing as to warrant immunization from the effect of the antitrust laws. In discharging that function, it was incumbent upon the Commission to consider the available alternatives. The Minneapolis application was ready at hand as a clear alternative. It was calculated to promote and stimulate, rather than to stifle and lessen, competition. It carried with it, in the public interest, the economy, the integration and the elimination of duplication and waste, objectives underscored in the National Transportation Policy. The gradual reduction of unnecessary job positions contemplated under

the Minneapolis proposal was to be effected under the cushioning protection of the policy established by the Commission for just that purpose. The Commission's criticism of the Minneapolis proposal on the ground that top management would no longer be located in Peoria has been shown to be a transparent sham in which the Commission can take little pride as an expert.

The blunt truth is that the Commission simply did not consider whether the harm to the public from the monopolistic power which the acquisition of Western would concentrate in the Pennsylvania-Santa Fe group could be avoided in reasonable fashion by the alternative Minneapolis proposal. The applications were not balanced in that light. There was no weighing of the Minneapolis application with its emphasis on promoting the competition of the Peoria gateway against the proposal of the successful applicants whose interests lay elsewhere. Indeed, after the Commission decided to grant the Pennsylvania-Santa Fe application, it said quite frankly that that action made the Minneapolis application moot (J. St. 94). Perhaps that very admission accounts for the fact that the Commission chose never to dignify by findings the considerations underlying the Minneapolis application.

We respectfully suggest that the Commission utterly failed to discharge the serious weighty duty entrusted to it of determining whether or not immunity from antitrust prosecution should be granted to the Pennsylvania-Santa Fe partners.

5.

The District Court review was inadequate.

None of the motions to affirm makes any real effort to defend the perfunctory opinion of the District Court. The reason is not far to seek.

The errors committed by the Commission to which this brief is addressed relate to the improper application of the law, the failure to make findings on many vital issues, and the inadequacy of the record basis for the significant findings which were made. There can be no dispute that these items constitute a proper subject matter for judicial review. The District Court failed to recognize the scope of its authority to deal with these errors. It summed up its concept of the whole matter in the extraordinary statement that, "within the limits of the jurisdiction conferred upon it, the power of a Court or an administrative agency to decide questions is not confined to deciding them correctly" (J. St. 45). And with all respect, we suggest that the District Court in its opinion applied that approach literally.

CONCLUSION

We recognize that we are asking this Court to make a true analysis of the facts and law and to look behind the superficial plausibility of the Commission report and the easy reliance thereon by the District Court. We do so only because there is no other way to avoid a dangerous precedent and to avert a serious miscarriage of administrative justice.

For the reasons set forth above, as well as those presented in our Jurisdictional Statement, it is respectfully submitted that the questions presented by this appeal are sub-

stantial, that they are of public importance, and that they require that the motions be denied and the appeal be heard on the merits.

Respectfully submitted,

4. Proceedings in the District Court 13

Summary of argument 14

Argument 18

I. The standard of "separate and independent management" adopted by the Commission to determine public interest is false, artificial and meaningless and collides with the National Transportation Policy. That standard deprived Minneapolis of a fair hearing and comparative consideration of its application 18

II. On many essential issues findings were completely omitted and on others findings were made contrary to undisputed record proof. The Commission failed to provide the findings and explanation for decision required by law 32

III. The purchase of Western shares by Pennsylvania constituted a direct violation of section 10 of the Clayton Act which the Commission and the District Court were powerless to condone 50

A. The negotiation and execution of the contracts for the purchase of Western's stock constitute prohibited "dealings in securities" between a carrier and a corporation having directors in common 53

B. The Interstate Commerce Commission is without authority to condone antitrust violations occurring prior to the entry of the Commission's order 57

IV. The Pennsylvania-Santa Fe acquisition was specifically designed and calculated materially to restrain competition between the Peoria gateway and the major east-west gateways of St. Louis and Chicago, and to afford monopolistic power to the successful applicants in their own service areas. Immunization of the acquisition from the operation of the antitrust laws was an abuse of the Commission's statutory power 59

V. The restrictive consideration by the District Court constituted a denial of judicial review 70

Conclusion 72

OCTOBER TERM 1959

No. 12

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY, A MINNESOTA CORPORATION

Appellant

VS.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, ET AL.

Appellees

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA

BRIEF OF APPELLANT THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY

OPINIONS BELOW

The opinion of the District Court for the District of Minnesota, 4th Division (R. 91-105), is reported at 165 F. Supp. 893. The report of Division 4 of the Interstate Commerce Commission (R. 17-49), is reported at 295 I.C.C. 523.

JURISDICTION

The action in the District Court was brought under 28 U.S.C. § 1336 to set aside orders of the Interstate Com-

merce Commission. It was heard by a District Court of three judges, as provided in 28 U.S.C. § 2284 and §§ 2321-2325. The final order of the District Court was entered September 16, 1958 (R. 105), and the Notice of Appeal was filed in that Court October 2, 1958 (R. 106-110). On March 9, 1959, this Court entered an order noting probable jurisdiction and transferring this case, together with two companion appeals (Nos. 27 and 28) to the summary calendar (R. 2029). The jurisdiction of this Court is conferred by 28 U.S.C. §§ 1253 and 2101(b). The following decisions sustain the jurisdiction of this Court to review the determination of the District Court on direct appeal in this case: *Chicago, M., St. P. & P. RR.* v. *Illinois*, 355 U.S. 300 (1958); *Alleghany Corp.* v. *Breswick & Co.*, 353 U.S. 151 (1957); *United States* v. *ICC*, 352 U.S. 158 (1956); *United States* v. *Pierce Auto Freight Lines*, 327 U.S. 515 (1946).

Statutes Involved

Section 1 of the Sherman Act, as amended (26 Stat. 209, as amended, 15 U.S.C. § 1); section 7 of the Clayton Act, as amended (38 Stat. 731, as amended, 15 U.S.C. § 18); section 10 of the Clayton Act (38 Stat. 734, 15 U.S.C. § 20); the National Transportation Policy (54 Stat. 899, 49 U.S.C. preceding § 1); sections 5(2) and 5(11) of the Interstate Commerce Act, as amended (24 Stat. 380, as amended, 15 U.S.C. §§ 5(2) and 5(11)); and sections 8(b) and 10(e) of the Administrative Procedure Act (60 Stat. 242, 243, 5 U.S.C. §§ 1007(b) and 1009(e)) are set forth in Appendix A hereto.

QUESTIONS PRESENTED FOR REVIEW

1. Minneapolis[1] was denied a comparative hearing.

2. Under the appropriate legislative standard, the Commission may not authorize an acquisition that violates section 1 of the Sherman Act and sections 7 and 10 of the Clayton Act, in the face of an alternative application which would promote competition and assure, as well, improved and accelerated service, added service routes, large operating economies and the strengthening of a small carrier.

3. The legislative standard of "public interest" requires an accommodation of the antitrust laws and the National Transportation Policy of the Interstate Commerce Act. The national policy of unfettered competition may be overridden only by compelling considerations of improved service, safer operation, lower costs and other aspects of sound and effective transportation, of such magnitude as to outweigh the public harm of stifled competition or monopoly.

4. The Commission's order is invalidated by the total failure to make findings of fact on many essential issues and the making of findings contrary to the undisputed record proof. No findings were made with respect to (i) public service benefits of the Minneapolis application, (ii) Penn-

[1] The interested railroads will be referred to hereinafter as follows:

The Minneapolis & St. Louis Railway Company	Minneapolis
Toledo, Peoria & Western Railroad Company	Western
The Pennsylvania Railroad Company	Pennsylvania
The Atchison, Topeka & Santa Fe Railroad Company	Santa Fe
Chicago, Burlington & Quincy Railroad Company	Burlington
Wabash Railroad Company	Wabash
The Monon Railroad	Monon
New York, Chicago & St. Louis Railroad Company	Nickel Plate
Chicago, Rock Island & Pacific Railroad Company	Rock Island

sylvania's specific intent to stifle competition by the acquisition of Western, (iii) the contrasting motivations and self-interests of the competing applicants, (iv) antitrust questions, and other important considerations. The basic finding that Pennsylvania-Santa Fe would solicit traffic for the Peoria gateway on a parity with their long haul gateways is in direct contradiction with the testimony of their own principal officers and their economic incentives. Similar conflicts invalidate the findings as to industrial development, "independence" of Western and other matters.

5. The purchase of Western shares by Pennsylvania and the underlying negotiations and contracts constitute violations of section 10 of the Clayton Act to which the Commission cannot accord retroactive condonation.

6. The Commission may not sanction Pennsylvania's scheme to stifle competition with Chicago and St. Louis gateways by blocking the acquisition of Western by Minneapolis.

7. The District Court improperly declined to review the errors of law and the failure of the Commission to supply systematic findings, adequately supported by the record, in conformity with the Administrative Procedure Act.

STATEMENT OF THE CASE

This action was instituted in the District Court by Minneapolis, to set aside orders of the Interstate Commerce Commission denying the Minneapolis application to acquire the capital stock of Western and authorizing the acquisition of Western's shares in equal parts by Pennsylvania and Santa Fe. The appeal is from the District

Court's order dismissing the complaint and, in effect, sustaining the report of the Commission.[2]

1. The Competing Gateways, the Competing Applicants and the Status of Western.

Western is a short railroad spanning Illinois east and west through Peoria; it utilizes the Peoria gateway to bridge east-west traffic, avoiding the longer haul and congestion through Chicago or St. Louis. (R. 21) For thirty-three years Pennsylvania had owned Western in partnership with the Burlington and such ownership resulted in a disastrous receivership. *Acquisition by T.P. & W.R.R.*, 124 I.C.C. 181 (1927). At the receivership sale Western was acquired by George McNear, who built it into a fine property. Upon his death the present management took over with equal success. Emancipated from Pennsylvania-Burlington control, Western engaged in aggressive solicitation for the Peoria gateway, augmenting the solicitation of complementary carriers such as Minneapolis. (R. 21, 426, 520-521, 582, 589, 590, 1011, 1408)

There are three principal gateways for rail traffic moving between the east and the west. The two largest are St. Louis and Chicago. Lying about midway between St. Louis and Chicago, Peoria provides a third competitive gateway, bypassing the larger terminals with heavier traffic and affording an opportunity for expedited service. (R. 21) Western (and complementary carriers such as Minneapolis) have aggressively solicited Peoria gateway routing. Much of this volume is bridge traffic, received or delivered

[2] For the convenience of the Court, we have included at the end of the brief two maps showing the routes of the railroads primarily involved in the appeal. Map I covers the entire United States. Map II shows in greater detail the north central section of the country and the gateways and other points to which frequent reference is made.

at Effner on the east and Nemo and Lomax on the west. Thus, Pennsylvania and Santa Fe have become Western's largest connections without the solicitation of a pound of Peoria gateway freight. Pennsylvania and Santa Fe have solicited exclusively for the longer hauls and better divisions through the Chicago and St. Louis gateways. (R. 21, 402, 426, 520-522, 582, 589, 590, 1011, 1408)

Minneapolis is a small agricultural carrier with its main line operating between Minneapolis, Minnesota, and Peoria, Illinois. Branch lines extend into South Dakota and through Minnesota and Iowa. The Commission found that Minneapolis was sixtieth in size among the 127 Class I railroads and had annual operating revenues approximating $20,000,000. The Commission found further that the capital structure of Minneapolis is conservative, unburdened by preferred stock, and carries only a relatively small amount of long term debt. It came out of reorganization receivership in 1943 and, according to the Commission, was built into a modern and efficient plant providing exceptionally good service to the public. It is completely dieselized and owns what the Commission described as well-conditioned rolling stock, adequate to accommodate an increase of 25% in the tonnage now available to it. Minneapolis is predominantly an east-west railroad, with the operating slogan "The Peoria Gateway", used since 1912. It advertises, promotes and utilizes the Peoria gateway, which is the only east-west gateway to which it has access. (R. 27-28, 1011)

The successful applicants are two of the largest, most powerful rail carriers in the United States. They converge at Chicago. Santa Fe extends from that point to the Pacific coast, serving 12 states. It ranks first in mileage and third in freight revenues among all carriers. About 64%

of its freight revenues are derived from the transportation of manufactured products originating on its lines. Santa Fe enters the Kansas City and Chicago gateways and connects with Western at Lomax, Illinois for traffic through Peoria.[1] (R. 25-26) Some years ago the Commission denied the Santa Fe entrance into the St. Louis gateway. *Chicago, B. & Q. R. R. Control*, 271 I.C.C. 63 (1948). In Chicago, Santa Fe has recently completed a $20 million push-button freight yard, doubling the number of cars that can be handled, enlarging the storage facilities, and greatly accelerating interchange." The President of Santa Fe conceded that its Chicago line competes with the full length of Western. (R. 388, 398)

The Commission found Pennsylvania to be the largest rail carrier "by practically any standard used to indicate size and volume of business handled." (R. 26) Its system operates in thirteen states and blankets the industrial east. Wabash, an almost entirely owned subsidiary, has lines extending westwardly to Des Moines, Iowa, Omaha, Nebraska, and Kansas City. (R. 26) More than half of Pennsylvania's freight revenue is derived from manufactured goods originating on its lines. (R. 26) Pennsylvania solicits traffic for its long haul through St. Louis and then Chicago, both lines being competitive with Western. (R. 521-522) The Decatur gateway, served by its subsidiary Wabash, provides another competitive route (see attached maps).

2. Motivations of the Competing Applicants.

Shortly after World War II there were discussions that Minneapolis might acquire Western. From that time until

[1] Santa Fe press release, March 25, 1958; Chicago Tribune, March 26, 1958, p. 5; Traffic World, March 29, 1958, p. 152; Railway Age, March 31, 1958, pp. 18-9.

as late as 1954, the President of Pennsylvania urged the heads of Minneapolis and Western to merge their properties and operations. (R. 537-538, 977-978) In June, 1954 new management took control of the Minneapolis and immediately opened negotiations with the McNear trustees for the purchase of the stock of Western. (R. 1014) The purposes, as shown by undisputed evidence, were these: (R. 1027-1028, 1076-1077, 1102-1104, 1177-1184, 1186-1187, 1222-1233, 1239-1242; Ex. H - 44, R. 1894-1924, 1379)

(i) Economies of operation estimated at $1,770,945 through the elimination of duplicate yard, roundhouse, repair, accounting and other facilities and the integration of operations.

(ii) More intensified use of the Peoria gateway by (A) integrated through service, (B) acceleration of schedules by direct interchanges with eight railroads and the elimination of duplicate switching and transfer, (C) aggressive industrial development, and (D) an added bypass of the Chicago terminal, adding connections and services to the east, south and southwest not theretofore available for Peoria gateway routing.

(iii) Strengthening of Minneapolis through industrial diversification and improved density of traffic, thereby solving the primary problems which had plagued Minneapolis for several decades and had resulted in its receivership and drastic reorganization.[4]

[4] The condition of Minneapolis had been so precarious that in 1938 the Interstate Commerce Commission gave serious and lengthy consideration to a proposal of eight midwestern railroads to dismember and divide up Minneapolis, and in the process to abandon more than one-

The motivations of the successful applicants revealed themselves during the course of the negotiations. During the summer of 1954 the McNear trustees showed no interest in Minneapolis' offers to purchase the shares held in the trust estate and the minority interests. Despite the reluctance of the trustees even to discuss a sale, offers to purchase were repeatedly pressed upon them by Minneapolis. (R. 1014-1016) In the forepart of 1955 Wilmington Trust Company, the corporate trustee, advised Minneapolis that it would consider its latest proposal and make a response by the first of February. (R. 1017) In the meantime, Wilmington Trust Company approached the President of Pennsylvania with respect to the possible purchase of Western by his railroad. Pennsylvania exhibited immediate interest, Mr. Symes, its President, explaining on the witness stand that his change in attitude grew out of rumors that Minneapolis, Western and Monon would form an outer-outer belt line around Chicago. (R. 529, 539) Upon learning of these "grandiose plans", as Mr. Symes described them, he decided that Pennsylvania "had better take steps to stop this nonsense". (R. 1022)

While pursuing the conversations with Pennsylvania, an officer of Wilmington Trust Company and an officer of the Hanover Bank, which held a minority of the Western shares, met with the Chairman of Minneapolis and again put him off for thirty days. (R. 1017-1018) The trustees

---

fourth of its trackage. Not a single bid had been received at any of the 55 occasions on which the road was offered on the auction block. The determined opposition of the States of Minnesota, South Dakota, Iowa and Illinois and their regulatory agencies accounted in large measure for the survival of the carrier, which languished in receivership for 20 years—a record in railroad history. *Associated Railways Company, Acquisition and Securities*, 228 I. C. C. 277 (1938). Donovan, *Mileposts on the Prairie* (Simmons-Boardman, 1950). This is a significant backdrop to the efforts of Minneapolis to increase the diversity and density of its traffic.

and the Hanover Bank meanwhile turned to the Pennsylvania and the Santa Fe, which had been invited into the matter by Pennsylvania. (R. 512) On April 15, 1955, Wilmington Trust Company, acting on behalf of both trustees, entered into letter agreements to sell 26% of the Western Stock to Santa Fe and a like percentage to Pennsylvania Company, a wholly-owned subsidiary of Pennsylvania, at a price of $100 per share. (R. 365, 1018; Exs. 7-8 and 7-g to Pennsylvania-Santa Fe application, R. 174-176) Despite its earlier offers, Minneapolis received no prior notice of the proposed sale and was afforded no opportunity to negotiate or to bid a higher price. (R. 1018)

Immediately upon receiving word of the sale, the Chairman of Minneapolis advised Wilmington Trust Company of the willingness of his railroad to increase the purchase price by 5%, pursue further negotiations and enter into competitive bidding, either publicly or privately. The corporate trustee showed no interest, and when the Minneapolis Chairman offered to come to Wilmington to discuss the matter, he was advised that "it would not be worth his carfare". (R. 1018-1020) Subsequently the individual trustee of the McNear Estate indicated that he had not been informed of the Minneapolis offer, whereupon Minneapolis submitted a written offer to purchase the stock in Western owned by the McNear Estate and all minority interests at $133 per share. (R. 1021-1022, 1024) That offer was to remain open for one week.[5] On the afternoon of the last day of the term of the offer, while attorneys for the individual trustee were preparing papers for the accept-

[5] The offer was kept open for two additional weeks upon assurance by counsel for the individual trustee that Minneapolis, having made the market for the Western shares, would be afforded an opportunity of meeting any higher bid—an assurance that was dishonored. (R. 1025-1026)

ance of the Minneapolis offer, the corporate trustee contracted for the sale to Pennsylvania and Santa Fe of all of the stock of Western held by the McNear trustees, without further conversations with Minneapolis." (R. 1026-1027; Ex. H-76, R. 1956-1957, 1445) The transaction took the form of a sale of the stock to Santa Fe in an agreement dated May 26, 1955, followed on June 28, 1955 by an agreement between Santa Fe, Pennsylvania and its subsidiary, Pennsylvania Company, under which the latter acquired half of the Western stock. (Exs. 7 and 7-d to Pennsylvania-Santa Fe application, R. 150-153, 165-169) This roundabout procedure resulted from Pennsylvania's insistence that the earlier agreement of April 15th remain in force, but the President of Santa Fe testified that from the outset he had contemplated joint ownership with Pennsylvania. (R. 409, 458)

During the period of the negotiations and contracts, the following persons were directors of Wilmington Trust Company and were also directors of Pennsylvania or its affiliates or subsidiaries: (Ex. H-73, R. 1944-1945, 1365)

Lammot duPont Copeland was a director of Wilmington Trust Company, a director of Pennsylvania and a director of a Pennsylvania subsidiary.

At the outset, Pennsylvania told Wilmington Trust that it would not discuss acquisition of Western "if they had in mind negotiating with us and others for the purpose of raising the price of the stock". (R. 512) The trustee with the interlocking directors yielded quickly. At every stage of the negotiations, Pennsylvania was afforded a decisive preference by Wilmington Trust Company. As the Minneapolis offer was expiring, Wilmington Trust approached Symes and Gurley to "match the price", which they promptly did by topping the Minneapolis offer of $12 million for all the Western stock by $150,000. Wilmington Trust did not even bother to telephone Minneapolis, which had made the high level market for Western's shares. (R. 535, 367, 391, 1026-1027)

F. M. Donohue was a Vice President and director of Wilmington Trust Company and a director of two Pennsylvania subsidiaries.

Hugh M. Morris was a director of Wilmington Trust Company and a director of a Pennsylvania subsidiary.

Wilmer Stradley was a director of Wilmington Trust Company and a director of a Pennsylvania subsidiary.

The Commission omitted from its report any findings with respect to the interlocking directors, the special preference accorded Pennsylvania-Santa Fe in the negotiations, or the motivations and objectives of the competing applicants in the acquisition of Western.

3. Proceedings before the Interstate Commerce Commission.

Pennsylvania and Santa Fe filed an application for approval of joint acquisition of control of Western through exercise of the several stock purchase contracts. (R. 129-130) Minneapolis filed an application with the Commission for authority to acquire Western. Minneapolis did not have a contract but proposed that if its application were approved, it would purchase for cash all of the outstanding stock of Western at the same price and upon the same terms proposed by Pennsylvania-Santa Fe. (R. 281) The applications were consolidated for hearing. (R. 2027-2028)

Numerous parties intervened in the two dockets. Nickel Plate and Rock Island each requested authority to be included in the acquisition of the Western stock on an equal basis with the successful applicant or applicants. Burlington and Wabash expressed no objection to the Pennsylvania-Santa Fe application, provided appropriate condi-

tions were attached for continuance of existing routes and traffic arrangements. They asked, however, that if any other carrier were authorized to acquire Western's stock, each of them be included in the transaction to the same extent as any such other railroad. Certain other carriers, without participation, requested the inclusion of certain conditions in the order authorizing control. (R. 19-20) The State of Illinois and certain other bodies intervened in support of the Pennsylvania-Santa Fe application. (R. 20) The States of Minnesota and South Dakota, together with their respective regulatory agencies, supported the application of Minneapolis upon the ground that the acquisition of Western would strengthen Minneapolis' ability to provide essential service in large agricultural areas which lacked dense and diversified traffic. (R. 328-332)

A consolidated hearing was held before an examiner who recommended (a) dismissal of the Minneapolis application, (b) approval of the Pennsylvania-Santa Fe application, and (c) denial of petitions of intervening railroads to participate in the acquisition. Exceptions, briefs and oral argument were presented before Division 4 of the Commission, which issued an order in effect sustaining the examiner. (R. 50-51) A petition for reconsideration by the full Commission was denied without opportunity for oral argument. (R. 51-53)

4. Proceedings in the District Court.

On November 29, 1957 Minneapolis instituted its action against the United States of America and the Interstate Commerce Commission in the United States District Court for the District of Minnesota seeking to suspend and annul the orders of the Interstate Commerce Commission. Pending briefs and argument, a temporary restraining order was

issued. On September 6, 1958 the Court filed its order dismissing the complaint of Minneapolis. The District Court's opinion gave no consideration either to the omission of pertinent findings or to the entry of findings contrary to the sworn testimony of the successful applicants. The District Court saw no public concern with the competition-stifling motivations of the successful applicants because the "Commission had no authority to direct the trustees to deal with Minneapolis rather than with the other interested purchasers." (R. 97) The bidding requirements of section 10 of the Clayton Act were held inapplicable because the interlocking directors had not been corruptly enriched. It was further held that the Commission did not, and had no obligation to, determine "whether the acquisition of Western by these two railroads will violate the antitrust laws". (R. 101) Underlying the District Court's entire review was the comment "that, within the limits of the jurisdiction conferred upon it, the power of a court or an administrative agency to decide questions is not confined to deciding them correctly". (R. 97)

Subsequently Minneapolis filed its Notice of Appeal (R. 106-110) and secured an injunction pending appeal. Two later Notices of Appeal were filed, one by the State of Minnesota and the Minnesota Railroad and Warehouse Commission on November 12, 1958 and the other by the State of South Dakota and its Public Utilities Commission on November 13, 1958. (R. 111-117) These parties have been intervenors throughout the entire administrative and judicial proceedings, representing the public interest of their respective jurisdictions and supporting the position of Minneapolis.

SUMMARY OF ARGUMENT

1. The statutory standard of public interest, as amplified by the National Transportation Policy, was completely ignored. The Commission adopted "separate and independent" management of Western as the standard for determining which application to approve. The acquisition of absolute control of Western by the successful applicants robs this concept of any real meaning. The Commission fallaciously treated "separate" as synonymous with "independent." What is more serious, the illusory standard has no basis in the National Transportation Policy; it collides with the statutory policy of promoting economy and improved service and preventing unfair competition in transportation. The artificial standard served only to screen the Commission's failure to balance the relative advantages and disadvantages of the competing applications, as required in a truly comparative hearing.

Any notion that Minneapolis could discriminate in service among carriers connecting with Western runs afoul of the admissions by the successful applicants that neutrality is a product of economic self-interest. If that self-policing consideration is effective to restrain the largest carriers, it certainly cannot be flouted by a very small railroad. The standard conditions of neutrality imposed on the successful applicants in the Commission's order would provide at least equally effective protection if imposed on Minneapolis, which needs the cooperation and support of all roads serving its lifeline, the Peoria gateway.

2. The omission of pertinent findings and the entry of findings contrary to undisputed evidence deprived the Commission's report of the necessary factual expertise foundation. While the Commission noted the evidence or posi-

tion of Minneapolis with respect to economies, improved service and benefits to the national transportation system, there was a total absence of findings on these matters. Other subjects ignored in the report were the economic self-interests of the competing applicants, Pennsylvania's competition-stifling purpose in acquiring Western, the interlocking directorate, the prior disastrous history of ownership of Western by Pennsylvania and Burlington, and the absence of any reason to assume the present proposal would be less hazardous. The Commission report is barren alike of findings with respect to the violation of the antitrust laws and of any public interest consideration moving the Commission to override the antitrust violations.

Findings designed to show that Pennsylvania and Santa Fe would promote Western traffic were made in the face of contrary testimony by officers of the two railroads. The self-interest of Pennsylvania and Santa Fe is in the longer hauls through St. Louis and Chicago. No findings explain how the approved sale price of $135 per share could be fair when only one month earlier the same sellers and the same buyers signed contracts of sale at $100 per share. Only the exclusion of Minneapolis in order to forestall outer-outer belt line competition can account for that difference.

3. Inasmuch as Pennsylvania and Wilmington Trust Company had directors in common, the negotiations and contracts for the purchase of Western's shares by Pennsylvania constituted dealings in securities prohibited by section 10 of the Clayton Act. Pennsylvania is not insulated from that section by the fact that the second contract was taken in the name of its partner, Santa Fe, and immediately assigned to the extent of 50%, nor by the fact that Pennsylvania acted through its wholly-owned subsidiary. More-

over, nothing in the Interstate Commerce Act excuses, or authorized the Commission to condone, a past violation of the antitrust laws, even under circumstances warranting exoneration. Section 5(11) of the Act suspends the operation of the antitrust laws only with respect to future acts necessary to consummate transactions approved by the Commission.

4. The acquisition of Western by Pennsylvania-Santa Fe would tend substantially to lessen competition between the Peoria gateway and the larger, more profitable St. Louis and Chicago gateways, as well as to lessen competition within the service areas of the respective acquiring carriers. Minneapolis would be denied the opportunity of promoting the Peoria gateway and intensifying competition, with improved, accelerated service and new service routes. In these vital respects, and in linking the most powerful carrier in the east with the most powerful carrier in the west, the approved acquisition clearly offends section 1 of the Sherman Act and section 7 of the Clayton Act. Neither section was examined by the Commission, nor does the Commission's report outline any considerations of public interest so compelling and far-reaching that the consequences of the antitrust violations should be subordinated to them.

ARGUMENT

I.

The standard of "separate and independent management" adopted by the Commission to determine public interest is false, artificial and meaningless and collides with the National Transportation Policy. That standard deprived Minneapolis of a fair hearing and comparative consideration of its application.

Section 5(2)(b) of the Interstate Commerce Act lays down the ultimate standard that an acquisition transaction shall be approved if the Commission finds that it "will be consistent with the public interest". *49 U. S. C.* § 5(2)(b).[7] That ultimate standard is given meaning by the National Transportation Policy which provides:

> "It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; *to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers*; to encourage the establishment and maintenance of reasonable charges for transportation services, *without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices*; to cooperate with the several states and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions—all to the end of developing, coordinating, and preserving a na-

[7] In addition to that ultimate standard, section 5(2)(c) requires that consideration be given to the effects of the proposed transaction upon "adequate transportation service to the public," the effect on the public interest of including or excluding other railroads in the transaction, the fixed charge resulting, and the interest of carrier employees affected. 49 U. S. C. § 5(2)(c).

> tional transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy." (*49 U. S. C.* preceding § 1) (Emphasis supplied)

At the outset, the Commission adopted "separate and independent management" as the guiding criterion against which the competing applications would be tested. (R. 25, 46) This standard is not to be found anywhere in the Interstate Commerce Act or in any published authority. It was lifted out of the contract between Pennsylvania and Santa Fe which, incidentally, provides that it is solely for the benefit of the contracting parties and not enforceable by anyone else. (R. 24, 167) The very source of that language and the automatic exclusion of Minneapolis with its proposed elimination of duplicate facilities and unification of service, precluded any semblance of a true comparative hearing.

Independent management of a wholly-owned subsidiary is inherently meaningless. Unrestricted ownership and exclusive voting power are incompatible with independence. *Alleghany Corp.* v. *Breswick & Co.*, 353 U. S. 151 (1957). Secondly, the standard is not only artificial and illusory, but it disregards the basic statutory goal established by the Congress in the National Transportation Policy. The Commission was commanded to direct its activities toward achieving a strong effective transportation system designed to assure economy of operation, effective and efficient service and an avoidance of "undue preferences" and "unfair or destructive competitive practices". The Congression-

al concern for elimination of wasteful duplicate facilities, improved service, strengthening of a weak carrier and prevention of destructive competitive practices are not in any respect reflected in the Commission's criterion.

Separate is not independent. It is arrant nonsense to assume that the management of Western could be independent with all of the stock concentrated in, and voted, without Commission limitation, by, the powerful Pennsylvania-Santa Fe combination. While Pennsylvania-Santa Fe ownership might leave a nominal "President" in Peoria, as against a "Division Superintendent" under Minneapolis ownership, both executives would, of necessity, be subordinate to the owners in every meaningful sense. That incontrovertible fact cuts the ground from under the entire premise upon which the Commission reached its decision.

The virtue of maintaining Western's separate solicitation organization, stressed by the Commission, is not without its defeating fallacies. That organization would be placed under the control of a competing management that has consistently solicited against Peoria gateway routing. On the other hand, Minneapolis would strengthen the Western solicitation with its own organization which has always promoted the Peoria gateway. Here again the unity would involve strength, the separateness no independence. Reflecting the lack of substance in the Commission's concept of independence is the admission by the Traffic Vice President of Pennsylvania that Minneapolis could be expected "to maintain aggressive sales and service policies that have been successful in the past with respect to the Peoria gateway". (R. 590) The Minneapolis application would thus admittedly achieve the continuation of "the present policies of Western" which the Commission cites as its public interest goal. (R. 45) It would be fortified by the power-

ful incentive of self-interest and a program for the further development of the gateway through better public service, industrial development and enhanced solicitation. (R. 1102-1104, 1184, 1229-1234)

The Commission's standard presents a particularly idle illusion when it is recalled that Pennsylvania, Pennsylvania's subsidiary, Wabash, and Santa Fe are in full, active competition with Western. (R. 388, 389, 1288-1289) A more realistic approach is to be found in *ICC* v. *Baltimore & O. R. R.*, 152 I. C. C. 721, 735-736 (1929), where three carriers proposed acquisition of Wheeling with the retention of the Wheeling management. Rejecting the application, the Commission said:

> "We are unable to accept the theory that competition of the Wheeling with the respondents might continue unimpaired pending the final assignment of the Wheeling in a consolidation of eastern lines. The knowledge of its relationship to its controlling lines would deprive it of force as a competitor for their traffic."

Control is a matter of business reality which cannot be ignored either on the basis of finespun theories or pious promises among partners. *United States* v. *Southern Pacific Co.*, 259 U. S. 214 (1922); *Rochester Telephone Corp.* v. *United States*, 307 U. S. 125, 146 (1939). The power to select rather than the domination of individual directors constitutes the realistic test of control. *Alleghany Corp.* v. *Breswick & Co.*, 353 U. S. 151, 162-163 (1957). Nor can the reality of control be circumvented by conditions imposed in a Commission order. *Chicago, B. & Q. R. R. Control*, 271 I. C. C. 63; 162-163 (1948). These facts were recognized in *Control of Central California Traction Co.*, 131 I. C. C. 125, 135, 136 (1927), where the Commission stated:

> "It appears that irrespective of the method of operation shippers are inclined to look upon the line of a controlled company as the road of the company which exercises the control.
>
> * * * * *
>
> "It is manifestly impossible to estimate with any degree of certainty the extent to which safeguards required by us would reach and counteract the influence exerted upon the practices of shippers by considerations of expediency, real or imagined, incident to obtaining adequate service."

A clue to the proposed independence of Western in operation is provided by the conversations between Santa Fe and Pennsylvania with respect to traffic routing. The only item discussed, according to Gurley, was the use of Western for routing empty refrigerator cars westward. (R. 412, 429-430) Santa Fe and Pennsylvania would thus receive the full revenue for moving the loaded refrigerator cars eastward and Western would bear the expense of moving the empties westward, without compensation and indeed with the added burden of a per mile rental. At that price the public interest in the Peoria gateway can do without the successful applicants' brand of "independence."

The adoption, at the inception, of the artificial standard necessarily ruled out a comparative hearing. The one-sided procedure was no different from that condemned by this Court in *Schaffer Transportation Co.* v. *United States*, 355 U. S. 83 (1957). There the Commission denied an application for a trucking service solely upon the determination that the rail service was adequate. This Court held that the Commission was not relieved of the duty of evaluating competing truck services in the light of statutory standards or from the duty of articulating, in findings, the steps it had taken to reach a composite measure of the competing positions.

What the Commission should have done in this case was to observe the requirements of the National Transportation Policy and the definition given by Chief Justice Hughes to the term "public interest" in *New York Central Securities Corp.* v. *United States*, 287 U. S. 12, 25 (1932). It should have balanced the competing applications and catalogued their merits and demerits from the public viewpoint.[*] Had the Commission performed its function, it would have made comparative findings with respect to such matters as (1) efficiency and economies of operations,[**] (2) improvement and expansion of service through the Peoria gateway, (3) promotion of industrial development, (4) strengthening the carriers concerned in the interest of the national transportation system, (5) stability of employment, and (6) promotion of unfettered competition, particularly between the east-west gateways.

The competing applications present strong contrasts in each of these areas. The acquisition by Minneapolis would advance the National Transportation Policy in each of these areas under its affirmative program and under the sanction of economic self-interest. On the other hand, as a matter of announced purposes and economic self-interest, the Pennsylvania-Santa Fe acquisition would bring no improvement or expansion in operating service, no elimination of duplicate facilities or waste, no dynamic support for

---

[*] The comparative hearing technique of listing advantages and disadvantages and arriving at a "composite consideration of the findings as to the several differences, pro and con," is well described in *Johnston Broadcasting Co.* v. *FCC*, 175 F. 2d 351, 357 (D. C. Cir. 1949).

[**] "Use of the words 'economical' and 'economic' in the National Transportation Policy clearly demonstrates the intention of Congress that one of the primary concerns of Congress is to have the Commission give serious attention to the matter of providing economical transportation." *Southern Railway Co.* v. *United States*, 167 F. Supp. 747, 754 (M. D. Ga. 1958).

the gateway as a basis for job security, only secondary concern for new industry, and, finally, it would materially impair the fair, constructive competition that the national public policy would protect. Such rational balancing procedure the Commission spurned. It selected in advance an illusory standard unrelated to any authoritative aspect of public interest and calculated from the outset to assure the award to the successful applicants.

A so-called comparative hearing within the framework of that advance discriminatory determination was merely an empty phrase, as the Commission recognized when it said, "With our approval of that [Pennsylvania-Santa Fe] application, the possibility of the Minneapolis' acquiring the Western's stock is eliminated and its application becomes moot" (R. 48). And that, apparently, is the tacit explanation for the refusal of the Commission to make any findings with respect to the undisputed evidence that the Minneapolis application would promote the National Transportation Policy in all the respects indicated above, without offending the antitrust laws.

The economies offered by the two competing applications provided an ideal subject for comparative findings. After months of thought, preparation and consultation with Western's officers, the President of Santa Fe came up with nothing more than the likelihood that they might trade "ideas" (R. 434). Minneapolis supplied a detailed study of economies to be achieved in the amount of $1,770,945, facility by facility, job by job.[10]

[10] The Minneapolis study showed savings to be effected by an integration of executive, accounting and operating departments, the elimination of duplicate yard, shop, roundhouse, accounting and traffic facilities, the more effective utilization of power, rolling stock and work equipment, the combination of car service, purchases and related supplementary activity. (R. 1028, 1077, 1186, 1222-1229, 1239-1242; Ex. H-44, R 1894-1924, 1380)

At every opportunity the Commission has by decision, by report to the Congress, by testimony before Congressional Committees, by public statements, emphasized the achievement of economies through merger as one of the fundamental hopes upon which the effective survival of the railroad industry rests. 72d Annual Report of I. C. C. 4-5 (1958); testimony by Commissioners Freas and Arpaia, *Hearings Before the Senate Committee on Interstate and Foreign Commerce*, 85th Cong., 2d Sess., pt. 2 at 1834-1836, 1845-1846, 1869-1873 (1958), *Spokane International R. R., Control*, 295 I. C. C. 425 (1956); *Seaboard Airline, Acquisition of Greensville, Midland Ry.*, — I. C. C. — (Fin. Docket 20296, March 26, 1959); *Acquisition by Denver & Rio Grande Western and Union Pacific R. R. of Properties of Bamberger R. R.*, — I. C. C. — (Fin. Docket 20338, Nov. 25, 1958); Addresses by Commissioner Freas before New York Society of Security Analysts, May 29, 1959; Commissioner Walrath before Trans-Missouri-Kansas Shippers Board, March 20, 1959; Commissioner Walrath before Southwestern Association of R. & U. Comms., April 16, 1959; Commissioner Tuggle before Great Lakes R. & U. Comms., June 30, 1958; Commissioner Tuggle before Transportation Association of America, October 9, 1958; Commissioner Murphy before Transportation Conference, University of Alabama, February 11, 1959.

Testifying before the Transportation Subcommittee of the House Armed Services committee on July 17, 1959, Chairman Tuggle of the Commission urged the transportation industry to "improve its economic health" by eliminating duplicative facilities and fostering consolidations. Traffic World, July 25, 1959, pp. 23-24. A year earlier, in reporting on the Transportation Act of 1958, the Surface

Transportation Subcommittee of the Senate Committee on Interstate and Foreign Commerce said:

> "The railroad industry has not, in the subcommittee's opinion, been sufficiently interested in self help in such matters as consolidations and mergers of railroads; joint use of facilities in order to eliminate waste such as multiple terminals and yards that require expensive interchange operations; . . ." (S. Rep. No. 1647, 85th Cong., 2d Sess. 11 (1958))

Senator Smathers, Chairman of that Subcommittee, has recently urged consolidations as the path to "better service to the public", "greater security in jobs provided by the railroads", and a "stronger transportation network for the nation's defense". Smathers, *Blueprint to Save Our Railroads*, This Week Magazine, July 26, 1959.

That the expanded, accelerated service through the Peoria gateway proposed by Minneapolis would promote the public interest in terms of both commerce and national defense needs no documentation. The definite realistic Minneapolis proposals contemplate (1) the establishment of through trains, (2) the acceleration of time schedules by direct interchanges with other railroads, and (3) the establishment of a new interchange with the Chicago and Eastern Illinois Railroad at Watseka, Illinois, to open a new bypass of the Chicago terminal[11] (R. 1177-1184). Pennsylvania and Santa Fe could hardly be expect-

[11] The new bypass would open new, broader and faster routings through the Peoria gateway to the east, the south and the southwest via many carriers. In a number of instances it would substitute mainline for branch line connections. In considerable measure it would provide the outer-outer belt line, competition from which Pennsylvania sought to forestall by the purchase of Western. That fact is apparent from examination of attached Map H and by comparison of maps 15 and 17 in Exhibit H-4 (R. 1629, 1631, 462). In addition, direct interchanges will cut terminal delays as much as 24 to 48 hours and even the first class freight trains will make faster deliveries. (R. 1179, 1230)

ed to intensify competition with the gateways they dominate by improving the service through Peoria, and no such improvement was suggested. Here is an obvious, measurable contrast which the Commission elected not to draw.

Nor can a truly comparative analysis omit findings on the critical issue of the motivations and economic self-interests of the competing applicants. The undisputed evidence reveals, and Pennsylvania's President admitted under oath, that Pennsylvania entered upon the acquisition of Western for the deliberate purpose of blocking the purchase by Minneapolis so as to foreclose competition from an outer-outer belt line around Chicago (R. 535, 539, 1022). Here is a specific intent to monopolize and to restrain competition, to which neither the Commission nor the District Court paid the slightest attention. The Commission's shocking disinterest in the elimination of waste and duplication, in the added and accelerated service to the public proposed by Minneapolis and, above all, in the competition-stifling purpose of the nation's most powerful carrier resulted in a discriminatory and unfair hearing and a total failure to meet the requirements of the Administrative Procedure Act, *5 U. S. C.* § 1007 (b). The failure to disclose the factors balanced for the ultimate conclusion necessarily precluded proper judicial review. *Schaffer Transportation Co.* v. *United States*, 355 U. S. 83 (1957).

The public interest is served by affording a carrier the "opportunity to expand and develop its facilities and to make itself sufficiently strong, financially and otherwise, to provide effective and adequate competitive . . . service." *American Bus Lines, Inc., Purchase, Dollar Lines*, 56 M. C. C. 39, 48 (1949). Public interest has been held to warrant an acquisition for the purpose of strengthening a weak carrier. *Savannah & A. Ry. Co., Control*, 282 I.C.C. 39,

60 (1951). Western is a natural extension of Minneapolis, which would derive significant strength from the acquisition in terms of diversity and density of traffic as well as financial stability and revenues. The freight business of Western would add a third to that of Minneapolis and increase the net railway operating income 36.9%. (R. 1402) The thin traffic lines, so important to the States of Minnesota and South Dakota would be balanced and fortified. On the other hand, the effect of the acquisition of Western could hardly be found in the Pennsylvania and Santa Fe accounts. In net railway operating income Pennsylvania would gain 1.4% and Santa Fe 1.0%. (R. 1402-1403) Were the order permitted to stand, $7,000,000 of Minneapolis' revenue, 35% of its total, would become vulnerable, and a persuasive showing was made that $1,100,000 of this amount would be diverted. (R. 1114-1117, 1156-1157, 1356-1357, 1611-1612; Ex. H-32, R. 1755-1767, 1166)

Minnesota and South Dakota expressed the fear that such diversion ". . . would further reduce the already thin cushion which enables the M. & St. L. to provide needed service on thin-traffic lines . . .". (R. 1437, 1167) Both States emphasized the importance to their agriculture and commerce of an effective Peoria gateway. The States' expert witnesses cited economic motivations for their confidence that Minneapolis would develop and foster the Peoria gateway and that Pennsylvania-Santa Fe would continue their competitive preferences for the long haul. (R. 1167-1170, 1435-1438) The importance of the Peoria gateway in national defense could not be overstated, according to Minnesota's expert, because the Soo locks and the great Chicago industrial and transportation complex constitute strategic targets of high priority. (R. 1440)

Neutrality among connecting carriers was invoked by both the Commission and the defendants' motions in this Court to breathe life into the meaningless standard of independence. The contention is that the Pennsylvania-Santa Fe application should be preferred because it would preserve Western's neutrality among connecting carriers. The Commission saw a "built-in" assurance that Pennsylvania would insist upon equality with western connections and Santa Fe with those in the east (R. 46). Unexplained is the Commission's preference for this highly theoretical assumption against the reality of actual history. This very built-in assurance was operative during three decades of Pennsylvania-Burlington ownership which were catastrophic for Western as well as the Peoria gateway connections.

The testimony unequivocally established that Minneapolis, being entirely dependent upon the Peoria gateway, was determined in its self-interest that service with all carriers connecting with Western be maintained and improved (R. 1102-1104, 1184, 1229-1234). The successful applicants also undertook to maintain neutrality with connecting carriers; as they expressly testified, they did so in their own self-interest and in fear of retaliation were any other course adopted (R. 483-484, 546, 572). If that automatic safeguard is operative when the owners are the most powerful carriers, originating the greatest tonnage in America, how much more effective is it with respect to a small carrier dependent largely on bridge traffic. This economic fact of life is underscored by the powerful influence exerted by the originating carrier upon the routing of traffic.[12] (R. 1113-1114) The very fact that Minneapo-

[12] The President of Santa Fe, in discussing the influence of traffic solicitors on the routing of traffic, testified that "our utmost could really be quite tremendous". (R. 449) Another Santa Fe witness described how he could force the use of Lomax rather than Nemo, the junction served by Minneapolis. (R. 1355)

lis is dependent solely upon the Peoria gateway provides an overriding, self-policing guarantee of neutrality with connecting carriers who feed the pipeline of traffic into the gateway and those who carry it out.

To assure neutrality, the Commission imposed upon Pennsylvania-Santa Fe the standard conditions that Minneapolis had in open hearing offered to accept. The Commission concluded, without foundation, that the standard conditions adequate to protect other carriers in the event of control by the powerful Pennsylvania-Santa Fe combine would not be acceptable in the event of ownership by the infinitely weaker Minneapolis. The Commission might well have heeded Santa Fe's shipper witness who expressed preference for service dependent upon economics to that dependent upon commission-imposed conditions[13] (R. 858).

In the same vein, the Commission brushed off the clear, convincing and unchallenged evidence of the telling loss that the Minneapolis would suffer from the Pennsylvania-Santa Fe acquisition. (R. 1103-1104, 1112-1117, 1166-1170, 1254, 1356-1357, 1402-1412) Santa Fe asserted that it would actively solicit Lomax exchange with Western (R. 403, 405) and the reduction in the interchange with

[13] In denying Santa Fe access to St. Louis, the Commission said at an earlier date:

> "The policy of railroad managements to obtain long hauls over their lines is too pronounced to warrant a finding that the Santa Fe could, continue, in the slightest degree, to interchange with other carriers any traffic which it would handle to or from St. Louis. Furthermore, a requirement that the applicants maintain present routes or gateways would not prevent the loss of traffic by other railroads now handling such traffic in connection with the applicants via such routes and gateways." *Chicago, B. & Q. R. R. Control*, 271 I.C.C. 63, 163 (1948). This recognition of the doubtful worth of conditions makes particularly pertinent a query as to the Commission's authority to whittle away the Congressional standards on the assumption that conditions in the order would provide substitute protection for the public interest.

the Minneapolis at Nemo is an obvious and natural consequence (R. 496, 1114-1117, 1156-1157, 1356-1357). In contrast, the Commission asserted that the acquisition by Minneapolis would be "extremely harmful to other carriers", naming only the Wabash. (R. 32) The extreme solicitude for that large subsidiary of the Pennsylvania was based on a confused claim of one witness, unsupported by any specific data, figures or estimates, and rendered meaningless on cross-examination. (R. 1270-1271, 1292-1293) As a matter of survival, the Minneapolis could not do otherwise than maintain a policy of neutrality with respect to all connecting carriers. The colossi Pennsylvania and Santa Fe are under far less economic compulsion. Their powerful ability to reward or punish is already all too well known to connecting lines.

By its adoption of the false standard of "independence", by its distortion of the concept of "neutrality" and the disparity of the treatment of the competing applications thereunder, the Interstate Commerce Commission disobeyed the statutory mandate and made a farce of the concept of a comparative hearing.

In the present case even the Commission recognized that the two applications were mutually exclusive. Thus it was a clear case for a true comparative hearing under the *Ashbacker* doctrine. *Ashbacker Radio Corp.* v. *FCC*, 326 U. S. 327 (1945). According to Professor Davis, "The Ashbacker doctrine has a large and complex future." 1 Davis, *Administrative Law Treatise* 576 (1958). That prophesy cannot be fulfilled and the promising doctrine of comparative hearing in the public interest will die in its infancy if an administrative agency may adopt in advance an arbitrary standard that automatically precludes one of the competing applicants. Absent a composite weighing of the

advantages and disadvantages of the competing applications, there can be no comparative hearing and judicial review is rendered impotent.

One additional inference is equally ineluctable. The Congress set up the general and undefined standard of the "public interest" in section 5(2) (b) of the Interstate Commerce Act; that standard, however, was given a substantial degree of clarity, definiteness and meaning by the more specific commands of section 5(2)(c) and the National Transportation Policy. Here the Commission ignored all the more definite commands (as well as the precedents and its own contemporaneous pronouncements) and equated the "public interest" standard almost solely to a self-serving, unreal pronouncement of the successful applicants. If that course of action be not condemned, then it seems clear that the standard is void for vagueness and must be stricken under the Constitution.

II.

On many essential issues findings were completely omitted and on others findings were made contrary to undisputed record proof. The Commission failed to provide the findings and explanation for decision required by law.

Section 8(b) of the Administrative Procedure Act (5 U.S.C. § 1007(b)) contains the clear requirement that

> "All decisions . . . shall . . . include a statement of (1) findings and conclusions, as well as the reasons or basis therefor, upon all the material issues of fact, law, or discretion presented on the record; . . ."

In the instant case the Commission made no serious effort to present systematic and authentic findings to support

its predetermined conclusion. Particularly in a comparative hearing requiring composite balancing of the attributes of the competing applications, scrupulous regard should be had for the requirement of basic findings of fact underlying the ultimate conclusions and the reasoning in logic and law by which the decision is reached. The report should reflect the weight, if any, given to each significant factor of the competing applications and the considerations which led to the conclusion. *Schaffer Transportation Co.* v. *United States*, 355 U.S. 83, 88, 90, and (dissenting opinion) 125 (1957).

The "ultimate finding" that approval of the Pennsylvania-Santa Fe application is in the public interest is at best a mixed conclusion of law and fact. *Helvering* v. *Tex-Penn Oil Co.*, 300 U.S. 481, 491 (1937) Adequate subsidiary or basic findings that are both clear and complete are required to support the ultimate conclusions. *Colorado-Wyoming Gas Co.* v. *FPC*, 324 U.S. 626, 634 (1945). Whatever the problem, the evidence must be marshalled in a comprehensive and meaningful fashion and the reasoning must be exposed for an intelligible review by the courts.

The failure of the District Court to enforce the fundamental requirements for a fair administrative hearing makes it necessary that we catalog the most glaring deficiencies:

1. Already noted is the absence of any findings with respect to the economies and improved service proposed by the Minneapolis or the benefits to the national transportation system of strengthening Minneapolis and diversifying its traffic through combination with Western. Indeed, in at least thirteen instances the report cites the position of Minneapolis without drawing any conclusion. The terminology used is "Minneapolis contends", "Minneapolis estimates",

"Minneapolis states", and "Minneapolis insists". (R. 31-36) These factual aspects of the proposed Minneapolis acquisition, on which the Commission failed to make any findings, included (a) the making of direct interchange connections with twelve carriers, eliminating duplicate transfers and shortening schedules, (b) the fact that, of all carriers in the proceedings, Minneapolis alone had no economic incentive other than to maximize utilization of the Peoria gateway, (c) the showing that no one could operate Western with greater economy or better public service than Minneapolis, (d) the fact that the impact of integration on employees would be minimized by transfers to openings generated by attrition, and (e) the enormous economies, specified as to character and amount, which could be realized in the Minneapolis acquisition, thereby providing means for improved service and industrial development.

Nowhere in its report does the Commission evaluate the validity of the recited contentions nor their significance under the ultimate standard of public interest, despite the fact that in no material respect was the supporting evidence contradicted in the record. While the Commission report recites the concern of the States of Minnesota and South Dakota with a denial to Minneapolis of the opportunity for strengthening its operations and facility for service, there is not the slightest indication, by finding or declaration, that any weight was given to this factor.

These shortcomings have their counterparts in all too many Commission reports. Quite recently, in *Boston & Maine R.R.* v. *United States*, 162 F. Supp. 289, 298 (D. Mass. 1958), *appeal dismissed* 358 U.S. 68 (1958), the court stated:

> "What we do say is that the plan deserves more than the cursory consideration given it by the Commission, for without more detailed findings by it we cannot exercise our judicial function."

There is manifest a breakdown of the statutory scheme for administrative findings sufficiently organized and presented as to facilitate judicial review. Recitals of the positions of the parties and generalizations that fail to come to grips with the fundamental economic factors provide no substitute for a methodical marshalling of the facts and the law. Only from that orderly marshalling can a court determine whether the administrative agency has faithfully carried out the standards and requirements imposed by the Congressional enactment. The Commission should again be reminded that whatever expertise appointment to that body may carry with it, there is no authority to substitute Commission opinions for the statute.

2. The Commission made no findings with respect to the economic motivations of the competing applicants. The President of Western had long regarded his road as a natural extension of the Minneapolis and favored a merger.[11] Minneapolis proved, and President Symes of Pennsylvania conceded on the witness stand, that he also had long regarded Western and Minneapolis as a natural combination. (R. 537-538, 1022) While Minneapolis was negotiating in 1954 for the purchase of Western, friendly interests acquired control of the Monon, a small railroad running roughly north and south in Indiana, so that Minneapolis-Western-Monon could constitute an outer-outer belt line circumventing Chicago. When the President of Pennsyl-

[11] His position understandingly changed after Pennsylvania-Santa Fe entered into a contract to purchase the Western stock. (R. 977-978)

vania heard of this "grandiose scheme", he moved in to buy Western and put a stop to "this nonsense". (R. 1022) The purchase would not only thwart the immediate peril of competition, but as Symes put it, guarantee "the best permanent protection for the Pennsylvania Railroad". (R. 1023) Neither the Department of Justice, nor the Commission, nor the successful applicants have provided the slightest hint as to how permanent protection of Pennsylvania from competition provides even a color of public interest. The specific intent of Pennsylvania to monopolize and restrain competition, established without challenge in this record, received tacit blessing in the Commission's orders and went completely unnoticed in the Commission's findings and report. That omission stands in sharp relief against Pennsylvania's prior demonstration that it could and would curtail competition through the Peoria gateway under similar circumstances. Under much less telling circumstances, the Commission was moved to inquiry and action in the preservation of competition. *ICC* v. *Baltimore & O. R. R.*, 152 I. C. C. 721 (1929). The unwillingness of the "experts" to enter this fertile area of inquiry can be explained only by a deliberate purpose to sustain a predetermined, artificial standard.

3. The Commission ignored the lesson of history that Pennsylvania jointly with Burlington (a western carrier operating from Chicago to the west) had previously owned Western and permitted it to sink into receivership. *Acquisition by T. P. & W. R. R.*, 124 I.C.C. 181 (1927). The destruction of Western was the natural result of Pennsylvania's self-interest in the competing Chicago and St. Louis gateways which provide the longer hauls and the higher rate divisions. At that earlier stage the Pennsylvania and the Burlington had ample time and opportunity to develop

Western and to build up the Peoria gateway, but as Western itself advised the Commission, "it was against the interest of the controlling companies [Pennsylvania-Burlington] to develop the property because it competed for traffic with their lines."[15] (124 I.C.C. at 187)

In the instant case no showing or findings were made to suggest that there has been any change in the traffic or transportation conditions which would alter Pennsylvania's economic incentives or those of a western carrier. The Commission did not have to speculate as to what Pennsylvania might do in the future; it had only to read what it had done in the past. "A page of history is worth a volume of logic." *New York Trust Co.* v. *Eisner*, 256 U.S. 345, 349 (1921). The economic self-interest of the Pennsylvania-Santa Fe group is to use the competing long hauls to St. Louis and Chicago which furnish higher revenues. All of the promises that Pennsylvania and Santa Fe made to each other (and expressly "not for the benefit of others not parties hereto")[16] cannot erase these facts.

4. With respect to the propriety of the purchase price, the Commission rests its approval upon the premise that

[15] When the eight western carriers sought to acquire and dismember Minneapolis, the Commission said:

> "As the applicants serving both Minneapolis and Peoria have their own lines to Chicago, it is hardly to be expected that they would make the same use of the Peoria gateway as does the Minneapolis and St. Louis." *Associated Railways Company, Acquisition and Securities*, 228 I.C.C. 277, 325 (1938)

[16] The arrangement between Pennsylvania and Santa Fe for the proposed management of Western is embodied in a contract between them which contains the following provision (Ex. 7-d to Pennsylvania-Santa Fe application, R. 167):

> "The Parties hereto, each with the other, and not for the benefit of others not parties hereto, agree that they will exercise their stock ownership of the TP&W to accomplish the following objectives: . . ."

the price to Pennsylvania-Santa Fe "was established on the basis of agreement between a willing seller and a willing buyer". (R. 42) The Commission made no findings, however, with respect to these pertinent price considerations:

(a) A few weeks before they entered into the sale at $135 per share, the same "willing buyers" entered into contracts with the same "willing sellers" to purchase 52% of Western's stock at $100 per share. (Exs. 7-f and 7-g to Pennsylvania-Santa Fe application, R. 174-176) Obviously the minority shares would be worth less than majority control. If the Commission had power to approve a price negotiated at "arm's length" in May, 35% higher than the price negotiated at "arm's length" between the very same parties in April, then at a minimum it was incumbent upon the Commission to explore the transactions and to set out the considerations upon which it relied. One of the Commissioners who wrote the report in this case forgot his previous warning that, even in arm's length bargaining, the "desire to eliminate a competitor" may well induce a buyer to pay an excessive price. *Graves Truck Line, Inc., Purchase - Whitworth*, 59 M.C.C. 601, 606-607 (1953) (concurring opinion).

(b) The Commission asserted that if $135 per share were a proper price for Minneapolis to pay, it would automatically be fair and reasonable for the Pennsylvania-Santa Fe group. (R. 42) Based on the 1954 figures used at the hearing, the Pennsylvania-Santa Fe purchase was predicated on average annual earnings of Western of some $641,000, whereas the Minneapolis offer to pay the same price was predicated, as a result of the proposed economies, on average earnings of Western of some $1,279,000, after deducting the payment of interest on the bonds to be sold by Minneapolis to finance the purchase.

(R. 1253-1254) How those two can be equated, the Commission's report does not reveal. Nor was the extent to which the purchase price reflects the vital factor of curtailment of competition explored by the Commission.

The Pennsylvania-Santa Fe motion to affirm seeks to make capital of the fact that in its petition for reconsideration before the full Commission, Minneapolis requested inclusion in the ownership group if the Pennsylvania-Santa Fe application were approved. That request, of course, was made not for investment but as a matter of desperate defense necessity, reflecting the ruinous effect which unfettered Pennsylvania-Santa Fe ownership would have on the traffic and income of Minneapolis.

(c) The price-earnings ratio, embraced in the Pennsylvania-Santa Fe proposal, far outstripped the price-earnings ratios of all other railroads in the United States, as shown by the public markets. Although Western's earnings had risen during the litigation, the price earnings ratio reflected by the purchase price on the date of the Commission's report was considerably higher than that of any blue chip railroad traded on the New York Stock Exchange. It was 41% higher than the Santa Fe ratio and almost three times the Pennsylvania ratio. These data passed unnoticed and their significance was not appraised. In the District Court both the Commission and the successful applicants attempted to shore up the Commission's fallacious conclusions as to the purchase price by decrying the "speculative test of potential earnings". In so doing, they ignored the principle that "the commercial value of property consists in the expectation of income from it", *Galveston, Harrisburg, etc. Ry. v. Texas*, 210 U.S. 217, 226 (1908). To the same effect

are *Consolidated Rock Products Co.* v. *DuBois*, 312 U.S. 510, 526 (1941); *Group of Investors* v. *Milwaukee R. R.*, 318 U.S. 523, 540 (1943).

5. On the prospective promotion of the Peoria gateway, the Commission omitted findings of undisputed facts and made findings directly contrary to the sworn testimony of officers of the successful applicants.

(a) No finding was made of the fact that, by the use of competing gateways, Pennsylvania and Santa Fe are in full and complete competition with the Peoria gateway. (R. 398) Conversely, Minneapolis relies exclusively on the Peoria gateway which constitutes its lifeline. (R. 27-28, 1011, 1101) The testimony shows that the Minneapolis traffic program was directed toward improved, unified service and added connections to meet the competition through the larger terminals. (R. 1101-1104, 1177-1184, 1229-1234)

(b) Neither Pennsylvania nor Santa Fe has heretofore solicited for the Peoria gateway because economic self-interest has dictated the longer haul through St. Louis and Chicago for Pennsylvania and through Chicago for Santa Fe. (R. 401, 475-476, 479, 528-529, 571, 582) The Commission found that all this would change, that Santa Fe "intends to place Lomax on a parity with Chicago from a solicitation standpoint" and, while "Pennsylvania will continue to solicit its long haul to St. Louis, Effner and Chicago will be on a parity." (R. 34) *This is simply not true.*[17] It runs counter to

[17] Even if it were true, it would be unenforceable and meaningless. The comments about parity were never more than indications of intent, in the guise of benevolent paternalism. They were never commitments and were not in any way binding.

the sworn word of Symes, President of Pennsylvania, who testified that the past solicitation policy had been for St. Louis first, Chicago next, and Effner (for the Peoria gateway) last, and that after acquisition of Western, the policy would not "change very much". (R. 521-522)

Some Santa Fe-Pennsylvania witnesses were less candid. But they all made it clear that parity does not mean equality in traffic solicitation. It is a deceptive term, intended only to express absence of active opposition. The Traffic Vice-President of Pennsylvania explained the term, "We will as heretofore, solicit via the gateway giving us the longest haul, but . . . we will not *work against*" the Western connection. (R. 571) Traffic Vice-President Duffy, of Santa Fe, indicated that parity does not mean equal solicitation (R. 483), and then went on to say that any diversion of traffic from Chicago would come not from Santa Fe's solicitation but only from Western's.[15] (R. 496) He conceded that unrouted traffic would be sent through Chicago for the longer haul, making it perfectly clear where the Santa Fe preference lay. (R. 506)

President Coulter, of Western, appearing as the final witness for Santa Fe and Pennsylvania, actually punctured the whole parity balloon. Putting Effner on a parity with Chicago, he said, would yield no change in the existing policy of benevolence; Pennsylvania would still seek its long haul to Chicago or St. Louis. (R. 1600)

[15] The mental reservations attaching to the term "parity" are illustrated by Gurley's testimony. He expressed the intention of putting Lomax on a parity with Chicago, and Nemo on a parity with Lomax. When asked whether that meant that Nemo would go on a parity with Chicago, he replied excitedly, "no, no, no." (R. 402, 418) To compound the confusion, Gurley's subordinate, Duffy testified that Nemo would cease to be on a parity with Lomax. (R. 496)

Solicitation for Effner by Pennsylvania could add to Western traffic but, as Coulter put it, "they are not going to do it". (R. 1601) Nor does the Santa Fe intend soliciting for Lomax. (R. 1609) Finally, he conceded that "parity" and a "benevolent attitude toward a gateway" are precisely synonymous. (R. 1609) With the semantic covers cut away, the evidence reveals that neither Santa Fe nor Pennsylvania will solicit one pound of freight for Western. (R. 1600-1601, 469, 1287) On the other hand, the traffic organization of Minneapolis, with agencies in 36 cities (in 16 of which Western presently has no representation) would be joined with the Western traffic solicitors to sell Peoria gateway routing. (R. 1185-1186)

At the best, the Commission simply failed to realize that the use of the term "parity" gave no promise of equality of solicitation or any enhancement of Western's traffic. At the worst, the use of that term was a hoax, designed to mislead the Commission. Promotion of traffic through the Peoria gateway is a vital factor in this proceeding. The self-interest of Pennsylvania and Santa Fe weighs heavily against such promotion.[19] The self-interest of Minneapolis is to maximize the use of the Peoria gateway. The finding of the Commission that Pennsylvania and Santa Fe intend to promote traffic through the Peoria gateway is contradicted by the testimony of their own witnesses as well as by their own economic incentives.

---

[19] Atkinson of the Wabash, Pennsylvania's huge subsidiary, made it clear that Pennsylvania's self-interest would be to get the longest haul "and that means St. Louis or Chicago over their own railroad". Only if that were not possible, would Pennsylvania choose between the Ettner interchange and the Wabash Logansport interchange (using the Decatur gateway). (R. 1280)

The preference of the two successful applicants for Chicago also contradicts the Commission's conclusion that "Santa Fe and Pennsylvania are just about as well off financially when handling traffic via Western as they would be on the long haul through Chicago". (R. 34) True, there was a self-serving generalization to that effect in the testimony, but if the Pennsylvania-Santa Fe partners were to sustain the notion that their financial advantage lay in the shorter rather than in the longer haul, they had the duty of supplying specific data and figures to establish that startling fact. This Court has long recognized the contrary to be true. In *United States* v. *Southern Pacific Co.*, 259 U.S. 214, 231 (1922), this Court said:

> "Self-interest dictates the solicitation and procurement of freight for the longer haul by the Southern Pacific lines."

Furthermore, the Commission, with its asserted expertise, must have been aware, as is any thoughtful businessman, of the lower incremental costs and the higher margins of profit arising from more intensive utilization of yard facilities such as the two successful applicants operate in the major competing gateways. Subsequent to the Commission's determination, Santa Fe announced the opening of a "high-speed, 'push-button' railroad freight yard" in Chicago (see footnote 3, above). That announced investment of $20 million in improvements to double the working capacity and to automate and speed-up the facility in Chicago effectively belies the notion of equality for the short haul through Peoria.

(c) The Commission expressed confidence that the Pennsylvania-Santa Fe acquisition would improve West-

ern's car supply. (R. 47) That is an expression of faith, not fact. The undisputed evidence shows that both lines experienced car shortages in their own operations and that the Minneapolis, as the Commission conceded, was one of the "bright spots" in the country in car ownership and supply. (R. 27, 487, 592, 1233-1237) In terms of bad order ratio, reflecting the portion of the freight car fleet in disrepair, Minneapolis' 1955 experience was two to three times more favorable than Santa Fe and five to ten times more favorable than Pennsylvania. (R. 1238)

(d) Similarly unwarranted is the Commission's confidence that "the backing of the Santa Fe and Pennsylvania" made Western's industrial development prospects bright. (R. 46) Both carriers expressed preference for the location of industry on their own lines so as to yield the greatest revenues. Traffic Vice-President Duffy of Santa Fe and Traffic Vice-President Carpi of Pennsylvania each made it crystal clear that he would bring an industry to Western only if he could not locate it on his own line. (R. 493-494, 583, 584)

6. The findings of the Commission with respect to shippers and local officials brought to the witness stand by Pennsylvania-Santa Fe omit any consideration of the following undisputed facts:

(a) The witnesses were assembled as part of a large-scale publicity and promotional campaign. (R. 458, 626, 637, 644, 674, 748-750, 800-801, 802, 884, 1505-1507) Cross-examination revealed that the witnesses had not been advised, and, with one or two exceptions, were not even remotely aware, of the considerations underlying the Minneapolis application. (R. 615,

626-627, 659, 669, 751, 791, 822) A baker's dozen of these assembled witnesses cited the abandonment of the Iowa branch of Western as the basis for opposing the Minneapolis application—although, as the Commission expressly found, Minneapolis has no intention of abandoning that west end branch. (R. 615, 750, 759, 773, 846-847, 861-862, 923, 929-930, 958, 962; 31)

(b) All of the shippers testified that their interest was solely in good service. Not one expressed opposition to the elimination of duplicate facilities, the acceleration of train service or the addition of more trains and connections. Every shipper who had ever used Minneapolis testified to the excellence of its service and his satisfaction with the way Minneapolis operated. (*e.g.*, R. 614-615, 627, 732, 775, 853, 862, 871) A mine owner called to support the Pennsylvania-Santa Fe application admitted that Western had experienced shortages of coal cars and that Minneapolis had kept his competitor supplied. (R. 669)

(c) Finally, the Commission erred in failing to recognize that its treatment of the testimony of the shipper witnesses should have been confined to the economic substance of that testimony. Instead, the Commission concentrated on the number of witnesses produced by the free-spending Pennsylvania-Santa Fe promotion as though the proceedings before it were a popularity contest. In a more responsible vein, the Commission recently pointed out that the burden of proof upon the applicant and the responsibility of expert inquiry by the Commission are in no respect lessened by the absence of protests or intervenors. *Transcon Lines—Purchase—B&M Express, Inc.*, 70 M.C.C. 796 (1958).

7. The Commission denigration of the Minneapolis program of integration, because it would result in the replacement of some employees, ignored controlling considerations with respect to which no findings were made nor explanation offered:

(a) Integration and economy are express aims of the National Transportation Policy, and these aims can seldom, if ever, be accomplished without a reduction in employment. They can, however, be accompanied by a protective cushioning program such as the program offered by Minneapolis in the present case. (R. 289, 1032-1033, 1078-1079, 1186, 1220, 1229, 1242, 1377, 1397) Both the Commission and the courts have approved acquisitions designed to effect economies and better utilization of facilities, even though employment is reduced and a headquarters moved from a particular community. *City of Nashville, Tennessee v. United States*, 155 F. Supp. 98 (M.D. Tenn. 1957), *aff'd.* 355 U.S. 63 (1957).

(b) The only true ultimate guarantee of job security lies in economic, efficient, profitable operations such as proposed by Minneapolis, with emphasis on augmented and improved service through the Peoria gateway. Featherbedding cannot last forever, and jobs cannot be secure when based on uneconomical operations. Nor can job security be invulnerable to a drying up of the gateway.[20]

---

[20] The vulnerability of railroad jobs to a decline in traffic volume is shown by the recent history of the industry. During the 25 years preceding 1958, railroad employment declined from 1,857,674 to 861,928. For the 5 years ended March 1958, there was an average decrease of 5,800 employees per month. (Sen. Rep. 1647, 85th Cong., 2d Sess. 8 (1958).) If this trend is to be reversed, and if the railroads are to

(c) Minneapolis explained fully how minimal the impact on the employees would be because of the time consumed in integration, the transfer to vacancies arising from attrition, the full observance of the Washington Job Protection Agreement of 1936, and other factors. (R. 1032-1033, 1078-1079, 1186, 1220, 1229, 1242, 1377) At the outset, Minneapolis voluntarily offered to abide by the Washington Job Protection Agreement, assuring displaced employees a minimum of 60% of their regular compensation for a period up to five years and permitting an employee to obtain a separation allowance amounting, in the case of seniority of five years or more, to twelve months' pay. (R. 289) These undertakings are designed both to assist affected employees and to encourage the carrier to minimize displacement and provide substitute employment wherever possible. While the Commission noted that 256 jobs would be affected by the integration, it ignored the fact that the actual displacement would be only a small fraction of that total.[21] This expectation rests upon the firm ground of experience. The mechanization of the Minneapolis accounting department yielded a sizeable reduction in the number of jobs, but by careful utilization of attrition vacancies, all of the incumbents were transferred to other Minneapolis positions, except for two or three who moved to other railroads. (R. 1032-1033)

---

secure their fair share of an expanding economy, more economical and efficient operations must be sought. When that is ensured, true employment will increase to take care of the increased business. Retention of employees in unnecessary, duplicating positions can only be self-defeating in the long run.

[21] A detailed schedule disclosed that during the period of integration a considerable number of job openings would become available through normal attrition, including the retirement of many of the 350 Minneapolis employees then aged 60 or over. (Ex. H-44, R. 1917-1924, 1379)

8. The Commission made no findings of fact with respect to any of the elements to be considered on the key issue of the violation of section 10 of the Clayton Act (15 U.S.C. § 20). It did not report the interlock nor identify the interlocking directors. It made no findings with respect to the preference which Pennsylvania-Santa Fe enjoyed in the negotiations as a result of the interlocking directorate. It made no finding with respect to the exclusion of Minneapolis from the negotiations as a consequence of the interlocking directorate relationship. Finally, if section 5(11) of the Interstate Commerce Act (49 U.S.C. § 5(11)) could be read—we think misread—to permit condonation of a past violation of section 10, the Commission failed to make any findings of the considerations in the public interest which would warrant such condonation.

9. The findings with respect to anti-competitive consequences of the Pennsylvania-Santa Fe acquisition were wholly inadequate to sustain the grant of immunity from antitrust prosecution.

(a) The Commission report does not mention either section 1 of the Sherman Act (15 U.S.C. § 1) or section 7 of the Clayton Act (15 U.S.C. § 18), or indicate how the Pennsylvania-Santa Fe proposal could possibly be reconciled with the statutory interdictions.

(b) Although the Commission discussed (without findings) some possible consequences *within the Peoria gateway*, it gave no consideration to the power of the two railroad colossi to cut off competition *by drying up the Peoria gateway in its entirety*, and their economic incentive so to do. The record is devoid of evidence and findings that they could not and would not do so and

would not profit by sending traffic through their larger gateways precisely as the Pennsylvania and Burlington had done during the many years they owned Western.

(c) The Commission placed great weight upon the fact that Pennsylvania and Santa Fe are Western's two largest connections. (R. 46) How assignment of control of Western to such connections equates with the public interest is not explained. This non sequitur is particularly significant since the Commission's own findings make it abundantly clear that Western's business—the very interchanges with Santa Fe and Pennsylvania—were obtained primarily through the aggressive solicitation of its own traffic department, in active competition with the solicitation by Pennsylvania and Santa Fe for their longer haul gateways. (R. 35) And, by way of contrast, there is the aggressive solicitation for Peoria gateway routing by Minneapolis. (*e.g.*, R. 27-28, 284, 1011)

(d) The Commission accepted at face value the successful applicants' easy assurance that Western's aggressive traffic solicitation policies would be continued. Yet that assurance, conflicts with their own self-interest, and, as we have pointed out above, derives solely from a private agreement between the two partners, which by its express terms was not for the benefit of, or enforceable by, any outside party. The Commission thus rested its ultimate standard of public interest upon the shifting sands of a private arrangement between the two partners completely beyond the control of the Commission, shippers or other carriers.

In similar circumstances, the Commission has shown itself to be less naive. *ICC* v. *Baltimore & O. R. R.*, 152 I.C.C. 721, 735-6 (1929). Rejecting the Santa Fe

bid for a St. Louis gateway, the Commission thought that even a condition of the order—as distinguished from a pious promise revocable at will—would not "maintain present routes or . . . prevent the loss of traffic by other railroads". *Chicago, B. & Q. R. R. Control*, 271 I.C.C. 63, 163 (1948)

Time and again the Commission selected a single element upon which to predicate a finding, without taking into account the total record. This presents a facade of plausibility but does not conform to the command of this Court in *Universal Camera Corp. v. NLRB*, 340 U.S. 474, 488 (1951):

> "The substantiality of evidence must take into account whatever in the record fairly detracts from its weight."

Compliance with the Administrative Procedure Act in terms of both adequate findings and regard for the totality of the record would have rendered impossible the conclusion reached by the Commission.

III.

The purchase of Western shares by Pennsylvania constituted a direct violation of section 10 of the Clayton Act which the Commission and the District Court were powerless to condone.

Section 10 of the Clayton Act prohibits any carrier from having any dealings in securities, articles of commerce or contracts amounting to more than $50,000 in any one year with a corporation with which it has directors or managing officials in common, except upon competitive bidding under regulations prescribed by the Commission.

The statutory prohibition is comprehensive in scope and absolute in terms. Absent competitive bidding, the dealings in the stock of Western between Pennsylvania and Wilmington Trust Company fall squarely within the ban of the statute. The record discloses that during the pertinent period, Lammot duPont Copeland, a director of Wilmington Trust Company, was also a director of Pennsylvania and a wholly-owned subsidiary of Pennsylvania. Three other directors of Wilmington Trust Company were concurrently directors of wholly-owned subsidiaries of Pennsylvania.

That the control of competitive bidding may lie in other hands does not relieve the carrier of the ban imposed by the statute. *In re Missouri Pac. R. R.*, 13 F. Supp. 888 (E. D. Mo., 1935) The Missouri Pacific Railroad had there entered into a contract for the instalment purchase of securities from a subsidiary of Allegheny, with which the carrier had a director in common. During the receivership, the Reconstruction Finance Corporation sought to annul the contract as violative of section 10 of the Clayton Act. Holding the transaction invalid and subject to rescission, Circuit Judge Faris said (13 F. Supp. at 892-893):

> "Counsel for the debtor contend that the proviso as to competitive bids covers securities, and that if in the very nature of the situation bidding for the sale of securities is not possible—*and they insist it was not here possible*—then the statute has no application, and one corporation may freely buy securities from another regardless of interlocking directorates and regardless of the statute. To my mind such a construction utterly destroys the beneficent intention held in mind by Congress when it passed the Clayton Act, of which section 10 is a part. As forecast, I think it rather clearly provides that when interlocking directorates exist between a railroad which is engaged in

> interstate commerce, and another railroad, or corporation, then unless competitive bids are obtained, such corporations are forbidden to deal with each other. And if, as already said, in the situation existing here, no competitive bids are possible, then the statute forbids the deal absolutely. If this is not what Congress intended, then Congress did a vain and futile act when it enacted the statute, so far as concerns the control of the buying and selling of securities, and as is known by all men such buying and selling has long constituted a crying financial evil in railroad annals." (Emphasis in original)

In the instant case the Commission held that because the final contract was taken only in the name of Santa Fe—which thereafter assigned one-half of the shares to its partner, Pennsylvania—"the issue before us does not involve a purchase by the Pennsylvania from the Wilmington Trust". It held further that upon approval of the transaction, section 10 of the Clayton Act became inoperative under the terms of section 5(11) of the Interstate Commerce Act (R. 44)

The District Court completely rewrote the statute saying (1) bidding was not required because this is not "a situation where interlocking directors may be enriched by reason of dealings in their securities", (2) "the common directorate which existed between the Wilmington Trust Company and the Pennsylvania Company was not the kind intended by the Congress to be covered by the prohibition", and (3) the statute "does not appear to cover the sale of stock held by a trust company to a common carrier." (R. 98-99) How the plain language of the statute could be twisted into such tortured knots of interpretation is a mystery into which neither the District Court nor any of the appellees has ventured to delve.

The motions to affirm previously filed in this Court depart from the reasoning of both the Commission and the District Court. The Pennsylvania-Santa Fe motion denies that Pennsylvania engaged in "dealings in securities". The Department of Justice—I.C.C. motion asserts that section 10 of the Clayton Act was designed "to prevent a railroad from buying at too high a price" and that the Commission had here expressly found the purchase price to be reasonable.

A. The negotiation and execution of the contracts for the purchase of Western's stock constitute prohibited "dealings in securities" between a carrier and a corporation having directors in common.

With respect to dealings in securities—the precise language of the statutory prohibition—the record establishes three facts, each of which is sufficient to taint the transaction with a badge of illegitimacy:

1. Pennsylvania and Wilmington Trust Company carried on active negotiations with respect to the acquisition of the Western shares. In fact, the President of Pennsylvania testified that he was approached by Wilmington Trust Company at the outset, and that he was interested but wanted no part of any competitive negotiations. (R. 512, 529, 535)

2. By letter agreement of April 15, 1955, Wilmington Trust Company agreed to sell 26% of the Western stock to the Pennsylvania Company, a wholly-owned subsidiary of Pennsylvania, at a price of $100 per share. Concurrently a similar agreement was made with Santa

Fe. (Exs. 7-f and 7-g to Pennsylvania-Santa Fe application, R. 174-176)

3. The May 26, 1955 agreement for the sale by Wilmington Trust Company and its co-trustee of their Western stock to Santa Fe at $135 per share was followed shortly by the agreement of Santa Fe to sell one-half of the shares so acquired to the Pennsylvania Company. (Exs. 7 and 7-d to Pennsylvania-Santa Fe application, R. 150-153, 165-169) This was a continuation of the joint venture, reserving to Pennsylvania its rights against the McNear trustees.

These contracts and the negotiations leading up to them adequately bring the conduct of Pennsylvania and Wilmington Trust Company within the statutory prohibition of dealings in securities. At least one of the successful applicants agrees. On April 14, 1958, Pennsylvania Company instituted suit against the trustees of the McNear trust, seeking specific performance of the April 15, 1955 contract to sell 26% of Western's stock at $100 per share, or, in the alternative, damages for the breach of that contract in the amount of $819,000. *Pennsylvania Company* v. *Wilmington Trust Company*, Civil Action 969, Court of Chancery, New Castle, Delaware. That lawsuit is presently pending.

The suggestion by the appellees that section 10 reaches only a consummated purchase of securities runs afoul of the statutory language. Had Congress intended such restricted scope, it could hardly have couched its purpose in less appropriate language. The selection of the term "dealings" evidences an intent comprehensively to encompass all business activities with respect to the enumerated subject matter. This Court has recently given to the statu-

tory term "dealing" a broad connotation. *NLRB* v. *Cabot Carbon Company*, — U. S. —, 3 L. Ed. 2d 1175, 1180-1182 (1959).

Nor is there any basis for assuming that the adequacy of price was the sole consideration to which Congress addressed its attention. Public bidding opens the transaction to a wholesome public scrutiny not attendant upon back-room deals. In any event, Congress specifically prescribed the method by which related corporations might deal with one another. That is competitive bidding under prescribed regulation. The statute leaves no room for substitution of other procedures, even though undertaken in good faith and for proper purpose—virtues not here readily apparent.[22] This record is testimony to the wisdom of the Congressional enactment and to the scope of its prophylactic purpose. The negotiations reveal an unusual anxiety by the corporate trustee to sell the shares held in the trust estate to Pennsylvania and its partner, Santa Fe. There was an absence of the normal process of pitting prospective buyers against each other in an effort to obtain the highest possible price. While we are not here concerned with the fiduciary conduct of Wilmington Trust Company as trustee, the circumstances reveal the extraordinarily close relationship between the corporate trustee and Pennsylvania, which may reasonably be attributed to their interlocking directorates.

The consideration of section 10 by the tribunals below was shallow and inhospitable. The Commission thought

[22] The government argued that the purchase was "remote from the evils against which Section 10 was directed" because it was subject to approval by the Commission entailing a determination that the purchase price was reasonable (Motion to Affirm, p. 11). No authority is cited for such limited statutory purpose or to warrant the after-the-fact substitution of Commission review of price for the unequivocal statutory bidding procedure.

that taking the second contract in the name of Pennsylvania's partner, with a subsequent division of the shares, shielded the transaction from the statute. Equally transparent is the District Court's rewriting of the statute and its intimation that evasion might have been accomplished by Pennsylvania's acting through its wholly-owned subsidiary.[23]

The unpleasant odor of such intimations is not dissipated by the suggestion made by the Department of Justice to this Court that there is at most a technical breach of section 10. Rather, this case presents, with all the ugly brush strokes highlighted, a vivid picture of the nation's largest railroad carrier using the influence of an interlocking directorate to crush the natural expansion of a small carrier —and doing that for the deliberate purpose of suppressing competition. The purpose and effect have been to flout the public policy of the antitrust laws.

Apart from the legal authority to condone a violation of section 10 is the warrant for the exercise of a purported discretion by the Commission. Immunization from antitrust laws may not be conferred by edict or fiat, unaccompanied by disclosed considerations in the public interest dictating such exercise of discretion. Here the Commission was called upon to determine whether a transaction conceived in illegality and dedicated to the suppression of competition, was so vital to our national transportation system that the violators of the law should be clothed with

---

[23] Their application itself shows that the successful applicants were quite realistic on both counts (R. 129-130):

"1. The proposed transaction for which approval is sought is the *joint acquisition* of control of TP&W by Santa Fe and Pennsylvania *Railroad* through purchase of its capital stock in equal amounts by Santa Fe and by Pennsylvania Company, a wholly-owned subsidiary of Pennsylvania Railroad." (Emphasis supplied)

immunity to preserve their illegal gains. No such overriding public interest appears in the record or the findings.

In two recent instances, the Commission refused to stamp with approval acquisitions that had been made in violation of law. In one, the Commission refused to permit the applicant to retain "the fruits of its unlawful conduct," for to sanction such conduct would be to encourage and welcome disregard of the law by others. *Central of Georgia Ry. Control*, 307 I.C.C. 39 (1958). The basic principle enunciated in that case was:

> "The public interest is concerned not only with improvements in transportation service, but also with the maintenance of respect for and the observance of the law."

With respect to the acquisition of a truck facility, the Commission held that transactions rooted in illegality "should not be blessed by approval". *L. Nelson & Sons Transportation Co.—Control and Merger—Gilbertville Trucking Co., Inc.*, 75 M. C. C. 45 (1958).[24]

B. The Interstate Commerce Commission is without authority to condone antitrust violations occurring prior to the entry of the Commission's order.

The present transaction cannot be immunized from the interdiction of section 10 of the Clayton Act. Section 5(11) of the Interstate Commerce Act is designed to facilitate the consummation of transactions approved by the Com-

[24] These decisions are in complete accord with the history of Sherman Act enforcement, where this Court has been vigilant to see that, "Those who violate the Act may not reap the benefits of their violations" or avoid an undoing of their unlawful projects. *United States* v. *Crescent Amusement Co.*, 323 U. S. 173, 189 (1944). *Schine Chain Theatres* v. *United States*, 334 U. S. 110, 128 (1948). *United States* v. *Paramount Pictures, Inc.*, 334 U. S. 131, 152 (1948).

mission. Carriers are relieved from the operation and restraints of the antitrust laws "insofar as may be necessary to enable them to carry into effect the transaction so approved." We are here concerned not with an offense against the antitrust laws in carrying out a transaction approved by the Commission, but rather a violation antedating the proceedings before the Commission.

Pennsylvania had carried on its dealings in securities in disregard of the Clayton Act. Thereafter the transaction rooted in illegal conduct was brought to the Commission for its approval. The statute may be searched in vain for authority to confer retroactive condonation of such violation.

By its very terms the statute operates *in futuro* and not in retrospect. The exception to the antitrust laws is precise and limited. There is no authority to purge the taint of a transaction illegal at the time it was brought to the Commission.

Construing an earlier statutory version of what is now section 5(11), Commissioner Eastman said, in a concurring opinion:

> "Plainly there is nothing in this provision which in any way modifies the antitrust statutes, and nothing which suspends their operation until we have made an order. In that event the operation of these statutes is suspended with reference only to *future* acts authorized or required by the order. In no way is it suspended with reference to unauthorized acts pending our subsequent approval or disapproval, such suspension to continue if we approve and to cease if we disapprove. If that had been the intent of Congress it could very easily have been expressed, but there is no language which even remotely suggests such an intent." *ICC* v. *Baltimore & O. R. R.*, 152 I.C.C. 721, 740 (1929).

IV.

The Pennsylvania-Santa Fe acquisition was specifically designed and calculated materially to restrain competition between the Peoria gateway and the major east-west gateways of St. Louis and Chicago, and to afford monopolistic power to the successful applicants in their own service areas. Immunization of the acquisition from the operation of the antitrust laws was an abuse of the Commission's statutory power.

The order under review, carrying with it under section 5(11) of the Act, immunization from the antitrust laws in its consummation, cannot stand in the absence of clear-cut transportation advantages to the general public of such character and magnitude as to outweigh the public harm attendant upon violation of the antitrust laws. The vice of the order here assailed is the absence of consideration of the nature and scope of the antitrust violations, particularly in respect of the east-west gateway competition, the failure to cite any benefits to the public outweighing the destructive effect upon competition of the Pennsylvania-Santa Fe acquisition, and the availability of the alternative Minneapolis application that promotes both the transportation and the antitrust policies of the Congress.

Section 1 of the Sherman Act prohibiting contracts and combinations in restraint of trade, and section 7 of the Clayton Act prohibiting acquisitions of stock or corporate assets where the effect may be substantially to lessen competition or to tend to create a monopoly, are both offended by the successful applicants in two major respects. The first is a restraint of trade, lessening of competition and monopolization in east-west gateways. This element the Commission did not consider at all. The second relates to

the effect upon commerce in the respective service areas of Pennsylvania and Santa Fe." This the Commission touched upon lightly with neither comprehensive survey nor decisive determination. The Commission apparently felt, as the District Court held, that "It is not the function of the Commission to determine whether the acquisition of Western by these two railroads will violate the antitrust laws." (R. 101) The Court then noted, what is perfectly true, that the Commission made no effort to conduct such an inquiry. The Commission simply abdicated its duty to consider free competition as a pertinent factor in the public interest.

The Commission apparently did not realize how intimately its functions are touched by the antitrust laws. The Commission could determine public interest only by accommodating the reach of the antitrust laws with that of the Interstate Commerce Act. With respect to carriers, the Commission has a statutory duty to enforce section 7 of the Clayton Act and other antitrust provisions. Its responsible concern with free competition is an essential concomitant of the immunity from antitrust laws attendant upon compliance with the Commission's orders. We had thought it clear that due regard for antitrust consequence was a duty transcending the Commission's discretion. *McLean Trucking Co.* v. *United States*, 321 U.S. 67, 86 (1944). Neither transportation policy nor protection of free competition occupies a superior position in the public interest. If the Commission is to function with an eye single to that public interest, these two fundamental policies must be accommodated, one to the other, on the basis of candid and rational reasons. In effecting that statutory accommodation, it was necessarily incumbent upon the Commission to consider the alternative application of Min-

neapolis which would further the National Transportation Policy and at once conform to the antitrust laws.

Pennsylvania, the nation's largest carrier, enjoys a preeminent position in the St. Louis and Chicago gateways, and, through its subsidiary, the Wabash, in the Decatur gateway. Santa Fe occupies a preeminent position in the Chicago gateway which, since the hearing before the trial examiner, has been enhanced by a huge, modern transfer facility. Both carriers aggressively compete with Western. (R. 398) In addition to that competition, the President of the Wabash testified that his railroad ran parallel to Western across the State of Illinois, at times running "side by side." (R. 1288-1289) The competition is so direct that improved service over the Wabash to Kansas City diverted traffic previously handled over Western and Santa Fe. (R. 1294) Among all the carriers in the United States, Pennsylvania and Santa Fe are two of the largest originators of traffic, and, as such, are able to exercise a tremendous influence over the routing of traffic. To allow control of a competing gateway—Peoria—to pass into the hands of the Pennsylvania-Santa Fe combine would place them in a powerful position to strangle Peoria gateway competition to the advantage of their preferential positions in Chicago, St. Louis and Decatur. That the fear is not idle is apparent from the admission by the President of the Pennsylvania that "we could destroy" the Effner connection.[25] Lurking in the record, too, is the historical fact that for a third of a

[25] Speaking of the Effner interchange at the east end of Western, President Symes testified: "That is what I mean when I say we made it, if anything here does harm to it, we could destroy it. That is not a threat, I don't mean it that way but I could very well do it from the standpoint of economics." (R. 547) While the President of the Santa Fe anticipated no bad relations with Western if his application were disapproved, he took occasion to warn that the possibility "should not be disregarded." (R. 434)

century the Peoria gateway did in fact dry up to the benefit and enhancement of Western's then owners' preferential interests in the competing gateways.

Many years ago this Court analyzed and condemned the very evils which the Commission and the District Court have here elected to sanction. In *United States v. Southern Pacific Co.*, 259 U.S. 214, 230 (1922), the Court stated:

> "Such combinations, not the result of normal and natural growth and development, but springing from the formation of holding companies, or stock purchases, resulting in the unified control of different roads or systems, naturally competitive, constitute 'a menace to, and a restraint upon, that freedom of commerce which Congress intended to recognize and protect, and which the public is entitled to have protected.' "

This principle was then applied to the very considerations which will inevitably influence the Pennsylvania-Santa Fe group in the instant case:

> "Self-interest dictates the solicitation and procurement of freight for the longer haul by the Southern Pacific lines. While many practices, formerly in vogue, are eliminated by the legislation of Congress regulating interstate commerce, and through rates and transportation may be had under public supervision, there are elements of competition in the granting of special facilities, the prompt carrying and delivery of freight, the ready and agreeable adjustment and settlement of claims, and other elements which that legislation does not control." (259 U.S. at 231)

Ill-concealed by the loose references to parity and benevolence is the fact that Santa Fe and Pennsylvania promise only to lessen their resistance to Western's solicitation for the Peoria gateway. But as the Commission's order stands,

Western's solicitation will be controlled by these very carriers. Can it be assumed that their own economic self-interests will actually be submerged and sacrificed? Would Santa Fe be content with 52% of the revenues on a shipment routed through Lomax which would yield Santa Fe 70% if routed through Chicago, even if one-half of the difference, remaining after expenses, could be realized through ownership in Western? Or would Pennsylvania be content with 26% of the revenues on shipments routed through Effner which would yield Pennsylvania 50% if routed through St. Louis, and would yield the combined Pennsylvania-Wabash 70%; even if some 11%, less expenses, were realized through ownership in Western? These queries are predicated upon the specific divisions for various traffic routings shown in the first table of Exhibit H-34. (R. 1769-1816, 1166) Economic self-interest and human nature being what they are, the Western traffic organization will be responsive to the best interests of the owners of Western. No Western solicitor would dare buck either Pennsylvania or Santa Fe in routing solicitation. Unless we are to retreat to Alice-in-Wonderland fantasy, we must face the fact that the self-interest of the controlling carriers will be a primary consideration in traffic solicitation. The gateways which yield them the greater return will necessarily be favored over the competitive route of Western.

In *ICC* v. *Baltimore & O. R. R.*, 152 I.C.C. 721, 735, 736 (1929), the Commission pointed out that (a) the effective competition in the solicitation of the acquired carrier could not survive the acquisition because "knowledge of its relationship to its controlling lines would deprive it of force as a competitor for their traffic", and (b) the motivation of the acquiring carriers "to prevent the consumma-

tion of the plans for a competing through system" should not be ignored.

The Commission has here deviated from the realistic standards by which it has tested previous comparable situations. *Chicago, B. & Q. R. R. Control*, 271 I.C.C. 63, 162-163 (1948); *ICC* v. *Baltimore & O. R. R.*, 152 I.C.C. 721, 735-736 (1929). Recently the District Court quoted with approval certain statements of the Commission rejecting the applications of Northern Pacific, Great Northern and Milwaukee to acquire the Spokane International Railroad. *Canadian Pacific Ry.* v. *United States*, 158 F. Supp. 248, 253-254 (D. Minn. 1958). These statements are equally apposite here. When the word "Western" is substituted for the words "Spokane International", they read:

> " '. . . Such ownership, involving as it does the principal competitors of the Western, would result in a conflict of interests which inevitably would lead to a stalemate in matters of policy, solicitation of traffic, physical improvements, and industrial development. The competitors would be more interested in their wholly-owned lines than they would be in the part ownership of the Western. Divided ownership and responsibility, particularly where the interests of those in control may be somewhat opposed, would not be conducive to harmonious results. Any plan calling for control by its competitors offers little or no prospect that the Western's properties would continue to be operated vigorously in the solicitation of rail traffic as they are now. . . .' "

The motives of the Pennsylvania-Santa Fe group did not concern the Commission although the evidence was clear, convincing and uncontradicted. (R. 454-455, 533, 535, 539-540, 597, 1022-1023) Even the most ingenuous of optimists ought to be convinced by the admission made by President Symes of Pennsylvania under oath that his pur-

pose in seeking control of Western was to block the competitive outer-outer belt line around Chicago.[26]

The Commission, the District Court and the appellees are unanimous in their disregard of the competition-stifling intent of Pennsylvania and the history of the negotiations. If the mere suspicion of a scheme to suppress competition was sufficient to evoke disapproval in the *Baltimore & O. R. R.* case, how much more forceful is the demand for judicial condemnation in the present case, where the pernicious purpose was admitted under oath by the prime movers.

The duty of the Commission with respect to granting immunity under the antitrust laws was spelled out by Mr. Justice Rutledge, speaking for this Court in *McLean Trucking Co. v. United States*, 321 U.S. 67, 86-88 (1944):

> "Congress however neither has made the antitrust laws wholly inapplicable to the transportation industry nor has authorized the Commission in passing on a proposed merger to ignore their policy. Congress recognized that the process of consolidating motor carriers would result in some diminution of competition and might result in the creation of monopolies. To prevent the latter effect and to *make certain that the former was permitted only where appropriate to further the national transportation policy*, it placed in the Commission power to control such developments.
>
> * * * * *
>
> "In short, the Commission must estimate the scope and appraise the effects of the curtailment of the competition which will result from the proposed consolidation and consider them along with the advantages of improved service, safer operation, lower

[26] The President of the Santa Fe reflected little public interest in his explanation for opposing the Minneapolis when he made the statement already quoted above, that "the brief answer is that we prefer to own it." (R. 455)

> costs, etc., to determine whether the consolidation will assist in effectuating the over-all transportation policy. . . . If the Commission did not exceed the statutory limits within which Congress confined its discretion *and its findings are adequate and supported by evidence*, it is not our function to upset its order." (Emphasis supplied)

In quoting from that opinion, neither the District Court nor any of the appellees has seen fit to include the first sentence quoted above. The obligation prescribed by this Court required the Commission to bring into rational focus the full thrust of both the National Transportation Policy and the antitrust laws. In doing so, the Commission may not deny hospitable acceptance to the antitrust laws nor may it substitute its own conclusory evaluation of competitive requirements for the dictates of those laws and the National Transportation Policy.

In its report the Commission did concede that the effect of the Pennsylvania-Santa Fe acquisition might be "some diversion of traffic". (R. 34) The Commission, however, was addressing itself solely to the narrow effect as among the several carriers within the Peoria gateway. What it failed to consider was the more important, much broader, question of the future of the Peoria gateway itself if entrusted to the powerful carriers whose primary interests lay elsewhere. The Commission ignored the fact that its order would place it within the unrestrained power of the Pennsylvania-Santa Fe group substantially to lessen the traffic through the Peoria gateway, for the benefit of the competing St. Louis and Chicago gateways, which, at least in respect of the Pennsylvania, was the very purpose of the acquisition. It is in this vital, sensitive area of the natural working of economic forces that the Commission was called upon to exercise the highest level of expertise analysis.

and it is in this very area that the greatest vacuum exists in the Commission's report.

A second aspect of the competitive problem, equally ignored by the Commission, is the over-all effect upon transportation of linking, and enlarging the sphere of influence of, two gigantic rail empires. The greatest tonnage in the east is captive to Pennsylvania; the greatest tonnage in the west is captive to Santa Fe. Their influence upon other carriers and industry dependent upon their services is monumental. Their traffic solicitation and operating coverage is enormous. Against this background, any enhancement of their competitive power increases the pressure upon, and the jeopardy to, their competitors in rail and other transportation. When it is remembered that the proposed addition joins these two giants, the perils are necessarily magnified. By any standard of measurement, the power of these two colossi of the railroad industry is already so tremendous that any further augmentation violates the language, spirit and national policy of the antitrust laws.

The President of Santa Fe insisted that as a matter of general policy "the applicant having the greatest exchange of traffic . . . should be preferred." (R. 384) The Commission wholeheartedly embraced that philosophy to the extreme. It awarded Western to the huge carriers enjoying the heaviest connections even though that traffic was interchanged despite, not because of, such connecting carriers. It made that award in the face of the conflicting self-interests, the condemnatory experience and the destructive competitive purposes. That underlying philosophy jeopardizes fair competitive practices in the transportation industry and is calculated to spill over into other areas. Our way of life does not contemplate that a government agency should make the big, bigger, and the small, weaker.

Since size itself is "an earmark of monopoly power",[37] Pennsylvania-Santa Fe could not sustain their application without an affirmative showing that the antitrust laws would not be transgressed. No such showing was made nor was it possible under the circumstances of this case.

Pertinent is the comment of the Commission in rejecting the application of Santa Fe and Burlington to acquire joint control of a small carrier affording access to St. Louis:

> "The fact that two of the strongest railroads in the United States propose to unite in an arrangement whereby they could attract to their lines from competing carriers a large volume of traffic and handle it at favorable operating costs, would, inure largely to their benefit and possibly to the benefit of some shippers, but ultimately, because of the power that might be exercised in an area where competition is so keen the transportation facilities in the entire Southwestern section of the country would probably be adversely affected. Traffic losses of other carriers, including the protesting railroads, unable to compete with such a powerful combination, might be so great as to result in curtailment of service or abandonment of substantial portions of their lines, either of which would be detrimental to the public interest." *Chicago, B. & Q. R. R. Control*, 271 I.C.C. 63, 162-163 (1948).

Promises to avoid such detriment, even if buttressed by conditions in the order, were regarded by the Commission as inadequate against the normal incentive of carriers for the long haul.

Santa Fe and Pennsylvania are both in active competition with Western. The power and self-interest of the successful applicants in curtailing competition with Western so as to promote their preferential long hauls is undeniable. It happened before, and it is not illogical to antici-

---

[37] *United States* v. *Paramount Pictures, Inc.*, 334 U. S. 131, 174 (1948).

pate a repetition. The Commission has found that "mere representation" of one carrier on the board of another would "destroy the latter's neutrality" and may "substantially lessen competition." *New York, Chicago & St. L. R. R. Control*, 295 I.C.C. 131, 148 (1955). The consequences of control of a competitor are more far-reaching in terms of service, traffic data and solicitation. Mere access to Western's interchange reports would yield valuable competitive information as to the types, sources, volume and destinations of traffic moving via Western in conjunction with other connecting carriers. There is no reason to expect self-restraint on the part of Pennsylvania or Santa Fe in utilizing the competitive advantages in their own service areas which control of the strategic Western line can yield. The reasonable likelihood that the acquisition will result in a restraint of commerce is sufficient to invoke section 7 of the Clayton Act even were competition absent between the parties to the acquisition. *United States* v. *E. I. duPont deNemours & Co.*, 353 U. S. 586, 592 (1957). It is apparent that, in terms of both gateway competition and traffic competition in the Pennsylvania and Santa Fe service areas, the combination under scrutiny by the Commission would be unreasonably in restraint of trade.

In a proper case the Commission admittedly may determine that antitrust considerations should be subordinated to other considerations in the public interest. In order to make that determination, however, and to make it susceptible to the meaningful judicial review guaranteed by statute, the Commission must spell out the other interests—as it failed to do here. They cannot be assumed or implied from expertise.

No exploration of the antitrust problems could be com-

plete without consideration of the available alternatives. The Minneapolis application was ready at hand. Of all the carriers in the proceeding, Minneapolis alone has no conflict of interest with the Peoria gateway. Its program was calculated to foster and stimulate, rather than to stifle and lessen, competition. It contemplated promoting the use of the Peoria gateway in more spirited competition with the busier terminals. It carried with it, in the public interest, economy, integration and elimination of duplication and waste, improvement and acceleration of service, all objectives underscored in the National Transportation Policy. The Commission's criticism of the Minneapolis proposal on the ground that top management would no longer be located in Peoria has been shown to be a transparent sham in which the Commission can take little pride as an expert.

The record with respect to antitrust considerations required findings by the Commission (1) that the acquisition of Western by Pennsylvania-Santa Fe would, in telling and far-reaching respects, offend section 1 of the Sherman Act and section 7 of the Clayton Act, (2) that the disadvantages of the restraint are hardly overcome, so far as the public is concerned, by the illusory "independence" of Western, and (3) that the allowance of the Minneapolis application would be consistent with, and indeed promote, the national policy for the preservation of free competition.

V.

The restrictive consideration by the District Court constituted a denial of judicial review.

A rubber stamp approval of the Commission's report was sought by the appellees and given in the District Court. The government told the Court that "no case has been

found in which such an order has been held invalid on the merits." (D.C. Brief, Department of Justice and I.C.C., p. 10). The District Court summed up its concept in the extraordinary statement that "within the limits of the jurisdiction conferred upon it, the power of a Court or an administrative agency to decide questions is not confined to deciding them correctly." And then that tribunal applied that approach quite literally.

No invasion of the province entrusted to the Commission was sought in this case. We complained that looking down one side of the street and paying no attention to the other constituted a denial of a comparative hearing and was in keeping with the one-sided approach condemned by this Court in *Schaffer Transportation Co.* v. *United States*, 355 U.S. 83 (1957), handed down after the Commission had acted.

The whole subject of findings was left untouched in the District Court. Neither the omission nor the lack of adequate support was explored.

An unmistakable issue of law was raised with respect to section 10 of the Clayton Act. Refuge in expertise judgment was unavailable. To avoid reversing the Commission, the Court supplied its own concept of what the law ought to be, a concept so alien to the Congressional enactment that it was never urged or defended—either before or after the District Court opinion.

Finally, there were the broader antitrust aspects of the case. Seldom is a purpose to inhibit competition candidly announced. This case being an exception, one would have expected the Court to seize upon the confession of illegal purpose and question the failure of the administrative agency to take it into account. If the Court gave any thought to the adverse effect upon competition between the several

gateways, it was not expressed in the written word of the opinion. The judicial thinking was that since the general subject had been given some limited consideration by the Commission, Minneapolis was foreclosed from asking the Court to examine any phase of the issue. (R. 101)

Not without significance is the fact that this very District Court gave the same rubber stamp approval, almost at the same time, to a decision of the Commission denying competitive carriers—including large connections—authority to acquire a smaller carrier because of the harmful results competitively. *Canadian Pacific Ry.* v. *United States*, 158 F. Supp. 248 (D. Minn. 1958).

The perfunctory character of the review, manifest in the lower court's opinion, constituted an abdication of the functions designed to assure compliance with law by an administrative agency.

Conclusion

The considerations presented in this brief warrant relief by an order or orders:

1. Enjoining, annulling and setting aside the orders of the Interstate Commerce Commission dated May 31, 1957 and October 30, 1957 in Dockets 18991 and 18906.

2. Declaring that, on the undisputed evidence, the Interstate Commerce Commission should have made an order determining that the application of Minneapolis to acquire the capital stock of Western is in the public interest, serving to promote the National Transportation Policy because of efficiency, economy and improved service, the absence of unfair or destructive competitive practices, and the strengthening of Minneapolis as an integral part of the national transportation system.

3. Declaring that the Interstate Commerce Commission should have found that the application of Santa Fe and Pennsylvania to acquire the stock of Western is contrary to the public interest by reason of their conflicting interests in competing gateways, the absence of any improvement in service or provision for economies, Pennsylvania's violation of section 10 of the Clayton Act, and the fact that the acquisition would produce flagrant violations of section 1 of the Sherman Act and section 7 of the Clayton Act, which are neither balanced nor overridden by any considerations of public interest.

4. Declaring that upon this record and as a matter of law it is the duty of the Interstate Commerce Commission to enter an order approving the application of Minneapolis, authorizing the acquisition of the Western stock by Minneapolis and denying the application of Pennsylvania-Santa Fe.

5. Reversing the order of the District Court and remanding this proceeding to that Court with directions to take appropriate steps to effectuate the foregoing relief.

APPENDIX A

Section 1 of the Sherman Act, as amended (26 Stat. 209, as amended, 15 U.S.C. § 1):

"Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is declared to be illegal: *Provided*, That nothing contained in sections 1-7 of this title shall render illegal, contracts or agreements prescribing minimum prices for the resale of a commodity which bears, or the label or container of which bears, the trade mark, brand, or name of the producer or distributor of such commodity and which is in free and open competition with commodities of the same general class produced or distributed by others, when contracts or agreements of that description are lawful as applied to intrastate transactions, under any statute, law, or public policy now or hereafter in effect in any State, Territory, or the District of Columbia in which such resale is to be made, or to which the commodity is to be transported for such resale, and the making of such contracts or agreements shall not be an unfair method of competition under section 45 of this title: *Provided further*, That the preceding proviso shall not make lawful any contract or agreement providing for the establishment or maintenance of minimum resale prices on any commodity herein involved, between manufacturers, or between producers, or between wholesalers, or between brokers, or between factors, or between retailers, or between persons, firms, or corporations in competition with each other. Every person who shall make any contract or engage in any combination or conspiracy declared by sections 1-7 of this title to be illegal shall be deemed guilty of a misdemeanor, and, on conviction there-

of, shall be punished by fine not exceeding fifty thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court."

Section 7 of the Clayton Act, as amended (38 Stat. 731, as amended, 15 U.S.C. § 18):

"No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.

"No corporation shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of one or more corporations engaged in commerce, where in any line of commerce in any section of the country, the effect of such acquisition, of such stocks or assets, or of the use of such stock by the voting or granting of proxies or otherwise, may be substantially to lessen competition, or to tend to create a monopoly.

"This section shall not apply to corporations purchasing such stock solely for investment and not using the same by voting or otherwise to bring about, or in attempting to bring about, the substantial lessening of competition. Nor shall anything contained in this section prevent a corporation engaged in commerce from causing the formation of subsidiary corporations for the actual carrying on of their immediate lawful business, or the natural and legitimate

branches or extensions thereof, or from owning and holding all or a part of the stock of such subsidiary corporations, when the effect of such formation is not to substantially lessen competition.

"Nor shall anything herein contained be construed to prohibit any common carrier subject to the laws to regulate commerce from aiding in the construction of branches or short lines so located as to become feeders to the main line of the company so aiding in such construction or from acquiring or owning all or any part of the stock of such branch lines, nor to prevent any such common carrier from acquiring and owning all or any part of the stock of a branch or short line constructed by an independent company where there is no substantial competition between the company owning the branch line so constructed and the company owning the main line acquiring the property or an interest therein, nor to prevent such common carrier from extending any of its lines through the medium of the acquisition of stock or otherwise of any other common carrier where there is no substantial competition between the company extending its lines and the company whose stock, property, or an interest therein is so acquired.

"Nothing contained in this section shall be held to affect or impair any right heretofore legally acquired: *Provided*, That nothing in this section shall be held or construed to authorize or make lawful anything heretofore prohibited or made illegal by the antitrust laws, nor to exempt any person from the penal provisions thereof or the civil remedies therein provided.

"Nothing contained in this section shall apply to transactions duly consummated pursuant to authority given by the Civil Aeronautics Board, Federal Communications Commission, Federal Power Commission, Interstate Com-

merce Commission, the Securities and Exchange Commission in the exercise of its jurisdiction under section 79 of this title, the United States Maritime Commission, or the Secretary of Agriculture under any statutory provision vesting such power in such Commission, Secretary, or Board."

Section 10 of the Clayton Act (38 Stat. 734, 15 U.S.C. 20):

"No common carrier engaged in commerce shall have any dealings in securities, supplies, or other articles of commerce, or shall make or have any contracts for construction or maintenance of any kind, to the amount of more than $50,000, in the aggregate, in any one year, with another corporation, firm, partnership, or association when the said common carrier shall have upon its board of directors or as its president, manager, or as its purchasing or selling officer, or agent in the particular transaction, any person who is at the same time a director, manager, or purchasing or selling officer of, or who has any substantial interest in, such other corporation, firm, partnership, or association, unless and except such purchases shall be made from, or such dealings shall be with, the bidder whose bid is the most favorable to such common carrier, to be ascertained by competitive bidding under regulations to be prescribed by rule or otherwise by the Interstate Commerce Commission. No bid shall be received unless the name and address of the bidder or the names and addresses of the officers, directors, and general managers thereof, if the bidder be a corporation, or of the members, if it be a partnership or firm, be given with the bid.

"Any person who shall, directly or indirectly, do or attempt to do anything to prevent anyone from bidding, or shall do any act to prevent free and fair competition

among the bidders or those desiring to bid, shall be punished as prescribed in this section in the case of an officer or director.

"Every such common carrier having any such transactions or making any such purchases shall, within thirty days after making the same, file with the Interstate Commerce Commission a full and detailed statement of the transaction showing the manner of the competitive bidding, who were the bidders, and the names and addresses of the directors and officers of the corporations and the members of the firm or partnership bidding; and whenever the said commission shall, after investigation or hearing, have reason to believe that the law has been violated in and about the said purchases or transactions, it shall transmit all papers and documents and its own views or findings regarding the transaction to the Attorney General.

"If any common carrier shall violate this section, it shall be fined not exceeding $25,000; and every such director, agent, manager, or officer thereof who shall have knowingly voted for or directed the act constituting such violation, or who shall have aided or abetted in such violation, shall be deemed guilty of a misdemeanor and shall be fined not exceeding $5,000 or confined in jail not exceeding one year, or both, in the discretion of the court."

National Transportation Policy (54 Stat. 899, 49 U.S.C. preceding § 1):

"It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical and efficient service and foster,

sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several States and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions;—all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy."

Section 5(2) of the Interstate Commerce Act, as amended (24 Stat. 380, as amended, 49 U.S.C. § 5(2))

"(2)(a) It shall be lawful, with the approval and authorization of the Commission, as provided in subdivision (b)—

"(i) for two or more carriers to consolidate or merge their properties or franchises, or any part thereof, into one corporation for the ownership, management, and operation of the properties theretofore in separate ownership; or for any carrier, or two or more carriers jointly, to purchase, lease, or contract to operate the properties, or any part thereof, of another; or for any carrier, or two or more carriers jointly, to acquire control of another through ownership of its stock or otherwise; or for a person which is not a carrier to acquire control of two or more carriers through ownership of their stock or otherwise; or for a person

which is not a carrier and which has control of one or more carriers to acquire control of another carrier through ownership of its stock or otherwise; or

"(ii) for a carrier by railroad to acquire trackage rights over, or joint ownership in or joint use of, any railroad line or lines owned or operated by, any other such carrier, and terminals incidental thereto.

"(b) Whenever a transaction is proposed under subparagraph (a), the carrier or carriers or person seeking authority therefor shall present an application to the Commission, and thereupon the Commission shall notify the Governor of each State in which any part of the properties, of the carriers involved in the proposed transaction is situated, and also such carriers and the applicant or applicants (and, in case carriers by motor vehicle are involved, the persons specified in section 305(e)), and shall afford reasonable opportunity for interested parties to be heard. If the Commission shall consider it necessary in order to determine whether the findings specified below may properly be made, it shall set said application for public hearing; and, a public hearing shall be held in all cases where carriers by railroad are involved unless the Commission determines that a public hearing is not necessary in the public interest. If the Commission finds that, subject to such terms and conditions and such modifications as it shall find to be just and reasonable, the proposed transaction is within the scope of subparagraph (a) and will be consistent with the public interest, it shall enter an order approving and authorizing such transaction, upon the terms and conditions, and with the modifications, so found to be just and reasonable: *Provided*, That if a carrier by railroad subject to this chapter, or any person which is controlled

by such a carrier, or affiliated therewith within the mea
ing of paragraph (6), is an applicant in the case of a
such proposed transaction involving a motor carrier, t
Commission shall not enter such an order unless it fin
that the transaction proposed will be consistent with t
public interest and will enable such carrier to use servi
by motor vehicle to public advantage in its operations a
will not unduly restrain competition.

"(c) In passing upon any proposed transaction und
the provisions of this paragraph (2), the Commission sha
give weight to the following considerations, among other
(1) The effect of the proposed transaction upon adequa
transportation service to the public; (2) the effect upon t
public interest of the inclusion, or failure to include, oth
railroads in the territory involved in the proposed transa
tion; (3) the total fixed charges resulting from the propo
ed transaction; and (4) the interest of the carrier employe
affected.

"(d) The Commission shall have authority in the ca
of a proposed transaction under this paragraph (2) invol
ing a railroad or railroads, as a prerequisite to its approv
of the proposed transaction, to require, upon equitab
terms, the inclusion of another railroad or other railroa
in the territory involved, upon petition by such railroad
railroads requesting such inclusion, and upon a finding th
such inclusion is consistent with the public interest.

"(e) No transaction which contemplates a guaran
or assumption of payment of dividends or of fixed charge
shall be approved by the Commission under this paragra
(2) except upon a specific finding by the Commission th
such guaranty or assumption is not inconsistent with t
public interest. No transaction shall be approved und

this paragraph (2) which will result in an increase of total fixed charges, except upon a specific finding by the Commission that such increase would not be contrary to public interest.

"(f) As a condition of its approval, under this paragraph (2), of any transaction involving a carrier or carriers by railroad subject to the provisions of this chapter, the Commission shall require a fair and equitable arrangement to protect the interests of the railroad employees affected. In its order of approval the Commission shall include terms and conditions providing that during the period of four years from the effective date of such order such transaction will not result in employees of the carrier or carriers by railroad affected by such order being in a worse position with respect to their employment, except that the protection afforded to any employee pursuant to this sentence shall not be required to continue for a longer period, following the effective date of such order, than the period during which such employee was in the employ of such carrier or carriers prior to the effective date of such order. Notwithstanding any other provisions of this chapter and chapters 8 and 12 of this title, an agreement pertaining to the protection of the interests of said employees may hereafter be entered into by any carrier or carriers by railroad and the duly authorized representative or representatives of its or their employees."

Section 5(11) of the Interstate Commerce Act, as amended (24 Stat. 380, as amended, 49 U.S.C. § 5 (11)):

"The authority conferred by this section shall be exclusive and plenary, and any carrier or corporation participating in or resulting from any transaction approved by the Commission thereunder, shall have full power (with

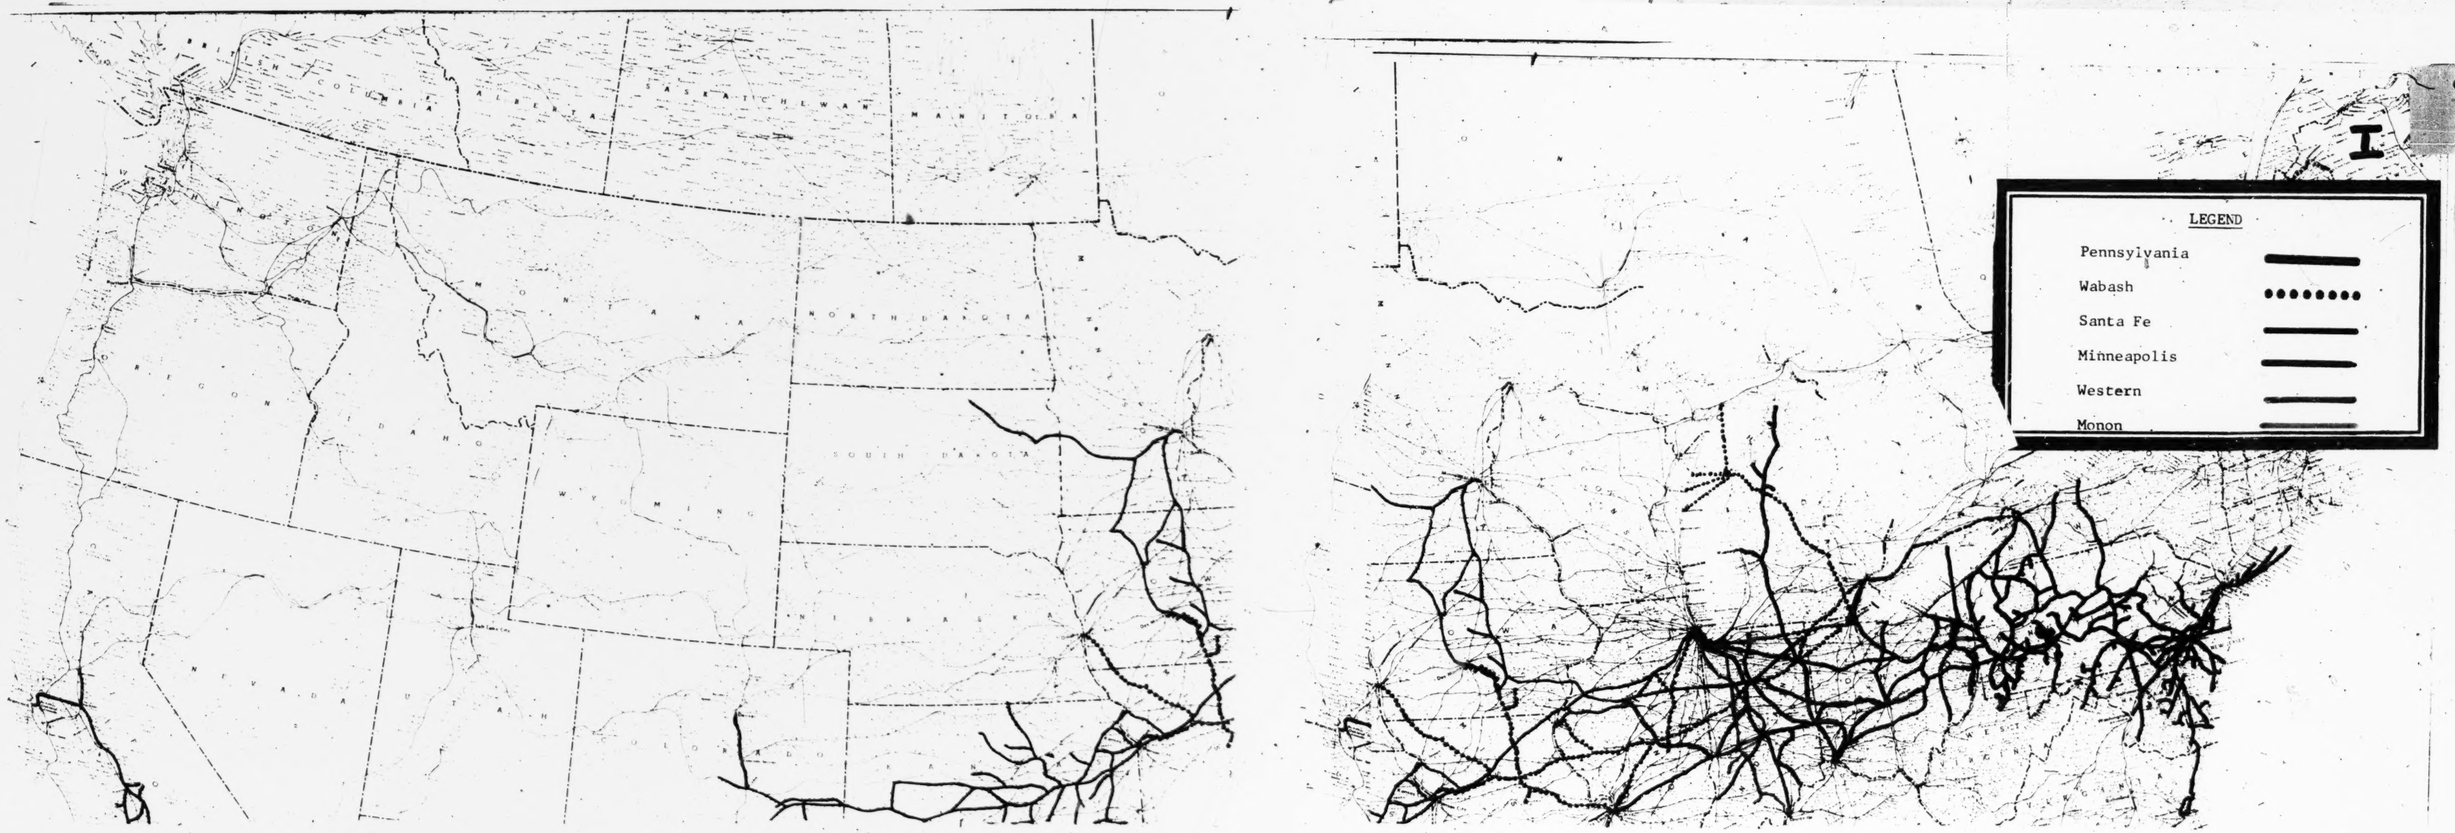
the assent, in the case of a purchase and sale, a lease, a corporate consolidation, or a corporate merger, of a majority, unless a different vote is required under applicable State law, in which case the number so required shall assent, of the votes of the holders of the shares entitled to vote of the capital stock of such corporation at a regular meeting of such stockholders, the notice of such meeting to include such purpose, or at a special meeting thereof called for such purpose) to carry such transaction into effect and to own and operate any properties and exercise any control or franchises acquired through said transaction without invoking any approval under State authority, and any carriers or other corporations, and their officers and employees and any other persons, participating in a transaction approved or authorized under the provisions of this section shall be and they are hereby relieved from the operation of the antitrust laws and of all other restraints, limitations, and prohibitions of law, Federal, State, or municipal, insofar as may be necessary to enable them to carry into effect the transaction so approved or provided for in accordance with the terms and conditions, if any, imposed by the Commission, and to hold, maintain, and operate any properties and exercise any control or franchises acquired through such transaction. Nothing in this section shall be construed to create or provide for the creation, directly or indirectly, of a Federal corporation, but any power granted by this section to any carrier or other corporation shall be deemed to be in addition to and in modification of its powers under its corporate charter or under the laws of any State."

Section 8 (b) of the Administrative Procedure Act (60 Stat. 242, 5 U.S.C. § 1007(b)):

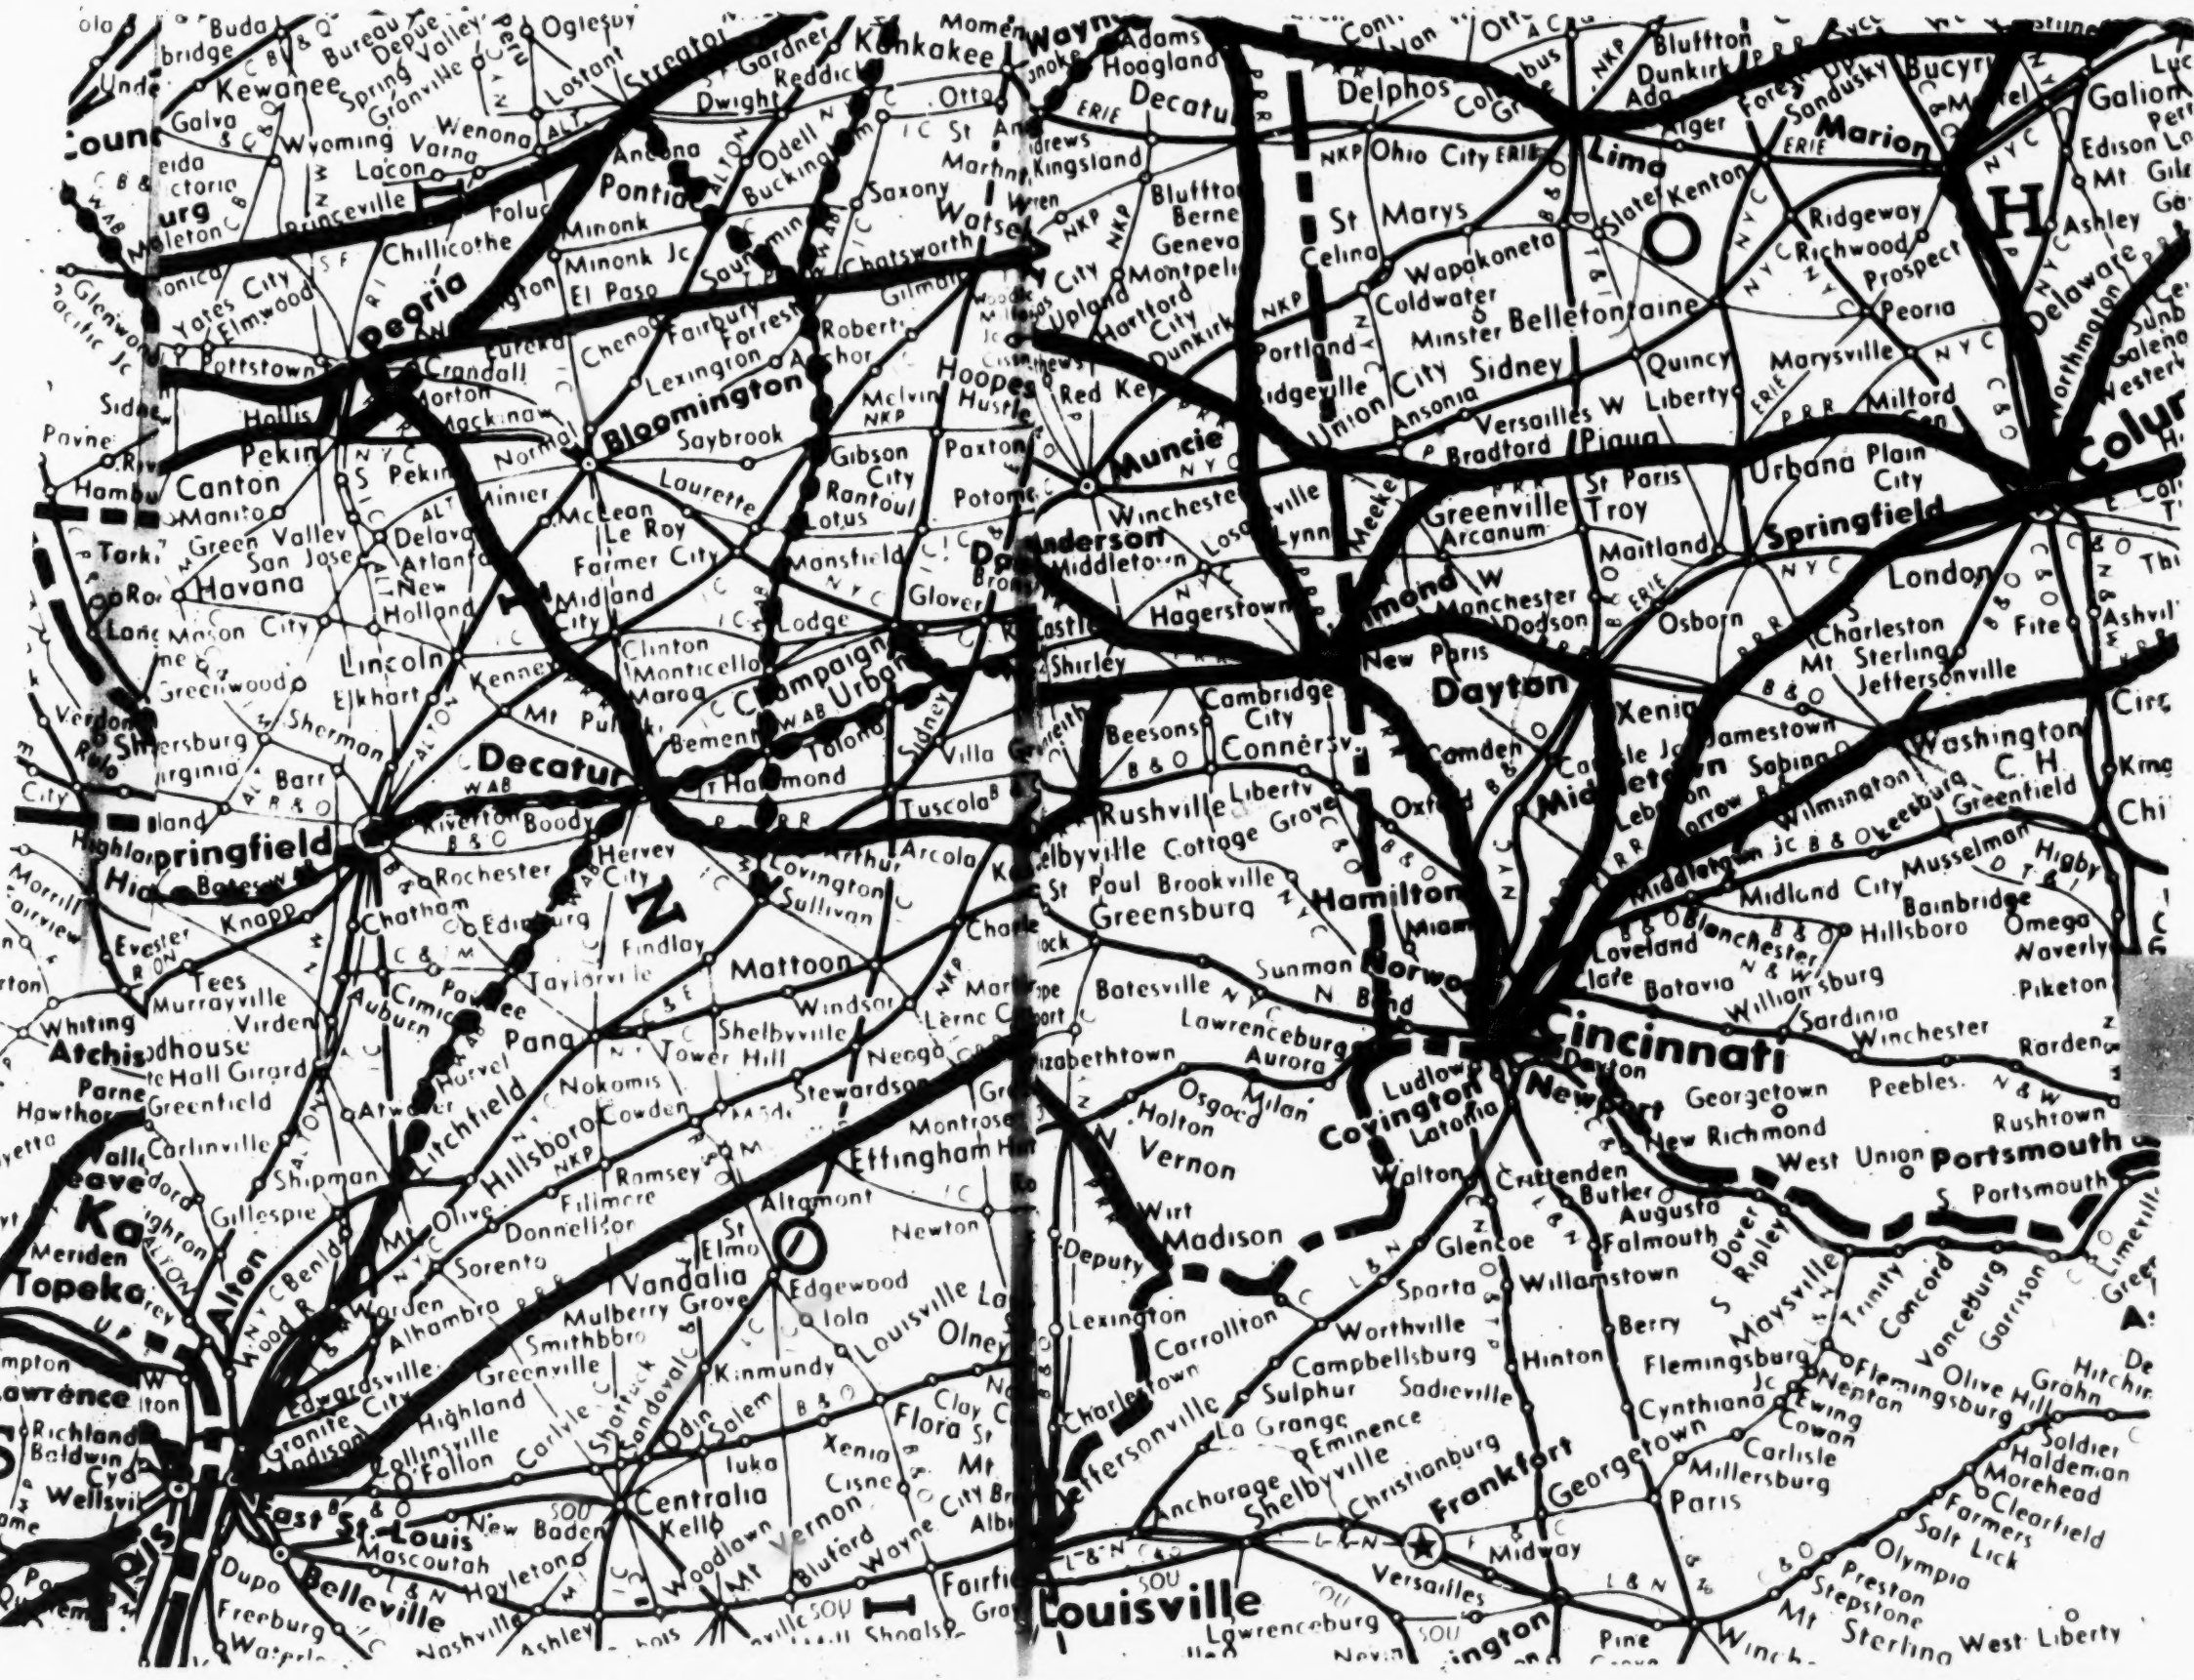
"In cases in which a hearing is required to be conducted in conformity with section 1006 of this title—

* * * * *

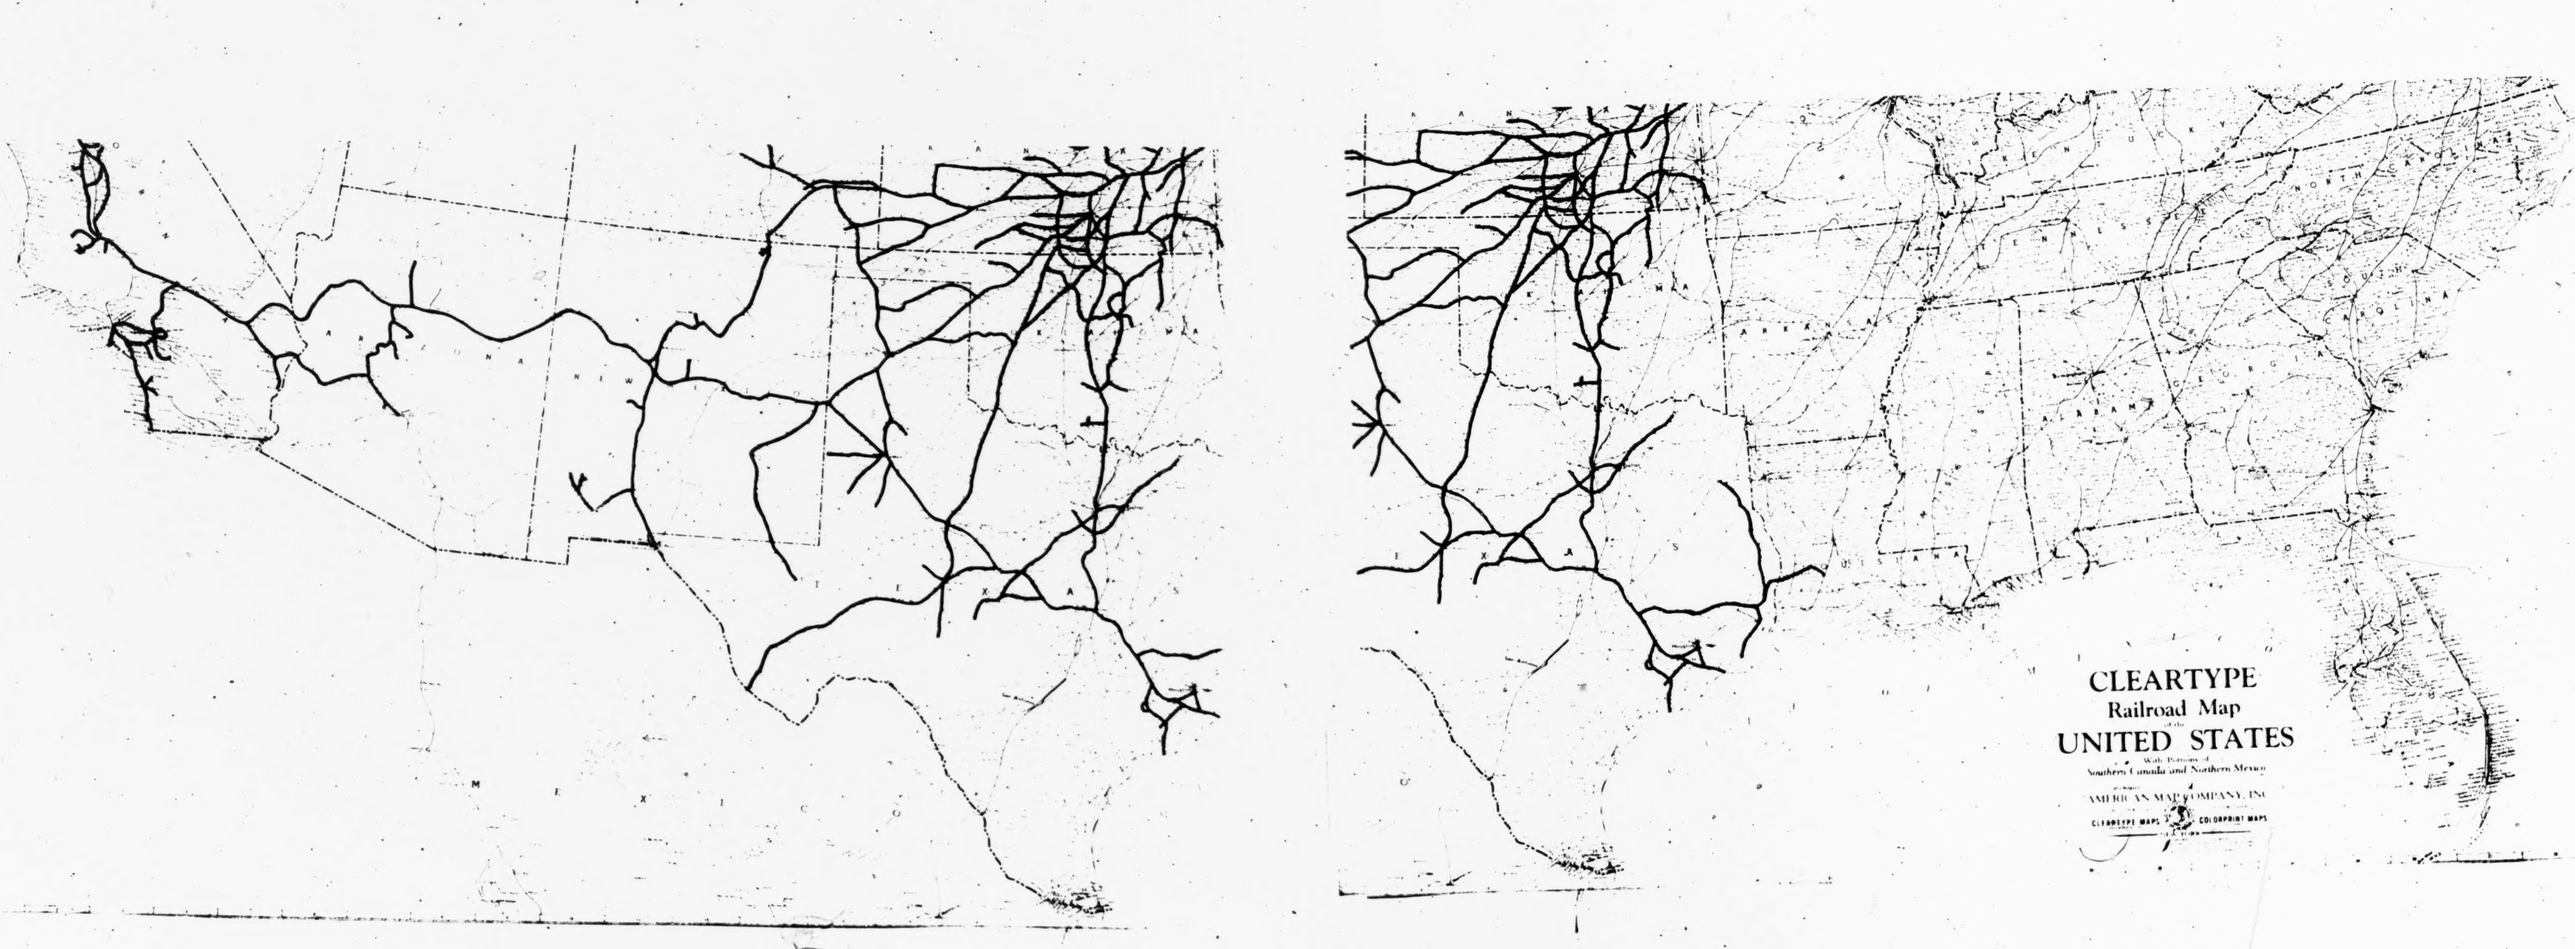
"(b) Prior to each recommended, initial, or tentative decision, or decision upon agency review of the decision of subordinate officers the parties shall be afforded a reasonable opportunity to submit for the consideration of the officers participating in such decisions (1) proposed findings and conclusions, or (2) exceptions to the decisions or recommended decisions of subordinate officers or to tentative agency decisions, and (3) supporting reasons for such exceptions or proposed findings or conclusions. The record shall show the ruling upon each such finding, conclusion, or exception presented. All decisions (including initial, recommended, or tentative decisions) shall become part of the record and include a statement of (1) findings and conclusions, as well as the reasons or basis therefor, upon all the material issues of fact, law, or discretion presented on the record; and (2) the appropriate rule, order, sanction, relief, or denial thereof."



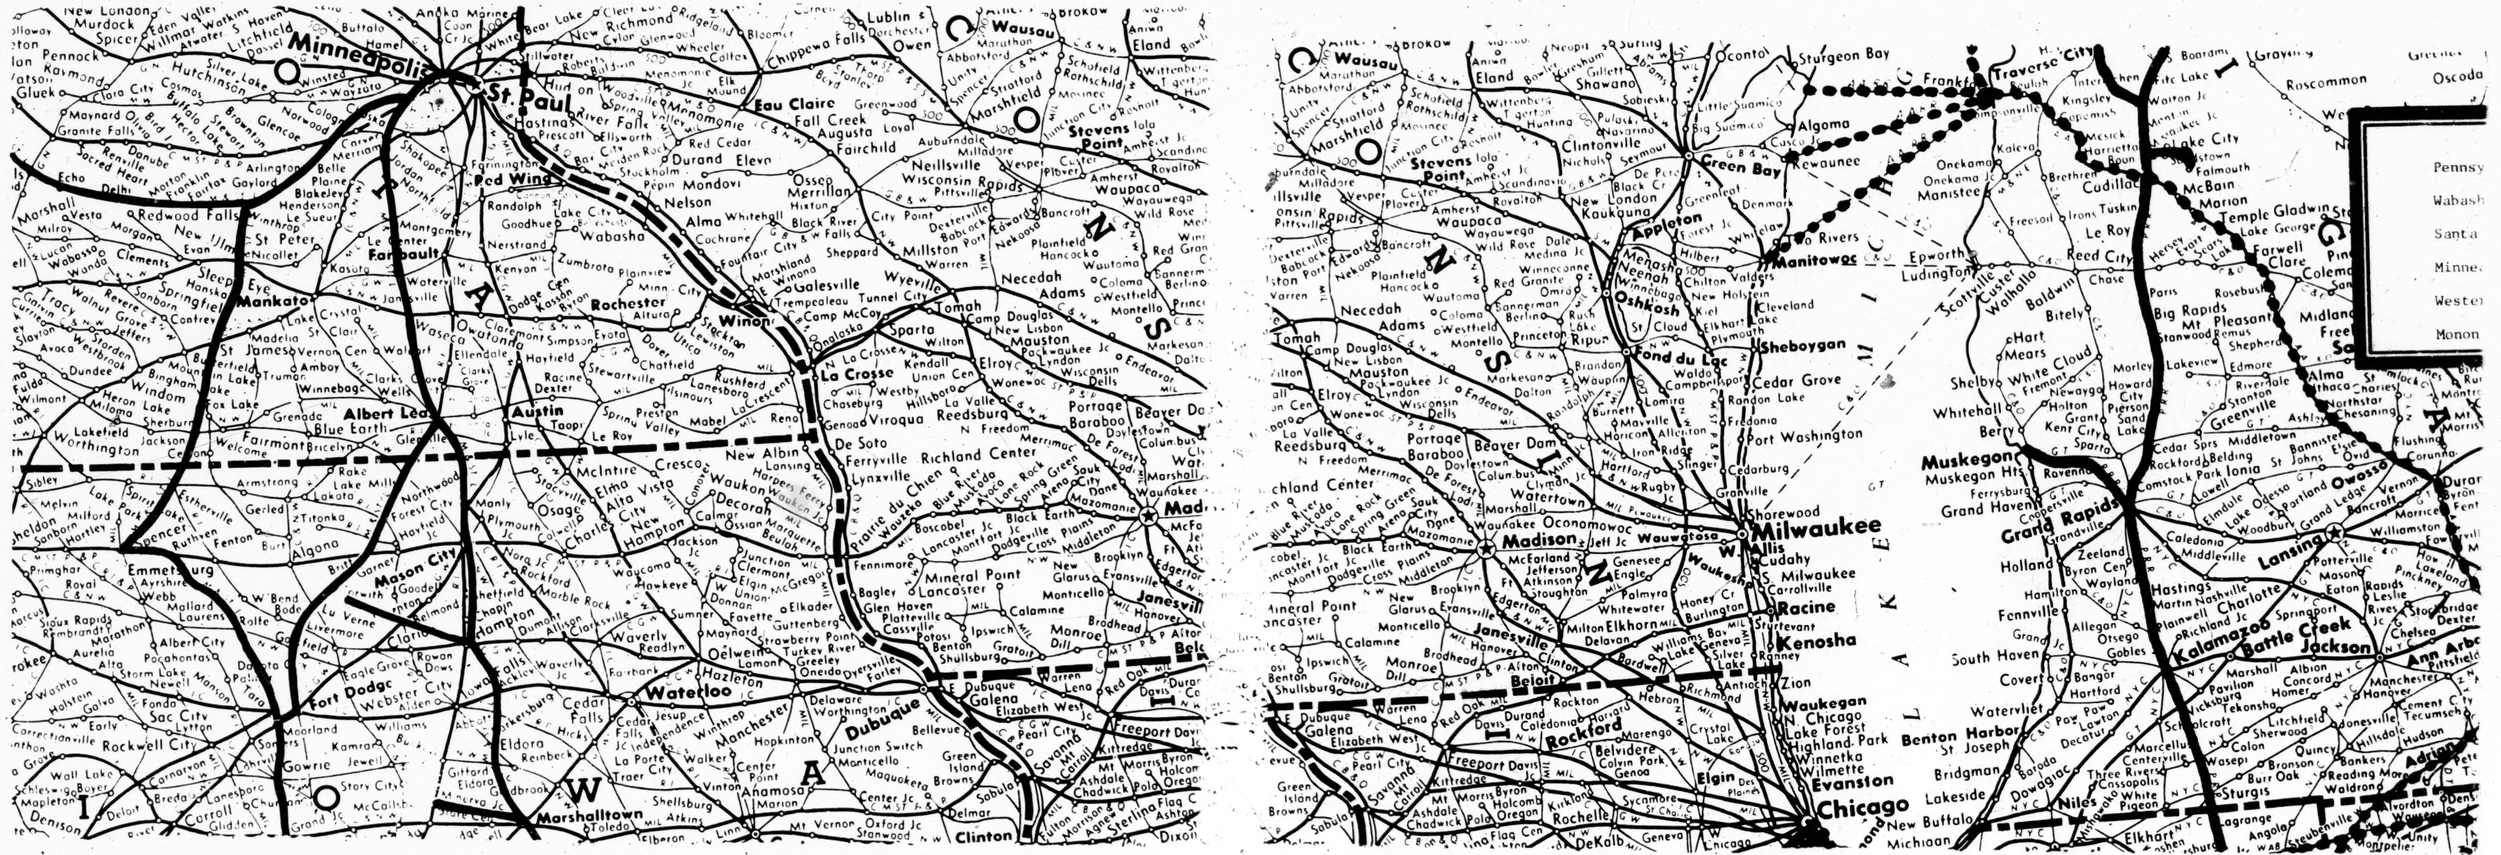
Section 10 (e) of the Administrative Procedure Act (6 Stat. 243, 5 U.S.C. § 1009 (e)):



"Except so far as (1) statutes preclude judicial review or (2) agency action is by law committed to agency discretion,



* * * * *



"(e) So far as necessary to decision and where presented the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provi-

sions, and determine the meaning or applicability of the terms of any agency action. It shall (A) compel agency action unlawfully withheld or unreasonably delayed; and (B) hold unlawful and set aside agency action, findings, and conclusions found to be (1) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; (2) contrary to constitutional right, power, privilege, or immunity; (3) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right; (4) without observance of procedure required by law; (5) unsupported by substantial evidence in any case subject to the requirements of sections 1006 and 1007 of this title or otherwise reviewed on the record of an agency hearing provided by statute; or (6) unwarranted by the facts to the extent that the facts are subject to trial de novo by the reviewing court. In making the foregoing determinations the court shall review the whole record or such portions thereof as may be cited by any party, and due account shall be taken of the rule of prejudicial error."

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA

BRIEF OF APPELLANTS THE STATE OF SOUTH DAKOTA AND THE PUBLIC UTILITIES COMMISSION OF THE STATE OF SOUTH DAKOTA

OPINIONS BELOW

The opinion of the District Court for the District of Minnesota, 4th Division, is reported in 165 F. Supp. 893. The report of Division 4 of the Interstate Commerce Commission is reported in 295 I.C.C. 523. Copies of these opinions are printed in the consolidated record herein (R. 91-105, 17-49), covering this appeal and the companion appeals of The Minneapolis & St. Louis Railway Company

(No. 12) and of the State of Minnesota and the Minnesota Railroad and Warehouse Commission (No. 28).

JURISDICTION

This appeal is taken from the final order of the United States District Court for the District of Minnesota, entered September 16, 1958, dismissing several complaints, including the complaint in intervention of these appellants, and refusing to vacate the order of Division 4 of the Interstate Commerce Commission issued May 31, 1957, and the Order of the Interstate Commerce Commission of October 30, 1957. The Commission's Orders authorized The Atchison, Topeka and Santa Fe Railway Company and the Pennsylvania Railroad Company to acquire control, through stock ownership, of the Toledo, Peoria & Western Railroad Company, and dismissed the competing application for acquisition by The Minneapolis & St. Louis Railway Company.[1]

The State of South Dakota and the Public Utilities Commission of the State of South Dakota were intervenors before the District Court. The action was brought by Minneapolis to set aside the above mentioned orders of Division 4 of the Interstate Commerce Commission and of the Interstate Commerce Commission. It was heard by a District Court of three judges, as provided in 28 U.S.C. § 2284 and §§ 2321-2325. The final order of the District Court was entered September 16, 1958, and the appellants' Notice of Appeal was filed in that Court November 13, 1958 (R. 105, 114). The jurisdiction of the Supreme Court to

[1] Hereafter, as in the proceedings below, The Minneapolis & St. Louis Railway Company will be referred to as "Minneapolis", the Toledo, Peoria & Western Railroad Company as "Western", The Atchison, Topeka and Santa Fe Railway Company as "Santa Fe", and the Pennsylvania Railroad Company as "Pennsylvania".

review that decision by direct appeal is conferred by 28 U.S.C. §§ 1253 and 2101(b).

STATUTES INVOLVED

Section 1 of the Sherman Act, as amended (15 U.S.C. § 1); section 7 of the Clayton Act, as amended (15 U.S.C. § 18); the National Transportation Policy and sections 5(2) and 5(11) of the Interstate Commerce Act, as amended (49 U.S.C. preceding § 1, and §§ 5(2) and 5(11)); and sections 8(b) and 10(e) of the Administrative Procedure Act (5 U.S.C. §§ 1007 and 1009) are set forth in Appendix A of the Minneapolis brief and are incorporated herein by reference.

QUESTIONS PRESENTED FOR REVIEW

These appellants will present two questions which are of immediate and urgent concern to the State of South Dakota.

1. The Interstate Commerce Commission arbitrarily and erroneously failed to consider or to make any findings concerning the harm to the public which will result from loss of adequate rail transportation service on the branch lines of the Minneapolis in South Dakota. The findings refer to no off-setting or overbalancing benefits to the area served by the Santa Fe and the Pennsylvania which could result from their acquisition of Western. The public interest resulting from predicted abandonment of service is so directly related to the statutory criterion "*adequacy of transportation*" that absence of findings by the Commission on this controlling issue renders its decision void, and requires setting aside the Commission's Order.

2. In authorizing the Pennsylvania-Santa Fe acquisition, the Interstate Commerce Commission failed to give proper weight and consideration to the adverse competitive effect thereof on Minneapolis and to the antitrust policy and purposes of section 1 of the Sherman Act and section 7 of the Clayton Act.

STATEMENT OF THE CASE

As indicated above, the appeal to this Court of the State of South Dakota and the Public Utilities Commission of the State of South Dakota is a companion appeal to that taken by Minneapolis from the same final Order of the District Court. Therefore, we shall confine this brief to those facts and issues which directly affect the *public interest* of this State, and adopt by reference in the interest of brevity the Statement of the Case set forth in the brief of Minneapolis, mentioning here only those additional facts of special interest to this State.

The State of South Dakota and the Public Utilities Commission of the State of South Dakota have participated throughout, both before the Interstate Commerce Commission and in the District Court. These appellants have done so in order to protect the *public interest* of South Dakota in adequate rail transportation and to assure the integrity of the marginal branch lines of Minneapolis serving South Dakota and the several railroad stations located along such lines. Absence of competitive rail lines serving much of the area renders imperative continuance of the established rail service by Minneapolis.

The Minneapolis branch line entering South Dakota extends approximately 154 miles into the northeastern part of the state (R. 1166). It is an important link of rail transportation in the state, serving six counties and seventeen

cities and towns and the trade territory adjacent thereto (R. 1167). This area in South Dakota consists of 6,685 square miles of farm land, all under cultivation, with an annual average production of over $92,000,000 of agricultural commodities (R. 1168-1169; Ex. H-37, R. 1856-1866, 1173). Over a period of 27 years, an average of 136,581 tons of traffic originated on the South Dakota segment of the Minneapolis and 92,363 tons of freight terminated thereon (Ex. H-37, R. 1856-1866, 1173). That segment of rail transportation is a part of the less remunerative mileage operated by Minneapolis (R. 1170). Continuance of rail service on this segment is dependent upon the results of operations over the system as a whole (R. 1117, 1432).

Witness Swanson testified (R. 1117):

> "We have analyzed this traffic and have come to the conclusion that based upon 1954 figures we would suffer an annual loss of approximately $1,110,000 in the event the application of the Pennsylvania and Santa Fe were granted.
>
> "All of this business I have described as being vulnerable to loss to the M&StL, is very desirable traffic. It not only pays its way but lends substantial support to our entire system. *Without it our low density lines in South Dakota*, Western Minnesota, and Western Iowa *could not survive*." (Emphasis supplied)

The factual accounting basis for Mr. Swanson's estimate was in evidence and was not challenged (Ex. H-32, R. 1755-1767, 1166; Ex. H-33, R. 1768, 1166). His testimony was corroborated by that of other witnesses, including Dr. Edmund A. Nightingale, of the University of Minnesota, an independent, unquestioned authority on transportation and railroad traffic (R. 1431-1441). None of

MICROCARD
TRADE MARK ®
microcard
MATTHEW BENDER & COMPANY
MB
1962
1-59

the testimony was controverted. The Commission refused to consider it.

The Interstate Commerce Commission had only this to say:

> "*State representations*—The States of Minnesota and South Dakota, along with their respective Public Service Commissions, intervened in support of the Minneapolis application. They fear that with Western under the control of the Santa Fe and the Pennsylvania, the Peoria route of the Minneapolis will deteriorate to the extent that its low density lines in Minnesota and South Dakota will be in danger of abandonment * * * Of course, there can be no abandonment of any line of railroad without the issuance by us of a certificate of public convenience and necessity permitting such abandonments. So far as the instant record is concerned, no abandonments are presently contemplated." (R. 42-43)

The District Court did even less. It did not even refer to the contentions of these appellants except to state that they supported the Minneapolis.

The Interstate Commerce Commission ignored the factors which are of primary importance to the State of South Dakota and which should be controlling. The District Court, in turn, simply by-passed the Commission's error of omission and commission thereby depriving these appellants of a full judicial review.

SUMMARY OF ARGUMENT

When it approved the Pennsylvania-Santa Fe application and dismissed the Minneapolis application, the Interstate Commerce Commission failed to strike a balance between the public benefits, on the one hand, and the loss or damage to the public, on the other hand. The Commission

ignored the sole dependence of Minneapolis on the Peoria gateway and brushed off the uncontroverted evidence of the serious consequences to this State which would flow from having Western pass into the hands of competitors lacking any comparable interest in the Peoria gateway. In the few instances where it did consider results, the Commission employed different standards to test the competing applications. Otherwise, it completely failed to make findings on the material issues. The Commission's action ignored the standards of the National Transportation Policy and the Interstate Commerce Act and the procedural requirements of the Administrative Procedure Act. In essence, the award constituted arbitrary action which should be reversed.

In authorizing the Pennsylvania-Santa Fe combine to take control of Western, the Interstate Commerce Commission did not even mention section 1 of the Sherman Act, section 7 of the Clayton Act, or the national antitrust policy. The Commission purported to give the successful applicants immunity from prosecution under those antitrust laws without any findings on the issues presented by the record and without stating any reasons why such immunity could be warranted in the public interest. If that determination stands, it will be contrary to the teaching of *McLean Trucking Co.* v. *United States*, 321 U.S. 67 (1944), and will amount to a holding that the antitrust laws are completely inapplicable to the conduct of the nation's transportation.

ARGUMENT

1. The Disregard of the Branch Lines in South Dakota.

The National Transportation Policy (49 U.S.C. preceding § 1) requires the Interstate Commerce Commission "to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation". Section 5(2) of the Interstate Commerce Act (49 U.S.C. § 5(2)) commands the Commission to approve applications for control of a carrier only when the proposed transaction "will be consistent with the public interest", and orders the Commission to give weight to the effect of the proposed transaction upon adequate transportation service to the public. The meaning of the basic statutory criterion has been expressed as follows by Chief Justice Hughes in *New York Central Securities Corp.* v. *United States*, 287 U.S. 12, 25 (1932):

> "* * * the term 'public interest' * * * is not a concept without ascertainable criteria, but has direct relation to adequacy of transportation service, to its essential conditions of economy and efficiency, and to appropriate provision and best use of transportation facilities. * * *"

In the instant case the evidence before the Commission established beyond question that the Minneapolis is solely dependent upon the Peoria gateway for its lifeblood (R. 1100-1102, 1413), whereas the Pennsylvania-Santa Fe combine has no comparable interest in the Peoria gateway (R. 497, 498-499, 506, 520-522, 546-547, 571, 590-591, 1126-1129); that ownership of Western by the Minneapolis would foster economy and efficiency (R. 1028, 1076-1077, 1186-1187, 1228-1229, 1239-1242; Ex. H-44, R. 1894-1924, 1379), whereas ownership by the Pennsylvan-

ia-Santa Fe combine would promote neither economy nor efficiency (R. 434-435, 437-439); that ownership by the Minneapolis would promote adequate transportation service (R. 1101-1104, 1184-1185, 1229-1231, 1231-1234), whereas ownership by the Pennsylvania-Santa Fe combine would do nothing toward that end (R. 457-458, 520-522, 571). The State of South Dakota and its Public Utilities Commission have a vital interest in strengthening the Minneapolis to preserve the adequacy of its transportation service on the branch lines in this State; they have an equally vital interest in seeing that the Minneapolis is not weakened, because the inevitable result of any such weakening will be felt first on the marginal branch lines in South Dakota (R. 1117, 1166-1167, 1168-1170, 1431-1441).

The record is replete with uncontroverted evidence of the vulnerability of the traffic presently carried by Minneapolis (R. 1112-1117, 1185, 1408-1409). Much of that highly competitive traffic is certain to be diverted by the powerful solicitation efforts of the Pennsylvania-Santa Fe combine (R. 1117, 1187-1188, 1408-1409). The Commission recognized that there might be some diversion of traffic, but concluded, "* * * such diversion would not jeopardize the maintenance of adequate transportation service by the objecting intervening carriers" (R. 34). That conclusion is empty, unexplained, unsupported and erroneous.

As indicated above, the Commission also brushed off the contentions of these appellants by stating that "no abandonments are presently contemplated" (R. 43). It is clear, however, that one of the first effects of drying up the Minneapolis traffic will be an application, at some future date, for abandonment of service on the marginal branch lines in South Dakota (R. 1117, 1169-1170, 1437). These

appellants are interested in preventive medicine now, not curative medicine in the future. A diminution of the Minneapolis revenues must be prevented now so that no reason can be given in the future for abandonment of the trackage in South Dakota. If the revenues are allowed to diminish and in consequence the branch lines in South Dakota become losing operations, then they will be a burden on interstate commerce and it will be the duty of the Commission to authorize the abandonment of those lines. That inevitable result was totally disregarded by the Commission in the instant case. The realistic danger faced by South Dakota stems from the inescapable economies; it is not limited, as the Commission lightly assumed, by "present contemplations".

The Commission's shocking prejudgment of this case is laid bare by the double standard it employed. The effect of the Pennsylvania-Santa Fe acquisition of Western was simply brushed aside and the future abandonments it would necessitate were deemed unimportant (R. 42-43). On the other hand, when considering the effect of an acquisition of Western by the Minneapolis, the Commission stated (R. 32):

> "Under the Minneapolis' unified-operation theory a new service route via Forrest would be established for such traffic which would imperil, or at least diminish the Wabash's participation therein, and possibly could result in the abandonment of the latter's Des Moines branch."

The record contains no support for the Commission's solicitude on behalf of the Wabash nor any explanation of the different treatment concerning abandonment between the competing applications. The unexplained contrast in the treatment makes a travesty of administrative justice.

A number of communities along the Western supported the Pennsylvania-Santa Fe application. Their intervention, however, was merely a result of a brief, intensive public relations campaign by the wealthy Santa Fe (*e.g.*, R. 637-638, 643-645, 673-674, 748-750, 751-752, 800-801, 821-822, 884, 1505-1506). In truth those communities would benefit from a Minneapolis acquisition and could suffer from a Pennsylvania-Santa Fe acquisition. Certain labor groups also supported the Pennsylvania-Santa Fe application. They also could not suffer from a Minneapolis acquisition; they are protected by the Minneapolis commitment to abide by the provisions of the Washington Job Protection Agreement of 1936 (R. 1032-1033). Furthermore, the record is clear that any labor economies to be effected by Minneapolis would come as the result of normal retirements, not discharges (R. 1032, 1033, 1078, 1242).

In reaching its arbitrary conclusion to approve the further aggrandizement of the two railroad giants and to overlook the harmful effects on these appellants and others, the Commission not only ignored the controlling statutory criteria but also violated the procedural requirements essential to due process. In reaching this conclusion, it did not, because it could not, make the findings required by section 8 of the Administrative Procedure Act (5 U.S.C. § 1007). Absent such findings, there was no basis on which the District Court could perform its duty of judicial review. These appellants were denied fair treatment by the Commission. They were then deprived of judicial review by the District Court.

The finding that an acquisition of one railroad by another is "consistent with the public interest" must show that full consideration has been given to the *public* benefits on the one hand versus the loss or damage to the *public*

on the other hand. There must be the striking of a balance between the public benefits, if any, and the public loss clearly articulated and spelled out so as to make clear the effectuation of the prescribed Congressional standards and criteria "*to promote safe, adequate, economical and efficient service and foster sound economic conditions in [railroad] transportation.*" In this the Commission failed.

The Commission's failure in this respect was not because its duty was not called to its attention. Professor William Leonard, Chairman of the Department of Economics, Hofstra College, summarized it in the following language (R. 1414):

> "The Commission is fortunate in this proceeding to have an affirmative choice between two applications, that of the Santa Fe and Pennsylvania, and that of the M&StL. Ordinarily, the Commission does not have the alternative of deciding whether a road should be acquired by one carrier or another in a case, comparing the benefits flowing from one proposal with those flowing from another, but only whether in a single application for control, the advantages outweigh the disadvantages. In this combined proceeding the Commission's choice is wider. Here, I believe, we have convincing proof that the gains to the Pennsylvania and Santa Fe and their shippers are minimal in comparison with the injury which could easily befall the M&StL, its shippers, and the area it serves.
>
> "As for possible injury to the Santa Fe and Pennsylvania from the proposed control by the M&StL of the TP&W, this would be negligible. Such control would be as injurious to these great systems as a gnat's bite would be to an elephant.
>
> "In the light of these considerations, I believe the application for control of the TP&W by the M&StL eminently meets the tests of public interest, and requires approval by the Commission."

As to what constitutes arbitrary action, in the case of *Baltimore & Ohio R.R. v. United States*, 264 U.S. 258, 265 (1924), it was stated:

> "To refuse to consider evidence introduced or to make an essential finding without supporting evidence is arbitrary action."

2. The Antitrust Effect.

The Interstate Commerce Commission and the District Court sanctioned and approved what is in effect a gigantic railroad merger. The acquisition of Western gives the Pennsylvania-Santa Fe combine a third major gateway and unifies their operations from Tidewater on the east to Tidewater on the west.

In *McLean Trucking Co. v. United States*, 321 U.S. 67, 86 (1944), this Court announced:

> "Congress however neither has made the anti-trust laws wholly inapplicable to the transportation industry nor has authorized the Commission in passing on a proposed merger to ignore their policy."

Admittedly section 5(11) of the Interstate Commerce Act (49 U.S.C. § 5(11)) empowers the Commission in an appropriate case to give immunity from prosecution under the antitrust laws. That immunity, if it is to be granted, must be based on an explicit judgment that it is required by other factors in the "public interest". The size of the merging carriers cannot be wholly ignored as it was in the instant case. The powerful rail combine authorized by the Commission in this case dwarfs, by comparison, the few motor lines whose merger was authorized in the *McLean* case.

In this case the appellees have attempted to defend the Commission's action by asserting that conditions were included for the protection of other carriers. It is true that the Commission has power by statute to condition approval of any acquisition on "such terms and conditions" as it shall find to be just and reasonable (49 U.S.C. § 5(2)). But that limited power is here exceeded. The Commission has used unenforceable conditions to justify and immunize what would otherwise be a clear violation of the antitrust laws—the laws which this Court has said the Commission may not ignore. If allowed to succeed in this case, it can succeed in any case, and the Commission can always use the imposition of "terms and conditions" to justify its total disregard of all controlling statutory standards. We doubt that the power conferred by Congress on the Commission was ever intended to be so far-reaching as to permit the results which have occurred in this case.

The Pennsylvania-Santa Fe combine is a gigantic one, by any test. Its latent power is an enormous threat to any smaller competitors and to intervenors, like these appellants, who are dependent upon such small competitors. The monopoly or oligopoly sanctioned in this case has no precedent. There are no findings and there is no articulation of any reasons which could justify the creation of this colossus. If this Court affirms the result announced below, it will be holding, in essence, that the antitrust laws are wholly inapplicable to the transportation industry.

CONCLUSION

The Interstate Commerce Commission failed to perform its statutory duty. Its arbitrary conclusions have neither a rational basis nor supporting findings. It is respectfully sub-

mitted that the judgment of the District Court should be reversed and that that Court should be instructed to grant the relief sought by the complaints of the plaintiffs below.

BRIEF OF APPELLANTS

The State of Minnesota and the Minnesota Railroad and Warehouse Commission

OPINIONS BELOW

The opinion of the District Court for the District of Minnesota, 4th Division (R. 91-105), is reported at 165 F. Supp.

893. The report of Division 4 of the Interstate Commerce Commission (R. 17-49) is reported at 295 I.C.C. 523.

JURISDICTION

The jurisdiction of this Court to review the decision of the district court by direct appeal is conferred by 28 U.S.C., Sections 1253 and 2101(b). The final order of the district court was entered September 16, 1958 (R. 105), and the notice of appeal of the State of Minnesota and the Minnesota Railroad and Warehouse Commission was filed in that court on November 12, 1958 (R. 111). On March 9, 1959, this court entered an order noting probable jurisdiction and transferring this case together with the companion appeals of the Minneapolis and St. Louis Railway Company and the State of South Dakota to the summary calendar.

STATUTES INVOLVED

The statutes involved in this proceeding are section 1 of the Sherman Act, as amended (15 U.S.C. § 1), sections 7 and 10 of the Clayton Act, as amended (15 U.S.C. §§ 18 and 20), and the National Transportation Policy and sections 5 (2) and 5 (11) of the Interstate Commerce Act, as amended (49 U.S.C. preceding § 1, and §§ 5 (2) and 5 (11) and sections 8 (b) and 10 (e) of the Administrative Procedure Act (5 U.S.C. §§ 1007 and 1009). The pertinent text of these statutes are set forth in Appendix A to the Minneapolis[1] Brief in its companion appeal at Docket No. 12.

[1]The interested railroads will be referred to hereinafter as follows:
Minneapolis and St. Louis Railway Company — Minneapolis
Toledo, Peoria & Western Railroad Company — Western
The Pennsylvania Railroad Company — Pennsylvania
The Atchison, Topeka & Santa Fe Railway Company — Santa Fe.

QUESTIONS PRESENTED FOR REVIEW

1. Whether the district court erred in failing to set aside the orders of the Interstate Commerce Commission on the grounds that the Commission failed to make adequate and proper findings and that the findings it did make were not supported by substantial evidence.

2. Whether the district court erred in failing to set aside the orders of the Interstate Commerce Commission on the grounds that the Commission's erroneous application and interpretation of the Interstate Commerce Act and the National Transportation Policy deprived the Minneapolis of a true comparative hearing thereby discriminating against its supporters including these appellants.

3. Whether the district court erred in failing to set aside the orders of the Interstate Commerce Commission on the grounds that the Commission erroneously interpreted and applied Section 5 (11) of the Interstate Commerce Act with respect to a violation of Section 10 of the Clayton Act occurring prior to the Commission proceedings.

4. Whether the district court erred in failing to set aside the orders of the Interstate Commerce Commission on the grounds that the Commission erroneously interpreted and applied Section 5 (11) of the Interstate Commerce Act with respect to Section 1 of the Sherman Act and Section 7 of the Clayton Act.

5. Whether the district court erred in failing to set aside the orders of the Interstate Commerce Commission because of the self-defeating scope of the review adopted by the district court.

STATEMENT OF THE CASE

This proceeding involves the future control and devel
ment of the facilities of the Toledo, Peoria and West
Railroad Company and, to that substantial extent it invol
the future control and development of the Peoria Gatew
Previously, the Western has been independently owned a
operated. As a result of this proceeding the Western will
owned and controlled by the Pennsylvania–Santa Fe co
bination, the Minneapolis, or a combination[2] of these a
other connecting carriers.

Because of the intimate association of the Minneapo
with the Western (R. 1010, 1014, 1111, 1112) and with
Peoria Gateway (R. 1011, 1101, 1440), the future devel
ment and stability of the Minneapolis is also involved
this proceeding. Many advantages would inure to the M
neapolis by approval of its application. These would inclu
direct access to interchanges with the numerous lines c
necting with the Western, longer hauls and greater abil
to render better service (R. 1232, 1435). All of these wo
strengthen the Minneapolis in terms of competitive posit
and more efficient operation. Also resulting would be
added stability from diversification of traffic to relieve
present heavy reliance upon agricultural and mineral sh
ments (R. 1099, 1100, 1436). On the other hand, appro
of the Pennsylvania–Santa Fe application would grav
injure the Minneapolis through the loss of traffic now h
dled by it between Peoria and Nemo. The extent of this l
has been estimated at approximately $1,100,000.00 annua
out of $7,000,000.00 potentially vulnerable traffic reven

[2]The case for multiple ownership was summarily rejected by
Commission and that position is not represented in this appe

along that line (R. 1117, 1437). Diversion of this profitable traffic from the Minneapolis could very well affect its ability to provide service on the less profitable segments of its system in Minnesota and South Dakota (R. 1117, 1437).

Because of its duty to insure adequate transportation service within its boundaries the State of Minnesota also has a direct interest in the fate of the Minneapolis. The Minneapolis performs an important transportation role in the State and its main line connection with the Peoria Gateway adds to that importance its role in the National Transportation System. In those parts of the state where no other rail service is offered, its service is obviously indispensable. As the prime expositor of service through the Peoria Gateway, Minneapolis promotes for the State of Minnesota a second gateway to the Eastern Territory providing many additional connections to the South and to the East.

The Peoria Gateway, next to the Chicago Gateway, is the most important to the State of Minnesota (R. 1440). This importance stems from the necessity of connection with Official Territory railroads, with the Ohio River Gateways into the Southern Territory and connection through St. Louis, Missouri or Thebes or Cairo, Illinois into the Southwestern Territory (R. 1439). The Minneapolis line between the Twin Cities and the Peoria Gateway is the main line of that railroad (R. 1439). A further consideration of the importance of the Peoria Gateway to the State of Minnesota, involving the national defense as well, is the additional reliance upon that gateway which would be necessary during any period of national emergency (R. 1440).

These statements of Dr. Edmund A. Nightingale, the state's expert witness at the hearing, point up the position

of the State of Minnesota which was attempted to be communicated to the Commission;

> "The State of Minnesota and the Minnesota Railroad and Warehouse Commission are vitally interested in the provision and continuance of adequate, economical and efficient transportation service for the people of that state. This objective is consistent with those of the National Transportation Policy, as stated in the Inter-State Commerce Act. If the petition of the M&StL, the future interests of which are here at stake, is denied, the adverse effects upon the objectives stated above are likely to include curtailment or withdrawal of rail service from certain communities on light-traffic lines of the M&StL in western and southern Minnesota and South Dakota.
>
> "Possibility of curtailment of service or abandonment on mileage of low-density lines of the M&StL is not something remote. In I.C.C. Finance Docket No. 15619, the M&StL sought authority and permission to abandon 40.66 miles of line between St. James, Minnesota, and Estherville, Iowa, some 36 miles of which is in Minnesota (see Ben W. Heineman's map in either Exhibit No. H-10 or H-21). A hearing was held at St. James, Minnesota in July 1947. By [fol. 1664] stipulation among the parties to that proceeding, passenger service was withdrawn and carload freight service was reduced to a tri-weekly basis. * * * (R. 1432-1433)
>
> "According to the 'Interstate Commerce Commission's Sixty-eighth Annual Report on Transport Statistics in the United States for the Year Ended December 31, 1943', total assets of the T. P. & W. are $9,893,197, those of the Pennsylvania Railroad are $2,455,547,988, and those of the Santa Fe are $1,484,889,559, and those of the M. & St. L. are $37,807,778. The T. P. & W. assets in relation to the combined assets of almost $4,000,000,000 for the Pennsylvania-Santa Fe combination are hardly

visible at only 0.025 per cent of this huge total. Viewed in broad perspective, the effect therefore of adding the 1943 net income and assets of the T. P. & W. to those of the Pennsylvania-Santa Fe group is negligible, or about that of a peanut tossed by a child at a zoo to a hippopotamus.

"M. & St. L. freight revenue losses in the Peoria-Nemo traffic and that through Peoria to or from other gateways in [fol. 1671] the event the application of the Pennsylvania-Santa Fe combination were granted, have been estimated by Witness James A. Swanson at approximately $1,110,000 in his Exhibit H-32, Schedule 1, and testimony. His estimate of potentially vulnerable traffic revenue is $7,000,000. Highly desirable traffic like that between Peoria and Nemo not only pays its way but gives substantial support to the entire M. & St. L. system. It is highly doubtful that the grant of authority to acquire control of the T. P. & W. to the Pennsylvania-Santa Fe group which would further reduce the already thin cushion which enables the M. & St. L. to provide needed service on thin-traffic lines, is consistent with the National Transportation Policy and the requirements of Section 5(2) of the Interstate Commerce Act. * * *" (R. 1436-1437)

His analysis was confirmed on the record by Mr. Oliver Ossanna of the Railroad and Warehouse Commission (R. 1445). The State's position, while it rested upon unimpeached expert testimony, was brushed aside by the Commission and the district court with these comments by the Commission and the district court respectively:

"State representations — The States of Minnesota and South Dakota, along with their respective Public Service Commissions, intervened in support of the Minneapolis application. They fear that with Western under the control of the Santa Fe and the Pennsylvania, the Peoria

route of the Minneapolis will deteriorate to the extent that its low density lines in Minnesota and South Dakota will be in danger of abandonment. On the other hand, the State of Illinois opposes the application of the Minneapolis because of the possibility that the portion of Western's line west of Peoria may be abandoned, and the further reason that such control would have a devastating effect upon the economy of the city of Peoria and the State of Illinois generally. Of course, there can be no abandonment of any line of railroad without the issuance by us of a certificate of public convenience and necessity permitting such abandonment. So far as the instant record is concerned, no abandonments are presently contemplated." (R. 42-43)

"Minneapolis, supported by the Minnesota and South Dakota plaintiffs, contends, in effect, that, under the evidence [fol. 106] and the applicable law, the Commission could not approve the acquisition of the control of Western by the Pennsylvania and the Santa Fe, and should have approved the application of Minneapolis, which would have resulted in a consolidation with increased efficiency and economy in management. * * *" (R. 95)

The success of the Minneapolis like that of the Western has been in developing public acceptance of service through the Peoria Gateway rather than through the Chicago Gateway (R. 1010, 1413). The Minneapolis is the sole railroad serving Minnesota to the East whose gateway connections are only with the Peoria Gateway (R. 1408). The use and development of the Peoria Gateway is essential to the future development of both the Western and the Minneapolis. In direct contrast is the situation of both the Santa Fe and the Pennsylvania. The self-interest of the Pennsylvania lies primarily in the development of service through the St. Louis Gateway and the Chicago Gateway (R. 1406, 1435, 1440).

The self-interest of the Santa Fe lies in the development and use of the Chicago Gateway under Pennsylvania-Santa Fe control (R. 1406, 1435, 1440). This division of interest in the Peoria Gateway would prevent the Peoria Gateway from ever competing successfully with the St. Louis and Chicago Gateways which afford the longest hauls over Western's proposed owners. The control of the Peoria Gateway by the Pennsylvania and Santa Fe would result in greater control by them of the Chicago, Peoria and St. Louis Gateways. Any resulting loss in vitality of the Peoria Gateway would, because of the presence of the Great Lakes, force the state to rely entirely upon the Chicago Gateway for shipments to the East.

In addition to the foregoing statement particularly relating to the interests of the State of Minnesota, the state adopts by reference the Statement of the Case contained in the Minneapolis brief.

SUMMARY OF ARGUMENT

These appellants contend that the Interstate Commerce Commission erroneously assumed that it must, or could, decide between the competing applicants on the basis of a single standard of public interest and further that the Interstate Commerce Commission erroneously considered that the Minneapolis did not have a transaction which could be considered by the Commission and that as a result of these fundamental errors, the Commission did not make findings as required by law or compare the advantages of the public interest of the competing applications as required by law and that the district court merely because it found substantial evidence in the record to support the conclusions of the Commission, failed to correct any of these errors.

ARGUMENT

1. The Failure of the Commission to Make Proper Findihgs

The requirement of the Administrative Procedure Act for the findings to be made by administrative agencies, including the Interstate Commerce Commission, are set forth in Section 8(b) of the Act which provides as follows:

> "(b) Prior to each recommended, initial, or tentative decision, or decision upon agency review of the decision of subordinate officers the parties shall be afforded a reasonable opportunity to submit for the consideration of the officers participating in such decisions (1) proposed findings and conclusions, or (2) exceptions to the decisions or recommended decisions of subordinate officers or to tentative agency decisions, and (3) supporting reasons for such exceptions or proposed findings or conclusions. The record shall show the ruling upon each such finding, conclusion, or exception presented. All decisions (including initial, recommended, or tentative decisions) shall become part of the record and include a statement of (1) findings and conclusions, as well as the reasons or basis therefor, upon all the material issues of fact, law, or discretion presented on the record; and (2) the appropriate rule, order, sanction, relief, or denial thereof. * * *".

In comparative hearings the requirements for proper findings have been described in *Johnson Broadcasting Co. v. F. C. C.*, 175 F. 2d 351 (D.C. Cir. 1949), where it was stated:

> "The principles which govern the interplay of administrative and judicial functions in a comparative consideration are basically the same as those which govern in the determination of the qualifications of a single applicant. The Commission has wide powers and discretion,

but upon appeal the courts must determine whether its action was within its statutory authority and applicable constitutional limitations, and the findings, conclusions and decision must be such that the courts can exercise the jurisdiction. But the essentials to legally valid conclusions differ, as the two problems, one of bare qualification and the other of comparative qualifications, differ. In respect to comparative decisions, these are the essentials: (1) The bases or reasons for the final conclusion must be clearly stated. (2) That conclusion must be a rational result from the findings of ultimate facts, and those findings must be sufficient in number and substance to support the conclusion. (3) The ultimate facts as found must appear as rational inferences from the findings of basic facts. (4) The findings of the basic facts must be supported by substantial evidence. (5) Findings must be made in respect to every difference, except those which are frivolous or wholly unsubstantial, between the applicants indicated by the evidence and advanced by one of the parties as effective. (6) The final conclusion must be upon a composite consideration of the findings as to the several differences, pro and con each applicant."

The controversy involved herein is one of great importance not only to the participating parties but also to large segments of the public in the areas directly affected. Such a case demands sufficient attention of the Commission that it exercise care in preparing findings purporting to support the ultimate findings which it makes. The Commission is amply protected in its judgments on matters of discretion because of its presumed expertise. The decisions of the Commission should not be immunized by condoning such judgments to be buried in general recitals and discussions, without findings, so that they cannot be properly reviewed. Because of

the limited scope of review of Interstate Commerce Commission decisions, it is all the more necessary that the Commission's findings be clear cut and ready for immediate judicial inspection. It is apparent that the findings in this case do not measure up to the importance of the matter involved, nor to the complicated nature of the issues involved and do not resolve "all material issues of fact, law, or discretion" as required by Section 8(b) of the Administrative Procedure Act. The Commission's report amounts to little more than a summary of the proceedings. The report describes, with varying accuracy, the contentions of the several parties but in few instances are the contentions resolved by an appropriate and unequivocal finding of fact. Only the Commission's ultimate findings appear with "unambiguous clarity."

"* * * A Commission having defined and limited delegated power must justify the exercise of that power by findings that support it and by evidence that supports the findings. When regard is had for the complicated technical nature of the problems and the voluminousness of the records in the important cases that come before the Commission, a fair discharge of its functions precludes casting upon a reviewing court the task of quarrying through a record to find for itself adequate evidence to permit the effectuation of orders of the Commission.

"The precise function of findings is to make practicable scrutiny by the courts in order to determine whether the Commission has kept within the bounds legislatively defined. To be sure, the Commission's findings are not binding in the sense that attack cannot be made on them for lack of evidence. Interstate Commerce Commission v. Louisville & Nashville R. Co., 227 U.S. 88, 91-94, 33 S. Ct. 185, 186, 188, 57 L. Ed. 431. The Commission cannot — it has not purported to do so here — pass on to the Court an unanalyzed summary of a long proceeding and call it findings. While findings need not be formulated in an enumerated sequence, helpful as that would be, they must at least appear in a Commission's decision with unambiguous clarity, and they must be logically related to its conclusion. * * *" (Dissenting opinion — *Denver & Rio Grande West R. Co. v. Union Pac. R. Co.*, 351 U.S. 321 (1956).)

They are these:

> "We find, subject to the conditions for the protection of railway employees and the maintenance of existing routes and channels of trade referred to herein, that acquisition by the Atchison, Topeka and Santa Fe Railway Company and the Pennsylvania Company, and through the latter by the Pennsylvania Railroad Co. of control of the Toledo, Peoria & Western Railroad Company through ownership of capital stock, in equal amounts, as described herein, is a transaction within the scope of section 5(2) of the Interstate Commerce Act, as amended; that the terms and conditions proposed are just and reasonable; and that the transaction will be consistent with the public interest.
>
> "We further find that the application of the Minneapolis & St. Louis Railway Company for authority to acquire control of the Toledo, Peoria & Western Railroad Company, through ownership of capital stock, should be dismissed." (R. 49)

It is significant that these alone are the ultimate findings made by the Commission. No ultimate finding was made that the Minneapolis application was inconsistent with the public interest or that it should be denied. The ultimate finding that the Minneapolis application should be dismissed rests exclusively upon the fact that Minneapolis lacked a contract for the purchase of the controlling stock of the Western.

The finding that the Santa Fe-Pennsylvania application would be "consistent with the public interest" rests almost entirely on the finding that the public interest requires the Western to be continued as a "separate and independent" carrier. This latter finding, itself being in the nature of an ultimate finding, must be supported by subsidiary findings and substantial evidence. In fact, this standard must

have been an assumption rather than a conclusion for its factual or logical basis is nowhere developed by the Commission. The conclusive standard adopted is not one of the standards specifically mentioned in the Interstate Commerce Act or the National Transportation Policy nor is the standard justified in terms of those statutory standards, rather it is justified only on the basis of support for the standard by various interested parties. We submit that the finding of widespread support for the standard which automatically excludes the Minneapolis application does not alone justify its use. Considering the standard itself, neither the Minneapolis nor the State of Minnesota or the State of South Dakota advocated the disappearance of the Western as an independently owned and operated carrier. The decision of the trustees of the McNear estate to sell control of the Western alone advocates the disappearance of the Western as an independent railroad. The analysis of the Commission in relying upon the form of ownership and control of the Western is superficial. It appears, therefore, that the Commission not only adopted a standard which has no particular significance in the public interest as defined by the law, but also one which is not realistic and is not satisfied by any of the applicants.

2. The Failure of the Commission to Afford a True Comparative Hearing

(a) *Erroneous adoption of a single standard of public interest*

Mere simultaneous consideration and disposition of the applications does not satisfy the requirements for a comparative hearing. The statement of the Commission at the

outset of its report that "we, in such proceeding as this *must* arrive at *a standard* of public interest" is patently erroneous. It was also fatally prejudicial since the single standard adopted, the continuance of the Western as a separate and independent operation, automatically excluded the Minneapolis proposal from any possibility of approval.

It is apparent that this statement of the Commission was literally applied and followed. As hereinbefore discussed the standard was adopted without proper findings to support it. There were many areas in which the competing proposals presented strong contrasts. The Commission should have established criteria or standards for these areas for the purpose of considering the extent to which each of the applications on a comparative basis would have fulfilled the standards so established. Thereupon proper findings of fact should have been made in relation to each of the criteria. In the absence of this kind of analysis and evaluation there is no sound basis for the Commission's final reliance upon one criterion as the conclusive basis for its determination. In, FCC Criteria for Evaluating Competing Applicants, 43 Minn. Law Review 479 (1959), by H. Gifford Irion, an analysis of the weight to be given any one criterion was made as follows:

> "An analysis of the weight given to any one criterion, or an evaluation of all in the aggregate, is somewhat difficult because the language of decisions has not always been as explicit as might be desired. In some cases it would appear that each area of comparison has been treated as a distinct mathematical unit, and that the final result has been reached by tallying up points of preference. In its more reflective decisions, however, the Commission has expressly deplored this practice and has referred to the criteria as 'guideposts'. It should be clear to anyone seriously interested in judicial rea-

soning that an isolated area of preference, such as local ownership, is virtually meaningless unless it is considered in connection with a number of other factors. For example, the fact of residence must be tempered by the record of stockholders in civic participation and by the degree to which the owners will participate in management. Otherwise it would have no significance as an indication that knowledge of the community would result in better programming for its needs.

"At this point it is fitting to state emphatically that no application of the criteria can ever be successful when it loses sight of the basic philosophy which accounts for their existence. Using the phrase 'public service' as an approximate expression of this philosophy, it becomes evident that no one of the criteria should be determinative unless it tends to form a pattern with other evidence concerning an applicant's knowledge of the community, his ability and sincere efforts to perform promises and his general imagination and resourcefulness. The assessment which must thus be made of the areas of comparison is admittedly difficult. It should not be done in any mechanical fashion but requires a most conscientious use of judicial discretion. There can be no question that value judgments are called for. They are sometimes attacked as being 'subjective judgments,' and this is perhaps true if we regard a judgment that is not made by slide-rule as being subjective."

It is obvious that the sole criterion used by the Commission does not equate with "public interest" and it is doubtful that its determinative effect can be justified on the basis that it tends to form a pattern with other evidence conclusively proving its qualifications in the public interest.

(b) *Erroneous interpretation of the "transaction" requirement under Section 5 (2) of the Interstate Commerce Act*

While the Act does require the submission of a "transaction" for the approval of the Commission, it is plain from the facts presented, and the Commission should have found, that Minneapolis could acquire the stock held by the trustees of the McNear estate, as well as the stock held by the minority share holders, all of whom would have no reason for refusing to sell to the Minneapolis. In fact on the very day that the contract of sale was made to the successful applicants, counsel for the trustees had prepared an acceptance of the Minneapolis offer (Exhibit H-76, R. 1956-1957, 1445). If any doubt did exist on that question, the Commission could fully protect its decision in favor of the Minneapolis application by limiting the time within which the Minneapolis would be permitted to acquire the stock pursuant to the decision. It would seem that any case involving two carriers competitively seeking to purchase the stock of a third carrier would involve the same question, since only one of them could have a contract for the purchase of the stock at the time it presented its transaction for the Commission's approval. If the limited view taken by the Commission is supported, it would appear that cases arising under Section 5(2) could never have the benefits of a comparative hearing. The undesirability of such a result is obvious from the fact that the comparative hearing process is greatly in aid of the administrative process to determine the presence of public interest. Thus, it was recognized in *Midwestern Gas Transmission Co. v. F. P. C.*, 258 F. 2d 660, 669, 670, (D.C. Cir. 1958), that comparative hearings have the effect of raising issues of public interest and that it is important to have

a great number of such issues not only presented but considered. Just as the Commission should have looked through the form of the transaction to see the substance of the Pennsylvania-Santa Fe control, so also this Court should look through the form of the Commission's decision purporting to afford a comparative hearing.

That the Commission's comparative consideration was at most halfhearted, is apparent from this statement following a description of the Minneapolis proposals:

> "Other benefits and advantages claimed by the Minneapolis in the matter of adequate car supply and the coordinated service which would result if Western were controlled by the Minneapolis are of record, but in view of our findings herein with respect to the disposition of its application, the details thereof need not be specifically described. * * *" (R. 33)

It is absolutely clear from this statement that the Commission did not make a true comparative analysis of the two competitive applications. To undertake a true comparative analysis, the Commission would have had to consider every material advantage claimed by Minneapolis in support of its application. Obviously, since the Commission was deciding the case on other grounds, it felt no need to make a comparative analysis and it did not.

3. The Failure of the Commission Properly to Interpret and Apply the Applicable Anti-trust Provisions

Strong arguments have been urged by the Minneapolis throughout this controversy questioning the Commission's disposition of its claims based upon violations of the Anti-trust Laws. While these matters are left to the Minne-

apolis for argument, the State of Minnesota is very much concerned that its interests not be prejudiced by condoning improper actions so as to reward the actors with the fruits of wrong and, also, that the likelihood of monopolistic competitive practices not be ignored as a factor in the Commission's decision in this proceeding. If the economy of the State of Minnesota is to suffer as a result of a Commission determination that the Pennsylvania-Santa Fe anti-trust violations are to be condoned and subordinated to other considerations in the public interest, then, at the very minimum, the people of this state are entitled to a clear, logical explanation of what those other considerations are and why the national anti-trust policy is being subordinated to them.

THE SCOPE OF REVIEW BY THE DISTRICT COURT

The error of the District Court relative to its scope of review consisted in its observation that the existence of substantial evidence to support the conclusion reached by the Commission in itself prevented further judicial inquiry into any facet of the Commission's action. If the Commission's reasoning was based on correct interpretations of the law, and if its actions were not arbitrary and capricious, then its application of the law to the particular proposals would be free from second guessing by the Courts and this is properly so. But where the Commission's reasoning is faulty, its orders cannot be sustained, even if the Court could substitute correct theories which the Commission might have used to reach the same result. This principle[1] was established in *S. E. C. v. Chenery Corp.* 318 U.S. 80 (1942), where the court stated:

[1]See also Davis, Administrative Law Treatise, 1958, Volume 2, Sections 16.05 and 16.09.

"Congress has seen fit to subject to judicial review such orders of the Securities and Exchange Commission as the one before us. That the scope of such review is narrowly circumscribed is beside the point. For the courts cannot exercise their duty of review unless they are advised of the considerations underlying the action under review. If the action rests upon an administrative determination—an exercise of judgment in an area which Congress has entrusted to the agency—of course it must not be set aside because the reviewing court might have made a different determination were it empowered to do so. But if the action is based upon a determination of law as to which the reviewing authority of the courts does come into play, an order may not stand if the agency has misconceived the law. In either event the orderly functioning of the process of review requires that the grounds upon which the administrative agency acted be clearly disclosed and adequately sustained. 'The administrative process will best be vindicated by clarity in its exercise.' Phelps Dodge Corp. v. National Labor Relations Board, 313 U.S. 177, 197, 61 S. Ct. 845, 853, 85 L. Ed. 1271, 133 A.L.R. 1217. What was said in that case is equally applicable here: 'We do not intend to enter the province that belongs to the Board, nor do we do so. All we ask of the Board is to give clear indication that it has exercised the discretion with which Congress has empowered it. This is to affirm most emphatically the authority of the Board'. Ibid. Compare United States v. Carolina Carriers Corp., 315 U.S. 475, 488, 490, 62 S. Ct. 722, 729, 730, 86 L. Ed. 971. In finding that the Commission's order cannot be sustained, we are not imposing any trammels on its powers. We are not enforcing formal requirements. We are not suggesting that the Commission must justify its exercise of administrative discretion in any particular manner or with artistic refinement. We are not sticking in the bark of words. We merely hold that an ad-

ministrative order cannot be upheld unless the grounds upon which the agency acted in exercising its powers were those upon which its action can be sustained."

This must be particularly so in a comparative hearing, for erroneous assumptions by the Commission in such a hearing would necessarily deprive the affected competitive applicant of a fair consideration of its proposal. The substantial evidence test is not very meaningful when, according to the District Court apparently, there is evidence sufficient to support any of the contentions before the Commission.[3] Thus, following the terminology used in *Johnson Broadcasting Co. v. F. C. C.*, supra, so far as the evidence is concerned all of the applicants satisfy the bare qualifications for its proposal and it is only the comparative qualifications which determine the ultimate result. Since the Commission's ultimate finding was not that the Santa Fe-Pennsylvania proposal most fully promoted public interest but only that such proposal was "consistent with the public interest," it is obvious that the Commission's findings were inadequate if it erroneously found that the Minneapolis application did not meet the bare qualifications for lack of "transaction".

[3] "The Commission might have granted the application of Minneapolis for sole control and ownership, which was strenuously opposed by all those carriers who wanted Western to remain independent and neutral. The Commission might have authorized the Rock Island and the Nickel Plate to join the Pennsylvania and the Santa Fe in joint ownership and control of Western. The Commission concluded that the application of Pennsylvania and Santa Fe was consistent with the public interest and should be granted. That we think, under the evidence and the law, it had power to do; even if that conclusion was wrong, it cannot be said to be arbitrary or capricious and is therefore binding upon this Court." (R. 104-105)

In the judicial review of the Commission's order the competitive nature of the proceeding involved cannot be ignored. Consideration now of the Pennsylvania-Santa Fe proposal cannot proceed as if Pennsylvania and Santa Fe were the only applicants for control of the Western merely considering whether there is substantial evidence which would support that application. If the Commission erred in any of the respects contended, then its decision must be set aside so that a true comparative consideration of the applications could be made.

CONCLUSION

It is submitted that the Orders of the Interstate Commerce Commission which appellants sought to have set aside, annulled and suspended by the District Court are unlawful and based upon erroneous interpretation of the law and that the District Court should have so decided. The decision of the District Court should be reversed accordingly.

Respectfully submitted,

I. Answer to the Contentions of Minneapolis

A. The Commission's order awarding control of Western to Santa Fe-Pennsylvania is based upon adequate findings 6

B. The findings upon which the Commission based its award of control to Santa Fe-Pennsylvania bear a direct relation to Sec. 5, the objectives of the National Transportation Policy, and are consistent with other Commission decisions 10

C. Minneapolis was accorded a fair hearing.. 12

1. Minneapolis' argument reflects a misunderstanding of the function of judicial review 12

2. The Commission's rejection of the Minneapolis proposal fell within the scope of its discretionary authority under Sec. 5 and the National Transportation Policy 13

3. Adequate findings were made relative to Minneapolis' proposal for control of Western 15

4. The Commission balanced the factors upon which the decision rests..... 17

D. The findings upon which the Commission based its rejection of the Minneapolis proposal are supported by substantial evidence 18

1. The finding that the Minneapolis proposal would result in materially altering Western's transportation function is supported by substantial evidence... 18

2. The finding that Minneapolis' absorption of Western would be harmful to Western's connecting lines is supported by substantial evidence 20

3. The finding that any economies effectuated under Minneapolis' absorption of Western would be secured at the expense of Western's connecting lines is supported by substantial evidence 21

II. Answer to South Dakota and Minnesota 23

A. South Dakota's contentions 23

1. South Dakota's branch lines 23

2. The anti-trust effect 25

B. Minnesota's contentions 26

Conclusion 26

IN THE

Supreme Court of the United States

OCTOBER TERM, 1959.

Nos. 12, 27, 28.

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY, ET AL.,

Appellants,

vs.

UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION ET AL.,

Appellees.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA.

BRIEF ON BEHALF OF THE STATE OF ILLINOIS.

STATEMENT.

This controversy, while directly involving the judicial review of an order of the Interstate Commerce Commission, basically concerns the question of the acquisition by the Pennsylvania and Santa Fe of the stock of Western[1]

1. The interested railroads will be referred to hereinafter as follows: Toledo, Peoria and Western Railroad Company as "Western." The Pennsylvania Railroad Company as "Pennsylvania." and The Atchison, Topeka and Santa Fe Railway Company as "Santa Fe," and Minneapolis & St. Louis Railway Company as "Minneapolis".

under the statutory standards of Sec. 5 of the Interstate Commerce Act (49 U. S. C. Sec. 5). That section requires that any acquisition "be consistent with the public interest". While initially there were four alternatives presented to the Interstate Commerce Commission,[2] the issue has now been narrowed to two, namely: (1) does the public interest lie in preserving Western's existing transportation function as a bridge-line through the Peoria Gateway by stock ownership in Western's two largest connecting lines, or (2) does the public interest lie in making the future operation of Western a part of Minneapolis' railroad and substantially altering Western's present operation and transportation function?

Western Is an Illinois Railroad.

The State of Illinois has a substantial interest in this proceeding. Western lies almost entirely within Illinois. Its executive and general offices, yards and shops are located in Illinois. Western's employees reside in Illinois. Although Western is primarily a bridge-line, it provides an essential transportation service upon which the communities along its line are completely dependent.[3] Its function as a bridge-line provides the communities along its line a type of service which would otherwise not be

2. They included: (1) joint control by Santa Fe-Pennsylvania (2) sole control by Minneapolis, (3) multiple ownership, and (4) denial of both applications or dismissal of Minneapolis' application.

3. All of the communities along the line of Western intervened in the proceedings before the Interstate Commerce Commission and the United States District Court in support of Santa Fe-Pennsylvania control. These communities are: the City of Peoria, the City of East Peoria, the City of Bushnell, the City of Canton, the City of LaHarpe, the Village of Lomax, the City of Warsaw, the City of Forrest, the City of Fairbury, the City of Gridley, the City of Gilman, the City of Sheldon, the City of Watseka, the City of Eureka, the Village of Secor, the City of Washington and the City of Chenoa.

economically justified. This is particularly true as to the line west of Peoria.

The interests of the States of South Dakota and Minnesota involved in this proceeding are, at best, remote and indirect. They are based upon the unwarranted assumption that Minneapolis' traffic would be diverted under Santa Fe and Pennsylvania's control of Western. Unlike the conditional nature of these interests, the interests of the State of Illinois are directly and immediately affected by the admitted loss of existing benefits which would result from the absorption of Western into the operations of Minneapolis. Such losses are involved in the alteration of Western's existing transportation function, the abandonment of Western's executive and general offices and shops at Peoria, the substantial reductions in employment, and the cutbacks in spending within the State of Illinois.

The State of Illinois Interests in Western

Illinois has a direct interest in the economy of the area of Central Illinois served by Western. That interest is manifest in the continued agricultural and industrial development of that area, in the economy of the City of Peoria and the Peoria area, the further development of railroad service to the communities along Western's line, the development of Peoria as a major rail gateway, and finally—but of major consequence—in Western's employees. Each of these interests are directly related to the preservation of Western's existing transportation function and its continued development as a bridge-line in transcontinental traffic. The disadvantages inuring to each of these points of interest by altering Western's existing transportation function under the proposal of Minneapolis is apparent and compelled the participation by the State of Illinois in this proceeding before the Interstate Commerce Commission, the District Court and now this appeal.

Since this brief is in answer to both the brief of Minneapolis in docket No. 12 and the briefs of South Dakota and Minnesota in Nos. 27 and 28, we shall devote the first Section to the contentions of Minneapolis and the second to the position of our sister states, South Dakota and Minnesota.

SUMMARY OF ARGUMENT.

1. The criterion upon which the Commission's decision rests relates to the preservation of Western's unique transportation function. This is reflected in the finding that Western's present policies must "in all respects" be continued. This finding is, in turn, based upon adequate subsidiary findings which establish the national and local importance of retaining Western's function as a "short line connection" for the sixteen carriers with which its function is interrelated.

2. The finding bearing upon the preservation of Western's transportation function and the subsidiary findings upon which it is based, all have a direct relation to the relevant legislative standards as expressed in Sec. 5 and the National Transportation Policy, and the decision falls within the scope of the Commission's discretionary authority under those standards. The specific benefits accruing to the public as a consequence of Santa Fe and Pennsylvania control are, moreover, consistent with the objectives of Sec. 5 as reflected in previous Commission decisions.

3. The Commission's decision reflects that a fair hearing was accorded Minneapolis and its proposal to substantially alter Western's transportation function. The Commission's findings indicate that due consideration was given to the nature and scope of the Minneapolis proposals. Adequate findings were made, reflecting the basis for the Commission's rejection of the Minneapolis proposal and these findings fall within the scope of the authority conferred.

upon the Commission under the legislative standards of Sec. 5 and the National Transportation Policy.

4. The Commission's decision fully reflects the basis upon which the two competing proposals were weighed and evaluated. The findings upon which the Minneapolis proposal was rejected are supported by substantial evidence. Judicial review of Commission orders are limited to a determination of whether the essential basis of the Commission's judgment is disclosed and the findings upon which that determination was made are fully supported by the record.

5. The interest of the employees of Western are substantial and must be considered under any Section 5 proposal. Such interest cannot be relegated to the acceptance of a dole under the Washington Job Protection Agreement.

6. The improvement of the financial position of Minneapolis in order to protect marginal lines in South Dakota and Minnesota at the expense of ruining a strong railroad in Illinois is not in the public interest. The Commission also found, based upon substantial evidence, that there will be no diversion of traffic from Minneapolis by reason of the Santa Fe-Pennsylvania control of Western.

ARGUMENT.

I.

ANSWER TO THE CONTENTIONS OF MINNEAPOLIS

A. The Commission's Order Awarding Control of Western to Santa Fe and Pennsylvania Is Based Upon Adequate Findings.

The basic structure of Minneapolis' argument concerning the alleged inadequacy of the Commission's findings is based upon the premise that the Commission adopted as the basic finding, upon which the proceeding turned, the need for "separate and independent management" of Western.

The complete answer, in brief, to this entire argument is that the proceeding was not resolved by the Commission upon the basis of a "standard" concerning the "separate and independent management" of Western. No finding concerning the "separate and independent management" of Western was in fact made by the Commission anywhere in its report. The alleged "standard," moreover, of "separate and independent management" of Western bears no reasonable relationship to any of the findings which were in fact made by the Commission, whether ultimate, subsidiary or evidentiary. No such "standard" was expressed in the actual language of the report nor may it reasonably be inferred.

Minneapolis' creation of a fictitious "standard," upon which the proceeding was allegedly resolved, its attempt to relate this "standard" to the Commission's alleged prejudgment of the proceeding, and other devices which it has employed in presenting the issues to this court,

constitute an ill conceived attempt to avoid a logical and analytical treatment of the issues relative to the adequacy of the findings. Nowhere in its entire discussion of the issues relative to the adequacy of the findings does Minneapolis come to grips with the findings which were in fact made by the Commission or the theory upon which the decision of the Commission is based. The Commission's report and the opinion of the District Court, are completely ignored.

The justification for the failure of Minneapolis to deal with the findings which were made and the theory upon which the decision rests apparently lies in its contention that its proposal was excluded from the Commission's consideration at the inception of the hearing. A review of the findings and of the District Court's interpretation of the findings is therefore essential to demonstrate the error of Minneapolis and to show the basis for the Commission's approval of Santa Fe-Pennsylvania control of Western.

The Commission's ultimate findings are that the Santa Fe-Pennsylvania proposal to preserve Western's existing transportation function is "consistent with the public interest," (the statutory standard of Sec. 5(2)) and that the benefits to be derived from the operation of Western under Santa Fe-Pennsylvania's proposal would be "in furtherance of the overall National Transportation Policy declared by the Congress" (R. 49, 39). These ultimate findings were the result of the subsidiary finding that the public interest required that Western's existing transportation function "in all respects" be preserved (R. 45).

The need for retaining Western's existing transportation function as expressed in such basic subsidiary finding, in turn, rests upon the following evidentiary findings: (1) that Western occupies a geographically strategic

position as a "direct east-west line" (R. 21); (2) that Western performs a strategic function as an overhead bridge carrier for transcontinental traffic operating through the Peoria Gateway, bypassing the congested terminals of Chicago and St. Louis (R. 21); (3) that Western's function as an overhead carrier and its existing traffic policies of (a) maintaining strict neutrality between its sixteen connecting lines and (b) attempting to participate in a haul of traffic no matter how slight, are a natural result of and are directly related to Western's strategic geographic position and the function which it performs and accounts for Western's success (R. 21); (4) that Western's successful operation originated with the utilization of its plant as a bridge carrier between the Santa Fe at its western terminus and Pennsylvania at its eastern terminus (R. 21); (5) that, as a consequence of Western's strategic position, the function which it serves, and its traffic policies, Western has assumed national importance in the Nation's railroad system as a "vital direct link" supplying the "short-line connection" for east-west traffic (R. 45); (6) that Western's existing function and its traffic policies thus make available Western's natural advantages to the maximum number of its connecting railroads (R. 21, 31, 45); and that (7) the retention of Western's existing transportation function and the preservation of its existing policies have significant consequences both to the railroad industry as well as the public generally (R. 45). The Commission found furthermore, that, with the exception of Minneapolis and the States of South Dakota and Minnesota, its conclusion that the retention of Western's existing function was essential to the public interest was shared by all of the parties to the proceeding, including all of the railroad intervenors, all of the communities served by Western and all of the shippers who appeared in the proceeding as witnesses (R. 31).

A significant quotation from the Commission's order which contains a recital of decisive facts indicates most clearly the rationale for the Commission's decision:

"Situated as it is between the Santa Fe at Lomax on the west and the Pennsylvania at Effner on the east, Western receives its long haul and provides a vital direct link essential to the type of through service which is becoming increasingly important not only to the shipping public but to the railroads as well. Fast, strong, and reliable through transportation service is necessary in order for the railroads adequately to compete with the other modes of modern transportation, and Western, as a direct east-west line, supplies the short-line connection for providing this through service with a minimum of delay.

"Public interest demands that the present policies of Western in all respects be continued." (R. 45.)

The District Court recognized the significance of this finding in its analysis of the issue regarding their adequacy. The Court stated (R. 104):

"The Commission specifically found that 'public interest demands that the present policies of Western in all respects be continued.' It concluded that this result would be attained if the two carriers which had contributed the greatest volume of traffic with Western, one from the East and one from the West, should be accorded joint ownership. As stated, it appears that some 70% of Western's interline traffic is exchanged with these two railroads. This constitutes about two-thirds of Western's total traffic. * * * It is entirely reasonable to expect that the two carriers which are largely responsible for the excellent condition of Western today, will, by sheer self-interest continue with the same incentive in the future."

It should be noted that, if any single finding may be termed to constitute a decisive determination in this proceeding, it is the finding referred to and quoted by the District Court, *i.e.*, that "Public interest demands that the pres-

ent policies of Western in all respects be continued.'" This concept includes all of the aspects of the findings enumerated above which relate basically to the preservation of Western's unique transportation function. The retention of this transportation function is of vital interest and importance to the State of Illinois.

B. The Findings Upon Which the Commission Based Its Award of Control to Santa Fe and Pennsylvania Bear a Direct Relation to Section 5, the Objectives of the National Transportation Policy and Are Consistent With Other Commission Decisions.

Minneapolis' argument that the concept of "separate and independent management" is unrelated to the standards of Sec. 5 of the Interstate Commerce Act or the objectives of the National Transportation Policy is again the red herring conjured up completely outside the language and the intent of the Commission's order. The Commission's decision rests squarely upon the findings referred to above which relate to *the best use* of Western's transportation plant, the function which it is to perform and its orientation within the complex network of the American railroad system.

The statutory standard of Sec. 5 requires that the Commission give specific consideration to (1) "the effect of the proposed transaction upon adequate transportation service to the public * * *" and (2) "the interest of the carrier employees affected." This court has held that Section 5 requires the "best use of transportation facilities," *New York Central Securities Co.* v. *United States*, 287 U. S. 12, 25, and that specific requirement was determined as expressed by the Commission in finding that Santa Fe-Pennsylvania control maintained the "best use of [Western's] transportation facilities." Moreover, the

Santa Fe-Pennsylvania proposal was consistent with "the interest of the carrier employees affected."

The finding that Western's existing transportation function must be preserved and the findings upon which that ultimate finding is based all have an obvious relation to the objectives of the National Transportation Policy which deal with the promotion of "safe, adequate, economical and efficient service," the fostering of "sound economic conditions in transportation" without "unjust discrimination, undue preferences or advantages or unfair or destructive competitive practices."

Apart from the general considerations which led the Commission to conclude that the preservation of Western's present policies was essential to the public interest, the Commission also found that certain specific advantages would accrue to the public as a result of Santa Fe-Pennsylvania control of Western. These benefits included (1) the continued access of the public to local management (R. 33); (2) the economic stimulus such ownership would afford the area served by Western's lines (R. 82); (3) the promotion of industrial development along Western's lines (R. 33); (4) expanded industrial markets (R. 33); (5) an increase in Western's car supply (R. 33); (6) the realization of economies in operation by Western and (7) the technical and managerial assistance afforded by Santa Fe-Pennsylvania to Western (R. 33). These benefits have been consistently held by the Commission to provide the significant factors in other proceedings involving the application of Sec. 5 and the National Transportation Policy. *Niagara Junction R. Co. Control*, 267 I. C. C. 649, 660 (1947); *Pacific Coast R. Co. Control*, 282 I. C. C. 607, 609 (1951); *Savannah & Atlanta Ry. Co. Control*, 282 I. C. C. 39, 51 (1951); *Wabash R. Co. Control*, 247 I. C. C. 365, 370 (1941); *Wheeling & L. E. Ry. Co. Control*, 267 I. C. C. 163, 183 (1946).

C. Minneapolis Was Accorded a Fair Hearing.

Minneapolis, by creating a mythical "standard" upon which the Commission is said to have "prejudged" the proceeding, ignored the rationale upon which the Commission actually based its decision as expressed in specific findings. Ignoring the Commission's analysis of the need for preserving Western's existing transportation function because its proposal obviously did not coincide with this objective, Minneapolis argues that the relative merits of the two proposals "should have" been decided on the basis of a "comparative" evaluation of certain other criteria.

1. Minneapolis' Argument Reflects a Misunderstanding of the Function of Judicial Review.

The argument of Minneapolis is based upon a fundamental misconception of the function of judicial review of a proceeding such as this. It is not the function of this court to examine the evidence to determine whether it will permit a finding more favorable to Minneapolis. The review function of this court is discharged if the "essential basis" of the Commission's judgment is sufficiently disclosed so that the court can satisfy itself that the Commission had performed its function. *Alabama Great Southern R. Co.* v. *United States*, 340 U. S. 216, 227. In analyzing the adequacy of the findings, the court must review the report on the basis upon which the decision rests, not just on the basis of the evidence adduced by Minneapolis or the factors upon which it relied. The findings, moreover, essential to support the validity of an order will vary with the context of the situation presented. *United States* v. *Pierce Auto Lines*, 327 U. S. 515, 532, (1954). However, it is not necessary for the Commission to comment on all of the evidence produced. In speaking

bout the adequacy of findings and the evidence the Illi-ois Supreme Court in *Atchison, Topeka & S. F. Ry. Co. v. ommerce Commission*, 335 Ill. 70 said at page 95:

> "It does not follow because evidence appearing in the record was not commented upon in the order that it was not considered by the commission. The question for a judicial review of the order is whether the findings of the commission on which the order is based have substantial support in the evidence."

ikewise, in *Chicago Junction Ry. Co. v. Commerce Commission*, 412 Ill. 579, it was held at page 584:

> "We believe that the findings of fact by the commission, *which need not recite each bit of evidence which leads to the conclusion of fact*, are sufficient to support the order, and are, in compliance with the terms of the statute." (Emphasis added.)

In this proceeding the Commission expressed the "essen-al basis" of its judgment in its report and made all the ecessary findings to support its judgment consistent with e relevant legislative standards.

The Commission's Rejection of the Minneapolis Proposal Fell Within the Scope of Its Discretionary Authority Under Section 5 and the National Transportation Policy.

Minneapolis argues that, if adequate findings had been ade relative to its proposal, a decision favorable to nta Fe-Pennsylvania would have been "impossible" der the standards of Sec. 5 and the National Transporta-n Policy as a matter of law.

This argument raises a basic question regarding the rpose of Sec. 5 and the scope of the Commission's dis-tion in its application. What Minneapolis is saying that, under Sec. 5 and the National Transportation licy, the Interstate Commerce Commission could not fully approve a proposal for stock control of a carrier

involving the retention of the carrier's corporate identity and separate operation of the controlled carrier when afforded the alternative of what is, in effect, a corporate merger allegedly resulting in large scale economies and "expanded" rail service. Emphasis is placed upon alleged "economies" and "expanded" rail service, which are said by Minneapolis to be determinative of the issues and the criteria of Sec. 5 and the National Transportation Policy.

While the term "public interest" in Sec. 5 has been defined to relate to "conditions of economy," it also was deemed to embrace "appropriate provision and best use of transportation facilities." *New York Central Securities v. United States*, *supra*, p. 25. This interpretation, we submit, substantially broadens the concept and permits the broadest area of administrative judgment in the application of the standard. No single objective or group of objectives of the National Transportation Policy, moreover, may be said to be determinative of all proceedings under Sec. 5, since these objectives have been held to be mutually inconsistent in their application to the context of particular proceedings. *Schaffer Transportation Co. v. United States*, 355 U. S. 83, at pp. 94-95. That the achievement of economies and establishment of "expanded" rail service are not absolute but relative objectives of Sec. 5 is reflected in Sec. 5(2)(c), which directs the Commission to give consideration to the effect of a proposal upon the "carrier employees affected," as well as to its effect upon "adequate transportation service to the public." The application of this mandate is illustrated in the Commission's findings in this proceeding. The Commission found that Minneapolis' proposed "expanded" rail service would be "extremely harmful" to other carriers and to the ability of such carriers to continue to provide adequate rail service to the public (R. 32), and also found that the economies which might be achieved by Minneapolis would be *offset*

at the expense of Western's employees (R. 32). The achievement of Minneapolis' overall objectives were, moreover, incompatible with the Commission's basic objective of preserving Western's existing transportation function which the Commission recognized as essential (R. 30). The achievement of large-scale economies, such as allegedly would result from a merger, would be more than offset by separate operation of Western which the Commission found to be essential to the preservation of Western's transportation function. The kind of "improvement" and "expansion" of rail service via Western, which was proposed by Minneapolis was also incompatible with the retention of Western's present traffic policies upon which the preservation of its transportation function was completely dependent and the Commission so found (R. 30).

There is no basis to support the argument of Minneapolis that a decision based upon the retention of the corporate identity and separate operation of a controlled carrier constitutes an abuse of the Commission's discretion under Sec. 5 or the National Transportation Policy, either in an absolute or a "comparative" sense. Separate operation of a controlled carrier is recognized to be consistent with the objectives of Sec. 5 since Sec. 5(2) specifically provides for acquisition of control through stock purchases.

3. Adequate Findings Were Made Relative to Minneapolis' Proposal for Control of Western.

Minneapolis' argument that it was denied a comparative hearing rests finally upon the alleged inadequacy of findings with respect to the evidence which Minneapolis adduced at the hearings. It argues that "no" findings were made with respect to the (1) economies and (2) service proposals which it advanced (Brief, p. 33), (3) its economic motivations (Brief, p. 35), and (4) that the Commission "brushed off" the evidence of its traffic losses

which would result from Santa Fe-Pennsylvania's control of Western (Brief, pp. 30-31).

The case of Minneapolis was predicated upon certain affirmative proposals, all of which related in one way or another to the achievement of economies arising out of its absorption of Western and the establishment of certain operating changes which would affect the combined service of Western and Minneapolis as a merged operation. While these objectives may otherwise be generally regarded as consistent with the relevant legislative standards, the Commission found that their application under the circumstances involved in this proceeding would be disadvantageous. Specific findings were made which indicate that Minneapolis' service proposals would be "extremely harmful" to other carriers (R. 32) and that the alleged economies would be effected "at the expense of Western's employees" (R. 32). Minneapolis' economic motivations in prosecuting its application for control were, moreover, not "ignored" by the Commission, for it specifically found that Minneapolis sought to acquire control in order to enhance its financial stability (R. 30). Moreover, the mere fact that the Commission did not comment about the evidence of Minneapolis to the extent that Minneapolis might desire does not mean that the Commission did not give it full and thorough consideration. *Mobilgas, Topeka & S. F. Ry. Co. v. Commerce Commission*, supra; *Chicago Junction Ry. Co. v. Commerce Commission*, supra.

Minneapolis' case was also predicated upon certain defensive considerations which it contended made its control of Western imperative. These arguments related to the alleged diversion of its traffic which it asserted would result from Santa Fe-Pennsylvania control. The Commission's detailed and comprehensive consideration of this evidence can hardly be characterized as a "brushing off" of the issue. The Commission considered this issue to be

vital significance in the proceeding and devoted four pages of its report to an analysis of appellant's claims of loss of revenue through traffic diversion (R. 33-37).

It is, therefore, apparent that adequate findings were made with respect to the essential elements of Minneapolis' proposal.

4. The Commission Balanced the Factors Upon Which This Decision Rests.

A comparative evaluation of Minneapolis' case with that of the other railroad intervenors and the Santa Fe-Pennsylvania proposal did not require findings in the form in which Minneapolis asserts, nor does it require that any special technique be employed in arriving at the findings. The "essential basis" of the Commission's judgment is sufficiently disclosed so that this court can intelligently discharge its function of judicial review. *Alabama Great Southern R. Co. v. United States*, *supra*, at pages 227-8. This, in the final analysis, is the only function of findings. The form which the findings take and the techniques employed in arriving at the findings are not significant as long as the "essential basis" of the Commission's judgment is disclosed. The balancing of the factors upon which the decision rests, required by *Schaffer Transportation Co. v. United States*, *supra*, was fulfilled in this proceeding. The Commission considered the advantages of the economies and new service routes but found that these advantages would be initially outweighed by the interests of shippers and the economic consequences of the service routes on other rail carriers (R. 32). Finally, Minneapolis' proposal to abolish Western as a separately operated carrier was found to be outweighed by the need for preserving Western's existing transportation function under its present policies (R. 30, 45).

D. The Findings Upon Which the Commission Based Its Rejection of Minneapolis' Proposal Are Supported by Substantial Evidence.

The Commission made three significant findings regarding the merits of Minneapolis' proposal which reflect the basis upon which its plan for control was held not to be in the public interest. The Commission found that the proposal of Minneapolis "unequivocally" contemplated the abandonment of Western's policy of neutrality as to its 16 connecting lines (R. 30). It also found that Minneapolis' proposed service policies would be "extremely harmful" to Western's other connecting carriers (R. 32), and that any economies secured by Minneapolis' absorption of Western would be at the expense of Western's employees (R. 32). While Minneapolis has attacked the substantiality of the evidence as to each of these findings, yet there was more than sufficient evidence to support these basic findings.

1. The Finding that Minneapolis' Absorption of Western Would Result in Materially Altering Western's Transportation Function is Supported by Substantial Evidence.

One of the fundamental determinations upon which the decision rests is the need for retaining Western's existing policies (R. 45). These policies include the maintenance of strict neutrality between its connecting lines and soliciting for a haul of traffic no matter how slight (R. 21). The Commission found that Minneapolis' proposal "unequivocally" contemplated the disappearance of Western as a "neutral connection for the other 15 carriers with which it presently works" (R. 30). This subsidiary finding was decisive in this proceeding because it reflects the basis upon which Minneapolis' proposal was ultimately rejected. The importance of the finding lies in the fact that the retention of Western's policies of neutrality towards its

connecting carriers is essential to the preservation of Western's transportation function as a bridge line which the Commission found to be the "best use" of Western's transportation facilities.

Recognizing this to be a fact, Minneapolis now contends that it too would maintain a policy of neutrality with respect to Western's connections because, "as a matter of survival," it "could not do otherwise" (Brief, p. 31). Although it attempts to avoid a direct attack upon this finding, Minneapolis, in effect, is challenging the basis for the Commission's finding that its proposal "unequivocally" would abolish Western's policies of neutrality as to its connecting lines. To support its contention, Minneapolis points to its dependence upon the Peoria Gateway and upon bridge traffic, but ignores the comprehensive and detailed outline of its traffic program offered by Mr. Nelson, its Traffic Vice President, which was specifically predicated upon the diversion of traffic from Western's other connections to the combined route resulting from the merged operations. Mr. Nelson's testimony clearly reveals that Minneapolis, with Western merged, expressly proposed to pursue a policy of aggressive solicitation to divert traffic and short-haul Western's other connecting lines (R. 1177-1184). The carriers which Minneapolis' Traffic Vice President admitted would be short-hauled under his policy are all existing connections of Western and include the Illinois Central (R. 1195), the G. M. & O. (R. 1197), the C. & E. I. (R. 1197), the Wabash (R. 1198), the Milwaukee (R. 1198) and the North Western (R. 1198). Traffic would also be diverted from the Minneapolis-Chicago lines of the Burlington, Rock Island, Milwaukee and North Western (R. 1198, 1200).

Western's transportation function would also be materially altered by the limited use that Minneapolis would make of Western's facilities. Minneapolis' plan for diverting

the traffic of Western's connecting lines through the establishment of new interchanges and service routes did not involve Western's line west of Peoria (R. 1178-84). Minneapolis' line west of Peoria parallels the route of Western and the economies of Minneapolis' control would require the consolidation of the Santa Fe traffic which presently is interchange at Lomax to the Minneapolis interchange at Nemo. This Santa Fe traffic is practically the sole support of railroad service presently being afforded the communities along the west end of Western. Western's function as contemplated by the Minneapolis traffic program would substantially alter the present traffic route of Western and would be disadvantageous to the interests of the State of Illinois and to the communities which are entirely dependent upon Western for rail service.

2. The Finding that Minneapolis' Absorption of Western Would Be Harmful to Western's Connecting Lines Is Supported by Substantial Evidence.

The Commission found that the traffic policies proposed by Minneapolis under its "unified operation theory" would be "expremely harmful to other carriers" (R. 32). Minneapolis argues that this finding is not supported by substantial evidence since it is based upon a "confused claim" of "one witness" (Brief, p. 31). This broad finding, however, is not based solely upon the testimony of Mr. Atkinson, the President of the Wabash. The Rock Island introduced evidence which tended to show that $6,000,000 of its freight revenue annually was susceptible to diversion under Minneapolis' control of Western (R. 1545). The Nickel Plate estimated that a "substantial" portion of its Peoria traffic would be susceptible to diversion under Minneapolis' unified operations with Western (R. 1325), and Minneapolis itself, made it clear that its traffic program was based upon diverting traffic from Western's connecting lines (R. 1184).

3. The Finding that Any Economies Effectuated Under Minneapolis' Absorption of Western Would be Secured at the Expense of Western's Employees Is Supported by Substantial Evidence.

The State of Illinois has a substantial interest in the 527 families residing in the State of Illinois which could be displaced either by layoffs or transfers through Minneapolis' merger of Western. The interests of these men and women, who have built a pattern of living within a community, constitute a vital part of the public interest and we submit that their interests were properly weighed by the Commission against the alleged economies in its finding that economies would be secured at the expense of Western's employees (R. 32).

This finding is based upon Minneapolis' comptroller's testimony that, of the estimated $1,770,945 reduction in annual operating expense allegedly accruing from the merging of Western, $1,327,062 would result from the elimination of at least 256 positions now held by Western's employees (R. 1377, 1379). Minneapolis attacks this finding by emphasizing the importance of economies as an objective of the National Transportation Policy (Brief, p. 46) but ignores that, under Sec. 5(2)(c)(4), the Commission is specifically enjoined to consider "the interest of the carrier employees affected." Appellant also attacks the finding with the assertion that "ultimate job security" lies only in "efficient" operation; that "featherbedding" and "uneconomical operations" cannot provide a basis for job security. There is no evidence of record to support the contention that the separate operation of Western is either "inefficient" or "uneconomical" or that the retention of Western's employees constitutes "featherbedding" in any sense of the term. Quite to the contrary, the Commission found that Western is a successful railroad operation performing a vital public service (R. 21, 44).

Finally, Minneapolis attacks the finding on the basis that the impact of its proposal would be "cushioned" by Minneapolis' abidance with the Washington Job Protection Agreement, which would provide for payments of 60% of regular compensation for five years and severance pay equal to one year's earnings for the employees whose positions would be terminated. This argument is irrelevant to the finding. The payment of compensatory allowance does not alter the fact that $1,327,062 of the estimated economies would be secured by the elimination of at least 256 positions. The Commission's duty to give consideration to the interests of employees is not discharged by simply providing for compensatory allowances to dismissed personnel for a limited period pursuant to the provisions of Sec. 5(2)(f)[5]. These provisions make such compensatory allowances mandatory only after a transaction subject to Sec. 5(2) has been determined to be "consistent with the public interest." Thus, before the Commission reaches Sec. 5(2)(f), it has a prior obligation with respect to employees, to consider their interests in making a public interest determination under Sec. 5(2)(c)[6]. This is precisely what the Commission did in this proceeding as reflected by the finding.

5. It would be no argument against the Commission's prescription of safety facilities to say that the employee can get compensated by an F. E. L. A. action if he is hurt.

6. This is reflected in the Commission's decision in *Fort Worth & D. C. Ry. Co. Lease*, 247 I. C. C. 119 (1942), where the Commission indicated that, while it theretofore had given consideration to the interest of the carrier employees affected to the extent of imposing appropriate conditions, it was now required under Sec. 5 (2) (c) "*to give consideration to the interest of such employees in determining whether the transaction is consistent with the public interest*" (p. 127). (Emphasis supplied.)

II.

ANSWER TO SOUTH DAKOTA AND MINNESOTA.

A. South Dakota's Contentions.

1. South Dakota's Branch Lines.

South Dakota's argument that the Santa Fe-Pennsylvania "combine" would adversely affect the branch lines of Minneapolis in South Dakota assumes that the only public interest lies in the economic benefit to Minneapolis (Brief, p. 9). The benefit to South Dakota through the creation of a theoretically stronger railroad which could then support the low density marginal branch lines in that State through either the destruction of a strong main line railroad in Illinois or by converting it into a branch line is not necessarily in the public interest. Besides, it is the very function of the Commission to weigh and determine the evidence. As this court so aptly said in *Baltimore and Ohio R. Co.* v. *United States*, 298 U. S. 349 at page 359:

> "The Commission alone is authorized to decide upon weight of evidence or significance of fact."

In this case, the Commission found that the acquisition by Santa Fe-Pennsylvania "will be consistent with the public interest" and the record substantiates that finding. The evidence clearly shows that the status of Western as a strong transcontinental bridge carrier will remain the same through the acquisition by Santa Fe and Pennsylvania, while it would be greatly changed through Minneapolis' ownership. The Commission obviously felt that the preservation of the existing service provided by Western's operation in Illinois was of the greater importance in the over all public interest. And this is the function of the Commission with which the court, in the absence of arbitrariness, should not interfere. In *Georgia Public Service*

Commission v. *United States*, 283 U. S. 765, Mr. Justice Brandeis speaking for a unanimous court stated at page 775:

> "It is not our province to inquire into the soundness of the Commission's reasoning, the wisdom of its decisions, or the consistency of its conclusion with those reached in similar cases."[7]

South Dakota's argument regarding the possible abandonment of the Minneapolis branch line is, moreover, predicated upon the assumption that Minneapolis' traffic would be diverted by the Santa Fe and Pennsylvania "combine". The record is said to be "uncontroverted" with respect to the vulnerability of the Minneapolis' traffic and the Commission is said to have "brushed off" this evidence (S. D. Brief, p. 9). This contention is fully answered by our reply to the similar contention of Minneapolis at pages 16-17 *supra*, and the four pages of the Commission's order devoted to the contention of Minneapolis on traffic diversion (R. 33-37).

It should be pointed out that South Dakota and Minnesota, whose interests in this proceeding are predicated entirely upon the alleged effect of such diversion of traffic, have only made the most general and sweeping attack upon the specific findings made by the Commission.

While completely unrelated to its branch line argument, South Dakota attacks the intervention of the communities along Western's line and the Railway Labor Executives Association which intervened in support of Santa Fe-Pennsylvania control of Western (S. D. Brief, p. 11). The significance of the unanimous public support accorded Santa Fe-Pennsylvania acquisition by the municipalities,

7. While this case involved the determination of rates, there should be no difference in standards for court review of just and reasonable rates in the public interest and acquisitions and mergers consistent with the public interest.

business associations and shippers along Western's line cannot be dismissed with the assertion that these interests have been victimized by a Santa Fe public relations campaign. If the communities have been victimized, so also has the State of Illinois and the active participation by the State in this proceedings from the inception refute any "public relations victimization". Actually, no reply need be made to this assertion since South Dakota does not indicate how these interests (municipalities and shippers) will be hurt by Santa Fe-Pennsylvania control. Furthermore, it would seem that the communities and shippers along Western's line would be better able to judge their own interest than South Dakota.

Our answer to Minneapolis' similar contention (*supra*, page 22) is a complete reply to South Dakota's statement that labor would not "suffer" under Minneapolis absorption of Western since it is protected by the Washington Job Protection Agreement. It seems rather presumptuous for South Dakota to advocate the reduction of fully employed persons in Illinois to the position of a dole under a job protection agreement.

2. The Anti-Trust Effect.

The argument that Santa Fe and Pennsylvania's joint control of Western would violate the anti-trust laws is based upon the assumption that the proposed transaction constitutes a "gigantic railroad merger" which "unifies" the operations of the Santa Fe and Pennsylvania from "tidewater" to "tidewater" (S. D. Brief, p. 13). Joint control of another carrier is not in any sense a merger of the owning roads. This is particularly true where, as here, they are an eastern and a western carrier subject to the checks and balances inherent in such control. The Commission expressly recognized this factor in its order:

"* * * No greater protection could be afforded to

carriers interchanging traffic with Western than to have ownership divided equally between the largest connecting carrier in the east and the largest one in the west. Under this built-in system of checks and balances, it is inconceivable for the Santa Fe to permit impairment of service or discriminatory solicitation with respect to eastern connections, or the Pennsylvania with respect to western ones, * * *" (R. 46).

B. Minnesota's Contentions.

Minnesota's brief is manifestly no more than a reiteration of the arguments advanced by Minneapolis. Minnesota's arguments relative to the alleged inadequacy of the findings (Brief, pp. 10-14), the alleged failure of the Commission to accord Minneapolis a comparative hearing (Brief, pp. 14-19) and the alleged erroneous interpretation by the District Court of the scope of judicial review (Brief, pp. 19-22) have been fully treated in our answer to the contentions of Minneapolis in the first section of this brief.

CONCLUSION.

We therefore respectfully submit that the decision of the District Court entered on September 16, 1958 should be affirmed.

Statement of the Case	3
1. Western's Transportation Function	3
2. Relationship With the Competing Applicants	4
3. Negotiations for the Purchase of Western's Stock	5
4. Proceedings Before the Interstate Commerce Commission	6
5. Proceedings in the District Court	8
Questions Presented	9
Summary of Argument	10
Argument	14
I. The Commission's Determination of the Public Interest Reflects Full Consideration of the Two Competing Applications. It Is Consistent With the Standards of Section 5 and the National Transportation Policy and Did Not Deprive Minneapolis of a Fair Hearing	14
A. The Report Shows that in Arriving at Its Determination of the Public Interest the Commission Gave Full Consideration to the Two Competing Applications, as Well as to the Other Interests Involved	15
B. The Findings on Which the Commission Based Its Approval of the Santa Fe-Pennsylvania Application Are Consistent With the Standards of Section 5 and the National Transportation Policy	19
C. The Alleged Advantages of the Minneapolis Application Were Appropriately Balanced Against the Other Factors Bearing on the Public Interest	24
II. Adequate Findings Were Made on All Material Issues; and the Findings Attacked by Appellant Are Supported by Substantial Evidence	31

III. The Commission Was Not Required to Measure the Santa Fe-Pennsylvania Application by the Standards of the Antitrust Laws. It Gave Full and Careful Consideration to the Competitive Situation and Its Conclusion That the Operation of Western by Santa Fe and Pennsylvania Would Be in Furtherance of the National Transportation Policy and Would Not Unduly Curtail Competition Was Well Within the Scope of Its Statutory Authority 42

A. The Commission's Evaluation of the Competitive Situation Conforms to the Standards Laid Down by This Court in *McLean Trucking Co.* v. *United States* 42

B. Appellant's Charges of Monopolization of East-West Gateways and Suppression of the Peoria Gateway Are Groundless 45

1. Control of Western Is Not Control of the Peoria Gateway 46

2. The Movement of Traffic via Western's Route Through Peoria Is Beneficial, Not Detrimental, to Santa Fe and Pennsylvania 47

C. No Combination of Santa Fe and Pennsylvania Is Involved in Their Joint Acquisition of Western 53

IV. There Has Been no Violation of Section 10 of the Clayton Act and That Section Is Not a Bar to Commission Approval of the Stock Acquisition by Santa Fe and Pennsylvania Pursuant to Section 5 of the Interstate Commerce Act .. 55

V. Appellant Was Accorded an Adequate Judicial Review by the District Court 61

ON APPEALS FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA.

BRIEF FOR APPELLEES, THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY, THE PENNSYLVANIA RAILROAD COMPANY AND PENNSYLVANIA COMPANY.

This brief is submitted jointly by The Atchison, Topeka and Santa Fe Railway Company, The Pennsylvania Railroad Company and Pennsylvania Company, appellees herein, the successful applicants in the proceeding before the Interstate Commerce Commission which is here under review. The three cases to which this brief is addressed (Nos. 12, 27 and 28) are direct appeals by Minneapolis & St. Louis Railway Company and the States of South Dakota and Minnesota and their respective utility commissions from the order of the District Court for the District of Minnesota, Fourth Division, dismissing the complaint in *Minneapolis & St. Louis Ry. Co.* v. *United States*, 165 F. Supp. 893 (R. 91-105).[1] By its decision the District Court in effect sustained the order of the Interstate Commerce Commission in *Toledo, Peoria & Western R. Co. Control*, 295 I. C. C. 523 (R. 17-49), authorizing Santa Fe and Pennsylvania, through its subsidiary, Pennsylvania Company, to acquire joint control of Western by purchase of its stock and dismissing appellant's application to acquire control.

1. The respective parties and other railroads involved will be referred to hereafter as follows:

The Atchison, Topeka and Santa Fe Railway Company	Santa Fe
The Pennsylvania Railroad Company	Pennsylvania
Minneapolis & St. Louis Railway Company	Appellant or Minneapolis
Toledo, Peoria & Western Railroad Company	Western
The New York, Chicago & St. Louis Railroad Company	Nickel Plate
Chicago, Rock Island & Pacific Railroad Company	Rock Island
Chicago, Burlington & Quincy Railroad Company	Burlington
Wabash Railroad Company	Wabash
The Monon Railroad	Monon

STATEMENT OF THE CASE.

The statement of the case in appellant's brief (pp. 4-14) is more of an argument than a statement of the facts. It seems necessary, therefore, to describe briefly the factual background of the case and the proceedings below.

Western's Transportation Function.

Western's line is about 240 miles in length extending across Illinois from Effner at the Indiana border through Peoria to Lomax, Illinois, and Keokuk, Iowa (See Map, Appendix A). Western's general offices, as well as its shops and yards, are at East Peoria.

Western connects at Effner with the line of the Pennsylvania to Logansport, Indiana, and east. It is, in effect, merely an extension of that line. On the west it connects with the main line of the Santa Fe at Lomax and with the Rock Island and Burlington at Keokuk. In the Peoria area, it connects with a number of railroads, including the Burlington, Rock Island and Minneapolis from the west and the Nickel Plate and New York Central from the east. It has connections with a total of 16 railroads (See Exhibit 6 to Santa Fe-Pennsylvania application: R. 149).

Western's line through Peoria forms a short, direct bridge route between the east and the west, bypassing the congested terminals of Chicago and St. Louis (R. 21). Western has capitalized upon its strategic location by maintaining a policy of strict neutrality between all its connections and rendering fast, dependable service as a bridge carrier (R. 21). As a result, more than two-thirds of its revenues are derived from bridge traffic (R. 22). In another recent case Western was described as "a valuable link for transcontinental shipments" occupying "a

particularly important position in the Nation's transportation system". See *Illinois-Missouri Terminal Ry. Co. Purchase*, I. C. C. Finance Docket No. 18752 (sheets 43-44 of mimeographed report, dated April 2, 1956).

Relationship with the Competing Applicants.

Western's relations with all its principal connections are in part complementary and in part competitive. This is true of Santa Fe and Pennsylvania—and Minneapolis, as well.

Santa Fe's line extends to Chicago, but does not reach Peoria or St. Louis. Pennsylvania serves both Chicago and St. Louis. Although they have ordinarily solicited for their long hauls through Chicago and St. Louis, both Santa Fe and Pennsylvania have realized the value of Western's route and have played a major part in its development (R. 34). Western provides a vital link for fast, through service between the lines of the Santa Fe to the Southwest and Pacific Coast and the lines of the Pennsylvania extending throughout the industrial East (R. 45). Western's success as a bridge line dates from the construction of its connection with the Santa Fe at Lomax in 1927 (R. 21). It is undisputed that since that time—for more than 30 years—Santa Fe and Pennsylvania have cooperated with Western in coordinating their schedules and services to provide a fully competitive service via Western's route (R. 21-22). The value of their contribution to the development of Western's route was recognized by a number of large shippers using this route (R. 46); and it was demonstrated by the greatly increased use of their connecting services during World War II (Ex. H-5, pp. 11-12; R. 46, 1644-45). As a result of this cooperation Western's interchange with Santa Fe and Pennsylvania accounts for about 70 per cent of its interline traffic and revenues and two-thirds of its total traffic (R. 22).

Western receives its long haul on traffic interchanged with the Santa Fe and Pennsylvania at Lomax and Effner, but most of its interchange with its other connections is at Peoria near the center of its line (R. 45, 21). Minneapolis, which connects with Western at Peoria, competes with the latter for traffic moving west of Peoria (R. 1207-08). Its line is complementary only to that part of Western's line extending east from Peoria to Effner. There are several other routes through the Peoria gateway which do not include Western's line; and the traffic Minneapolis handles via the competitive routes formed by its line and the Nickel Plate and New York Central (Peoria and Eastern), respectively, is more than double that which it interchanges with Western (Ex. H-128, pp. 1-3; R. 1590, 2001-04).

Negotiations for the Purchase of Western's Stock.

Appellant's treatment of the negotiations for purchase of Western's stock is in no sense a statement of the facts. It is not only argumentative, but it makes no reference to the findings of the Commission which are in direct conflict with much of what is said. Nor does it refer to the evidence on which those findings are based.

Appellant's arguments with respect to these matters are dealt with fully in our reply to the contention that the stock purchase negotiations involved a violation of Section 10 of the Clayton Act (15 U. S. C. 20). It should be sufficient here to point out that Santa Fe, on May 25, 1955, and shortly thereafter, entered into contracts to purchase all of Western's stock from the holders thereof. These contracts were expressly made subject to the approval of the Interstate Commerce Commission.

Proceedings before the Interstate Commerce Commission.

Having contracted to buy all of Western's stock, Santa Fe on June 28, 1955, agreed, subject to Commission approval, to sell 50 per cent of Western's stock to Pennsylvania Company, a wholly owned subsidiary of the Pennsylvania. Thereafter Santa Fe, Pennsylvania and Pennsylvania Company filed a joint application seeking Commission approval under Section 5(2) of the Interstate Commerce Act (49 U. S. C., Sec. 5), for Santa Fe and Pennsylvania Company each to acquire and hold 50 per cent of the Western stock.

Minneapolis filed a similar application seeking Commission approval of its proposal for sole acquisition of Western's stock.

The two applications were considered at a consolidated hearing before a Commission examiner at Peoria, Illinois. The hearing was an extended one, from February 1 to 14, 1956. Numerous witnesses were heard and many exhibits received in evidence. Several other railroads intervened in the consolidated proceeding to protect their interests. Four of these, the Rock Island, Nickel Plate, Burlington and Wabash, sought authority, under varying circumstances, to participate equally in the ownership of Western with any carrier or carriers that might be authorized to acquire it.

The examiner issued a proposed report recommending approval of the Santa Fe-Pennsylvania acquisition and rejection of appellant's application.

Thereafter, upon exceptions and replies to exceptions to the proposed report, the case was argued orally before Division 4 of the Commission (Commissioners Mitchell, Arpaia, and Winchell). Division 4 issued a comprehensive report approving the application of Santa Fe-Pennsylvania and rejecting that filed by appellant.

The Commission was confronted, for present purposes, with two diametrically opposed plans. Santa Fe-Pennsylvania proposed the continued operation of Western as a separate carrier under its present service and traffic policies so as to preserve Western's unique function as a short, direct east-west bridge carrier. It was supported by many interveners, including the cities and towns served by Western from one end of the line to the other,[2] leading civic and business organizations, shippers located in the area served by Western, and The Railway Labor Executives Association (representing Western's employees). Other shippers, both local and off-line, appeared and testified in support of the Santa Fe-Pennsylvania application.

Appellant's application, on the other hand, contemplated a complete departure from the policies on which Western's success was based. Instead of operating as a separate bridge carrier working closely with all its connections, Western would be integrated into Minneapolis for ownership, management and operation and its headquarters and shops would be moved from Peoria. The traffic policies of the combined operation would be aimed at increasing the volume of traffic moving over the Minneapolis line extending northwest from Peoria.

Appellant's proposal was supported only by the states of Minnesota and South Dakota. It was strongly opposed by the State of Illinois. No shippers or local community interests lent their support.

In approving the Santa Fe-Pennsylvania application, the Commission found that "public interest demands that the present policies of Western in all respects be continued" (R. 45). Those policies would only be continued under the

2. Communities which intervened were Keokuk, Iowa, and Warsaw, LaHarpe, Lomax, Bushnell, Canton, Peoria, East Peoria, Eureka, Secor, Gridley, Chenoa, Fairbury, Forrest, Gilman, Watseka and Sheldon, Illinois.

Santa Fe-Pennsylvania plan. In rejecting the Minneapolis application the Commission found that it contemplated "the disappearance of Western as an independent and neutral connection for the other 15 carriers with which it presently works" (R. 30); that the policies contemplated by Minneapolis "would be extremely harmful to other carriers" (R. 32), and that most of the proposed economies "would be effected at the expense of Western's employees" (R. 32).

Appellant's petition for reconsideration was denied by the full Commission.

Proceedings in the District Court.

The description in the appellant's brief (pp. 13-14) of the proceedings in the District Court is neither complete nor accurate. It fails to point out that the State of Illinois, the City of Peoria, the Peoria Association of Commerce, as well as the municipalities and their civic and commercial organizations along Western's entire route, intervened to defend the Commission's order.[3] And the characterization of the District Court's opinion is both argumentative and inaccurate.

Appellant raised four main contentions before the District Court. In its opinion dismissing the complaint, the District Court rejected these contentions, holding: (1) that Section 10 of the Clayton Act (15 U. S. C. 20) did not appear to be applicable to the situation here involved and that, in any event, it was not a bar to approval because the authority of the Commission in the premises is made exclusive and plenary, regardless of the anti-trust laws, by express provision of Section 5(11) of the Interstate Commerce Act (R. 98-99); (2) that the Commission gave due consideration to the effect of the acquisition on the com-

3 These interests are now appellees in this Court.

petitive situation in the light of this Court's ruling in *McLean Trucking Co. v. United States*, 321 U. S. 67 (R. 99-102, 103-104); (3) that the advantages and disadvantages of the two competing applications were weighed and considered in the light of the public interest and that the Minneapolis application, therefore, was not denied comparative consideration (R. 102-103); and (4) that the Commission's order was based on adequate findings supported by substantial evidence (R. 105).

QUESTIONS PRESENTED

Appellant's statement of the "Questions Presented" is nothing more than an outline of argument. Briefly, the questions presented are:

1. Is the Commission's decision consistent with the standards of Section 5 of the Interstate Commerce Act and the National Transportation Policy and was appellant accorded a fair hearing under the circumstances of the case?

2. Is the Commission's order based upon adequate findings and are the findings supported by substantial evidence?

3. Do any of the considerations involved in Section 1 of the Sherman Act and Section 7 of the Clayton Act require judicial rejection of the Commission's order?

4. Is Section 10 of the Clayton Act a bar to Commission approval of the Santa Fe-Pennsylvania application?

5. Was appellant accorded an adequate review by the District Court?

SUMMARY OF ARGUMENT.

1. The Commission's approval of the Santa Fe-Pennsylvania application to acquire control of Western was a proper exercise of its administrative discretion and within the scope of its statutory authority. The report recognizes Western as a successful working organization which has proved itself by rendering a valuable public service to the communities it serves, to the shippers who use its services, and to the 16 railroads with which it connects. Western today plays an important part in the nation's transportation system as a short, direct east-west bridge line working closely with all its connections to provide a vital link for the fast through service which is becoming increasingly important not only to shippers, but to the railroads as well, in meeting the competition of other modes of transportation. By its decision the Commission has recognized the "valuable transportation service" provided by Western and the important part Santa Fe and Pennsylvania have played in its development. It has concluded that separate operation of Western under their joint control will insure the continuance of this vital service in the pattern and under the policies that have proved so successful in the past and with excellent prospects for future growth and development. These public benefits can be assured without adversely affecting the service or economic welfare of other railroads; and the interests of Western's employees will be fully protected.

Thus the Commission's determination reflects full consideration of the effect of the proposed acquisition on adequate transportation service, on other carriers and on Western's employees as required by Section 5 of the Interstate Commerce Act. It also squares with the National Transportation Policy and its objectives of fostering "sound economic conditions in transportation and among

the several carriers" and of "developing, coordinating and preserving" an adequate national transportation system.

The Commission's report reflects consideration of the interests of all parts of the public directly concerned with Western's future, including the interests of appellant. Appellant's competing application was fully considered. The alleged benefits of appellant's plan for integrating Western into its own operations, including the proposed economies and service changes, were weighed against the adverse effects on Western's employees and on the other railroads connecting with Western. These considerations and the fact that appellant's plan contemplated the disappearance of Western as a separate and neutral connection for the other 15 carriers with which it presently works, led to the rejection of the Minneapolis application. The District Court properly held that the balancing of these factors is for the Commission, not the courts.

The Commission's conclusion that Western's present policies toward its connections will be continued under Santa Fe-Pennsylvania control is supported by findings which demonstrate that it will be in the self-interest of Santa Fe and Pennsylvania to continue such policies and by the checks and balances which the Commission found to be inherent in the control of an east-west bridge carrier, such as Western, by an eastern and a western railroad, respectively. Appellant's assertion that it would maintain a policy of neutrality if permitted to gain control of Western is belied by its specific plan to divert traffic from Western's other connections to its own line extending north and northwest from Peoria.

2. Appellant's argument that the Commission failed to make findings on material issues simply ignores the findings actually made. The Commission specifically recognized the benefits Santa Fe and Pennsylvania receive from Western's route, their economic interest in its future develop-

ment and the major part they have played for over 30 years in providing the connecting services which have made its present development possible—to the point where today the traffic interchanged with Santa Fe and Pennsylvania amounts to about two-thirds of Western's total traffic.

Appellant also attacks a number of unrelated findings on the ground that they are not supported by the record. In doing so appellant ignores or misconstrues the substantial evidence on which these findings are based. This is discussed in some detail in Section II of the Argument.

3. The decision of this Court in *McLean Trucking Co.* v. *United States* makes it clear that the Commission is not required to measure a proposed acquisition under Section 5 of the Interstate Commerce Act by the standards of the antitrust laws. Pursuant to the Court's ruling in that case the Commission analyzed the effects of the proposed acquisition on the competitive situation in practical and concrete terms and concluded that the benefits to be derived from the operation of Western under the control of Santa Fe and Pennsylvania will be in furtherance of the overall national transportation policy and that there will be no undue curtailment of competition. More than one-third of the report is devoted to a discussion of the various factors bearing on the competitive situation.

Appellant's charge that the acquisition of Western by Santa Fe and Pennsylvania will lead to the monopolization of east-west gateways and suppression of the Peoria gateway is without support in the record. There are too many available routes through the Chicago, St. Louis and Peoria gateways to permit monopolization. The suggestion that Santa Fe and Pennsylvania would use their control of Western to suppress the Peoria gateway to the advantage of the other gateways is contrary to the evidence and the Commission's findings. Any attempts at suppression of Western would only divert Western's traffic to other avail-

able routes. Moreover, in view of the benefits Santa Fe and Pennsylvania receive from Western's route and their record of 30 years' cooperation with Western in developing traffic over that route, it is only common sense to conclude that the future of Western under their joint control will be one of continued growth and development. It defies common sense to assert, as does appellant, that having spent 30 years in helping to build up Western to its present position, the Santa Fe and Pennsylvania are now seeking to acquire control of Western in order to destroy it.

The charge that the joint acquisition of Western by Santa Fe and Pennsylvania will increase their "monopolistic power" is also without support in the record. There is no evidence of monopolistic power; and no combination or merger of Santa Fe and Pennsylvania is involved in such acquisition. As an eastern and a western railroad, respectively, they cannot afford to work together to the detriment of their other respective connections on the east and on the west.

4. Section 10 of the Clayton Act is not applicable to the transaction here involved and even if it were applicable, it would not constitute a bar to the Commission's approval of the acquisition of Western by Santa Fe and Pennsylvania. The Commission's authority under Section 5 of the Interstate Commerce Act is exclusive and plenary and neither the antitrust laws nor any other provisions of law can operate as a bar to the consummation of a transaction which has been approved by the Commission.

ARGUMENT.

I.

THE COMMISSION'S DETERMINATION OF THE PUBLIC INTEREST REFLECTS FULL CONSIDERATION OF THE TWO COMPETING APPLICATIONS. IT IS CONSISTENT WITH THE STANDARDS OF SECTION 5 AND THE NATIONAL TRANSPORTATION POLICY AND DID NOT DEPRIVE MINNEAPOLIS OF A FAIR HEARING.

Appellant says that the Commission adopted the "false" standard of "separate and independent management" to determine the public interest; that this standard collides with the National Transportation Policy; and that it was a "predetermined" standard which "automatically" excluded Minneapolis and deprived it of a fair hearing.

The term "separate and independent management" is set out in quotation marks in appellant's brief, but it appears nowhere in the Commission's report. What the Commission referred to was "separate and independent *operation*" (R. 31, 26), a well-understood concept in the railroad field. The distinction may seem slight, but it is significant.

By coining this term here for the first time,[4] appellant creates a straw man, which it proceeds to demolish by pointing out that the management of a controlled carrier cannot be entirely independent of its owners. Of course, no such contention was ever advanced.

The concept of "separate and independent operation" does not have its source, as appellant contends, in the contract between Santa Fe and Pennsylvania. Nor is it true,

4. In its Jurisdictional Statement (p. 23), appellant used the correct term: "separate and independent operation".

as appellant states, that it cannot be found in any "published authority" (brief, p. 19). The concept is not a new one and it is reflected in the published reports of the Commission. In a number of cases, which reflect its experience over the years in the administration of Section 5 of the Interstate Commerce Act, the Commission has recognized that separate operation of a controlled carrier under its own local management is an effective factor in preserving existing traffic relationships with connecting lines and insuring continued neutrality in service.[5] This has been demonstrated by actual experience in the case of the Wabash as the Commission noted in *Detroit, Toledo & Ironton R. Co. Control*, 275 I. C. C. 445, 490 (1950). And as far back as 1924 the Commission imposed a condition requiring separate operation of the Clinchfield Railway, which like Western, was a bridge line connecting with a number of other railroads. *Clinchfield Ry. Co. Lease*, 90 I. C. C. 112, 132-133 (1924).

But the Commission's concept of the controlling public interest in this case was not just separate operation as such. It went much deeper than that as a review of the Commission's report will show.

A. The Report Shows that in Arriving at Its Determination of the Public Interest the Commission Gave Full Consideration to the Two Competing Applications, As Well As to the Other Interests Involved.

The Commission was confronted with two radically different proposals for the future operation of Western's line. Santa Fe and Pennsylvania proposed the continued operation of Western as a separate carrier under its present local

5. *Wheeling & L. E. Ry. Co. Control*, 267 I. C. C. 163, 176 (1946); *D. T. & I. R. Co. Control*, 275 I. C. C. 455, 490, 491-92 (1950); *Pacific Coast R. Co. Control*, 282 I. C. C. 600, 607 (1951); *Spokane International R. Co. Control*, 295 I. C. C. 425 (1956).

management and its present service and traffic policies. The Minneapolis proposal for integrating Western's line into its own operations in the interest of economy involved the disappearance of Western as a separate and neutral connection for the other 15 carriers with which it presently works. In addition to these two proposals the Commission had to consider the applications of four other railroads, the Nickel Plate, Rock Island, Burlington and Wabash, for inclusion in the transaction under varying circumstances (R. 25).

The problem, then, was what should be done with Western—under which proposal would it best serve the nation's transportation system? In resolving this problem the Commission was to be guided by the specific statutory standards of Section 5(2) of the Interstate Commerce Act and by the more general provisions of the National Transportation Policy.

The standard of Section 5(2) (b) is the broad one of consistency with the public interest; and in passing on any proposed transaction the Commission is specifically directed by Section 5(2)(c) to give weight to: (1) its effect on adequate transportation service; (2) the effect of including, or failing to include, other railroads; and (3) the interest of the carrier employees affected. 49 U. S. C. § 5 (2) (b) and (c).

Objectives of the National Transportation Policy, which are relevant here, are: (1) the promotion of safe, adequate, economical and efficient service; (2) the fostering of sound economic conditions in transportation and among the several carriers; and (3) the encouragement of fair wages and equitable working conditions—all to the end of developing, coordinating and preserving an adequate national transportation system. 49 U. S. C. preceding § 1.

In applying these broad standards to a given case the

Commission, as "the agency that is expert in the field," must resolve such conflicts as may exist in the light of the overall public interest. *Schaffer Transportation Co.* v. *U. S.*, 355 U. S. 83, 92 (1957). A brief review of the Commission's report will show that that is what was done in this case.

The report begins by describing Western; the important place it occupies in the nation's transportation system as a strategically located east-west bridge route; the policy of neutrality toward all its connections by which it attained that position; its excellent local management; and the important part Santa Fe and Pennsylvania have played in Western's development (R. 20-22).

The report then describes the principal railroads involved, their relations with Western and the various proposals for control of Western (R. 25-30).

Following this the report turns to the Minneapolis and reviews in detail its plan for integrating Western's line with its own railroad, the substantial economies which Minneapolis expects to achieve, and the plan for establishing new service routes east of Peoria which is designed to divert traffic from Western's other connections to the Minneapolis line extending north and west of Peoria. The report points out that the Minneapolis proposal unequivocally contemplates the disappearance of Western as an independent and neutral connection for the other 15 carriers with which it presently works. It also states that most of the proposed economies will be at the expense of Western's employees and that the proposed new service routes would be extremely harmful to the other carriers (R. 30-33).

Turning to the Santa Fe-Pennsylvania proposal for continued operation of Western as a separate carrier under its present local management and present policies, the report analyzes the claims of traffic diversion by Minneapolis

and others and concludes that Santa Fe-Pennsylvania control would be in furtherance of the overall national transportation policy and would not jeopardize the traffic of the other carriers or unduly curtail competition (R. 33-39). The report notes the valuable transportation service Western is now furnishing, the support of the Santa Fe-Pennsylvania application by Western's employees, the general insistence by shippers and by the communities along its line that its present status be maintained and the importance to Western of the connecting service of Santa Fe and Pennsylvania in providing a fast transcontinental route competitive with other modes of transportation and concludes that the public interest demands "that the present policies of Western in all respects be continued" (R. 44-45).

The request of other carriers for inclusion in the control of Western is rejected because diffusion of control would lessen the incentive of Santa Fe and Pennsylvania for the future development of Western and because it is not necessary to protect their traffic. In this connection the report points to the opportunities for future development of Western's territory and other advantages flowing from Santa Fe-Pennsylvania ownership and concludes finally that on the basis of all the considerations disclosed in the report the application of Santa Fe and Pennsylvania should be granted in preference to that of Minneapolis (R. 45-49).

From this outline of the report it is apparent that the controlling consideration in the Commission's view of the public interest was the need for preserving Western's status as a separately operated bridge line working closely with all its connections. The key finding, as the District Court recognized (R. 104), was that "Public interest demands that the present policies of Western in all respects be continued" (R. 45).

This was not a "predetermined conclusion" reached "at the outset" to automatically exclude Minneapolis as the

latter contends (brief, pp. 19-32). As the District Court pointed out, the report shows that this conclusion was reached after consideration of the evidence and the contentions of all parties to the proceeding, including Minneapolis (R. 102-104).

B. The Findings on Which the Commission Based Its Approval of the Santa Fe-Pennsylvania Application Are Consistent With the Standards of Section 5 and the National Transportation Policy.

The Commission's conclusion that the public interest will best be served by the continued operation of Western as a separate carrier under its present policies is supported by a number of specific findings throughout the report. These findings reflect the unique part Western plays in the nation's transportation system and the general insistence, by all parts of the public most directly concerned, that Western's separate operating status and present policies be continued.

Thus the Commission found that Western has capitalized on its strategic location as an east-west bridge carrier through Peoria by its policy "to maintain strict neutrality between all connections, and to participate in any haul of traffic no matter how slight" (R. 21). More than two-thirds of its revenues are derived from bridge traffic (R. 22). "Western, as a direct east-west line, supplies the shortline connection" for providing the type of through service which is becoming increasingly important "not only to the shipping public but to the railroads as well" in competing with "the other modes of modern transportation" (R. 45).

This is not the first time that the Commission has recognized the important part Western plays in the nation's transportation system. In *Illinois-Missouri Terminal Ry.*

Co., Purchase, I. C. C. Finance Docket No. 18752 (1956), the Commission described Western as follows:

> "Although only 231 miles long, *the Toledo, Peoria & Western occupies a particularly important position in the Nation's transportation system* as it forms a short, direct bridge route between the east and west which avoids the congested areas of Chicago and other major gateways. Modern equipment, dependable and convenient schedules, connections with all main lines, and complete icing and livestock facilities make the Toledo, Peoria & Western a valuable link for transcontinental shipments * * *" (Sheets 43-44 of mimeographed report, dated April 2, 1956). (Emphasis supplied.)

Thus Western, as presently constituted, has proved itself as a "well-managed, independently operated railroad furnishing a valuable rail transportation to the public" (R. 44). Those who have a real stake in its future have insisted, therefore, that its present pattern of operation and its present policies must be continued.

This is true of the intervening railroads, which are among its principal interchange connections (R. 31). It is true of the off-line shippers who use Western as a bridge line for through traffic (R. 31, 46); and the communities and local shippers along Western's line who benefit from the present ready access to local management and the excellent local service which has been made possible by Western's success as a bridge line (R. 31, 44-45, 46-47, 369). It is true of the cities in the Peoria area which have a direct and vital interest in the retention of Western's headquarters and general offices in East Peoria and in preserving employment for their citizens (R. 31, 21, 47). It is true of Western's employees whose jobs are at stake (R. 32, 44). Only Minneapolis and its two supporting intervenors, South Dakota and Minnesota, advocated "the disappearance of Western as a separate and independent operating carrier" (R. 31).

The proposed acquisition of Western by Santa Fe and Pennsylvania is entirely consistent with the concept of the overall public interest expressed in the above findings. This is demonstrated by many specific findings relating to the Santa Fe-Pennsylvania plan for the future operation of Western.

Under their proposal Western would continue to function as a separate carrier under its present local management and under the traffic and service policies which have contributed so much to its success (R. 24). This plan reflects the natural community of interest resulting from the geographical location of Western as an important link between the Santa Fe on the west and the Pennsylvania on the east in providing fast through service via the Peoria gateway (R. 45).[6] Thus Western receives its long haul on traffic interchanged with Santa Fe and Pennsylvania, while its interchange with most of its other connections, including appellant, is in the Peoria area at the center of its line (R. 45, 21). Much of Western's success as a bridge line dates from the construction of Western's connection with the Santa Fe at Lomax in 1927 (R. 21). Since that time Santa Fe and Pennsylvania have cooperated with Western in coordinating their schedules and services to provide a

6. This natural community of interest was recognized by the various railroad consolidation plans which generally allocated Western to a system based on Pennsylvania and, in one instance, divided it between Pennsylvania and a system based on the Santa Fe (Ex. II-14, pp. 9-11; R. 566, 4694-96). It was also recognized by the Office of Defense Transportation which seriously considered having Santa Fe and Pennsylvania take over a strike-bound Western during World War II (R. 363-64).

The importance of the Santa Fe—Western—Pennsylvania route was convincingly demonstrated by the greatly increased use of Santa Fe and Pennsylvania's connecting services in World War II. Between 1939 and the peak war year, 1944, Western's total traffic increased 62 per cent; its overhead or bridge traffic increased 91 per cent; and its interchange with Santa Fe increased 142 per cent and with Pennsylvania, 105 per cent (Ex. II-5, pp. 11-12; R. 462, 644-45).

fully competitive service over Western's route (R. 21-22, 46). Service, as the Commission found, is the most important factor affecting the routing of traffic (R. 34). As a result, Santa Fe and Pennsylvania account for about 70 per cent of Western's interline traffic and revenues (R. 22).

The Commission noted the strong shipper support for the Santa Fe-Pennsylvania application based on this long record of superior service in connection with Western, as well as the support by the communities along Western's line and by Western's employees (R. 46, 47, 44). The Commission thoroughly analyzed the effect of the acquisition on competing carriers and concluded that there would be no undue curtailment of competition (R. 33-39). It found that the self-interest of Santa Fe and Pennsylvania would provide assurance that Western's solicitation and service policies would be continued (R. 35, 39). It found that the checks and balances inherent in the control of Western, as an east-west bridge line, by Santa Fe and Pennsylvania, together with prescribed routing conditions, would protect Western's other rail connections from impairment of service or discriminatory solicitation (R. 46, 40-41).

The Commission found other advantages in Santa Fe-Pennsylvania control. These included increased traffic for Western under the joint applicants' plan to place Effner and Lomax, where they connect with Western, on a association parity with Chicago (R. 34); stimulation of industrial development in the area served by Western (R. 46, 47); technical assistance in the realization of economies in operation, advantages in purchasing and the assurance of a more adequate supply of freight cars for Western (R. 47).

In the light of the findings outlined above the District Court properly concluded that it could not substitute its judgment for that of the Commission on the broad policy

question of the public interest. The "wisdom and experience" of the Commission, not of the courts, must determine whether the proposed transaction is in the public interest. *McLean Trucking Co. v. United States*, 321 U. S. 67, 87-88 (1944).

As the Commission's report shows, Western is not just a corporate entity or a physical plant. It is a successful working organization which has proved itself by rendering a valuable public service to the communities it serves, to the shippers who use its services and to the 16 railroads with which it connects. By its decision the Commission has recognized the "valuable transportation service" provided by Western and the important part Santa Fe and Pennsylvania have played in its development. It has concluded that separate operation of Western under their joint control will insure the continuance of this vital service in the pattern that has proved so successful in the past and with excellent prospects for future growth and development. These public benefits can be assured without adversely affecting the service or economic welfare of other railroads. And the interests of Western's employees will be fully protected.

These considerations provide ample justification for the Commission's ultimate finding that the control of Western by Santa Fe and Pennsylvania will be consistent with the public interest. Certainly this determination is within the permissible scope of the broad authority granted to the Commission by Section 5(2)(b) of the Interstate Commerce Act. It reflects full consideration of the effect of the proposed transaction on adequate transportation service, the effect on the other carriers, and the interests of the affected employees, as directed by Section 5(2)(c).

The decision to preserve Western's important function in the nation's transportation system as a separately operated bridge railroad linking the east and the west and

working closely with all its connections squares with the National Transportation Policy and its objectives of fostering "sound economic conditions in transportation and among the several carriers" and of "developing, coordinating and preserving" an adequate national transportation system. It is also consistent with this Court's statement in *New York Central Securities Corp. v. United States*, 287 U. S. 12, 25 (1932), that the broad criterion of the public interest has direct relation to the "best use of transportation facilities".

C. The Alleged Advantages of the Minneapolis Application Were Appropriately Balanced Against the Other Factors Bearing on the Public Interest.

Appellant characterizes the Commission's concept of the public interest as a "false, artificial and meaningless" standard which was "selected in advance" and "calculated from the outset" to secure the award to the successful applicants. This "one-sided" procedure is said to be similar to that condemned in *Schaffer Transportation Co. v. United States*, 355 U. S. 83 (1957), where an application for a proposed new truck service was denied solely on the ground that the existing rail service was adequate. But what this Court condemned in *Schaffer* was the failure to balance the alleged advantages of the proposed service against the other factors bearing on the issue of public convenience and necessity in the light of the National Transportation Policy. There was no such failure here.

Appellant lays great stress on the economies that could be effected under its plan to integrate Western's line with its own operations, but these were not ignored. The Commission described them in considerable detail, but found that they would be largely at the expense of Western's employees (R. 32). It also found that the plan of integra-

tion which was essential to the realization of these economies meant the disappearance of Western as a separate and neutral connection for the other 15 carriers with which it presently works (R. 30).

Economies are an important consideration in determining the public interest but they are not of "controlling importance". *Virginian Ry. Co. Control*, 117 I. C. C. 67, 75 (1926). Section 5(2)(c) of the Interstate Commerce Act specifically directs the Commission to give weight to the interest of employees in determining consistency with the public interest. This is wholly apart from the obligation, imposed by Section 5(2)(f), to attach specific conditions relating to job protection or dismissal pay to any order of approval. *Fort Worth & D. C. Ry. Co. Lease*, 247 I. C. C. 119, 125-27 (1941). In *Florida East Coast Ry. Co. Reorganization*, 267 I. C. C. 295, 325 (1947), the Commission said that the interests of employees in "changes of management, ownership and operation" of companies by which they are employed are of public as well as private interest.

In this case the interest of Western's employees in the retention of their jobs at Peoria coincides with the interests of the shipping public, the communities served by Western and Western's other rail connections in its continued operation as a separate carrier under its present management and its present policies. Certainly the balancing of these interests against the economies which could be realized from the unified operation of Minneapolis and Western is a task committed to the Commission, not to the courts. The District Court so held (R. 103).

Again in considering the service aspects of the Minneapolis plan the Commission also considered the interests of the other carriers connecting with Western. The Minneapolis plan for establishing new service routes via Western was admittedly designed to divert traffic from Western's other connections to the Minneapolis line extending north

and northwest from Peoria. This would be a complete departure from Western's policy of working closely with all its connections and the Commission found it would be extremely harmful to the other carriers (R. 30, 31-32).[7] Again, as the District Court held, the balancing of these interests was for the Commission (R. 102-103).

Appellant stresses its financial difficulties prior to its reorganization more than 20 years ago and suggests that the Commission should have permitted it to acquire Western in order to strengthen its line (brief, p. 28). South Dakota and Minnesota join in this contention. Inefficient operation and excessive debt, however, were the causes of appellant's earlier difficulties. See *Associated Rys. Co. Acquisition and Securities*, 228 I. C. C. 277 (1938). Since 1936 the picture has changed entirely. The Commission found that earnings since 1936 have permitted the development of Minneapolis into a modern and efficient operating plant, relatively free from debt, and that it is now a reasonably prosperous railroad with a financial and physical picture that has been steadily improving over the past few years (R. 27-28). The Commission also found that control by Santa Fe and Pennsylvania would not result in the diversion of appellant's traffic (R. 35-37). As the District Court pointed out, the advantages which might be realized by appellant through acquisition of Western was only one of the factors which the Commission had to evaluate (R. 102).

Although appellant relies on this Court's decision in *Schaffer*, the contention that its application did not receive comparative consideration is actually based on the failure of the Commission to model its findings after the pattern suggested in *Johnston Broadcasting Co.* v. *F. C. C.*, 175 F. 2d 351, 357 (D. C. Cir., 1949), and to make specific find-

7. Here there was no shipper testimony to evaluate—as there was in *Schaffer*, 355 U. S. at 92. Not a single shipper testified as to the alleged benefits of the proposed new service.

ings as to every difference between the two competing applications (brief, p. 23). But the *Johnston* case dealt with two mutually exclusive applications to do the same thing—to operate a new broadcasting station—and an item by item comparison was appropriate to determine which applicant was better qualified.

Here the Commission was confronted with two radically different proposals for the future operation of an existing railroad, as well as various proposals by other roads for inclusion in control. An item by item comparison was, therefore, impracticable. The controlling question in evaluating the two competing applications was what function Western could best serve in the national transportation system. The Commission concluded that preservation of Western's present function as a separately operated bridge line was preferable to its integration into the Minneapolis line. This conclusion was reached after consideration of the interests of all elements of the public involved, including Minneapolis. Under these circumstances the failure to follow the *Johnston* formula was in no sense a denial of a fair hearing.[8]

Appellant (brief, pp. 29-31) attacks the Commission's finding that Santa Fe and Pennsylvania would preserve Western's present policy of neutrality toward its connecting carriers and contends that it, too, would be neutral—only more so. This argument is made without any reference to the evidence on which the Commission's finding is based. Nor is reference made to the testimony by appellant's vice-president which disclosed the plans for using the control of Western to divert traffic from Western's other connections to the Minneapolis line. In this context, appellant's claim that it was denied comparative considera-

8. A similar approach to a somewhat similar problem by the Federal Communications Commission was upheld by this Court in *F. C. C.* v. *Allentown Broadcasting Co.*, 349 U. S. 358, 361-63 (1955).

tion boils down to a contention that the Commission should have ignored the evidence and decided in its favor.

The Commission's finding, which appellant calls a "highly theoretical assumption", is soundly based on the record and the Commission's own transportation experience.[9] The Commission found that:

> "* * *, No greater protection could be afforded to carriers interchanging traffic with Western than to have ownership divided equally between the largest connecting carrier in the east and the largest one in the west. Under this built-in system of checks and balances, it is inconceivable for the Santa Fe to permit impairment of service or discriminatory solicitation with respect to eastern connections, or the Pennsylvania with respect to western ones * * *." (R. 46.)

This "built-in system of checks and balances" works in two ways:

First, Pennsylvania as an eastern road receives valuable traffic via Western from the latter's connections on the west, such as Rock Island, Burlington and Minneapolis. Santa Fe likewise receives important traffic via Western from eastern roads, such as Nickel Plate and the New York Central. Neither would want Western to be operated in such a way as to lose that traffic (R. 371-72, 575, 581-82).

Secondly, it is a well-known fact that railroads serving the east-west gateways cannot afford to favor one connection to the detriment of others. This was conceded by appellant's freight traffic manager (R. 1137) and it is reflected in the policy of the Nickel Plate (R. 1328-29). It was recognized by the Commission in *Chicago, Burlington & Quincy R. Co. Control*, 271 I. C. C. 63, 154 (1948).

Neither Santa Fe nor Pennsylvania could afford to join in any attempt to divert traffic from Western's other con-

[9] Appellant's suggestion (brief, p. 29) that Western, under Pennsylvania-Burlington ownership, discriminated against its other connections is without foundation in the record or in fact.

nections to routing via Santa Fe and Pennsylvania. If they attempted this, Santa Fe would antagonize all its other eastern connections and Pennsylvania would antagonize all its other western connections, including not only the lines with which each bridges traffic over Western, but also their connections at other east-west gateways which do not connect with Western.

This would be true whether Santa Fe and Pennsylvania attempted to favor each other directly by their own solicitation or indirectly through their control of Western. Perhaps appellant will argue, as it did before the Commission, that other railroads would recognize the right of Santa Fe and Pennsylvania to solicit a long haul for "their subsidiary," Western. But as joint owners of Western, Santa Fe and Pennsylvania would still be an eastern and a western carrier and, as such, they could not afford to work together to the detriment of their respective eastern and western connections.

Appellant asserts that as a small railroad it, too, would have to be neutral (brief, p. 29); but there could be no checks and balances with Western's line integrated into the Minneapolis as one railroad (R. 1325-26). *There would be no Western to observe a policy of neutrality.* The Nickel Plate and Rock Island, as well as the Wabash, offered evidence as to the detrimental effect of the Minneapolis plan on their traffic (R. 1325, 1544-45). This was corroborated by Mr. Nelson, appellant's traffic vice-president, who testified that by integrating Western's line into its service, Minneapolis would obtain "new traffic" by diverting it from the Rock Island, Milwaukee, North Western and Burlington (R. 1200, 1197-98), and by short-hauling the Gulf, Mobile & Ohio, the Chicago & Eastern Illinois, the Illinois Central and the Wabash (R. 1197, 1178-79, 1182-83). Minneapolis would "actively solicit" this traffic to divert it from these lines, all of which are connections of Western (R. 1184,

1199). This would be a far cry from Western's present policy of working closely with all its connections. Certainly the Commission was justified in finding that this policy would be harmful to other carriers (R. 32).

Referring to its own claims of diversion, Minneapolis says (brief, p. 30) that the Commission "brushed off" its "unchallenged" evidence of the loss it would suffer from the Santa Fe-Pennsylvania acquisition. This is somewhat lacking in candor. Reference should at least have been made to the five full paragraphs of the report which the Commission devoted to a careful analysis of this "evidence", which was most definitely challenged (R. 35-37). The analysis speaks for itself and fully supports the Commission's finding that Minneapolis would not be injured.

Appellant concludes its comparative hearing argument by again repeating the irresponsible assertion that the Commssion adopted "in advance" an arbitrary standard that "automatically" excluded Minneapolis (brief, p. 31). The District Court rejected this contention, pointing out that the benefits claimed by Minneapolis were weighed against the interests of Western's other connections, the shippers using its services, the communities along its line and Western's employees (R. 102-103). The public interest is the interest of the "whole public" not just that of Minneapolis.[10] The conclusion that Western could best serve the public as a separately operated bridge carrier working closely with all its connections was in no sense an arbitrary one selected in advance, but was reached after full consideration of the claims of all the interests involved.

II.

ADEQUATE FINDINGS WERE MADE ON ALL MATERIAL ISSUES; AND THE FINDINGS ATTACKED BY APPELLANT ARE SUPPORTED BY SUBSTANTIAL EVIDENCE.

Appellant contends (brief, pp. 32-33) that the Commission failed to observe the requirements of Section 8(b) of the Administrative Procedure Act, 5 U. S. C. § 1007(b). That section provides that all decisions include a statement of the findings and conclusions on all material issues, as well as the reasons or basis therefor. We have already reviewed the findings which explain and support the Commission's concept of the overall public interest in the particular context of this case, pp. 19-20, *supra;* the findings on which the Commission based its conclusion that the Santa Fe-Pennsylvania application was consistent therewith, pp. 21-24, *supra;* and the findings on which the Commission based its rejection ofthe Minneapolis application, pp. 24-30, *supra.* This review, we think, sufficiently demonstrates compliance with the requirements of Section 8(b). However, appellant has devoted a considerable part of its brief to an attack on the manner in which the Commission dealt with a number of specific issues and we shall take them up *seriatim.*

1. *Economies and Service:* Appellant first repeats its contention that there was an "absence of any findings" respecting its economies and service proposals and the alleged benefits "of strengthening Minneapolis" (brief, pp. 33-35). We have already reviewed the findings which reflect the Commission's evaluation of these contentions, *supra,* pp. 24-26. Appellant simply ignores these findings and contends that the Commission erred because it failed to make specific findings as to evidentiary details of its integration program and service proposals. Such a detailed analysis would have served no useful purpose. The

Commission's report clearly recognized the nature and scope of these proposals in weighing them against the other factors bearing on the public interest.

2. *Economic Motivations:* Appellant says the Commission made "no findings" as to the economic motivations of the competing applicants (brief, p. 35). This is not true. The Commission found that appellant sought to acquire Western in order to reap the financial benefits of the economies to be realized through integration of its line with Western and of the added traffic which it expected to obtain for its line north of Peoria by the diversion of traffic from Western's other connections (R. 30, 32-33, 31-32).

On the other hand, the Commission recognized the perfectly legitimate self-interest of Santa Fe and Pennsylvania in cementing their already close relationship with Western when they learned that its stock was to be sold.[11] After pointing to the major part they had played for over 30 years in the development of Western's route (R. 21-22) and to the fact that 70 per cent of Western's traffic was interchanged with them (R. 22) the Commission stated that:

> "* * * The protection of interchange traffic was one of the principal reasons advanced by the applicants, and recognized by us in approving acquisition of control in *Detroit T. & I. R. Co. Control*, 275 I. C. C. 455." (R. 22.)

The considerations which led Santa Fe and Pennsylvania to seek authority to acquire control of Western are significant in a proceeding such as this because they reflect the strong interest of these two roads in the future of Western's route and in the preservation of its primary

11. Section 5(2)(c) implicitly recognizes the interest of a railroad's connecting lines in any proposed acquisition by its provision that in determining the public interest the Commission must give weight to the effect of the inclusion, or failure to include, other carriers in the transaction.

function as a transcontinental bridge line. Santa Fe had seriously considered the acquisition of Western as far back as 1942, when its future was threatened by serious labor difficulties (R. 362-64). And the first discussions with the Pennsylvania about joint acquisition of Western took place at that time (R. 363).

3. Burlington-Pennsylvania Control: Appellant contends that the Commission ignored Western's bankruptcy under Pennsylvania-Burlington ownership more than 40 years ago and that there has been no showing of any change in traffic or transportation conditions which would lead to a different result under Santa Fe-Pennsylvania control (brief, pp. 36-37). The Commission did not ignore Western's former receivership (R. 21) and its findings explicitly recognize the substantial changes which have taken place since that time.

Subsequent developments have proven that what Western lacked then was an effective connection at the western end of its line to complement the Pennsylvania on the east. The Burlington, with an important line directly into Peoria, had no incentive to support the western part of Western's line. The need for an effective connection on the west was met when the interchange with Santa Fe at Lomax was constructed in 1927. As pointed out in the case authorizing that interchange, "the proposed construction will aid in sustaining that part of the applicant's railroad west of Peoria" *Construction by T. P. & W.*, 124 I. C. C. 278, 279 (1927). The soundness of this prediction is amply demonstrated by the Commission's findings as to the successful growth of Western's traffic in cooperation with Santa Fe and Pennsylvania in the more than 30 years since the construction of the Lomax interchange (R. 21-22, 46).

4. *Future of the Peoria Gateway*: Appellant says the Commission made no findings as to the competition with the Peoria gateway provided by Santa Fe's route to Chicago and Pennsylvania's routes to Chicago and St. Louis (brief, p. 40). This is not true. The Commission specifically referred to such competition (R. 33) but found that:

> "Under [Santa Fe-Pennsylvania] control, Western would have an increased opportunity to secure traffic now moving via other gateways. While the Santa Fe and the Pennsylvania ordinarily solicit traffic for their long hauls, they have not worked against Western, and have offered only passive resistance against Lomax and Effner, respectively, in recognition of the benefits they would receive from the Western route. Considering the greater expense of operating through a large congested terminal, Santa Fe and Pennsylvania are just about as well off financially when handling traffic via Western as they would be on the long haul through Chicago. If the Santa Fe obtains a half interest in Western, it intends to place Lomax on a parity with Chicago from a solicitation standpoint, and as the other half owner, the Pennsylvania will recognize Effner as one of its principal interchanges along with Chicago and St. Louis. While the Pennsylvania will continue to solicit its long haul to St. Louis, Effner and Chicago will be on a parity" (R. 34).

Appellant ignores what the Commission said in this finding and attempts to confuse the issue by asserting that Santa Fe and Pennsylvania would not "solicit one pound of freight for Western" and charging that the parity policy was therefore a "hoax" designed to mislead the Commission (brief, pp. 40-42).

The Commission was not misled. It did not find that *Santa Fe* and *Pennsylvania* would solicit freight for Western.[12] It found that under their control *Western*

12. If they did they would alienate their other eastern and western connections, respectively, which do not serve the Peoria gateway. As we pointed out at pages 28-29, *supra*, railroads serving the east-west gateways cannot afford to do this.

"would have an increased opportunity to secure traffic now moving via other gateways"—in other words, by Western's own solicitation efforts.

This is entirely consistent with the parity policy, as explained by Santa Fe's vice president, Mr. Duffy. Under that policy shippers using the Santa Fe will be advised that Santa Fe will be satisfied with routing either via Chicago or via Lomax, where it connects with Western (R. 483). This does not mean that Santa Fe will solicit traffic for Western; but it means that Western's solicitors will be "in a better position to solicit traffic which might otherwise move via the Santa Fe through Chicago" (R. 483-84, 494-95, 496-97).

Conversely, Pennsylvania, while it will continue to solicit for its long haul to St. Louis, will place Effner, where it connects with Western, on a parity with Chicago and thus increase the opportunity of Western's solicitors to secure traffic now moving via the Pennsylvania to Chicago. Pennsylvania's traffic vice-president, Mr. Carpi, so testified (R. 582, 607) and President Symes' testimony, when read in its entirety, is not in conflict with this finding (R. 557-58 as well as R. 521-22).

Contrary to appellant's assertion (brief, pp. 41-42), the testimony of Western's president, Mr. Coulter, supports the Commission's finding. His testimony recognizes that while Santa Fe and Pennsylvania will not solicit for Western, their policy of placing Lomax and Effner on a parity with Chicago will make additional reservoirs of traffic "available" to Western's solicitation efforts (R. 1582-83, 1600).[13] Certainly it cannot be said that the record

13. Mr. Coulter did not state, as appellant says (brief, p. 41), that under this policy Pennsylvania would still seek its long haul to Chicago or St. Louis. He said that is Pennsylvania's "present policy", but that it will be changed "to put Chicago and Effner on the same basis, on a parity, which is not the case today" (R. 1600).

lacked substantial evidence to support the Examiner's parity findings, which was adopted by the Commission.

Appellant says, however, that Santa Fe and Pennsylvania lack any incentive to develop Western's route (brief, pp. 42-43). Such incentive is not lacking.

The only economic justification for Pennsylvania's line west of Logansport, Indiana, is its connection with Western at Effner. Thus the Commission found that Pennsylvania has consistently favored interchange with Western at Effner, rather than interchange with its own subsidiary, the Wabash at Logansport (R. 43-44). When Pennsylvania interchanges traffic with Western at Effner it saves the expense of the longer haul to Chicago and avoids the congestion and switching expense at Chicago (R. 575-76, 474). The divisions it receives out of the through rates are, generally speaking, not substantially less than those it receives for a haul to Chicago (Ex. H-10, pp. 5-6; R. 508, 1670-71) and when half of Western's divisions are added to reflect its proposed 50 per cent interest in Western it will generally fare better via Effner than via Chicago (Ex. H-34, pp. 1-41; R. 1163, 1770-1810 and Ex. H-36, pp. 1-36; R. 1163, 1818-1853).

Santa Fe has a particularly strong interest in Western's route through Peoria because it does not reach the Peoria or St. Louis gateways, while its western competitors, the Rock Island and Burlington, serve the Chicago, Peoria and St. Louis gateways directly (R. 481). The movement of traffic via Western enables Santa Fe to obtain a long haul through Lomax on traffic which might otherwise move via St. Louis; in which event, Santa Fe could receive no haul east of Kansas City and might lose the traffic entirely, as the Commission found (R. 38 and see R. 481-83). This consideration has been prominent in the thinking of Santa Fe

traffic people for many years (R. 362-64).[14] It was recognized in the proceeding involving construction of the interchange connection between Santa Fe and Western at Lomax in 1927, when it was pointed out that "the route to be afforded by the proposed connecting track will permit of longer hauls to [Western] and the Santa Fe." *Construction by T. P. & W.*, 124 I. C. C. 278, 279 (1927).

These economic considerations explain why Santa Fe and Pennsylvania have cooperated with Western for 30 years in coordinating their schedules and services to provide a fast through route for east-west traffic (R. 21-22). Service is the "most important" factor influencing the routing of traffic (R. 34), and it is perfectly obvious that Santa Fe and Pennsylvania would not have cooperated in improving their connecting services if it was against their interests to build up traffic over Western's route.

5. *Car Supply*: Appellant next attacks the finding with respect to car supply because Santa Fe and Pennsylvania were short of cars in 1955 (brief, pp. 43-44). Of course, all roads suffer from lack of cars during periods of general car shortage,[15] but that does not detract from the Commission's finding which was that Santa Fe and Pennsylvania would increase the supply of cars available to Western by seeing to it that Western's car ownership obligations were met in full either by having Western increase its car ownership or by increasing their own ownership sufficiently to take care of Western (R. 47). This is supported by the record (R. 368-69).

14. The traffic manager of a large Pacific Coast shipper testified that in recent years the Santa Fe has "tended to lean toward the Lomax gateway about as freely as they do the Chicago gateway" (R. 859).

15. Appellant's reports to the Association of American Railroads showed that it was short of cars for most of the year 1955 (Ex. H-120, pp. 1-2; R. 1577, 1981-82; R. 1573-74) and its president admitted that its car ownership was not up to A. A. R. recommendations (R. 1122).

6. *Industrial Development*: Appellant attacks the find ing that with the backing of Santa Fe and Pennsylvani and the assistance of their industrial departments, ther are excellent prospects for locating new industries o Western's line (brief, p. 44). But the record is replet with testimony that the ownership of Western by thes two strong connections (R. 486-87, 654, 658, 681, 750, 758 59 790, 807-08, 820, 949, 950, 957-58, 965-66) and the assistanc of their industrial staffs (R. 571-72, 574-75, 639-40, 75 964) would provide an economic stimulus to industria development along Western's line. Appellant says officer of Santa Fe and Pennsylvania testified that they woul prefer to locate industries on their own lines, but th testimony of the officers referred to shows that both Santa Fe and Pennsylvania will have an incentive to assist i locating industries on Western. Santa Fe, because of it late entry into Chicago, is lacking in industrial property in that area and Pennsylvania, too, is short of industria sites in Illinois (R. 485-86, 582-83).

7. *Purchase Price*: The Commission's finding that the purchase price of $135 per share is reasonable was based upon the consideration of a number of factors which it "explored" and which were expressed in a series of findings (R. 42). These factors included (1) the fact that the purchase price of $135 was arrived at on the basis of an agreement between a willing buyer and a willing seller; (2) the fact that the same price of $135 per share was offered by all of the other railroads seeking inclusion, namely, the Nickel Plate, Rock Island, Burlington, Wabash and Minneapolis; (3) the excellent physical and financial condition of Western; (4) its good earnings and operat ing record its net income ranged from $641,000 to over $1,000,000 in the period 1950-1954 (Ex. 9-C to Santa Fe-Pennsylvania application; R. 189); (5) its strategic loca tion which "adds to its value as a long-term investment"

(6) the valuation of its properties as fixed by the Commission for rate-making purposes; and (7) its progressive and able management.

Appellant attacks only two of these findings and ignores the rest. Appellant argues that the finding that the price was established on the basis of an agreement between a willing buyer and a willing seller does not take into consideration the fact that the same parties had entered into an earlier contract for the purchase of Western's stock at $100 per share (brief, pp. 37-38). This argument is merely a quibble about the word "willing." The trustees repudiated the earlier understanding which called for a $100 per share purchase price when Minneapolis offered $133. Santa Fe, knowing that Minneapolis and Rock Island were also bidding for the stock, was willing to pay $135 to get it (R. 23). The trustees were willing to sell at that price and not at $100. That is the way prices are determined in the market.

Appellant says that the price of $135 is fair and reasonable for Minneapolis but not for Santa Fe and Pennsylvania, because as sole owner Minneapolis will be able to increase the earnings of Western through economies and increased traffic (brief, pp. 38-39). This argument is necessarily speculative because the alleged savings are apparently exaggerated[16] and the proposed traffic program, involving a complete departure from the policies on which Western has built its success, could be harmful to Western and Minneapolis. In any event, not only Minneapolis but the Rock Island, Nickel Plate, Burlington and Wabash were all willing to pay $135 per share if permitted to participate in the ownership of Western.

16. Appellant's counsel insisted that the record clearly show "that the maximum savings are one thing and the actual program is something else" (R. 1205).

Appellant says finally that "data" as to price-earnings ratios "passed unnoticed", but there were no such data in the record. It is apparent from the findings outlined above that Western's potential earning capacity was not ignored by the Commission.

8. *Public Witnesses:* In an obvious effort to discredit the public support accorded Santa Fe-Pennsylvania's proposal, appellant says that the witnesses were "assembled" as part of a "large-scale publicity and promotional campaign" (brief, pp. 44-45). The record does not support this charge.

Appellant argues that the witnesses were not advised of the considerations underlying its proposal. It was only at the insistence of counsel for appellant, however, that the public witnesses were heard before the details of the Minneapolis plan were revealed (R. 351-52). Moreover, appellant overlooks the fact that its board chairman made a special appearance at Peoria in advance of the hearing to describe the Minneapolis plan (R. 808, 815-16). The continued participation of the local community and industrial interests in the later phases of this proceeding indicates that whatever apprehensions they may have had regarding appellant's proposal were confirmed after the drastic nature of its plans were fully revealed.

Appellant suggests that the local community witnesses were primarily concerned about possible abandonment of Western's "Iowa Branch" (brief, p. 45). But what appellant calls the "Iowa branch" is the line extending west from Peoria to Lomax and Keokuk, in other words, the entire western half of the railroad. The local communities and shippers west of Peoria have real cause for concern about future prospects of service and industrial development if Minneapolis is permitted to acquire Western. Today they are receiving "main line" service because

Western's operations over this part of its route are supported by the large volume of traffic interchanged with Santa Fe at Lomax (R. 369).

As the owner of Western, Minneapolis would have every incentive to adjust its service and solicitation policies to secure the movement of the through traffic over its own line extending northwest from Peoria, rather than over the west end of Western's line. The incentive would be to "consolidate" the interchange of traffic with the Santa Fe at Nemo on the Minneapolis, rather than at Lomax (R. 386-87). This is borne out by the fact that appellant's plans for improved service relate only to service via the Minneapolis line and Western's line *east* of Peoria and by the fact that its traffic plans are designed to divert traffic to its own line north of Peoria. There were no plans for improving service to the large transcontinental shippers whose bridge traffic provides the principal support for Western's line and who insisted that the excellent connecting service provided by Santa Fe and Pennsylvania affords the best assurance of continued good service via Western under their joint control (R. 46).

The cities in the Peoria area, Peoria and East Peoria, are strongly opposed to the disappearance of Western as a separate operating entity and its absorption by Minneapolis. They have a direct and vital interest in the retention of Western's headquarters and general offices at East Peoria; in preserving employment for their citizens; and in preventing the destruction of $1,330,000 in payrolls in the Peoria area. The State of Illinois has a similar direct interest in Western, extending to its entire line.

9. *Labor:* Appellant argues that the benefits of its integration plan outweigh the adverse effect on Western's employees (brief, pp. 46-47). We have already pointed out that in rejecting the Minneapolis plan the Commis-

sion considered not only the interests of the employees, but also the interests of all the other elements of the public involved, including the intervening railroads, the communities served by Western and the shippers using its line (*supra*, pp. 20, 25). The balancing of these interests against the alleged benefits of the Minneapolis plan is a task committed to the Commission, not to the courts. This is implicitly recognized in *City of Nashville* v. *U. S.*, 155 F. Supp. 98, 104 (M. D. Tenn. 1957), cited by appellant.

* * * * * *

The alleged inadequacy of the findings with respect to the issues concerning the applicability of Section 10 of the Clayton Act (brief, p. 48) and the competitive consequences of Santa Fe-Pennsylvania control of Western (brief, pp. 48-50) are dealt with in Sections III and IV, respectively of this Argument.

III.

THE COMMISSION WAS NOT REQUIRED TO MEASURE THE SANTA FE-PENNSYLVANIA APPLICATION BY THE STANDARDS OF THE ANTITRUST LAWS. IT GAVE FULL AND CAREFUL CONSIDERATION TO THE COMPETITIVE SITUATION AND ITS CONCLUSION THAT THE OPERATION OF WESTERN BY SANTA FE AND PENNSYLVANIA WOULD BE IN FURTHERANCE OF THE NATIONAL TRANSPORTATION POLICY AND WOULD NOT UNDULY CURTAIL COMPETITION WAS WELL WITHIN THE SCOPE OF ITS STATUTORY AUTHORITY.

A. The Commission's Evaluation of the Competitive Situation Conforms to the Standards Laid Down by this Court in *McLean Trucking Co.* v. *United States*.

Minneapolis argues that the Santa Fe-Pennsylvania acquisition would violate the antitrust laws and that the Commission abused its statutory power in approving the acquisition. The implication is that the Commission

ignored this Court's ruling in *McLean Trucking Co. v. United States*, 321 U. S. 67 (1944), and failed to weigh the public benefits of the proposed acquisition against its "destructive effect upon competition". A review of the Commission's findings, which are wholly ignored by Minneapolis, will show the contrary.

This Court's opinion in *McLean* makes it clear that in railroad legislation enacted since 1920, Congress has not placed its principal reliance on free competition. The emphasis has been "on achieving an adequate, efficient and economical system of transportation through close supervision of business operations and practices rather than through heavy reliance on the enforcement of free competition in various phases of the business" (321 U. S. at 83).

This Court held in *McLean* that the "basic determinants" of Commission action in proceedings under Section 5(2) of the Interstate Commerce Act must be the policies expressed in that Act and in the National Transportation Policy (321 U. S. at 79-80). Proposals under Section 5(2) are not to be measured by the general policies of the antitrust laws; otherwise the provisions of Section 5(11) granting immunity from the antitrust laws to transactions approved by the Commission would be meaningless (321 U. S. at 85-86). The policy of the antitrust laws is not to be ignored, however; and it is, therefore, the duty of the Commission to consider the scope and effect of the curtailment of competition which will result from the proposed transaction along with its advantages in the light of the over-all transportation policy (321 U. S. at 86-87).

This is exactly what the Commission did, as the District Court pointed out (R. 101). The Commission finding was as follows:

"We are convinced that the benefits to be derived

> from the operation of the Western under the control of the Santa Fe and the Pennsylvania as proposed will be in furtherance of the overall national transportation policy declared by the Congress, and its consummation will not unduly curtail competition in connection with the other carriers. Compare *McLean Trucking Co.* v. *United States*, 321 U. S. 67." (R. 39.)

This finding is supported by numerous subsidiary findings, to which we have already referred, outlining the public benefits from the control of Western by Santa Fe and Pennsylvania, the important part they have played in Western's development, and the competitive effects of the proposed acquisition upon other carriers. More than a third of the report is devoted to a discussion of the various factors bearing on the competitive situation.[17]

Appellant assumes that the policy of the antitrust laws was ignored because the Commission's report "does not mention" either Section 1 of the Sherman Act or Section 7 of the Clayton Act and its findings as to the competitive effects of the acquisition are not expressed in terms of the antitrust laws (brief, p. 48); but *McLean* makes it clear that this is not required. The Commission's report, which was sustained in that case, did not discuss the competitive situation in terms of the antitrust laws and made no reference to the Sherman or Clayton Acts. *Associated Transport, Inc.—Control and Consolidation*, 38 M. C. C. 137 (1942). In that case, just as in the present case, the Commission discussed the competitive situation in practical and concrete terms reflecting the evidence of record and its "past experience with transportation operations and analogous transactions." (321 U. S. at 89.)

17. See R. 21-22, 33-34 (relationships between Santa Fe, Pennsylvania and Western); R. 25-30 (routes, size and importance of the railroads principally involved); and R. 34-41, 42-44 and 45-48 (effects of Santa Fe-Pennsylvania control on other railroads).

B. Appellant's Charges of Monopolization of East-West Gateways and Suppression of the Peoria Gateway Are Groundless.

Minneapolis says that the Commission should have found that the proposed acquisition would lead to "monopolization" in east-west gateways and the suppression of the Peoria gateway in favor of Chicago and St. Louis (brief, pp. 59, 61). No such findings were required. The evidence would not support them.

The alleged "monopolization" of east-west gateways is apparently just rhetoric, for Minneapolis does not amplify the charge and the facts will not support it. There are too many available routes through Chicago, Peoria and St. Louis which do not include the Santa Fe or Pennsylvania (R. 577-78; and see Map, Appendix A).

Santa Fe serves only Chicago. Pennsylvania serves both the Chicago and St. Louis gateways, as does the Baltimore & Ohio, but this is not unique.[18] Nickel Plate and New York Central each serve the Chicago, Peoria and St. Louis gateways from the east, and Santa Fe's competitors, the Rock Island and Burlington, each serve all three from the west.

Many other important railroads serve one or more of these gateways. For example, Chicago is served by such major railroads as the Erie and Chesapeake & Ohio from the east and the Chicago & North Western and the Milwaukee from the west; and the same condition prevails at St. Louis (See Map, Appendix A).

Minneapolis says that if "control" of the Peoria gateway is allowed to pass into the hands of the "Pennsyl-

18. Pennsylvania also has a line to Peoria from the south, but that line is not a service route on east-west traffic (R. 567-70). When traffic is routed via Western and the point of interchange is not specified, Pennsylvania delivers it at Effner, thus giving Western its long haul (R. 573-74).

vania-Santa Fe combine" they would strangle Peoria gateway competition to the advantage of the other gateways. This suggestion is based on two assumptions: (1) that control of Western is control of the Peoria gateway; and (2) that the movement of traffic over Western's route is detrimental to the interests of Santa Fe and Pennsylvania. Both assumptions are false.

1. Control of Western is not control of the Peoria Gateway.

In the first place, control of Western is not control of the Peoria gateway. There are a number of competitive east-west routes through Peoria which do not include Western. These are formed by such lines as the Minneapolis, Rock Island and Burlington on the west and the Nickel Plate, New York Central (through its subsidiary, the Peoria & Eastern), and the Chicago & Illinois Midland-Baltimore & Ohio route on the east (see Exhibit 6 to Santa Fe-Pennsylvania application, R. 149; Ex. H-11, R. 508, 1672; R. 844, 845; and Map, Appendix A). A substantial volume of traffic moves via such routes, cutting Western out entirely (Ex. H-128, pp. 1-3; R. 1590, 2002-04 and Ex. H-126; R. 1558, 1993).

Any attempt at suppression of Western would only divert Western's traffic to other available routes. Thus, as the Commission pointed out, unless Western continues its present service and solicitation policies, it will lose the traffic it interchanges with its other connections without any benefit to Santa Fe or Pennsylvania (R. 38-39). A number of large shippers, who use Western's route for service reasons, testified that if Western rendered poor service to its other connections, the traffic would go to other available routes which do not include either Santa Fe or Pennsylvania (R. 725-26, 727-28, 729-30, 771-73, 798, 845-46).

2. The movement of traffic via Western's route through Peoria is beneficial, not detrimental, to Santa Fe and Pennsylvania.

In the second place, the Commission found that Western's route was beneficial, not detrimental, to Pennsylvania and Santa Fe (R. 34) providing a "vital direct link" between them "essential to the type of through service which is becoming increasingly important not only to the shipping public but to the railroads as well" in meeting the competition "of other modes of transportation" (R. 45). The Commission also found that the plan of Santa Fe and Pennsylvania to place Lomax and Effner on a parity with Chicago from a solicitation standpoint would make additional traffic available for solicitation via Western's route (R. 34).

The basis for these findings is explained fully at pp. 34-37, *supra*, and need not be repeated here. Suffice it to say that unless Western's solicitors are left free to continue their present solicitation policies, Santa Fe would lose the opportunity of obtaining, through Western, a long haul on traffic which would otherwise move via St. Louis and might be lost to the Santa Fe entirely. Similarly, Pennsylvania, which with a half-interest in Western will fare as well or better on traffic moving via Effner rather than via Chicago, could well lose much of the traffic it now receives via Western at Effner from the Santa Fe, Burlington, Rock Island, and Minneapolis. This is just another aspect of the checks and balances inherent in the control of Western by an eastern and a western carrier (R. 46 and see pp. 28-29, *supra*).

Appellant refers to the exhibits showing the percentages of through revenues accruing as divisions to the railroads involved and says that Santa Fe would never be content with 52 per cent at Lomax when it could get 70 per cent by

hauling the traffic to Chicago (brief, p. 63). The example is not typical, involving as it does a haul from Grand Rapids, Michigan to Tulsa, Oklahoma, while 50 per cent of the interchange between Santa Fe and Western is transcontinental traffic where the differences between Chicago and Lomax divisions are much less (R. 475; Ex. H-10, pp. 2-3; R. 508, 1667-68). Even this example shows that the Santa Fe share via Lomax becomes 63 per cent when one-half of Western's division is added to reflect Santa Fe's proposed 50 per cent ownership of Western (Ex. H-34, p. 1; R. 1166, 1770).

The important point, however, is that "paper" comparisons such as these ignore the realities of transportation economics. A railroad cannot expect to get its longest haul on all the traffic it handles and cannot afford to neglect other routes which are sources of traffic for its line even though it may receive a shorter haul (R. 475-77). It is the total business the railroad handles that produces its gross revenues, not the maximum revenues on a particular car (R. 402-03, 483-84).[19] In this case Western's solicitation for traffic through the Peoria gateway, as noted above, assures the Santa Fe an opportunity to handle traffic which otherwise would move via St. Louis and which might be lost to it entirely.

Using the same Grand Rapids-Tulsa example, appellant compares Pennsylvania's 26 per cent division via Effner with its 50 per cent division via St. Louis. But with one-half of Western's division to reflect its proposed 50 per

19. These considerations explain the willingness of any railroad to accept less than its longest possible haul on much of the traffic it handles. Their significance was recognized by Mr. Nelson, appellant's vice president, when he testified that if appellant acquired Western it would not attempt to get the long haul to Effner on the large volume of traffic which it presently interchanges with the Nickel Plate at Peoria. Any attempt to disturb the profitable interchange with the Nickel Plate would be "penny-wise and pound foolish" (R. 1188).

cent ownership in Western, Pennsylvania's share is shown as exceeding 37 per cent; and in several of the examples in the exhibit it is close to or equals the division via St. Louis (Ex. H-34; R. 1166, 1788-92, 1800, 1803). In almost all the examples shown, this basis produces a substantially greater percentage for Pennsylvania when routing is via Effner rather than Chicago.

Wholly aside from these considerations the checks and balances of Santa Fe-Pennsylvania ownership would prevent any restriction on the efforts of Western's solicitors to secure traffic for Western's route as against the St. Louis gateway. Any such restriction would destroy or greatly diminish Western's value to the Santa Fe. This the Santa Fe would never permit; and the contract under which it agreed to divide Western's ownership equally with Pennsylvania specifically provides that Western's solicitors "will be entirely free to solicit traffic in such manner as is best to serve the interests of Western" (R. 24).

Again using its Grand Rapids-Tulsa example, appellant suggests that Pennsylvania would favor the route through St. Louis and Kansas City via the Pennsylvania and its subsidiary, the Wabash. This would short haul the Santa Fe with a vengeance and it certainly would not permit any restriction on Western's solicitation against that route. Moreover, the record shows that even today with no interest in Western, Pennsylvania does not work with the Wabash against Western's route. On the contrary the Commission found that Pennsylvania favors Western's route via Effner (R. 43-44).

The Commission found that, although it is controlled by Pennsylvania, Wabash is independently operated by its own management (R. 26). The same finding was made in *Detroit, Toledo & Ironton R. Co. Control*, 275 I. C. C. 455,

458 (1950), and in *Illinois-Missouri Terminal Ry. Co. Purchase*, I. C. C. Finance Docket 18752 (1956).

The record in this case fully supports the finding that, under Pennsylvania's control, Wabash has been independently operated by its own management (R. 526, 1278-79). It is shown by the fact that Pennsylvania and Wabash each pursue their own independent traffic policies based on their own self interest. This explains why the Pennsylvania-Wabash route via Logansport and Decatur has not developed as a significant competitor of the Pennsylvania-Western route via Effner. Use of the route via Logansport short-hauls both Wabash and Pennsylvania (R. 579). Wabash solicits for its long haul to Buffalo and as a result, interchanges more traffic with the Delaware, Lackawanna & Western at Buffalo than at all ten of its interchanges with Pennsylvania (R. 523). Conversely, Pennsylvania prefers to secure a haul to St. Louis, Chicago or Effner rather than interchange traffic with Wabash at Logansport (R. 579, 580, 528-29).

If further proof is needed to support the testimony that these are, in fact, the traffic policies of Pennsylvania and Wabash, it is found in the interchange data in the present record. In 1954, the interchange between Pennsylvania and Wabash at Logansport was 20,000 cars (R. 595), as compared with 56,414 cars interchanged with Western (R. 1641). And of the 20,000 cars interchanged with Wabash almost 18,000 were eastbound cars received from Wabash, much of that traffic being from local points on Wabash's line which are not competitive with Western (R. 595). Even at St. Louis the interchange between the Pennsylvania and the Wabash amounted to only 7,910 cars (R. 603).

Nor has Pennsylvania used its control of the Wabash to restrain competition or injure its competitors. This was recognized by the Commission in *Detroit, Toledo & Ironton R. Co. Control*, *supra*, 275 I. C. C. at 490, when, after its

viewing the results of Pennsylvania's control of the Wabash, it found that such control had had "no substantial effect" on the interchange of traffic between the Wabash and its other connections.

Certainly the finding that Western's route is beneficial, not detrimental, to the Santa Fe and Pennsylvania, based as it is on the practical considerations affecting the routing of traffic and the relationships between railroads and shippers, was within the competence of the Commission. And it is buttressed by the undisputed finding that Santa Fe and Pennsylvania have demonstrated their economic interest in the development of Western by more than 30 years of cooperation in improving their connecting services (R. 21-22). In view of this long record of cooperation and the added incentive provided by their investment in Western, it is only common sense to conclude that the future of Western under their joint control will be one of continued growth and development. The shippers who are using Western's route today because of its superior service and who, therefore, have a very real interest in its future are convinced of this (R. 46). It defies common sense to assert—as does appellant—that having spent thirty years in helping to build up Western to its present position, Santa Fe and Pennsylvania are now seeking control in order to suppress it.

Minneapolis cites *United States* v. *Southern Pacific Co.*, 259 U. S. 214 (1922), as a decision in which this Court condemned "the very evils" said to be present here (brief, p. 62). But the history of that case only serves to illustrate the fact that the Commission is not bound by the standards of the antitrust laws in proceedings under Section 5 (2) of the Interstate Commerce Act. In that case this Court held that the Southern Pacific with its route from California via New Orleans to the east violated the antitrust laws when it acquired control of the Central

Pacific with its competing route from California via the Ogden gateway. Shortly thereafter, the acquisition was authorized by the Interstate Commerce Commission under the recently enacted Section 5 and the Commission's action was sustained in *United States* v. *Southern Pacific Co.*, 290 Fed. 433, 450 (D. Utah, 1923). Minneapolis refers to a statement in the earlier opinion of the Supreme Court that Southern Pacific would prefer its long haul via New Orleans to the detriment of the Ogden gateway. The vigor of the Ogden gateway after years of Southern Pacific control of the Central Pacific indicates that this fear was unjustified.

Minneapolis says the Commission has deviated from standards applied in previous cases, but the cases cited do not support this charge. *I. C. C.* v. *Baltimore & O. R. R.*, 152 I. C. C. 721 (1929), did not involve an "application" for approval of a "proposed acquisition" as Minneapolis asserts (brief, p. 21). It was a proceeding under the Clayton Act. The Commission expressly pointed out that approval under Section 5 (2) had neither been given nor sought and Commissioner Eastman, in a concurring opinion, pointed out that it was conceivable that the acquisition there involved might finally be approved in a proceeding under Section 5 (152 I. C. C. at 723 and 739). Moreover, that case involved direct competition of parallel lines between common points, which is not present here.

Chicago, B. & Q. R. Co. Control, 271 I. C. C. 63 (1948), was in no way comparable. That case involved the rehabilitation of existing rail lines to provide a new route and the entrance of an additional western carrier, the Santa Fe, directly into St. Louis. And it was conceded that there would be a very substantial diversion of traffic from other St. Louis lines, several of which were in weakened financial condition.

As a matter of fact, the report in that case recognized that the Santa Fe, as a western line, could not afford to "favor any of its connections at St. Louis as against another in its solicitation of traffic or otherwise because of the possible retaliation from the other" (271 I. C. C. at 154). This fact and its converse—that an eastern line like the Pennsylvania cannot afford to favor one western line against another—provide the checks and balances to which the Commission referred in the present case.

The quotation (brief, p. 64) from the *Spokane International* case, 295 I. C. C. 425 (1956), reflects views similar to those expressed by the Commission in the present case in rejecting the request of certain other railroads for participation with Santa Fe and Pennsylvania in the control of Western (R. 45). If an analogy is to be drawn from that case, the Santa Fe and Pennsylvania can best be likened to the successful applicant there, the Union Pacific. Like them, the Union Pacific was a large carrier; it gave the Spokane a long haul on interchange traffic; it had cooperated with the Spokane for years in building up through traffic; it was the Spokane's most important interchange connection; and under its proposal relationships with other carriers would be protected because the Spokane would retain its identity as a separate railroad "exactly as it is today".

C. No Combination of Santa Fe and Pennsylvania Is Involved in Their Joint Acquisition of Western.

Finally, Minneapolis argues that the Commission ignored the overall effect on transportation of joining two "gigantic railroad empires" (brief, p. 67). Apparently this is a reference to the charge that acquisition of Western would increase their "monopolistic power" in their own service areas. Both Santa Fe and Pennsylvania are large rail-

roads, as the Commission's report shows (R. 25-26), but there is no evidence that either possesses monopolistic power in its own territory. Nor does this proceeding involve a combination or merger of Santa Fe and Pennsylvania. The lurid language, which is remarkably free from references to the record,[20] cannot obscure the fact that, despite their joint control of a 240 mile bridge railroad which already interchanges 70 per cent of its traffic with them, Santa Fe and Pennsylvania will still remain a western and an eastern railroad, respectively. As such, they cannot afford to work together to the detriment of their other connections to the west and to the east. The Commission so found (R. 46).

The District Court quite properly rejected the contention that the proposed acquisition would violate the antitrust laws. As that court pointed out, the Commission "did give due consideration to the effect of the acquisition on competing carriers and the possible curtailment of competition and weighed such factors against the broad question of the public interest" (R. 101). It is not the function of the court to substitute its judgment for that of the Commission (R. 101). Resolving these considerations is "a complex task which requires extensive facilities, expert judgment and considerable knowledge of the transportation industry"; and Congress left that task to the Commission. *McLean Trucking Co. v. United States*, *supra*, 321 U. S. at 87.

20. For example, the statement that "the greatest tonnage in the west is captive to Santa Fe" (brief, p. 67). This is not supported by the record and it is also untrue.

IV.

THERE HAS BEEN NO VIOLATION OF SECTION 10 OF THE CLAYTON ACT AND THAT SECTION IS NOT A BAR TO COMMISSION APPROVAL OF THE STOCK ACQUISITION BY SANTA FE AND PENNSYLVANIA PURSUANT TO SECTION 5 OF THE INTERSTATE COMMERCE ACT.

Appellant contends that the "purchase" of Western's shares by Pennsylvania was a violation of Section 10 of the Clayton Act, 15 U. S. C. 20. Section 10 provides that no "common carrier engaged in commerce" may have "dealings in securities, supplies, or other articles of commerce" amounting to more than $50,000 in any one year with any corporation with which it has directors in common, unless such dealings shall be pursuant to competitive bidding and with the bidder "whose bid is the most favorable to such common carrier".

The controlling interest in Western's stock—82 per cent—was held by the two trustees of the McNear estate, the Wilmington Trust Company and Guy Gladson. There are directors common to the Wilmington Trust and the Pennsylvania and appellant contends that Pennsylvania has had "dealings in securities" with the Wilmington Trust without receiving competitive bids. This, appellant says, was a direct violation of Section 10 which the Commission was powerless to "condone".

The pertinent facts are as follows: On April 15, 1955, Santa Fe and Pennsylvania obtained letter commitments from the McNear trustees for the sale to each of 26 per cent of Western's stock at $100 per share, subject to any necessary Commission approval (R. 174-76). On May 25, after appellant had offered $133 per share for the stock, these commitments were repudiated (R. 366). At the suggestion of Mr. Gladson, the individual trustee, after discussions with counsel for Mrs. McNear, the principal bene-

ficiary, Santa Fe and Pennsylvania were advised that the stock would be sold to appellant unless Santa Fe or Pennsylvania agreed to purchase all of the stock "on a basis of equal to or better than" the offer of appellant (R. 1426-27). Pennsylvania declined; but Santa Fe on May 26 contracted to purchase all the stock held by the trustees at $135 per share, subject to Commission approval (R. 1427-28, 150-54). It also contracted to purchase the shares of all the other holders of Western's stock (R. 367).

During the following month Santa Fe's president, Mr. Gurley, considered several possibilities ranging from sole ownership by Santa Fe to possible multiple ownership by a number of railroads (R. 367). Finally, on June 28, 1955, Santa Fe entered into a contract with Pennsylvania and Pennsylvania Company providing that the latter should acquire 50 per cent of the stock Santa Fe had contracted to purchase. This contract was also subject to Commission approval (R. 165-69).

Even if it is assumed that Section 10 of the Clayton Act is applicable to the situation here involved—we think it is not—the short answer to appellant's argument is found in Section 5(11) of the Interstate Commerce Act. Section 5(11) provides that the authority of the Commission under Section 5 is "exclusive and plenary" and that any persons participating in a transaction approved under Section 5 are "relieved from the operation of the antitrust laws and of all other restraints, limitations, and prohibitions of law; Federal, State or municipal, insofar as may be necessary to enable them to carry into effect the transaction so approved." The controlling consideration under Section 5 is the public interest in an adequate transportation system (*McLean Trucking Co. v. U. S., supra*) and, having determined that the proposed acquisition of Western's stock by Santa Fe and Pennsylvania was in the public interest, the Commission properly concluded that the alleged violation

of Section 10 was no bar to its approval (R. 44). The District Court agreed (R. 98-99).

Appellant says Section 5(11) operates only as to the future and that the Commission is powerless to "condone" a past violation such as is alleged here (brief, pp. 57-58). What appellant fails to recognize is that the order here under attack operates only as to the future. It does not approve or ratify a past acquisition, although the Commission has the power to do so. *United States* v. *Southern Pacific Co.*, 290 Fed. 433, 450 (D. Utah, 1923). The contracts involved are expressly subject to the approval of the Commission. No stock has as yet been acquired by either Pennsylvania or Santa Fe and none will be unless and until the Commission's order is finally approved.

This action of the Commission was fully within its statutory authority and did not even purport to relieve the Pennsylvania of any past violations of law. If Pennsylvania had in fact violated Section 10, it would still be subject to prosecution and fine, the only sanction provided by that section. But there has been no violation either of the letter or purpose of Section 10.[21]

The purpose of Section 10 is to protect a carrier from paying too much or selling for too little when it deals in

21. As to the letter, Section 10 applies to "dealings in securities" by a "common carrier engaged in commerce". The term "dealings in" has been defined as "buying or selling" (25 C. J. S. 1040-41) and here no securities have been bought and none will be unless and until the Commission's order of approval becomes final. *NLRB* v. *Cabot Carbon Company*, 360 U. S. 203, 210-214 (1959), cited by appellant (brief, p. 55) is not in point. The term construed there was "dealing with", not "dealings in".

Moreover, as the District Court noted in passing, the prospective purchaser of 50 per cent of the stock is not Pennsylvania Railroad, but its subsidiary, Pennsylvania Company. The latter does not engage in railroad operations or operate carrier property (*Wabash R. Co. Control*, 247 I. C. C. 365, 366 and see R. 119, 120, 127-28) and therefore is not a "common carrier engaged in commerce".

supplies or securities with a seller or buyer with which it has an interlocking relationship. This is perfectly clear both from its language and its legislative history. Hence the provision that it must deal with "the bidder whose bid is most favorable to such common carrier". The legislative history, too, shows that Section 10 was enacted to protect the carrier from improvident dealings with a buyer or seller where there are directors in common and to prevent the enrichment of the latter at the expense of the carrier (51 Cong. Rec. 15943, 63rd Cong., 2d Sess., Sept. 30, 1914).

Appellant's argument, although it is not stated as clearly as it was below, necessarily assumes that Section 10 is intended to protect the interests of competing carriers who seek to purchase the same thing as the carrier to which Section 10 applies. But nowhere in the statute nor in its legislative history is there the slightest suggestion that its purpose is to require the carrier to bid competitively *against* other railroads when it is seeking to purchase supplies or securities. As the District Court pointed out, there is no language in Section 10 which "pertains to any competitive bidding by the railroad company" (R. 99). That would only serve to increase the price the carrier had to pay.

Although the District Court rested its decision of the Section 10 issue on the provisions of Section 5(11) of the Interstate Commerce Act, it noted in passing that the proposed purchase involved here was not the kind of transaction at which Section 10 is aimed. It pointed out that Wilmington Trust was not acting for itself but was functioning in a fiduciary capacity as a trustee in the interest of the beneficiaries of the trust. Thus the situation was not

one in which the interlocking directors could be enriched at the expense of the purchasing carrier (R. 98-99).[22]

The Commission, too, while resting its decision on Section 5(11), pointed out that the issue before it did not involve a purchase by the Pennsylvania from the Wilmington Trust. The Commission said:

> "* * * The Santa Fe is the only purchaser of the stock from the trustees and had no commitments to sell any of it to any other railroad. Before offering to sell a portion of the stock to Pennsylvania several other joint control possibilities were considered and rejected." (R. 44.)

Appellant challenges this finding, asserting that the Santa Fe purchase contract was part of a "joint venture" between Santa Fe and Pennsylvania (brief, p. 54), but the finding is fully supported by the record. Mr. Gurley, Santa Fe's president, testified that when Santa Fe contracted to purchase all the stock "there were no commitments on our part to sell any of the stock to any other railroad" (R. 367). He testified further that before agreeing to sell a portion of the stock to Pennsylvania, he considered several possibilities ranging from sole ownership by Santa Fe to possible multiple ownership, including Nickel Plate, Rock Island, Burlington and Minneapolis (R. 367). Conversations were had with officials of each of these roads, as well as with officials of Pennsylvania (R. 367).

22. Appellant says the Commission should have found that the Pennsylvania enjoyed a preference in the negotiations as a result of the interlocking directorate (brief, p. 48). Such a finding would have no relevance to Section 10, but, in any event, it was the individual trustee, Mr. Gladson, who made the suggestion that the offer be made to Santa Fe or Pennsylvania if either would meet or better appellant's offer. This was made after discussion with counsel for the principal beneficiary (R. 1426-27) and reflects the desire of the beneficiaries to sell to Santa Fe and Pennsylvania, if they could get as good a price, because of their natural interest in the future of Western and its employees (R. 831-33).

Mr. Gurley was cross-examined at length, but his testimony was not shaken (R. 379-80, 407-11). It was corroborated by copies of correspondence between Mr. Gurley and the president of the Rock Island which were introduced by the Rock Island, an adverse party (Ex. H-80-84; R. 1457, 1964-70) and by the testimony of appellant's chief executive (R. 1107-08). The Examiner who heard the testimony and observed the demeanor of the witness believed it. Under the circumstances, there would be no basis for overturning the Commission's finding even if the substantial evidence rule were not applicable.

Finally it should be pointed out that even if Section 10 were applicable to the parties here involved the Commission's findings fully justified the exercise of its "exclusive and plenary" authority under Section 5 to approve the acquisition and, thereby, relieve the parties from any restraints which might be imposed by Section 10 upon its consummation. There was no *fait accompli;* approval of which would undermine the administration of the statute, such as that which was condemned in *Central of Georgia Ry. Control*, 307 I. C. C. 39 (1958), cited by appellant (brief, p. 57). The proposed acquisition has been submitted to and approved by the Commission in advance of consummation. The Commission has found the proposed acquisition to be in the public interest. It has passed on the terms of the transaction and has expressly found the purchase price to be reasonable. In doing so it has also provided full protection against the evil which Section 10 of the Clayton Act was designed to prevent—exploitation of the purchasing carrier through payment of an excessive purchase price for the stock.

V.

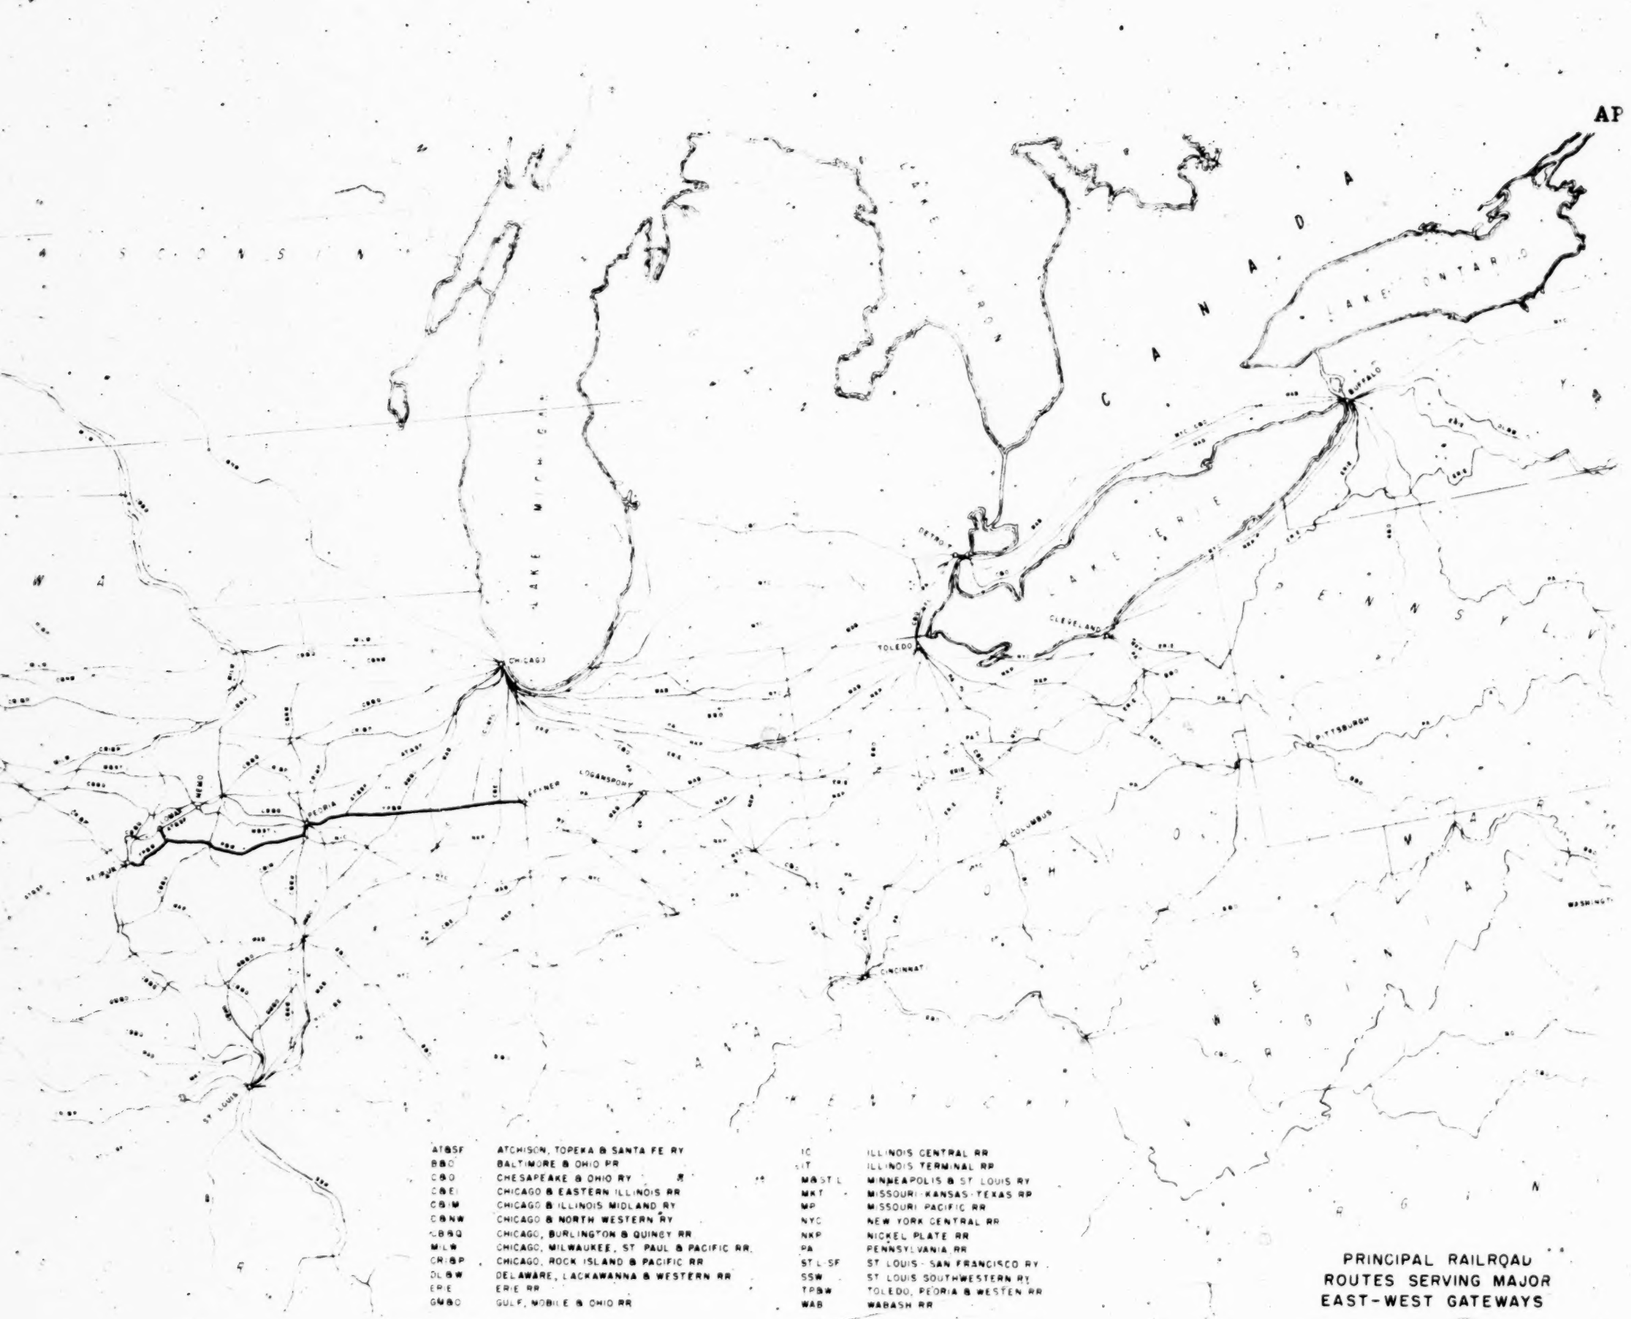
APPELLANT WAS ACCORDED AN ADEQUATE JUDICIAL REVIEW BY THE DISTRICT COURT.

Appellant's entire argument shows a fundamental misconception of the function of the courts in reviewing an exercise of the Commission's administrative discretion. It is directed largely to the merits of the issues presented before the Commission with scant reference to the Commission's findings or the evidence on which they are based. The court below did not abdicate its function as charged (brief, p. 72). It merely refused to substitute its judgment for that of the Commission on issues committed by law to the lafter. Its action was consistent with a long line of decisions by this Court.[23]

Appellant's assertion (brief, p. 71) that it has not sought to invade "the province entrusted to the Commission" is belied by the very relief it seeks here. It has asked this Court to declare "as a matter of law" that "it is the duty of the Interstate Commerce Commission" to enter an order approving the Minneapolis application and denying that of Santa Fe and Pennsylvania (brief, p. 73). Appellant simply fails to recognize that the review of a Commission order is not a trial *de novo* of the issues before the Commission.

23. See, for example: *McLean Trucking Co.* v. *U. S.*, 321 U. S. 67 at 87-88 (1944); *U. S.* v. *Detroit Navigation Co.*, 326 U. S. 236, 241 (1945); *U. S.* v. *Pierce Auto Lines*, 327 U. S. 515, 535-36 (1946).

CONCLUSION.



We submit that the District Court carefully considered the questions raised by appellant, followed accepted standards of review and merely refused to substitute its judgment for that of the Commission on matters committed by law to the latter. Its judgment should, therefore, be affirmed.

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1959.

Nos. 12, 27 and 28.

THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY ET AL.,
Appellants,

vs.

UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION ET AL.,
Appellees.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA.

BRIEF ON BEHALF OF THE MUNICIPALITIES AND SHIPPERS ALONG THE LINES OF TOLEDO, PEORIA & WESTERN RAILROAD COMPANY, APPELLEES.

STATEMENT.

This brief is submitted jointly on behalf of the 18 municipalities, the 6 civic and business associations and

the Keokuk Bridge Commission of Keokuk, Iowa, which are referred to by appellant in its statement of the case as "certain other bodies" (Brief p. 13) which intervened in support of Santa Fe and Pennsylvania's control of Western.[1] Collectively, we represent virtually every municipal, civic, business and shipping interest along the lines of the Toledo, Peoria & Western Railroad Company.[2]

Because of appellant's inadequate characterization of the scope of the interests represented by our intervention and of the significance of our participation in the proceeding, it would appear necessary to define our interests and explain the basis for our participation. Our interest in this proceeding evolves out of the concern which we share for the economic and commercial welfare of the area in Central Illinois served by Western, of which the City of Peoria is the commercial and industrial center. Specifically, these interests include: (1) our interest in preserving and developing adequate transportation service in this

---

1. These parties include: the City of Peoria, Illinois; the City of East Peoria, Illinois; the Peoria Association of Commerce; the City of Bushnell, Illinois; the Bushnell Chamber of Commerce; the City of Canton, Illinois; the Canton Chamber of Commerce; the City of LaHarpe, Illinois; the LaHarpe Golden Rule Club; the Village of Lomax, Illinois; the City of Keokuk, Iowa; the Keokuk Chamber of Commerce; the Keokuk Bridge Commission; the City of Warsaw, Illinois; the Warsaw Chamber of Commerce; the City of Forrest, Illinois; the City of Fairbury, Illinois; the City of Gridley, Illinois; the City of Gilman, Illinois; the City of Sheldon, Illinois; the City of Watseka, Illinois; the City of Eureka, Illinois; the Village of Secor, Illinois; the City of Washington, Illinois; and the City of Chenoa, Illinois. All of said appellees will hereinafter sometimes be referred to as "these intervening appellees."

2. Hereafter called Western. The Atchison, Topeka and Santa Fe Railway Company will be referred to herein as Santa Fe and the Pennsylvania Railroad Company will be referred to as Pennsylvania. Appellant will sometimes be referred to as Minneapolis.

area; (2) our interest in maintaining and extending the total transportation plant available in the Peoria area; (3) our interest in the welfare of the employees in the transportation industry in this area;[3] (4) our interest in the continued further industrial development of the Peoria area and in the area along the lines of Western, the achievement of which objective is so closely related to transportation, including (a) the location of new industry, (b) expansion of existing plant and (c) diversification of industrial lines; and (5) our broad interest in the economic stability of the area generally which is so vitally affected by a basic industry such as transportation.

We intervened in Interstate Commerce Commission Finance Docket 18991 in support of the application of Santa Fe and Pennsylvania for joint control of Western. We intervened in Interstate Commerce Commission Finance Docket 19086 in opposition to appellant's application for control of Western. We opposed at the hearing, upon brief, exceptions and oral argument before the Commission and on appeal to the District Court, appellant's proposal and the request of certain railroads for multiple ownership.[4]

We supported the application of Santa Fe and Pennsylvania for joint control of Western on the following grounds:

---

3. It should be noted that the Railway Labor Executives Association intervened in support of joint control by Santa Fe and Pennsylvania on the ground that the interests of Western's employees would be given full recognition under their proposal (R. 44).

4. Direct participation in control was sought by the New York, Chicago & St. Louis Railroad Company and the Chicago, Rock Island & Pacific Railroad Company; also, Chicago, Burlington & Quincy Railroad Company and Wabash Railroad Company applied for participation in control in the event the Commission extended control to the two former railroads.

1. It will insure continued separate operation of Western under its present management with its executive offices and terminal facilities located in the Peoria area;

2. It will preserve intact all of the positive benefits accruing to these communities by the continued maintenance and preservation of Western's basic function as an important link in transcontinental traffic;

3. It will best assure the continued growth and development of Peoria as a railroad gateway;

4. It will best assure the continued growth and development of Western;

5. Such control and the benefits which will inevitably flow as a consequence of ownership by Santa Fe and Pennsylvania will provide the greatest single impetus which this area could receive to an expanding economy by the further industrial development of the Peoria area as well as the entire area served by Western.

We opposed appellant's application for control of Western on the following grounds:

1. Such control would forever foreclose to the Peoria area the realization of the positive benefits described above which would flow as a consequence of the joint control by Santa Fe and Pennsylvania and the continued development of Western as a major link in transcontinental rail traffic;

2. Such control admittedly would visit serious economic consequences upon these communities and particularly the Peoria area by a permanent loss of an annual payroll of over one and one quarter million dollars and a loss of employment affecting at least 256 families;

3. Such control would result in a substantial reduction of the total transportation plant and facili-

ties available to the Peoria area by major abandonments of railroad yards, shops and offices;

4. Such control, with the curtailment of existing transportation plant and personnel and particularly the shift in orientation of Western's function as a major link in transcontinental traffic, would make the Peoria area and the area served by Western less attractive as a site for plant expansion and for the location of new industry;

5. Such control would inherently transform Western's line west of Peoria from a main line serving transcontinental traffic into a branch line of appellant's combined operation. This would result in serious economic consequences to the communities along this segment of Western's line which are wholly dependent upon Western for rail service.

The complete unanimity of opinion by those of us who are most vitally affected by a change in Western's control is a highly significant factor in this proceeding. Appellant cannot dismiss the importance of this fact by contending, as it has, that we are the victims of a "publicity and promotion campaign" (Brief p. 44). Too broad a range of interests, both geographic and economic, are involved herein. The Commission, in defining the concept of the public interest under Section 5(2) has stated that "consideration must be given to the public affected by the transaction and the effect of the proposal upon all parts of the public which would be so affected." *C., B. & Q. Railroad Control*, 271 I.C.C. 63, at p. 146 (1948); *Detroit Toledo & Ironton R. Co. Control*, 275 I.C.C. 455, 488 (1950). We constitute that part of the public which is most directly affected by the transaction. We submit that the Commission's order properly reflects our interests and should be sustained.

SUMMARY OF ARGUMENT.

1. The Commission's decision awarding control of Western to Santa Fe and Pennsylvania is based upon adequate findings.

2. The findings upon which the Commission based its decision fall within the scope of the relevant legislative standards of Sec. 5 of the Interstate Commerce Act and the National Transportation Policy.

3. Appellant was accorded a fair hearing and a comparitive consideration of its application for control of Western.

4. *An analysis of the criteria suggested by appellant for testing the issues* relating to (1) adequacy of findings, (2) the relevance of the findings to the legislative standards, and (3) the question of whether appellant was accorded a comparative hearing, *demonstrates that the District Court's decision should be affirmed.*

5. The findings are supported by substantial evidence.

6. Appellant's attack on the shippers and communities along the lines of Western is groundless and constitutes an abortive attempt to conceal the fact that its proposal for control of Western was opposed to the interests of that segment of the public which is most directly affected by this proceeding, the shippers, municipalities; and business interests located along the lines of Western.

7. South Dakota and Minnesota's interests in appellant's branch lines will not be affected by Santa Fe-Pennsylvania's control of Western.

ARGUMENT.

I.

The Commission Accorded Appellant a Comparative Hearing; the Decision Is Based upon Adequate Findings and the Findings Are Consistent with the Statutory Standards.

A reading of the Commission's report in its entirety indicates clearly that appellant was accorded a fair hearing and a comparative consideration of its application. Appellant ignores what the Commission found in its report and undertakes to attack the subjective mental process by which the decision was reached. Thus, ignoring the extended discussion of appellant's proposal contained in the report, appellant argues that the Commission reached its ultimate conclusion "at the outset" without a consideration of its proposal (Brief p. 19). Appellant argues, moreover, that the "criterion" adopted by the Commission was a "standard" of "separate and independent management" of Western (Brief p. 19). This "standard", however, can be found nowhere in the Commission's report either expressed as a finding or in its discussion of the issues.

Appellant's argument, based as it is upon some nebulous subjective mental processes of the Commission arrived at apart from the Commission's report, cannot be intelligently discussed. We can only deal with the Commission's approach to the proceeding as reflected by the objective standards of the findings contained in the report. By these objective standards, it is clear that (1) the Commission preliminarily defined its function to

include a comparative evaluation of both applications on the merits (R. 25), (2) the Commission did, in fact, discuss and evaluate the principal aspects of appellant's proposal on their merits (R. 30-37), and (3) the Commission made specific findings on the merits of appellant's proposal (R. 30-33).

The Commission initially undertook to define its function in this proceeding to include an evaluation of both applications in order to arrive at a decision as to which of the alternatives before it was most consistent with the public interest (R. 65). The Commission defined its function as follows: (1) to arrive at a standard of public interest; (2) in arriving at a standard of the public interest, to analyze each application in relation to the other, as well as to the other interests; and (3) then to determine which of the alternative plans for control most nearly approximates that standard.

Having defined its function to include a consideration of appellant's proposal, the Commission then proceeded to evaluate the significant aspects of that proposal. The report shows that, in arriving at a standard of the public interest, the benefits and detriments of both applications were considered. This is evident by the extended discussion of appellant's proposal which followed (R. 30-37). On the basis of this discussion of the proposal and the findings relating thereto, the Commission concluded that appellant's proposal was contrary to the public interest.

Appellant nevertheless argues that the Commission should have made "comparative" findings which "catalogued" the merits and demerits of the competing applications. Appellant contends that such findings are required in a comparative hearing proceeding and cites as authority, *Johnston Broadcasting Co.* v. *F.C.C.*, 175 F.2d 351 (D.C.

(Cir. 1949). The *Johnston* case, however, involved two mutually exclusive applications for the construction of a new broadcasting station. The court there said that the F.C.C. was required to make specific findings as to "every difference" between the applicants only after the minimum qualifications of both applicants had been established and the public interest was protected. The Commission in this proceeding was presented with two radically different proposals, both of which could not meet "minimum qualifications". Consequently, there was no point in the Commission's analysis at which the *Johnston* rule could have been applied.

As a practical matter, the complexity of the proceeding precluded detailed findings as to every difference between the Santa Fe-Pennsylvania plan and appellant's proposal. Any failure to make such detailed findings in no sense reflects a denial of a fair hearing or a comparative consideration of appellant's proposal.

Appellant suggests that certain criteria may be used for testing the issues relating to (1) the adequacy of the findings, (2) the compatibility of the findings with Sec. 5 and the National Transportation Policy and (3) the question of whether appellant was accorded a comparative hearing (Brief p. 23). We submit that each of these three issues should be resolved favorably to appellees *even under the criteria by which appellant seeks to have this court evaluate the Commission's report.* These tests include (1) efficiency and economies of operations, (2) improvement and expansion of service through the Peoria Gateway, (3) promotion of industrial development, (4) strengthening of the carriers in the interest of the national transportation system, (5) stability of employment and (6) promotion of competition.

An analysis of each of these criteria follows:

Economies: After reviewing appellant's evidence relative to its proposed economies, the Commission made a specific finding that most of the economies would be secured "at the expense of labor" (R. 32). This finding reflects that the interests of labor was one of the factors balanced by the Commission against the economies. The Commission is specifically required under Sec. 5(2)(c)(4) to give consideration to the interests of the "carrier employees affected". The economies which the Commission found would be realized as a consequence of Santa Fe-Pennsylvania's control of Western involved no similar conflict (R. 47).

A finding, isolating the factor of economies and weighing, the "comparative" dollar amounts of the economies which might be achieved under the two proposals, such as appellant contends is required in a comparative hearing, would have been inappropriate in this proceeding. The economies which appellant contends would be achieved under its control were based upon appellant's proposal to abolish Western as a separately operated carrier. This proposal conflicted not only with the interests of Western's employees, but the communities served by Western, local industries, shippers and other rail carriers. The economies which allegedly would be achieved under appellant's control of Western could not, therefore, logically be isolated from the context of appellant's proposal and "balanced" as an abstraction against the economies which would be achieved under Santa Fe-Pennsylvania's control of Western. Such balancing would have been illogical, moreover, for the additional reason that separate operation, by its very nature, does not lend itself to striking economies.

The economies were balanced realistically against the need for preserving Western's status as a separately operated carrier. The District Court recognized this and answered appellant's contention as follows:

> "The plan which Minneapolis proposes is to abolish Western as an independent carrier, and that plan is strongly opposed, not only by the carriers and other defendants who have intervened herein, but also by many communities and industries in Illinois and Iowa, as well as the employees of Western. The removal of the offices of Western and its key personnel to Minneapolis is strongly protested. The large savings which allegedly were to follow upon an integration of Minneapolis and Western, as asserted by Minneapolis, was weighed and considered by the Commission. * * * It may be noted that, of the $1,770,945 reduction in combined operating expense of Minneapolis and Western if integration took place, $1,327,062 would result from the elimination of some 256 positions now occupied by employees of Western. *Whether such economies outweigh the alleged detriment to Western's employees, to its local industries and communities, and to other carriers, is also a matter which is clearly within the sound judgment of the Commission.*" (Emphasis supplied.) (R. 102).

Improvement of service via the Peoria Gateway: Appellant argues that the findings are deficient because "no" finding was made relative to the "improvement" and "expansion" of service via the Peoria Gateway and that it was denied a comparative hearing because the "merits and demerits" of the two proposals were not "catalogued" and "balanced" in relation to this standard. Appellant suggests that its proposal was superior "from the public viewpoint" in this regard because it proposed to establish through trains, accelerated schedules and new and direct interchanges with other railroads (Brief pp. 26-27).

Adequate findings were made with respect to the broad issue of the effect upon adequacy of rail service of the two proposals (R. 30, 32, 45). The ultimate basis for the Commission's decision rests, in fact, upon the "best use" of Western's transportation facilities in terms of the transportation service which it can best perform (R. 45). These findings are inherently related to adequacy of rail service via the Peoria Gateway (R. 36). Appellant ignores the broad service considerations underlying the decision and directs the court's attention instead to its proposal to establish new interchange points and to operate through trains via the Peoria Gateway which it argues was a test against which both proposals should have been compared.

This argument illustrates the inappropriateness of "comparative" findings as to any single aspect of either of the two proposals because of their radically different nature. Santa Fe-Pennsylvania's proposal for control of Western did not involve the institution of new interchange points or operating through trains via Western. The absence of such proposals did not, however, constitute an inherent "demerit" in its plan "from the public viewpoint". It simply reflected a different kind of utilization of Western's plant. The nature of the two proposals consequently did not lend itself to the kind of "comparative" findings as to any aspect of either of the plans as appellant argues should have been made. The Commission's view of the service factor in the proceeding was made abundantly clear. It concluded that ultimately the "improvement" and "expansion" of rail service via the Peoria Gateway lies in the future development of Western under its "present policies" (R. 45). This conclusion was based upon broad considerations having regard for the "strategic position" of Western serving the Peoria Gateway

as an alternative route (R. 21), its function as an overhead carrier (R. 21), the importance of its relationships with its 16 connecting lines (R. 21), and the significance of the preservation of these relationships and its policies to the railroad industry and to the public (R. 45). Appellant's plan for the "improvement" and "expansion" of service via Peoria, being part of its proposal for the absorption of Western, was inconsistent with the achievement of these objectives. The Commission so found (R. 30).

Appellant's argument illustrates why no single aspect of its proposal could have been isolated from the context of the plan of which it is a part and be dealt with as an abstraction in a comparative finding by the Commission. Such an approach would have been completely unrealistic. While the achievement of new service routes via Peoria by the establishment of new interchanges and through trains would appear superficially desirable, the Commission was faced with appellant's specific traffic program. The application of this program was found by the Commission to be "extremely harmful to other carriers" (R. 32), and would result in imperiling the traffic of other railroads (R. 32). In analyzing the effect of appellant's "unified operations" proposal and weighing the effect of these changes in Western's operations against their economic impact upon Western's connecting lines, the Commission was discharging the requirements of Sec. 5 and the National Transportation Policy which require the Commission to give consideration to "adequacy of transportation service".

These findings illustrate that new service proposals, such as are involved in the establishment of new interchange points and the operation of through trains, are not absolute objectives of either Sec. 5 or National Trans-

portation Policy, but are conditional objectives which must be weighed against their economic impact upon other carriers in a significantly broader application of the concept of "adequacy of transportation service". This is precisely what the Commission did.

Strengthening carriers in the interest of the national transportation system: Appellant, capitalizing on its status as a small carrier, argues that one of the determinative standards in the proceeding should have been the "strengthening" of a "weak carrier" and that "comparative" findings should have been made in accordance with this standard (Brief pp. 27-28). The Commission recognized that one of appellant's objectives in acquiring control of Western was to "enhance its financial stability" (R. 30). But the Commission found that appellant is "reasonably prosperous with a financial and physical picture that has been steadily improving over the past few years" (R. 28). The District Court noted in its decision that "The advantages to Minneapolis in adding Western to its railway system seems apparent. No doubt Minneapolis would be materially strengthened by its proposed integration with Western. But obviously the advantages to Minneapolis was only one of the considerations, and factors which the Commission had to weigh and evaluate." (R. 102).

This is exactly the point which appellant ignores. The Commission's function was broader than resolving the issues in terms of appellant's financial interests. Having found that appellant was a "substantial" railroad, a "comparative" finding resolving the issue of Western's control in terms of the relative financial needs of the competing applicants would have been completely inappropriate, and would not have provided a criterion which was relevant to the public interest.

The issues in the proceeding, moreover, were far more complex than appellant suggests. The Commission had to deal with the realities of appellant's proposal. It found that appellant's plan for securing additional traffic by its control of Western would be at the expense of other carriers connecting with Western (R. 32). Appellant's argument also ignores the fact that the ultimate rationale of the Commission's decision lies in this very area of strengthening the carriers in the interests of the national transportation system. The Commission's principal concern, however, was not with the financial interests of a single carrier but with the railroad industry as a whole. It found that, because of the national importance of Western as a "short line connection", and the unique transportation function which it performs on behalf of its 16 connecting lines, its present operation had to be retained in order to provide for the railroad industry the kind of transportation service which is essential "for the railroads adequately to compete with other modes of modern transportation" (R. 45).

Industrial development: There was no occasion for the Commission to make a "comparative" finding with respect to the relative interests of the competing applicants in industrial development along Western's lines. The economic interests of either applicant as owner of Western in this area are obvious. The Commission found that the promotion of industrial development along Western's lines was one of appellant's objectives as owner of Western (R. 30) and that under Santa Fe-Pennsylvania's control there also were "excellent prospects" for the location of new industry (R. 46). The latter finding is supported by the subsidiary finding reflecting our position regarding industrial development. The Commission found that "each of the city officials and representa-

tives of Chambers of Commerce of the communities served by Western recognized the advantages of Santa Fe-Pennsylvania ownership as an economic stimulus to the industrial development of their communities" (R. 47).

Stability of employment: Sec. 5(2)(c)(4) directs the Commission to give specific consideration to the "interest of the carrier employees affected". The interests of the carrier employees were represented by the Railway Labor Executives Association with participated in the proceedings before the Commission. The Commission found that the employees "unanimously" favored Santa Fe-Pennsylvania's proposal (R. 44). To argue, as appellant does, that the "carrier employees" interests would best be served by the elimination of 256 positions is little less than fantastic. Appellees submit that the Commission's decision accurately reflects the interests of the "carrier employees" and that a "comparative" finding based upon appellant's theory of "stability of employment" would have directly contravened the congressional intent expressed in the mandate of Sec. 5(2)(c)(4).

Promotion of competition: The Commission's findings regarding the competitive effects of the competing proposals particularly illustrate the fact that both proposals were accorded comparative consideration. The radically different objectives of the two proposals, however, necessarily required that the plans be analyzed independently of each other.

The Commission found that appellant's proposal contemplated the abandonment of Western's existing policy of neutrality with respect to the 15 other connecting carriers with which it presently cooperates (R. 30). Appellant's plan to increase its traffic by diverting the traffic of Western's connecting carriers was found to

have serious competitive consequences to other carriers (R. 32). The Commission found that the traffic of the Wabash and the other carriers which participated in the proceeding would be imperiled, or at least, diminished, and that the consequences of such diminution of traffic could result in line abandonments (R. 32). The effectuation of appellant's proposal, therefore, would ultimately have resulted in a serious curtailment of rail competition not only in the immediate area served by the combined Minneapolis-Western operation, but in a significantly broader area of the Middle West.

The competitive effects of Santa Fe-Pennsylvania's control of Western were given detailed consideration by the Commission. The economic self-interests of Santa Fe and Pennsylvania as joint owners was found to assure the continuance of Western's existing solicitation and service policies of working closely with each of its 16 connecting lines (R. 35). Before the Commission, appellant's argument with respect to the alleged restraint on competition resulting from Santa Fe-Pennsylvania control of Western took the form of specific claims of traffic diversion. These claims were analyzed in detail and were found to be groundless (R. 35-37). The Commission concluded that Santa Fe-Pennsylvania control of Western would not unduly curtail competition in connection with other rail carriers (R. 39).

The ultimate rationale of the Commission lies in Western's unique transportation function and in the need of preserving its function in order to promote more effective inter-mode competition in the field of transportation. The Commission found that the function which Western performs as a "vital link" to its connecting lines affords a basis for the railroad industry to provide the

"fast, strong and reliable" transportation service which is "necessary in order for the railroads adequately to compete with other modes of transportation" (R. 45). Control of Western by Santa Fe and Pennsylvania was thus found to have no adverse intra-mode competitive effect but would result in a substantial promotion of inter-mode competition in the transportation field.

II.

The Findings Are Supported by Substantial Evidence.

1. Industrial Development.

The interests represented by these intervening appellees, the communities and shippers along the lines of Western, have a very real interest in the promotion of industrial development in the area served by Western. We submit that the Commission's recognition of the benefits which would accrue to the economy of this area as a consequence of Santa Fe-Pennsylvania's control of Western through industrial development is fully supported by substantial evidence (R. 46).

This finding is based in part upon the evidence in the record establishing that the very fact of ownership by Santa Fe and Pennsylvania would itself provide a significant stimulus to industrial development in the communities served by Western. Such ownership by two large railroads, which connect at the eastern and western termini of Western would itself create an inducement both for the location of new industry as well as the expansion of existing plant (R. 639-40, 654, 658, 681, 750, 758-59, 790, 807-08, 820, 940, 950, 957, 965).

Appellant suggests that the Commission's finding is inconsistent with Santa Fe's and Pennsylvania's competitive interests in the area along their own lines (Brief p.

24). This ignores the fact that the finding is based upon evidence that, because of Santa Fe's late entry into Illinois and the Chicago area, it is lacking in industrial property in that area, and that Pennsylvania is short of industrial sites in Illinois (R. 485-86, 571, 582-83).

Appellant argues that the Commission's "confidence" is unwarranted because both carriers made it "crystal clear" that they would "bring" to Western only such industries as they were unable to locate on their own lines (Brief p. 44). This is not an accurate statement of the record or of the testimony of Messrs. Carpi and Duffy (R. 493-494, 583, 584). Mr. Gurley, then President of the Santa Fe, made it "crystal clear" that, as joint owner of Western, Santa Fe would treat the area served by Western on an equal basis with communities served by the Santa Fe with reference to the location of industries (R. 368).

The validity of the finding, moreover, is not dependent upon whether Santa Fe or Pennsylvania would "bring" industry to Western in preference to their own lines since it was established that merely the consulting services of Santa Fe and Pennsylvania's industrial development departments would be of material assistance to Western and to these intervening appellees (R. 639-40, 759, 964), and that their joint ownership of Western would itself create a basis for stimulating industrialization along Western's lines.

Directly related to this finding is the fact that Western's existing status as a bridge-line handling east-west traffic along its entire line "is the greatest single underwriting influence" for continued good service to the communities along Western's line and, particularly, along the segment of its line west of Peoria (R. 369). In 1927,

when Western's application was filed to connect with the Santa Fe at Lomax, it was pointed out that the proposed construction would aid in sustaining that part of the lines west of Peoria. *Construction by TP&W R.R.*, 124 I.C.C. 278, 279 (1927). This prediction has been fulfilled. The Santa Fe interchange at Lomax accounted for 78 per cent of the total traffic interchanged by Western with all its western connections for a twelve-month period ending June 30, 1955 (R. 1713). The retention of Western's existing function under Santa Fe-Pennsylvania's proposal, therefore, is particularly essential to the industrial development of the communities along its line west of Peoria.

Control of Western by appellant would, on the other hand seriously impair the service and would preclude the possible future industrial development of communities along Western's lines west of Peoria.[5] Some of these communities are entirely dependent upon Western for rail service. Appellant's main line between Nemo and Peoria parallels Western's line west of Peoria (Exhibit 6 attached to the application of the M. & St. L. and Finance Docket No. 19086-296). The traffic presently interchanged at Lomax with Western could, as was suggested by appellant's Chairman, be "consolidated" at Nemo (R. 386). Appellant's plan for diverting the traffic of other carriers to its own lines, moreover, did not involve a single interchange point on Western's lines west of Peoria (R. 1197-1200, 1178-84). Appellant's Freight Traffic Manager indicated furthermore that every line which presently interchanged with Western west of Peoria, except at

---

5. These communities include the City of Canton, Illinois, the City of Bushnell, Illinois, the Village of Lomax, Illinois, the City of LaHarpe, Illinois, the City of Warsaw, Illinois, and the City of Keokuk, Iowa. Each of these municipalities and their respective Chambers of Commerce are parties to this brief.

Keokuk, could interchange such traffic with appellant on its present main line (R. 1158-60). This leaves little room for doubt as to the future of service via Western's line west of Peoria or the possibilities for industrial development along this line. Regardless of what appellant might argue concerning the future of Western's west end under its control, appellant's control would transform an existing main line into a branch line. Appellant's President was forced to admit this to be a fact (R. 1164). This would involve the transformation of a significant portion of a "vital link" in the national transportation system into a mere appendage of appellant's operations. This result, we submit, would have serious economic consequences to the communities and business interests which are presently served by Western's line west of Peoria.

Each of the municipalities, civic and business associations and shippers along Western's line represented by these intervening appellees offered extensive evidence which provided the basis for the Commission's finding that there are "excellent prospects" for the location of new industry under Santa Fe and Pennsylvania's control of Western. The unanimity of opinion of the organizations specifically concerned with the industrial development of these communities regarding this question cannot be disregarded. It should be noted, moreover, that the testimony of these witnesses was based in part upon the record of demonstrated cooperation of Santa Fe-Pennsylvania with both Western and these communities in the past.

2. Increased Car Supply.

Another area in this proceeding in which we have a substantial interest lies in the increased availability of railroad cars to the shippers in the communities served by Western. The Commission found that under Santa

Fe-Pennsylvania's control the supply of freight cars available to Western would be materially increased (R. 47). This finding is closely related to the finding respecting industrial development along Western's lines since Western's inadequate car ownership creates a substantial deterrent to plant location along Western's lines.

Appellant ignores the specific proposals by which Santa Fe-Pennsylvania would, as joint owners, increase Western's car supply, and argues that the finding is not supported by the evidence because Santa Fe and Pennsylvania have experienced car shortages in their own operations (Brief pp. 43-44).

Appellant has experienced similar periods of car shortage (R. 1214). The problem of periodic periods of car shortages in the railroad industry is, however, national in scope and is wholly unrelated to this finding. The record on this point is clear. In the first place, it was established that Santa Fe and Pennsylvania would increase Western's car supply by bringing Western's car ownership to a proper level (R. 368-69). Secondly, as joint owners of Western, Santa Fe and Pennsylvania would make a greater number of their own cars available to Western and in a period of car shortage, Western's shippers would be treated on a parity with their own shippers in car distribution (R. 368-69). As joint owners of Western, Santa Fe and Pennsylvania would have a sufficient economic interest to justify such a program. These intervenors supported Santa Fe-Pennsylvania's proposal for this specific reason (R. 668, 689, 783-84, 917, 923). This testimony was based in part upon the demonstrated cooperation of Santa Fe-Pennsylvania with Western and its shippers in the matter of car supply in the past.

III.

Appellant's Attack on the Shippers and Communities Along the Lines of Western.

Appellant has made broad and rather sweeping charges in its effort to discredit the unanimous public support accorded the Santa Fe-Pennsylvania proposal for control of Western (Brief pp. 44-45). Appellant's statements constitute neither a legitimate argument directed to the adequacy of the findings nor to the substantiality of the evidence as to specific findings. Appellant's statements are intended to minimize the significance of the participation in this proceeding of the 18 municipalities, the civic and business associations, and the shippers which are most directly and immediately affected by the outcome of this proceeding. Because our testimony underlies significant findings contained in the report, we cannot let these charges go unchallenged although they are not relevant to any of the issues with respect to the adequacy or substantiality of the findings.

The charge is made that the commercial and municipal interests represented by the intervenors herein were "produced" by the "free-spending" Santa Fe-Pennsylvania and "assembled" as part of a "promotional campaign". We are said to have been uninformed and not "remotely aware" of the issues in the proceeding. It is suggested that we do not really desire to maintain Western as a separate and independent operating carrier since we are not really opposed to the reduction of transportation facilities at Peoria, the removal of Western's offices to Minneapolis, the loss of at least 256 jobs in the area and the inability to realize the advantages occurring from Santa Fe-Pennsylvania control. We are said, on the other hand, to be interested "solely" in good service and appel-

lant is said to provide good or better service than Santa Fe-Pennsylvania. Thus the Commission should have confined the treatment of our testimony to its "economic substance," *i. e.*, good service, instead of taking us at our word and assuming that we were supporting the continued separate and independent operation of Western and opposed to appellant. The significance of our testimony and the treatment accorded it by the Commission is thus conveniently written off as a "popularity contest", the import of which was completely misunderstood by the Commission (Brief pp. 44-45).

This rather fantastic argument only emphasizes the length to which appellant must go in an effort to discredit the significance of our participation in this proceeding.

No matter how carefully the record of our testimony is sifted in order to find a basis for discrediting it, the fact remains that not a single shipper, municipal or community interest which is directly and immediately affected by Western supported appellant's plan for control. This is not mere happenstance. It cannot be written off by a charge that these responsible municipal and business interests were the "victims" of Santa Fe and Pennsylvania's "promotion and publicity". Too broad a range of economic and public interests is represented by our participation. The absence of any public support speaks eloquently for the fact that appellant's proposal contravened the interests of that segment of the public interest which is most vitally and directly affected by the services of Western.

Without identifying specific findings, appellant argues that the Interstate Commerce Commission erred in not confining "the findings with respect to the shippers and local officials" to the "economic substance" of their testimony. The only findings made by the Commission with

respect to the shippers and communities along Western's lines reflect our position in this proceeding. We sought to maintain Western as a separate and independently-operated carrier (R. 31, 46). We sought to maintain Western's existing plant and facilities in the Peoria area (R. 47). We sought to retain Western's headquarters at Peoria in order to continue the present easy access to management (R. 47). We supported Santa Fe and Pennsylvania's proposal for control because of the specific advantages which would accrue to us by virtue of such ownership (R. 45). This was the "economic substance" of our testimony and this is precisely what the Commission found.

Appellant's proposal to eliminate at least 256 jobs in Peoria, to reduce the available transportation facilities involved in the abandonment of a classification yard, car repair shops and operating offices located in Peoria, and to move the offices to Minneapolis, obviously was unpopular. Consequently appellant is obliged to attack the Commission's action as reflecting the result of a "popularity contest" (Brief p. 45). But the basis for the "popularity" of Santa Fe-Pennsylvania's proposal lies in the fact that it would secure substantial economic advantages to these communities. Appellees submit that our participation in this proceeding would have been precisely the same even if we had not been the "victims" of an alleged "publicity and promotional campaign" to which appellant attributes our intervention (Brief p. 44). There is, however, no support in the record for this assertion and appellant's references to the record do not bear out the charge. The record references indicate that an attorney for the Santa Fe discussed its proposal with some of our witnesses, but it is also clear that the then Chairman of the Board of appellant's railroad was soliciting our support (R. 808, 815-16).

At the hearing before the Commission, counsel for the Santa Fe requested that we be heard after appellant had presented its proposal on the record (R. 351). Apparently realizing the extent to which appellant's plan, when its drastic character was completely revealed, would contravene our interests, counsel for appellant insisted that our witnesses be heard before appellant introduced its evidence (R. 351-52). Appellant now charges that our witnesses were uninformed and "not even remotely aware" of the considerations underlying its proposal (Brief pp. 44-45) and that not one of them expressed opposition to the elimination of "duplicate facilities" (Brief pp. 44-45), but were solely interested in "good service". If our opposition to appellant's proposal was not sufficiently articulate at the hearing, it was attributable entirely to appellant's procedural maneuvers at the commencement of the hearing. Our subsequent participation in this proceeding (after all the evidence was in) before Division 4, the Commission, the District Court and this Court indicates where our interests lie.

IV.

Control of Western by Santa Fe-Pennsylvania Will Not Injure Appellant's Branch Lines in South Dakota and Minnesota.

The participation in the proceedings of the States of South Dakota and Minnesota and their respective Public Utilities Commissions was predicted upon the fear that Santa Fe-Pennsylvania's control of Western would divert traffic from appellant's lines, thus resulting in the abandonment of appellant's branch lines in these states (Brief p. 28). The Commission, however, made an extensive analysis of appellant's claims of traffic diversion (R. 35-37). The Commission found that these claims were groundless.

Neither South Dakota nor Minnesota have attempted to deal with the Commission's detailed analysis or raised any question with respect to these findings in this appeal.

The issues discussed by South Dakota and Minnesota's briefs are manifestly no more than a reiteration of the arguments advanced by appellant.

CONCLUSION.

Representing, as we do, the great bulk of the public interest of the middle west in this case, as opposed to the only expressed interest in reversing the lower court and the Commission (which was filed by the states of South Dakota and Minnesota and their respective public utility commissions), it can hardly be doubted that the public interest, insofar as the participants in this case are concerned, lies heavily in support of the Commission's order.

Concluding, it is earnestly submitted that the public interest to which the Interstate Commerce Commission is committed by virtue of the National Transportation Policy and the Interstate Commerce Act compels no other conclusion when reviewed in the light of the findings of the Commission in this case that the Commission in the exercise of its delegated authority in approving the application of the Santa Fe and the Pennsylvania Railroad for the acquisition of the Toledo, Peoria & Western Railroad Company has met all of the exacting requirements of the Interstate Commerce Act and the National Transportation Policy.

We therefore respectfully suggest, on the basis of the considerations outlined in this brief, that this honorable Court should—

(1) Sustain the holding of the lower court in this case, and

(2) Sustain the findings of the Interstate Commerce Commission and its order, which is the subject of this review.

Respectfully submitted,

ON APPEALS FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA

REPLY BRIEF OF APPELLANT, THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY

The one subject that went unnoticed in the Commission's report, and upon which the appellees have elected

to remain silent in [illegible] briefs, is Pennsylvania's admitted motive in enteri[illegible] the acquisition of Western; namely, to stifle competition. Pennsylvania had for years conceded the soundness of a Minneapolis-Western merger. (R. 977-8, 1022, 537-8) When it learned of the plan to add a third sector—the Monon—to produce a meaningful outer-outer belt line by-pass of Chicago, Pennsylvania proceeded with the acquisition of Western to forestall and permanently prevent that competition. (R. 1022-3, 539-40) And it did so with the aid of its interlocking directorate relationship with the seller, Wilmington Trust Company. How a transaction so oriented squares with the public interest the Commission did not say. The District Court, as explained in a footnote to the opinion, saw no purpose in exploring such motivations because the Commission had "no authority to direct the trustees to deal with Minneapolis rather than with the other interested purchasers." (R. 97) And the whole subject, including the District Court's *non sequitur*, is simply ignored by all the appellees.

The deficiencies of the Commission report (and the briefs filed in its defense) reach deeper and further than this one item. The assumption is persistently made that Minneapolis contemplates the "disappearance" or "destruction" of the Western organization and abandonment of the policy of neutrality. (R. 30-1, U. S. Br. 24, 31, P.-S.F. Br. 8, 25, 29) There is not a shred of evidence to support any of these assumptions. The unification of the Minneapolis and Western solicitation and service organizations will enhance and fortify the existing policies of aggressive solicitation, impartiality with connections, and effective service. That is the announced purpose and the incontestable self-interest; both carriers have for years solicited the Peoria gateway to the exclusion

of all other gateways. The point is not whether the surviving operation of Western will be "independent", "autonomous", or "separate"—all of which are literary allusions. The real question is whether the service and solicitation policies will be aggressively pursued and impartially administered.

With respect to section 10 of the Clayton Act, the appellees' briefs reiterate the Commission's position that Pennsylvania made no purchase of Western stock from Wilmington Trust, but none attempts to explain how that comports with the record. Instead, they would read into the statute special limitations which the Congress did not write or, so far as the legislative history reveals, ever contemplate.

With respect to the national antitrust policies, the Commission's position, unexplained in its report, is finally disclosed. It regards the National Transportation Policy as a substitute for the national economic policy of free competition. In that frame of reference, it felt called upon to allude to the antitrust policy in terms only of individual traffic diversions rather than the over-all framework of free competition and did not seek the accommodation, to the extent possible, of both national policies.

I.

The Denial of a Comparative Hearing.

Minneapolis presented a positive program for promotion of the Peoria gateway, economies through elimination of duplicate facilities and operations, added and improved service and strengthening the two small carriers. Pennsylvania and Santa Fe united on a negative program, admittedly undertaken to forestall competition from Minneapolis and Western; no economies or service im-

provements were involved and the owners would continue as Western's most powerful competitors. The Minneapolis application clearly advanced the National Transportation Policy "to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation"; it conforms fully to the national antitrust policies. The Pennsylvania-Santa Fe application makes no contribution to the transportation policy and gravely offends the antitrust policy. Findings that would catalogue, evaluate and balance the comparative considerations (which could have yielded but one result) were not made. Instead the Commission adopted as the sole criterion "independent and separate operation" of Western, automatically ruling out any possibility of integration or economy. Now the Commission justifies its lack of comparative findings on the ground that it confronted "radically different proposals". Whether the standard to be achieved be determined in advance or at the conclusion of a composite balancing, there is no excuse for omitting findings of fact with respect to each application or the evaluation of the comparative advantages in each category.

While the appellees' briefs rely upon *FCC* v. *Allentown Broadcasting Corp.*, 349 U.S. 358 (1955), that decision actually offers little comfort to their position. There the Commission did in fact examine and appraise, in comparison, each application in relation to each factor. The Commission found that both applicants were legally, technically and otherwise qualified and that both communities were equally in need of the programs proposed to be broadcast by each applicant. The one factor which carried the crucial weight was that Allentown had three local stations and that Easton had only one. Despite the difference in population, the Commission thought that the choice between locally originated programs was

decisive. Had like procedure been followed in this case, the Commission would have been compelled to grant the Minneapolis application and deny the other.

1. The Illusion of Independence of Western.

Both the Commission and the appellees gloss over the absence of comparative findings by loose references to the terms "independent", "separate" and "neutral". And now the Government brief (pp. 10, 23, 34) adds the term "autonomous". That Western's management could be independent of its owners is an illusion that not even the Pennsylvania-Santa Fe brief seriously espouses. Dispelling any notion that promises of separation and autonomy will insulate Western from effective control by its owners, were the Pennsylvania-Santa Fe conversations about using Western for their own advantage in empty refrigerator car routing, as noted in our original brief. (p. 22) In preparation for this hearing, the President of Pennsylvania found it advisable to warn his executives against altering existing relations to Pennsylvania's advantage—a measure wholly unnecessary were the normal inclination not in that direction. (Ex. H-14, R. 1693).

The assumed virtue of the separate operation appears to be two-fold. First, it is designed to continue active solicitation for Peoria gateway routing by Western's traffic solicitors, notwithstanding that the economic self-interest of the controlling carriers would remain in their longer hauls through Chicago and St. Louis. Our original brief exposed the parity hoax perpetrated upon the Commission and showed the unreality of expecting a subsidiary's solicitation force effectively to compete with the parents. *ICC* v. *Baltimore & O.R.R.*, 152 I.C.C. 721, 735-6 (1929) (Orig. Br. 20-22)

In terms of promotion of the Peoria gateway, the Commission had a choice. The solicitation force could be placed under the control of two carriers that had long been, and would continue as, active competitors and whose economic preferences lay in other gateways. Alternatively, Western's organization could be augmented with the Minneapolis traffic staff, both having long concentrated on bridge solicitation for the Peoria gateway to the exclusion of all others, and having no conflicting economic interest either to erase or to avoid.

Secondly, a "separate" Western was thought to provide assurance of neutrality with connecting carriers. The record shows that whether the exercise of control be patent or latent, self-interest provides the only truly effective guarantee of neutrality. In the court below, Pennsylvania-Santa Fe described any departure from neutrality by Western as "suicidal". There is nothing in the record or in good sense that renders that term less applicable if Minneapolis acquires Western. As the Traffic Vice President of Santa Fe put it, "any time it [Western] was guilty of preference, even with its owners under an independent operation, it wouldn't be long before the T.P.&W. would find very little cooperation with any of the other railroads that now interchange with it." (R. 503)

The Minneapolis acquisition was designed to be ". . . the closest possible thing to a continuation of the TP&W policy in its present form . . ." (R. 1030) The Peoria gateway is the lifeline of Minneapolis. The Pennsylvania-Santa Fe brief (p. 28) concedes that ". . . railroads serving the east-west gateways cannot afford to favor one connection to the detriment of others." The $12 million investment in Western compares to Minneapolis' capital stock of $20 million. These add up to an overriding

economic incentive to operate, as the Minneapolis Chairman testified, "with an eye single to the best interest of the TP&W." (R. 1031)

We need look only to the conditions imposed by the Commission as an assurance of neutrality (R. 40-1) to see that these operating principles are unrelated to whether Western operates as a separate organization or in integrated collaboration with Minneapolis. These conditions require that existing routes, junctions and channels of trade be preserved and that the neutrality of handling traffic inbound, outbound and in overhead service be continued without discrimination.[1] Present relationship and service are to be continued without impeding the routing of traffic by captive industries. These conditions prescribe a way of life which the Pennsylvania-Santa Fe witnesses testified must be respected by any owner in order to avoid reprisals and retaliation from any carrier adversely affected. (R. 483-4, 546, 572)

2. *Preservation of Western's Solicitation and Service Policies by Minneapolis.*

Stripped of the confusion of labels, the heart of the Commission position is that the public interest will be served by retaining the established solicitation and serv-

[1] The Government brief complains of our "belated" acceptance of these conditions. (p. 31) On the opening day of the hearing, Burlington, whose petition proposed the conditions, suggested a change. Counsel for Minneapolis announced its acceptance of the conditions, stating that prior to the hearing he had advised the Milwaukee of that acceptance. (R. 355, 454) The question arose again the next day, and Minneapolis reiterated its full acceptance of all the conditions. (R. 551) The neutrality conditions accord precisely with the incentive of Minneapolis "to carry on and improve the same type of aggressive solicitation and service that has been provided by the TP&W." (R. 1032)

ice policies of Western. Accepting this preconceived premise, it was incumbent upon the Commission to set out precisely the policies it proposed to preserve and to determine separately how each of these policies would fare under each of the competing applications. This the Commission was called upon to do, not by generalizations, not by recitals of asserted position, but by findings of fact predicated upon the evidence. And this is precisely what the Commission failed to do.

The policies which made Western successful were these:

First, aggressive solicitation of traffic in active competition with the primary gateways at Chicago and St. Louis and the minor gateways at Decatur, Kansas City and the like. This little carrier maintains 19 off-line agencies throughout the United States to promote that solicitation.

Second, efficient service bridging traffic on transcontinental routes between the east and the west. This involves efficiency in operation and effective utilization of equipment.

Third, the furnishing of full and prompt information to shippers with respect to traffic being handled. Here again the 19 off-line agencies provide facilities for that important purpose.

Fourth, the maintenance of cooperation with each of the 16 carriers with which Western connects. Primarily, this involves maintenance of service routes, facility of interchange and accommodation of schedules under a policy of impartial treatment for all connections.

These policies, supplemented by the active solicitation by Minneapolis which was dependent upon, and other roads that utilized, the Peoria gateway, enabled Western to build up its large traffic volume in defiance of the

"passive" opposition of its two largest connections, Pennsylvania and Santa Fe.[2] (R. 34)

3. Preservation of Neutrality by Minneapolis.

The Commission insisted that "The proposal of Minneapolis unequivocally contemplates the disappearance of Western as an independent and neutral connection for the other 15 carriers with which it presently works." (R. 30) That Western and Minneapolis would integrate their operations and, to that extent the independence of both would be affected, is perfectly true. But with respect to neutrality, there is not one speck of evidence to support the Commission's statement. Indeed, it flies in the teeth of the sworn testimony and unqualified opinions of the

[2] Counsel make much of the Commission's finding that the success of Western "dates from the construction, in 1927, of its western connection with the Santa Fe at Lomax," (U.S. Br. 5; P.-S.F. Br. 4) The Court will note that finding reflects a time rather than a causal connection. The truth is that Western's success was attributable to the aggressive solicitation and service policies of McNear, who acquired the Western from the Receiver in 1927. At that time he said of his principal eastern and western connections that had owned the property for 33 years:

> ". . . It was against the interest of the controlling companies—Pennsylvania-Burlington—to develop the property because it competed for traffic with their lines." Acquisition by T.P. & W. R.R., 124 I.C.C. 181, 187 (1927)

In the first year McNear jumped the Western carloads from 38,650 to 53,283, the Santa Fe contribution being less than 3,600 cars. The next year he increased the volume to just under 68,000 cars, of which the Santa Fe connection at Lomax accounted for 5,961. (R. 464; Ex. H-5, R. 1641) And even these Santa Fe carload figures are not net because, contemporaneously with the opening of the Lomax gateway, Western discontinued its joint operation from Lomax to Burlington for connection with the Burlington. (R. 381)

officers of the opposition. The evidence on the subject of neutrality is as follows:

1. Pennsylvania-Santa Fe witnesses testified that neutrality with connections is a highly sensitive aspect of railroad operation because the failure to respect neutrality invites reprisal and retaliation. Any semblance of favoritism is self-defeating. (R. 483-4, 546, 572) These economic forces would hardly be less operative under the Minneapolis regime than they would be for the colossi giving the warning.

2. Minneapolis proposed expanding and intensifying solicitaiton for the Peoria gateway. The number of off-line agencies soliciting Western traffic would be increased from 19 to 35. (R. 1185-7) Ninety percent of the revenue being derived from bridge traffic, such intensified solicitation would necessarily increase the volume of the connecting carriers. Far from deteriorating, the connections would be enhanced.

3. The Minneapolis program received the wholehearted endorsement of both the President of Pennsylvania, Western's largest connection, and the President of Western, who is credited with Western's progress in recent years. It was only when Pennsylvania's President felt the sting of meaningful competition from a proposed outer-outer belt line that he abandoned his position, held for years, that the Western and Minneapolis merger was a natural. (R. 532, 539, 1022-3, 977-8) It was only after Pennsylvania and Santa Fe made the second purchase contract that Western's President changed his allegiance. (R. 997) With their first-hand knowledge of both the operating realities of the proposed merger and the basic requirement of impartiality with connections, they supported the Minneapolis program—until they became adversaries in this litigation.

4. The improved service, proposed by Minneapolis, particularly when coupled with the intensified solicitation, offers new opportunities for traffic to most of Western's connections. If a car can move 15 or 18 hours—or even one hour—faster through integrated, accelerated schedules, the connections that deliver or receive that car will be the beneficiaries of heavier traffic.

5. Minneapolis, Santa Fe and Pennsylvania constitute three of Western's connections. Not one of the remaining 13 connections has appeared in this Court to challenge Minneapolis on the issue of neutrality. Were this a genuine threat, were there a danger that Minneapolis would adopt the self-defeating policy of favoritism, at least one of the adversely affected carriers would have appeared.

6. The Commission-imposed conditions are both acceptable to, and in harmony with the self-interest of, Minneapolis.

The opposition briefs assume that improved service is incompatible with neutrality. As the Commission's proposed conditions reveal, neutrality requires that existing service routes, connections and schedule accommodation be retained so that the opportunity for continuing existing service is not impaired for any connection. (R. 40-1) The evidence shows that Minneapolis intends to continue that program, and indeed the contemplation that Minneapolis would continue Western's high quality of service was conceded by Pennsylvania's Traffic Vice President. (R. 590) Neutrality does not guarantee to any connection that it will retain the same volume of business, that the shipper will not seek faster, better service elsewhere. The very essence of the transportation goal, be it rail, water, highway or air, is to give the shipper the finest, the fastest, the most convenient service. And that is

hardly incompatible with the public interest. But more than that, an examination of the improved and accelerated service proposed by Minneapolis establishes a complete absence of harm to any connections with Western.

First, it is proposed to provide integrated service between the Twin Cities and Effner, the eastern terminal of Western. How any connections could be injured by eliminating duplicate yard handling and the transfers of cars two or three times along the route, is difficult to see. Secondly, Minneapolis proposed to get coal traffic not now moving from its Middle Grove mines to the river port at Peoria by integrated service, avoiding a switching charge. Having in mind the intense competition in the coal industry and the significant portion of the coal selling price attributable to transportation expense, this proposal is a contribution to the miners and the mine owners in Middle Grove and adds a measure of stability to a vital, ailing national industry. Here again no connection could possibly be affected adversely.

Third, main line interchanges without intermediate switching carriers would save some 24 to 48 hours on Illinois Central interchanges, opening the opportunity for traffic from and to the south and southeast. (R. 1179) Improved interchanges were also proposed with the Gulf, Mobile & Ohio, Nickel Plate and New York Central, all calculated to bring new traffic through the Peoria gateway. (R. 1179-82) These steps would necessarily enhance the volume of traffic moving over Western, from and to its connections.

Fourth, new service routes would be opened through the C. & E. I. interchange at Watseka. This would "provide a faster freight service route" for traffic "now fun-

neled through the Chicago Gateway." (R. 1181) It would enable shippers from the northwest and, indeed, from any part of the west coast, to utilize Western's facilities to reach the south and southeast, and vice versa. Here, too, a new flow of traffic would be drawn into the gateway. Again, the connections could only be benefited, not harmed.

We do not deny that Minneapolis will intensify the competition with the Chicago and St. Louis gateways. Certainly it plans to divert traffic from these competing gateways and from other modes of transportation. (R. 1029) If promotion of the Peoria gatew , serves the National Transportation Policy, then such diversions, obtained on the basis of better service, should be encouraged and not suppressed.

4. The Commission's Use of Different Yardsticks.

Not only did the Commission attribute to the Minneapolis program a destruction of neutrality, contradicted by all of the evidence, but the Commission invoked a special yardstick with which to strike at the so-called diversion of traffic. The improved, accelerated service and the new service routes, the Commission found, would be extremely harmful to other carriers. (R. 31-2) No finding of fact showing the nature or magnitude of such harm is provided. The only railroad mentioned is the Wabash, whose President thought "a large part" of about 6500 cars moving via Albia and Des Moines to or from Illinois or states east thereof would be "influenced" to Western.[3] (R. 1270-1). He could not say what portion

[3] The witness spoke of a large part of 35% of 21,000 cars moved in 1955. On cross-examination he admitted that this figure should be reduced by a 2500 car nonrecurring movement from Detroit. (R. 1292).

of this "large part" related to stations west of Bement, Illinois, the breakpoint for any possible diversion. The truth is that the Albia-Des Moines interchange to which the Wabash President referred is predominantly a north-south interchange which could not affect east-west traffic. (R. 1202) In any event, the Wabash is quite competent to supply specific data if genuine vulnerability existed or if the item had any real significance in its operations.

When the possibility of diversion of traffic by Pennsylvania-Santa Fe was considered, the Commission adopted a wholly different yardstick—and indeed a different tone:

> "Of course, if service over the Western is improved under the control of the Santa Fe and the Pennsylvania, and traffic can be handled over it more economically and efficiently than over existing routes, there may be some diversion of traffic, but such diversion would not jeopardize the maintenance of adequate transportation service by the objecting intervening carriers." (R. 34)

Thus the Commission employed the standard of jeopardy to maintenance of adequate transportation service to test diversion of traffic by Pennsylvania-Santa Fe, while holding that *any* diversion by Minneapolis is "extremely harmful." The employment of two wholly different criteria to judge the significance of traffic diversion by the competing applicants demonstrates the utter absence of a comparative hearing.

The Commission again tinkered with the standards in considering the diversion of Minneapolis traffic inherent in the Pennsylvania-Santa Fe program. Santa Fe's Traffic Vice President testified that Nemo would cease to be on a parity with Lomax "service wise and every other wise". (R. 496) This and other preferences would render $7 million of Minneapolis traffic—more than

one-third of its total volume—vulnerable to diversion and would produce an almost certain loss of $1.1 million in revenue. (R. 1027, 1104, 1112-8, 1254, 1356-7, 1410-1) While the Commission said that the "record does not disclose the basis of the percentages used" (R. 35), witness Swanson, in response to a Pennsylvania request, provided an analytical breakdown of all the traffic movements, the commodity and nature of which he had already described. (R. 1151/2, 1356-7) When he returned to the witness stand, the successful applicants elected not to cross-examine on that analytical breakdown. (R. 1611-12) Although Santa Fe's deliberate change in service was admitted and the imperiled traffic explored in detail, the Commission concluded that the Minneapolis traffic "does not move on a competitive service basis" and hence would not be vulnerable.* (R. 36)

---

*The idea that Minneapolis obtained the traffic through friendship rather than service came from the testimoney of Coulter (President of Western) that Minneapolis service from Peoria to Nemo was almost a full day slower than Western's service to the Lomax terminal. (R. 1580-2) On cross, he admitted that the principal Minneapolis business received from Western at Peoria came "around 10 P. M. in the evening". (R. 1605) His principal testimony had reference to morning westward movement, which was admittedly light, but he did not know that Minneapolis' train No. 19 (departing Peoria at 1:15 A. M.) connects with the same Santa Fe train No. 59 at Nemo which receives the cars delivered at Lomax by Western's train No. 23 (departing Peoria at 1:00 A. M.). (R. 1606) The identity of these westward connections appears from the schedules in Santa Fe Exhibit H-121. (R. 1982-4) Recent schedule improvements have reduced the elapsed time for the traffic moving from Peoria to Kansas City to 17 hours 45 minutes on the Minneapolis-Santa Fe, compared with 19 hours 59 minutes on the Western-Santa Fe. The eastward traffic from Nemo connecting with Western at Peoria is delayed by lack of integrated schedules and switching (R. 1184), but the volume is not substantial. Of the entire Nemo-Peoria revenue, the eastward portion is less

Finally, any appraisal of added and improved service must be primarily in terms of public interest, not in terms of advantage for particular carriers. If the facility of movement of goods and wares in peace and military equipment in war can be expedited through the elimination of double and triple switching and multiple yard operations, then the public interest demands that such service be sustained unless, in the words of the Commission itself, such improvement would "jeopardize the maintenance of adequate transportation service by the objecting intervening carriers". (R. 34) Such effect from the Minneapolis program for improved service has never even been intimated by any party.

Had a comparative hearing been accorded, very little expertise judgment would have been required to weigh and compare the competing applications in terms of (1) improvement in transportation service, (2) promotion and development of the Peoria gateway, (3) economic incentive to preserve and enhance Western operations, (4) the maintenance of effective competition in the interest of shipper service and in keeping the antitrust policy, (5) the strengthening of carriers to perform their roles in the national transportation system, (6) provision of stability in employment without undue burden on individual employees, and (7) economies that will facilitate better and cheaper service to the public.

---

[1] (continued)
than 30%. (R. 1355-6) And of the Minneapolis deliveries at Peoria, less than 13% represents such delayed interchange with Western. (Ex. H 128, R. 2002) Other carriers cooperate to integrate their schedules with those of Minneapolis. (R. 1193, 1349) The comparison by the witness of 49 miles per hour speed on Western with 30 miles per hour on Minneapolis (R. 1579) turned out to be the maximum in the first instance and the average in the second. (R. 1597)

II.

The Omission of Findings on Essential Issues and the Entry of Findings Contrary to Undisputed Record Proof.

Appellees' briefs proceed on the assumption that when the Commission recites the position of a party on an issue, its fact finding function has been adequately discharged.

1. Economies and Improved Service.

The primary benefits sought in railroad mergers are economies through the elimination of duplicate facilities and integration of service. The Minneapolis proposal achieves both objectives for strengthening carriers and improving public service. This was no mere exercise in generalities. The evidence spells out the precise operations to be integrated, the duplications to be eliminated, the trains to be accelerated and the new service routes and connections to be added. (R. 1028, 1077, 1186, 1222-9, 1239-42; Ex. H-44, R. 1894-1924, 1380) The Pennsylvania-Santa Fe answer is that we ignore the "findings which reflect the Commission evaluation" of our contentions. (Br. 31) There is not a syllable in the Commission report which even approaches the dignity of a finding and none is cited by appellees. On economies, the Commission says only that "Minneapolis estimates". (R. 32) On improved service, the Commission says "Minneapolis contends" and "Minneapolis proposes to establish". (R. 31) Would the actual saving be $1,770,945, as shown in the Minneapolis schedules and testimony, or would it be more or less? Are the accelerated service and the new service routes practical and will they advance the public interest? These are the queries which the Commission was called upon to answer in findings of fact

and on these matters nothing appears in the Commission report.

Without mentioning the public service benefits from the improved accelerated service, the Commission found that it would be "extremely harmful to other carriers". (R. 32) The Commission referred only to the vague Wabash generalization, unsupported by specific data (*supra*, pp. 13-14). Appellees would now bolster the Commission's findings with auxiliary findings of their own that the new service routes would divert traffic from Western's connections. (U. S. Br. 32-3; P.-S. F. Br. 29-30) The new service routes and accelerated service are designed to bring into the Peoria gateway additional traffic now moving through other terminals or by other modes of transportation (R. 1029); these must necessarily add to the volume of Western's connections. The Government errs in its assertion that Rock Island and Nickel Plate presented estimates of "potential losses from diversion of traffic under the Minneapolis plan." (U.S. Br. 23) The Rock Island figures mentioned reflect simply competitive traffic which could move today on either the Minneapolis or the Rock Island, and which the originating carrier can greatly influence. (R. 1551) The witness testified only that the Minneapolis was an aggressive competitor and that any business which is competitive could be lost. (R. 1542-5, 1550-1) The Nickel Plate testimony is in the same vein. (R. 1340-1)

Nor is there any evidentiary support for the fears expressed by appellees for the six other carriers. Hostile as the Commission was to the Minneapolis application, it did not even mention the Rock Island or the Nickel Plate or any carrier other than the Wabash in discussing the Minneapolis program. And none of the connecting carriers has been sufficiently concerned to intervene in

this Court. In the District Court, the only intervenor, Nickel Plate, did not raise any issue of Minneapolis diversion.

The other side of the coin is that the Santa Fe and Pennsylvania, with their massive originating volume, are in a truly powerful position to divert large tonnage. Most important is the tremendous long haul incentive for Pennsylvania and Santa Fe to divert existing Peoria gateway traffic to the more profitable St. Louis and Chicago gateways—a condition inherent in awarding Western to its most powerful competitors.

2. Economic Motivations.

As noted, Pennsylvania's plan to acquire Western for the purpose of forestalling competition was, so far as disclosed in the report, not considered at all. Reference is made to the purpose of Pennsylvania and Santa Fe to "cement" their already close relationship with Western. (P.-S.F. Br. 32) No mention is made of the fact that their connections with Western were in the nature of a shotgun marriage brought about by the service demands of shippers who were solicited by the dynamic McNear to utilize the short line bypassing Chicago. No account is taken of the fact that Santa Fe and Pennsylvania have "passively" opposed Western solicitation throughout the years. No consideration is given to the fact that Pennsylvania and Santa Fe are active, serious competitors of Western, with a primary interest in their long hauls to St. Louis and Chicago.

Counsel took pains to recall conversations of 1942 with reference to the acquisition of Western, but ignore (as did the Commission) the fact that up until the outer-outer belt line was proposed, Symes, President of Pennsylvania, kept urging a merger of Minneapolis and Western as a natural. Nor is there any reference to the

fact that Coulter, President of Western, administrator of the policies the Commission would preserve, similarly endorsed the Minneapolis-Western merger until he acquired new bosses under the contract of sale to Pennsylvania-Santa Fe.

We submit that an appraisal of economic motivations with these enormous blank spaces does not fulfill the Commission's responsibility in the public interest.

3. Prior Ownership of Western by Pennsylvania-Burlington.

Except for a reference to Western's "prolonged ownership by the Pennsylvania and the Burlington, which ended in receivership" (R. 21), the Commission's report makes no reference to that disastrous ownership experience of 33 years. It does not comment upon the fact, shown in its own records, that the receivership and the destruction of Western derived directly from the fact that it was against the interest of the controlling companies to develop the property because it competed with them for traffic. *Acquisition by T. P. & W. R.R.*, 124 I.C.C. 181 (1927).

Western's unhappy history imposed upon the Commission the duty of determining and weighing (a) the elements that led to the deterioration and receivership of Western, (b) the extent to which pertinent economic and operating conditions have undergone any material change, and (c) how, if at all, a repetition of the adverse results of ownership of Western by Pennsylvania in concert with a large western carrier could be avoided. That was never done. All that the Pennsylvania-Santa Fe brief can point to is the Commission's statement that much of Western's success dates from the construction of Western's connection at Lomax in 1927. As we have already indicated, this is a time and not a causal connection. the dramatic resurgence of Western's volume derives

from McNear's strong constructive solicitation and service. (*supra*, p. 9n.[2]) Nor does the Commission claim otherwise either through analysis of the figures or a direct finding. Even today only one-fourth of Pennsylvania's interchange with Western passes over the Santa Fe. (Ex. H-5, R. 1638) No amount of argument can erase the indelible fact that Western could not persuade shippers to use this strategic route until it was freed from control by its gigantic competitors. And in that sense, we fail to see the slightest difference between the history that Pennsylvania wrote before McNear and the one that the Commission would write now.

4. Purchase Price.

The Commission approved the price as reasonable because it was established by "agreement between a willing seller and a willing buyer". (R. 42) Why the same willing seller and the same willing buyer agreed upon a price 35% lower just one month earlier gave no concern to the Commission. How it could discharge its obligations without inquiring into that startling fact, none of the briefs explains.

Both the Commission and the appellees would bolster the finding by generalizations with respect to the condition of the property and the operating record of Western which the Commission considered without specific evaluation. They see confirmation in the willingness of Minneapolis to pay the same price, but give no consideration to the fact that the Minneapolis program, because of economies, would yield earnings more than twice those available under the separate operation of Western. Lack of consideration of price-earnings data is attributed by Pennsylvania-Santa Fe to the absence of such data in the record. (P.-S.F. Br. 40) We would have thought that the agency regulating the railroads and collecting

their day-to-day earning and operating figures would have no difficulty correlating those earnings with the daily market quotations. It has not been too much for this Court to take judicial notice of market data, and we take it that the Commission should not deny itself similar information.

5. Promotion of the Peoria gateway.

The Commission found that Pennsylvania and Santa Fe intended to promote Western as a strong competitive force. Assurances were accepted in disregard of (a) the competition of their own traffic organizations, (b) their economic advantages in the long haul through competing gateways, and (c) their 30 years of passive resistance to Western solicitation. This vital conclusion was reached by the Commission on the basis of its findings that Santa Fe "intends to place Lomax on a parity with Chicago from a solicitation standpoint" and that under Pennsylvania solicitation "Effner and Chicago will be on a parity". (R. 34) The plain meaning of these findings is that, upon investing in Western, Santa Fe would solicit traffic equally for the Chicago and Lomax terminals and Pennsylvania (while continuing to favor St. Louis) would solicit equally for the Chicago and Effner interchange.

---

[3] Pennsylvania's Traffic Vice President was asked, upon cross-examination, whether he intended to advise his "traffic solicitors that Effner is to be placed on a parity with Chicago and St. Louis with respect to the active solicitation of freight". His answer was, "Yes, sir." (R. 594) At an earlier point he had mentioned the proposed parity and said that Pennsylvania would "not work against Effner". (R. 571) Throughout the proceeding, Pennsylvania-Santa Fe officers spoke of parity in terms of solicitation, generally without revealing that they did not intend to solicit any traffic for Western. (R. 403, 405, 495, 582, 594) It remained for the final Pennsylvania-Santa Fe witness to make it clear, on cross-examination, that Pennsylvania would not solicit for Effner and Santa Fe would not solicit for Lomax, and that, in their lexicon, "parity" and "benevolent attitude" were synonymous. (R. 1600-1, 1609)

Our original brief showed that the word parity was delusive and misleading; that actually the successful applicants meant no equality of solicitation but in the words of their own witness, merely a "benevolent attitude". (R. 1609) Pennsylvania and Santa Fe now concede that they do not intend to solicit a pound of freight for interchange with Western either at Lomax or Effner, or anywhere else.[6] They say, in effect, that the Commission understood that parity of solicitation meant neither parity nor solicitation.[6] And they arrive at that by the curious fact that the subject had been introduced earlier in the paragraph of the Commission report by a comment that under the new control, Western "would have an increased opportunity to secure traffic now moving via other gateways." (P.-S.F. Br. 34-5) Whatever special insight appellees may have, the report of the Commission which the courts are called upon to review makes it perfectly clear that the cornerstone of the Commission's fundamental conclusion that Pennsylvania-Santa Fe will promote the Peoria gateway is the finding of equality of solicitation for Western connections on the part of both carriers. The crumbling of that cornerstone, we respectfully suggest, withdraws the entire foundation for the promising structure erected by the Commission as a justification for its order.

6. Testimony by Shippers and Local Officials.

Our original brief pointed out that these witnesses were assembled as a part of a huge promotion, that they had no knowledge of the Minneapolis program and attempted no comparisons, that shippers were primarily interested in service, that all who had used Minneapolis applauded

---

[6] The words of the Pennsylvania-Santa Fe brief (p. 34) are these:

"The Commission was not misled. It did not find that Santa Fe and Pennsylvania would solicit for Western."

its service and that, finally, the Commission should have been concerned with economic and public considerations not a public opinion poll.

The one-sided expressions are excused by Pennsylvania-Santa Fe counsel by the argument that these witnesses appeared prior to the testimony of Minneapolis officials (Br. 40) That hardly excuses the failure to enlighten these witnesses or commends their uninformed opinions.

The concern, expressed by counsel for the appellees, for the future of service and industrial development on the segment of Western lying west of Peoria, has no basis in either evidence or findings. (U.S. Br. 11, 39, P.-S.F. Br. 40-1) Studies made by the Minneapolis demonstrated the desirability of that property. (R. 1028-9, 1065) The density of its traffic is greater than that of a considerable portion of the Minneapolis line. The Commission found specifically that Minneapolis had no intention of abandoning that operation, and its findings do not intimate any possibility of deterioration in service. (R. 31)

Finally, the Pennsylvania-Santa Fe brief (p. 41) complains that the Minneapolis plans for accelerated schedules and new service routes would not benefit transcontinental shippers. A simple answer is that the Pennsylvania-Santa Fe proposes no improvement in service for any shippers. However, transcontinental shippers between the east and northwest must certainly benefit from the accelerated schedules. Those shipping to the west coast and the south and southeast would have new service routes with as much as two days' delay eliminated; these should certainly attract traffic movements to Western.

3. Stability of Employment.

The duty of the Commission to consider the effect of an acquisition upon employment is not satisfied by a mere reference to the number of positions eliminated by the abandonment of duplicate facilities and operations. The number of individuals who could be adversely affected and the extent to which the dislocation would be cushioned are factors which the Commission is required to consider. Nor may the long-range advantages of stability of employment be ignored. No explanation for the Commission's silence on these matters is suggested by the appellees.

The communities served by Western would be natural beneficiaries of the improved service, promotion and stability to be derived from uniting Western with the only other carrier that has for years promoted the Peoria gateway as basic to its very existence. Nor should there be overlooked the opportunities for commercial and industrial development, with added payrolls, which would be opened up by the consolidation of facilities. Considerable acreage from the yard and other facilities to be abandoned, a large office building and other property would become available for useful and productive utilization. (R. 1226)

The Commission knows full well that the employment aspect of carrier acquisition is a many faceted problem which cannot be answered simply by a mathematical computation of the number of unnecessary positions that will be eliminated. Indeed, the Washington Job Agreement and related formulae, from time to time invoked by the Commission, were established to meet the reality of that problem.

The factor of stability of employment as a consideration in a merger proceeding was ably described by the Commission itself in a recent decision:

> "*The merger will afford more stabilized employment for employees of both roads.* — In our opinion, the merger will be in the interest of employees of both roads, since in the last analysis railroad employment is directly dependent on volume of traffic handled. A stronger unified railroad would be in a much better position to develop new traffic than either Norfolk & Western or Virginian is separately. With heavier and more diversified traffic for the combined system, employment opportunities should be stabilized and increased." *Norfolk & Western Railway Company — Merger — Virginian Railway Company*, I.C.C. F.D. No. 20599, (October 8, 1959) Sheet 37.

In that case the carriers made a special agreement that displaced employees would not be discharged but would move into vacancies which attrition would amply provide and the Commission invoked the Oklahoma job protection formula. The Minneapolis program was not materially dissimilar. Its Chairman testified that in a large internal reorganization vacancies from attrition were sufficient to absorb substantially all displaced employees and that the same result was expected here. (R. 1032-3) This program was fortified by the protection of the Washington Job Agreement. (R. 289) The possibility that the incumbents of the positions to be abolished would not all be absorbed in other positions is so remote and the number who can possibly be in jeopardy is so small that an absolute guarantee of employment would have cost less than the printing bills in this proceeding.

III.

Section 10 of the Clayton Act.

The Commission held section 10 of the Clayton Act inapplicable, *first*, because the Commission has plenary authority under section 5(11) of the Interstate Commerce Act to render antitrust restraints inoperative, and *second*, because the purchase from Wilmington Trust Company had been made by the Santa Fe. (R. 44) Under *SEC* v. *Chenery Corp.*, 318 U. S. 80, 93-4 (1943), the validity of the decision "must be measured by what the Commission did, not by what it might have done."

The application to the Commission was for a joint acquisition by Santa Fe and Pennsylvania. The carriers had together negotiated and concluded the purchase agreements of April 15, 1955. Admittedly, Pennsylvania would have been a direct party to the agreement of the following month but for its insistence that the original sale agreements were valid. (R. 409, 458) Whether the Santa Fe discussion of participation with other railroads was or was not genuine, is not material. It did collaborate solely with its original partner, Pennsylvania, which always insisted upon the validity of its April 15th purchase contract, to enforce which a lawsuit is pending today. Both carriers then filed their joint application for the "joint acquisition of control of TP&W by Santa Fe and Pennsylvania Railroad". (R. 129)

Appellees insist that the "plain purpose of the section is to prevent a railroad from buying at too high a price" in an interlocking directorate situation. (U.S. Br. 63) Not a word of the statute is or can be cited to suggest such limited scope, nor is any support cited or to be found in the legislative history. The objectives outlined by the President and the Congress with respect to the original

section 9 of the bill (which became sections 8 and 10 of the Clayton Act) are these:

> "As the President has well said in his message, the adoption of the provisions of this section will bring new men, new energies, new spirit of initiative, and new blood into the management of our business enterprises. It will open the field of industrial development and origination to scores of men who have been obliged to serve when their abilities entitled them to direct. It will immensely hearten the young men coming on and will greatly enrich the business activities of the whole country." (H. R. Rep. No. 627, p. 20, 63rd Cong. 2d Sess. (1914))

We might add that were section 10 rewritten in conformity with the Government's brief, the Commission should have been particularly scrupulous and exhaustive in its exploration of the purchase price issue. That inquiry could hardly exclude the unexplored 35 per cent increase in purchase price in 41 days, the disparity of the price with market appraisals of railroad shares, and the drastic difference in the income to the purchasers under the competing applications.

That the phrase "dealing in securities" is not limited to the carrier's own securities, as the Government suggests (U.S. Br. 63-4, n. 22), is affirmatively established by *In Re Missouri Pac. R.*, 13 F. Supp. 888 (E.D. Mo. 1935), as well as the legislative history. The initial House Bill did limit the restraint to the carrier's own securities. (H. R. Rep. No. 627, p. 3, 63rd Cong., 2d Sess. (1914)) The Senate bill, which in this respect the conference report adopted, changed the phrase to its present comprehensive terminology. (S. Rep. No. 698, p. 64, 63rd Cong., 2d Sess. (1914))

By the Clayton Act, the Congress was striking at the hard core of concentrated economic power. It established

clear-cut standards for corporate morality. The use of an interlocking directorate by the largest railroad in America to crush the competition of a tiny carrier falls squarely within the comprehensive spirit and the unqualified condemnation of the legislative enactment.

The Government brief concedes that the Commission may not ignore the policy embodied in section 10 of the Clayton Act but insists that "it is quite clear that the Commission did not do so". (U. S. Br. 67) While the Commission observed that it had powers of immunization under section 5(11) of the Interstate Commerce Act, it found section 10 inapplicable upon the ground that Santa Fe had made the purchase. (R. 44) It did not find it necessary to inquire into the section 10 policy or to cite considerations, if any there were, warranting special condonation. Indeed, the Commission did not even look beyond the nominal purchaser, to note the joint purchase initially made and the joint application for joint acquisition that initiated the proceeding.

The Government is apparently unwilling to defend the District Court's position that section 10 could be applied only where the seller was acting for its own beneficial interest and where the interlocking directors could be enriched at the expense of the carrier. (R. 98-9, P.-S.F. Br. 58-9)

IV.

Absence of Consideration of Antitrust Policy and its Accommodation to the National Transportation Policy.

An accommodation of the national antitrust policy to the National Transportation Policy requires something much more fundamental and comprehensive than a mere inquiry into isolated diversions of traffic. It is not enough to say, as did the Commission (R. 39), that

the business of intervening railroads will not be unduly curtailed. Antitrust policy is concerned with whether mechanisms for monopolizing or stifling competition are being formulated, and that without regard to whether the immediate victims may be in the hearing room. It concerns the stake that the American people have in maintaining a free economy, unfettered by private cartels and combinations. It is in the full sweep of antitrust considerations that the Commission should have examined the antitrust problems before it.

We do not contend that the Commission may not properly sanction combinations that restrain competition in order to achieve significant public advantages in transportation service and facilities. Nor do we contend that the enormous disparity in size and power between the competing applicants entitles either to special consideration by the Commission. If the Commission is to proceed with an eye single to the public interest, it must take into account all significant considerations of transportation policy and antitrust policy, and may yield the latter only to the extent reasonably necessary to attain desirable transportation objectives for the public. We insist that the Commission cannot meet that obligation without taking into account the alternative possibilities.

The Commission's concept is that "Congress in dealing with recurrent railroad problems, has deliberately developed specific policies *in lieu of* the general national economic policy of free and unrestrained competition." (U. S. Br. 47) (emphasis supplied) This replacement notion is contradicted by *McLean Trucking Co. v. United States*, 321 U. S. 67, 84 n. 20, 85-7 (1944), where the Court makes it clear that (a) the antitrust laws remain applicable to the transportation industry, (b) their policy should be accommodated, to the extent possible, with

hat of the Interstate Commerce Act, and (c) antitrust iolations may be overridden "only where appropriate o further the national transportation policy, as estab-shed by adequate findings." Thus is posed the issue efore this Court.

Since the Commission did not see the flouting of anti-rust policy in the curtailment of gateway competition, n Pennsylvania's purpose permanently to foreclose com-etition, or in the enhanced competitive influence in the ennsylvania-Santa Fe service areas, findings to war-ant condonation were not provided. What transporta-on advantages in the public interest outweigh the cur-ilment of competition and the concentration of eco-omic powe has not been intimated either in the Com-ission's report or in the appellees' briefs. An appro-riate criterion recently set by the Commission is "the firmative improvement of transportation facilities" as xpressed in terms of "more economical and efficient erations and service, and improved service to the public", rtified by an assurance that "adequate competition would main." *The Pittston Company—Control—Brinks, Incor-rated*, 75 M.C.C. 345, 371-2 (1958). Of the applicants re, only Minneapolis could meet that test.

Even when the Commission dipped lightly into the roblem, it utilized, as we have already demonstrated, fferent yardsticks. With respect to the Minneapolis pplication, any diversion by Minneapolis was deemed xtremel harmful" even though the facts were vague, e figures indefinite, and the amount involved was in-gnificant in the affected carrier's volume. On the other nd, jeopardy to 35% of the Minneapolis volume, with almost certain loss of 5%, was of no consequence. or was the Commission concerned with diversion by ennsylvania-Santa Fe unless it would "jeopardize the aintenance of adequate transportation service by the

objecting intervening carriers." (R. 34) Thus, even in this limited aspect of the dynamic problem, there was not the slightest pretense of objectivity.

The subject of gateway competition was never considered by the Commission. It accepted the easy assurances of Pennsylvania-Santa Fe that competition with the Chicago and St. Louis gateways, which represents the very heart of the Western service, would not be relaxed, notwithstanding that such assurances are at war with the objective evidence:

1. Pennsylvania and Santa Fe have heretofore opposed Peoria gateway solicitation, preferring their long hauls respectively through Chicago and St. Louis.

2. Neither Pennsylvania nor Santa Fe proposes to change its solicitation policies. These will continue to favor the long hauls to St. Louis and Chicago in keeping with their economic self-interest. The repeated references to parity serve only to conceal the fact that neither Pennsylvania nor Santa Fe intends to support traffic routing through the Peoria gateway. Solicitation will be left wholly to the present Western organization which cannot but be responsive to the preferences of the controlling carriers. *ICC* v. *Baltimore & O. R.R.*, 152 I.C.C. 735, 735-6 (1929).

3. For more than three decades Western was permitted to dry up under the control of Pennsylvania and Burlington, both of which appeared willing to sacrifice their investment in this property for the advantages of traffic moving through the Chicago and St. Louis gateways. The only change that has been cited is that, in the west, a Santa Fe connection has been substituted for that of Burlington. But the

Commission made no finding that either this or any other circumstance constituted a material or controlling difference between the current conditions and those under the prior regime.

4. The Minneapolis application provided the ready alternative in which there could be no doubt that Western's service would be promoted with intensified solicitation, and that genuine competition with the competing gateways would be effectively maintained.

The issue with respect to gateway competition, is charged on the ground that "Control of Western is not ntrol of the Peoria gateway." (U. S. Br. 56) Western the primary Peoria link between the principal transntinental roads of the east and of the west. It connects th all railroads entering Peoria and is the only bridge ving traffic into and through Peoria, from both the stern and the western territories. It has connections th 16 carriers that account directly for 40.8% of the lroad trunk mileage in the United States. And they, turn, connect with most of the remaining lines. Western the key to the Peoria gateway because it permits transntinental traffic to move between the east and the west m originations and for destinations in almost every rt of the United States. Chicago is the great railroad mpital of the United States. Yet there is hardly a rough traffic movement passing through that terminal ich cannot be by-passed through Peoria on the Western.

The record discloses that interchanging well in excess 100,000 cars of traffic per year, Western is far and ay the primary carrier in the Peoria gateway. Its edules, its service, its facilities, its location, give it strategic importance to which this closely contested

proceeding is testimony. Were there satisfactory alternative facilities for the effective use of the Peoria gateway, the President of Pennsylvania would not feel called upon to reverse his policies of many years and move to destroy the grandiose plans for an outer-outer belt line (R. 1022) If Western did not occupy the strategic position of pre-eminence in the Peoria gateway, the Pennsylvania would not feel that its acquisition assured permanent protection against competition. (R. 1023)

There can be no doubt that Western is so vital a part of the Peoria gateway that its misuse is reached by the antitrust principles of the Sherman and Clayton Acts. Our national policy is not to wait until the economic injury has been accomplished, but to check the condemned evils at the outset. The possibility that the Peoria gateway will be completely destroyed is not necessary to move the Commission to preventive action. It is enough that the major, the dominant factor in that transcontinental bridge is being acquired by its largest competitors under circumstances calculated materially to restrain gateway competition.

Section 11 of the Clayton Act specifically charges the Commission with enforcement of section 7 of the Clayton Act in relation to carriers. (15 U.S.C. § 21) Section 7 is specifically designed to arrest in their incipiency combinations, through the acquisition of stock or assets, the effect of which may be substantially to lessen competition. The very body charged with the enforcement of that section now insists that it need not effectively deal with that policy here.

The briefs of appellees repeat the Commission's theory of checks and balances to protect competing carriers. These were fully operative during the long Pennsylvania-Burlington ownership which ended in disaster. None of

the briefs suggests why the future of the theory should be any happier than its history. Santa Fe admits that the checks and balances will not operate in the crucial area of terminal routing and parity. (R. 425-6) Thus the discrimination against Minneapolis by ending the Lomax-Nemo parity and similar discrimination against others would not be reached. Finally, if the Commission's action must rely upon theoretical checks and balances, and hopes that the successful applicants will change their economic ways of life, the Commission had a duty to turn to the alternative application which required no such crutches.

Admittedly, we do not have a detailed analysis of the competitive effects of the Commission's order in the respective service areas of Santa Fe and Pennsylvania. The vacuum is not of our making. The successful applicants did not supply the necessary data, and the Commission showed no interest in exploring this sensitive area. We do know that the largest railroad in the east and the largest railroad in the west have joined to establish a transcontinental link. We know that at least the Pennsylvania thought it of sufficient importance to use its interlocking directorate relationship to crowd out the natural buyer. We know that the outer-outer belt line would permit direct utilization of the Peoria gateway by transcontinental carriers that can now reach it only through branch lines or interconnections.

It was not incumbent upon the objectors to establish a transgression of antitrust policy. What the Commission describes as the "heavy burden" of the applicants certainly includes, in the case of these giants, a showing that their program would not offend antitrust policy—at least not beyond the point necessary for appropriate transportation purposes.

Conclusion.

Basically this proceeding concerns the proper application of legislative standards and respect for procedural principles established by statutes and the courts. There is a surprising lack of conflict in the evidence in factual matters. We have taken issue only with failure to make findings from undisputed facts or with the entry of findings contradicted by the evidence on both sides. Nor need expertise judgment be challenged to upset the Commission order.

Upon the record before the Commission it was its duty, as a matter of law, to reject the Pennsylvania-Santa Fe application and to approve the Minneapolis application.

Respectfully submitted.

ON APPEALS FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MINNESOTA

BRIEF FOR THE UNITED STATES AND THE INTERSTATE COMMERCE COMMISSION

OPINIONS BELOW

The opinion of the District Court (R. 91–105) is reported at 165 F. Supp. 893. The report of the In-

terstate Commerce Commission (Division 4) (R. 17–49) is reported at 295 I.C.C. 523.

JURISDICTION

The judgment of the District Court was entered on September 16, 1958 (R. 105), and the notices of appeal in Nos. 12, 27, and 28 were filed in the District Court on October 2, 1958 (R. 106–110), November 13, 1958 (R. 114–117), and November 12, 1958 (R. 111–114), respectively. Probable jurisdiction was noted as to all three appeals on March 9, 1959 (R. 2029). The jurisdiction of this Court rests on 28 U.S.C. 1253 and 2101(b).

STATUTES INVOLVED

The National Transportation Policy (54 Stat. 899, 49 U.S.C. preceding Section 1); Sections 5(2) and 5(11) of the Interstate Commerce Act, as amended (24 Stat. 380, as amended, 49 U.S.C. 5(2) and 5(11)); Section 1 of the Sherman Act, as amended (26 Stat. 209, as amended, 15 U.S.C. 1); Section 7 of the Clayton Act, as amended (38 Stat. 731, as amended, 15 U.S.C. 18); Section 10 of the Clayton Act, as amended (38 Stat. 734, 15 U.S.C. 20); and Sections 8(b) and 10(e) of the Administrative Procedure Act (60 Stat. 242, 243, 5 U.S.C. 1007(b) and 1009(e)) are set forth in the Appendix.

QUESTIONS PRESENTED

1. Whether, in authorizing the Atchison, Topeka & Santa Fe Railway and the Pennsylvania Railroad to acquire joint control of the Toledo, Peoria & Western, the Commission gave proper consideration to the com-

peting application of the Minneapolis & St. Louis Railway and made adequate findings, supported by evidence, in accordance with the standards of the Intersfate Commerce Act.

2. Whether the Commission gave appropriate consideration to the competitive effects of the acquisition of control.

3. Whether Section 10 of the Clayton Act precludes the Commission from authorizing the acquisition of control in this case.

STATEMENT

These are direct appeals from the final judgment of a three-judge district court, dismissing the complaint of Minneapolis[1] which sought to set aside orders of the Interstate Commerce Commission authorizing Santa Fe and Pennsylvania to acquire joint control of Western through ownership of equal amounts of Western's stock.

---

[1] The following railroads are designated in this brief as indicated below:

Toledo, Peoria & Western Railroad Company	Western
The Atchison, Topeka & Santa Fe Railway Company	Santa Fe
The Pennsylvania Railroad Company	Pennsylvania
The Minneapolis & St. Louis Railway Company	Minneapolis
The New York, Chicago & St. Louis Railroad Company	Nickel Plate
Chicago, Rock Island & Pacific Railroad Company	Rock Island
Chicago, Burlington & Quincy Railroad Company	Burlington
Wabash Railroad Company	Wabash

Description of Western.—Approximately 240 miles in length, Western extends across Illinois from its eastern terminus at Effner on the Illinois-Indiana border through Peoria to its western termini at Lomax, Illinois, and Keokuk, Iowa. It has connections for the interchange of traffic with 16 railroads. It connects at Effner with the line of the Pennsylvania. On the west, it connects with the main line of the Santa Fe at Lomax and with the Rock Island and the Burlington at Keokuk. In the Peoria area, it connects with a number of carriers, including the Rock Island, the Burlington, and Minneapolis (from the west), the Nickel Plate, and the New York Central Railroad (from the east). Other principal connections are the New York Central at Sheldon (near Effner) and the Chicago, Milwaukee, St. Paul & Pacific Railroad at Webster.[2] Western's headquarters, shops, and yards are at East Peoria, just across the Illinois River from Peoria. (R. 20–21; Ex. H-4, R. 1615–1631.)

Taking full advantage of its strategic position as a short, direct bridge route between the east and the west bypassing the congested terminals of Chicago and St. Louis, Western has maintained a policy of

[2] Santa Fe and Pennsylvania also connect with Western at Eureka and Peoria, respectively. However, their branch lines to these points are not service routes on through traffic and the interchange there is inconsequential (R. 516–517, 567–569; Exs. H-16, R. 1700, H-18, R. 1713–1714). For example, during the year ending June 30, 1955, Santa Fe and Western interchanged 31,671 cars at Lomax but only 307 at Eureka, and the Pennsylvania-Western interchange was 55,180 cars at Effner and 140 at Peoria (Ex. H-18, R. 1713).

strict neutrality between all of its connections. More than two-thirds of its total revenues are derived from overhead or bridge traffic. (R. 21–22.)

Much of Western's success as a bridge line dates from the construction, in 1927, of its western connection with the Santa Fe at Lomax. Since that time, the Santa Fe and the Pennsylvania have cooperated with Western in coordinating their schedules and services to provide a fully competitive service over Western's route. Consequently, Western exchanges more interline traffic with them than with all of its other connections combined, this interchange accounting for almost 70 percent of Western's gross revenues. The Burlington and the New York Central ranked third and fourth in volume of interchange with Western, followed by the Rock Island, Nickel Plate, and Minneapolis in that order. (R. 21–22.)

The arrangements for purchase of Western's stock.—82 per cent of Western's stock is held by two trustees of the estate of George P. McNear, principal owner of Western until his death in 1947. One of these trustees, Wilmington Trust Company, had four directors who were also directors of Pennsylvania and/or one or more of its affiliates or subsidiaries (Ex. H–73, R. 1944–1945).

Upon learning that the trustees desired to sell in order to diversify the holdings of the trust estate, Santa Fe and Pennsylvania entered into negotiations with the trustees for the purchase of the stock, as did Minneapolis. Subsequently, Santa Fe and Pennsylvania obtained letter agreements, dated April 15, 1955, from the trustees for the sale of 26 per cent of

the stock to each of the two railroads for $100 per share, subject to the approval of the Interstate Commerce Commission (R. 174–176). However, on May 25, 1955, the trustees informed Santa Fe and Pennsylvania that they did not regard the letter agreements as binding and arranged to meet with the presidents of the two roads on May 27 (R. 366, 1026). In the meantime, Minneapolis had made further offers to purchase the stock, culminating in an offer to purchase the entire 82 per cent at $133 per share—an offer which was to expire at 5:00 p.m., May 26 (R. 1018–1019, 1021, 1024–1026, 1426). On May 26, Santa Fe and Pennsylvania were advised by the trustees that the Minneapolis offer would be accepted unless they agreed to meet or better it (R. 366–367, 1426–1428). Thereupon, Santa Fe alone entered into an agreement with the trustees to purchase the stock for $135 per share, subject to the Commission's approval (R. 150–154, 367, 1428–1429). Shortly thereafter, Santa Fe entered into agreements of like tenor with the remaining stockholders of Western (R. 154–160). After considering various joint control possibilities, as well as the possibility of proceeding alone (R. 367–368; Exs. H–80, H–81, H–82, H–83, R. 1964–1969), Santa Fe, on June 28, 1955, entered into an agreement with Pennsylvania Company (a wholly-owned subsidiary of Pennsylvania) to sell it 50 per cent of Western's stock, subject to Commission approval (R. 165–169).

Proceedings before the Commission.—On July 8, 1955, Santa Fe, Pennsylvania, and Pennsylvania Com-

pany filed with the Commission an application for its approval, under Section 5(2) of the Interstate Commerce Act, of joint acquisition by them of control of Western. Subsequently, Minneapolis also applied for authority to acquire control of Western through ownership of Western's entire capital stock.

Numerous parties intervened. The Nickel Plate and the Rock Island intervened to request inclusion in the acquisition of the stock of Western on an equal basis with the successful applicant or applicants. The Burlington and the Wabash did not object to the granting of the Santa Fe-Pennsylvania application, provided appropriate conditions were imposed for the maintenance of existing routes and traffic arrangements; but they requested that should any railroad other than Santa Fe and Pennsylvania be authorized to acquire an interest in the stock of Western, they be included in the transaction to the same extent as such other railroad. Various other railroads intervened to request the imposition of certain conditions. The States of Minnesota and South Dakota and their respective regulatory commissions intervened in support of the Minneapolis application, and the State of Illinois intervened in opposition to it. Various communities located along the line of Western, civic and business organizations, and shippers intervened in support of the Santa Fe-Pennsylvania application. The Railway Labor Executives Association intervened to protect the interests of carrier employees, and, on briefs and at oral argument, supported the Santa Fe-Pennsylvania application and opposed that of Minneapolis.

The two applications were consolidated for hearing. After the taking of extensive oral and documentary evidence, the hearing examiner issued a proposed report, recommending approval of the Santa Fe-Pennsylvania application and dismissal of the Minneapolis application. After exceptions and replies were filed and oral argument was heard, Division 4 of the Commission issued its report and order authorizing the acquisition of control of Western by Santa Fe and Pennsylvania and dismissing the application of Minneapolis. The Division found, subject to the conditions for the protection of railway employees and the maintenance of existing routes and channels of trade referred to in its report, that the terms and conditions of the proposed Santa Fe-Pennsylvania acquisition are "just and reasonable", and that the transaction "will be consistent with the public interest" (R. 49). The petition of Minneapolis for reconsideration was denied by the entire Commission.

Proceedings in the District Court.—On November 29, 1957, Minneapolis filed its complaint in the United States District Court for the District of Minnesota, and the court issued a temporary restraining order staying the effectiveness of the Commission's orders pending determination of the case on the merits. The States of Minnesota and South Dakota and their regulatory commissions intervened in support of Minneapolis.[3] Santa Fe, Pennsylvania, the State of Illi-

[3] Nickel Plate also intervened, joining Minneapolis in its effort to have the Commission's orders set aside, but taking the position that neither application should have been approved, and that multiple control (in which it participates) is the only form of control consistent with the public interest.

nois, and various communities and civic and business organizations intervened as defendants.

The district court, in an opinion which carefully considered and rejected appellants' principal contentions, unanimously sustained the validity of the Commission's orders (R. 91–105). The court discharged its temporary restraining order, but granted a 30-day stay and, after appellants had filed their notices of appeal, enjoined enforcement of the Commission's orders during the pendency of the appeals to this Court.

SUMMARY OF ARGUMENT

I

The National Transportation Policy and Section 5(2)(c) of the Interstate Commerce Act set forth broad criteria which the Commission must consider in determining whether a proposed railroad acquisition will serve the public interest. There necessarily remains for the Commission, as the expert agency chosen by Congress, the exacting task of applying the legislative policy to variant factual situations which are invariably complex. In this case, in passing upon competing applications for acquisition of Western—applications which embraced markedly different plans for the future operation of that road—the Commission, in order to make a meaningful choice, had to determine at the outset the kind of functional role which Western might best perform in the national and area transportation schemes. This determination, to be sure, might play a critical part in the eventual decision as to which applicant's ac-

quisition of Western would best serve the public interest. It does not follow, however, that such a determination is unfair to the applicant which contemplates a different role for Western.

Historically, Western had developed into a successful and efficient carrier serving as a link between a number of eastern and western trunk lines through the Peoria gateway. Its local management and its policy of neutrality between all of its connections were important elements in its success. When the death of Western's majority stockholder led to proposals for the transfer of its control to other railroad interests, the Commission determined that the public interest would best be served by maintaining Western's existing mode of operation to the greatest extent possible. This determination was certainly within its sound discretion.

As between the two competing proposals, there is no doubt that the Commission was amply justified in finding that the Santa Fe-Pennsylvania plan is far more consistent with this objective than Minneapolis'. Thus, the former proposed to continue Western as an autonomous carrier under its own local management, performing essentially the same bridging operation it had successfully carried on for the preceding 30 years; Minneapolis, on the other hand, planned to absorb Western within itself, without any separate Western management or solicitation force, and to initiate an intensive program to divert traffic from existing routing patterns to one more advantageous to Minneapolis. Moreover, contrary to

appellants' contentions, the economic interests of Santa Fe and Pennsylvania were not in conflict with their professed intentions. As lines joining the western and eastern extremities of Western, respectively, they had been largely instrumental in building up Western, had carried 70% of the interchange traffic between them, and had a continuing self-interest in maintaining a healthy neutral bridge carrier operating through the Peoria gateway.

The Commission's conclusion as to the advantages in granting the Santa Fe-Pennsylvania proposal is fortified by consideration of the other relevant factors in issue. A Santa Fe-Pennsylvania acquisition would have little, if any, adverse impact on the employees of the affected carriers, whereas Minneapolis' plans called for virtual elimination of the Western staff. The approved plan gives promise of encouraging considerable new industrial development along Western's route. Minneapolis, however, planned to cease all separate Western operations and would have had no incentive to promote industrial expansion on the important segment of Western's line between Peoria and the Iowa border, a segment which competes with its parallel line into Peoria. Contrary to Minneapolis' claim, the purchase price agreed to by the Santa Fe and Pennsylvania (which Minneapolis was willing to match) was a reasonable one, not burdening any of the parties with undue fixed charges. Although the economies of operation which Minneapolis claimed would result from its acquisition of Western were greater than those which would be realized by

its successful competitors, the significance of this factor is greatly offset by the consideration that those savings would be achieved largely by shifting Western's mode of operation from that favored by the overwhelming majority of carriers, shippers and other interested parties and found most desirable by the Commission.

II

Since 1920, it has been plain that the general policy of encouraging competition, reflected in the antitrust laws, is not the test of public interest for purposes of railroad regulation. Congress has concluded that acquisitions or consolidations of railroad properties, which would otherwise violate the antitrust laws, may well serve the public interest by strengthening the transportation system. See Section 5(11) of the Interstate Commerce Act. This Court has accordingly held, *McLean Trucking Co. v. United States*, 321 U.S. 67, that the Commission, in passing upon a proposed acquisition under Section 5 of the Interstate Commerce Act, is not required to determine whether the acquisition would otherwise violate the Sherman or Clayton Acts or to make findings in terms of those Acts.

This is not to say that the Commission is to ignore the policy of the antitrust acts. Here, the Commission carefully analyzed the various claims as to the alleged adverse effect of a Santa Fe-Pennsylvania acquisition of Western upon "competition and diversion of traffic"; it concluded that "the benefits to be derived from the operation of Western under the

control of the Santa Fe and the Pennsylvania as proposed will be in furtherance of the over-all national transportation policy declared by the Congress, and its consummation will not unduly curtail competition in connection with the other carriers" (R. 39). The interests of the Santa Fe and Pennsylvania in the large interchange business they have developed over Western gives assurance, the Commission found, of their continued interest in the Peoria gateway and in maintaining Western's neutrality as between all carriers with which it connects. Other factors to which the Commission gave weight were (1) the checks and balances inherent in control equally divided between the largest connection carrier on the eastern extremity of Western and the largest connecting carrier on the west; (2) the evidence of shipper control of routings in a manner protective of all carriers; and (3) the nature of the agreement between Santa Fe and Pennsylvania for the operation of Western. Finally, the Commission's approval contained a series of express conditions designed to insure that existing routes and channels of trade will be maintained.

Minneapolis ignores the fact that the Santa Fe and Pennsylvania have strong economic interests in the continued development of the Peoria gateway and that other lines provide east-west routes through Peoria to which traffic might be diverted, to the detriment of the Santa Fe and Pennsylvania, if Western's service were allowed to deteriorate. The previous history of partial control of Western by Pennsylvania under entirely different circumstances does not indicate that

the present plan is undesirable. And, contrary to the contention of Minneapolis, the Commission's decision here is nowise inconsistent with the standards applied in other acquisition proceedings.

III

The Pennsylvania and the Wilmington Trust Company, one of the trustees for the estate which held the majority of Western's stock, had a number of common directors. On this basis it is suggested that Section 10 of the Clayton Act is an obstacle to Commission approval of the Santa Fe-Pennsylvania acquisition.

However, the plain purpose of Section 10 is to prevent a railroad from buying at too high a price or selling at too low a price as the result of some common relationship between it and the seller or buyer. Here, if the price paid for Western's stock was high, this resulted from the competition for the stock between Minneapolis and Santa Fe-Pennsylvania and not because of directors which the Pennsylvania and Wilmington Trust Company had in common. Moreover, unlike ordinary purchases and sales by carriers, which are subject only to the criminal prohibitions of Section 10 of the Clayton Act, the proposed acquisition here was entered into subject to Commission approval; under Section 5(2) of the Interstate Commerce Act, the Commission had a responsibility, which it fully exercised, of determining that the proposed acquisition generally, and the purchase price and terms of sale specifically (See 49 U.S.C. 5(2) (c) and (d)), were consistent with the public interest.

Even if a technical violation of Section 10 had occurred, the Commission is expressly authorized to approve the acquisition notwithstanding such violation. Section 5(11) of the Interstate Commerce Act provides that the authority of the Commission over acquisitions is "exclusive and plenary" and that participating carriers are "relieved from the operation of the antitrust laws and of all other restraints, limitations, and prohibitions of law, Federal, State, or municipal * * *." Although Commission approval of an acquisition might not bar criminal prosecution of a violation of Section 10 occurring during the purchase negotiations, both the language of Section 5(11) and relevant court decisions make it clear that the Commission may approve a Section 5 acquisition regardless of whether the acquisition would otherwise violate the antitrust laws. See *McLean Trucking Co. v. United States*, 321 U.S. 67.

ARGUMENT

I

THE COMMISSION'S DETERMINATION OF THE MERITS OF THE COMPETING APPLICATIONS WAS MADE IN CONFORMITY WITH THE STATUTORY STANDARDS AND IS SUPPORTED BY THE RECORD

In this case, the Commission was faced with two applications for authority to acquire control of Western; they embodied radically different proposals for the future operation of that road (R. 24–25, 30–31). The Commission expressly recognized its obligation to consider both applications under the governing public interest standard (R. 25). Its ultimate conclu-

sion (R. 49) in favor of the Santa Fe-Pennsylvania proposal is the result of a lengthy process in which it considered the views of all interested parties, determined what type of operation would best serve the public interest, and evaluated the acquisition proposals in the light of that determination and the various criteria set forth in the Act. The Commission also considered the competitive effects which might result.

Appellant Minneapolis, in Points I and II of its brief, urges that the Commission prejudged its case and deprived it of a fair hearing by determining that the public interest requires the continued separate and independent operation of Western in conformity with that road's established policies. This, it contends, amounted to advance endorsement of the proposal of Santa Fe and Pennsylvania and prevented a fair comparative consideration of the applications. Minneapolis also attacks the Commission's conclusion that the Santa Fe-Pennsylvania proposal would in fact achieve this goal (and that its own application would not) on the grounds that it is not supported by the evidence of record and could only have been reached by ignoring relevant considerations which the Commission was required to weigh. We shall show that none of these contentions has merit, and that this Court is, in effect, being asked on this appeal to recanvass and reweigh the findings and judgment of the Commission on matters that have been entrusted to its determination by Congress.

A. THE COMMISSION'S DETERMINATION THAT THE PUBLIC INTEREST WOULD BE SERVED BY MAINTAINING THE EXISTING POLICIES OF WESTERN WAS CONSISTENT WITH THE STATUTORY STANDARDS AND DID NOT DEPRIVE MINNEAPOLIS OF A FAIR HEARING

Congress and this Court have defined the general criteria which serve as guides to the Commission in determining whether a proposed acquisition of control is in the "public interest," as that term is used in Section 5(2). Thus, this Court has stated that the concept "public interest" "has direct relation to adequacy of transportation service, to its essential conditions of economy and efficiency, and to appropriate provision and best use of transportation facilities * * *." *New York Central Securities Corp.* v. *United States*, 287 U.S. 12, 25; *Texas* v. *United States*, 292 U.S. 522, 531; *McLean Trucking Co.* v. *United States*, 321 U.S. 67, 81. Section 5(2)(c) in terms requires the Commission to give weight to such considerations (among others) as the effects of the proposed transaction upon adequate transportation service to the public and upon the carrier employees affected. And the bearing of National Transportation Policy, 49 U.S.C. preceding Section 1, must, of course, be evaluated.

These criteria are not self-executing; comparative hearings are invariably complex and exacting.[1] The

[1] Of course, as the Commission stated (R. 47), there was only one matured plan for acquisition agreed to by both the potential seller and would-be purchaser—that put forward by the Santa Fe and Pennsylvania—and even if the Commission had rejected this plan and authorized Minneapolis to purchase the stock, there was no assurance Western would agree to sell it. But, contrary to the contentions of the State of Minnesota in

Commission must translate the general criteria into concreteness in the factual context of the particular case. Cf. *Schaffer Transportation Co.* v. *United States*, 335 U.S. 83, 92. In doing so, it must give due consideration to all segments of the public affected by a proposed acquisition and to the nature of the railroad property to be acquired.[5] Thus, in the present case, the Commission carefully analyzed the situation of Western—its physical condition, its geographical location, its function in the national transportation system; the interests of the shippers who utilize Western; the interests of communities dependent upon Western; the interests of Western's employees; and the interests of the other railroads involved.

---

its brief (pp. 9, 17), the Commission expressly found (R. 48) it to be within its power to authorize Minneapolis to acquire Western if its proposals proved superior. The Commission's conclusory statement that authorization of the Santa Fe-Pennsylvania acquisition mooted the question of anyone else's acquiring Western's stock is merely a recognition of the fact that the two proposals were mutually exclusive. Having found, after "carefully consider[ing] the evidence and arguments presented relating to both the applications before us", that on "the whole record" the application of the Santa Fe and Pennsylvania was to be granted (*ibid.*), the Commission obviously was not required to consider whether Minneapolis, standing alone, would have been qualified to acquire Western.

[5] The Commission stated at the outset of its Report (R. 25):

"* * * We must weigh whether each application is consistent with the public interest, with or without inclusion of other railroads, considering not only other intervening petitioners seeking such inclusion but also the other applicant and nonparticipating railroads as well. * * * As a practical matter we, in such a proceeding as this, must arrive at a standard of public interest and determine which of the various plans of control most nearly approximates it."

The Commission found that Western was developed as a sound railroad under its former owner, George McNear, and has continued to be successful under its present management (R. 21). It is in excellent physical and financial condition, has a good earnings and operating record, and enjoys able and progressive management (R. 42). Its policy "has been, and now is, to maintain strict neutrality between all connections, and to participate in any haul of traffic no matter how slight. Such policy emphasizes the strategic position of an overhead carrier[6] through Peoria as an alternative route, bypassing the congested terminals of Chicago and St. Louis." (R. 21).

As the Commission stated, "It is universally conceded on the record that Western now is a well managed, independently operated railroad furnishing a valuable rail transportation service to the public" (R. 44). The Commission's appraisal of Western's role in the overall transportation picture is fully set forth in the following finding (R. 45):

> * * * Situated as it is between the Santa Fe at Lomax on the west and the Pennsylvania at Effner on the east, the Western receives its long haul and provides a vital direct link essential to the type of through service which is becoming increasingly important not only to the shipping public but to the railroads as

[6] Overhead or bridge traffic is traffic which originates and terminates on the lines of other carriers. The importance of bridge traffic to Western and its relative importance as a bridge line is shown by the undisputed fact that "At present, more than two-thirds of the total revenues of Western are derived from overhead or bridge traffic." (R. 22.)

> well. Fast, strong, and reliable through transportation service is necessary in order for the railroads adequately to compete with the other modes of modern transportation, and Western, as a direct east-west line, supplies the short-line connection for providing this through service with a minimum of delay.[7]

In obvious recognition of the fact that Western is providing an extremely valuable service to shippers, to the communities along its line, and to its connecting railroads alike, the vast majority of those interested in the proceeding strongly favored the continuance of service by Western as a separate and independently operated carrier under its present local management. Thus, the Commission noted (R. 31):

> Only the Minneapolis and its supporting interveners, the States of Minnesota and South Dakota, advocate the disappearance of West-

---

[7] The value of Western to the Nation's transportation system was demonstrated by the greatly increased volume of through traffic which moved over its line during World War II (Ex. H–5, R. 1644–1645). In an earlier proceeding (*Illinois-Missouri Terminal Ry. Co. Purchase*, 295 I.C.C. 805, not printed in full), the Commission described the important function which Western fulfills as follows (Finance Docket No. 18752, mimeographed report of April 2, 1956, sheets 43–44):

"* * * Although only 231 miles long, the Toledo, Peoria & Western occupies a particularly important position in the Nation's transportation system as it forms a short, direct bridge route between the east and west which avoids the congested areas of Chicago and other major gateways. Modern equipment, dependable and convenient schedules, connections with all main lines, and complete icing and livestock facilities make the Toledo, Peoria & Western a valuable link for transcontinental shipments * * *."

> ern as a separate and independent operating carrier. All the other parties to these proceedings, including the railroad interveners, the communities served by the Western, and the shippers who appeared as witnesses, insist that the separate and independent operation of Western under its present local management is a public necessity. * * *

And see the further statement at R. 46–47.

Based upon its evalaution of the record, the Commission concluded (R. 45) that "Public interest demands that the present policies of Western in all respects be continued", a conclusion which is overwhelmingly supported by the views expressed at the hearing and the above, unchallenged findings. Certainly, this determination conforms to the Congressional mandate that the development and preservation of a transportation system adequate to meet the needs of commerce, the Postal Service, and the national defense is the ultimate requirement of the public interest. National Transportation Policy, 49 U.S.C. preceding Section 1; *McLean Trucking Co.* v. *United States,* 321 U.S. 67, 82–83.

It is a basic misconception to suggest that the Commission should not have determined the optimum role which Western's operation may perform in the area transportation picture. Comparisons, if they are to be meaningful, must necessarily be made in a defined context. The merits of competing proposals and the qualifications of competing applicants must be viewed in terms of the concrete, practical objectives which are to be served.

To the extent that Minneapolis chose to gear its proposal to a scheme of operation that had undesirable features, that, to be sure, affected its chances of prevailing. Thus, its emphasis on the asserted efficiencies and savings to be achieved under its plan of consolidating Western's operations into its own necessarily lost weight in the face of the Commission's determination that the public interest would best be served by maintaining Western as a separate functional entity. In this respect, the situation is closely analogous to that presented in *Federal Communications Commission* v. *Allentown Broadcasting Corp.*, 349 U.S. 358, where two competing applicants for radio stations proposed to serve different communities. This Court recognized that a preliminary judgment had to be made between the needs for service of the two areas, and that, in determining which of the two applicants could best meet this need, the award might well go to the party who, upon an abstract analysis of qualifications unrelated to the greater need, might have been found to be less qualified. Here, too, the Commission properly determined the basic transportation objectives and then evaluated the comparative qualifications of the applicants in the light of their ability to implement them.*

---

* *Johnston Broadcasting Co.* v. *Federal Communications Commission*, 175 F. 2d 351 (C.A.D.C.) which appellant Minneapolis states (Br. 23) "well describe[s]" the proper "technique" for comparing competing applicants, unlike *Allentown* and the instant case, was a proceeding where *both* applicants sought to perform the same function of a local radio station in a particular town, and the establishment of a governing norm was thus not a prerequisite of a meaningful comparison. Nor is the fair comparative hearing required of mutually exclusive applicants

B. THE COMMISSION PROPERLY FOUND THAT THE SANTA FE-PENNSYLVANIA PROPOSAL WOULD BEST INSURE MAINTENANCE OF SERVICE IN THE PUBLIC INTEREST

As the Commission pointed out (R. 25), the alternatives before it were the authorization of acquisition of control of Western by either Santa Fe-Pennsylvania or by the Minneapolis (or such authorization conditioned upon inclusion of other railroads who had expressed a desire to participate) or denial of both applications. Since Western was financially sound and performing a valuable public service, both applicants, as the Commission indicated, (*ibid.*) had a "most heavy" burden of proof in demonstrating that approval of their acquisition plans would be in the public interest. On the other hand, with the death of Mr. McNear, the controlling interest in Western had passed into the hands of an estate anxious to sell, and the Commission recognized that under such circumstances "it is in the public interest for control of a carrier to pass from non-carrier interests, which no longer desire it, to carrier auspices" (R. 45).

In evaluating the proposals of the two applicants, the Commission, of course, gave primary consideration to the extent to which their proposals in fact contemplated continuance of Western as an autonomous entity serving the Peoria gateway in accordance with Western's existing operating policies. It analyzed

---

by *Ashbacker Radio Corp.* v. *Federal Communications Commission*, 326 U.S. 327, impaired by the prior establishment, in appropriate circumstances, of proper standards for determining what type of operation will in fact best serve the public interest.

the proposals of the two applicants in considerable detail and concluded that the one advanced by Santa Fe-Pennsylvania did in fact contemplate operation of the Western in the same manner as it had operated under independent ownership. On the other hand, the Minneapolis proposal "unequivocally contemplate[d] the disappearance of Western as an independent and neutral connection for the other 15 carriers with which it presently works" (R. 30)—a result which, the Commission concluded, "would be extremely harmful to other carriers" (R. 32). Minneapolis contends that these determinations are unrealistic and that the facts of record show that control by Minneapolis will best preserve Western as an integral part of the East-West railroad traffic pattern and enhance the development of the Peoria gateway as an alternative to Chicago or St. Louis. It is clear, however, as the court below expressly found (R. 105), that the findings of the Commission on these issues within its special statutory competence rest on substantial evidence and should not be disturbed.

(1) There is no dispute as to the nature of the Santa Fe-Pennsylvania proposal for the future operation of Western. Western will continue to be operated as a separate, independent carrier under local management; it will maintain its own solicitation forces and be free to solicit traffic in a manner which will best serve its own interests; and all existing routes and channels of trade via Western are to be kept open without discrimination as between connecting railroads (R. 24). The continued neutrality of West-

ern's operations was in fact incorporated into seven specific "conditions" which the two carriers agreed to accept as part of any order approving their application (R. 40). These the Commission incorporated into its authorization order as the binding conditions upon which its approval was premised (R. 50).

Minneapo''s claims that none of the representations as to an independent or neutral operation of Western can be accepted at face value, and that, in light of the economic interests of the Santa Fe and Pennsylvania, the Commission had no alternative but to conclude that the real effect of their acquisition of Western would be to destroy or seriously hinder the "Peoria Gateway" and to promote the Chicago and St. Louis Gateway in which the primary economic interests of the Santa Fe and Pennsylvania are said to reside.

The alleged anti-competitive aspects of the joint control of Western by Santa Fe and Pennsylvania are discussed in detail in point II of this brief, *infra*, pp. 51–58. We do note at this point that the Commission gave appropriate consideration to the allegedly anti-competitive consequences of a Santa Fe-Pennsylvania acquisition of Western and found them to be minimal.

It is, of course, true that stock control of a corporation inherently involves control of its policy. It does not follow, however, that stock control of Western must be so exercised as to impair its separate and independent operation and policies of neutrality. Confronted with predictions of the same dire consequences in an earlier acquisition proceeding, the Commission noted that actual experience had proved otherwise.

pointing to the case of the Wabash under control of the Pennsylvania, *Detroit, T. & I. R. Co. Control*, 275 I.C.C. 455, 488–490, affirmed *sub. nom. New York, C. & St. L. R. Co.* v. *United States*, 95 F. Supp. 811 (N.D. Ohio). In a number of cases the Commission has recognized the efficacy of separate operation of a controlled carrier under its own local management as a means of preserving existing traffic relationships with connecting lines and insuring continued neutrality in service (*Wabash R. Co. Control*, 247 I.C.C. 365, 370–371; *Wheeling & L.E. Ry. Co. Control*, 267 I.C.C. 163, 176; *Detroit, T. & I. R. Co. Control*, 275 I.C.C. 455, 490), and it has had occasion to require separate operation (*Chicago Junction Case*, 71 I.C.C. 631, 638–639; *Clinchfield R. Co. Lease*, 90 I.C.C. 112, 132–133).

The Commission was not required to presume that the Santa Fe-Pennsylvania proposal was not made in good faith. On the contrary, responsible officers of the two roads provided assurances in their testimony, upon which the Commission was entitled to rely, that Western would indeed be operated as proposed.[*] Cf. *Chicago Junction Case*, *supra*, at pp. 638–639; *Detroit, T. & I. R. Co. Control*, *supra*, at pp. 491–492. As the Commission found (R. 35, 39), it will be in the self-interest of Santa Fe and Pennsylvania, in order to insure a substantial return on their investments, that they continue the present solicitation and service

[*] See the testimony of the President of Santa Fe (R. 357–358, 434–435), the President of Pennsylvania (R. 513), the Vice-President of Traffic of Santa Fe (R. 503), the Vice-President of Freight Sales and Services of Pennsylvania (R. 572). See, also, the testimony of the President of Western (R. 158).

policies which have been responsible for Western's success. The Commission also observed that the checks and balances inherent in control equally divided between the largest connecting carrier on the eastern extremity of Western and the largest connecting carrier on the west will work to prevent impairment of service or discriminatory solicitation (R. 46); see pp. 54–55, *infra*). In addition, conditions were imposed in the Commission's order, and these are designed to insure that existing routes and channels of trade will be maintained (R. 40–41).[*]

Moreover, the Commission pointed out in considerable detail, the geographic relationship of the Santa Fe and Pennsylvania to Western, the major role they played in Western's development, and the extensive interchange traffic which the Santa Fe and Pennsylvania now enjoy via Western, gave further assurance of their interest in the continued development of the Peoria gateway. Thus, the Commission noted (R. 21–22):

> * * * Much of the success of Western as a bridge line dates from the construction of a western connection with the Santa Fe at Lomax in 1927, authorized in *T., P. & W. R.R. Construction*, 124 I.C.C. 278. In 1928, the first full year after completion of the Santa Fe-Western

[*] There are adequate enforcement powers should these conditions not be carried out. See Interstate Commerce Act, Sections 5(9), 12(1), 16(8), 49 U.S.C. 5(9), 12(1) and 16(8); cf. *Atlantic Coast Line R. Co. v. United States*, 284 U.S. 288; *United States v. Texas & Pacific Ry. Co.*, 12 F. Supp. 511 (N.D. Texas); *City of New Orleans v. Texas & N.O. R. Co.*, 196 F. 2d 882, 886 (C.A. 5).

> Lomax connection, the Western interchanged a total of 29,697 carloads of traffic with the Pennsylvania and 7,264 carloads with the Santa Fe. By 1955, the corresponding figures increased to 58,543 carloads, or 97 percent, and 34,755 carloads, or 378 percent, respectively.
>
> Over the years, the Santa Fe and the Pennsylvania have cooperated with Western in coordinating their schedules and services. In 1930 arrangements were made for the establishment of coordinate schedules for the handling of perishables from Santa Fe origin territory, and the Western constructed icing facilities at Peoria to accommodate such traffic. Today, the Santa Fe, Western, and Pennsylvania schedules are set up to provide a fully competitive service over the Western route. * * *

See R. 464–468; Exs. H–5, R. 1641, H–8, R. 1661–1662, H–16, R. 1705, H–121, R. 1983–1984.

The Commission found, and it is undisputed, that Western interchanges more interline traffic with Santa Fe and Pennsylvania than with all of its other connections combined, this interchange accounting for almost 70% of Western's gross revenues (R. 22; see Ex. H–5, R. 1632–1650):

> For the year ended June 30, 1955, the latest period for which both car and revenue data were available, the total freight revenue of Western was $6,920,432. Of a total of 105,705 cars of interline traffic handled during the period, 74,772, or 70.7 percent, were interchanged with the Santa Fe and/or Pennsylvania. Such interchange accounted for $4,404,318 or 69.8 percent, of Western's gross revenues for

that year. The Burlington and The New York Central Railroad Company ranked third and fourth in the volume of interchange with Western, and the Rock Island, Nickel Plate, and Minneapolis ranked fifth, sixth and seventh, respectively. The protection of interchange traffic was one of the principal reasons advanced by the applicants, and recognized by us in approving acquisition of control in *Detroit, T. & I. R. Co., Control*, 275 I.C.C. 455.

The *Detroit, T. & I. R. Co.* case, *supra*, is strikingly similar to the present case. There the Commission authorized joint control of the Detroit by Pennsylvania and the Wabash, stressing the fact that the two applicants were its largest interchange connections. Observing that the Wabash and Pennsylvania were "the most logical owners," the Commission added that, "On the basis of present interchange their interests are superior to those of any other carrier in the area." (275 I.C.C. at 492.) And in *Spokane International R. Co. Control*, 295 I.C.C. 425, 441, order affirmed, *Canadian Pacific R. Co.* v. *United States*, 158 F. Supp. 248 (D. Minn.), Union Pacific's preponderance in interchange with Spokane International was a factor which the Commission considered in authorizing it to acquire control of the latter.

The complementary geographical relationship of Santa Fe, Western, and Pennsylvania, their record of mutual cooperation, and their common economic interest as reflected in the value of interchange strongly supported the Commission's decision. These factors disclose the legitimate interest of Santa Fe and Penn-

sylvania in seeking to acquire control of Western upon learning that its present owners desired to sell. (R. 370–371, 514, see also R. 358, 363–364, 513.) Most importantly, they provide the best possible assurance for the future stability and further development of Western.

This comports with the views of the shipper witnesses, all of whom supported the application of Santa Fe and Pennsylvania, as the Commission noted (R. 46):

> Several nationally prominent traffic executives of large industrial concerns, which annually route a substantial volume of traffic via Western testified in support of Santa Fe and Pennsylvania joint ownership. They based their support upon the fact that the Santa Fe and the Pennsylvania are presently rendering excellent service in conjunction with Western and that ownership by them would constitute their best assurance of continued good service via the combined Santa Fe-Western-Pennsylvania route, as well as via each of the other connections of Western.

It is most significant that communities along the entire length of Western's line, shippers located on Western, off-line shippers using Western as an interline or bridge carrier and Western's employees were unanimous in their support of the application of Santa Fe and Pennsylvania. In contrast, not a single shipper supported the Minneapolis proposal. Only three of Western's sixteen rail connections were in opposition (R. 46), and two of these were equally opposed to the Minneapolis application (R. 19–20).

(2) In contrast to the Santa Fe-Pennsylvania proposal, the Minneapolis proposal, as the Commission found (R. 30):

> * * * unequivocally contemplates the disappearance of Western as an independent and neutral connection for the other 15 carriers with which it presently works. Only the corporate existence of Western would remain. For all practical purposes Western would be integrated, consolidated and merged into the Minneapolis for ownership, management and operation. * * *

As the district court indicated (R. 102), "The advantages to Minneapolis in adding Western to its railway system seem apparent. No doubt Minneapolis would be materially strengthened". But, as the Commission found, these advantages would be largely at the expense of other carriers connecting with Western and the Western employees and would, if the benefits of Minneapolis' plan are to be carried into effect, necessarily result in elimination of Western as the neutral bridge line now performing such a useful public service (R. 30).

In its brief, Minneapolis protests that it "could not do otherwise than maintain a policy of neutrality" (Br. 31), and that conditions similar to those made part of the order approving the Santa Fe-Pennsylvania acquisition could fully protect the other carriers and the shipper and community interests (Br. 30). But this is a belated attempt to convert its basic proposal into one approximating that offered by the successful applicants; it is wholly at odds with the nature

of its proposal as offered and with its own supporting evidence. Minneapolis' contention that it would "naturally" maintain the neutrality of Western is also inconsistent with its claims (Br. 70) that the goal of its program of absorption of Western was to "foster and stimulate" competition between the unified Minneapolis-Western combination and the other carriers.

It is not disputed that under Minneapolis control Western would be integrated into its parent so as to be operated as a part of Minneapolis, indeed as a division of that carrier, thereby eliminating Western as a competitor and converting what are now interchange points on a separate Western to interchange points on a unified Minneapolis-Western. The entire program for the establishment of new service routes via these interchange points, as detailed by Minneapolis' Vice-President of Traffic, Roy W. Nelson, is designed to secure additional traffic for Minneapolis' line north and north-west of Peoria by diverting it from the lines of other carriers (R. 1177–1185). Although Mr. Nelson talked of creating new traffic via Minneapolis and Western (R. 1178), it is apparent that the traffic is to be diverted from other lines at Chicago and St. Louis (R. 1029, 1178) or from Western's connecting lines (R. 1184). Thus, traffic is to be secured by diversion from the direct Chicago-Twin Cities lines (R. 1178), including the Milwaukee (R. 1198), Chicago & North Western (R. 1198), and Rock Island (R. 1199–1200); and by short-hauling carriers connecting with Western's line east of Peoria, such as the Gulf, Mobile and Ohio (R. 1179–1180, 1197), Chi-

cago and Eastern Illinois (R. 1180–1181, 1197), Illinois Central (R. 1178–1179, 1195), and Wabash (R. 1182, 1202, 1198). Minneapolis will "actively solicit" this traffic (R. 1184).

Consistent with the above evidence, the Commission stated (R. 31–32) that "under unified operations, the Minneapolis proposes to establish coordinated schedules between it, the Western, and the connecting carriers, providing new service routes via these additional junctions for moving traffic in all directions. The record shows that such a policy would be extremely harmful to other carriers."

Thus, the Rock Island estimated its potential losses from diversion of traffic under the Minneapolis plan at more than $6,000,000 (R. 1542–1545); the Nickel Plate introduced testimony that its losses would be heavy (R. 1324–1326); and the testimony with respect to the Wabash indicates a substantial, if not precisely determined, potential loss (R. 1270–1271, 1292–1293).

It is thus apparent that the Minneapolis plan for operation of Western tends to defeat important objectives sought by the Commission and by virtually all of the parties participating in the proceeding. It is predicated upon integration of Western into Minneapolis with the operations controlled by Minneapolis and the direction emanating from the headquarters of Minneapolis; and it contemplates an aggressive traffic program designed to divert traffic now enjoyed by other lines.

C. THE COMMISSION GAVE PROPER CONSIDERATION TO THE OTHER FACTORS RELEVANT TO A CHOICE BETWEEN THE APPLICANTS

We consider, next, the Commission's conclusions with respect to the interests of the employees of the affected carriers; the reasonableness of the purchase price; and the relative advantages of the two proposals in terms of industrial development, increase in rolling stock, and economies and efficiency of operation.

1. Section 5(2)(c) provides that, in determining whether a transaction is in the public interest, the Commission shall give weight to "the interest of the carrier employees affected." Section 5(2)(f) states that, as a condition of its approval, the Commission shall require an equitable arrangement to protect affected employees for a limited period. To this end, the Commission is to provide for compensatory allowances to protect employees who will be affected by the transaction (accomplished here by imposing a condition requiring compliance with the Washington Job Protection Agreement of 1936) (R. 44, 49).

Operation of Western under the joint control of Santa Fe and Pennsylvania as an autonomous railroad under responsible local management would obviously have little adverse effect on employees. This is borne out by the testimony of the chief executives of Santa Fe and Pennsylvania that the two roads are satisfied with the management and staff of Western and that no changes in personnel or in the loca-

tion of the headquarters of Western at Peoria are contemplated. (R. 357–360, 434–435, 459–460, 511, 513, 541.) The employees unanimously favored the granting of the application of Santa Fe and Pennsylvania and opposed that of Minneapolis (R. 44; Reply of Railway Labor Executives' Association to Exceptions of Minneapolis, R. 2010).

In contrast, grant of the Minneapolis application would have severe employee consequences. In fact, a principal argument of Minneapolis in support of its application is based on alleged economies, three-fourths of which would be accomplished at the expense of the employees (R. 32). Minneapolis introduced evidence purporting to show that by unification the combined operating expenses of the two roads could be reduced by $1,770,945 (R. 32), of which $1,327,062 would take the form of wages and salaries to be saved through the elimination of 256 positions (Ex. H–44, R. 1918–1924). It further appeared that the bulk of the positions to be abolished would be in Peoria (R. 1379). Consequently, even those employees fortunate enough to be transferred, rather than released outright, would have to undergo the serious inconveniences involved in reestablishing homes in a new community.

We agree that the fact that some employees will be displaced is not a bar to approval of a Section 5 application when the transaction is otherwise clearly in the public interest. Nevertheless, the effect on employees

is a factor to which the Commission is required to give weight. It is apparent that it was accorded appropriate consideration here (R. 31, 32, 44).

2. As the Commission pointed out, the stock of Western is not listed on any exchange, but its market value of $135 per share was established on the basis of agreement between a willing buyer and a willing seller (R. 42). This is not altered by the fact that an earlier understanding called for a $100 purchase price, as Minneapolis seems to contend (Br. 38). Certainly, Santa Fe and Pennsylvania are not proposing to pay a higher price than necessary in order to acquire the stock. It is the price which Minneapolis and the railroads which sought inclusion were prepared to pay (R. 42), and was obviously considered fair and reasonable by them.

Minneapolis argues that the price is reasonable as to it (though not as to Santa Fe-Pennsylvania) because of the alleged economies which it anticipates. But apart from the uncertain nature of these economies (see R. 1204–1205) and the likelihood that they are exaggerated (R. 1579), there is, to say the least, no certainty that Western would continue to prosper under a plan which represents a complete departure from the policies which have made Western successful.

Contrary to the implication in the Minneapolis brief, the Commission, in determining the reasonableness of the price, gave proper consideration to the potential earning capacity of Western. Thus, in arriving at its conclusion the Commission took note

of the following factors not mentioned by Minneapolis (R. 42): (1) the excellent physical and financial condition of Western, (2) its good earnings and operating record, (3) the value of its properties as fixed by the Commission for rate-making purposes, (4) its progressive and able management, and (5) its strategic location, which adds to its value as a long-term investment. Cf. *Graves Truck Line, Inc.—Purchase—Whitworth*, 59 M.C.C. 601, 604–605.

In addition, in keeping with the statutory mandate, the Commission made the further unchallenged finding that "The transaction proposed by the Santa Fe and the Pennsylvania does not contemplate a guaranty or assumption of the payment of dividends or fixed charges, and there will be no increase in total fixed charges." (R. 49.) The obvious purpose of the requirements of Section 5(2) (b) and (c), *i.e.*, that the Commission consider the reasonableness of the terms of purchase and the total fixed charges resulting from the transaction proposed, is to erect a safeguard against improvident use of funds by a purchasing carrier, which might impair its ability to function in the transportation field. Clearly, that purpose is fully satisfied here.

3. The Commission also adverted to the industrial development along Western's right of way, and to certain other benefits which joint ownership by Santa Fe and Pennsylvania could be expected to give to Western. Minneapolis contests these findings and

argues that, on the contrary, it should have been given a strong preference because of the economies and efficiencies of operation flowing from the integration of Western into its system.

With respect to industrial development, the Commission found as follows (R. 46):

> With the backing of the Santa Fe and the Pennsylvania, there are excellent prospects for locating new industries on Western which will substantially increase the traffic originating and terminating on its line. Western has large acreages of potential industrial property in the Peoria area, and at other points along its line, and with the combined efforts of the industrial development departments of the Santa Fe and the Pennsylvania, such property development may be expected without undue delay.

Minneapolis attacks this finding, arguing that both Santa Fe and Pennsylvania would prefer to locate industry on their own lines (Br. 44). However, there is ample supporting testimony (R. 485–487, 571, 574–575, 582–583). The incentive for Santa Fe and Pennsylvania to assist in locating industry on Western is clear when it is realized that Western is favored with an abundance of potential industrial property both in Peoria and along its line (R. 486, 575), while both Santa Fe and Pennsylvania are lacking in industrial property in the area (R. 485–486, 582). As the president of Santa Fe testified: "It will be the attitude of the Santa Fe to try to help the T. P. & W. in every respect to locate industries

along its line * * * not only because we are going to be a half owner and accrue benefits, but also the selfish-reason we have limited industrial area in Chicago which makes it much more attractive to us to help the T. P. & W." (R. 486). The advantage of Santa Fe-Pennsylvania ownership as a stimulus to industrial development was recognized by the communities served by Western as well as by business interests in the area (R. 47; see 638–640, 758–759, 790, 807, 820, 940, 950, 957–958, 961).

Under Minneapolis control, on the other hand, Western would be just a division, with no sales force of its own, and the impetus for making use of the property along the Western line would be weaker. This would be particularly true of the entire portion of the Western line between Peoria and Lomax, which is directly in competition with the main line of the Minneapolis between Nemo and Peoria. While Minneapolis, by the time of the hearing had, for obvious reasons, discarded its earlier consideration of abandoning this line, and was willing to accept a condition against such abandonment (R. 31), its lack of incentive for expending major efforts on this important part of Western's line is apparent (see R. 615, 760, 773, 846–848, 958, 962).

The Commission further found that the supply of freight cars available to Western would be materially increased under joint control by Santa Fe and Pennsylvania, and that the latter roads would see to it that the car ownership obligations of Western were met in full (R. 47). Minneapolis criticizes this as

an expression of faith, not fact (Br. 43–44). But, we submit, it is a permissible judgment based on testimony of record (R. 368–369).

Finally, the Commission took note of other benefits, such as advice and assistance in the technique of railroad management, the realization of economies in operation and advantages in purchasing, which would be expected to accrue to a small railroad under ownership of two large, well-staffed roads (R. 47). Minneapolis stresses the economies which allegedly could be realized under its proposal (Br. 24–25). Manifestly, extensive economies are not contemplated under the plan of Santa Fe and Pennsylvania, predicated as it is on maintaining Western in its present status as a separate railroad under responsible local management. But possible economies comprise only one of a number of factors which the Commission must consider in determining consistency with the public interest. *Virginian Ry. Co. Control*, 117 I.C.C. 67, 75. The importance of proposed economies of operation in determining the public interest in a proposed acquisition will necessarily vary with the financial strength of the railroads involved and their present degree of operating efficiency. Since Western is now a well-run, successful property in excellent physical condition, the economies which Minneapolis claims would be realized through its absorption of Western would, in any event, be less significant than would be the case in other situations. To the extent that these economies are to be achieved at the expense of Western's employees and through Western's destruction as

a neutral bridge carrier performing a function the Commission has found to be in the public interest, they fail to furnish affirmative support for the Minneapolis case.

II

THE COMMISSION GAVE APPROPRIATE CONSIDERATION TO THE COMPETITIVE EFFECTS OF THE ACQUISITION OF CONTROL OF WESTERN BY THE SANTA FE AND PENNSYLVANIA

Minneapolis argues that the Commission, in giving approval to the Santa Fe-Pennsylvania acquisition of Western as comporting with the "public interest", failed to give proper consideration to the application of the antitrust laws. Both the Sherman and Clayton Acts, it is contended, would be violated by the transaction which the Commission approved. As we shall show, however, appellant misconstrues the role of the antitrust laws in the Commission's consideration of potential railroad combinations. Neither the language of Section 5 of the Interstate Commerce Act nor the controlling cases requires the Commission to determine antitrust questions as such or to make findings in terms of the antitrust laws. To be sure, the Commisison must give adequate consideration to possible anti-competitive aspects of a proposed railroad acquisition; the answer is that it has done so here.

1. Preliminarily, we review briefly the development of Congressional policy on railroad mergers, consolidations or acquisitions. The original Interstate Commerce Act of 1887 was concerned largely with the pro-

tection of shippers. As the Court observed in *McLean Trucking Co.* v. *United States*, 321 U.S. 67, 80–81, "'the effort of Congress [was] directed mainly to the prevention of abuses; particularly, those arising from excessive or discriminatory rates'; and emphasis on the preservation of free competition among carriers was part of that effort." By the Mann-Elkins Act amendments of 1910, the Commission was given broad power to prescribe and control rail rates. However, prior to 1920, the Interstate Commerce Act was silent as to railroad combinations, thus leaving them fully subject to the antitrust laws. *Northern Securities Co.* v. *United States*, 193 U.S. 197; *United States* v. *Union Pacific R.R. Co.*, 226 U.S. 61; *United States* v. *Reading Co.*, 253 U.S. 26; *United States* v. *Southern Pacific Co.*, 259 U.S. 214.

The Transportation Act of 1920 (41 Stat. 456) embodied a drastic change in Congressional policy toward the railroads. It followed a near breakdown in rail transportation during World War I, which resulted in two years of federal operation. Also, it reflected the precarious financial condition of the railroads at the end of the period of federal control. This change was described by the Court in the *McLean* case, 321 U.S. at p. 81, as follows:

> * * * The Act of 1920 added "a new and important object to previous interstate commerce legislation." It sought "affirmatively to build up a system of railways prepared to handle promptly all the interstate traffic of the country." *Dayton-Goose Creek Ry.* v. *United States*, 263 U.S. 456, 478; *Texas & Pacific Ry.*

> *Co.* v. *Gulf, C. & S. F. Ry. Co.*, 270 U.S. 266, 277. And in administering it, the Commission was to be guided primarily by consideration for "adequacy of transportation service, * * * its essential conditions of economy and efficiency, and * * * appropriate provision and best use of transportation facilities * * *" *New York Central Securities Corp.* v. *United States*, 287 U.S. 12, 25.

Specifically, in the Transportation Act of 1920, Congress found the general national economic policy of competition to be inadequate to provide a transportation system sufficient for the nation's needs. A major element in the new policy was the affirmative encouragement of unification as a partial cure for railroad problems.

For the first time, in amended Section 5(2) of the Interstate Commerce Act, 41 Stat. 481, the Commission was authorized to approve as "in the public interest" the acquisition by one railroad of control of another "either under a lease or by the purchase of stock or in any other manner not involving the consolidation of such carriers into a single system for ownership and operation."

Moreover, Section 5(4), 41 Stat. 481, provided that after notice and hearing:

> The Commission shall as soon as practicable prepare and adopt a plan for the consolidation of the railway properties of the continental United States into a limited number of systems. In the division of such railways into such systems under such plan, competition shall be preserved as fully as possible

> and wherever practicable the existing routes and channels of trade and commerce shall be maintained. * * *

Section 5(6), 41 Stat. 481, provided that "It shall be lawful for two or more carriers by railroad, subject to this Act, to consolidate their properties or any part thereof, into one corporation for the ownership, management, and operation of the properties theretofore in separate ownership, management, and operation," upon the condition, *inter alia*, that the proposed consolidation "be in harmony with and in furtherance of the complete plan of consolidation mentioned in paragraph (5) and * * * be approved by the Commission." Section 5(8) exempted from the antitrust laws consolidations approved under Section 5.

In brief, Section 5, as rewritten by the Transportation Act of 1920, not only permitted railroad mergers and consolidations, but encouraged them within the outlines of the general consolidation plan which the Commission was directed to prepare and adopt. Indeed, as the Court recognized in *St. Joe Paper Co.* v. *Atlantic Coast Line R. Co.*, 347 U.S. 298, 305–306, 315–321, the controversial question with respect to railroad mergers and consolidations from 1919 to 1940 was not whether they should be permitted, but whether they should be compelled. And see Leonard, *Railroad Consolidation Under the Transportation Act of 1920* (1946).[11]

[11] By Title II of the Emergency Railroad Transportation Act of 1933 (48 Stat. 217), Congress recast the provisions of Section 5, subjecting all forms of unification to Commission jurisdiction under a uniform rule. The provision relating to the

The objective of the 1920 Act, *i. e.*, extensive voluntary railroad consolidations into a limited number of systems, was not realized, and the Commission asked repeatedly to be relieved by Congress of its responsibility for working out such a national plan of consolidation. As a result, the Transportation Act of 1940 abandoned the attempt, begun in 1920, to channel voluntary consolidations into a predetermined national plan of consolidation. Section 5 was redrafted and took substantially its present form. Section 5(2)(a) provides that "It shall be lawful, with the approval and authorization of the Commission * * * for any carrier, or two or more carriers jointly, to acquire control of another through ownership of its stock or otherwise; * * * ." Section 5(2)(b) provides that "* * * If the Commission finds that * * * the proposed transaction * * * will be consistent with the public interest, it shall enter an order approving and authorizing such transaction, upon the terms and conditions, and with the modifications, so found to be just and reasonable: * * *." Section 5(2)(c) declares:

> In passing upon any proposed transaction under the provisions of this paragraph (2), the

---

adoption by the Commission of the consolidation plan was retained. But the separate paragraphs dealing with acquisitions of control and with consolidations were combined into a single paragraph governing all types of combinations of railroad properties (including those effected by noncarriers such as holding companies, hitherto not required to be approved by the Commission). The paragraph empowered the Commission to approve proposed combinations, including acquisitions of control and consolidations, provided they were in harmony with the Commission's consolidation plan and would "promote the public interest."

> Commission shall give weight to the following considerations, among others: (1) The effect of the proposed transaction upon adequate transportation service to the public; (2) the effect upon the public interest of the inclusion, or failure to include, other railroads in the territory involved in the proposed transaction; (3) the total fixed charges resulting from the proposed transaction; and (4) the interest of the carrier employees affected.

In addition, Section 5(2)(d), an echo of the former provisions for a national consolidation plan, empowers the Commission to condition its approval upon the inclusion in the transaction of other railroads in the territory involved who request such inclusion. And Section 5(11) provides that "The authority conferred by this section shall be exclusive and plenary * * * and any carriers or other corporations, and their officers and employees and any other persons, participating in a transaction approved or authorized under the provisions of this section shall be and they are hereby relieved from the operation of the antitrust laws and of all other restraints, limitations, and prohibitions of law, Federal, State, or municipal, insofar as may be necessary to enable them to carry into effect the transaction so approved * * *." [12]

Section 5(4) of the 1920 Act had provided that in the division of railroads "into a limited number of

---

[12] In like vein the last paragraph of Section 7 of the Clayton Act, 15 U.S.C. 18, expressly provides that "Nothing contained in this section shall apply to transactions duly consummated pursuant to authority given by the * * * Interstate Commerce Commission * * * under any statutory provision vesting such power in such Commission * * *."

systems * * * competition shall be preserved as fully as possible." Significantly, the present Section 5(2)(c), in prescribing statutory standards to govern the Commission's public interest determination, does not mention the preservation of competition—a failure which is emphasized by the command of Section 5(2)(b) that the Commission shall not approve a transaction involving both a railroad *and* a motor carrier unles it finds that the transaction "will not unduly restrain competition."

In summary, since 1920, Congress in dealing with recurrent railroad problems, has deliberately developed specific policies in lieu of the general national economic policy of free and unrestrained competition.[13]

2. Asserting that acquisition of control of Western by Santa Fe-Pennsylvania would violate the antitrust laws, Minneapolis contends (1) that "Pennsylvania-Santa Fe could not sustain their application without an affirmative showing that the antitrust laws

---

[13] In contrast, the Declaration of Policy in Section 2 of the Civil Aeronautics Act of 1938 (49 U.S.C. 402) provides as follows:

"In the exercise and performance of its powers and duties under this chapter, the Board shall consider the following, among other things, as being in the public interest, and in accordance with the public convenience and necessity

* * * * * * *

"(d) Competition to the extent necessary to assure the sound development of an air-transportation system properly adapted to the needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense;"

* * * * *

See, also, Section 314 of the Communications Act (47 U.S.C. 314).

would not be transgressed" (Br. 68), and (2) that the Commission's order is invalid in the absence of an inquiry into whether the acquisition would violate the antitrust laws, findings respecting the nature and scope of the alleged antitrust violations, and findings of advantages to the public outweighing the harm attendant upon violation of the antitrust laws (Br. 48, 59–60, 70).

These contentions have already been rejected by this Court in *McLean Trucking Co.* v. *United States*, 321 U.S. 67. In that case the Commission authorized, pursuant to Section 5(2), a consolidation of seven large motor carriers to form the largest motor carrier in the United States. As the Court noted (p. 77), the chief attack was "that the Commission improperly construed the standards by which Congress intended it to determine the propriety of a consolidation; and the burden of this complaint is that it did so 'by failing to consider and give due weight to the anti-trust and other laws of the United States.'"

At the outset, the Court expressly rejected the contention that the Commission lacks power to approve a transaction which, but for that approval, would violate the antitrust laws, pointing out that such a view of the Commission's authority would render Section 5(11) meaningless. 321 U.S. at pp. 77–79, 86. The Court then noted (p. 79) that the "Commission has no power to enforce the Sherman Act as such. It cannot decide definitively whether the transaction contemplated constitutes a restraint of trade or an attempt to monopolize which is forbidden by that Act."

After reviewing the development of Congressional policy as to transportation, including the National Transportation Policy "which is the Commission's guide to 'the public interest'" (p. 82), the Court said (p. 83):

> The history of the development of the special national transportation policy suggests, quite apart from the explicit provision of § 5(11), that the policies of the antitrust laws determine "the public interest' in railroad regulation only in a qualified way. And the altered emphasis in railroad legislation on achieving an adequate, efficient, and economical system of transportation through close supervision of business operations and practices rather than through heavy reliance on the enforcement of free competition in various phases of the business, cf. *New York Central Securities Corp.* v. *United States*, 287 U.S. 12, has its counterpart in motor carrier policy. * * *

Continuing, the Court stated, that "there can be little doubt that the Commission is not to measure proposals for all-rail or all-motor consolidations by the standards of the anti-trust laws. * * * And in authorizing those consolidations [Congress] did not import the general policies of the anti-trust laws as a measure of their permissibility." The Court concluded (pp. 85-86), "Against this background, no other inference is possible but that, as a factor in determining the propriety of motor-carrier consolidations the preservation of competition among carriers, although still a value, is significant chiefly as it aids in the attainment of the objectives of the national transportation

policy." Moreover, the Court expressly noted that, in view of the unique Congressional history of fostering railroad consolidations, the policies of the antitrust laws were, if anything, to be accorded less weight in rail than in motor consolidations. See 321 U.S. at 78, 85.[14]

To be sure, the Court made it clear that the Commission may not ignore the policy of the antitrust laws as a relevant and significant factor in its deliberations. It set forth the duty of the Commission and the function of the reviewing court as follows (pp. 87–88):

> In short, the Commission must estimate the scope and appraise the effects of the curtailment of competition which will result from the proposed consolidation and consider them along with the advantages of improved service, safer operation, lower costs, etc., to determine whether the consolidation will assist in effectuating the over-all transportation policy. Resolving these considerations is a complex task which requires extensive facilities, expert judgment and considerable knowledge of the transportation industry. Congress left that task to the Commission "to the end that the wisdom and experience of that Commission may

[14] Subsequently, in *Schwabacher* v. *United States*, 334 U.S. 182, 198, in passing on the relative function and authority of federal and state law respecting a railroad merger, this Court stated flatly, "We think it is equally clear that the Commission must look for standards in passing on a voluntary merger only to the Interstate Commerce Act." And, more recently, in *Federal Communications Commission* v. *RCA Communications, Inc.*, 346 U.S. 86, this Court emphasized that the effect upon competition is not necessarily the governing consideration in the resolution of the problems of closely regulated industries.

> be used not only in connection with this form of transportation, but in its coordination of all other forms." 79 Cong. Rec. 12207. "The wisdom and experience of that commission," not of the courts, must determine whether the proposed consolidation is "consistent with the public interest." Cf. *Interstate Commerce Commission* v. *Illinois Central R. Co.*, 215 U.S. 452; *Pennsylvania Co.* v. *United States*, 236 U.S. 351; *United States* v. *Chicago Heights Trucking Co.*, 310 U.S. 344; *Purcell* v. *United States*, 315 U.S. 381. If the Commission did not exceed the statutory limits within which Congress confined its discretion and its findings are adequate and supported by evidence, it is not our function to upset its order.

Accordingly, the Minneapolis contentions which are predicated upon the absence of findings in terms of the antitrust laws are without merit. Indeed, the report sustained in the *McLean* case (*Associated Transport, Inc.—Control and Consolidation*, 38 M.C.C. 137) did not discuss the competitive effects of that extensive consolidation in terms of the antitrust laws and it made no reference to the Sherman or Clayton Acts.

3. In its report in the present case, the Commission, after a careful analysis of the effects of a Santa Fe-Pennsylvania acquisition on "competition and diversion of traffic" (R. 33–39, see also R. 25–26, 40–41, 46), concluded (R. 39):

> * * * We are convinced that the benefits to be derived from the operation of Western under the control of the Santa Fe and the Pennsylvania as proposed will be in furtherance of the

> over-all national transportation policy declared by the Congress, and its consummation will not unduly curtail competition in connection with the other carriers. Compare *McLean Trucking Co.* v. *U.S.*, 321 U.S. 67.

This determination, fully supported by numerous subsidiary findings, demonstrated to the district court that "the Commission did give due consideration to the effect of the acquisition on competing carriers and the possible curtailment of competition, and weighed such factors as against the broad question of public interest" (R. 101), and that "* * * its conclusions are not without substantial foundation" (*ibid.*).

The Commission devoted much of its long report to a discussion of the factors bearing on the competitive situation, including a detailed analysis of the effect of the proposed acquisitions on competing carriers. It described the routes, size, and importance of the railroads principally involved (R. 25–30). After referring to the competition existing between the various interested railroads, the Commission pointed out that "All the carriers endeavoring to participate in its control are in competition with Western." R. 33.) For example, the routes of Santa Fe and Pennsylvania via the Chicago gateway compete with Western's route through Peoria; Nickel Plate is in competition with the eastern half of Western; and the Minneapolis line between Nemo and Peoria competes with the western half of Western. (R. 31, 33.) However, while Santa Fe and Pennsylvania ordinarily solicit for their long hauls, they have not worked against Western; even prior to the proposed acquisi-

tion, they offered only passive resistance against Lomax and Effner, respectively, in recognition of the benefits they received from the Western route (R. 34). Indeed, as the Commission found (R. 21–22), the cooperation of Santa Fe and Pennsylvania, including the construction of the connection with Santa Fe at Lomax, played a major role in the development of the fast through service which has contributed so greatly to the success of Western. More than 70 percent of Western's interline traffic is now interchanged with Santa Fe and/or Pennsylvania (R. 22).

Continuing, the Commission pointed out that "all but a very small part of the nation's traffic is routed by the shipper" and set forth the factors which influence that routing (R. 34–35; see 477–479, 499, 723–724, 730, 778, 1483). It concluded that "These factors are operating today and are reflected in the present division of traffic among all of Western's connections, and since no change in service is contemplated with Western under the control of the Santa Fe and the Pennsylvania, the volume of traffic handled by the protesting intervening carriers should not be materially affected" (R. 35). And it found that "the self-interests of the Santa Fe and the Pennsylvania provide further assurance that the Western's present solicitation and service policies will be continued. Those policies have been responsible for the success of Western in the past, and the best way for the Santa Fe and the Pennsylvania to insure a substantial return on their investments to be made herein is to see that the Western management is left free to con-

tinue them" (R. 35; see 503, 725–726, 728, 730, 790–791, 845–846).

The Commission further found (R. 46):

> * * * No greater protection could be afforded to carriers interchanging traffic with Western than to have ownership divided equally between the largest connecting carriers in the east and the largest one in the west. Under this built-in system of checks and balances, it is inconceivable for the Santa Fe to permit impairment of service or discriminatory solicitation with respect to eastern connections, or the Pennsylvania with respect to western ones. * * *

The nature of these "checks and balances" is apparent from the undisputed testimony reflected in the findings. Located on the eastern extremity of Western, Pennsylvania receives a large volume of traffic which is bridged by Western between Pennsylvania and Western's connections on the west, such as Burlington, Rock Island, and Minneapolis; Santa Fe, on the west, receives valuable traffic via Western from such eastern connections as Nickel Plate and New York Central. (R. 371–372; Ex. H–5, R. 1649). Obviously, neither could afford to permit the other to do anything detrimental to the traffic it enjoys and the carriers which supply it (R. 371–372, 503, 575). That railroads serving east-west gateways cannot afford to favor one connection to the detriment of the others was conceded by the Freight Traffic Manager of Minneapolis (R. 1137) and is reflected in the policy of Nickel Plate (R. 1328). Should Santa Fe

attempt to prefer an eastern carrier, or Pennsylvania a western carrier, Santa Fe would antagonize all its other eastern connections and Pennsylvania would antagonize its other western connections (including their connections at other east-west gateways as well as the lines which connect with Western) (R. 484–485, 496–497). Cf. *Chicago, B. & Q. R. Co. Control*, 271 I.C.C. 63, 154.

The Commission also found (R. 46) that the agreement between Santa Fe and Pennsylvania setting forth their proposed method of operation and objectives (R. 24), together with the conditions imposed with respect to the maintenance of all existing routes and channels of trade of Western without discrimination (R. 40–41), is adequate to protect Western's connections.

Finally, the Commission examined the specific claims of diversion of traffic advanced by Minneapolis, as well as by Nickel Plate and Rock Island, and found them to be grossly exaggerated, if valid in any respect (R. 35–39). We need not discuss the matter further here, since Minneapolis has contented itself with a bare assertion that the Commission "brushed off" its "unchallenged evidence" of the loss it would suffer from the Santa Fe-Pennsylvania acquisition (Br. 30)—a statement patently at variance with the facts (see R. 35–37).

4. Minneapolis charges that control of Western by Santa Fe and Pennsylvania would permit the latter roads to strangle the Peoria gateway to the advantage of their positions in other gateways and that they have

a specific intention to do so (Br. 59–65).[15] This contention, too, was properly rejected by the Commission. It ignores the record of cooperation between Santa Fe and Pennsylvania, on the one hand, and Western, on the other, and the resulting substantial traffic interchange. It assumes that Santa Fe and Western wish to invest substantial funds to acquire Western in order to reverse their policy of cooperation and bring about Western's downfall, contrary to their own self-interest and the assurances of their responsible officers. See pp. 26–30, *supra.*

Control of Western is not control of the Peoria gateway. There are numerous competitive east-west routes through Peoria which do not include Western, formed by such railroads as Minneapolis, Rock Island, and Burlington on the west and Nickel Plate, New York Central (through its subsidiary, the Peoria & Eastern), and the Chicago & Illinois Midland-Baltimore & Ohio routes on the east (R. 728, 846; Exs. H–4,

[15] Minneapolis also contends that control of Western by Santa Fe and Pennsylvania would tend to "monopolization in the east-west gateways" (Br. 59). This vague and unsupported charge is clearly erroneous, as an examination of any comprehensive railway map will show. For example, Santa Fe serves only Chicago; Pennsylvania serves both the Chicago and St. Louis gateways, as does the Baltimore and Ohio; Nickel Plate and New York Central each serve the Chicago, Peoria, and St. Louis gateways from the east; and Rock Island and Burlington each serve all three gateways from the west. Other important railroads serve one or more of these gateways. Thus, Chicago is served by such major railroads as the Erie and Chesapeake & Ohio from the east, the Chicago & North Western and Milwaukee from the west. A similar situation prevails at St. Louis.

R. 1615, H–11, R. 1672). A substantial volume of traffic moves over these routes in which Western does not participate at all (Exs. H–126, R. 1993, H–128, R. 2002).

Moreover, contrary to Minneapolis' assumption, the movement of traffic over Western's route is not detrimental to Santa Fe and Pennsylvania. Plainly, the connection at Effner with Western is the only economic justification for Pennsylvania's line beyond Logansport, Indiana. Western provides Pennsylvania—and Santa Fe as well—with a valuable alternate route bypassing the congested Chicago gateway (R. 546, 570–571). Financially, Pennsylvania fares approximately as well on traffic via Effner and Western as by way of Chicago (R. 571). Both Santa Fe and Pennsylvania receive valuable traffic via Western from railroads which connect with Western (Ex. H–5, R. 1649). If the present service over Western's route were not maintained, much of this traffic would move over alternate routes cutting off Pennsylvania and Santa Fe entirely (R. 728–729).

Santa Fe has a strong interest in Western's route since it does not reach either the Peoria or St. Louis gateways while its western competitors, the Rock Island and the Burlington, serve the Chicago, St. Louis, and Peoria gateways directly. The movement of traffic via Western enables Santa Fe to obtain a long haul on east-west traffic, through its Lomax connection with Western, which might otherwise move through St. Louis, in which event Santa Fe would only receive a haul west of Kansas City or

lose the traffic entirely (R. 403, 479–483). This consideration explains Santa Fe's early interest in the Western route (R. 363). It was expressly recognized by the Commission in its discussion of Nickel Plate's claims of traffic diversion (R. 38–39).[16] It explains in large part Santa Fe's interest in its Lomax interchange with Western, despite the higher divisions accruing to Santa Fe at Chicago.[17]

---

[16] The Commission found:

"* * * In 1954, the Nickel Plate interchanged a total of 14,497 cars with Western, of which the Santa Fe participated in the movement of 11,224 cars. Most of the Nickel Plate's traffic bridged from Lomax via the Western is perishable moving, in superior service, to points on the Nickel Plate and its connections. It provides the Santa Fe with a long haul to Lomax on traffic which otherwise might move via St. Louis. If the Western's connection with the Nickel Plate were not maintained as a service route, this traffic would be routed to the Nickel Plate at St. Louis, short-hauling the Santa Fe at Kansas City. Thus, the self-interest of the Santa Fe would assure the continuance of good service to the Nickel Plate at Peoria and prevent preferential solicitation by the Western for the Pennsylvania at Effner. * * *"

This is an illustration of the checks and balances referred to above.

[17] Minneapolis also makes a general and wholly unsupported charge that the acquisition of Western will tend to create a monopoly on the part of Santa Fe and Pennsylvania in their respective service areas (Br. 59–60) and that the Commission ignored the "over-all effect upon transportation of linking, and enlarging the sphere of influence of, two gigantic rail empires" (Br. 67). As the Commission's analysis of traffic diversion charges (R. 33–39) makes clear, the Santa Fe-Pennsylvania acquisition of Western under the terms of the plan here approved will result in little, if any, change in existing traffic patterns, and the two railroads (which are directly "linked" at Chicago) already share 70.7% of the total traffic exchanged by Western, a figure their joint ownership of Western should not substantially affect.

Minneapolis also contends (Br. 36–37, 61–62) that the Commission ignored the lesson of history to be found in Western's bankruptcy in 1917 while under Pennsylvania-Burlington control. But the Commission did not ignore the fact of Western's earlier receivership (see R. 21), and, as we have seen (*supra*, pp. 26–30), discussed in great detail the prevailing economic reasons which provide assurance that Santa Fe-Pennsylvania ownership of Western will serve the public interest. As the Commission pointed out (R. 21), the cooperative efforts between Western and the Santa Fe in constructing a connection between the two roads at Lomax in 1927 has been largely responsible for much of Western's subsequent success as a bridge line. Surely, the Commission was justified in determining the instant case upon the basis of the record before it and its current experience with similar acquisitions,[18] rather than on the basis of events occurring more than 40 years previously under totally different transportation conditions.

Finally, Minneapolis charges (Br. 64) that the Commission deviated from the standards previously applied in comparable situations. But, as might be expected with respect to matters as complex as the acquisition of railroads, the cited cases are by no means comparable to the instant one, and statements lifted from the context of those decisions are of little if any relevance here. Thus, *Interstate Commerce*

[18] See *Detroit, T. & I. R. Co. Control*, 275 I.C.C. 455; *Savannah & A. Ry. Co. Control*, 282 I.C.C. 39; *Pacific Coast R.R. Co. Control*, 282 I.C.C. 600.

Commission, v. *Baltimore & Ohio R. Co.*, 152 I.C.C. 721, cited at several places in the Minneapolis brief, was not an acquisition proceeding under Section 5 of the Interstate Commerce Act at all, but a proceeding under Section 7 of the Clayton Act voiding the joint purchase, without prior Commission approval, of 51% of the stock of the Wheeling and Lake Erie Railway Co. by three of its major competitors. Subsequently, one of the three (the "Nickel Plate") was in fact authorized to take control of the railway under circumstances similar to those involved here ("Wheeling would continue to have an organization separate from that of the Nickel Plate, under control of the latter, and no change in traffic relationships with other railroads is contemplated," *Wheeling & L. E. Ry. Co. Control*, 267 I.C.C. 163, 176, 190). Similarly, the Commission's language quoted in the cited extract from the opinion of the District Court in *Canadian Pacific R. Co.* v. *United States*, 158 F. Supp. 248 (D. Minn.)[19] was utilized in rejecting a multiple acquisition of the Spokane International Railway by carriers in parallel, point-to-point, competition with it, which, the Commission found, would have resulted in a substantial dismantling of Spokane. See *Spokane International R. Co. Control*, 295 I.C.C. 425. As we noted *supra*, p. 29, the Union Pacific Railroad, which *was* authorized to acquire control of Spokane in the very same proceeding, had, like Santa Fe and Pennsylvania here, an end-to-end connection with

[19] This three-judge district court was composed of the same three judges who, eight months later, approved the Commission's report and order in the instant case (See R. 93).

Spokane, was its most important interchange connection, and had cooperated with it for years in building up through traffic.[20]

III

SECTION 10 OF THE CLAYTON ACT DID NOT PRECLUDE THE COMMISSION FROM AUTHORIZING THE PROPOSED ACQUISITION OF CONTROL PURSUANT TO SECTION 5 OF THE INTERSTATE COMMERCE ACT

Minneapolis contends (Br. pp. 50–58) that the Commission lacked power to authorize joint acquisition of control of Western by the Santa Fe and Pennsylvania because the latter's purchase of Western shares constituted a violation of Section 10 of the Clayton Act. We show that (1) there was no violation of Section 10, and (2) that, even if there were conflict with that provision, Section 5(11) of the Interstate Commerce Act would empower the Commission to authorize the acquisition.

1. Section 10 of the Clayton Act provides in pertinent part that no carrier "shall have any dealings in securities, supplies, or other articles of commerce," aggregating more than $50,000 in any one year, with another corporation when any person who is a director of the carrier is, at the same time, a director of the

[20] *Chicago, B. & Q. R. Co. Control*, 271 I.C.C. 63, also cited by Minneapolis, is in no way analogous. It involved the proposed entrance of Santa Fe into St. Louis under circumstances in which it was clear that there would be substantial diversion of traffic from other lines, which might impair their abilities to continue to render adequate service. The Commission found no such likelihood of diversion here.

other corporation "unless and except such purchases shall be made from, or such dealings shall be with, the bidder whose bid is the most favorable to such common carrier, to be ascertained by competitive bidding under regulations to be prescribed by rule or otherwise by the Interstate Commerce Commission."

The alleged violation of Section 10 in the present case is predicated upon the fact that the Wilmington Trust Company, one of the trustees of the McNear estate (which owned 82% of Western stock), had four directors who were also directors of the Pennsylvania or its affiliate or subsidiary (Ex. H–73, R. 1944–5). The actual purchase of Western stock at $135 per share from the McNear estate, as well as from the remaining stock owners, was made by Santa Fe; about a month later Santa Fe entered into an agreement to sell 50% of Western stock, at the same price, to the Pennsylvania (R. 23–24). However, the trustees, in earlier negotiations, had agreed to sell 26% of the stock to each of the railroads for $100 per share (R. 174–176), and, after those agreements were repudiated,[21] it is alleged (Br. 10–11), the Penn-

[21] There is disagreement between Pennsylvania and the trustees as to the continued validity of this agreement, and litigation is pending in which Pennsylvania seeks specific performance of this earlier contract of sale, or damages for the breach of that contract. Its agreement to purchase 50% of Western stock from Santa Fe is without prejudice to its action against the trustees, and the contract provides that if the Pennsylvania eventually secures any of the Western shares at the lower figure its obligation under the contract with Santa Fe is to be reduced in an equivalent amount so that both railroads will maintain their 50% ownership in Western (R. 24).

sylvania continued to work with the Santa Fe in seeking the consummation of the joint purchase of all Western stock (which was eventually accomplished). Thus, Minneapolis urges, there were "dealings in securities" between a carrier (Pennsylvania) and a corporation (the Wilmington Trust Company) having common directors, without the competitive bidding required by Section 10 of the Clayton Act.

It is clear, however, that the dealings in securities here involved are far removed from the type of transaction to which Section 10 of the Clayton Act was directed. The plain purpose of the section is to prevent a railroad from buying at too high a price or selling at too low a price as the result of a common relationship between the carrier and the seller or the buyer. The requirement of competitive bidding where such interlocking relationships exist is phrased in terms of the "bidder whose bid is most favorable to such common carrier," and, as the court below indicated (R. 99), has no application to competitive bidding by the railroad company. The carrier is to get the benefit of competitive bidding between those who desire to purchase from or sell to it, but the section does not seek to protect the interests of competing carriers who seek to purchase the same commodities.[22]

[22] The legislative history of Section 10, though meager, supports the view that it was intended solely for the protection of the particular common carrier involved in the transaction. Indeed, the language of the several drafts of Section 10, together with the types of abuses cited in support of its enactment, strongly suggests that the words "dealings in securities" were intended to cover only a common carrier's dealings with related persons in its own securities. See H. Rep. 627, 63d Cong., 2d

Obviously, such a provision has little, if any, bearing upon an acquisition of control of one carrier by others under the provisions of Section 5 of the Interstate Commerce Act. Both the Santa Fe purchase agreement with the McNear trustees and the subsequent agreement by which Pennsylvania acquired a 50% interest in the Western stock were expressly made subject to Commission approval. This approval necessarily entailed a determination both that the transaction as a whole was in the public interest and that the price paid for the stock was reasonable. If the price paid for Western stock in the instant case was high, the factor determinative of this price was the competition for the stock between appellant and Santa Fe-Pennsylvania, rather than any relationship between the trustee and the Pennsylvania.

Moreover, as the court below pointed out (R. 98–99), the Wilmington Trust Company was acting not on its own behalf but as one of the two trustees of the McNear estate and "[w]e do not have a situation where interlocking directors may be enriched by reason of dealings in their securities and thus should be re-

---

Sess., p. 3; S. Rep. 698, 63d Cong., 2d Sess., pp. 47–48; Sen. Doc. 585, 63d Cong., 2d Sess., pp. 8–9; 51 Cong. Rec. 15943. *In Re Missouri Pacific R. Co.*, 13 F. Supp. 888 (E.D. Mo.), cited by appellant, while expressing the view that securities other than the carrier's are covered by Section 10 of the Clayton Act, is not pertinent here; it involved a situation where the carrier was buying the controlling securities in a land development corporation from another subsidiary of its parent, the typical kind of transaction at which the section was aimed and one which, of course, was not subject to the approval of the Commission under Section 5 of the Interstate Commerce Act.

quired to sell securities only to a bidder whose 'bid is most favorable to the common carrier' ". Also, the direct purchaser of the stock from the McNear estate was the Santa Fe Railroad, which admittedly had no interlocking relationship with the Wilmington Trust Company or Western. It is true that the Santa Fe had had previous dealings with the Pennsylvania concerning a joint purchase of Western stock and that it later sold a 50% interest in Western to a Pennsylvania affiliate. It is clear, however, that the Santa Fe did not agree to pay more for the Western stock than it believed it was worth because of any relationship between Pennsylvania and the Wilmington Trust Company. On the contrary, as the Commission found (R. 44) "the Santa Fe * * * had no commitments to sell any of it to any other railroad. Before offering to sell a portion of the stock to Pennsylvania several other joint control possibilities were considered and rejected." (See R. 367–368; Exs. H–80, H–81, H–82, H–83, R. 1964–1969.)

2. Apart from its conclusion that Section 10 of the Clayton Act had not been violated, the Commission ruled that Section 5(11) of the Interstate Commerce Commission Act, makes the "authority" over acquisitions conferred by Section 5 "exclusive and plenary" and relieves carriers participating in an approved transaction from the operation of the antitrust laws (R. 44). That section specifically provides that:

> The authority conferred by this section shall be exclusive and plenary, * * * and any carriers or other corporations, and their officers

> and employees and any other persons, participating in a transaction approved or authorized under the provisions of this section shall be and they are hereby relieved from the operation of the antitrust laws and of all other restraints, limitations, and prohibitions of law, Federal, State, or municipal, insofar as may be necessary to enable them to carry into effect the transaction so approved or provided for * * *.[23]

Minneapolis contends that Section 5(11) operates only *in futuro* and confers "no authority to purge the taint of a transaction illegal at the time it was brought to the Commission." (Br. 58). This may be true in the limited sense that Commission approval of an acquisition proposal might not bar a subsequent criminal prosecution—the only sanction provided—for a violation of Section 10 occurring during the negotiations leading to the application. But, insofar as the acquisition itself is concerned, both the language of the section and the relevant court opinions make clear that Commission approval of the transaction, under Section 5 of the Interstate Commerce Act, is "exclusive and plenary" regardless of whether the acquisition would otherwise be in violation of the antitrust laws. See *McLean*

---

[23] It is clear that Section 10 of the Clayton Act (15 U.S.C. 20) is included in the "antitrust laws" referred to in Section 5(11). Section 1 of the Clayton Act, 15 U.S.C. (1952 ed.) 12, provides that "'Antitrust laws', as used in sections 12, 13, 14-21, and 22-27 of this title, includes sections 1-27 of this title." And, in any event, Section 5(11) avoids any ambiguity by including "all other restraints, limitations and prohibitions of law, Federal, State or municipal."

Trucking Co. v. *United States*, 321 U.S. 67. Perhaps, the most dramatic example of this is *United States* v. *Southern Pacific Co.*, 290 Fed. 493 (D. Utah), sustaining the Commission's authority, after the adoption of what is now Section 5(11) as part of the Transportation Act of 1920, to approve the Southern Pacific's acquisition of the Central Pacific, an acquisition which this Court had previously held violative of the Sherman Act. See *United States* v. *Southern Pacific Co.*, 259 U.S. 214. What is true of acquisitions which themselves would otherwise violate the antitrust laws is certainly true of negotiations leading to proposals which are subject to the requirement of Commission approval.

This Court's decision in the *McLean* case, *supra*, at p. 86, indicates that the Commission probably could not "ignore" the policy embodied in Section 10 of the Clayton Act. But it is quite clear that the Commission did not do so. It gave particular attention (R. 42) to the reasonableness of the price paid by the Santa Fe and Pennsylvania for the Western stock. Under the circumstances, the Commission would have been remiss if it had made its determination on the basis of what was, at most, a technical breach of Section 10 rather than on the major issues of transportation policy committed to its expert judgment.

CONCLUSION

For the foregoing reasons, the judgment of the District Court should be affirmed.

Respectfully submitted.

J. LEE RANKIN,
Solicitor General.

ROBERT A. BICKS,
Acting Assistant Attorney General.

RICHARD A. SOLOMON,
Attorney.

ROBERT W. GINNANE,
General Counsel,

B. FRANKLIN TAYLOR, JR.,
Associate General Counsel, Interstate Commerce Commission.

OCTOBER 1959.

APPENDIX

National Transportation Policy (54 Stat. 899, 49 U.S.C., note preceding section 1):

> It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several States and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions—all to the end of developing, co-ordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy.

Section 5(2) of the Interstate Commerce Act (24 Stat. 380, as amended, 54 Stat. 905, 49 U.S.C. 5 (2)):

> (2) (a) It shall be lawful, with the approval and authorization of the Commission, as provided in subdivision (b)—

"(i) for two or more carriers to consolidate or merge their properties or franchises, or any part thereof, into one corporation for the ownership, management, and operation of the properties theretofore in separate ownership; or for any carrier, or two or more carriers jointly, to purchase, lease, or contract to operate the properties, or any part thereof, of another; or for any carrier, or two or more carriers jointly, to acquire control of another through ownership of its stock or otherwise; or for a person which is not a carrier to acquire control of two or more carriers through ownership of their stock or otherwise; or for a person which is not a carrier and which has control of one or more carriers to acquire control of another carrier through ownership of its stock or otherwise; or

"(ii) for a carrier by railroad to acquire trackage rights over, or joint ownership in or joint use of, any railroad line or lines owned or operated by any other such carrier, and terminals incidental thereto."

(b) Whenever a transaction is proposed under subparagraph (a), the carrier or carriers or person seeking authority therefor shall present an application to the Commission, and thereupon the Commission shall notify the Governor of each State in which any part of the properties of the carriers involved in the proposed transaction is situated, and also such carriers and the applicant or applicants (and, in case carriers by motor vehicle are involved, the persons specified in section 205(e)), and shall afford reasonable opportunity for interested parties to be heard. If the Commission shall consider it necessary in order to determine whether the findings specified below may properly be made, it shall set said application for public hearing; and a public hearing shall be held in all cases where carriers by railroad are involved unless the Commission determines that

a public hearing is not necessary in the public interest. If the Commission finds that, subject to such terms and conditions and such modifications as it shall find to be just and reasonable, the proposed transaction is within the scope of subparagraph (a) and will be consistent with the public interest, it shall enter an order approving and authorizing such transaction, upon the terms and conditions, and with the modifications, so found to be just and reasonable: *Provided*, That if a carrier by railroad subject to this part, or any person which is controlled by such a carrier, or affiliated therewith within the meaning of paragraph (6), is an applicant in the case of any such proposed transaction involving a motor carrier, the Commission shall not enter such an order unless it finds that the transaction proposed will be consistent with the public interest and will enable such carrier to use service by motor vehicle to public advantage in its operations and will not unduly restrain competition.

(c) In passing upon any proposed transaction under the provisions of this paragraph (2), the Commission shall give weight to the following considerations, among others: (1) The effect of the proposed transaction upon adequate transportation service to the public; (2) the effect upon the public interest of the inclusion, or failure to include, other railroads in the territory involved in the proposed transaction; (3) the total fixed charges resulting from the proposed transaction; and (4) the interest of the carrier employees affected.

(d) The Commission shall have authority in the case of a proposed transaction under this paragraph (2) involving a railroad or railroads, as a prerequisite to its approval of the proposed transaction, to require, upon equitable terms, the inclusion of another railroad or other railroads in the territory involved, upon petition by such railroad or railroads requesting such

inclusion, and upon a finding that such inclusion is consistent with the public interest.

(e) No transaction which contemplates a guaranty or assumption of payment of dividends or of fixed charges, shall be approved by the Commission under this paragraph (2) except upon a specific finding by the Commission that such guaranty or assumption is not inconsistent with the public interest. No transaction shall be approved under this paragraph (2) which will result in an increase of total fixed charges, except upon a specific finding by the Commission that such increase would not be contrary to public interest.

(f) As a condition of its approval, under this paragraph (2), of any transaction involving a carrier or carriers by railroad subject to the provisions of this part, the Commission shall require a fair and equitable arrangement to protect the interests of the railroad employees affected. In its order of approval the Commission shall include terms and conditions providing that during the period of four years from the effective date of such order such transaction will not result in employees of the carrier or carriers by railroad affected by such order being in a worse position with respect to their employment, except that the protection afforded to any employee pursuant to this sentence shall not be required to continue for a longer period, following the effective date of such order, than the period during which such employee was in the employ of such carrier or carriers prior to the effective date of such order. Notwithstanding any other provisions of this chapter and chapters 8 and 12 of this act, an agreement pertaining to the protection of the interests of said employees may hereafter be entered into by any carrier or carriers by railroad and the duly authorized representative or representatives of its or their employees.

Section 5(11) of the Interstate Commerce Act (24 Stat. 380, as amended, 54 Stat. 908, 49 U.S.C. 5(11)):

> The authority conferred by this section shall be exclusive and plenary, and any carrier or corporation participating in or resulting from any transaction approved by the Commission thereunder, shall have full power (with the assent, in the case of a purchase and sale, a lease, a corporate consolidation, or a corporate merger, of a majority, unless a different vote is required under applicable State law, in which case the number so required shall assent, of the votes of the holders of the shares entitled to vote of the capital stock of such corporation at a regular meeting of such stockholders, the notice of such meeting to include such purpose, or at a special meeting thereof called for such purpose) to carry such transaction into effect and to own and operate any properties and exercise any control or franchises acquired through said transaction without invoking any approval under State authority, and any carriers or other corporations, and their officers and employees and any other persons, participating in a transaction approved or authorized under the provisions of this section shall be and they are hereby relieved from the operation of the antitrust laws and of all other restraints, limitations, and prohibitions of law, Federal, State, or municipal, insofar as may be necessary to enable them to carry into effect the transaction so approved or provided for in accordance with the terms and conditions, if any, imposed by the Commission, and to hold, maintain, and operate any properties and exercise any control or franchises acquired through such transaction. Nothing in this section shall be construed to create or provide for the creation, directly or indirectly, of a Federal corporation, but any power granted by this section

to any carrier or other corporation shall be deemed to be in addition to and in modification of its powers under its corporate charter or under the laws of any State.

Section 1 of the Sherman Act (26 Stat. 209, as amended, 15 U.S.C. 1):

> Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is declared to be illegal: *Provided*, That nothing contained in sections 1–7 of this title shall render illegal, contracts or agreements prescribing minimum prices for the resale of a commodity which bears, or the label or container of which bears, the trademark, brand, or name of the producer or distributor of such commodity and which is in free and open competition with commodities of the same general class produced or distributed by others, when contracts or agreements of that description are lawful as applied to intrastate transactions, under any statute, law, or public policy now or hereafter in effect in any State, Territory, or the District of Columbia in which such resale is to be made, or to which the commodity is to be transported for such resale, and the making of such contracts or agreements shall not be an unfair method of competition under section 45 of this title: *Provided further*, That the preceding proviso shall not make lawful any contract or agreement, providing for the establishment or maintenance of minimum resale prices on any commodity herein involved, between manufacturers, or between producers, or between wholesalers, or between brokers, or between factors, or between retailers, or between persons, firms, or corporations in competition with each other. Every person who shall make any contract or engage in any combination or conspiracy declared by sections 1–7 of this title to be illegal shall be deemed guilty of a misde-

meanor, and, on conviction thereof, shall be punished by fine not exceeding fifty thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

Section 7 of the Clayton Act (38 Stat. 731, as amended, 15 U.S.C. 18):

No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.

No corporation shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of one or more corporations engaged in commerce, where in any line of commerce in any section of the country, the effect of such acquisition, of such stocks or assets, or of the use of such stock by the voting or granting of proxies or otherwise, may be substantially to lessen competition, or to tend to create a monopoly.

This section shall not apply to corporations purchasing such stock solely for investment and not using the same by voting or otherwise to bring about, or in attempting to bring about, the substantial lessening of competition. Nor shall anything contained in this section prevent a corporation engaged in commerce from causing the formation of subsidiary corporations for the actual carrying on of their immediate lawful business, or the natural and legitimate branches or extensions thereof, or from owning

and holding all or a part of the stock of such subsidiary corporations, when the effect of such formation is not to substantially lessen competition.

Nor shall anything herein contained be construed to prohibit any common carrier subject to the laws to regulate commerce from aiding in the construction of branches or short lines so located as to become feeders to the main line of the company so aiding in such construction or from acquiring or owning all or any part of the stock of such branch lines, nor to prevent any such common carrier from acquiring and owning all or any part of the stock of a branch or short line constructed by an independent company where there is no substantial competition between the company owning the branch line so constructed and the company owning the main line acquiring the property or an interest therein, nor to prevent such common carrier from extending any of its lines through the medium of the acquisition of stock or otherwise of any other common carrier where there is no substantial competition between the company extending its lines and the company whose stock, property, or an interest therein is so acquired.

Nothing contained in this section shall be held to affect or impair any right heretofore legally acquired: *Provided*, That nothing in this section shall be held or construed to authorize or make lawful anything heretofore prohibited or made illegal by the antitrust laws, nor to exempt any person from the penal provisions thereof or the civil remedies therein provided.

Nothing contained in this section shall apply to transactions duly consummated pursuant to authority given by the Civil Aeronautics Board, Federal Communications Commission, Federal Power Commission, Interstate Commerce Commission, the Securities and Exchange Commission in the exercise of its jurisdiction under

section 79j of this title, the United States Maritime Commission, or the Secretary of Agriculture under any statutory provision vesting such power in such Commission, Secretary, or Board.

Section 10 of the Clayton Act (38 Stat. 734, 15 U.S.C. 20):

No common carrier engaged in commerce shall have any dealings in securities, supplies, or other articles of commerce, or shall make or have any contracts for construction or maintenance of any kind, to the amount of more than $50,000, in the aggregate, in any one year, with another corporation, firm, partnership, or association when the said common carrier shall have upon its board of directors or as its president, manager, or as its purchasing or selling officer, or agent in the particular transaction, any person who is at the same time a director, manager, or purchasing or selling officer of, or who has any substantial interest in, such other corporation, firm, partnership, or association, unless and except such purchases shall be made from, or such dealings shall be with, the bidder whose bid is the most favorable to such common carrier, to be ascertained by competitive bidding under regulations to be prescribed by rule or otherwise by the Interstate Commerce Commission. No bid shall be received unless the name and address of the bidder or the names and addresses of the officers, directors, and general managers thereof, if the bidder be a corporation, or of the members, if it be a partnership or firm, be given with the bid.

Any person who shall, directly or indirectly, do or attempt to do anything to prevent anyone from bidding, or shall do any act to prevent free and fair competition among the bidders or those desiring to bid, shall be punished as prescribed in this section in the case of an officer or director.

Every such common carrier having any such transactions or making any such purchases shall, within thirty days after making the same, file with the Interstate Commerce Commission a full and detailed statement of the transaction showing the manner of the competitive bidding, who were the bidders, and the names and addresses of the directors and officers of the corporations and the members of the firm or partnership bidding; and whenever the said commission shall, after investigation or hearing, have reason to believe that the law has been violated in and about the said purchases or transactions, it shall transmit all papers and documents and its own views or findings regarding the transaction to the Attorney General.

If any common carrier shall violate this section, it shall be fined not exceeding $25,000; and every such director, agent, manager, or officer thereof who shall have knowingly voted for or directed the act constituting such violation, or who shall have aided or abetted in such violation, shall be deemed guilty of a misdemeanor and shall be fined not exceeding $5,000 or confined in jail not exceeding one year, or both, in the discretion of the court.

Section 8(b) of the Administrative Procedure Act (60 Stat. 242, 5 U.S.C. 1007(b)):

In cases in which a hearing is required to be conducted in conformity with section 1006 of this title—

* * * * *

(b) Prior to each recommended, initial, or tentative decision, or decision upon agency review of the decision of subordinate officers the parties shall be afforded a reasonable opportunity to submit for the consideration of the officers participating in such decisions (1) proposed findings and conclusions, or (2) exceptions to

the decisions or recommended decisions of subordinate officers or to tentative agency decisions, and (3) supporting reasons for such exceptions or proposed findings or conclusions. The record shall show the ruling upon each such finding, conclusion, or exception presented. All decisions (including initial, recommended, or tentative decisions) shall become a part of the record and include a statement of (1) findings and conclusions, as well as the reasons or basis therefor, upon all the material issues of fact, law, or discretion presented on the record; and (2) the appropriate rule, order, sanction, relief, or denial thereof.

Section 10(e) of the Administrative Procedure Act (6 Stat. 243, 5 U.S.C. 1009(e)):

Except so far as (1) statutes preclude judicial review or (2) agency action is by law committed to agency discretion—

* * * * *

(e) So far as necessary to decision and where presented the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provisions, and determine the meaning or applicability of the terms of any agency action. It shall (A) compel agency action unlawfully withheld or unreasonably delayed; and (B) hold unlawful and set aside agency action, findings, and conclusions found to be (1) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; (2) contrary to constitutional right, power, privilege, or immunity; (3) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right; (4) without observance of procedure required by law; (5) unsupported by substantial evidence in any case subject to the requirements of sections 1006 and 1007 of this title or otherwise reviewed on the record of an agency hearing provided by statute; or (6)

unwarranted by the facts to the extent that the facts are subject to trial de novo by the reviewing court. In making the foregoing determinations the court shall review the whole record or such portions thereof as may be cited by any party, and due account shall be taken of the rule of prejudicial error.

For the District of Minnesota

PETITION FOR REHEARING OF APPELLANT, THE MINNEAPOLIS & ST. LOUIS RAILWAY COMPANY

Appellant, The Minneapolis & St. Louis Railway Company, respectfully petitions for a rehearing of the decision and judgment of this Court, dated December 14, 1959, affirming the District Court and sustaining the Interstate

Commerce Commission. The grounds for the petition are stated below:

I.

This Court's opinion strikes a death knell for the statutory requirement of adequate, evidence-supported findings of fact. Complete paralysis of judicial review is demonstrated by the Court's ready acceptance, without examination of the proof, of findings made contrary to all the evidence, and by its overlooking the total absence of findings measuring an application against the statutory criterion. To this is added the statement in the Court's opinion (p. 19) that the law requires no more than consideration and discussion—that findings which may be tested against the statutory standards are not required.

A. The Santa Fe Traffic Vice President admitted, on cross-examination, a deliberate scheme to degrade service at the Nemo connection with Minneapolis in order to divert traffic to Lomax (R. 496). We showed that a loss of $1.1 million in revenue—5% of our total—would result. (R. 1027, 1104, 1112-8, 1254, 1356-7, 1410-1) The Commission found that the traffic would not be lost because Minneapolis schedules were slower and the traffic "does not move on a competitive service basis". (R. 36) This finding ignores the timetable exhibit establishing the principal Peoria-Nemo service by Minneapolis as 15 minutes *faster* than the competitive Western run. (Ex. H-121, R. 1983-4) And this is the major movement, accounting for the principal part of the imperiled traffic. (R. 1355-7) The testimony that Western trains moved at 49 miles per hour compared to 30 miles per hour on Minneapolis was exposed as being the *maximum* in the former instance and

the *average* in the latter. (R. 1579, 1597) This Court has now sustained a central finding shown by the evidence to be mathematically false. We are here concerned not with judgment, or opinion, or interpretation or inference, but with a matter of cold mathematics. On that the Commission was simply wrong. And this Court has refused to look at the simple underlying numbers appearing in three brief record references.

B. The Minneapolis application proposed significant improvement in transportation service in terms of accelerated schedules and new service routes. No finding of any kind was made as to whether, or to what extent, the "public interest" would be advanced or the National Transportation Policy (*49 U. S. C.* preceding § 1) to promote "efficient service" would be enhanced by the proposed improvements.

The Commission's obligation to enter findings on this basic issue is not discharged by the generalization, cited in this Court's opinion (p. 8), that direct interchanges designed to eliminate inordinate switching delays "would be extremely harmful to other carriers". The statutory standard is "public interest" and the legislative goal is "efficient service"; injury to other carriers does not, as such, equate with either. If increased efficiency in transportation is to be rejected in the public interest, it must be upon a showing that the *harm to the public* flowing from adverse effects on other carriers outweighs the transportation improvement. No such balance was offered and the record facts deny its support for the ultimate result.

Indeed, the finding of harm rests on the flimsy claim of the Wabash that some undefined part of 6,500 cars per year (compared with a total volume of some 850,000 cars) could be "influenced" to Western. (R. 1270-1, 1292)

And even this possibility could occur only by improvement of the Forrest interchange (R. 1292, 1182), which could not occur without the voluntary cooperation of the Wabash. That the risk of this minute diversion from the huge Wabash System could be "extremely harmful" or wipe out the "public interest" in the comprehensive plan of Minneapolis for improvement of service is an absurdity at best. At the least it was incumbent upon the Commission to make a direct finding on the public interest issue, so that the reviewing court could see how this gadfly effect on the Wabash justified denial to the public of the new, improved service inherent in the Minneapolis application.

C. Basic to the denial of the Minneapolis application is the finding that its plan contemplated "the disappearance of Western as an *independent* and *neutral* connection". (emphasis supplied) That Western would cease to be independent whether sold to Minneapolis or to Pennsylvania-Santa Fe is self-evident. But there is not an iota of evidence that the *neutrality* of Western would be impaired by Minneapolis. The only evidence is to the contrary:

1. All the witnesses agreed that failure to respect neutrality would be "suicidal"—regardless of ownership of Western. (R. 483-4, 546, 572) Reprisal and retaliation render any favoritism self-defeating. This is a particularly effective economic sanction as to Minneapolis—a small carrier dependent exclusively on the Peoria gateway and, in a large measure, on bridge traffic.

2. Minneapolis would double the number of solicitation agencies for Western and add service routes and faster schedules. (R. 1185-7, 1179-82) Of necessity, carrier connections into and from Western would be enhanced by the enlarged volume.

3. The two men most keenly aware of the need for, and the scope of, the neutrality—the President of Western and the President of Pennsylvania—had endorsed the Minneapolis program for acquisition of Western. (R. 537-8, 977-8)

Coupling "neutrality" with the obvious matter of "independence" served to obscure the vast difference between them in fact and in the proof. Neither the court below nor this Court separated this coupled finding to look at the evidence as to each. As to any departure from neutrality, there is no proof whatever: all the evidence is to the contrary.

D. Neither Pennsylvania's competition-stifling motive nor the fiasco attendant upon its prior ownership of Western was subjected to either scrutiny or findings. The corrupt purpose was not mentioned by the Commission or this Court in purporting to test the "public interest". The prior ownership is recited without a word to suggest that the competitive self-interest of Pennsylvania, cited by McNear as the cause of Western's failure, has diminished in the slightest degree. Could anything be more material in judging "public interest" than the applicant's grossly destructive purpose or its prior misuse of the very same property?

Judicial review is robbed of meaning and the Congressional command for disclosure of findings and reasoning by administrative agencies is frustrated by the Court's opinion. If the public benefit from improved service need not be evaluated, if findings shown to be mathematically erroneous must be accepted, then this Court is saying that any decision by the Interstate Commerce Commission where it "considered" the issues, is conclusive.

II.

The Court failed to notice that the Commission made no effort to accommodate the interest of employees, on the one hand, with the National Transportation Policy to foster economy and efficiency in transportation, on the other hand.

With one-half of railroad revenues today expended in wages, economies are necessarily accompanied by curtailment of employment. A proper "weighing" as directed by the statute requires

> (1) an appraisal of the public benefits to be derived from the elimination of duplicate facilities and operations,
>
> (2) the number of employees—not positions—to be displaced and the extent of protection afforded them, and
>
> (3) the effect of the program on stability of employment.

Not one of these factors received consideration by the Commission. All that the report shows is the discontinuance of 256 excess positions. Whether 200 persons or only 2 would actually be displaced—after the absorption of excess employees in other positions—the Commission did not determine. Minneapolis had carried out a similar major readjustment with only 2 or 3 employees displaced—and they found ready employment by other carriers. (R. 1032-3) The Commission should have exercised its expertise function to determine the number of employees—not positions—that would be affected and to balance that number, with full consideration of the cushioning plans for absorption and compensation, against the public interest in economy and efficiency.

This Court notes, with satisfaction, that the Commission "did consider and discuss" the cushioning plans, and, accordingly, that findings on such items were unnecessary. But that easy disposition ignores the Commission's duty at least to evaluate the number of employees who might be displaced against the relative advantages of the large transportation economies. To discard the economy policy because it requires abandonment of positions would be like banning all surgical operations because they involve the loss of some blood. Like the surgeon, the Commission is obliged to strike a balance on a rational basis—and this must be disclosed for the scrutiny of the reviewing courts.

The failure of the Commission to discharge its statutory "weighing" function or to deal with public interest in efficiency and the elimination of waste condemns the report as contrary to law. The relationship of economies to employment is involved in every merger. If mere reduction in positions can block integration, then neither elimination of duplication nor consolidation of operations can have a meaningful future in the railroad industry, which so desperately needs just that relief.

III.

The opinion overlooks the use by the Interstate Commerce Commission of three different yardsticks to measure the effect of traffic diversions. The standard is conveniently altered to sustain a conclusion in line with the Commission decision.

1. The possible diversion of traffic on Western under Pennsylvania-Santa Fe ownership, the Commission found, "would not jeopardize the maintenance of adequate transportation service by the objecting interven-

ing carriers". (R. 34) That statement conforms to the statutory standard of "public interest".

2. However, the diversion of traffic on Western by the Minneapolis improvement program was condemned as "extremely harmful to other carriers". (R. 32) The public interest concern not to jeopardize the maintenance of adequate transportation could hardly have been applied to the flimsy Wabash claims, so the Commission simply changed the yardstick.

3. Similarly, a further shift in criteria was made in considering the deliberate degrading of the Nemo connection to divert traffic from Minneapolis. Here a destruction of more than 5% of the Minneapolis revenues which would wipe out 35% of its net profit was brushed aside on the theory that Minneapolis could get the business without being competitive. The Commission took refuge in the assumption that the vulnerable traffic moved on Minneapolis for considerations other than service. (R. 36) And to warrant that theory, the Commission simply tore up the time schedules in the record.

The issue of traffic diversion provided an ideal setting for the application of a single, uniform yardstick. The adoption of differing yardsticks, each fashioned for the occasion, spells an utter lack of fairness and an absence of a truly comparative hearing.

IV.

The legislative history of section 10 of the Clayton Act (*15 U. S. C.* § 20) is misconceived in the Court's opinion. Moreover, no transaction tainted by a section 10 violation should be blessed with administrative and judicial sanction save under the most compelling circumstances.

The opinion reads into the section 10 legislative history a narrow purpose to protect the carrier against excessive price payments. This is at odds with the much more comprehensive aims expressed by the President and the Congress. Both saw the attack on interlocking directorates as striking at the concentration of economic power. Both hoped that the statute "will bring new men, new energies, new spirit of initiative, and new blood into the management of our business enterprises". By discouraging interlocking directors, the Congress sought to "open the field of industrial development and origination to scores of men." The goal was to "enrich the business activities of the whole country". (H. R. Rep. No. 627, p. 20, 63rd Cong. 2d Sess. (1914)) These quotations do not permit the limited, parsimonious application of the statute made by this Court. The Congress was seeking, not safeguards for individual carriers, but a dissolution of the hard core of concentrated power in our whole economy.

Nor does the impression that the Act was designed "to cover only a carrier's dealing with related persons in its own securities" (Opinion, p. 16, ftnt. 13) square with the legislative record. The initial House Bill did limit the restraint to dealing in the carrier's own securities. (H. R. Rep. No. 627, p. 3, 63rd Cong. 2d Sess. (1914)) The Senate Bill changed the phrase to the present comprehensive language which the conference report adopted. (S. Rep. No. 698, p. 64, 63rd Cong. 2d Sess. (1914)) That history leaves no doubt that the Congressional objective went well beyond the limits circumscribed in this Court's opinion.

Nor is it a mere "legal abstraction" to urge that condonation of a transaction condemned by law is not readily to be inferred. This Court has repeatedly denied to wrongdoers the fruits of their illegal conduct. A lesser respect

for law in determining "public interest" should not be expected from the Commission. And if sanctioned, it ought to be only for the most compelling considerations of public benefit. The issue is not solely, or even primarily, one of the Commission's power under section 5(11) of the Interstate Commerce Act (*49 U. S. C.* § 5(11)). Rather it is one of morality. It reaches the problem of when immunity should be granted and what showing the Commission must make to sustain such a grant of immunity when exposed to judicial review.

A re-examination of the section 10 issues is particularly appropriate in view of the lack of authoritative review by the District Court. That court so completely rewrote the statute that the government could not bring itself to defend that unfounded position. A hospitable consideration of the statute, with the broad-gauged legislative objectives, is called for in this Court, and for such consideration, a rehearing is required.

V.

This Court failed to notice two major areas in which the Commission did not even attempt to accommodate the antitrust policy to the transportation policy.

A. The Commission did not consider, and this Court makes no reference to, the competitive gateway problem. That problem exists wholly apart from the question of the competitive effects on individual carriers. What is involved is the basic competition between the Peoria gateway and the principal gateways in Chicago and St. Louis. There is, in this respect, not the slightest conflict between the national policy promoting competition and the National Transportation Policy seeking to strengthen our trans-

portation system in the interest of commerce and national defense.

Building up the Peoria gateway, in competition with Chicago and St. Louis, assures to the nation the added facilities that by-pass the congestion and delay of the larger gateways. The more effective the competition, the stronger the Peoria route.

The issue requires a simple determination of which of the competing applicants has the greater incentive to foster Peoria routings in preference to Chicago and St. Louis. Is it Pennsylvania-Santa Fe who derive the long haul and much larger revenue from Chicago and St. Louis, or is it Minneapolis which is dependent solely on the Peoria gateway? Should Western again be entrusted to Pennsylvania, its St. Louis and Chicago competitor, under whose prior ownership that strategic line fell into almost three decades of receivership?

What the Court failed to see was that both antitrust and the transportation policies support the wisdom of strengthening Western to compete most effectively with the Chicago and St. Louis gateways. Economic self-interest provides the greatest assurance in that respect. And Minneapolis can be expected, in its own interest, to maximize solicitation and service through Peoria, the only gateway to which it has access. A like incentive could hardly be attributed to Pennsylvania-Santa Fe, whose economies are in the contrary direction.

B. The promotion of the Peoria gateway by Pennsylvania-Santa Fe is inferred from their announced plan to place Chicago and Lomax and Chicago and Effner "on a parity—from a solicitation standpoint." (R. 34, Opinion, p. 14) What this Court overlooked is the fact that the successful applicants intend neither parity nor solicitation.

President Symes of Pennsylvania explained the situation and his intentions in the following words (R. 521-2):

> "Q. Does the Pennsylvania solicit traffic via Effner [its connection with Western] as against St. Louis?
>
> "A. No, we do not.
>
> "Q. As against Chicago?
>
> "A. Effner as against Chicago?
>
> "Q. Yes.
>
> "A. No, we do not.
>
> * * * * *
>
> "Q. Mr. Symes, would your solicitation policies be changed in the event you acquire a 50 per cent interest in the T. P. & W.?
>
> "A. Well, I prefer that Mr. Carpi answer that, but as president of the company I wouldn't think they would substantially change * * * If somebody asked me in Philadelphia, I am going to ship a car of freight to California, I would say St. Louis, if you couldn't do it there but could at Chicago I'd say do that, if you couldn't do that at Chicago, give it to us at Effner, I'd say give it to us, I don't think it would change very much."

That authoritative testimony effectively gave the lie to any semblance of parity for the Western connection at Effner.

President Coulter of Western, the last witness for the successful applicants, similarly admitted that (1) Pennsylvania-Santa Fe would not solicit at all for Western through either Lomax on the West or Effner on the East (R. 1601, 1609), and (2) the new "parity" policy meant no help or assistance, but was synonymous with "a benevolent attitude." (R. 1609)

We respectfully submit that the entire assurance of parity of solicitation is a semantic hoax designed to mislead

the Commission. Pennsylvania-Santa Fe sold the Commission a program that, in truth, spells no change in actual solicitation or service. Western will survive only to the extent that it fights successfully for its traffic against Chicago and St. Louis solicitation by its owners. This returns Western to the roller coaster headed right back to the impossible position of competing with its owners for traffic—a condition which McNear bluntly described as the cause of its hopeless failure. How this squares with the national policy for a strong transportation system or with the public interest is not revealed in the Commission report or the opinion of this Court. If this Court will recognize the significance of an available alternate course, it cannot allow this gamble with a strategic carrier's well-being to stand.

Much, much more than inequitable curtailment of the natural expansion of a small carrier and monopolistic enhancement of the power of two huge railroads is here involved. To permit this injustice in the name of the public interest, this Court must abandon the traditional restraint on arbitrary administrative action which systematic findings impose. At a time when the reputation of administrative agencies for even-handed justice has, under the glare of Congressional exposure, sunk to a new low, such judicial insistence upon administrative conformity to Congressional standards should not be relaxed. Nor should conclusions be afforded the gloss of untouchable expert opinions without systematic findings with at least some support in the record. In these circumstances the Court ought not to refuse to look at the record.

Wherefore, the plaintiff prays that a rehearing be gran
ed and that upon such rehearing the judgment of the Di
trict Court be reversed.

Respectfully submitted,

Attorneys for Appellant, The Minneapolis & St. Louis Railway Company

CERTIFICATE OF COUNSEL

The undersigned does hereby certify that the foregoi
Petition for Rehearing is presented in good faith and n
for delay.

JOHN G. DORSEY

SUPREME COURT OF THE UNITED STATES

Nos. 12, 27 and 28.—October Term, 1959.

The Minneapolis & St. Louis Railway Company, Appellant, 12 v. United States of America, et al.	On Appeals From the United States District Court for the District of Minnesota.
State of South Dakota, et al., Appellants, 27 v. United States of America, et al.	
State of Minnesota, et al., Appellants, 28 v. United States of America, et al.	

[December 14, 1959.]

Mr. Justice Whittaker delivered the opinion of the Court.

These appeals present questions arising out of rival applications by several rail carriers to the Interstate Commerce Commission under § 5 (2) of the Interstate Commerce Act [1] for authority to acquire control of Toledo, Peoria & Western Railroad Company.

[1] Section 5 (2) of the Interstate Commerce Act, 24 Stat. 380, as amended, 54 Stat. 905, 49 U. S. C. § 5 (2), provides, in pertinent part, that:

"(2) (a) It shall be lawful, with the approval and authorization of the Commission, as provided in subdivision (b) of this paragraph—

"(i) for . . . two or more carriers jointly, to acquire control of another through ownership of its stock or otherwise . . .

"(b) Whenever a transaction is proposed under subdivision (a) of this paragraph, the carrier . . . seeking authority therefor shall pre-

"Western" is an independent, short-line "bridge carrier"[2] of through east-west traffic by-passing the congested Chicago gateway. Its line is about 234 miles long, extending from its connection with the Pennsylvania Rail-

---

sent an application to the Commission and thereupon the Commission shall notify [designated parties], and shall afford reasonable opportunity for interested parties to be heard. If the Commission shall consider it necessary in order to determine whether the findings specified below may properly be made, it shall set said application for public hearing; and a public hearing shall be held in all cases where carriers by railroad are involved unless the Commission determines that a public hearing is not necessary in the public interest. If the Commission finds that, subject to such terms and conditions and such modifications as it shall find to be just and reasonable, the proposed transaction is within the scope of subdivision (a) of this paragraph and will be consistent with the public interest, it shall enter an order approving and authorizing such transaction, upon the terms and conditions, and with the modifications, so found to be just and reasonable . . .

"(c) In passing upon any proposed transaction under the provisions of this paragraph, the Commission shall give weight to the following considerations, among others: (1) The effect of the proposed transaction upon adequate transportation service to the public; (2) the effect upon the public interest of the inclusion, or failure to include, other railroads in the territory involved in the proposed transaction; (3) the total fixed charges resulting from the proposed transaction; and (4) the interest of the carrier employees affected.

"(d) The Commission shall have authority in the case of a proposed transaction under this paragraph involving a railroad or railroads, as a prerequisite to its approval of the proposed transaction, to require, upon equitable terms, the inclusion of another railroad or other railroads in the territory involved, upon petition by such railroad or railroads requesting such inclusion, and upon a finding that such inclusion is consistent with the public interest.

. . . . . .

"(f) As a condition of its approval, under this paragraph, of any transaction involving a carrier or carriers by railroad subject to the provisions of this chapter, the Commission shall require a fair and equitable arrangement to protect the interests of the railroad employees affected . . . ."

[2] The term "bridge carrier" appears to mean a short-line carrier which transports through traffic from one long-line carrier to another

road Company ("Pennsylvania") at Effner, on the Illinois-Indiana state line, westward, through Peoria, to its connection with the main line of the Atchison, Topeka & Santa Fe Railway Company ("Santa Fe") at Lomax, Illinois, and thence southwesterly a short distance to Keokuk, Iowa. Its headquarters, shops and yards are located in East Peoria where it has 24 executives and where, and elsewhere along its line, it has about 225 other employees. It has connections for the interchange of traffic with 16 railroads, the principal ones being with the Pennsylvania at Effner, with the Santa Fe at Lomax, and with the New York, Chicago & St. Louis Railroad Company ("Nickel Plate"), the Illinois Terminal Railroad Company, the Chicago, Burlington & Quincy Railroad Company ("Burlington") and the Minneapolis & St. Louis Railway Company ("Minneapolis") at Peoria. Its interchange connections with the other 10 railroads are at 17 other towns along its line.

Western has outstanding 90,000 shares of common capital stock, 82% of which is owned by the testamentary trustees of the estate of George P. McNear—Wilmington Trust Company and Guy Gladson—and the remaining 18% is owned by members of the McNear family, a bank and the president of Western. In 1954, the trustees determined to sell their Western stock, and rival efforts were commenced by Minneapolis, on the one hand, and by the Santa Fe and Pennsylvania, on the other hand, to purchase it. (Four of Wilmington Trust Company's directors were also directors of Pennsylvania.) Those negotiations culminated in a contract between the trustees and the Santa Fe, dated May 26, 1955, providing for the sale by the former and purchase by the latter of the stock at a price of $135 per share, subject to the Commission's approval.[3] Soon afterward, like agreements

[3] During the negotiations, Minneapolis first offered $69.50, and later $80, per share for the stock. On April 15, 1955, the Santa Fe

were made by the Santa Fe with the holders of the remaining 18% of the Western stock.

On June 28, 1955, the Santa Fe entered into a contract to sell to the Pennsylvania Company, a wholly owned subsidiary of Pennsylvania, 50% of the outstanding capital stock of Western at $135 per share,[4] subject to approval of the Commission.

---

and Pennsylvania each obtained letter commitments from the trustees for the sale to each of them of 26% of the Western stock at a price of $100 per share. (Near the same time the Rock Island made a like offer to the trustees for 26% of the Western stock, but that offer was not accepted.) But a dispute arose—and apparently still exists between the trustees and Pennsylvania—with respect to the validity of those commitments. Thereupon, Minneapolis offered the trustees $133 per share for the Western stock, but that offer was not accepted, and on May 26, 1955, the Santa Fe, acting, as the Commission found, "on behalf of that carrier alone," agreed with the trustees for the sale by the former and purchase by the latter of all of the Western stock held by the trustees at a price of $135 per share, and those parties on that date entered into a contract accordingly, subject to approval of the Commission.

[4] The contract of June 28, 1955, between the Santa Fe and the Pennsylvania Company provided that it was without prejudice to any claims, causes of action or rights, which Pennsylvania may have against the trustees of the McNear estate with respect to the letter commitment of April 15, 1955, for the sale by the trustees to Pennsylvania of 26% of the Western stock; and that, in the event Pennsylvania should acquire from the trustees, under that letter commitment, all or any part of such shares, the obligation of the Santa Fe under the contract to sell Western shares to the Pennsylvania Company was to be reduced accordingly. It appears that litigation was then and is yet, pending by Pennsylvania against the trustees for the enforcement of the letter commitment of April 15, 1955.

The contract also contained a covenant which, in essence, provided that (1) "Western will continue to be operated as a separate and independent carrier with responsible management located along its line in order to preserve to shippers and communities the present direct access to its officials," (2) that Western's properties will be maintained and improved, (3) that Western "will continue to maintain its own solicitation forces and will be entirely free to solicit

On July 8, 1955, the Santa Fe and Pennsylvania Company and its parent, Pennsylvania, applied to the Commission under § 5 (2) of the Act[5] for approval of those stock purchase agreements and the consequent joint control of Western. The Minneapolis intervened and objected to the application, as did also the States of Minnesota and South Dakota and their respective public service regulatory commissions.

Thereafter, on October 13, 1955, the Minneapolis applied to the Commission, under the same section of the Act, for authority to acquire sole control of Western, expressing its willingness to enter into contracts with Western's stockholders to purchase their stock at the same price and on the same terms as set forth in their existing contracts with the Santa Fe. The Santa Fe, the Pennsylvania Company and Pennsylvania intervened in the latter proceeding and objected to the Minneapolis application.

On motion of Minneapolis, the Commission consolidated the two proceedings. Thereafter, seven other railroads having interchange connections with Western's line intervened. Two of them sought authority, at all events,[6]

---

traffic in such manner as best to serve the interests of Western," (4) that all "existing routes and channels of trade via Western will be maintained and kept open without discrimination between connecting lines of railroad," and (5) that the Board of Directors of Western shall consist of 11 members, of whom one shall be the president of the company, two shall be officers of the Santa Fe, two shall be officers of the Pennsylvania Company, or Pennsylvania, or both, and the remaining six shall be prominent citizens not connected with either of the parties but selected by them through mutual agreement.

[5] See note 1.

[6] The New York, Chicago & St. Louis Railroad Company ("Nickel Plate") and the Chicago, Rock Island & Pacific Railroad Company ("Rock Island") sought authority, under § 5 (2) (d) of the Act (see note 1), to be included in the acquisition of Western's stock on an equal basis with the successful applicant or applicants.

and two others of them sought authority, under stated conditions,[7] to participate, under § 5 (2)(d) of the Act, in the acquisition of the Western stock on an equal basis with the successful applicant. The State of Illinois, 18 cities or towns and seven chambers of commerce located on or along Western's line, two labor organizations representing Western's employees, and a large number of shippers over Western's line, intervened in support of the Santa Fe-Pennsylvania application and in opposition to the Minneapolis application.

After an extended consolidated hearing before him, the Commission's examiner issued a proposed report recommending approval of the Santa Fe-Pennsylvania application and dismissal of the Minneapolis application. Thereafter, upon exceptions, and briefs and arguments in their support, Division 4 of the Commission issued its report. It was confronted, as it said, with four alternative proposals, (1) for authorization of joint control of Western by the Santa Fe and Pennsylvania, (2) for

---

[7] The Chicago, Burlington & Quincy Railroad Company ("Burlington") and the Wabash Railroad Company ("Wabash") did not object to approval of the Santa Fe-Pennsylvania application, provided the order required continuation of present routes and channels of trade via existing junctions and gateways and of all existing traffic and operating relations and arrangements, but they asked, in the event any railroad other than the Santa Fe and Pennsylvania be authorized to acquire an interest in Western's stock, that they, too, be authorized to participate therein to the same extent as any such other railroad.

The Illinois Central Railroad Company ("Illinois Central"), the Gulf, Mobile & Ohio Railroad Company ("Gulf") and the Chicago & North Western Railway Company ("North Western") asked that, if either application be approved, the order be conditioned to require the maintenance of all routes and channels of trade via existing gateways. The Monon Railroad Company asked that if the Santa Fe-Pennsylvania application be approved, the order contain a requirement that Pennsylvania shall grant to it certain trackage rights, and, if not done, that the Santa Fe-Pennsylvania application be denied.

authorization of sole control by the Minneapolis, (3) for authorization of two other railroads, at all events, and of two more railroads, under stated conditions, to participate in the acquisition of the Western stock on an equal basis with the successful applicant,[8] and (4) denial of both applications.

The Commission observed that "[t]hese proceedings represent a new and more complicated phase in the administration of § 5, since [they involve] 2 applications for authority to control the same property, and petitions by 4 other carriers for inclusion in the transaction under varying circumstances." It recognized that, under § 5 (2) of the Act and the National Transportation Policy,[9] it was required to "weigh whether each application is consistent with the public interest, with or without inclusion of other railroads, considering not only other intervening petitions seeking such inclusion but also the other applicant and nonparticipating railroads as well." It thought that the burden of proof was "most heavy for an applicant in a proceeding like this, because it must not only overbalance the claims of those seeking to share in the control but also of those seeking to exclude it from the transaction." It conceived it to be its duty, under the Act and the National Transportation Policy, to "arrive at a standard of public interest and determine which of the various plans of control most nearly approximates it."

The Commission found that the Santa Fe-Pennsylvania plan contemplates that Western "will continue to be operated as a separate and independent carrier with responsible management located along its line"; that it "will continue to maintain its own solicitation forces and will be entirely free to solicit traffic in such manner as best to serve the interests of Western," and that all

[8] See notes 6 and 7.

[9] 49 U. S. C., n. preceding § 1, 49 Stat. 543.

"existing routes and channels of trade via Western will be maintained and kept open without discrimination between connecting lines of railroad." It found, on the other hand, that the Minneapolis plan "unequivocally contemplates the disappearance of Western as an independent and neutral connection for the other 15 carriers with which it presently works; that "[f]or all practical purposes Western would be integrated, consolidated and merged into the Minneapolis for ownership, management and operation"; that features of the Minneapolis plan "would be extremely harmful to other carriers"; that Western's headquarters office at Peoria would be eliminated, leaving only a trainmaster and a roadmaster at that point, and that the employment of most of Western's 24 executives and 225 other employees would be severed.

The Commission further found that "[o]nly the Minneapolis and its supporting interveners, the States of Minnesota and South Dakota, advocate the disappearance of Western as a separate and independent operating carrier," and that all other parties to, and intervenors in, the proceedings "insist that the separate and independent operation of Western under its present local management is a public necessity." It then found that the "[p]ublic interest demands that the present policies of Western in all respects be continued." It thereupon made the ultimate finding, required by § 5 (2)(b) of the Act, that the acquisition and plan of operation by the Santa Fe and Pennsylvania, subject to stated conditions, was "within the scope of § 5 (2) of the Interstate Commerce Act, as amended; that the terms and conditions proposed [by them] are just and reasonable; and that the transaction will be consistent with the public interest." The Commission then entered its order approving the Sante Fe-Pennsylvania application, dismissing the Minneapolis application, and denying the petitions of the several inter-

vening railroads which sought to participate in the acquisition of the Western stock. 295 I. C. C. 523.

Thereafter, Minneapolis petitioned the whole Commission for a reconsideration, and alternatively requested that, if the approval of the Santa Fe-Pennsylvania application be permitted to stand, it be authorized to participate equally with those railroads in the purchase of Western's stock on the same terms. That petition was denied.

Minneapolis then timely filed a complaint in the District Court for Minnesota against the United States and the Interstate Commerce Commission to vacate the Commission's order. The States of Minnesota and South Dakota and their respective regulatory commissions, being interested in strengthening the Minneapolis which operates in those States, intervened in support of the complaint. The defendants answered, asserting the full legality of the Commission's order. The Santa Fe, the Pennsylvania, the Pennsylvania Company, the State of Illinois, the 18 cities and seven chambers of commerce and the numerous shippers who were intervenors before the Commission, intervened in opposition to the complaint. The Nickel Plate intervened, complaining that the Commission had improperly denied its request to participate in the purchase of the Western stock.

A three-judge court was convened and, after hearing, rendered its opinion and judgment sustaining the Commission's order. 165 F. Supp. 893. On separate appeals by the Minneapolis, the State of Minnesota and its regulatory commission, and the State of South Dakota and its regulatory commission, the case was brought here and we noted probable jurisdiction. 359 U. S. 933. All of those who were defendants and intervenors in opposition to the complaint in the District Court, except the Nickel Plate, are appellees in this Court.

Minneapolis, supported by the States of Minnesota and South Dakota, contends, first, that the Commission improperly adopted at the outset of its report the standard of "separate and independent management" of Western as the criterion governing the comparative merits of the rival plans, which was antithetic to its application, and thereby deprived it of "fair comparative consideration," and that the District Court erred in approving the Commission's action.

The record does not support that contention. Rather, it shows that the Commission's governing standard was the "public interest," although it ultimately did find that the public interest would be best served by Western's continued operation as a "separate and independent carrier." We believe that the recited findings show that the Commission carefully "weighed" and considered "each application" in its labors to determine which, if either, of them was "consistent with the public interest." Its subsidiary findings (a) that the Minneapolis plan "unequivocally contemplates the disappearance of Western as an independent and neutral connection for the other 15 carriers with which it presently works," (b) that certain features of the Minneapolis plan "would be extremely harmful to other carriers," (c) that the Minneapolis plan contemplates the elimination of Western's office and the separation of its employees and (d) that numerous witnesses insisted "that the separate and independent operation of Western under its present local management is a public necessity," fully support its conclusionary finding that the "[p]ublic interest demands that the present policies of Western in all respects be continued." That finding, though antithetic to Minneapolis' application, did not deprive it of "fair comparative consideration," but, on the contrary, it seems to us, was made by the Commission after full and fair consideration, and the District Court did not err in so holding.

Appellants' principal contention appears to be that acquisition of control of Western by Santa Fe and Pennsylvania will create a combination in restraint of commerce in violation of § 1 of the Sherman Act [10] and will lessen competition or tend to create a monopoly in violation of § 7 of the Clayton Act,[11] and that the Commission's approval of their application was an abuse of power.

On their face these contentions would seem to run in the teeth of the language and purpose of § 5 (11) of the Interstate Commerce Act. That section, in substance, provides that "The authority conferred by this section shall be exclusive and plenary, and any carrier or corporation participating in . . . any transaction approved by the commission thereunder, shall have full power . . . to carry such transaction into effect and to own and operate any properties and exercise any control or franchises acquired through said transaction . . . and any carrier . . . participating in a transaction approved or authorized under the provisions of this section shall [be] and [it is] hereby relieved from the operation of the antitrust laws and all other restraints, limitations, and prohibitions of law . . . insofar as may be necessary to enable [it] to carry into effect the transaction so approved or provided for in accordance with the terms and conditions, if any, imposed by the commission, and to hold, maintain, and operate any properties and exercise any control or franchises acquired through such transaction." 24 Stat. 380, as amended, 54 Stat. 908, 49 U. S. C. § 5 (11).

Section 5 (11) is both a more recent and a more specific expression of congressional policy than § 1 of the Sherman Act and § 7 of the Clayton Act, and in terms relieves the acquiring carrier, upon approval by the Commission of the acquisition, "from the operation of the anti-

[10] 15 U. S. C. § 1, 26 Stat. 209.
[11] 15 U. S. C. § 18, 38 Stat. 731

trust laws . . . ." Although § 5 (11) does not authorize the Commission to "ignore" the antitrust laws, *McLean Trucking Co.* v. *United States*, 321 U. S. 67, 80, there can be "little doubt that the commission is not to measure proposals for [acquisitions] by the standards of the antitrust laws." 321 U. S., at 85. The problem is one of accommodation of § 5 (2) and the antitrust legislation. The Commission remains obligated to "estimate the scope and appraise the effects of the curtailment of competition which will result from the proposed [acquisition] and consider them along with the advantages of improved service [and other matters in the public interest] to determine whether the [acquisition] will assist in effectuating the over-all transportation policy." 321 U. S., at 87.

Even though such acquisitions might otherwise violate the antitrust laws, Congress has authorized the Commission to approve them, if it finds they are in the public interest, "because it recognized that in some circumstances they were appropriate for effectuation of the national transportation policy. It was informed that this policy would be furthered by 'encouraging the organization of stronger units' in the . . . industry. And in authorizing those [acquisitions] it did not import the general policies of the anti-trust laws as a measure of their permissibility. It in terms relieved participants in appropriate [acquisitions] from the requirements of those laws. § 5 (11)." 321 U. S., at 85. It must be presumed that, in enacting this legislation, Congress took account of the fact that railroads are subject to strict regulation and supervision. "Against this background, no other inference is possible but that, as a factor in determining the propriety of [railroad acquisitions] the preservation of competition among carriers, although still a value, is significant chiefly as it aids in the attainment of the objectives of the national transportation policy." 321 U. S., at 85–86.

As respects railroad acquisitions, the Commission is not so bound by the antitrust laws that it must permit them to overbear what it finds to be in "the public interest." A contrary view would, in effect, permit the Commission to authorize only those acquisitions which would not offend those laws. "As has been said, this would render meaningless the exception relieving the participants in a properly approved [acquisition] of the requirements of those laws . . . ." 321 U. S., at 86. Resolution of the conflicting considerations "is a complex task which requires extensive facilities, expert judgment and considerable knowledge of the transportation industry. Congress left that task to the commission 'to the end that the wisdom and experience of that commission may be used not only in connection with this form of transportation, but in its coordination of all other forms.' 79 Cong. Rec. 12207. 'The wisdom and experience of that commission,' not of the courts, must determine whether the proposed [acquisition] is 'consistent with the public interest.' Cf. *Interstate Commerce Commission* v. *Illinois Central R. Co.*, 215 U. S. 452; *Pennsylvania Co.* v. *United States*, 236 U. S. 351; *United States* v. *Chicago Heights Trucking Co.*, 310 U. S. 344; *Purcell* v. *United States*, 315 U. S. 381." 321 U. S., at 87–88.

Here, the Commission gave extensive consideration to the anti-competitive contentions advanced by appellants, devoting more than five pages of its report to that matter. It found that "[a]ll the carriers endeavoring to participate in its control are in competition with Western"; that the "important thing is not whether there is competition, but whether there is probability of existing or potential competition being diminished or strangled by the Western under the control of the Santa Fe and the Pennsylvania." After an extended analysis of the complex facts and conflicting evidence, the Commission found that control of

Western by the Santa Fe and Pennsylvania would not result in any significant lessening of competition. It pointed to the fact that although the Santa Fe's "long haul" is to Chicago and the Pennsylvania's "next to longest haul" is also to Chicago (its longest haul being to St. Louis) the Santa Fe has agreed, and is bound, "to place Lomax on a parity with Chicago from a solicitation standpoint, and . . the Pennsylvania will recognize Effner as one of its principal interchanges along with Chicago and St. Louis"; that "there may be some diversion of traffic but such diversion would not jeopardize the maintenance of adequate transportation service by the objecting intervening carriers."

The Commission also pointed to the fact that Western had been in a prolonged receivership until 1927 when George P. McNear acquired its stock at a receiver's sale, *Toledo, P. & W. R. Co. Acquisition*, 124 I. C. C. 181. It further found that Western's modern existence began at that time and, under the guidance of McNear, was built into a fine railroad; that since McNear's death, in 1947, the present management has continued with much success, the policies he established. Those policies, the Commission found, were, and are, "to maintain strict neutrality between all connections, and to participate in any haul of traffic no matter how slight [as a bridge] carrier through Peoria, an alternative route bypassing the congested terminals of Chicago and St. Louis," and that those policies are to be continued under the Santa Fe-Pennsylvania plan.

We think it is clear from this summary of its analysis and findings that the Commission fully estimated the scope and appraised the effects of any curtailment of competition which may result from the acquisition of Western by the Santa Fe and Pennsylvania, and, after having done so, concluded that their acquisition and plan of operation of Western would not result in any significant lessening

of competition. Congress has left the task of making that determination to the wisdom and experience of the Commission. The determination it has made rests upon adequate findings which are, in turn, supported by substantial evidence and is well within the limits of its discretion under the Act.

Appellants argue that the Pennsylvania, in actuality, contracted to purchase 50% of the Western stock from Wilmington Trust Company, a co-trustee of the McNear trust, and that, since four persons were directors of both companies, that proposed stock purchase violates § 10 of the Clayton Act; that the Commission was without power to approve it; that, in any event, its action in "condoning" it was an abuse of power; and that the District Court, for those reasons also, erred in upholding the Commission's order.

The Commission found that the Santa Fe in entering into the contract of May 26, 1955, with the trustees of the McNear trust was "acting on behalf of that carrier alone." But even if we assume, for present purposes, that it was acting as well for the Pennsylvania the result must be the same. Section 10 of the Clayton Act prohibits a common carrier engaged in commerce from having "any dealings in securities" of more than $50,000, in the aggregate, in any one year, "with another corporation, . . . when the said common carrier shall have upon its board of directors . . . any person who is at the same time a director [of] such corporation . . . , except such purchases [as] shall be made . . . by competitive bidding under regulations to be prescribed by [the] commission." 38 Stat. 734, 15 U. S. C. § 20.

Section 10 of the Clayton Act is, of course, an antitrust law,[12] and much of what we have just said relative

[12] It is clear that § 10 of the Clayton Act is included in the "antitrust laws" referred to in § 5 (11) of the Interstate Commerce Act. Section 1 of the Clayton Act, 15 U. S. C. (1952 ed.) § 12, provides

to the problem of accommodation of § 5 (2) of the Interstate Commerce Act and the antitrust laws is equally applicable to this contention. The evident purpose of § 10 of the Clayton Act was to prohibit a corporation from abusing a carrier by palming off upon it securities, supplies and other articles without competitive bidding and at excessive prices through overreaching by, or other misfeasance of, common directors to the financial injury of the carrier and the consequent impairment of its ability to serve the public interest.[13] But, even if this purchase of securities might, under other circumstances, violate § 10 of the Clayton Act, Congress, by § 5 (11) of the Interstate Commerce Act, has authorized the Commission to approve it if it finds that so doing is in the public interest. And Congress has expressly said that, upon such approval, the carrier shall be relieved "from the operation of the anti-trust laws . . . ." A contrary view would, in effect, permit the Commission to authorize only those stock purchases which would not, in the absence of § 5 (11), offend the antitrust laws. "As has been said, this would render meaningless the exemption relieving the participants in a properly approved [acquisition] of the requirements of those laws . . . ." *McLean Trucking Co.* v. *United States*, *supra*, at 86.

---

that "'anti-trust laws,' as used in sections 12, 13, 14–21, and 22–27 of this title, includes sections 1–27 of this title." Moreover, § 5 (11) avoids any ambiguity by including "all other restraints, limitations and prohibitions of law, Federal, State or municipal."

[13] The legislative history of § 10 of the Clayton Act, though meager, supports the view stated in the text. In fact, the language of the several drafts of § 10, together with the types of abuses cited in support of its enactment, suggest strongly that the words "dealing in securities" were intended to cover only a carrier's dealings with related persons in its own securities. See H. R. Rep. No. 627, 63d Cong., 2d Sess., p. 3; S. Rep. No. 698, 63d Cong., 2d Sess., pp. 47–48; S. Doc. No. 585, 63d Cong., 2d Sess., pp. 8–9; 51 Cong. Rec. 15943.

Here, the Commission fully considered the contracts under which the Pennsylvania proposes to acquire a 50% interest in the Western stock and all other factors bearing on that matter and, after doing so, approved them. That action by the Commission did not exceed the statutory limits within which Congress has confined its discretion.

Minneapolis contends that § 5 (11) operates only *in futuro* and confers "no authority to purge the taint of a transaction illegal at the time it was brought to the commission." Whether there is merit in that contention, as a legal abstraction, we need not decide, for here the existing contractual arrangements through which Pennsylvania asks authority to acquire 50% of the Western stock look entirely to the future. Neither the stock sale and purchase contract between the trustees and the Santa Fe nor the one between the Santa Fe and the Pennsylvania Company are consummated transactions, but both are expressly subject to, and will become effective only upon, approval by the Commission. Apart from criminal prosecutions with which we are not here concerned, it seems plain that approval of an acquisition by the Commission operates under § 5 (11), as that section says, to relieve the acquiring carrier "from the operation of the anti-trust laws . . . ."

Appellants next contend that the Commission violated § 8 (b) of the Administrative Procedure Act by failing to make findings which, they think, were compelled by the evidence.

There can be no doubt that the Administrative Procedure Act applies to proceedings before the Commission, *Riss & Co., Inc.*, v. *United States*, 341 U. S. 907, and see *Chicago & Eastern Illinois R. Co.* v. *United States*, 344 U. S. 917.

The last sentence of § 8 (b) provides:

> "All [administrative] decisions . . . shall become a part of the record and include a statement of (1) find-

ings and conclusions, as well as the reasons or basis therefor, upon all material issues of fact, law, or discretion presented on the record; and (2) the appropriate rule, order, sanction, relief, or denial thereof." [14]

Upon the basis of that language, appellants argue that the Commission should have found that the price which the Santa Fe agreed to pay for the Western stock of $135 per share was excessive. Though the Commission made no express finding upon that matter it did discuss it, pointing out that the certified value of Western's properties for ratemaking purposes was more than $13,500,000; that it has no outstanding preferred stock and is relatively free of debt; that it has a fine earning record; that the transaction was at arm's length; that Minneapolis had offered $133 per share for the stock within a few days of the time when the Santa Fe contracted for its purchase at $135 per share, and that the Minneapolis sought authority in this proceeding to acquire the stock at the same price. The Commission concluded that if $135 per share was a fair price for the one it was also for the other.

Upon the same basis, appellants also argue that the Commission should have found that the Minneapolis application was in the public interest in that its acquisition of Western would greatly strengthen both Minneapolis and Western by eliminating many duplicating facilities and by reducing operating expenses by more than $1,770,000 annually. The Commission did not make a specific finding upon that matter, but it did give consideration to it and found that most of that saving—more than $1,300,000 annually—would be at the expense of Western's employees—a matter which, because of the express command of clause 4 of § 5 (2)(c) of the Interstate Commerce Act (see note 1), it evidently thought was not consistent with the public interest. Appellants

[14] 60 Stat. 242, 5 U. S. C. § 1007 (b).

further argue that the Commission should have found that the Minneapolis plan afforded adequate protection to Western's employees by providing for their absorption into the Minneapolis as attrition among its own employees permitted. Again, although the Commission made no specific finding upon that contention it did consider and discuss it, and we think the law required no more.

Appellants challenge the Commission's failure to make a number of other subsidiary findings, all of which have been considered, but we find that they relate to contentions that are so collateral or immaterial that the law did not require specific findings upon them. By the express terms of § 8 (b), the Commission is not required to make subordinate findings on every collateral contention advanced, but only upon those issues of fact, law, or discretion which are "material." From a thorough examination of the record we are persuaded that the Commission has made adequate subsidiary findings upon all material issues and has made the ultimate findings required by § 5 (2), that they support the Commission's order, and are, in turn, supported by substantial evidence.

Finally, appellants' contend that the District Court, because of inadequate subsidiary findings by the Commission, was unable to, or at least did not, afford it a proper judicial review, and merely "rubber stamped" the Commission's order. Whether or not we approve all of the reasons and legal conclusions of the District Court, it is clear that it fairly considered and decided all of the issues raised by appellants, accorded to them a full and fair judicial review, and reached a right result. Accordingly the judgment is

Affirmed.

MR. JUSTICE DOUGLAS dissents.
